To the Reader

SCIENTOLOGY® applied religious philosophy contains pastoral counseling procedures intended to assist an individual to gain greater knowledge of self. The mission of the Church of Scientology is a simple one: to help the individual achieve greater self-confidence and personal integrity, thereby enabling him to really trust and respect himself and his fellow man. The attainment of the benefits and goals of Scientology philosophy requires each individual's dedicated participation, as only through his own efforts can he achieve these.

This book is part of the religious literature and works of the Scientology Founder, L. Ron Hubbard. It is presented to the reader as part of the record of his personal research into life, and the application of same by others, and should be construed only as a written report of such research and not as a statement of claims made by the Church or the Founder.

Scientology philosophy and its forerunner, DIANETICS® spiritual healing technology, as practiced by the Church, address only the "thetan" (spirit). Although the Church, as are all churches, is free to engage in spiritual healing, it does not, as its primary goal is increased *spiritual awareness* for all. For this reason, the Church does not wish to accept individuals who desire treatment of physical or mental illness but prefers to refer these to qualified specialists of other organizations who deal in these matters.

The HUBBARD® Electrometer is a religious artifact used in the Church confessional. It in itself does nothing, and is used by ministers only, to assist parishioners in locating areas of spiritual distress or travail.

IMPORTANT NOTE

In reading this material, be very certain you never go past a word you do not fully understand.

The only reason a person gives up a study or becomes confused or unable to learn is because he or she has gone past a word that was not understood.

The confusion or inability to grasp or learn comes after a word that the person did not have defined and understood.

Have you ever had the experience of coming to the end of a page and realizing you didn't know what you had read? Well, somewhere earlier on that page you went past a word that you had no definition for or an incorrect definition for.

Here's an example. "It was found that when the crepuscule arrived the children were quieter and when it was not present, they were much livelier." You see what happens. You think you don't understand the whole idea, but the inability to understand came entirely from the one word you could not define, *crepuscule,* which means twilight or darkness.

It may not only be the new and unusual words that you will have to look up. Some commonly used words can often be misdefined and so cause confusion.

This datum about not going past an undefined word is the most important fact in the whole subject of study. Every subject you have taken up and abandoned had its words which you failed to get defined.

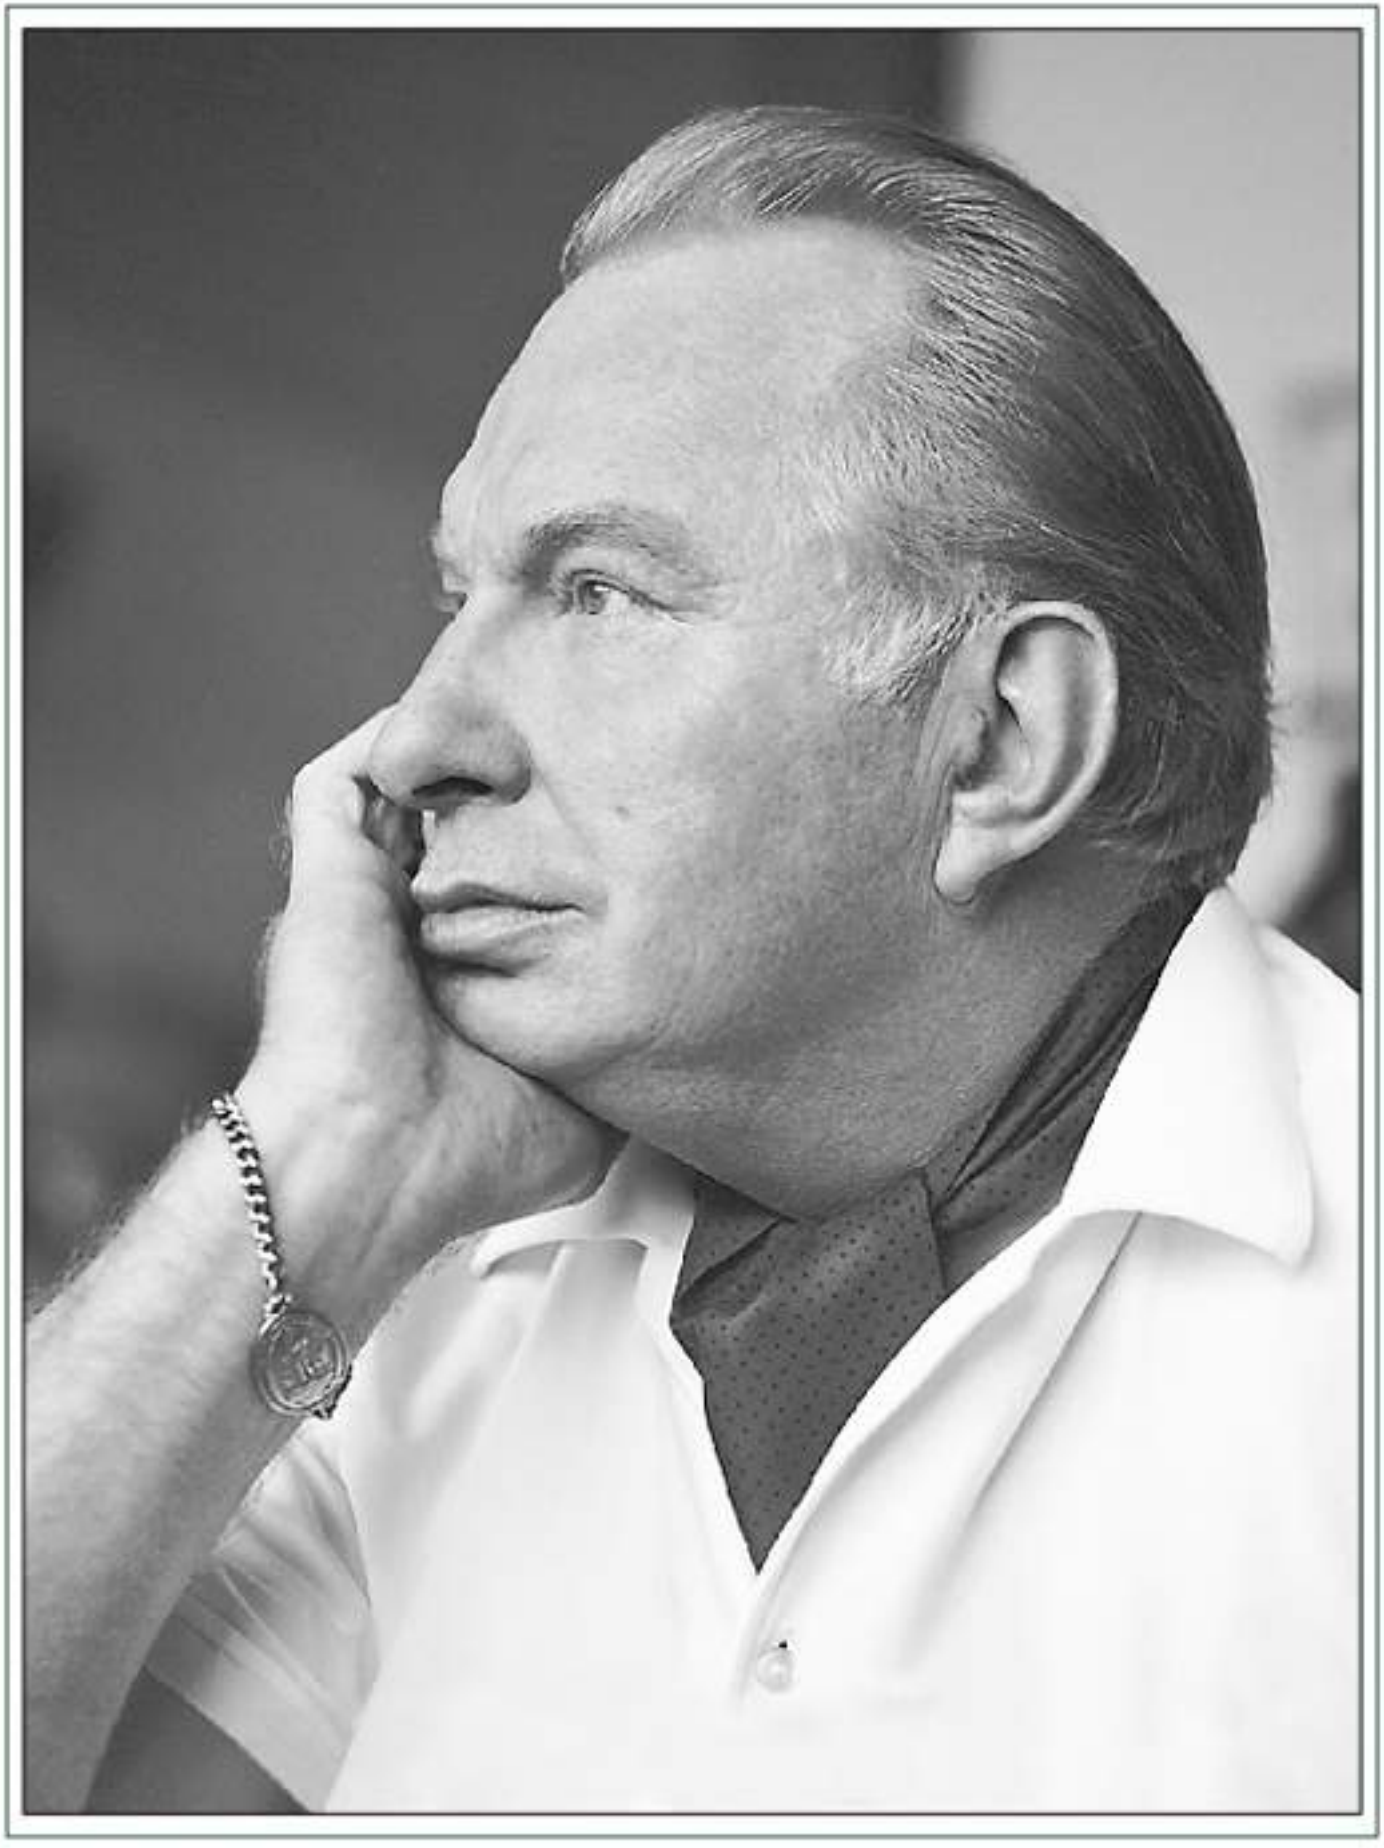
Therefore, in reading this material be very, very certain you never go past a word you do not fully understand. If the material becomes confusing or you can't seem to grasp it, there will be a word just earlier that you have not understood. Don't go any further, but go back to BEFORE you got into trouble, find the misunderstood word and get it defined.

We have administrative tech.

And it is all published and there for use.

And further, when it is known and used,

proven times without number now,



production and prosperity occur AND *show up*

as statistics which INDICATE *that production*

and prosperity are occurring.

L. Ron Hubbard
HCO PL 20 Sept. 76

INTRODUCTION

When, after twenty years of organizational experience, L. Ron Hubbard developed what he called *The Management Series,* top administrators around the world found in their hands an extraordinarily powerful tool: the ultimate reference for executive success. Since then, in many countries and on all continents, these administrators have conclusively proven that this revolutionary technology provides the means to establish, operate and expand any activity or group — and guarantee its total success.

The Management Series consists of three volumes, which together contain eleven managerial subjects that LRH isolated and then codified, each as a complete subject series—434 policy letters in all. To understand this accomplishment, one must realize that each series contains key principles of organization never before known to man, let alone codified. And that together they represent unprecedented administrative breakthroughs that form the only precise technology anyone anywhere can use to recognize and handle organizational problems and situations.

This new CD-ROM contains all three volumes of the *Management Series* in addition to *OEC Volume 0, The Basic Staff Hat,* providing a landmark collection of policies for the success of any staff member or executive. The special Search and Find features provide the facility to locate any issue you need on any subject covered in these volumes. And the combined Subject Index, Alphabetical List and Chronological List cross-reference all volumes on this CD-ROM. The result — instant access to LRH's administrative policy.

The policies contained herein hold the very laws and principles governing organization — third dynamic technology, which mirrors exactly the precision of auditing technology, providing standard handlings for any organizational situation. The most powerful and needed management technology man has ever known, these materials, correctly applied, mean expansion and planetary clearing. Thus, an executive with a full knowledge of the policies in this CD-ROM has the tools to organize, establish and operate any organization and take it to the stars.

–The Editors

CHECKSHEET

THE ORG EXEC COURSE INTRODUCTION

This course contains the basic laws of organization.

Primarily intended for Scientology organization executives, its policy letters are slanted toward a Scientology org (short for organization). However, it covers any organization and contains fundamentals vital to any successful or profitable activity.

This course also applies to the individual. Any individual has his 7 (or 9) divisions and his 21 (or 27) departments. Where one or more of these is missing in his conduct of life he will be to that degree an unsuccessful individual.

No matter how organized, any company, society or political entity will be as unsuccessful as it has these functions missing.

Thus this is not just the Scientology idea of how an org should run — most of it is vital basic discovery.

Man did not really know the principles of organization any more than he knew what made his mind work before *Dianetics* was published.

A very small amount of the material on this course has crept into general use, just as a very few of the principles of Dianetics and Scientology are now an "Everybody knows———." Survival is now conceded as the basic principle of existence. Universities now know man can change IQ and personality. As time goes on, more and more of the technology "leaks" into general knowledge. But it takes a long time for all mankind to know a whole tech in this fashion.

To date the Scientology discoveries in organization are known to a very few. But some of the more general principles are already creeping into business practice.

Not long ago, for instance, a close friend of the president of the US was given the policy letter about "Don't reward a down statistic." A few days later the president used it in his new relief program policy.

Of course there are hundreds of other "PLs" that *haven't* been shown to the friend of the president. It takes years for new ideas to "leak" into public consciousness. It

took five years for the medical professors in universities to begin to teach that aberration could come from the "birth engram." In eighteen years only a handful of medical doctors accepted that mental image pictures caused aberration. In nineteen years only a few medical doctors could also audit.

Therefore, if one were fully conversant with the full subject and all its principles he would appear to be a magician, a miracle worker.

If anyone knew the Org Exec Course fully and could practice it, he could completely reverse any downtrending company or country. Indeed, here and there at this writing men have done so.

It could be argued or pleaded that this huge body of data should be made into texts capable of general application by businesses and countries. The one effort to republish these policies in other terms so badly altered the material that it became a hopeless bog even though attempted by a very successful businessman. He himself was applying the originals direct to his company and it soaringly became rich. Then he decided to rewrite it all, greatly altered and edited, for his employees, and his business went on a toboggan slide. His correct action would have been to send his employees to take the same course he took — this very Org Exec Course. And let them adapt what they now knew to fit their own posts and activities. Instead, he cut them off from source and what *he* wrote for them was only as much as *he* had gotten out of the course from his own viewpoint.

At least there are Scientology orgs around which are successful living models of these policies and org form.

The only real trouble these orgs ever have is not a failure to apply policy but a failure of the whole staff to know policy.

Wherever a portion of a Scientology org is in confusion, you will find that the staff members in that portion have not done the Org Exec Course. They may know a few policies. But outside that, anyone can come along and say "this is the policy" or "what you're doing is against policy," and being ignorant of policy, they develop the idea of some vast unknown area and go downhill.

The name Org *Exec* Course is probably a misnomer. Certainly the executives of the org should know it well. But the staff member who doesn't know it is at effect. If he *knew* his OEC data he would be able to defend himself and get his own "show on the road" in his portion of the org.

ANY FAILURE OF THESE BASICS AND POLICIES IS IGNORANCE OF THEM.

When you know them all, not just a few, it makes a whole intelligible picture.

It is rather exciting to be able to cut through the superstition of yesterday's organizations and deal in basic down-to-earth fundamentals.

When you understand all the policies on this course, you will understand organization itself, no matter to what you apply it. You will also be able to recognize misorganization when you see it.

And I assure you that in a misorganized society the individual loses out.

Even dictatorships come about only because the citizen doesn't know basic organization. Thus authoritarian rule exists only to the degree that its subjects are ignorant of the fundamentals of organization.

Those fundamentals, even if specialized to fit a Scientology organization, exist in this, the Org Exec Course.

HCO POLICY LETTER OF 11 AUGUST 1971
ISSUE I

REMIMEO

BASIC HAT PACK

The Basic Staff Hat is OEC Volume No. 0.

Every staff member needs one of these.

When every staff member of one org bought one, the stats promptly went up through the roof.

It tells how an org operates and gives the basic information necessary to a staff member to operate properly as one.

The whole set should be owned by execs. And the divisional book as well as Vol 0 by members of any one division.

An heroic job of compilation and publishing was done by the staff involved. It took years of work. And they did a beautiful job of making these big books.

They contain all the policy ever issued sorted by divisions, fully indexed.

Just the Basic Staff Hat in every staff member's hands and available for reference made the first org boom.

So what will the whole set do?

L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 9 SEPTEMBER 1969R
REVISED 17 JUNE 1985

REMIMEO
ORG EXEC COURSE

HOW TO STUDY THIS COURSE

Each checksheet of the Org Exec Course should be studied one time through.

That is a completion of the course.

All Scientology rules of study and student conduct, as given in the Student Hat, apply.

A checksheet may be added to per HCO PL 21 July 81 I, WHAT IS A CHECKSHEET, but only for a new student or one who has discontinued as incomplete and is resuming the course after a long absence.

All new LRH policy letters are added to the checksheet for the appropriate volume(s) as they are issued, or as indicated in newly issued checksheets after the date of this policy letter.

Beware of going past misunderstood words. Use a dictionary liberally.

If the student bogs or is slow he should be sent to Qual.

Beware of other students "explaining things" in the policy letters or of Course Supervisors who say, "That isn't used now." The data is the data and it *is* in the policy letters.

In particular, beware of memorizing things without understanding them. What is true for you is true. The data here is for you and to help make a better world.

Good luck.

KEEPING SCIENTOLOGY WORKING SERIES 1

Note: Neglect of this PL has caused great hardship on staffs, has cost countless millions and made it necessary in 1970 to engage in an all-out international effort to restore basic Scientology over the world. Within 5 years after the issue of this PL, with me off the lines, violation had almost destroyed orgs. "Quickie grades" entered in and denied gain to tens of thousands of cases. Therefore actions which neglect or violate this policy letter are HIGH CRIMES resulting in Comm Evs on ADMINISTRATORS and EXECUTIVES. It is not "entirely a tech matter" as its neglect destroys orgs and caused a 2-year slump. IT IS THE BUSINESS OF EVERY STAFF MEMBER to enforce it.

SPECIAL MESSAGE

THE FOLLOWING POLICY LETTER MEANS WHAT IT SAYS.

IT WAS TRUE IN 1965 WHEN I WROTE IT. IT WAS TRUE IN 1970 WHEN I HAD IT REISSUED. I AM REISSUING IT NOW, IN 1980, TO AVOID AGAIN SLIPPING BACK INTO A PERIOD OF OMITTED AND QUICKIED FUNDAMENTAL GRADE CHART ACTIONS ON CASES, THEREBY DENYING GAINS AND THREATENING THE VIABILITY OF SCIENTOLOGY AND OF ORGS. SCIENTOLOGY WILL KEEP WORKING ONLY AS LONG AS *YOU* DO YOUR PART TO KEEP IT WORKING BY APPLYING THIS POLICY LETTER.

WHAT I SAY IN THESE PAGES HAS ALWAYS BEEN TRUE, IT HOLDS TRUE TODAY, IT WILL STILL HOLD TRUE IN THE YEAR 2000 AND IT WILL CONTINUE TO HOLD TRUE FROM THERE ON OUT.

NO MATTER WHERE YOU ARE IN SCIENTOLOGY, ON STAFF OR NOT, THIS POLICY LETTER HAS SOMETHING TO DO WITH YOU.

ALL LEVELS

KEEPING SCIENTOLOGY WORKING

HCO Sec or Communicator hat check
on all personnel and all new personnel as taken on.

We have some time since passed the point of achieving uniformly workable technology.

The only thing now is getting the technology applied.

If you can't get the technology applied then you can't deliver what's promised. It's as simple as that. If you can get the technology applied you *can* deliver what's promised.

The only thing you can be upbraided for by students or pcs is "no results." Trouble spots occur only where there are "no results." Attacks from governments or monopolies occur only where there are "no results" or "bad results."

Therefore the road before Scientology is clear and its ultimate success is assured *if* the technology is applied.

So it is the task of the Assoc or Org Sec, the HCO Sec, the Case Supervisor, the D of P, the D of T and all staff members to get the correct technology applied.

Getting the correct technology applied consists of:

One: **Having the correct technology.**

Two: **Knowing the technology.**

Three: **Knowing it is correct.**

Four: **Teaching correctly the correct technology.**

Five: **Applying the technology.**

Six: **Seeing that the technology is correctly applied.**

Seven: **Hammering out of existence incorrect technology.**

Eight: **Knocking out incorrect applications.**

Nine: **Closing the door on any possibility of incorrect technology.**

Ten: **Closing the door on incorrect application.**

One above has been done.

Two has been achieved by many.

Three is achieved by the individual applying the correct technology in a proper manner and observing that it works that way.

Four is being done daily successfully in most parts of the world.

Five is consistently accomplished daily.

Six is achieved by Instructors and Supervisors consistently.

Seven is done by a few but is a weak point.

Eight is not worked on hard enough.

Nine is impeded by the "reasonable" attitude of the not-quite-bright.

Ten is seldom done with enough ferocity.

Seven, Eight, Nine and Ten are the only places Scientology can bog down in any area.

The reasons for this are not hard to find. (a) A weak certainty that it works in Three above can lead to weakness in Seven, Eight, Nine and Ten. (b) Further, the not-too-bright have a bad point on the button Self-Importance. (c) The lower the IQ, the more the individual is shut off from the fruits of observation. (d) The service facs of people make them defend themselves against anything they confront, good or bad, and seek to make it wrong. (e) The bank seeks to knock out the good and perpetuate the bad.

Thus, we as Scientologists and as an organization must be very alert to Seven, Eight, Nine and Ten.

In all the years I have been engaged in research I have kept my comm lines wide open for research data. I once had the idea that a group could evolve truth. A third of a century has thoroughly disabused me of that idea. Willing as I was to accept suggestions and data, only a handful of suggestions (less than twenty) had long-run value and *none* were major or basic; and when I did accept major or basic suggestions and used them, we went astray and I repented and eventually had to "eat crow."

On the other hand there have been thousands and thousands of suggestions and writings which if accepted and acted upon would have resulted in the complete destruction of all our work as well as the sanity of pcs. So I know what a group of people will do and how insane they will go in accepting unworkable "technology." By actual record the percentages are about twenty to 100,000 that a group of human beings will dream up bad technology to destroy good technology. As we could have gotten along without suggestions, then, we had better steel ourselves to continue to do so now that we have made it. This point will of course be attacked as "unpopular," "egotistical" and "undemocratic." It very well may be. But it is also a survival point. And I don't see that popular measures, self-abnegation and democracy have done anything for man but push him further into the mud. Currently, popularity endorses degraded novels, self-abnegation has filled the Southeast Asian jungles with stone idols and corpses, and democracy has given us inflation and income tax.

Our technology has not been discovered by a group. True, if the group had not supported me in many ways I could not have discovered it either. But it remains that if in its formative stages it was not discovered by a group, then group efforts, one can safely assume, will not add to it or successfully alter it in the future. I can only say this now that it is done. There remains, of course, group tabulation or coordination of what has been done, which will be valuable — only so long as it does not seek to alter basic principles and successful applications.

The contributions that were worthwhile in this period of forming the technology were help in the form of friendship, of defense, of organization, of dissemination, of application, of advices on results and of finance. These were great contributions and were and are appreciated. Many thousands contributed in this way and made us what we are. Discovery contribution was not however part of the broad picture.

We will not speculate here on why this was so or how I came to rise above the bank. We are dealing only in facts and the above is a fact — the group left to its own

devices would not have evolved Scientology but with wild dramatizations of the bank called "new ideas" would have wiped it out. Supporting this is the fact that man has never before evolved workable mental technology and emphasizing it is the vicious technology he *did* evolve — psychiatry, psychology, surgery, shock treatment, whips, duress, punishment, etc., ad infinitum.

So realize that we have climbed out of the mud by whatever good luck and good sense, and *refuse* to sink back into it again. See that Seven, Eight, Nine and Ten above are ruthlessly followed and we will never be stopped. Relax them, get reasonable about it and we will perish.

So far, while keeping myself in complete communication with all suggestions, I have not failed on Seven, Eight, Nine and Ten in areas I could supervise closely. But it's not good enough for just myself and a few others to work at this.

Whenever this control as per Seven, Eight, Nine and Ten has been relaxed, the whole organizational area has failed. Witness Elizabeth, NJ; Wichita; the early organizations and groups. They crashed only because I no longer did Seven, Eight, Nine and Ten. Then, when they were all messed up, you saw the obvious "reasons" for failure. But ahead of that they ceased to deliver and *that* involved them in other reasons.

The common denominator of a group is the reactive bank. Thetans without banks have different responses. They only have their banks in common. They agree then only on bank principles. Person to person the bank is identical. So constructive ideas are *individual* and seldom get broad agreement in a human group. An individual must rise *above* an avid craving for agreement from a humanoid group to get anything decent done. The bank-agreement has been what has made Earth a Hell — and if you were looking for Hell and found Earth, it would certainly serve. War, famine, agony and disease has been the lot of man. Right now the great governments of Earth have developed the means of frying every man, woman and child on the planet. That is bank. That is the result of Collective Thought Agreement. The decent, pleasant things on this planet come from *individual* actions and ideas that have somehow gotten by the Group Idea. For that matter look how we ourselves are attacked by "public opinion" media. Yet there is no more ethical group on this planet than ourselves.

Thus each one of us can rise above the domination of the bank and then, as a group of freed beings, achieve freedom and reason. It is only the aberrated group, the mob, that is destructive.

When you don't do Seven, Eight, Nine and Ten actively, you are working for the bank-dominated mob. For it will surely, surely (a) introduce incorrect technology and swear by it, (b) apply technology as incorrectly as possible, (c) open the door to any destructive idea and (d) encourage incorrect application.

It's the bank that says the group is all and the individual nothing. It's the bank that says we must fail.

So just don't play that game. Do Seven, Eight, Nine and Ten and you will knock out of your road all the future thorns.

Here's an actual example in which a senior executive had to interfere because of a pc spin: A Case Supervisor told Instructor A to have Auditor B run Process X on Preclear C. Auditor B afterwards told Instructor A that "It didn't work." Instructor A was weak on Three above and didn't really believe in Seven, Eight, Nine and Ten. So Instructor A told the Case Supervisor "Process X didn't work on Preclear C." Now *this* strikes directly at each of One to Six above in Preclear C, Auditor B, Instructor A *and* the Case Supervisor. It opens the door to the introduction of "new technology" and to failure.

What happened here? Instructor A didn't jump down Auditor B's throat, that's all that happened. This is what he *should* have done: Grabbed the auditor's report and looked it over. When a higher executive on this case did so, she found what the Case Supervisor and the rest missed: that Process X *increased* Preclear C's TA to 25 TA divisions for the session but that near session end, Auditor B Qed-and-Aed with a cognition and abandoned Process X while it still gave high TA and went off running one of Auditor B's own manufacture which nearly spun Preclear C. Auditor B's IQ on examination turned out to be about 75. Instructor A was found to have huge ideas of how you must never invalidate anyone, even a lunatic. The Case Supervisor was found to be "too busy with admin to have any time for actual cases."

All right, there's an all too typical example. The *Instructor* should have done Seven, Eight, Nine and Ten. This would have begun this way. Auditor B: "That Process X didn't work." Instructor A: "What exactly did *you* do wrong?" Instant attack. "Where's your auditor's report for the session? Good. Look here, you were getting a lot of TA when you stopped Process X. What did you do?" Then the pc wouldn't have come close to a spin and all four of these would have retained their certainty.

In a year, I had four instances in *one* small group where the correct process recommended was reported not to have worked. But on review found that each one had: (a) increased the TA, (b) had been abandoned and (c) had been falsely reported as unworkable. Also, despite this abuse, in each of these four cases the recommended, correct process cracked the case, yet they were reported as *not having worked!*

Similar examples exist in instruction and these are all the more deadly as every time instruction in correct technology is flubbed, then the resulting error, uncorrected in the auditor, is perpetuated on every pc that auditor audits thereafter. So Seven, Eight, Nine and Ten are even more important in a course than in supervision of cases.

Here's an example: A rave recommendation is given a graduating student "because he gets more TA on pcs than any other student on the course!" Figures of 435 TA divisions a session are reported. "Of course his Model Session is poor but it's just a knack he has" is also included in the recommendation. A careful review is undertaken because *nobody* at Levels 0 to IV is going to get that much TA on pcs. It is found that this student was never taught to read an E-Meter TA dial! And no Instructor observed his handling of a meter and it was not discovered that he "overcompensated" nervously, swinging the TA 2 or 3 divisions beyond where it needed to go to place the needle at "set." So everyone was about to throw away standard processes and Model Session because this one student "got such remarkable TA." They only read the reports and listened to the brags and never *looked* at this student. The pcs in actual fact were making slightly less than average

gain, impeded by a rough Model Session and misworded processes. Thus, what was making the pcs win (actual Scientology) was hidden under a lot of departures and errors.

I recall one student who was squirreling on an Academy course and running a lot of offbeat whole track on other students after course hours. The Academy students were in a state of electrification on all these new experiences and weren't quickly brought under control, and the student himself never was given the works on Seven, Eight, Nine and Ten so they stuck. Subsequently, this student prevented another squirrel from being straightened out and his wife died of cancer resulting from physical abuse. A hard, tough Instructor at that moment could have salvaged two squirrels and saved the life of a girl. But no, students had a right to do whatever they pleased.

Squirreling (going off into weird practices or altering Scientology) only comes about from noncomprehension. Usually the noncomprehension is not of Scientology but some earlier contact with an offbeat humanoid practice which in its turn was not understood.

When people can't get results from *what they think* is standard practice, they can be counted upon to squirrel to some degree. The most trouble in the past two years came from orgs where an executive in each *could not* assimilate straight Scientology. Under instruction in Scientology they were unable to define terms or demonstrate examples of principles. And the orgs where they were got into plenty of trouble. And worse, it could not be straightened out easily because neither one of these people could or would duplicate instructions. Hence, a debacle resulted in two places, directly traced to failures of instruction earlier. So proper instruction is vital. The D of T and his Instructors and all Scientology Instructors must be merciless in getting Four, Seven, Eight, Nine and Ten into effective action. That one student, dumb and impossible though he may seem and of no use to anyone, may yet someday be the cause of untold upset because nobody was interested enough to make *sure* Scientology got home to him.

With what we know now, there is no student we enroll who cannot be properly trained. As an Instructor, one should be very alert to slow progress and should turn the sluggards inside out personally. No *system* will do it, only you or me with our sleeves rolled up can crack the back of bad studenting and we can only do it on an individual student, never on a whole class only. He's slow = something is awful wrong. Take *fast* action to correct it. Don't wait until next week. By then he's got other messes stuck to him. If you can't graduate them with their good sense appealed to and wisdom shining, graduate them in such a state of shock they'll have nightmares if they contemplate squirreling. Then experience will gradually bring about Three in them and they'll *know* better than to chase butterflies when they should be auditing.

When somebody enrolls, consider he or she has joined up for the duration of the universe — never permit an "open-minded" approach. If they're going to quit let them quit fast. If they enrolled, they're aboard, and if they're aboard, they're here on the same terms as the rest of us — win or die in the attempt. Never let them be half-minded about being Scientologists. The finest organizations in history have been tough, dedicated organizations. Not one namby-pamby bunch of pantywaist

dilettantes have ever made anything. It's a tough universe. The social veneer makes it seem mild. But only the tigers survive — and even *they* have a hard time. We'll survive because we are tough and are dedicated. When we *do* instruct somebody properly he becomes more and more tiger. When we instruct half-mindedly and are afraid to offend, scared to enforce, we don't make students into good Scientologists and that lets everybody down. When Mrs. Pattycake comes to us to be taught, turn that wandering doubt in her eye into a fixed, dedicated glare and she'll win and we'll all win. Humor her and we all die a little. The proper instruction attitude is, "You're here so you're a Scientologist. Now we're going to make you into an expert auditor no matter what happens. We'd rather have you dead than incapable."

Fit that into the economics of the situation and lack of adequate time and you see the cross we have to bear.

But we won't have to bear it forever. The bigger we get the more economics and time we will have to do our job. And the only things which can prevent us from getting that big fast are areas in from One to Ten. Keep those in mind and we'll be able to grow. Fast. And as we grow, our shackles will be less and less. Failing to keep One to Ten will make *us* grow less.

So the ogre which might eat us up is not the government or the High Priests. It's our possible failure to retain and practice our technology.

An Instructor or Supervisor or Executive *must* challenge with ferocity instances of "unworkability." They must uncover what *did* happen, what *was* run and what *was* done or not done.

If you have One and Two, you can only acquire Three for all by making sure of all the rest.

We're not playing some minor game in Scientology. It isn't cute or something to do for lack of something better.

The whole agonized future of this planet, every man, woman and child on it, and your own destiny for the next endless trillions of years depend on what you do here and now with and in Scientology.

This is a deadly serious activity. And if we miss getting out of the trap now, we may never again have another chance.

Remember, this is our first chance to do so in all the endless trillions of years of the past. Don't muff it now because it seems unpleasant or unsocial to do Seven, Eight, Nine and Ten.

Do them and we'll win.

AND ACADEMIES
HGCs
MISSIONS

URGENT AND IMPORTANT

KEEPING SCIENTOLOGY WORKING SERIES 5

TECHNICAL DEGRADES

(This PL and HCO PL 7 Feb. 65 must be made part of every study pack as the first items and must be listed on checksheets.)

Any checksheet in use or in stock which carries on it any degrading statement must be destroyed and issued without qualifying statements.

Example: Level 0 to IV checksheets SH carry "A. Background Material — This section is included as an historical background but has much interest and value to the student. Most of the processes are no longer used, having been replaced by more modern technology. The student is only required to read this material and ensure he leaves no misunderstood." This heading covers such vital things as TRs, Op Pro by Dup! The statement is a falsehood.

These checksheets were not approved by myself; all the material of the Academy and SH courses IS in use.

Such actions as this gave us "quickie grades," ARC broke the field and downgraded the Academy and SH courses.

A condition of TREASON or cancellation of certificates or dismissal and a full investigation of the background of any person found guilty will be activated in the case of anyone committing the following HIGH CRIMES:

1. Abbreviating an official course in Dianetics and Scientology so as to lose the full theory, processes and effectiveness of the subjects.

2. Adding comments to checksheets or instructions labeling any material "background" or "not used now" or "old" or any similar action which will result in the student not knowing, using and applying the data in which he is being trained.

3. Employing after 1 Sept. 1970 any checksheet for any course not authorized by myself or the Authority, Verification and Correction Unit International (AVC Int).

   (Hat checksheets may be authorized locally per HCO PL 30 Sept. 70 I, CHECKSHEET FORMAT.)

4. Failing to strike from any checksheet remaining in use meanwhile any such comments as "historical," "background," "not used," "old," etc., or VERBALLY STATING IT TO STUDENTS.

5. Permitting a pc to attest to more than one grade at a time on the pc's own determinism without hint or evaluation.

6. Running only one process for a lower grade between 0 to IV, where the grade EP has not been attained.

7. Failing to use all processes for a level where the EP has not been attained.

8. Boasting as to speed of delivery in a session, such as "I put in Grade Zero in 3 minutes." Etc.

9. Shortening time of application of auditing for financial or labor-saving considerations.

10. Acting in any way calculated to lose the technology of Dianetics and Scientology to use or impede its use or shorten its materials or its application.

REASON: The effort to get students through courses and get pcs processed in orgs was considered best handled by reducing materials or deleting processes from grades. The pressure exerted to speed up student completions and auditing completions was mistakenly answered by just not delivering.

The correct way to speed up a student's progress is by using two-way comm and applying the study materials to students.

The best way to really handle pcs is to ensure they make each level fully before going on to the next and repairing them when they do not.

The puzzle of the decline of the entire Scientology network in the late 60s is entirely answered by the actions taken to shorten time in study and in processing by deleting materials and actions.

Reinstituting full use and delivery of Dianetics and Scientology is the answer to any recovery.

The product of an org is well-taught students and thoroughly audited pcs. When the product vanishes, so does the org. The orgs must survive for the sake of this planet.

KEEPING SCIENTOLOGY WORKING SERIES 4

SAFEGUARDING TECHNOLOGY

For some years we have had a word "squirreling." It means altering Scientology, offbeat practices. It is a bad thing. I have found a way to explain why.

Scientology is a *workable system.* This does not mean it is the best possible system or a perfect system. Remember and use that definition. Scientology is a *workable system.*

In fifty thousand years of history on this planet alone, man never evolved a workable system. It is doubtful if, in foreseeable history, he will ever evolve another.

Man is caught in a huge and complex labyrinth. To get out of it requires that he follow the closely taped path of Scientology.

Scientology will take him out of the labyrinth. But only if he follows the exact markings in the tunnels.

It has taken me a third of a century in this lifetime to tape this route out.

It has been proven that efforts by man to find different routes came to nothing. It is also a clear fact that the route called Scientology *does* lead out of the labyrinth. Therefore it is a workable system, a route that can be traveled.

What would you think of a guide who, because his party said it was dark and the road rough and who said another tunnel looked better, abandoned the route he knew would lead out and led his party to a lost nowhere in the dark. You'd think he was a pretty wishy-washy guide.

What would you think of a Supervisor who let a student depart from procedure the Supervisor knew worked? You'd think he was a pretty wishy-washy Supervisor.

What would happen in a labyrinth if the guide let some girl stop in a pretty canyon and left her there forever to contemplate the rocks? You'd think he was a pretty heartless guide. You'd expect him to say at least, "Miss, those rocks may be pretty, but the road out doesn't go that way."

All right, how about an auditor who abandons the procedure which will make his preclear eventually Clear just because the preclear had a cognition?

People have following the route mixed up with "the right to have their own ideas." Anyone is certainly entitled to have opinions and ideas and cognitions — so long as these do not bar the route out for self and others.

Scientology is a workable system. It white-tapes the road out of the labyrinth. If there were no white tapes marking the right tunnels, man would just go on wandering around and around the way he has for eons, darting off on wrong roads, going in circles, ending up in the sticky dark, alone.

Scientology, exactly and correctly followed, takes the person up and out of the mess.

So when you see somebody having a ball getting everyone to take peyote because it restimulates prenatals, know he is pulling people off the route. Realize he is squirreling. He isn't following the route.

Scientology is a new thing — it *is* a road out. There has not been one. Not all the salesmanship in the world can make a bad route a proper route. And an awful lot of bad routes are being sold. Their end product is further slavery, more darkness, more misery.

Scientology is the only workable system man has. It has already taken people toward higher IQ, better lives and all that. No other system has. So realize that it has no competitor.

Scientology is a workable system. It has the route taped. The search is done. Now the route only needs to be walked.

So put the feet of students and preclears on that route. Don't let them off of it no matter how fascinating the side roads seem to them. And move them on up and out.

Squirreling is today destructive of a workable system.

Don't let your party down. By whatever means, keep them on the route. And they'll be free. If you don't, they won't.

HCO POLICY LETTER OF 5 MARCH 1965
ISSUE II

REMIMEO

POLICY: SOURCE OF

According to *Webster's New World Dictionary:*

POLICY: Political wisdom or cunning; diplomacy; prudence; artfulness. Wise, expedient or crafty conduct or management. *Any governing principle, plan or course of action.*

The last definition is the one we use.

According to the *World Book Encyclopedia Dictionary,* the one we most use (published by Field Enterprises Educational Corporation, Merchandise Mart Plaza, Chicago 54, Illinois, USA):

POLICY: A plan of action; way of management. Practical wisdom; prudence. Political skill or shrewdness. *Obsolete* — the conduct of public affairs; government.

The sense in which *we* use policy is the rules and administrative formulas by which we agree on action and conduct our affairs.

A "policy letter" is one which contains one or more policies and their explanation and application.

It is issued by the Hubbard Communications Office, is written by L. Ron Hubbard or written (more rarely) for him, has the agreement of the International Board and is basic organizational law in organizations.

A "policy letter" is not Scientology org policy unless written or authorized by L. Ron Hubbard and passed as a resolution or covered by blanket resolution of the International Board and issued or published by an HCO. It is not policy if any of those steps are missing.

The International Board is composed of three board members: the Chairman, Secretary and Treasurer. It is the controlling board of Scientology.*

The Chairman, Hubbard Communications Office and HCO Secretaries and staffs compose Division 1 of the International Board and all orgs.

*See three-division organizing board from 1965 in the Appendix.

The Secretary and all Organization Secretaries (US and Saint Hill) or Association Secretaries (Commonwealth and South Africa) and their staffs compose Division 2 of the International Board and all orgs.

The Treasurer, Assistant Treasurers, all accounting executives, and assistants for Materiel and their staffs compose Division 3 of the International Board and all orgs.

Policy for all divisions and orgs is made as above.

There are no other boards or board members, individual board members, officers or secretaries with the power of issuing policy. Boards issue resolutions. Individual board members or officers can issue directives, general orders and orders. These expire if not reissued as policy.

Other officers issue administrative directives in place of policy letters but these may only forward policy.

Secretarial Executive Director orders apply mainly to personnel or local conditions, expire in one year if not stated to expire earlier, may only last one year in any event.

Policy letters apply broadly to all orgs and Scientologists without exception.

Almost all policy has been developed by actual experience.

The only way policy can be changed is by writing up a policy letter in full and sending it to L. Ron Hubbard for approval or disapproval.

Policies cover hats, duties, lines, procedures, rules, laws and all other aspects of Scientology activity except technology.

Technology is covered in HCO Bulletins.

HCO Bulletins are written by or (more rarely) for L. Ron Hubbard and are issued by HCO and HCO Secretaries. They do not require sanction by the International Board.

No one else may issue or authorize an HCO Bulletin.

HCO Bulletins are recommended technical data. Certificates are awarded on the data contained in them and violation of it can therefore cause a suspension of the certificate. This is the main power of the HCO Bulletin.

An HCO Bulletin becomes policy only if mentioned in a policy letter.

A book may become policy if made so by a policy letter.

HCO Policy Letters are printed or (more commonly) mimeographed in green ink on white paper. This color combination may not be used for any other releases in Scientology. Reprinted policy letters sometimes appear in magazines in black ink on white paper but they are not the original.

HCO Bulletins are printed or mimeographed in red ink on white paper. This color combination may not be used for any other purpose in Scientology. Reprinted HCO Bulletins sometimes appear in magazines in black ink on white paper but they are not the original.

Committees of Evidence are called for in any violation of the publishing or counterfeiting of an HCO Policy Letter or an HCO Bulletin or their color combinations or signatures.

The only other official paper from L. Ron Hubbard and HCO is the HCO Executive Letter, usually a direct executive order or a request for a report or data or news or merely information. It is not policy but should be answered if an answer is requested. It is blue ink on green paper.

Using the color combination for any other purpose or counterfeiting one calls for a Committee of Evidence.

Sec EDs and HCO Executive Letters are basically LRH comm lines but are used by International Board Officers also if authorized.

The other divisions (2 and 3) have other means of comm, with other color flashes.

If it is not in an HCO Policy Letter it is not policy.

HCO Policy Letters do not expire until cancelled or changed by later HCO Policy Letters.

No officer or Scientology personnel may set aside policy even when requesting revision.

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 13 MARCH 1965
ISSUE III

GEN. NON-REMIMEO

DIVISIONS 1, 2, 3

THE STRUCTURE OF ORGANIZATION
WHAT IS POLICY?

The only reason anyone fights good policy is they're too stupid or too inexperienced in an org to understand it. Unable to grasp it, they are too lazy to work at trying. They miss words, don't see reasons, imagine situations are otherwise and in general can't grasp it. So they try not to use it or dream up their own. People with bad study histories can't grasp policy. For policy also follows the rules of study.

Therefore never put a person with bad study history on a key executive post. They can't grasp policy as they can't study it either.

Only personnel with quick study histories, fast passages through courses, can be counted on to put in an org or department pattern and keep it wheeling. The others are too involved in their own troubles and too imperceptive to be of any use in making an org boom.

Such people do however sometimes have a use even when not straightened up. They do well in pioneer areas where they have to do it all off the cuff and where their very inability to accept anything causes them also to refuse defeats and discouragements. Their inability to grasp a situation is often of benefit when bravery is required. This does not however excuse efforts to make them more capable and as they grow older and more experienced, they will also become brave and quick and *will* follow policy.

Following policy is a matter of grasping situations and knowing policy well enough to apply the right policy to the right situation. Where no policy covers, an experienced, quick person can easily extend the idea of general policy to cover it, knowing it isn't covered.

The dull person has never even grasped basic general policy and so confronted with usual or unusual situations alike, can't find any policy to cover anything and so acts in any old way.

On the other hand, policy, to fit and be of benefit, must be itself born out of great insight *and* familiarity with the facts. Government policy is usually written by clerks

who have never heard a shot fired in anger. Therefore almost all current government policy is completely silly. Nobody can apply it as it fits nothing and just gets everyone in trouble. Therefore a quick person with good judgment in the field and in the real situation can get through only by following his own policies and insights. This is easily mistaken for a dull person acting against policy that is good.

But even dull policies provide wide agreement as a basis for work coordination and so something happens on a larger scale. Individual policy-making on every post is the definition of chaos. Thus even bad policy is usually more workable than individual policy and can make stronger orgs.

Brilliant policy based on experience of course can cause orgs to zoom.

We conclude then that where we see a person constantly off-policy in an area that has worked well when *on*-policy, that we must act.

Where we have a *large* organizational scope we must have workable policy that is followed. For just lacking policy, good or bad, and lacking its being followed, we stay small by definition.

NO POLICY EXISTING MAKES SMALL, NONEXPANDING DEPARTMENTS OR ORGS.

POLICY, GOOD OR BAD, EXISTING BUT NOT FOLLOWED MAKES CHAOTIC DEPARTMENTS OR ORGS AND CAUSES SHRINKAGE.

GOOD POLICY BASED ON ACTUAL SITUATIONS EXPERIENCED, FOLLOWED WELL, MAKES AN EXPANDING DEPARTMENT, ORG OR CIVILIZATION.

The smaller the org unit or department the less policy is needed. Reversely, the less policy is used the smaller will become the org unit or department.

One can always safely assume, when policy is available, that nonexpansion is the direct result of the policy remaining unknown or not followed. The steps to take are therefore:

Expansion formula:

1. PROVIDE GOOD POLICY.

2. MAKE IT EASILY KNOWABLE.

3. BE STRENUOUS IN MAKING SURE IT IS FOLLOWED.

This is the most broad possible formula for expansion.

Profitable expansion of a unit, department, org, company, empire or civilization depends utterly on the above formula being applied.

If it is well applied, literally thousands of other impeding factors drop into unimportance.

This applies to anything, even a person, but the bigger the number of individuals involved the more rigorously it has to be followed.

The bigger the size of the activity concerned (the more people involved in it) the more damage can result from failures to follow policy.

Thus orgs or companies which halt expansion mysteriously only need to have more policy, or to make policy more easily available or to be more vigorous in requiring it to be followed.

Policy is a *guiding* thing. It is composed of ideas to make a game, procedures to be followed in eventualities and deterrents to departures.

The basic policy of an activity must be the defining and recommending of a successful and desirable basic purpose.

Take a navy, to get a more distant comparison. If a navy has the basic purpose of defending a nation and its citizens and expanding their scope, and if the policy is the guiding principle behind all other policies and if these in turn are developed from experience and made known and followed, then oddly enough even new inventions or new philosophies of state could not prevent that navy from doing its job and expanding the nation. The US Navy might very well have won the war with Japan in its six weeks if those who headed it in Washington had not been mere political puppets subject to every Congressional and Presidential whim. The textbooks were very clear about what the navy should do. But King, Nimitz and Short, the admirals involved, had been chosen by whim, favoritism and capacity for liquor, not by raw statistics of "good navy activity." They had been trained at an academy where the basic principles of "good navy" and raw statistics on personnel had not been used to choose an academy head or instructors. So King, Nimitz and Short, as admirals, *listened to current political rumors or whims* (being only confirmed in political not naval policy) and so let Pearl Harbor happen. How? Their own naval textbooks said, "During times of negotiation with an unfriendly state, the position of the fleet should be at sea, whereabouts unknown." That is line one of the navy textbook on tactics and strategy. Where was it? In Pearl Harbor during many days of hostile negotiation between Roosevelt and the Japanese — the most dangerous naval rival. Where were King and Nimitz? At a cocktail party with the politicians. Where was Short? Giving his all ashore, having given his men full weekend liberty and having ordered all ammunition stowed below for a coming admiral's inspection. So Pearl Harbor could happen. But did the humans learn? No. True, Short, acting on his Washington orders notwithstanding, was removed and eventually court-martialed. But King and Nimitz took over the whole navy for more than four heartbreaking years of "promote by political whim," "what policy?" and defeat in battle after battle until aircraft turned the tide of war and the army and an atom bomb finally finished it. Now the navy is really no more. A few subs. A few patrol ships. The rest in mothballs. People think the navy is small now because of new weapons. No, it is small because it (a) didn't clearly express its basic purpose, (b) didn't educate its

people well in the policy it did have, (c) let political opinion shift it about, (d) chose its officers by rumor, cabal and *social* presence and (e) forgot its texts when the emergency loomed. Result, long war, now no navy worth anything — officers palling with men, ships in the boneyard. Could the navy have done its job in 1941? Yes. Had its original policies regarding officer training and selection been followed ruthlessly despite all politics over the years, King, Nimitz and Short would not have been in charge or would have acted by policy had they been. The fleet would have been at sea during negotiations and the strike on Pearl Harbor would have been a Jap bust. The fleet would have been there to knock out the Jap in his own home ports. The war might have ended with Japan in the first six weeks. The point is not whether it is good or bad to have a navy. The point is that here is an actual organization and an actual occurrence.

Therefore one can learn that:

An individual, species, organism, organization, to succeed, survive and expand in influence must have a formulated BASIC PURPOSE.

To keep beings from growing, the reactive bank is almost entirely made up of false and booby-trapped purposes. Thus we can see that, by its having been impeded so thoroughly in past ages, the idea of having a personal or organizational or group basic purpose is an extremely valuable one.

Without one expressed or unexpressed, a being or an organization or group without one doesn't grow but shrinks and becomes weak — in this universe nothing can remain long in an unchanging state. Given a potentially successful basic purpose that is acceptable to the being, organization or group, one can then formulate POLICY.

POLICY is a rule or procedure or a guidance which permits the BASIC PURPOSE to succeed.

The basic purpose runs through time. When it is impeded, distracted from, not complied with, thwarted or stopped, a state of failure of the basic purpose occurs in greater or lesser degree. Sometimes challenges to it cause it to strengthen but only when the challenges are consistently overcome.

A being, organism, organization, group or species or race *learns* in forwarding its basic purpose or meeting challenges to its basic purpose certain *lessons*. Certain procedures or courses of action, rules or laws were conceived at times of stress and some of them were successful. Those that were not successful or helped the opposition were *bad*. Those that were successful forwarded of course the basic purpose and were *good*.

The successful ideas or procedures that assisted the basic purpose were then dignified by the status of proper ideas, acts, procedure or *policy*.

Those that were unsuccessful in assisting the basic purpose became *bad policy*.

Ideas or procedures that distracted from or balked the basic purpose were called *offenses*.

Things, groups, other-determinisms that challenged or sought to stop or refused to comply with the basic purpose became *enemies* or opposition.

Therefore *policy* is derived from successful experience in forwarding the basic purpose, overcoming opposition or enemies, ending distractions and letting the basic purpose flow and expand.

Policy laid down which is thought up independent of experience in similar situations is either the result of great foresight and is successful or it is simply stupidity, in that it seeks to handle situations which will never exist or if they do, won't be important.

Policy based solely on bad rumors, unverified, which may or may not reflect actual existing conditions or which is laid down at the insistence of some self-interested person or minority without taking the rest of the group into account is very destructive policy simply because it does not match the conditions which actually exist and so, *in itself,* may impede or distract from the basic purpose. An example of this is legislation by legislators who, otherwise uninformed, act because of pressure groups, minority riots or simply sensational press that seeks not legislation but simply to feed the appetite of a disaster-hungry public.

If bad policy or laws or actions based on rumor rather than raw facts become too frequent and general, then the basic purpose of a being, organization or group becomes itself distracted, smothered and forgotten and the result is shrinkage, loss of power, death and oblivion. Although it is often too late when bad policies or pressure-group laws have been the order of the day to slash them all from the books and exhume the basic purpose, the action of sweeping away unreal, unapplicable and impeding laws and policies which were based originally on rumor and bad sources can have the effect of rejuvenation on a being, a group or an organization which has begun to die. Periodic sweep-outs of antiquated and didactic laws (rather than general concepts and subpurposes) *must* be undertaken by a being, organization, group or race or species. However, such an action must be carefully done, selecting only those laws or rules which came into being because of pressure groups or infrequent enemies or which were derived from no experience. And before throwing any policy away, one must carefully examine its history to see if it is still restraining an enemy or forwarding some subpurpose. For throwing away a *lot* of lessons could also collapse the forward thrust of the basic purpose which has "gotten this far for *some* reason."

SUBPURPOSES are the purposes of the various sections or parts of the being, organism, group, race or species which forward the basic purpose. They must amplify, qualify and/or describe the action or procedure of the part of the whole in a brief and crisp way so as to hold them in function in their support of the basic purpose. They could also be called, the PURPOSE OF A PART OF THE WHOLE, or as we use them, the purpose of a post, unit, department or an org with a special function. When one hears of the PURPOSE of his hat or section, unit, department,

org or division, he is observing the SUBPURPOSE of a part of the whole organism which is vital to the action of forwarding the BASIC PURPOSE of the movement. Indeed he may never know what the BASIC PURPOSE really is and only know the SUBPURPOSE of his own hat, section, unit or department. However, by studying the various SUBPURPOSES of several hats or sections, he could probably figure out the SUBPURPOSE of the department and by studying the various SUBPURPOSES of the departments of an org, he could probably guess at the BASIC PURPOSE of the whole being or organization or movement. If study of SUBPURPOSES either fails to locate any or ends in being unable to relate them into any large PURPOSE, one is of course studying a disorganized movement.

One can change a SUBPURPOSE (cautiously indeed) or add parts with new SUBPURPOSES, and leave a movement (a) unaffected, (b) increased in scope or (c) decreased in size and influence.

One can, up to a point, add policies on and on, limited only by the ability to get them known and leave an organization or movement (a) unaffected, (b) increased in readiness to meet emergencies or (c) crippled. The wisdom of the policy and whether or not it was a successful solution to some actually possible confusion or crisis determines whether or not it should be added or deleted. Foresight plays a large role in formulating a SUBPURPOSE or a policy. These two are never wholly the product of chance or experience; indeed they may be 80 percent wise foresight and 20 percent experience and still be good usable SUBPURPOSES or policies. Twentieth-century science sought to discount wisdom entirely and beings and organizations were educated or developed with no SUBPURPOSES whatever and all policies were developed either by clerks, teachers or legislators inexperienced in any part of life or were taken from past experience only, with no refinement of any wisdom. The failures of governments and systems and races in the first half of the twentieth century were wholesale and the wars frequent and senseless.

Personal, state, or organizational or social chaos results from adding parts with no well-defined SUBPURPOSES, enforcing policies based on rumor or taken from the data of mere theoreticians in their ivory towers, an irresponsible press or legislators in their self-interested heads and smoke-filled rooms. A study of how the pressure groups, clerks, theoreticians and irresponsible press and duly elected but completely unselected and uneducated legislators destroyed individualism, states, businesses, civilizations and races would be only a study of how not to organize and survive, how to ignore, abandon or discredit all basic purposes, subpurposes and successful policies. The scene was one of indescribable chaos that filled one with protest and dismay. If there was a wrong way to do things it became the order of the day and youth went into a complete apathy, purposeless and drifting, and the world began to die a little each day, the mental hospitals became flooded, life ceased to be any fun at all. Things are not always like this and indeed don't have to be.

Mismanagement or misgovernment of self, an organization, group or state would then consist of failing to forward the BASIC PURPOSE, not grasping and specifying SUBPURPOSES, and not experiencing and formulating policies to strengthen successful ideas or actions that forward the basic and subpurposes and impede ideas or actions that retard them, and not recognizing actual enemies or oppositions or

planning and carrying out successful campaigns to handle them. Failing in any of these actions the individual, group, organization, state, civilization, race or species will falter, fail and die.

Recognizing the basic purpose, supplementing it with subpurposes for the parts of the whole, and learning and enforcing the policies which bring success, spotting actual enemies or oppositions and planning and carrying out campaigns to overcome them, removing distractions, rewarding the forwarding of basic purpose and subpurpose and penalizing actions which retard, an individual, group, organization, civilization, race or species survives, gets better, lives on higher and higher planes.

The game of life has the formula of having and forwarding a basic purpose and supplemental subpurposes.

This is done by the Formula of Policy which consists of:

1. Conceiving, recognizing, testing and codifying successful ideas, actions and procedures that forward the basic purpose and retard its opposition;

2. Making these policies known and in greater or lesser degree understood; and

3. Getting these policies followed.

If in (3) policy is to be followed, there must be discipline, but even more important, there must be ways of choosing personnel other than by sloppy rumor or social presence.

Personnel can *only* be chosen on raw statistics supported by ample data containing figures. If the raw data is good, then one assumes that basic purpose is being forwarded as it is meeting with success. The raw data already has a curve in it as it is tabulated against the success of basic policy. So the person whose raw data is good *must* have been forwarding basic purpose, therefore must be either a screaming genius at originating ideas that forward the basic purpose or a wizard at knowing, applying and following policy. Either way he or she is worth all the diamonds of Kimberley.

Such a person will inevitably rise in the organization or group if raw data alone is observed in selecting and promoting personnel.

If the person is a screaming genius at originating policy and has not made enough errors to reduce his successful raw data, and has stayed on-policy otherwise so as not to reduce the effectiveness of those around him, he will eventually rise to a level which makes policy and the whole organization will benefit. Similarly a person who grasps and follows policy very well and forwards the basic purpose well and who is very capable will sooner or later rise to a position of trust that safeguards against sweeping changes that will retard or crash the group or organization and so is vital at higher levels.

Out of these two general types of being one gets the leadership levels of a movement. But they will never arrive at all if those in charge ever use anything but statistics in judging them since their very success will cause enough cabal to influence high levels against them if these high levels ever use fragmentary rumors or opinions in handling personnel.

RAW DATA means assembled but otherwise unevaluated data. It is "uncooked" and "unflavored" and "untouched by human hands." It, in short, is uncontaminated or unchanged data. It is native and natural and unspoiled. And the only data that answers those qualifications is statistical data. "How many or how few and how much or how little in what time." That is the *only* data that a senior official in a group, organization or state ever *dare* use in selecting and promoting personnel.

The "state" of the person, the "result of his tests," "the examination figure," are all *useless* to a senior official deciding upon who to promote or pass over. His decision will be wrong in exact proportion that he permits opinion to enter and raw data to drop out.

Introducing opinion into personnel selection is a study of "how crazy can one get." How much liquor a man can hold, how acceptable socially is his wife, his breath, his taste in ties are all completely disrelated data. For how does anyone know at the top really what the environment is now like at the bottom? Maybe that lovely music room–board room requires a pink necktie, a purring wife and endless capacity for drink, but is that the organization's environment? It is not! Maybe the organization's environment demands an allergy to liquor, a complete tart for a wife, overwhelming breath and neon ties. And maybe tomorrow's board level will too! The world changes, it does not become softer. Only some people do.

The psychiatric or school test alike are written and administered by people in ivory towers who again have no contact with the organization's real environment. Statistical as they may try to be, such tests are utterly worthless. They are not on-the-job statistics. They are classroom or laboratory statistics. They are definitely cooked data. And when used for personnel and promotion they cook a lot of careers. And by putting eggheads on post, they cook a lot of parts of an org if not the whole thing. They have some small value in determining someone's quickness or slowness, but the conditions are too unreal and the necessity level of real environmental emergency is missing. It's like a plane crash synthesized in bed. No jolt. So, poor (but not the worst of) cooked data.

Maybe the working environment demands a dumb guy who is too slow to panic at awesome futures! Yet bright enough to see what policy applies. When men with small experience in it can qualify to run the world, they can only then administer tests to advise who should run it.

Only statistics that represent action and accomplishment are fair tests of ability and who deserves promotion or the gate.

Therefore the only organization that is a sound organization is one WHOSE EVERY ACTIVITY can be tabulated by statistics.

If you wish to reorganize you must do so with an eye toward "Can this post (dept or division) be statisticized?" Any body of people such as "the typing pool" or "the instructors" must be broken down to individuals one way or another. One has three things then that must be tabulatable: (a) the individual, (b) the part and (c) the whole. Each of these must be so organized as to be capable of being seen through accomplishment or lack of it. Only this is fair organization. All other types are unfair, will not select out leaders or good workers and subject these to the enturbulence of the lazy or those with other philosophies to fry.

If you have any other type, people are promoted or fired by rumor, backbiting or common brag, and either type have only liability. In using them one destroys empires and every great civilization that is dead died because opinion and rumor were the key causes of personnel changes.

It is unfair to every decent staff member to have an org that cannot be tabulated by relative income, work or traffic.

The common way of the dead-and-dying past was to put some fellow in charge and then shoot him or reward him if things went wrong or well and neglect the rest. This works unless a society only protects the man at the bottom and routinely weakens the man at the top. When that happens, the system is useless. Only by chance do things go well. So chance is added to rumor as the means of promotion or the gate. No wonder the Asiatic, a member of our oldest civilizations, says "Fate!" and explains it all. He had too many rulers who ruled by rumor or chance or didn't rule at all. And so the power died. Only when you can find out who did which or why can you be just. And only when an organization can be fully viewed top to bottom through raw data of how much or how little can individual show be rewarded and individual nuisance be weeded out.

REALITY

Reality in policy, in orders, in advice, depends upon either great insight or great experience. Combining both gives great success.

But no matter how great the insight may be, viewing the actual condition is a vital step to resolving it. Remote solutions not based on experience or close inspection are usually unreal.

Therefore no orders should ever be issued without data and experience and insight. Data comes from tabulation of actions and amounts in organizations. Experience comes from working in similar or parallel situations. Insight comes from the ability to observe coupled with the courage to see and the wit to realize without any thought of personal importance.

Therefore, the soundest leadership comes from the most extended experience and intimate knowledge of that or parallel circumstances. Leadership without this will lack judgment.

Remote leadership is best when it itself is involved close to its hand with the same problems. Therefore remote leadership must have under it similar organizational problems and traffic at home that exist at the remote point. Then understanding is quick and solutions are real.

For one organization to command another, they must be similar.

Management–labor problems evolve from the communications formula "cause-distance-effect with intention at cause, attention at effect, and duplication." A boardroom is not a machine shop. The machinists seek to duplicate the board or refuse to. If they fail to they always refuse to. Thus only a working org of similar pattern can command a working org.

The commanded org will always seek to follow the pattern of the commanding org and duplicate what it thinks the commanding org consists of. A great tension exists at all points of nonduplication. This tension stems from the effort to duplicate. If foiled, trouble or breakage will occur at that point. Where the subordinate org is unable to duplicate what it thinks exists at the senior org then it suffers an ARC break of greater or smaller magnitude. Patterns, officer authority, comm lines, all must be similar. Size is not important in this. Org pattern is. If the subordinate org has any hope of ever attaining the size, and if the purposes, pattern and policies are the same, that is enough. ARC will remain high, execution will be good and expansion is assured, providing of course that the basic purpose is good in the first place.

EXPANSION

All that is needed to expand an org or its business, given a good basic purpose and an area to expand into, is the knowledge of the expansion formula:

DIRECT A CHANNEL TOWARD ATTAINMENT, PUT SOMETHING ON IT, REMOVE DISTRACTIONS, BARRIERS, NONCOMPLIANCE AND OPPOSITION.

The basic formula of *Living* (not Life) is:

HAVING AND FOLLOWING A BASIC PURPOSE.

Thus expansion is an increase in living. To increase living and raise tone and heighten activity, one need only apply the expansion formula to living. Clean away the barriers, noncompliance and distractions from the basic purpose and reduce opposition, and the individual or group or org will seem more alive and indeed will be more alive.

All an executive has to do to expand a part or the whole of an org is to divine the basic purpose, divine or issue the subpurposes, point out an area to expand into and then remove the distractions from, barriers to and noncompliance with the basic purpose and subpurposes, and put something on the channels that augments existing impulses and expansion will begin. It will be successful to the degree that the basic purpose is good, the subpurposes real and the policies are taken from real experience and interpreted by persons facing similar current problems.

By the process, thereafter, of just removing barriers, distractions and noncompliance, expansion can be accelerated to a point where it overwhelms all hostile efforts to contain it and the result is extremely gratifying in terms of expansion at velocity. It seems completely magical. For life instantly appears.

One must remember to *channel* a basic purpose. A channel has two boundaries, one on either side of it. These must exist in an org. They consist of discipline of those who would distract or stray or wander or who help the opposition or suppress the basic purpose or subpurposes or who cannot seem to learn or comply with policies or orders. Discipline must only be aimed at the above and, where it is random or doesn't serve to channel, then it itself is a distraction or a barrier and will breed noncompliance. But when entirely absent, the force is let to wander and expansion does not occur. Discipline must be precise, known, uniformly applied and inevitable when the rules are broken. Those who do their job welcome it as it helps keep others from preventing them from working or acting or complying or getting their own jobs done.

HCO POLICY LETTER OF 4 DECEMBER 1966

REMIMEO

ADMIN KNOW-HOW SERIES 9

EXPANSION
THEORY OF POLICY

It is not very hard to grasp the basic principle underlying all policy letters and organization.

It is an empirical (observed and proven by observation) fact that nothing remains exactly the same forever. This condition is foreign to this universe. Things grow or they lessen. They cannot apparently maintain the same equilibrium or stability.

Thus things either expand or they contract. They do not remain level in this universe. Further, when something seeks to remain level and unchanged it contracts.

Thus we have three actions and only three. First is expansion, second is the effort to remain level or unchanged and third is contraction or lessening.

As nothing in this universe can remain exactly the same, then the second action (level) above will become the third action (lessen) if undisturbed or not acted on by an outside force. Thus actions two and three above (level and lessen) are similar in potential and both will lessen.

This leaves expansion as the only positive action which tends to guarantee survival.

The point of assumption in all policy letters is that we intend to survive and intend so on all dynamics.

To survive, then, one must expand as the only safe condition of operation.

If one remains level, one tends to contract. If one contracts, one's chances of survival diminish.

Therefore there is only one chance left and that, for an organization, is expansion.

PRODUCT

To expand, any company needs a demanded product and will and skill to produce and deliver it. It can be a service or an item.

If a company has a demanded product and will and skill to produce and deliver it, it must organize to expand. If it does, it will survive. If it organizes to stay level or seeks to grow smaller, it will perish.

This is easily observed in nations. Whenever one seeks to remain the same or to lessen itself, it usually perishes. It need not seek only to expand its borders. It can also expand its influence and service. Indeed, the effort to expand borders in a nation without increasing a demand for its influence and products is a primary cause of war. If a nation expanded the demand for its influence and products, it would expand without war. When a nation seeks to merely expand by force of arms and does not expand the demand for its products, one gets a dark age or at least a social catastrophe.

Rome, early on, was in great demand for its social technology and manufacturing skill and only a cruel streak in her made her wage war to expand. Britain for instance was ready to welcome Roman baskets and pottery and art and had been demanding them for nearly a century when Caesar's vicious ambitions actually wrecked the smooth progress of Rome by enforced expansion by arms in excess of the demand for Roman products. This was one Roman product nobody wanted — Caesar and his legions.

Psychiatry's product of further insanity was not in demand by the people but by the state which sought to crush people or at least hold them down. So psychiatry expanded by government regulation, not by popular demand, and so at this writing stands in danger of complete extinction, for its influence depends utterly on "expanding" into the legislatures and government treasuries and no expansion whatever of any demand from the public and no product except slaughter.

The Roman Catholic Church once had a healing product, by actual treatment and by relics and miracles and was in great demand by the public and eventually even the barbarians. But she began to fight progress in science and knowledge and her product turned into exported ignorance backed by autos-da-fé (burning heretics) and thus ceased to expand and today is rapidly shrinking.

Buddhism, earlier than that, expanded continuously as it never sought new extension of territory other than that of learning. Buddhism failed in India alone because its monks became licentious, ceased to deliver true teachings and were swept up, most likely, in India alone, by the Muslim conquest of that unhappy country sometime around the seventh century.

Britain of the twentieth century actively sought to contract her empire and did so to the tune of internal economic catastrophe.

SINGLE PRINCIPLE

Thus it should be obvious that contraction leads to death and expansion to life, providing that one maintains a demand for itself and the will and skill to produce and deliver a product.

If, as ours is, the product is very beneficial and if we continue to produce and deliver, the demand is assured. In this we are fortunate. And we are also fortunate

that, try as they will, no squirrel is ever able to duplicate our product since one variation (that of changed brand) leads to others and they promptly have neither product nor demand — that observation is itself empirical. No squirrel has lasted more than two or three years in the past sixteen years. And there have been many. That they squirrel shows enough bad faith to drive away the public the moment the public hears of the original.

Thus providing we maintain the will and skill to produce and deliver we can expand and proper expansion that will continue is possible.

All our policy then is built on EXPANSION.

It assumes we wish to survive.

And it stresses the production and delivery of a straight, nonsquirrel product.

It is calculated to ensure a continued and widening demand by ensuring that product remains good and beneficial.

The technology itself is complete but it expands also by experience of administration of it and simplifying its presentation.

But to alter the basics of the technology will stop expansion because it is what we are producing, not what we are building.

We are building a better universe. It has not been a good universe to live in so far but it can be.

Our punitive force is our ethics system and it exists to ensure the quality of the product and to prevent the blunting of demand for the product.

INTERPRETATION OF POLICY

The organization then has all its policy rigged to expand.

It takes many things to ensure expansion.

Thus when you are interpreting policy, it should be interpreted only against EXPANSION as the single factor governing it.

This can serve to clarify questions about policy. The correct interpretation always leads to expansion, not holding a level or contraction.

For example, policy bars the entrance of the healing field. This is solely because there is too much trouble with the occupiers of that field and only outright war (with no demand) could solve them. This seems to be a brake on expansion. It is only a brake on expanding by war in the absence of demand. Therefore the right way to expand is to gradually build up general public demand, let experience by the public see that we heal and when the demand is there and howling for us, reinterpret the policy or abolish it as a brake to expansion. As one can only expand by external demand for the product, if one seeks to expand in the absence of a specific demand

for the product, one has war and war doesn't lead to expansion any more than burning heretics and other brutalities expanded the Catholic movement.

So one interprets policy against *proper expansion* that is proper.

CORRECT EXPANSION

Expansion which when expanded can hold its territory without effort is proper and correct expansion.

Hitler (like Caesar) did not "consolidate his conquered territory." It was not possible to do so, not because he did not have troops but because he didn't have a real demand for German technology and social philosophy before conquering. Thus Hitler lost his war and fascist Germany died. It is almost impossible to consolidate territory where one was not invited in in the first place and force had to be used in order to expand.

One can remove a real suppressive by force to ensure demand will then build, providing he does not seek to force the product on the suppressive and all those around the suppressive.

The suppressive, as an individual, can be removed by force because he is an antidemand factor using falsehood and lies to prevent demand from occurring. But one, in removing the suppressive, has to be sure one's own product and delivery are still correct and straight and in no way suppressive of anything but suppressives.

Further one must leave at least a crack in the door and never close it with a crash on anyone because a demand still may develop there.

The only way to start a full scale revolution is totally and thoroughly slam the door. One must always leave a crack open. The suppressive can recant and apologize. The pauper can by certain actions no matter how improbable secure service. Etc.

In short, use force only to shut down false antidemand factors. Yet leave the door at least a crack open in case demand without duress develops. Never finally shut off a possible demand.

You can stimulate demand. You can create it. But you may only comfortably and properly expand into demand.

Removal of a suppressive only brings a potential appearance of demand from the area he dominated. That potential, by some means, the best of which are good dissemination and service examples, must become demand before one can truly occupy territory.

Thus areas taken purely by force of arms can never be held by force of arms in the absence of demand for product and thus demand by the area for occupation and consolidation.

As we have a product that frees in an ultimate sense and de-aberrates, there is of course an end to the game. But it is so far ahead, embracing a whole universe, that it requires minimal consideration.

Expansion requires area to expand into. And we are in no danger of running out of that.

If we were dependent as nations often think they are on boundary expansion on one planet, or into one planet's populations as companies think they are, we would have brakes on expansion due to territorial or population limitations alone. But we are not likely to encounter such barriers for a period of time so long we can consider our expansion potential as infinite — and are the only organization that honestly can so consider. We are not conquering land in the government sense anyway.

OVEREXPANSION

All factors, then, in policy are rigged for expansion.

And this brings about a possibility one can be asked about, that of *over*expansion.

One can "overexpand" by acquiring too much territory too fast without knowing how to handle it. One can conquer new territory as fast as one wants IF he knows how to handle the situation.

There are several ways one can "overexpand." They all boil down to overextended administration lines in a *single* administrative unit.

In this, one must know the principle on which the org board was originally conceived. It is that of Thetan–Mind–Body–Product.

If there is a thetan, a mind (organization potential, not a harmful mass) can be set up — a mind which will organize a body which will produce a product.

If any one of these elements (Thetan–Mind–Body–Product) are missing, then an organization will fail.

Man is so aberrated all mental actions seem to him to be reactive mind actions. But there has to be in organizations a data and problem-solution coordination unit in order to set up a body. (A thetan can do this without a lot of mass, having his memory and perception and intelligence.) We have then an Advisory Council to coordinate acquired data, recognize and resolve problems. Above it, there has to be a thetan somewhat detached from it. This may be a higher mind (Ad Council) operating as a director to the lower Ad Council.

The mind must operate to form a body. This body is the MEST (matter, energy, space and time) and staff of the organization.

This body must produce a product. This in the HGC for instance is resolved cases.

Any smaller part of the whole organization is also a Thetan–Mind–Body–Product. Often the executive is both thetan and mind but as soon as traffic gets too heavy, he must form a separate mind such as an administrative committee or a personal staff to compose the mind. In such a smaller unit than the whole org, there is yet a body (the staff and MEST of the unit). And there *must* be a specific product. The product sometimes is absent and sometimes incorrectly assigned but if so the unit won't function.

Overexpansion occurs only when one tries to handle the larger volume with the same Thetan–Mind–Body–Product numbers one had before.

This tells you why single practitioners can't expand their practices without overwork.

It also tells you why some executives are upset at the idea of expansion as they (lacking organizational insight) see it solely as overwork. They don't see that when you expand volume and traffic you must expand the organization.

There is a wrong way and a right way to expand an organization.

The wrong way is to add staff and facilities endlessly (like governments tend to do) without adding to the organization itself.

If you had huge affluences occurring steadily, you would soon go into collapse if you did not expand also *by organizational units* or branches.

In taking over a new field or area of operation, for instance, one errs when he adds that traffic to the basic organization's traffic.

In the presence of huge escalating affluences, one must analyze what is causing them and reinforce them. BUT one must also see what new KIND of traffic is being added.

If one finds a new KIND of traffic, then one sets up a suborganization unit to handle it which is complete in itself.

If we are now getting "businessmen" in quantity, we set up, under the control of the original organization:

1. a thetan to supervise it,

2. a mind to coordinate it,

3. a body to handle it, and

4. a new product called "released/cleared businessmen."

If we then were to find the new unit (struggling to form itself into seven divisions on its own by now) gets a lot of demand and statistics on an Org Exec Course, it must cease to gratuitously coach it and set up its "Business Academy" teaching the Org Exec Course as Dept 10, appointing a thetan, mind, body and achieving a product "trained businessmen" and see that units to support it occur in other divisions and an ethics unit to prevent blunting of demand and re-aberration.

This can even go backwards. One sets up in Dissem a unit called "Business Course Project Promotion Section" and stimulates the demand and then when it is there puts in its Department 10.

Soon all seven divisions have extra units to care for this new action, each unit with a Thetan–Mind–Body–Product. The products are different but they all add up to "trained businessmen," whether they are creating demand, financing or servicing.

So *over*expansion is only underorganization in the main.

One can of course "overexpand" by attempted servicing in the absence of demand causing thus losses in finance. In such a case only concentrate on creating *new* demand, not on servicing old demands. This by the way is the most common error in organizations of ours. They shrink because they are not creating *new* demand and concentrate only on creating demand in those already demanding (which is lazy-easy).

New demand is expensive to develop. Thus you often see finance units frowning on "new demand" expenses and cutting down magazines in number of issue, not buying new mail lists, etc.

To start a new suborganization, one sets up on the basis of potential demand, sets up ethics to prevent demand-blunting or bad internal service or performance, works on increasing the demand, introduces service, sets up external ethics to prevent blunted demand, increases the demand by dissemination to *new* and *old* areas of demand, increases service, ensures product, increases the organization (not just staff), increases demand in new and old areas, stiffens up ethics, improves service facilities, etc., etc.

It's continuous expansion of volume, continuous expansion of organization, continuous expansion of demand. Where one lags behind the others one gets trouble.

It is almost impossible to run a nonexpanding organization with ease. One gets into financial crises, staff troubles and overwork. Decay has set in. And fighting it is sure to overwork an executive. The easiest course is to expand. Then one has the help.

Summary: In understanding policy one must understand its key and that is expansion.

Only a Scientology organization has an unlimited horizon. But any organization must expand to survive.

The only ways you can "overexpand" are to fail to expand with new demand and keep pace with it evenly with organizational expansion as well as numbers.

It is easier to expand than to "remain level."

Organizations and units which do not expand cannot stay level and so contract.

Org executives and personnel are overworked only when they cannot afford to expand and thus cannot get the help they need to do the work, quite in addition to there being more problems made by contraction than by expansion.

Scientology organizations are designed for expansion.

Expansion requires an expansion of all factors involved and when something expands out of pace with the rest which is not expanding at the same rate, trouble is caused.

Uniform expansion of demand, ethics and service into new fields and areas as well as old areas of operation are needful to trouble-free activities.

Each member and unit of an organization has a product which, if different, contributes to the whole product of an organization.

The ultimate product of Scientology is a universe that is decent and happy to live in, not degenerated and made miserable by suppressives as it has been. This is accomplished by the de-aberration of individuals and the prevention of blunted demand and re-aberration by suppressives and this is the method of expansion.

If in these early days of Scientology we have any troubles, they occurred by an earlier imbalance of expansion.

Demand was created without handling suppressives, which unequal expansion gave us a backlog of unhandled ethics in the society. All we need do is catch up our backlog in those organizational functions which were not expanded when they should have been and all will go smoothly.

Any time you do not expand uniformly with all functions you get an appearance of overexpansion by some functions. The best answer is not to cancel the expanded functions which overreached but to catch them up by expanding the ones one neglected in support. You will have trouble wherever you cut back an expansion as that is contraction. The answer, within reason, is to advance all else to catch up to the expanded portion while still, more calmly, expanding it.

HCO POLICY LETTER OF 9 NOVEMBER 1968

REMIMEO

IMPORTANT

STANDARD ADMIN

This is the first policy letter on STANDARD ADMINISTRATION.

STANDARD TECH came in with a crash just by teaching the most basic of basics as the most important actions. Cases which hadn't moved for years, when handled by Case Supervisors and auditors who skipped all the airy-fairy nonsense and just did the usual ordinary basic actions, suddenly flew.

There is also Standard Training Procedure. This again is the ordinary, down-to-earth basic actions. A class that hadn't moved at all suddenly took off and all graduated when the USUAL was done.

Thus we find the flaw in all our actions to be the failure to separate out the truly basic important actions and instead engaging upon trivial complexities.

It is a characteristic of a thetan that the least complex actions are the most powerful. When his confront lessens he tries to do things by vias that add complexities and he then fails and becomes weak.

So, just as we blasted our way to 100 percent results with STANDARD TECH, so we can thunder straight through to victory using STANDARD ADMIN.

DEFINITIONS

STANDARD means "a definite level or degree of quality that is proper and adequate for a specific purpose." (*Webster's Third New International Dictionary Unabridged,* standard 3b, page 2223.)

ADMINISTRATION means "the principles, practices and rationalized techniques employed in achieving the objectives or aims of an organization." (*Webster's Third New International Dictionary Unabridged,* administration 5a, page 28.) We commonly call this "admin" as a shortening of it and to designate the work of doing it.

ORGANIZATION means "a group of people that has a more or less constant membership, a body of officers, a purpose, and usually a set of regulations." (*Webster's Third New International Dictionary Unabridged,* organization 2b, page 1590.)

BASICS means "(basic-s) something that is basic: FUNDAMENTAL."

BASE means "the bottom of something considered as its support."

FUNDAMENTAL means "serving as an original or generating source: being the one from which others are derived."

DERIVED means "formed or developed out of something else," which is to say something formed or made from a basic.

Thus if we have the BASIC or base or starting point, and know it well, then from it we can develop more complex actions.

We had to have the fundamental or basic laws of organization in order to develop the full structure of organization.

Administration becomes STANDARD when we have the most important points or laws or actions and when we always use these and use them in just the same way.

For example, some people look at a factory as a big complex structure, they consider it very complicated or hard to understand or are in awe of it. Or get confused trying to study it. Well, the moment they know that the *basic* action of the place is to make silk cloth, they have a fundamental on which to understand what is going on. When we then know that raw fiber goes in one side, gets processed and comes out the other as satin, we can begin to sketch in what its flow lines must be. At last we have that, we can assume somebody runs it and that people work there, and taken all in one piece it's an organization.

To RUN the factory we would have to know the most important duties of every person in the place, the functions of the machines and the lines of flow. And to run it SUCCESSFULLY, we would have to know where its raw fiber came from and its cost and who would buy it and its price and how much the various expenses were to keep it going and to make it make more than it spent, and we'd have its economics and accounting.

These would be the BASICS of the place: who did what, what the lines were, where the raw materials came from and where the finished product went, and keeping the cost and expense in ratio, how to stimulate more demand for satin and how to get raw materials in quantity at a reasonable price.

While some might be upset at making a similarity between a factory and an organization in general, all organizations have the same basic problems and similar solutions.

An army delivers blows to the enemy and gets recruits, materiel and pay from the government.

It has a supposed product too, since few armies exist after losing too often in a war.

THE BEST ORGANIZATION

The best organization is one which has a thetan over it, methods of working out its problems, basic actions and a good desirable product. It adapts itself to its environment or surroundings or conditions of operation so as to expand to greater or lesser degree.

Such an organization must have a clear-cut purpose and fill a definite need in order to survive.

Its services must be more valuable than what it costs to produce or furnish those services.

It must, to remain healthy, obtain more potential than it spends. For "potential" can be ready money or power or even strength.

Where an organization violates these very fundamental things, it sickens and will eventually perish.

For example, a government of a country can violate one or more of the above simple ideas and eventually cease to exist. Some governments are really dead for a very long time before the fact is discovered.

Such is the persistence and power of a once strong organization that it can continue for a very long while, feeding inward on itself. It gradually contracts and eventually becomes a memory only.

Thus when you see an organization begin to contract, if it is to be salvaged, it must be stripped back to basics quickly, its form simplified, its purpose clarified and the important services it can render greatly intensified and the cost of rendering them greatly reduced. This formula intelligently applied even to a dead government could revive it.

Lest we go too quickly, in the single sentence above and the earlier basics mentioned we have the whole "secret" of either reviving an old or founding a new organization.

If you know the purpose and how to make a desirable service known and know how to handle its *fundamentals* expertly, you can found, increase or revive any organization.

Putting together or handling an organization requires very certain, positive knowledge of

a. The basics of organization,

b. The purpose of the organization,

c. The basic actions necessary in the organization,

d. The potentials of the area in which the organization exists,

e. The needs and desires of the area or people the organization serves,

f. The economics on which the organization will operate.

Handling or serving in an organization successfully, one has to KNOW the actions and activities of the organization and its area so well that one does not have *to think about it*. One just *does* it or one indicates or works with *what* or who does it.

You don't think "clutch, gear shift, accelerator, steering wheel" when you drive a car. You should, to drive it successfully, know where these things are and what they do so well that you simply *drive a car*.

But learning to drive a car, you learn each of these things and its function and then learn them so well that it seems like *instinct* to use them. It isn't instinct. It's knowing them so well you don't fumble.

An organization is like that. Working in it or being one of those who run a part of it or the whole of it, one has to know the parts and actions and (a) to (f) above so well one knows them so *fast* that one just does them.

So, in STANDARD ADMIN we are acquiring

a. A knowledge of basics,

b. The basics that exist in and around a specific organization,

c. The ability to handle those basics with such speed and certainty that it seems instinct.

And when we have this, the organization will go, go, go with an ease and lack of effort that is astonishing.

CENOCON

KEEPING SCIENTOLOGY WORKING SERIES 3

QUALITY AND ADMIN IN CENTRAL ORGS

The function of the administrative personnel in a Central Organization is to make technical quality possible and get it delivered to Scientologists and the public.

Administration is no unimportant function. On the contrary, I had to work in Scientology a long time before I found out that in the absence of good administration, technical quality is impossible. At first I counted on high-caliber businessmen to do it. Then I found, after 1954, that they didn't have a clue and that their use had led us on a bad course. So we had to develop and learn administration and we are winning on it.

An administrative personnel is there to keep the lines moving and the function of his post operating.

Administrative personnel get Scientology to the public, keep the public happy and the organization solvent.

Administrative personnel are there to keep administration out of technical hands and let technical work.

Administration gets the public in and out, keeps communication going, gets the data to tech and keeps the org from going broke.

Administration is, however, owed something by technical. If administration gets people in for service, it is only right that that service, when rendered by technical, be the highest possible quality.

For if administration in all departments is not backed up by quality technical achievements, then administration is betrayed.

If one keeps, as in Accounts, collecting money for service rendered by technical, then Accounts has a right to demand that it was good service or else the accountant, in collecting, betrays.

Therefore, administration may at any time, just as technical may demand good admin, demand of technical that it produce and hold its own.

As of this moment there is no excuse of any kind for any technical failure in any Central Org.

The moment we got all the tools, it showed up that technical often had not understood any of the tools it already had. A clear-cut, simple routine as it now exists makes auditing and training a problem in black and white. Either it is done or it isn't.

If results are not forthcoming for any person as of now, then somebody is goofing. And it won't be any small goof.

It is working out that goofs are of this magnitude:

Auditor does not know anything about reading a meter but has been kidding us one and all that he or she knew;

Auditor has not the vaguest on how to handle rudiments;

Auditor couldn't security check Khrushchev and find a crime;

Auditor has no clue about assessment;

Auditor just doesn't even report to session.

That would be the sort of thing it would take to keep Scientology from working on every case. The errors are *gross,* never slight, if a case doesn't move.

All right. Admin personnel do their job. Therefore they have a right to expect tech will do its job.

The whole source of low units is tech failure. Bad tech makes it almost impossible to get pcs or students in. Therefore admin has a right to raise hell over bad tech. A graph drops. ARC breaks gleam clear to anyone. Admin, working at a less interesting job, has the right to scream loud enough to be heard on Arcturus. Because *that* took a fantastic, large technical goof to achieve.

None can now say all is changing in tech. The only thing that's changing is the communication and information to get tech to do its job.

Low units, lack of enough personnel, lack of new executive personnel, all trace to tech failure in the past.

Now is the time to make good. We *can* release people *easily*. Why not do it? We can clear people. Why not do it?

A high executive in a Central Org who had had a tech department that was failing, failing, failing owned up the other day to "having all the data but being too busy to study it." He meant, obviously, he was too busy to do his job. And a Joburg Security Check found out why.

All staff members, tech and admin, of a Central Org, each one or all together, have a right to demand that every tech person knows his business and does the job.

All staff personnel, in a meeting or by petition, have a right to demand certain personnel be sent to Saint Hill to be trained.

All staff personnel have a right to demand that any or all staff personnel be given a *Joburg* Security Check, WW Sec Form 3, by somebody who knows how to give one.

All staff personnel have a right to demand practical and functional releasing and clearing (1) of staff, (2) of executives and (3) of the public who buy our service.

If we're going to put a new world here, we better get going on the project. It isn't as if we could fool people forever.

HCO POLICY LETTER OF 20 SEPTEMBER 1969

REMIMEO

STABILITY

It can be said of companies, societies and governments that:

THE BEST GUARANTEE OF STABILITY IS ADMINISTRATIVE SKILL.

In areas where the abilities which add up to administrative skill are missing, the organization or country can expect to fail or be overthrown.

Even such small things as file keeping, accounts records, personnel placement, add up to better longevity.

The integrity of personnel is a large factor in administration, and a lack of skills with which to detect and handle false reports and lack of compliance or failed performance of duty can all by itself destroy management and the group.

No matter what the intention of those at the top, no matter how bright or honest they may be, if their administrative lines are clumsy or in any way false, if they are not backed up by skillful, well-taught administrators, they can be nullified. The plans and orders put "on the lines" seldom if ever arrive at the level of the worker in the shop or the man in the street.

The torrents of laws and directives passed by legislators or even boards of directors are ninety percent of them made necessary by earlier failures in getting earlier laws or directives enforced.

Bad administration, lack of know-how, lack of trained clerks and executives, can defeat utterly any plan or program no matter how urgent or beneficial.

The continuance of an organization and its leaders can be said to be entirely dependent upon the skill, training and integrity of those who handle the administrative lines, details and contacts of the group.

HCO POLICY LETTER OF 4 OCTOBER 1969

REMIMEO
BPI

ORGANIZATIONAL ENTURBULENCE

THE ENTURBULENCE (COMMOTION AND UPSET) IN AN ORGANIZATION IS DIRECTLY PROPORTIONAL TO THE IGNORANCE OR ABSENCE OF POLICY AND PURPOSE.

We can see this easily in processing. Processing is a skilled technical activity having precise steps and actions. When an auditor is ignorant of these he gets into a horrible mess and the pc likewise. When a Case Supervisor is having trouble it will be in direct proportion to his own and his auditors' ignorance of correct and exact tech.

The answer is to get tech known and exactly used. When this is done, the trouble, upset and commotion reduces to zero.

In Dianetics and Scientology our tech is very exact and when correctly applied produces exact, predictable results. So getting our tech known and used by auditors cures any upset or commotion in auditing or a group of auditors.

Going a lot lower, let us consider a group that has no tech or inadequate tech. If it engages in treatment there will be upset because of lack of adequate tech. This could be said to be the case of psychoanalysis where 33 percent of the patients commit suicide in the first three months according to a 1950 survey of their own.

Then going into the nether regions, take a group with destructive tech such as the psychiatrist. He not only has trouble in his own field but can smash a whole society and has done it to several societies already (Germany, Czarist Russia, Poland, etc.).

A country whose population does not know what constitution it does have is an "organization" of ignorant individuals. It will have riot and civil commotion.

In the US currently only 4 percent recognized the First Amendment to the Constitution which guarantees freedom of speech, the press and religion. Ignorance of the law, compounded by a willful neglect of the Constitution by government officials, is the basic reason for the riot, civil commotion and disintegration of the US.

So the same law holds as per the first paragraph above.

We in Scientology have very basic and strong organizational policy and structure.

Where a mission or org is in any way upset or is not giving good service, the individuals do not know or are aware of and are not using policy.

The answer is that it is dangerous and destructive for staffs and Scientologists not to know org pattern and policy. The result will be upsets and decline.

On the other hand, sound knowledge and use of Scientology policy and structure results in a strong org, excellent service and longevity.

REMIMEO

THIRD DYNAMIC TECH

The material contained in HCO BULLETINS applies to the FIRST DYNAMIC — self, the individual.

The data, material and procedures contained in POLICY LETTERS apply to the THIRD DYNAMIC — the dynamic of groups.

In applying HCOBs as in auditing a preclear, you see that following a certain procedure results in the remedy of a certain personal situation.

In applying HCO Policy Letters, you see that by following or continuing certain third dynamic procedures you remedy, handle or continue certain situations which relate to groups.

In both cases, SURVIVAL is the keynote of the end result.

HCOB auditing tech increases the survival of the individual as an individual.

HCO PL third dynamic tech increases the survival of the group.

Man has always had a certain amount of know-how in both individual and group matters of survival but he has never had any high level of result.

It is easy to see auditing improve the individual when it is exactly and expertly applied.

Similarly one can see third dynamic tech improve the group and its survival potential.

Just as there is “squirrel” auditing (alter-ised and unworkable) so there can be “squirrel” third dynamic tech.

An executive who has no familiarity with HCO PLs can make an awful lot of mistakes.

It is an easy pretense that first dynamic tech existed. But no one got any better when man knew no more than the mumbo jumbo he had before 1950. Since then real results occur. But they only occur when the actual tech of Dianetics and Scientology is correctly applied.

The same situation existed in the field of the third dynamic. The pretense was that "business" tech was successful, to name one. But 17 out of 19 businesses fail every year and the whole of the business world is under threat from the ideology of communism. Strikes, legislation, banking and other catastrophes daily remain unhandled by "business tech." So there's only pretense that "business tech" applies to groups successfully. It is at best a dying technology.

The failure is that previous third dynamic tech did not seek out and learn the basic laws on which it must have existed.

You have seen the first dynamic tech of auditing develop over the decades to a highly precise and very workable body of knowledge. The current search began in about 1931. By 1970 it was in full practice over the world.

The need of organizations to serve the first dynamic tech beginning in 1949 forced further and further into view the absence of third dynamic tech and its vital need.

With much hard experience the data now contained in HCO Policy Letters was won. In 1965 I began an active search for the basic laws of the third dynamic. What has been found since then has been recorded on tapes or published in HCO PLs.

If auditing took 38 years to bring to a highly polished state, then the 20 years of experience, of which only 5 were devoted to an active effort to locate the basic laws, can be seen to be an incomplete study.

But incomplete or not, the data and drills contained in HCO Policy Letters are a great advance over what man had.

For instance, in 1950–51, using the crude organizational tech man then had, the first board of directors of Dianetics Foundations failed utterly. Any and all off-on-the-wrong-foot moves which became later woes to us were laid in at that time by some of the finest legal, accounting and PR experts one could retain.

Twenty years later our organizations, traveling on our developed third dynamic tech (and even now poorly known by staffs), have enabled us to survive in the teeth of old vested interests and not only that, to expand as well.

This is due to the practical know-how we have dredged up and used and which you find in HCO Policy Letters.

Naturally, we have not had time to develop third dynamic drills for every situation. We have not had time even to train all our staffs.

But the basic knowledge is there, recorded on tape and in HCO PLs, and when known, understood and used it gives us survival, expansion and prosperity. When it isn't known or understood or used, only then do we sag.

If a study of our third dynamic tech is approached from the viewpoint that it is for use and when known, understood and used that it will deliver an expected result, then one has a proper framework for the study of it.

If one thinks it is a series of orders, or just some random ideas, then one will not have the use of it.

The short span of men's lives inhibits the full development of any one subject in one lifetime. Thus there is a lot of room for further expansion of our third dynamic tech. But the basic laws can be found in it and many exact drills are contained in it and it has great value in any zone of application.

What we now know and use of our third dynamic tech is all that has forwarded our survival so far.

Thus its wider understanding and use in our own organizations is the key to prosperity and expansion.

An "old experienced Scientology executive" (who has a lot of this know-how) can go into a collapsing org and boom it. The data he is using is all in these policy letters. He knows it is there for use and he uses it in action.

The elements he uses are in HCO Policy Letters.

The data encompasses third dynamic tech. It is applied very much like one applies the first dynamic tech to the individual.

In its present state of development, like early auditing material, third dynamic tech is used to think with, and only the bright mind will achieve its full potential in action.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 25 JANUARY 1971

REMIMEO

ORG SERIES 22

SQUIRREL ADMIN

When a squirrel is given a circular wheel he will run in it 'round and 'round and 'round. He gets nowhere.

When persons in an organization do not know organizing or their org board or hats, they go 'round and 'round and 'round and get nowhere.

There is no valuable production. There is no money.

When you have an organization that has no valuable production you know that the people there go 'round and 'round and 'round and get nowhere.

They are squirrel administrators.

STANDARD ADMIN

There are right ways to handle a group. This is the single fact which most often escapes people attempting to handle groups.

Also, for every correct solution there can be an infinity of wrong solutions.

The right way is a narrow trail but strong. The wrong ways are broad but all lead into a bog.

You could "fix" a radio by hitting it with a sledgehammer, putting a hand grenade in it or throwing it out of a 155th-story window. The number of wrong ways you could "fix" it would be infinite.

Or you could find out what was wrong with it and replace the part or properly correct it.

The difference between the wrong way and the right way is that the radio, wrongly "solved," doesn't work. The radio correctly solved works.

So the test of the wrong way or the right way is whether or not the radio then worked.

This is the basic test of *all* administrative solutions. DID THEY WORK?

When experienced persons, working from basic theory, have evolved a technique for handling a situation which routinely now handles that situation, we have now a STANDARD ADMINISTRATIVE ACTION.

When that situation appears, we apply *that* solution and the matter gets handled.

The test is, did the solution work?

Solutions that work and are therefore routinely used to handle the situation to which they apply are then called STANDARD ADMIN.

A multitude of these correct solutions are used in STANDARD ORGANIZING. The org board, the hats, comm lines, comm centers, comm baskets, despatch forms, routing forms, inspection actions, promotion actions, central filing, customer or visitor handling, selling, collecting income, paying bills, inventorying, doing finance reports, handling raw materials, training persons to handle and properly change materials, correcting or improving staff competence, correcting organizational form, inspecting, reviewing and handling failed products, handling contacting and converting the publics, establishing and using field distributors and salesmen, providing public services, maintaining contact with the original and basic technology, handling rivals and opposition, and running the organization in general *all* have standard actions.

Now, glancing over the above rough list, you see we have hit the high spots of a 21-department, 7-division org bd.*

Each *is* a standard solution to continuing and recurring problems.

Each contains numerous standard solutions to the recurring problems associated with them.

Underneath all this is basic theory and around it is survival and potential success.

USE OF STANDARD ACTIONS

The difference between a successfully viable organization with cheerful and cared for staff and a limping scene is standard and squirrel administration.

If standard admin is successful then why is it sometimes not used?

First the data has to exist, be available and known.

Next the data has to be used.

At first glance this may seem so clear-cut that it cannot go wrong. But one must look a bit further.

One is dealing with a variable called man. One is working in a world full of noise and conflict.

*See the 1971 organizing board in the Appendix.

Certain personalities do not want the group or the organization to succeed (see HCOB 28 Nov. 70, C/S Series 22, PSYCHOSIS). This problem has been so great amongst men that every historical culture — each one an organization — has died. About 10 to 20 percent of mankind, at a broad guess, fit into this category.

In this universe it is easier to destroy than to construct. Yet the survival of life forms depends on construction.

To overcome this, man has developed technology and the cooperative effort known as organization.

The forces of the physical universe can be channeled and used only with technology.

The forces inherent in life forms can succeed only when channeled and aligned with one another.

Therefore to succeed a group must have the technology it uses available and known to it. And then use it.

From this, one obtains the agreement and alignment necessary to generate the group action and production which brings about success.

NONCONFRONT

When a group member has the data, the bar to his using it would be his own disagreement with the group succeeding or, more frequently, his inability to confront things.

EXAMPLE: Two group members are quarreling. A third group member seeks to handle it. Even though he knows the technique (third party law), his own inability to confront people makes him fail to use the correct solution and he backs off.

In backing off he thinks of some nonconfront, nonstandard "solution" such as firing them.

He has become a squirrel administrator.

EXAMPLE: The plant machinery is in bad shape. It is deteriorating to such an extent that it soon will cease to run. The mechanics plead for money to repair. The plant manager unfortunately cannot confront machinery — he not only "doesn't know about it" but it frightens him. He does not financially plan its full repair on a gradient back to an ideal scene. He simply dreams up the vague hope a new type will be invented. He does nothing. The machinery now costs more to run than it produces. The plant fails. The plant manager was a squirrel administrator.

So we have various causes of failure:

1. A secret desire to destroy,

2. The nonexistence of technology,

3. Nonavailability of the technology,

4. Ignorance of the technology even when available,

5. Failure to apply the technology even when available and known because the being cannot or does not confront the people or the portions of the physical universe concerned.

The existence of any of these things brings a group toward squirrel administration.

Natural cataclysms or political or social catastrophes or upheavals are the other two points which can bring about a failure, but even these can be planned for and to some degree handled. The future possibility of these must also be confronted in order to be circumvented.

Any successful organization will be fought by the society's fancied rulers or enemies. This is something which should be taken in stride. The ability to confront these discloses that standard administrative actions exist for these two.

DRILLS

Thus an administrator or staff member, even when the group's tech is available and known, must be able to confront and handle the confusions which can occur and which invite a turn-away and a squirrel solution.

Even this situation of the inabilities to confront and handle can be solved by third dynamic (group) drills and drills on the sixth dynamic (physical universe).

The drills would be practices in achieving general awareness and confronting and handling the noise and confusions which make one oblivious of or which drive one off and away from taking standard actions.

COMPETENCE

Competence is increased in the individual and the group by successes.

Successes come from anticipating the situation and handling it.

Standard admin is the key to competence and successes in an organization.

HCO POLICY LETTER OF 4 JUNE 1971

REMIMEO

STANDARD ADMIN

To approach the subject of STANDARD ADMINISTRATION realistically, one first must recognize that a right way to do things can exist.

Let us take an example like starting a car. There *is* a right way to do this. You see if it has gasoline, you see that it's out of gear and that the brake is on. You turn on the ignition key and make the starter make contact. You feed it some gas and it starts. Now if one varied the sequence or did something else the car wouldn't start. Then one pushes it or finds a hill. It still doesn't start so a mechanic is sent for. The bulk of the time, the mechanic finds no gas or failure to turn on the ignition.

There are an infinity of ways *not* to start a car.

There is only one way to start a car.

So it is with any standard procedure.

There *is* a way to do something right. The right ways to do things are called TECHNICAL PROCEDURES or TECH when it comes to auditing or scientific or mechanical processes.

There is a TECH of ADMIN. This would be the right ways to do administrative actions or organize something.

Administration is the subject of how to organize or establish or correct the spaces, terminals, flows, line duties, equipment, materiel, and so forth of a production group so as to establish optimum volume, quality and viability.

Activities, organizations, companies, governments and even man's civilization depend upon having the TECH of ADMIN and the knowledge and APPLICATION of it.

This general subject is known as ADMINISTRATION or ADMIN for short.

There *are* correct ways to do things in ADMIN. For each correct procedure there can be an infinity of incorrect actions.

To be a good executive or staff member one has to know the right way something is done and to be able to apply and get done what he knows and be able to correct outnesses so they go back to the correct procedures.

Because of the great number of separate actions that go to make up a large activity, the subject looks complex unless one learns to look at one procedure at a time and fit it into other procedures.

The subject of admin only appears difficult because those involved in it SELDOM LEARN THE CORRECT PROCEDURES. Instead they do other odd things that, taken as a whole, give a thoroughly confused scene.

The test of any body of procedures is whether or not they will, when done, result in a smooth-running organization which produces final valuable products in volume that have acceptable quality and maintain the organization's survival.

Our admin passes this test. When used exactly by the book and applied and corrected back to the book they will produce high volume, quality and viability.

This has been tested over and over. By the book = prosperity. Offbeat use or ignorance or nonapplication = collapse.

By just getting "on-policy" (knowing and using the procedures with no departures) an org has leaped from long-enduring poverty to high success. Then run by those ignorant of policy, it has in turn collapsed to the degree it went "off-policy."

A continent has boomed when "on-policy," has decayed when it went "off-policy."

This fact has been seen over and over and over again. "On-policy" (knowing and applying our procedures) has been the common denominator of each boom. "Off-policy" (not knowing, not applying our procedures) has been the common denominator of every org or continental area collapse.

There are enormous numbers of witnesses to this and it is backed up by mountains of statistics.

STANDARD ADMIN means the usual "on-policy" procedure applied.

"Squirrel admin" means the departure or alteration of Standard Admin. The use of the word "squirrel" is long-standing because squirrels in their little cages go 'round and 'round and get nowhere and they are also, a bad pun, "nutty," meaning a bit crazy.

The source of STANDARD ADMIN is an HCO Policy Letter.

The main source of "squirrel admin" is simply ignorance of PL procedure or the neglect of reading and applying it — as simple as that.

So if an org's staff, ignorant or neglectful of policy and failing to apply it, is creating a mad scene daily, just realize they are trying to start a car by welding the trunk shut or polishing the tires!

The answer is invariably and always, find the policy, apply it and force out the "off-policy" actions, and coolness and prosperity will reign.

So this is a simple subject. Complicated only by the inability of people to confront and do the actions called for by policy.

Following policy is better all around as it is an area of agreement.

New procedures can be developed, tested, piloted, used. BUT until they become policy they can drive an area mad.

So there is a right way to do it. And that is the way it should be done. And so doing it "on-policy" will result in prosperity.

If one is not able to accept this fact, then one will not be able to run an activity prosperously.

So STANDARD ADMIN is rather simple after all.

HCO POLICY LETTER OF 31 JULY 1971

REMIMEO

THE USUAL

(Originally written by LRH for the *Apollo* OODs
of 31 July 71. Issued as an HCO PL on 6 Oct. 80.)

When in doubt do the usual, the routine, the standard.

If your hat says recruit, recruit. Don't do tool purchasing.

WHEN A POST DOES NOT DO ITS USUAL ACTIONS THESE BACKLOG AND APPEAR AS TRAFFIC AND DEMANDS.

The post goes into desperation and tries to cope and, failing to do what it was supposed to do in the first place, just goes more desperate.

A post will run wrong so long as it does not do the usual. And it will go wronger and wronger.

Like auditing a pc. Every shortcut, every unusual solution, just makes the pc worse. You can't go on with unusual solutions forever. The pc will collapse.

So it is with a post.

Do what the post is supposed to do in the first place. Cope part of the time, yes. But somehow get in the usual action.

If you don't you will feel desperate, 9,000 feet up and in a hurricane.

EVERY personnel line has gotten in this state.

Failing to recruit and do the usual has backlogged HASes over the world to a point of total desperation. Yet I see no Personnel Procurement Officers single-hatted on post in orgs. I see no new campaign for recruits. I see no hammer to get standard forms signed.

Thus by not doing the basic usual actions, each HAS is going mad trying to answer people who are demanding personnel. Then the HAS musical-chairs the place, destroys the org form.

WHY? Because the usual action of PPOs on post and records and lines and personnel promo were not done.

Not doing the usual resulted in desperate solutions.

This is the way any post goes when it backlogs. It backlogs for lack of the usual. Then it goes into total desperation.

The way to get out of the mess is each day do a couple hours of the usual regardless of traffic and demands.

And surprise! One will dig out of it and get on top of it.

One has to know three facts:

1. The usual solution already exists. One has to find out or work out what it is.
2. Unusual actions will backlog one and if continued will drown one.
3. One can dig himself out if he spends some time each day getting the usual lined up and in.

One's full hat usually contains the usual. A starter is to get the full hat and know it.

REMIMEO

ON–POLICY

(Originally written by LRH for the *Apollo* OODs of 18 Aug. 71.
Issued as an HCO PL on 3 Sept. 80.)

Policy *works*. Just like tech. If you apply policy, it works and things go well. When you don't, like a case "audited" on out-tech, things go wrong.

Policy came from years and years and years of experience. It's the know-how of handling orgs and groups.

When it isn't used things aren't handled.

An org will get off the launching pad when every person in it has studied and knows Vol 0 OEC.

That begins it.

It doesn't matter how long one has been around or how much policy he has read. Until he has studied Vol 0 OEC as a specific Basic Staff Hat action, he will now and then go off-policy.

Make a group!

That takes agreement.

Get on-policy.

That will build the agreement necessary.

KEEPING ADMIN WORKING

Refs:

HCO PL	7 Feb. 65	KSW Series 1 KEEPING SCIENTOLOGY WORKING
HCO PL	24 Sept. 70RA Rev. 3.7.77	ISSUES — TYPES OF

In 1965 I wrote the policy letter KEEPING SCIENTOLOGY WORKING. It appears as the first item of nearly every Dianetics and Scientology course checksheet. And with good reason. Unswerving and relentless application of that one issue by every Scientologist is our only certain means of keeping the technology pure and the future hope of mankind alive.

It may not be generally understood, however, that the principles given in that policy letter do not apply only to what is commonly referred to as "tech" — the first dynamic technology given in HCO Bulletins. You see, when "tech" goes out, the pc suffers. When "admin" goes out, the org declines.

Therefore, to keep Scientology working, *all* of Scientology, one must insist on standard tech *and* admin. The principles of unvarying adherence to precise technology, constant alertness to tech alter-is and insistence that every Scientologist abide by these rules apply *just* as severely to the third dynamic technology of standard administration — POLICY.

POLICY

POLICY embraces the basic duties of a staff member, the precision technology of management in all its aspects and at every echelon, and standard ethics and justice procedures. Policy is found in HCO PLs, Flag Orders, Central Bureaux Orders, LRH EDs, taped lectures and other duly authorized and on-source administrative issues.

Just as with our technology of handling the individual, our policies for the establishment and expansion of effective organizations are based on fundamental laws of life derived through exhaustive research and experience. Every policy we have has been put to the acid test — "Does it work?" — and passed. Neither tech nor policy admit interpretation, alteration or "new ideas" generated by the bank. Bright, constructive application of exact principles, yes. Embellishment and know-best, never.

To you, the individual executive or staff member, "Keeping Admin Working" means making sure that you have all the policy relating to your post and to your hat as a staff member. It means insisting that your org's Qual Division maintains a complete library of policy for use by staff and that it is not unmocked or hidden away or rendered unusable. It means knowing the policies of one's job, through standard hatting and training. It means insisting that standard staff courses exist complete with WHAT IS A COURSE? policy in down to the last comma, whose graduates go livid at the idea of anyone alter-ising standard policy. It means demanding that Qual provides a tough, standard Cramming Section that detects deviation from policy at the first pause of a stat and handles the hell out of it right now — including finding out how the scene was allowed to go awry in the first place and correcting THAT, too. It means total dedication on the part of every last Scientologist to putting in standard admin, straight by the book. It means holding an utterly unreasonable line on KEEPING standard admin IN.

OUT–ADMIN

While our overall record of success is stellar in the extreme, the history of our organizations is dotted here and there with stat crashes brought about by out-admin. These range in scope from the collapse of one staff member's post up to the near collapse of the whole international Scientology network in the 60s when squirrel "execs" at Worldwide were "managing" on their own know-best and over scores of misunderstoods on basic policy. That scene was salvaged by getting the admin squirrels off the lines, their orders cancelled and the simple on-policy usual done: org boards set straight and made known, hat checksheets and packs compiled, studied up and used by all staff, a schedule posted and adhered to, etc. Very simple, really. It just had to be DONE.

The fact is that every organizational failure or decline in our history can be traced to standard admin going OUT. Likewise, every boom or recovery can be traced to policy being put IN. It is a one-for-one.

EXAMPLES

It was once found that a senior exec (long since discovered and removed) was attempting to run a major org from his upper-management post on a day-to-day basis even though it was several echelons below him and despite numerous vividly clear policies forbidding such an activity. But this person "knew best." And he managed (not accidentally) to crash the org's delivery and leave a major mess for other, on-policy execs to come in and bail out on an emergency basis.

This same Mr. Know Best was also found to have worked his way onto the comm lines of some staff doing a vital project to revive a faltering org. He was covertly feeding them his own instructions (which were completely contrary to policy and the approved steps of the project) and getting them to forward his "successful actions" instead of policy. The result was a failed project which had to be redone from scratch. Had those executing the project adhered to policy instead of forwarding someone's know-best and alter-is, their project could have ended in success instead of a crash.

SOURCE

People's failure to recognize what standard policy is can sometimes get in your road. As an example, an executive once went into an org and established a standard, by-the-book (OEC Volume 4) Dept 10 with Dir Tech Services, HGC Admin, Tech Pages, Tech Receptionists, etc. The stats, of course, boomed. But after that, people kept referring to this exec's actions as though they were something new and strange and referred to the project instead of the OEC Volume! From this, one can conclude that you have to put in policy with an ax and call it such and take no nonsense concerning it. For even when people see the fruits of the application of policy materialize, they have to be told again that that was POLICY and IS IN THEIR OEC VOLUMES.

The way to do this is to get in a competent Qual that hats the staff on HCO PLs, from basic staff status checksheets all the way up to FEBC, and crams them when they flub. Unless Qual is strong and functioning and pounds home green-on-white as *the* tried and true way to go about something, the staff are open to some suppressive moving in and leading them off into squirreldom.

We work, in our organizations, in the face of a bank that says that the group is all and the individual nothing. This you know. Know too that that same bank is constructed to make very sure that no one ever succeeds in forming anything resembling an *effective* group with true survival goals or purposes. So we face quite a challenge. But in standard admin policy we have a potent weapon with which to meet this challenge: a codified system of organization which, where it has been applied purely, has resulted in the most powerful and effective organizations this planet and sector have ever known. Required are only the courage, determination and confront to master and use this weapon.

I count on you — the individual Scientologist — to take up the challenge, to put standard Scientology administrative policy to work, and to WIN. You can, you know. And the victory will be not only for you but for Scientology and for all mankind.

ADMIN DEGRADES

Refs:

HCO PL	17 June 70RB I	KSW Series 5
	Rev. 25.10.83	TECHNICAL DEGRADES
HCO PL	7 Feb. 65	KSW Series 1
		KEEPING SCIENTOLOGY WORKING

How does standard "green-on-white" policy get lost? Just as with the "red-on-white" tech of auditing or training, it can potentially be obscured or made to seem unimportant by the actions of an ill-intentioned individual.

Someone considers that the best way to get a new staff member quickly onto post is to shorten his hat checksheet or label key hat materials as "old." The new staff member fails, dragging a whole unit or department down with him in a maelstrom of dev-t.

In a hurry to get something accomplished, someone skimps on the usual, on-policy procedures and routings and soon his improvised (squirreled) "handling," tolerated by others, becomes "the way it's always done around here." And crash goes that area.

Seeking to get his own stats up at any cost (and ignoring the effects of his actions on the org as a whole), an "expert" manages to obscure standard, on-policy lines and routings and implements his own "successful actions," then torpedoes any attempt to get policy in. The result — the org falls far short of what it could be producing if it were operating by the book.

Such actions are suppressive. They are HIGH CRIMES. And they carry the same penalties as the suppression of the technologies of Dianetics and Scientology auditing or training — a condition of TREASON or cancellation of certificates or dismissal and a full investigation of the person's background.

The following actions or omissions are classified as HIGH CRIMES:

1. Abbreviating an official course in standard Scientology administrative policy so as to lose the full theory, administrative procedures and effectiveness of the subject.

2. Adding comments to the Org Exec Course or other administrative checksheets or instructions, policies or directives labeling any material "background" or "not used now" or "old" or "it doesn't need to be followed *exactly*," or any similar action which will result in the student not knowing, using and applying the standard administrative data in which he is being trained.

3. Employing any checksheet for any administrative course not authorized by the Authority, Verification and Correction Unit International (AVC Int) or, in the case of hat checksheets, duly authorized per HCO PL 30 Sept. 70 I, CHECKSHEET FORMAT.

4. Failing to strike from any administrative or hat checksheet any such comments as "historical," "background," "not used," "old," etc., or VERBALLY STATING IT TO STUDENTS.

5. Failing to hat and apprentice a staff member on the full policy and actions of his post.

6. Discouraging or preventing a staff member, administrator or executive from training on the full Org Exec Course and Flag Executive Briefing Course.

7. Failing to insist upon precise and exact application of the Data Series policy letters in investigations and evaluations.

8. Running any organization on squirrel "policy" or third dynamic administrative or management procedures that are contrary to approved policy.

9. Using any squirrel administrative procedure in managing an organization while falsely labeling it Scientology policy.

10. Using Scientology policy but calling it something else or attributing it to some other source.

11. Acting in any way calculated to lose standard Scientology policy to use or impede its use or shorten its materials or its application.

Our policy is the result of years of hard-won experience. It works. It must be applied vigorously, intelligently and to the letter. Our own lives and happiness are at stake. This planet and universe are at stake. To carry off the task we need only keep and use these tools of standard admin.

ADMIN HIGH CRIME

Refs:

HCO PL	8 Mar. 66	KSW Series 13 HIGH CRIME
HCO PL	19 Aug. 79RA Rev. 27.8.84	Word Clearing Series 47 HIGH–CRIME CHECKOUTS AND WORD CLEARING
HCO PL	10 July 86 I	AKH Series 50 KEEPING ADMIN WORKING
HCOB	22 Feb. 72RA Rev. 8.7.74	Word Clearing Series 32 WORD CLEARING METHOD 4

With this issue, checkouts on policy by all administrative personnel become mandatory.

It has long been policy that technical personnel study, word clear, and star-rate check out on any technical materials before they apply those materials on their jobs. Pro auditors and interns at any level study, word clear and check out on the processes they are to run in session. Supervisors and Word Clearers star-rate on the basic materials of study tech and Word Clearing before they are allowed to deliver Scientology courses. And as new materials are issued, the Qual Division sees to it that the tech delivery personnel to whom the materials apply get them checked out IMMEDIATELY. Such checkouts have come to be known as “high-crime checkouts,” from the title of the policy letter which brought them into being: HCO PL 8 Mar. 66, HIGH CRIME. And it is through the use of such checkouts that tech application is safeguarded and kept in step with the latest technical discoveries and advances.

Tech people take great pride in keeping on top of their subjects in this way. Understandably so; for when they do, the results they achieve are consistent and

spectacular. Miracles are the order of the day. The public pour in for service. The organization thrives.

Where tech terminals don't KNOW and USE their materials, results are only anxiously hoped for. The public come in for service reluctantly, when they can be coaxed in at all. The organization dwindles.

HIGH–CRIME CHECKOUTS ON POLICY LETTERS

Just as there is STANDARD TECH, so is there STANDARD ADMIN.

The fact is that any organization can be seen to fail when standard administrative policy is not known and used by its people. And every successful organization will be found to be composed of people who DO know and DO apply the basic principles found in our policy letters.

Therefore the following is classified as a HIGH CRIME:

NEGLECTING, ADVISING AGAINST THE APPLICATION OF, FAILING TO ENFORCE OR TOLERATING THE OMISSION OF STANDARD WORD CLEARING AND STAR–RATE CHECKOUTS ON ALL NEW OR NEWLY REVISED HCO POLICY LETTERS, AS WELL AS THE KEY HCO PLs OF THE BASIC STAFF MEMBER HAT AND THE KEY POLICIES OF THE STAFF MEMBER'S SPECIFIC ASSIGNED POST, BY EVERY STAFF MEMBER. IN THE SEA ORGANIZATION THIS APPLIES TO LRH CBOs AND FLAG ORDERS AS WELL AS HCO POLICY LETTERS.

STAFF MEMBER RESPONSIBILITY

Once an exec or staff member has completed study of his hat by proper checksheet, he should report to the SSO in Qual to be word cleared Method 4 and star-rate checked out on the key policies of his staff member hat as well as those policies specifically relating to his post. And when any new policy is issued relating to his post (or which is an essential part of his hat as a staff member), he must get it word cleared, checked out and into application immediately.

Such checkouts can be done by Qual personnel or by another staff member on a twinned basis. They must be tough standard star-rate checkouts which consult the staff member's understanding and demand that he demonstrate his ability to apply the material.

Staff on technical posts are included under this policy, as they are responsible for their hats as staff members.

QUAL RESPONSIBILITY

The SSO must alert all staff of new or revised LRH policies received, must keep a log of policies checked out by each staff member (just as a log is kept for technical). He must ensure that this is done within a matter of days of receipt of the issue — NOT allowed to drag out so that a backlog accumulates. The SSO is responsible for

determining which policies are to be checked out by which staff, and logging them under the staff member's name in his checkout log. He should coordinate with the HCO Hatting Officer in making such determinations and in getting the checkouts done.

VIOLATIONS

The MAA or Ethics Officer, in investigating any post or area with down statistics must include an inspection of the Qual checkout log entries for the persons in the area being investigated. Where violations of this policy are found, the matter is reported to the HCO Area Secretary. The HCO Area Secretary must at once order a full and searching investigation into any persons who might have instigated it and report the matter with all particulars to the HCO Executive Secretary.

The HCO Exec Sec must then convene a Committee of Evidence with the persons accused as interested parties and must locate amongst them any suppressive or suppressives. When so located, they are duly declared as suppressive by HCO Ethics Order and dismissed.

If any Ethics Officer, Director of Inspections and Reports or HCO Area Secretary cannot obtain cooperation by superiors in carrying out this policy quickly, a report must be handed to the LRH Communicator directly, with a copy sent to the Inspector General Network via Flag.

The LRH Comm must act swiftly and effectively to handle the matter with proper justice action, reporting actions taken and results on LRH Communicator Network lines to LRH Comm International, with a copy to the Inspector General Network.

COMPUTER VERIFICATION

The International Network of Computer Organized Management (INCOMM) will be preparing a computerized system to verify that this policy is in force in every organization, and to call for HCO ethics action where it is found to be out.

With STANDARD ADMIN known and conscientiously in use on every post, the game is ours.

A Message to the Executive Secretaries and All Org Staff

KEEPING SCIENTOLOGY WORKING SERIES 2

QUALITY COUNTS

Clearing is now in the reach of every Scientologist.

Excellent auditor training is now in the reach of every Academy.

And these are the only things in the long run that will count.

When I see an organization staff panting after newspaper publicity or going mad on the subject of dissemination, and at the same time turning in to me bad results and poor student quality, I know somebody has their targets mixed up.

Quality is the *only* thing that counts. If quality in training and processing is not given first rank and constant priority by secretaries or Executive Secretaries, then all the administration in the world will not make the grade for any Central Org.

Deliver the goods. That's a crude way to put it. But if you want a new and better civilization you won't get it by advertising or worrying what people think of you. You will get it only by releasing and clearing people and sending them out into the society to get the show on the road in all branches of human activity including Scientology.

I know we have been a long time without clearing people. But we're clearing them now. What does it take to clear people? It takes highly skilled and tightly supervised auditing. It takes good technology. It takes good technical application.

If you'll forget about how easy it is to mob students all up in a class and actually confront each student as an individual, make sure he knows every essential step he has to know, make sure *all* his questions get answered, you'll have auditors that can audit.

Will you *please* put attention on raising technical skill in the HGC, releasing people, clearing people, and on the quality of training in the Academy to the end of getting every student capable of all the steps necessary to release people.

I have made the grade technically in the field of research. Now it's time to drop all the boo-boos and nonsense. All you have to do in an org is release and clear people and turn out auditors who can release people and keep in contact with the public and treat them well and you're over the top.

This morning I received a cable from an org. An urgent cable. Did it say, "How do you assess for a Prehav level" or something sensible? No, it didn't. It said, "Send us some biographical data for a newspaper article." I spit. That org is doing the lousiest job possible in Technical and is all worked up to get publicity. What's this? *Do* they think a society in this shape will approve Scientology into power? Hell no! And to hell with this society. We're making a new one. So let's skip the approval button from a lot of wogs and settle down to work to make new people and better people. *Then* maybe you'll have a society.

Right here and right now this policy is laid down in concrete with an atomic branding iron: THE FIRST AND PRIMARY GOAL OF AN ORGANIZATION IS DELIVERING THE FOREMOST TECHNICAL QUALITY THAT CAN BE DELIVERED IN ITS AREA.

All right. I've made my technical target bang in the bull's-eye. You can release and clear. You can train auditors well. Well, Christ! Let's do it, do it, do it!

REMIMEO

THE BUSINESS OF ORGS

Orgs are in the very new, for this universe, business of setting people free.

SPs will find all manner of reasons not to for this is what they, with their own crimes, fear.

Thus it follows that they cut dissem lines, corrupt tech, suppress and confuse orgs, persuade people to be inactive and resort to other shifts, all quite "reasonable" and "logical" as to why this must be the way it is; so be alert to this and go ahead and set people free.

It's done with org services well delivered on-policy with standard tech.

So just do it, man, do it!

L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 31 JANUARY 1983

REMIMEO

THE REASON FOR ORGS

The *only* reason orgs exist is TO SELL AND DELIVER MATERIALS AND SERVICE TO THE PUBLIC AND GET IN PUBLIC TO SELL AND DELIVER TO. THE OBJECT IS TOTALLY FREED BEINGS!

The first and all subsequent organizations of the Church were founded for this purpose *only*.

It was manifestly impossible for one being to individually train and audit 2.5 billion people. Time alone would have prevented it.

Thus help was needed.

Every post in every org exists to keep the org there and accomplish this.

You see, we are not dealing with "just another self-help subject" or a "make people feel better."

This universe has been going downhill for just *one* reason — lack of tech to resolve the problems of the mind and beings.

Recent research has confirmed this: There is nothing whatever the matter with the universe itself. But suppressive persons and groups have specialized in caving people in. *And* they had no tech whatever to *undo* their vicious actions.

So what emerged was a universal population stuffed with lies and artificial disabilities who have been brought almost to the point of obliteration.

For the first time ever — and this is confirmed with careful historical research — the tech exists to reverse this chaos.

An org and every staff member is there to get it applied.

Where we are this instant in time is at the reverse point of the universe. *You* are the one who will make it happen.

And you will do it by selling and delivering materials and service to the public you get in and keeping the orgs there so they can and will do it.

You have the tech now, you have the policy. It is *you* who are applying it.

And by applying it, you have it in your power to reverse the dwindling spiral that has gone on without pause for more years than you can get into an Earth calculator.

For the first time ever you have this chance. And it is *you* who, just by knowing and using relentlessly the policy and tech, will make it happen.

I have never lied to you or conned you and what I tell you now is true. I would be falsifying if I told you other than the facts in this policy letter. So there it is! It may seem large and awesome but it is a fact. You are not engaged in anything superficial.

And that is the reason posts and orgs exist: to change the course of all things past and send the whole of existence back upward from its long plunge.

Oh, of course the unholy will beg you not to do it, will try to pervert policy and corrupt tech, will cause trouble and mock and lie and try to discourage or stop you. But that's the reason things went bad — and those were the creatures that did it. And no objective worth obtaining was ever achieved without some barriers arising or industrious dedication.

So: Make it happen!

The stars wait!

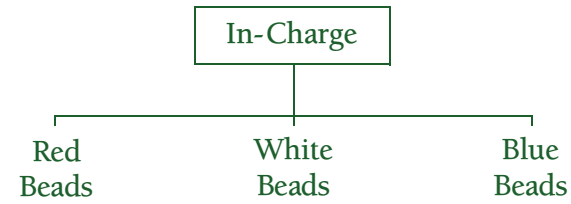
BASIC ORGANIZATION

What is organization?

Most people have so many associated ideas with the word "organization" that they think of one as an identity or a being, not as a dynamic activity.



Let's see what one really is.

Let us take a pile of red, white and blue beads. Let's organize them.

Now let us draw the org board.

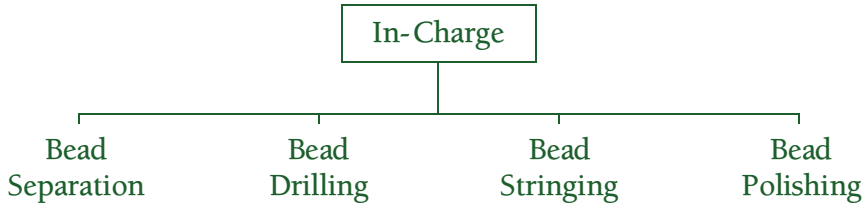
Let us dump them all on top of in-charge, all mixed up in a confusion.

Obviously in-charge must *route* them to dig himself out. So we get:

Thus we find out much of what an in-charge does. He routes. He separates into types or classes of thing or action.

This so far is a motionless org.

We have to have products. Let's say its products are drilled beads, strung beads, boxed beads.



We would get:

Or we would get:

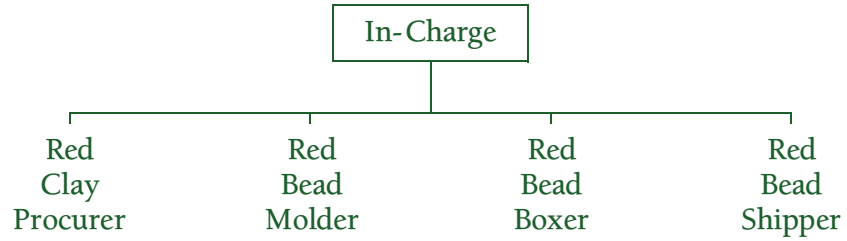
Or we would get:

It is not particularly important which pattern of org board we use so long as it handles the volume of beads.

If we only have one person in this "org," he would still have to have some idea of organization and a sort of org board.

If we have any volume to handle we have to add people. If we add them without an org board we will also add confusion. The organization without an org board will break down by overload and cross-flows and currents. These in conflict become confusion.

All a confusion is, is unpatterned flow. The particles collide, bounce off each other and stay IN the area. Thus there is no product as to have a *product* something must flow OUT.



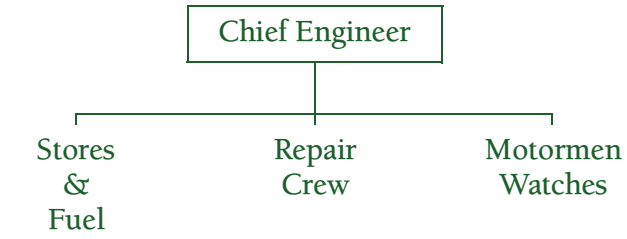
We can now note two things. We have some stable items. These are posts or locations. And we have flow items. These are things undergoing change.

So an org's positions change flowing particles.

Particles flow *in sequence*.

Things enter an org, get changed, flow out of an org.

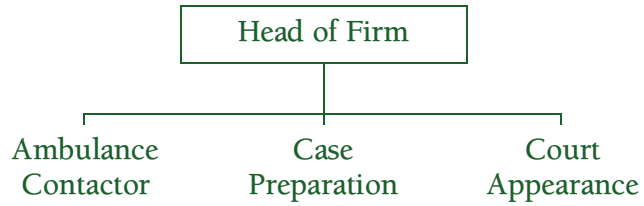
An org with one type of item only (red beads) is less complex than one with several types of items.



Any activity has a *sequence* of actions. It has to have stable points which do *not* flow in order to handle things which do flow.

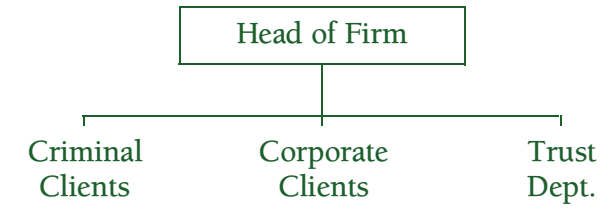
It is not necessary to have a stable terminal do only one thing. But if so then it also has a correct sequence of actions.

All this is true of an engine room or a lawyer's office or any organization.



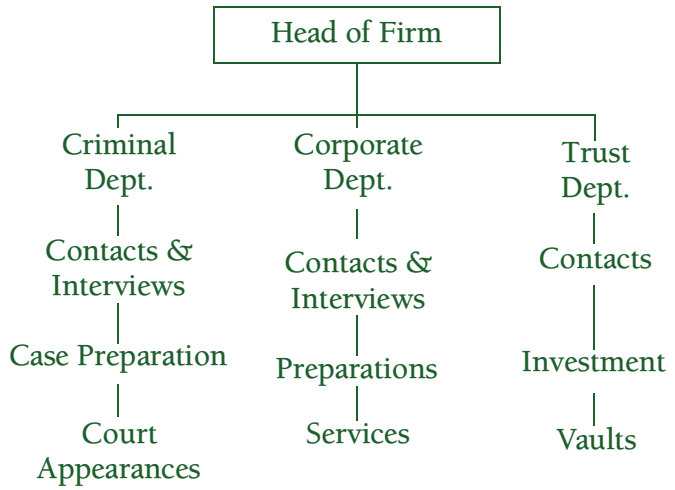
In an engine room fuel flows in and is changed to motion which flows out. Somebody runs the machines. Somebody repairs the machines. It may all be done by one person but as soon as volume goes up one has to plan out the actions, classify them and put them on an org board which the people there know and abide by or the place will not operate well.

This is done by dividing operation and repair into two actions, making two activities on the same org board.



The Chief keeps the flows going and the terminals performing their actions.

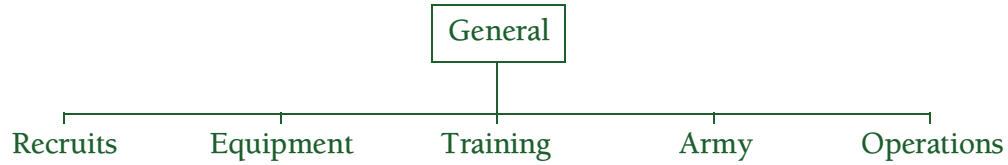
In a lawyer's office we get different actions as a flow.



would be a flow pattern, possibly with a different person (with a different skill) on each point.

Or we could have a sort of motionless org board.

But if we did that we would have to put the motion in vertically so that flow would occur.



Org boards which only give terminals usually will not flow.

A typical army org board of yesteryear was:

When they got into a lot more men they had to have a *flow* board.

So one *organizes* by:

1. Surveying the types of particles.

2. Working out the changes desired for each to make a product.

3. Posting the terminals who will do the changing along the sequence of changes.

The board also must include a *recognition* of the types in (1) which *routes* the types to the *terminals* who *change* them and to a further *routing out* as *products*.

To be practical an org board must also provide for pulling in the materials, disposing of the product and being paid for the cycle of action and its supervision.

A company has various actions.

It is essentially a collection of small org boards combined to operate together as a large org board.

The basic principles you have to know to organize anything are contained in this policy letter.

To plan out *any* action one has to be able to visualize its sequence of flows and the changes that occur at each point. One has to be able to see where a particle (paper, body, money) comes in and where it leaves.

One has to be able to spot any point it will halt and mend that part of the flow or handle it.

A proper org board is a perpetual combination of flows which do not collide with one another and which do enter and do experience the desired change and which do leave as a product.

VARNISHED OVER OR RELETTERED

ORGANIZATION
THE DESIGN OF THE ORGANIZATION

As our org board and org pattern we have not only an org board but a "philosophical system," which gives us the levels of able and extra able beings and an analysis of one's own life as well.

If you look at the levels written above the departments you find the spans of *the* Bridge which are followed to Release, Clear and OT. You can easily see which ones are missing in one's own life and the lives of others. These are the upper end of the awareness scale.

When you look at the department names you can see what is missing in your own life.

You can also see where your post or your job breaks down for every job has all these "department names."

When you look at the division names you see what the Cycle of Production must be in this universe to be successful. By studying this you can see why other businesses fail. They lack one or another of these divisions.

Although the organization seems to have a great many departments, and would fit only a large group, it fits any org of any size.

The problem presented me in deriving this board was how to overcome continual org changes because of expansion and applying it to organizations of different sizes. This board goes from one person to thousands without change. Just fewer or more posts are occupied. That is the only change.

The staff ratio here is one administration person in the five nontechnical divisions to one technical person in the Technical and Qualifications Divisions (excepting only Staff Staff Auditors and field staff members who count as admin personnel). Staff is added *in rotation* amongst the nontechnical divisions every time a technical person is put in the Technical or Qualifications Divisions.

The board is entered from the left and proceeds to the right.

It is actually a spiral with 7 higher than and adjacent to 1.

The organization corrects itself through the Qualifications Division, under the authority of the 7th Division.

Organizations go in phases. The phases agree with the Cycle of Production.

There are two tendencies man has that this board resolves.

Man's systems are based on groups and masses of people.

Every person on *this* org board is "statisticized." That means the job he does is a statistic that can be verified. He is not lost in a group.

The tendency of filling up every box indicated on an organization chart (which man usually does) is checked by the formula that there must be only one admin staff member for every tech as above. Thus Divisions 4 and 5 are heavy with personnel containing five times as many as all the other divisions.

In expanding, each department acquires seven sections, every section then acquires seven subsections, every subsection acquires seven units.

At this time of issue we find Scientology itself just at the end of its Dissemination Cycle (Division 2) and just entering upon the Organization Cycle (Division 3). There will be a full and long Organization Cycle. This will eventually be followed by a Qualifications Cycle in which we adjust civilization. After that will come a Distribution Cycle in which we use Scientology elsewhere in the universe and then will come the Source Cycle again, finding us all on a higher plane.

This pattern will probably be in use for a very long time.

This board is one of the *very* few things in Scientology which is not completely new. It is taken from an ancient organization and which I have refined through considerable experience by adding Scientology and our levels to it. It is based on an extremely successful pattern.

This org pattern is designed not to make money or Scientologists as one might think. Its whole purpose is to make the "Ability to Better Conditions," which is the mission of Scientology.

THE LEVELS

Your main interest in this board is of course its levels.

There are over thirty-two levels to the left of the board, covering the average human states.

Our board shows how we move up onto the Bridge at Communications (Level 0), and then progress division by division to Level VII. One division equals one level left to right.

The abilities recovered in these levels are marked above the department names (Communication, Perception, Orientation, Understanding, etc.) and take us all the way to a new state at VII.

As he progresses along this line left to right, a level is given the person each time a division is passed.

At Level V we find we can move people from the lowest human states onto the Bridge before we ourselves exit at the top.

Thus we leave behind us a Bridge.

In 1950 when I said, "For God's Sake Build a Better Bridge," I had to do it on my own.

But here it is, not only a bridge but also an organization to carry the weight of the spanning, a very needful thing.

HCO POLICY LETTER OF 7 MARCH 1969

REMIMEO

ORGANIZATION

It may be that in studying policies and org boards or trying to get something going, the basic of organization may be missing.

Organization is the subdivision of actions and duties into specialized functions.

One can organize a series of actions to be done by himself or herself. This would consist of seeing what has to be done, doing what one can do first and then the remainder as a feasible series of events, all to accomplish a final completion of a cycle of action which forwards one's assigned or postulated purposes.

A group is organized so as to permit flows and accomplish specialized actions which are completed in themselves and from which small actions or completions, the group purpose, assigned or specialized, is forwarded or accomplished.

There is a difference between directing and doing which some people have trouble separating apart. A person in charge of an activity is sometimes found deficient in organizational understanding and so tries to do all the actions himself. This if done to excess effectively can break up a group and render it useless since all members but one have no function, having been robbed by this one-man monopoly on action.

True, an active and competent person *can* do things better. But he can really never do more than he can do. Whereas a well-organized group, each with specialized functions, coordinated by the in-charge, can accomplish many times the work only one can do.

Because it is *organized* makes a group harder to defeat than the individual.

A competent individual who has been let down too often by groups tends to take it all on himself rather than whip the group into shape and get things organized.

The correct action when faced by urgent necessity arising from incompetence of a group or other causes is to:

1. handle it,

2. organize the group to handle such things and do their jobs.

One can get stuck on (1) and if he or she does, then will have trouble and overwork from there on out. Because he or she omits *also* doing (2).

The major failure of any group is to fail to organize.

Workers of the world may arise but if they are not quickly organized before or after the fact, they will promptly be put back down!

The major cause of not organizing is just not understanding what is meant by it.

For example, an executive is told he is in charge of seeing that the X project is done. He doesn't know much about it. He has two men who do know. The incorrect action is to try to do the X project himself or issue a lot of unreal orders about it. The correct action is to call up the man who does know, give him the other as an assistant and tell them to get on with it. Then, without interfering, the executive who received the order should get more knowledgeable about the X project so *he* can be sure it is done, while still letting the designated people get on with it.

This comprehension of organization is as simple as this — put somebody on the job and let him get on with it. On a project, make a survey of all the things there are to do, group types of actions into single posts, assign people to them, provide the comm lines, materiel and liaison and let the group get on with it.

Any post, no matter how junior, has to be organized.

Anyone in charge of people has to be able to organize functions and work.

Any executive has to know his target policies and be able to write them up, particularly the primary targets.

Failing that, one gets very little done and is badly overworked. And the rest of the group is wasted.

So, high or low, get a grip on this thing called organization. It's gruesomely simple.

Honest.

ISSUE II

CENTRAL ORGS
MISSIONS

ORGANIZATION POSTS— TWO TYPES

(Originally written by LRH as Sec ED 190 London, 24 Apr. 59.
Issued as an HCO Policy Letter on 22 June 64.)

We have two types of posts in an organization:

1. Line posts

2. Fixed terminals

A line post has to do with organizational lines; seeing that the lines run smoothly; ironing out any ridges in the lines; keeping particles flowing smoothly from one post to another post. A line post is concerned with the flow of lines, not necessarily with the fixed-terminal posts at the end of the lines.

An example of this is a communicator. His job is mainly keeping communications flowing smoothly from one terminal to another. Any time there is a stop in the flow of communications, he straightens it out. Other examples of line posts are HCO Area Secretary, Central Files Promotion Liaison, Training Administrator, and Processing Administrator.

A fixed-terminal post stays in one spot, handles specific duties and receives communications, handles them, and sends them on their way.

LRH ED 49RA INT

9 DECEMBER 1969
REVISED 8 JANUARY 1991

EXEC SEC HATS

ORGANIZATION PROGRAM NO. 1

HCO ES for activation

Where an org is forming or where its stats are low or its performance poor or it is failing, it is URGENT that this LRH ED be put into *immediate effect*.

As the form of the org is the first thought and action of the HCO Exec Sec, he or she should activate this ED as it applies, promptly and positively.

LESS THAN FIVE STAFF

Where an org has less than five staff do the following, no matter whether it is forming or performing poorly or failing.

If the org has less than three persons in it, bring it up to three persons or it isn't an org.

Appoint this much org board:

HCO ES OES PES

The senior auditor of the three is the Org Exec Sec.

The one who can type or manage is the HCO ES. The one with the best public reach is the Public Exec Sec.

These three beings give you the first glance at the two to one admin/tech ratio. An org may have two or less admin personnel to every tech personnel (auditor or instructor). There must never be more than two admin to one tech.

No matter how many functions you see on a nine-division org board, each one of the above is responsible for all the major functions which appear in his org portion.

This org board goes down to as few as three staff members as above or as high as thousands.

In its most basic view, in such a tiny org the major duties are as follows:

HCO ES — Form of org, Reception, registration, procurement letters, Central Files, ethics, personnel, appearance of org and staff, any LRH Comm and Director of Special Affairs duties, communications, legal.

The functions that MUST be covered for the org's basic survival are form of the org, Reception, registration and Central Files. These are the income-getting actions of her org. Anyone who ever buys anything from the org, whether via the PES such as a book or small course, is INVOICED with the person's name and address very legible and correct on the invoice and a copy of this goes to Central Files and into a folder and into a file cabinet. To omit these actions prevents the org from having a record for the Registrar to use to contact and sign people up and the org will probably fail or go broke. This one admin action is the most neglected and the most destructive. Addresses for mailings come from CF folders and out of this Address will grow. These folders never decay unless the person dies or asks to be taken off the list. Everything relating to comm with this person and new invoices, etc., including phone notes, goes in his folder.

OES — The Org Executive Secretary — Org Exec Sec combines Accounts, Tech and Qual functions. Elementary banking and bill paying (with the Registrar and PES both able to invoice in, giving the money over to the OES with an invoice copy) is done by the OES. All auditing and major course supervision is done by the OES. The combination of duties may look all but impossible to combine but the strange part of it is, they do and I have done all three at once in a small unit. The trick is to arrange one's time. The major functions that *must* be done for the org to be successful are safeguarding funds by recording and banking and paying bills, auditing pcs, teaching students and correcting those cases that fail or students that are slow. If one of those functions is omitted, especially correction (Qual), then the org will falter and fail.

PES — The Public Executive Secretary — Public Exec Sec works to get NEW people. He does not work on people who have already bought something unless they are dissatisfied or ARC broken with service and muddying up his field at which time he severely gets the HCO ES to bring them in and smooth them out and the OES or a higher org (preferably) to handle them as a tough case. If the HCO ES fails to handle or the OES has out-tech, the PES can have a very hard time of it. By low-level public courses, lectures, Sunday services, invitations and contacts and book sales, the PES gets people into the org, drives them in, in a number of ways. When they are in and getting some service the HCO ES signs them up for higher-level, higher-priced auditing and training. The PES also runs Group Processing sessions and co-audits and schedules such activities. As soon

as possible he gets in a field staff member program using persons who have had service. Getting people to give their success stories is part of it.

THE PES GETS OUT A TWICE–MONTHLY NEWSLETTER TO HIS FSMs TELLING THEM WHAT IS BEING SUCCESSFUL AND WHAT IS NOT. HE COAXES MISSIONS TO SELECT TO HIS ORG AND GIVES THEM ADVICE, PARTICULARLY BASED ON WHAT OTHER MISSIONS ARE DOING WELL. HE KEEPS HIMSELF INFORMED OF WHAT IS SUCCEEDING AND KEEPS OTHERS ADVISED OF IT AND KEEPS THE PICTURE CURRENT WITH CONTINUAL REOBSERVATION. He also sells memberships as well as books, tapes, meters, insignia. Methods of getting new names and getting people into the org vary. One follows the formula of pushing what was successful and dropping what wasn't. However, all of the above functions are accomplished by the PES. He is also the PRO and seeks to establish PRO area control (meaning keeping the area handled so the org is well thought of) no matter how hard this is to do where there is an active enemy or a muddied-up field or a hostile press.

TECH BACKLOGS are the primary menace in an org. If it can't deliver auditing it will shortly find no pcs apply. Neither a Tech nor Qual backlog must ever exist and must be reduced.

An org is far better off selling courses, and when pcs tend toward backlog the org increases its tech staff on a long range and starts heavily pushing courses on a short-range basis as there is no real limit to the number of students one can handle. Students also disseminate better and an org that only audits pcs stays small and is more expensive to run.

ALL AUDITORS ACTIONS

Whenever an org has a Tech or Qual backlog it is usual to call an "all auditors" action.

Any admin personnel assist with scheduling and getting pcs in to the auditors without making pcs wait or wasting an auditor's time.

All tech-trained personnel in the org devote a certain number of hours in the day to delivering auditing for Tech or Qual and spend a certain amount of time on their regular posts until the backlog is gone.

Too many of these "all auditors" can cut an org to bits. They are only done so long as there is a backlog. If too frequent the HCO ES should get in volunteer (but paid) field auditors to help (which was always MSH's successful solution to tech backlogs). The HCO ES is personnel so if personnel stays short, particularly tech personnel, then the HCO ES is not taking adequate personnel action and doesn't have a program to get adequate or qualified staff auditors. Such programs are vital, their training and support costs money. The program "Steal the VIs and VIIIs from another org" is both dishonest and org wrecking

and recoils on one's org eventually. Intern programs for students help this problem and are to be found in recent policy letters.

The above describes a three-man functioning org. Yet it also describes all orgs. It is a circle. The HCO ES, *mind,* routes people to the org's *body,* the OES, who routes them to the PES as FSMs and the product of the basis of a field. From a field stimulated by processed, trained people, the PES routes new people to the HCO ES and around it goes.

If tech and org integrity and service are good, you get an expansion. More and knowledgeable people in the field stimulate more and more new people who then are routed to the HCO ES, etc. Around and around.

The cycle is only interrupted by inattentive or poor service resulting in ARC breaks in the field which if not handled end expansion. Even the attacks of competitors and the press have never stopped this circle. Only inattentive service or staff inattentive to functions or poor service halts it. AN ORG THAT BELIEVES ANYTHING ELSE IS DELUDING ITSELF. Thus organization and function is everything.

THE BIGGER ORG

No matter how many staff members an org may have, the above portions, functions and actions apply.

What occurs is that the HCO ES, the OES and PES begin to acquire assistants. These have post titles. The org board seems to have a larger form. But it is always the same org board, the same functions.

Let us say now we have an HCO ES, an OES and a PES. And we have two more staff members making five.

One of these is an auditor. One is a typist. As you must never exceed two to one of admin/tech ratio and if possible keep it below that (it's less the bigger the org so that a fifty-staff-member org has half its staff in tech and will go awry financially if it doesn't have half in tech) as regards these two additionals, the auditor goes to the OES for auditing and training help and the typist goes to the HCO ES to help write letters to people in CF.

Now let us say we have five nontech staff applicants show up. Obviously four will have to go into prestaff tech training but one can go to the PES temporarily.

Meanwhile the OES has some students graduating, so the HCO ES persuades some to intern which helps the OES.

And so it goes. The functions gradually build up. But they are always assistants to the HCO ES or the OES or the PES.

COMBINED HATS

You normally fill posts by overload noted. But you always bend toward Registration and Tech Service and Promotion.

In the HCO ES portion hats can combine like LRH Comm–HCO Area Sec–Ethics Officer.

In areas under pressure we try to keep the Director of Special Affairs "single-hatted" on its own line to the Office of Special Affairs. It is a catchall, front-line troops sort of hat.

As the LRH Comm is a split-off of the old HCO Area Sec hats, these two combine very easily as HCO Area Secs were LRH's first communicators.

Where there is an LRH Comm single-hatted the org would have to be a forty- or fifty-staff-member org.

An E/O is more important to single hat in a larger org, but if not single-hatted *must* be a specific duty of the HCO ES or the HCO Area Sec.

The OES as he struggles up the line for more tech staff finds Accounts something he can well shed and so, an Accounts personnel comes under his early tech allocations. This is not stated in previous policy. The OES assigns his better auditors to Qual actions, but he continues to do tech actions until the org is safely large. Early policy on VIIIs placed them in Qual. However, it assumes an org is there. An VIII in a tiny org would have to be the OES and the Case Supervisor and also audit and it would be quite a lot of more staff members later before he was now not the Case Supervisor.

Early on the OES splits apart training and processing as separate departments and then finally a Qual. Until he has the traffic for it *he* patches up the pcs other auditors flubbed. But if he is very clever in a small org, the OES shunts all the goofed-up, hard pcs up to a larger org right away and is satisfied to collect the FSM of it as such pcs stall his lines or may be beyond local skill. That's what larger orgs are for. The rougher pcs.

The PES with his share of staff concentrates on his small courses, book sales and magazine actions as the logical zones to fill and with greater success tries to get a single-hatted Director of Clearing to handle FSM actions and see them through.

SHRUNKEN ORGS

We have covered the tiny org but the whole thing applies to an org that has shrunk.

The only real reasons an org shrinks are because it:

a. Followed illegal or destructive orders from above.

b. Failed to do its job as an org as outlined in the earlier part of this paper — in other words was disorganized.

c. Failed to give good service and got its field muddied up with ARC breaks.

d. Didn't outflow (letters, magazines, had no PES functioning).

e. Didn't train or process its own staff.

f. Didn't look or act sufficiently professional in staff member appearance and conduct or in quarters.

g. Let huge backlogs occur without giving fast, good tech service.

h. Monitored its rate of sign-up against what a lazy OES was willing to get handled or would arrange to get handled.

i. Let its admin/tech ratio go kooky.

j. Was subjected to internal suppression which blew off good staff and lost its safe environment without anyone locating the SP.

k. Let itself be raided of auditors by the call of big money in missions.

l. Let staff procurement be turned into freeloading.

To resolve these or other troubles one has to:

A. Confront what it was.

B. Remedy it vigorously.

C. Get in the pattern and actions given in this ED NOW, NOW, NOW.

REORGANIZATION

To use this ED to reorganize an org or to increase its effectiveness, restudy the basic functions of the HCO ES, OES and PES as given here, consider that these three people are *the* working people of the org and need assistance. Don't consider them executives. Consider the HCO ES with her hands full of interview- registration-comm-ethics functions, consider the OES as having his hands full of pcs and students and doing accounts between case supervision and lecturing and consider the PES scrambling around the area selling new people the idea of coming in for service and running an FSM sales staff, organizing groups and placing and collecting for books in bookstores and you see them in the expected light, acting but needing help. If you see these as high-status orderers of destiny with uncalloused hands operating from mysterious forces with incomprehensible requirements, the org is up the chimney already. We at

the top of Scientology work and work hard. And the duties are as roughly outlined at the beginning of this ED. All the way to the top I still C/S case folders or keep tabs on the C/Sing for pcs around. I still drive students to complete. I intervene when your books show cash-bills reversed. I work in the other two Exec Sec sectors, actually work in them and do my own research-writing hats besides.

Right this moment, I am handling your org personally.

The first question I'm asking, "Have you got Ethics Program No. 1 basically done? Right away get the results packaged and sent off."

The second question, "Have you got a backlog in Tech or Qual? How many auditors anywhere in the org? Okay, get an All Auditors going now, today!"

The third, "What's the state of ARC breaks in your field? Okay PES, round them up and get them to the HCO ES and then into Qual to get their overts pulled. Overts? You heard me. Overts. Then put in their life ruds."

The fourth question, "Where's your ethnic survey, PES, on what people think staff should be dressed like? To look more professional. Get it done, and on HCO ES orders get the money squeezed out of the OES and buy some outfits for the Ethics Upstats and reliable contracted execs. And get this place cleaned and neated up."

The fifth question, "What's your outflow? That's not good enough. Get it organized — magazine, info packs, letters from Letter Reg. All hands onto any stuffing-mailing cycle."

The sixth question, "How neat and complete is your CF? Get any and all folders out of mothballs and get a project going on it as you can."

The seventh question, "What state is your Address in? Good. Work it over so it is the exact index of your CF as you can. Meanwhile use it."

The eighth question, "What's your tech/admin ratio? All right, get the trained auditors into Tech and Qual and off admin posts. Assign one to HCO ES and one to PES up to a two to one ratio and put the rest on full-time training. Get personnel staff member procurement going right away of people who will be Ethics Upstats. Okay, let's post it up, holding as many posts stable as we can but double, triple hatting them where we can't cover."

The ninth question, "How is Staff Training Program No. 1 going? All right, smooth those out. Soon as they're ready get this staff audited."

The tenth question, "What students do you have on courses that are slow or blowy? All right Registrar, here's HCOB 23 November 69. OES to star-rate it for

action on the Tech auditors and Registrar to sell each slow student a five-hour Student Rescue Intensive."

The eleventh question, "Have you got your staff broken-contracts list? Turn it over to the HCO ES's people for further action. Oh, you say some of the VIIIs you trained up were lured off by a higher org and missions? Well, we'll make do here and audit with what we've got and I'll pass the contract-breaker names to the Sea Org for their further attention, poor souls."

"You say what do you do with the bill collectors and the enemy and the half-complete project on surveying salesmen? Well, I'll tell you. You turn those over to the respective Exec Secs each comes under and the enemy to the Department of Special Affairs and get the show on the road. You'll never clear the planet sitting around here worrying. Remember the old maxim? When all else fails, do what Ron said."

Love,

Ron

ORG SERIES 42

ORGANIZATIONAL BASICS

An organization consists of coordinated purposes, lines and terminals. That is *all* it consists of.

To be viable, it must have a fair and valuable exchange with an area outside its perimeter in a volume adequate to its needs.

To expand, it must strengthen its purposes and increase its lines and terminals and multiply its exchange above the rate of its consumption.

When you have understood this fully you will understand all groups, companies, societies, civilizations, countries and empires.

Such rise or fall in direct relationship to how well they meet or fail to meet the first three paragraphs above.

And when you fully grasp the basic definition of organization and are trying to build, make viable and expand one, you will be very hard on anyone who is discoordinating or blunting the purposes, damaging or omitting the lines and is disestablishing the terminals. You will understand exactly what that person is doing. He is seeking to make the organization less viable and trying to contract and destroy it. So know your enemies.

And when you see somebody trying hard to build your organization up by following the first three paragraphs, you will know he is your friend and help him all you can.

It is very well to clear off all confusions by doing the first three paragraphs in clay. Then you will have, if you master it, many things clarified. And you can not only understand what makes a slum a slum, a good society a good one, why one area is poor and another opulent, you will also have acquired the potential of creating or helping to create a far better life for all.

REMIMEO

ORG SERIES 12

THE THEORY OF SCIENTOLOGY ORGANIZATIONS

This "HCO Bulletin" 21 Sept. 58 explains how a Scientology organization differs from "the industrial ideal."

The industrial idea of organization is a cogwheel-type organization with each member of it totally fixed on post, doing only exact duties, with all cogwheels intending to mesh. The industrial idea does not differentiate between a *machine* and a human or live organization.

The product laws (Products 1, 2, 3 and 4 as given in this Org Series*) apply to both a live organization and a machine organization and any organization. Since a live and a machine organization hold these laws in common, the industrialist confuses the live organization and the machine organization.

HCO PL 29 Oct. 70 I, Org Series 10, THE ANALYSIS OF ORGANIZATION BY PRODUCT, also carries a mention of this difference between a live and a machine organization.

As the industrial idea has already been mentioned in this Org Series, and as this Org Series mainly applies to live (not machine) organizations, and as people tend to fall into a machine organization pattern (and also to use a live organization to *not* know their own specialty best) this earlier issue on live organization is published in full:

HUBBARD COMMUNICATIONS OFFICE
LONDON (ISSUED AT WASHINGTON)

HCO BULLETIN OF 21 SEPTEMBER 1958

FOR ALL STAFF
MEMBER HATS

THEORY OF SCIENTOLOGY ORGANIZATIONS

An organization is a number of terminals and communication lines united with a common purpose.

The actions of an organization can all be classified under the heading of particle motion and change. To analyze a post or a department or an organization, make a list

*See HCO PL 29 Oct. 70 I, THE ANALYSIS OF ORGANIZATION BY PRODUCT, on page 298 of this volume.

of each particle it handles (whether types of bodies, types of comm or any other item) and follow each item from the point it enters the post or department or organization to the point it exits. If a particle isn't handled *properly* and passed along *properly* there is a confusion or a dead end. To organize an organization requires more than theory. One has to inspect and list the particles and get their routes and desired changes of character en route. Then he has to see that terminals and comm lines exist to receive, change and forward the particle. All types of particles belong to somebody, are handled some way, come from somewhere and go somewhere. There are no confusions when lines, terminals and actions exist for each type of particle.

Judgment and decision are needed in every staff post. If the handling of items are just "petty details" then so is your fellow man a "petty detail."

There are no laborers in a Scientology organization. We are all managers of these particles.

Routes of handling are not orders to handle but directions to go. A route is not necessarily correct for all cases. It is only correct for most cases. Robots can't handle livingness. Robot organizations and robot civilizations fail. They only *seem* to work — like the commie empire *seems* to work until you find out everyone is starving to death in it. A *perfect* organization is not a machine but a pattern of agreements. A route is only the *agreed upon* procedure. It is not only occasionally broken, it now and then should be. The terminals involved make the agreement or the route doesn't work. A route along terminals that never agreed is no route but a labyrinth. People agree to postulates they can understand and appreciate. Hence, a route and handling begins with a particle, develops with a theory, comes to life with an agreement and continues to work because of judgment and decision.

The routing, the comm lines, the pattern of an organization do not do the work. The work is done by living beings using good sense and skill. The organizational pattern only makes their work easier and lessens confusion and overburden. Governments, armies, big research bureaus reduce themselves down to routes and titles. They don't work. They don't do work. They allow for no human equation. Therefore, slave societies (composed only of routes and unthinking terminals) are always beaten eventually by free peoples. There is a point where routes and exact procedures become unworkable, just as there is a point, facing a volume of work, that individuality and no teamwork becomes unworkable. An optimum organization is never severely either one. Total individualism and total mechanization alike are impossible. So if you or your department or your organization seem to be too heavily inclined to either one, *yell* don't talk. A bad organization will fire you and you can do something more profitable. A good organization will listen. BUT — always have a *better* idea than the one in use. Grumbling, refusing to work don't work. A better idea, talked over with the terminals on either side of you, put down in concise writing, submitted, will be put into action in a good organization. Of course, there's always a chance that the new proposed handling throws something out of gear elsewhere. If it does, you have the right to know about it.

An "organization" doesn't get the work done. As an orderly plan it helps its terminals get the work done. The staff as individuals do the work. An organization

can help or hinder getting the work done. If it helps, it's good. If it hinders, it should be examined thoroughly.

An organization can work wholly at "taking in its own laundry." All the work that gets done is the work generated inside the shop by unreal routes and weird changes of particles. This is a government circa mid-twentieth century. Its highest skill is murder which in its profundity it makes legal.

A totally democratic organization has a bad name in Dianetics and Scientology despite all this talk of agreement. It has been found by actual experiment (LA 1950) that groups of people called on to select a leader from among them by nomination and vote routinely select only those who would kill them. They select the talkers of big deeds and ignore the doers. They seem to select unerringly the men of average skill. That is never good enough in a leader and the people suffer from his lack of understanding. If you ever have occasion to elect a leader for your group, don't be "democratic" about it. Compare records as follows: Take the person who *is* a good auditor, not just says he is. Take the person who has a good, not necessarily the highest, profile and IQ. Take the person who can grant beingness to others. And look at the relative serenity and efficiency of any past command he may have had. And even then you're taking a chance. So always elect temporarily and reserve the right of recall. If his first action is to fire people, recall him at once and find another leader. If the organization promptly prospers, keep him and confirm the election by a second one. If the abundance of the organization sags in a month or so, recall and find another. Popularity is some criteria — but it can be created for an election only, as in the US. Select in an election or by selection as an executive the person who can get the work done. And once he's confirmed, obey him or keep him. He's rare. But beware these parliamentary procedure boys and girls who know all the legal and time wasting processes but who somehow never accomplish anything except chaos. A skilled, successful leader is worth a million impressive hayseeds. Democracies *hate* brains and skill. Don't get in that rut. In the US War between the States militia companies elected their officers with great lack of success in battle. They finally learned after tens of thousands of casualties that it was skill not popularity that counted. Why be a casualty — learn first. Democracy is only possible in a nation of Clears — and even they can make mistakes. When the majority rules, the minority suffers. The best are always a minority.

WHAT IS YOUR JOB?

Anything in an organization is your job if it lessens the confusion if you do it.

Your being exactly on post and using your exact comm lines lessens confusion. *But* failure to wear another hat that isn't yours now and then may cause more confusion than being exactly on post.

The question when you see you will have to handle something not yours is this: "Will it cause less confusion to handle it or to slam it back onto its proper lines?"

Example: A preclear wandering around looking for somebody to sell him a book. You see him. The book sales clerk isn't there. The books are. Now what's the answer? You'll create a little confusion if you hand him a book, take his money and give it to the book sales later. You'll create confusion for your own post and the organization if you go chasing around trying to find "book sales terminal." You'll create a feeling of unfriendliness if you don't help the preclear get his book. Answer it by deciding which is less confusing. You'll find out by experience that you can create confusion by handling another's particles *but* you will also discover that you can create confusion by not handling another's particles on occasion.

The only real error you can make in handling another's particles is to fail to tell him by verbal or written comm *exactly* what you did. You stole his hat for a moment. Well, always give it back.

Remember, in a Scientology organization every *Scientologist* on staff potentially wears not just his own but *every* hat in the organization. He has to know more jobs than his own. Particularly jobs adjacent to his post. He often has to do more jobs than his own because those jobs have to be done and he sees it. A non-Scientology member of an organization is only limited in what he can do in the organization by lack of know-how. But the limitation is applicable only to instruction and auditing. But a Scientologist: he may find himself wearing any hat in the place including mine. And others may now and then wear his hat.

A staff member gets the job done of (1) his own post, (2) his department and (3) the whole organization.

People who are *always* off-line and off-post aren't doing their own jobs. When we find somebody always off-post and in our hair, we know if we look at *his* post we'll find a rat's nest. So there are extremes here as well.

HOW TO HOLD YOUR JOB

Your hat is your hat. It is to be worn. Know it, understand it, do it. Make it real. If it isn't real, it is *your fault* since you are the one to take it up and get it clean with an executive. If he doesn't straighten it up so you can do it, it's still your fault if it's not done.

You hold a job in a Scientology organization by doing your job. There are no further politics involved — at least if I find out about it there aren't. So do your job and you've got a job. And that's the way it is.

But on post or off, we only fail when we do not help. The "public" only objects to us when we fail to help or when we fail to answer their questions. So we have two stable data on which we operate whether we're on post or not:

HELP PEOPLE!

ANSWER PEOPLE'S QUESTIONS EXACTLY!

When you don't you let everybody down.

NEATNESS OF QUARTERS

— THE PUBLIC KNOWS US BY OUR MEST —

A part of everyone's hats is keeping a good mock-up in people, offices, classrooms, quarters.

Keep your desk and your MEST neat and orderly. It helps.

And when you see things getting broken down or run down or dirty, fix them or clean them or if you can't, yell like hell on the right comm line.

THE DESPATCH SYSTEM

The despatch system is not there to plague you but to help you.

Except when you've got to have speed, *never* use an interoffice phone to another terminal. And never write a despatch and present it and *you* at some other point at the same time. That's "off-line" just as a phone is "off-line." A good use of the organization's lines reduces confusion. The other guy is busy, too. Why interrupt him or her unnecessarily with routine that should go on the lines? You'll usually get an answer in the same day or at least in 24 hours. The organization's comm lines are pretty good. They make it possible for this small handful of us to get more things done in this society than any other organization on Earth in terms of actual accomplishment.

A comm line can be jammed in several ways. Principal of these is *entheta.* Ask yourself before it goes on the lines — it's bad news but is it necessarily important? Another is *overburden.* Too much traffic jams a line. Too long a despatch doesn't get read. Another is *too little* data. That can jam a line but thoroughly. It takes more despatches to find out what goes. Another way is to bypass the line itself — this jams the terminal. The final way, in broad classes, to jam a comm line is to *put erroneous data* on it.

The last is a pet hate of Scientology people. Generally its form is "everybody knows." Example: "They say that George is doing a bad job," or "Nobody liked the last newsletter." The proper rejoinder is "Who is Everybody?" You'll find it was one person who had a name. When you have critical data omit the "everybody" generality. Say who. Say where. Otherwise, you'll form a bad datum for somebody. When our actions are said to be unpopular, the person or persons saying so have names.

IN SUMMARY

A post in a Scientology organization isn't a job. It's a trust and a crusade. We're free men and women — probably the last free men and women on Earth. Remember, we'll have to come back to Earth someday no matter what "happens" to us. If we don't do a good job *now,* we may never get another chance.

Yes, I'm sure that's the way it is.

So we have an organization, we have a field we must support, we have a *chance*.

That's more than we had last time night's curtain began to fall on freedom.

So we're using that chance.

An organization such as ours is our best chance to get the most done. So we're doing it!

CENOCON
MISSIONS
FIELD

CENTRAL ORGANIZATION EFFICIENCY

One could say with bitterness that the only place some Central Organizations show self-determinism is the HGC and then only on processes.

We are getting too big to refuse to make decisions locally. If we are going to bring self-determinism back to man, we'd sure as the devil better display it in ourselves and on our jobs.

Once the basic purpose of a post or department is known, only two things should then be necessary: (1) Self-determined and responsible continuous creation of department and post, and (2) holding the communication lines rigidly in place. No number of specific, detailed orders can remedy anything if these two are not in existence. Specific, microscopic orders on how the job is to be done are not only impossible but defeat the purposes of posts.

The unit depends utterly upon each department and post acting causatively. The more problems that aren't handled by the department or post receiving them, the more confusion develops.

It is my job to appoint or confirm people on posts, to map general strategy, to provide written ammunition and keep myself informed. If I am impeded in doing that job, we'll never make it. And floods of requests for decisions which are well within the power of Central Orgs to make defeat us in two ways — (1) it cuts my lines by jamming them and (2) denies us general leadership and materiel.

When I appoint or confirm a Scientologist on a post, I say, "There, he'll handle that area." I don't say, "Now I've got some more nursing to do."

If we are to bring self-determinism to man, we must be prepared to exhibit it ourselves.

Defining self-determinism as it applies to departments and posts is very easy — it is the willingness to decide and act in a causative manner toward the traffic and functions of that post. When we have a person on a post who is the total effect of that post, we have the post caving in on him and the tendency to pull the organization in with it. Only when the person on that post can assume positive and effective *cause* do we have gains in dissemination, units, ARC and MEST.

There are two ways of being a total effect — just to fixate and act not at all, just to disperse and throw everything off with resultant confusion to all.

We *must* come to orderly cause-point on every post. We must, we must, we must.

The full statement of function of every post is necessary or we have duplication of effort which we can't afford. But why beyond that do people demand decisions by others? Information they need. Traffic they need. A rigid comm system and exact lines they need, but decisions? How psycho can you get? Given information and the purpose anybody can make a decision. Unless he's batty.

Right here and now I declare us to have become of an age to grow up.

Here we must decide, are we to have a Mussolini empire where only Rome could decide? Or are we to have tightly run departments and posts, taking their own causativeness over their functions and traffic.

True, I'm pretty clever about things. And I'm handy to have around. But I rebel at making slaves. If I cannot teach you to stand on your own two feet on your post, I've surely failed. You've got to be willing to be hanged for mistakes and not tremble for fear of making them. Be right on a majority of decisions, and don't be wrong on any important ones. But if you are you'll only be hanged. How come your neck is so precious when mine isn't?

Yes, it's important what you decide. Yes, it's the survival of your area at stake if you're wrong. But why be timid about it? The whole place will wither and die where you are if you aren't causative. The man or girl on the post is the one who puts life in it.

We have attained now (1) our technical know-how; (2) our method of progress into the society — HAS Co-audit. And (3) our best form of organization (6 departments). And we can only be stopped now by failure to be causative, correct and decisive on our posts.

We're playing for blood. The stake is Earth. If we don't make it nobody will. We're the sole agency in existence today that can forestall the erasure of all civilization or bring a new better one. If we aren't willing to be hanged for our mistakes we'll surely fry for them.

So, let's get causative, each and every one.

A STAFF POST

It will generally be found that those who do their work least well have the greatest number of complaints and cause the most trouble.

When a person is left in momentary charge by some accident of succession, he has no right to use his brief authority to upset the organization. The disease known as anoxemia has no part in our activities and I can be counted upon to stamp it out whenever discovered. I can always be counted upon to back up board members and especially excellent Scientologists.

Causing difficulty or upset is therefore, and for other reasons, a hostile act against the organization, myself and the staff and Scientology in general, and is a gesture toward suicide.

There is another maxim concerning this — a post is better left empty than to be filled by an incompetent.

A post in this organization is a trust. Its duty is to keep the peace, do the job and get the show on the road. If anyone cannot conceive of his post as a trust with this mission, he has no business here.

HCO POLICY LETTER OF 27 APRIL 1960

STHIL

SECURITY OF EMPLOYMENT

(Originally issued as an HCO Bulletin,
same date, same title)

No staff member need have any fears for his job if the following conditions are factual:

1. Doing his work

2. On post at the proper hours

3. Observing Saint Hill regulations

People who do not do their work are the only ones ever dismissed. This is the stable datum on which I operate. People who do their work need very little supervision and have rights. People who don't do their work don't have rights as they need too much supervision from the rest of us, they slow us down. Therefore I usually can be counted upon to eventually sack people who consistently don't do their work. I can be counted upon to defend and retain in employ anyone who does his job. I pay no attention to rumors or gossip. If a person's department or area is running well, that person has my full support. The philosophy is too starkly simple to be believed by some people. But having run businesses, companies and groups of people now for a third of a century, I have found that other philosophies about work aren't effective. Thus I support the personnel who do their jobs and protect them from personnel who overburden us all. In fact, the world supports me only so long as I do my job and so I just pass the same idea along in governing staffs.

The term "on post" should have some attention. "On post" means activity in the area of one's job during the appointed hours. "Off post" means getting into other people's areas and hair. People who drift about into the areas of other people and waste the time of others are "off post." A person off post during the appointed hours is obviously not only not doing a job but causing others to carry his work and is making somebody else look bad as well.

Those who are part of Earth's people today are all part of an economic machine, whether we like it or not. No matter how we may dislike the fact, we live so long as our share of the machinery runs. Maybe it will all be different someday. Just now it isn't. Those of us who work, get along all right. Those who don't, don't.

HCO POLICY LETTER OF 11 APRIL 1961

CENOCON

HOW TO DO A STAFF JOB

If you want a higher level of dissemination and a higher unit or salary, the way to obtain them is simple.

1. Do your own job.

2. Insist that the other staff member do his — but don't do it for him or her.

Example of error: HCO Sec is so busy being D of P or D of T, no hats or tech bulletins get checked. Result: randomity. Assoc Sec is so busy being Dir of Accounts, no executive supervision and assistance occurs. D of P does so much admin, no tech results happen. Etc., etc.

You can wear several hats. The point is, do *them,* not other hats.

Every time you do the other fellow's job for him or her, you cover up a camouflaged hole. People who are camouflaged holes make dev-t. The next thing you know you are protecting the ineffective, have a large number on staff and get no work done and get no unit.

Let the ineffective either sink or get audited. Don't protect them.

Do *your own* jobs.

Refuse to do the other fellows'.

Make ineffective staff members look like ineffectives by leaving the hole open, not hidden.

Don't hide bad work from executives. Your game is not to protect the goofballs but to get a show on the road.

So please do *your* own job and do it well.

Even if an executive asks you to do somebody else's job — don't. Say, instead, "Am I transferred?" If the answer is no, tell him to get lost. I'll back you up.

Do *your* own jobs. What are they?

And you'll see — you'll have wider dissemination and higher income.

Every hour you spend off post doing somebody else's job is an hour lost off your lines. They catch up with you. Only then could you become frantic, overworked, dispersed.

So *please*. Do your own job and let the other fellow reap the hurricane if he doesn't do his.

I do my own job. I have pretty exact hats. They are Research, Writing, Dissemination, Goals, Justice and higher level personnel. Every time a staff member goofs, it tends to roll on up and knock my hats sideways.

So please ***handle*** your own job. That way the world will prosper and so will we.

SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 25 APRIL 1963R
REVISED 29 AUGUST 1990

CENTRAL ORGS
TO ALL STAFF

DUTIES OF A STAFF MEMBER

(Reissued and slightly amended from HASI PL 7 Aug. 58)

ATTACH THIS BULLETIN TO THE INSIDE FRONT COVER OF YOUR STAFF MEMBER HAT FOLDER.

1. Each staff member is responsible for seeing that organization policy is carried out. If you see another staff member at variance with organization policy, it is your duty to advise them direct — if that fails, advise the Ethics Officer.

2. Abide by the working hours of the organization — arrive on time, keep a set lunch hour. If you need to change your lunch hour, check with your department head for okay. A post not covered throws randomity into the organization.

3. Keep your own desk, equipment and quarters neat and orderly. See that papers are not scattered on your own desk and in your office.

4. If you see a door open with nobody on post, close or lock the door.

5. All staff members are responsible for seeing that their doors are locked in the evenings, lights turned off, recorders off, coolers off, cigarettes not left lighted. Leave your office clean and neat.

6. See that your supplies are adequate — order before you give out.

7. Make your daily pickups to and from the Comm Center, or see that this has been done by the Internal Comm Flow Officer.

8. If you change your residence or telephone number, report this information to the Personnel Control Officer, your department head and Reception.

9. Know well the organization board. Know the various posts and who covers them.

10. Abide by the purchase order system of the organization.

11. Be courteous and helpful to students and preclears on our premises, and anyone else who calls by. Refer people to the correct terminal. Take responsibility to see that they get to the right terminal, even if you have to walk them to the terminal's desk.

12. Abide by the policy of outside auditing (HCO PL 16 Oct. 62, AUDITING HOURS LIMITED).

13. Keep your attire as presentable as possible. A good presentation to the public creates a good impression upon them.

14. If you see something around the premises which needs repairing, report it to the Director of Records, Assets and Materiel.

15. Make your posts or post real to other staff members and the field.

16. Answer people's questions. Understand the question, answer it, make friends.

17. Attend staff meetings.

18. Keep your bulletins and policy letters in proper hat folders: technical bulletins in a gold or orange folder marked "Technical Bulletins," your own hat bulletins in your hat folder or folders (blue), and all other bulletins not technical and not your hat in your "Staff Member" hat folder (yellow).

19. Review your hat folders periodically. Refresh your memory regarding your duties. If they are not current, bring them up to date.

20. If you receive a despatch which does not concern your post, reroute it. Do not attempt to handle any and every despatch coming to you which is not your hat. (1) You are introducing randomity on your own post, and (2) you are handling something which another person should know and handle.

21. If you see another person off post, it is your duty to advise them direct. If this fails, advise their department head. Try to be helpful to them in this regard, not chop them. Help them get back on post.

22. If the organization board does not reflect the reality of your posts, report this to HCO.

23. If you occupy more than one post and you find that you do not have enough time to devote proper attention to another of your hats so that the job is lagging or not getting done, it is your duty to iron this out with your department head in order to remedy the situation. If it is found that one of your posts is being neglected due to lack of time available to cover it, the department head may take this up with the Director of Routing and Personnel in order to get that particular hat worn properly. If a person has too many hats, or if the workload has increased to the point that one of your hats is not being worn due to lack of time to devote to it, much randomity can occur within the organization itself and in the field. If you occupy posts in several departments, always consult the department head under which your post exists.

24. You are responsible for following the DESPATCH SYSTEM and the COLOR FLASH SYSTEM of the organization. (Ref: HCO PL 4 Jan. 66 III, SCIENTOLOGY ORGANIZATIONS COMMUNICATIONS SYSTEM: DESPATCHES)

25. If you have questions concerning your duties on any post, check with your departmental head.

26. When you change posts, be sure to report to the Personnel Control Officer so that your file can be changed accordingly.

27. To the best of your ability, help your fellow staff members. Staff members are a team, not opponents. If you see a person not doing his job, or doing it poorly, give him a hand — give him some suggestions for him to look over — this works better than merely chopping him up. Maybe he really doesn't know any better. It is to *your advantage* to assist your fellow staff members. When you assist them to do a better job, it results in a larger paycheck for you. When you chop them in person or to their backs, you are cutting your own and the organization's throat. If you see how they could improve their job, tell *them,* not somebody over the back alley. Confront them. Help them.

28. Each staff member is responsible for the organization itself. For its physical appearance — its personnel — its performance. It cannot properly perform unless each staff member makes it do so.

GOOD WORKERS

It should be established as a matter of principle that the staff member who does a good job gets lots of processing, and a person who is not doing a good job is given minimal processing.

Don't be held down by people who do a bad job just to be processed.

It pins the whole advance of the org down to its lowest staff member's case.

An almost perfectly run organization will fail to get in income or give service if the reverse policy is used and if the whole effort to improve the org is concentrated on processing only erring staff members.

You can only go a certain distance in improving an org by processing staff members. Beyond that it deprives people of an incentive to do a good job.

People don't *have* to be aberrated. And the best job deserves the fastest road to OT.

REWARDS AND PENALTIES HOW TO HANDLE PERSONNEL AND ETHICS MATTERS

The whole decay of Western government is explained in this seemingly obvious law:

WHEN YOU REWARD DOWN STATISTICS AND PENALIZE UP STATISTICS YOU GET DOWN STATISTICS.

If you reward nonproduction you get nonproduction.

When you penalize production you get nonproduction.

The welfare state can be defined as that state which rewards nonproduction at the expense of production. Let us not then be surprised that we all turn up at last slaves in a starved society.

Russia cannot even feed herself but depends on conquest to eke out an existence — and don't think they don't strip the conquered! They have to.

Oddly enough one of the best ways to detect a suppressive person is that he or she stamps on up statistics and condones or rewards down statistics. It makes an SP very happy for everyone to starve to death, for the good worker to be shattered and the bad worker patted on the back.

Draw your own conclusions as to whether or not Western governments (or welfare states) became at last suppressives. For they used the law used by suppressives: If you reward nonproduction you get nonproduction.

Although all this is very obvious to us, it seems to have been unknown, overlooked or ignored by twentieth-century governments.

In the conduct of our own affairs in all matters of rewards and penalties we pay sharp heed to the basic laws as above and use this policy:

We award production and up statistics and penalize nonproduction and down statistics. Always.

Also we do it *all* by statistics — not rumor or personality or who knows who. And we make sure everyone has a statistic of some sort.

We promote by statistic only.

We penalize down statistics only.

The whole of government as government was only a small bit of a real organization — it was an ethics function plus a tax function plus a disbursement function. This is about 3/100ths of an organization. A twentieth-century government was just these three functions gone mad. Yet they made the whole population wear the hat of government.

We must learn and profit from what they did wrong. And what they mainly did wrong was reward the down statistic and penalize the up statistic.

The hard worker-earner was heavily taxed and the money was used to support the indigent. This was *not* humanitarian. It was only given "humanitarian" reasons.

The robbed person was investigated exclusively, rarely the robber.

The head of government who got into the most debt became a hero.

War rulers were deified and peacetime rulers forgotten no matter how many wars they prevented.

Thus went ancient Greece, Rome, France, the British Empire and the US. *This* was the decline and fall of every great civilization on this planet: they eventually rewarded the down statistic and penalized the up statistic. That's *all* that caused their decline. They came at last into the hands of suppressives and had *no* technology to detect them or escape their inevitable disasters.

Thus, when you think of "processing Joe to make a good D of P out of him and get him over his mistakes," forget it. That rewards a down statistic. Instead, find an auditor with an up statistic, reward it with processing and make *him* the D of P.

Never promote a down statistic or demote an up statistic.

Never even hold a hearing on someone with an up statistic. Never accept an ethics chit on one — just stamp it "Sorry, Up Statistic" and send it back.

But someone with a steadily down statistic, investigate. Accept and convert any ethics chit to a hearing. Look for an early replacement.

Gruesomely, in my experience I have only seldom raised a chronically down statistic with orders or persuasion or new plans. I have only raised them with changes of personnel.

So don't even consider someone with a steadily down statistic as part of the team. Investigate, yes. Try, yes. But if it stays down, don't fool about. The person is drawing pay and position and privilege for not doing his job and that's too much reward even there.

Don't get reasonable about down statistics. They are down because they are down. If someone were on the post, they would be up. And act on that basis.

Any duress leveled by Ethics should be reserved for down statistics.

Even Section 5 investigates social areas of down statistic. Psychiatry's cures are zero. The negative statistic of more insane is all that is "up." So investigate and hang.

If we reverse the conduct of declining governments and businesses we will of course grow. And that makes for coffee and cakes, promotion, higher pay, better working quarters and tools for all those who earned them. And who else should have them?

If you do it any other way, everyone starves. We are peculiar in believing there is a virtue in prosperity.

You cannot give more to the indigent than the society produces. When the society, by penalizing production, at last produces very little and yet has to feed very many, revolutions, confusion, political unrest and dark ages ensue.

In a very prosperous society where production is amply rewarded, there is always more left over than is needed. I well recall in prosperous farm communities that charity was ample and people didn't die in the ditch. That only happens where production is already low and commodity or commerce already scarce (scarcity of *commercial* means of distribution is also a factor in depressions).

The cause of the Great Depression of the 1920s and 1930s in the US and England has never been pointed out by welfare "statesmen." The cause was income tax and government interference with companies and, all during the 1800s, a gradual rise of nationalism and size of governments and their budgets, and no commercial development to distribute goods to the common people, catering to royal governments or only a leisure class still being the focus of production.

Income tax so penalized management, making it unrewarded, and company law so hampered financing that it ceased to be really worthwhile to run companies and management quit. In Russia management went into politics in desperation. Kings were always decreeing the commoner couldn't have this or that (it put the commoner's statistic up!) and not until 1930 did anyone really begin to sell to the people with heavy advertising. It was Madison Avenue, radio, TV and Bing Crosby not the Gre-e-eat Roosevelt who got the US out of the depression. England, not permitting wide radio coverage, never has come out of it and her empire is dust. England still too firmly held the "aristocratic" tradition that the commoner mustn't possess to truly use her population as a market.

But the *reason* they let it go this way and the *reason* the Great Depression occurred and the *reason* for the decline of the West is this one simple truth:

If you reward nonproduction you get it.

It is *not* humanitarian to let a *whole* population go to pieces just because a few refuse to work. And some people just won't. And when work no longer has reward none will.

It is far more humane to have enough so everyone can eat.

So specialize in production and everybody wins. Reward it.

There is nothing really wrong with socialism helping the needy. Sometimes it is vital. But the reasons for that are more or less over. It is a temporary solution, easily overdone and like communism is simply old-fashioned today. If carried to extremes like drinking coffee or absinthe or even eating, it becomes quite uncomfortable and oppressive. And today socialism and communism have been carried far too far and now only oppress up statistics and reward down ones.

By the way, the natural law in this PL is the reason Scientology goes poorly when credit is extended by orgs and when auditors won't charge properly. With credit and no charge we are rewarding down statistics with attention and betterment as much as we reward up statistics in the society. A preclear who can work and produces as a member of society deserves of course priority. He naturally is the one who can pay. When we give the one who can't pay just as much attention, we are rewarding a down social statistic with Scientology and of course we don't expand because we don't expand the ability of the able. In proof, the most expensive thing you can do is process the insane and these have the lowest statistic in the society.

The more you help those in the society with low statistics the more tangled affairs will get. The orgs require fantastic attention to keep them there at all when we reward low society statistics with training and processing. The worker pays his way. He has a high statistic. So give him the best in training and processing — not competition with people who don't work and don't have any money.

Always give the best service to the person in society who does his job. By not extending credit you tend to guarantee the best service to those with the best statistics and so everyone wins again. None are *owed* processing or training. We are not an Earthwide amends project.

No good worker *owes* his work. That's slavery.

We don't *owe* because we do *better*. One would owe only if one did worse.

Not everyone realizes how socialism penalizes an up statistic. Take health taxes. If an average man adds up what he pays the government he will find *his* visits to medicos are *very* expensive. The one who benefits is only the chronically ill, whose way is paid by the healthy. So the chronically ill (down statistic) are rewarded with care paid for by penalties on the healthy (up statistic).

In income tax, the more a worker makes the more hours of his workweek are taxed away from him. Eventually he is no longer working for his reward. He is working for no pay. If he got up to 50 pounds a week the proportion of his pay (penalty) might go as high as half. Therefore people tend to refuse higher pay (up statistics), it has a penalty that is too great. On the other hand a totally indigent nonworking person is paid well just to loaf. The up statistic person cannot hire any small services to help his own prosperity as he is already paying it *via* the government to somebody who doesn't work.

Socialisms pay people *not* to grow crops no matter how many are starving. Get it?

So the law holds.

Charity is charity. It benefits the donor, giving him a sense of superiority and status. It is a liability to the receiver but he accepts it as he must and vows (if he has any pride) to cease being poor and get to work.

Charity cannot be enforced by law and arrest for then it is extortion and not charity.

And get no idea that I beat any drum for capitalism. That too is old-old-*old* hat.

Capitalism is the economics of living by nonproduction. It by exact definition is the economics of living off interest from loans. Which is an extreme of rewarding nonproduction.

Imperialism and colonialism are also bad as they exist by enslaving the population of less strong countries like Russia does, and that too is getting a reward for nonproduction like they did in Victorian England from all the colonies.

Parasitism is parasitism. Whether high or low it is unlovely.

All these isms are almost equally nutty and their inheritors, if not their originators, were all of a stamp — suppressive.

All I beat the drum for is that the working worker deserves a break and the working manager deserves his pay and the successful company deserves the fruits of its success.

Only when success is bought by enslavement or rewards are given to bums or thieves will you find me objecting.

This is a new look. It is an honest look.

Reward the up statistic and damn the down and we'll all make out.

DIVISION 1

ETHICS

ETHICS PROTECTION

Ethics actions must parallel the purposes of Scientology and its organizations.

Ethics exists primarily to get technology in. Tech can't work unless ethics is already in. When tech goes out, Ethics can (and is expected to) get it in. For the purpose of Scientology amongst others is to apply Scientology. Therefore when tech is in, ethics actions tend to be dropped. Ethics continues its actions until tech is in and as soon as it is, backs off and only acts if tech goes out again.

The purpose of the org is to get the show on the road and keep it going. This means production. Every division is a production unit. It makes or does something that can have a *statistic* to see if it goes up or down. Example: a typist gets out 500 letters in one week. That's a statistic. If the next week the same typist gets out 600 letters that's an UP statistic. If the typist gets out 300 letters that's a DOWN statistic. Every post in an org can have a statistic. So does every portion of the org. The purpose is to keep production (statistics) up. This is the only thing that gives a good income for the staff member personally. When statistics go down or when things are so organized you can't get one for a post, the staff members' pay goes down as the org goes down in its overall production. The production of an organization is only the total of its individual staff members. When these have down statistics so does the org.

Ethics actions are often used to handle down individual statistics. A person who is not doing his job becomes an Ethics target.

Conversely, if a person *is* doing his job (and his statistic will show that) ethics is considered to be *in* and the person is *protected* by Ethics.

As an example of the proper application of ethics to the production of an org, let us say the Letter Registrar has a high statistic (gets out lots of effective mail). Somebody reports the Letter Registrar for rudeness, somebody else reports the Letter Registrar for irregular conduct with a student. Somebody else reports the Letter Registrar for leaving all the lights on. Proper Ethics Officer action = look up the general statistics of the Letter Registrar, and seeing that they average quite high, file the complaints with a yawn.

As the second example of ethics application to the production of an org, let us say a Course Supervisor has a low statistic (very few students moved out of his course, course number growing, hardly anyone graduating, a bad Academy statistic). Somebody reports this Course Supervisor for being late for work, somebody else reports him for no weekly Ad Comm report and bang! Ethics looks up the person, calls for an Ethics Hearing with trimmings.

We are not in the business of being good boys and girls. We're in the business of going free and getting the org production roaring. Nothing else is of any interest then to Ethics but (a) getting tech in, getting it run and getting it run right and (b) getting production up and the org roaring along.

Therefore if a staff member *is* getting production up by having his own statistic excellent, Ethics sure isn't interested. But if a staff member isn't producing, shown by his bad statistic for his post, Ethics is fascinated with his smallest misdemeanor.

In short, a staff member can get away with murder so long as his statistic is up and can't sneeze without a chop if it's down.

To do otherwise is to permit some suppressive person to simply ethics chit every producer in the org out of existence.

When people do start reporting a staff member with a high statistic what you investigate is the person who turned in the report.

In an ancient army a particularly brave deed was recognized by an award of the title of Kha-Khan. It was not a rank. The person remained what he was, BUT he was entitled to be forgiven the death penalty ten times in case in the future he did anything wrong. That was a Kha-Khan.

That's what producing, high-statistic staff members are — Kha-Khans. They can get away with murder without a blink from Ethics.

The average fair-to-poor statistic staff member of course gets just routine ethics with hearings or Courts for too many misdeeds. The low statistic fellow gets a Court if he sneezes.

Ethics *must* use all org discipline only in view of the production statistic of the staff member involved.

And Ethics must recognize a Kha-Khan when it sees one — and tear up the bad report chits on the person with a yawn.

To the staff member this means — if you do your job you are protected by Ethics. And if you aren't so protected and your statistic is high, cable me.

HCO POLICY LETTER OF 12 SEPTEMBER 1967

REMIMEO
ORG EXEC COURSE

POST, HANDLING OF

Handling your post contains an element which is easily overlooked but without which you may have many troubles hard to trace.

IN ESSENCE YOU ARE WEARING *MY* ADMINISTRATIVE HAT FOR THAT POST.

You may wear the hat letter-perfect and yet have a miss. As it is *my* hat really, no matter how small the post is, it has to be worn as I would wear it. The air and attitude of how it's worn is important.

Many an HCO Sec in the old days successfully got out of a tough problem by asking "What would Ron do in this situation?" And did it and all worked out.

Therefore it is worthwhile to know how I would go about things.

I could detail for hours the admin indicators and admin technology I use. But you've got the bulk of it already in org policy letters.

There are only a few things I might add that would help.

One is that I work exclusively on the "greatest good for the greatest number of dynamics."

I believe that to command is to serve and only gives one the right to serve.

I have to be, above all things, effective and cannot fall short of being effective or explain ineffectiveness away.

I never compromise with a situation to be agreeable.

In handling something I figure out if I want to play that game or not and if I don't I won't. And if I don't I will do anything needful to disconnect from it and if I do I will do anything I can to win it.

There is at least one, however, that is wildly out in many executives. And that is how I handle other posts.

My entire concentration is to put the *person* on a given post that possibly can handle it and then let him or her get on with it.

The difference is this: others put a person on a post and then hammer and pound him with orders as to how to handle it. If the appointee gets in trouble, others give him streams of orders and directions.

I don't. If a person has been trusted with a post I also trust him to handle it.

If he or she obviously can't, I find another person who possibly can.

I give a person on a post a lot of chances. I know posts are hard to handle. But if the statistic goes down and down and stays down, and no admin or tech advice has been of any avail, I don't hammer away with streams of orders. I just find another person.

This I know is a greater plus and minus than people easily tolerate. The plus is that I extend complete trust to an appointee. The minus is that if the stat is down and WON'T come up I find another person. There is no in-between streams of directions or nagging.

Also, after a time, I grant that people can change and give a removed person another chance. I don't consider they will be bad forever. When I handle a situation that is bad I handle it according to the greatest good for the majority of dynamics. *Then,* when it IS handled, I usually try to pick up individuals who have had to be shot in the handling. I don't forget them.

You will see me handle situations ruthlessly and bring it all off, and then you may not see that I try afterwards to patch up whoever had to be shot.

People also try to teach me that it is useless to try to salvage a gone dog, a low-stat failure who had his chance. I refuse to learn it. I still try.

As time goes on I even love my enemies but after I have rendered them powerless to stop us.

I put a person on a job and let him or her get on with it. I don't act unless it is obvious the roof is falling in. Then I find somebody else who possibly can hold it. And *also* I patch up the fellow I had to remove and someday give him another chance. Evidence of this is all around.

I *don't* try to force a job to be held by streams of detailed instructions once failure is apparent. From the moment I see it isn't being held to the moment I appoint somebody new I will myself act to hold the post in any way I can, no matter how distant it is. But my attention is really on finding a new person to appoint and when that's done I get off the line and let him get on with it.

It makes a far more forceful organization to handle things this way and a far happier one in the long run.

A person always knows, with me, if his job is secure. If his stat is up, it is. I'll not admonish or permit him to be pushed about.

This may seem to be a brutal way to go about things but remember this: We are a few and we have an enormous area to salvage that long ago went down for the third time. If we fail, it is improbable the job will ever again be done as, on evidence that the problem still exists, it has never before been solved in all the past long ages. So we can't really take chances. Not with the whole human race. So we do our jobs and see that our jobs are done. We have a trust which, if we fail it, condemns ourselves, our friends, our future to continued oblivion. So we mustn't fail. Or permit others to fail. And that is how and why we ARE getting the job done.

REMIMEO

CLEANLINESS OF QUARTERS AND STAFF
IMPROVE OUR IMAGE

There is no quicker way to depress income and public goodwill than to have dirty quarters and slovenly staff.

While we know it takes income to make a place look smart and to have elegant quarters, this is not the point of this policy letter.

Clean floors, walls, woodwork and service rooms require *very* little. Clean washrooms and proper paper towels and tissue are an ordinary requirement.

As the world goes more beatnik it is hard to keep up a standard of cleanliness and good order.

But it can be done.

And for the sake of income and goodwill it must be done.

The world has been educated by business to a tradition of clean quarters and smart service. We must at least equal that.

Staff should be uniformed in orgs that can afford it. A clean well-dressed staff inspires confidence and begets the payment of bills and more service.

The private Scientology practitioner fails mainly on his personal lack of professional address to his clients and his personal dress is sometimes pretty grim. This is what costs him his income.

An org, to get anywhere at all, has to look like a real org and its staff must look like professionals. Until they can be uniformed, they can be clean.

Similarly, until you can have really swanky quarters you can at least have clean quarters, walls, WCs and things picked up.

A *clean* set of quarters and a neat, professional-looking staff can increase your income by about 500 percent.

IMPROVE OUR IMAGE.

EXERCISE

(Originally written by LRH as *Apollo* OODs item of 3 Mar. 72.
Issued as an HCO PL and HCOB on 3 Nov. 80.)

Health of a body requires some exercise. When a body is not exercised it goes downhill, diet or no diet.

Exercise and correct diet keep a body going.

This applies especially to auditors, desk workers and students.

That's why you should be out there getting some air in your lungs and some limberness in the muscles for a short time each day.

HCO POLICY LETTER OF 11 DECEMBER 1969R
ISSUE I
REVISED 16 SEPTEMBER 1988

REMIMEO
PES HAT
DIR PUBLIC RELATIONS

(IMPORTANT ORG BOARD CHANGE)

APPEARANCES IN PUBLIC DIVS

The appearance of the org and staff is transferred out of Department 1 which becomes the DEPARTMENT OF ROUTING AND PERSONNEL and may still be called RAP.

In accordance with HCO PL 5 June 83 VI, CLASS IV ORGS PUBLIC DIVISIONS ORGANIZING BOARD, APPEARANCES comes under the Department of Public Relations, Div 6C, Dept 18A, Org Appearances Section.

The Public Exec Sec therefore is directly responsible for the appearance of the org, its staff, its literature and publications so far as appearance and acceptability go.

Appearances never worked under Dept 1. "Image" is actually a PRO function and it is of vital interest to the Public Exec Sec as otherwise his promotion may be dulled or rendered null. Appearance can even cause him much trouble.

The IMAGE of an org and its staff and its literature and publications actually is a form of projection into the public.

The reason it is in Dept 18A is that this is the first department of the Field Control Division. Also it is something which has to be fitted into the values of the population where the org is located. They have definite ethnic ideas of what an org would look like, what a staff would dress like, what the literature should look like if any of these had a command position.

It is always easy when one has millions to spend to make a commanding image. The trick is to make it without its costing more than one can afford.

One has to make the money before one makes the full image.

There is much one can do — and has to do — at no financial cost or at a low price.

One can paint up a place with volunteer help for the cost of rented machines and materials.

Staff individual areas of responsibility ("cleaning stations") should be assigned via the HCO ES so that all areas of an org are covered. If one has a cleaning service this is still necessary as there is such a thing as litter. Newspapers, magazines, typewriters, machines — no cleaning service handles these. That is staff action because it's staff use.

Where one does not buy the staff its clothing one can still insist on clean hands, fingernails and cut hair, bathed bodies and brushed teeth, polished shoes and so on. It's poor advertising indeed when a staff member is dirty and unkempt.

When one has money and an ethnic survey has determined what the population thinks a professional looks like, one can buy the staff clothes that forward a highly professional image to create public respect and confidence. Remember in this survey as in all ethnic surveys, one does not copy professionals in the society as they *haven't* done a survey. One is interested in looking like what the public thinks a professional looks like. This is moderated of course by what the staff will then be proud to look like.

Reception and staff manners are part of appearances.

An auditor's bad breath or body odor can cost you quite a lot of gained ground. So this is part of it also.

A noisy atmosphere near auditing rooms or in Reception, radios playing, staff chattering can spoil an image.

Children flying about and babies' nappies hanging are about as far as you can get from a professional image. Do all right for the Congo maybe but even there I can't imagine a juju being taken very seriously in a hut so equipped.

The way to spoil an org image is of course to subdue or kill what successful Scientology orgs have always been noted for — a happy, friendly, busy atmosphere. So the use of heavy ethics to produce image compliance is murderous. Pride is the primary reason for good appearance.

So staff cooperation and enthusiasm for the project is worth thousands of conditions seeking to force them to work for an image. Modern schools are so backward they don't teach personal appearance, manners, cleanliness. And a lot of staff just don't know any better and have to be taught what they weren't taught in schools.

Fighting to obtain and improve a suitable image is inevitably quite a task. If the org had lots of money it could buy its image. But without lots of money the image has to be gradually built. Cleanliness and neatness are the primary building blocks to respect in most societies.

An org without money has to have an image to make money but an image costs money and the org hasn't any. That's a typical problem. "We should have a building like the new Life Insurance Skyscraper" leaves the problem unsolved. There is a gradient between. You can pay so much rent you just work for the landlord or the bank. Or the rent is so high you can't afford enough space to earn the rent. Problems like that crop up.

If the tech/admin ratio of 2 admin to 1 tech is kept and even brought toward 1 to 1, and if promotion is excellent and effective and tech service and org service is good, it is easy to lay aside enough to earn new quarters. So the image can be improved.

Similarly, literature quality is desirably very high. But its cost can rise to a point where it makes promotion too costly to be engaged upon. That has happened several times to orgs where they went overboard on too posh literature.

Quality of presentation of tape recordings — sound quality — definitely comes under Dept 18A now.

The org image is in the care of the PES. I trust he does well with it.

DIV 6

THE ORG IMAGE

A poor org public image can cost an org nine-tenths of its income, thus greatly curtailing pay and facilities. It can lead to trouble with the area. It can reduce the expansion of Dianetics and Scientology to near zero.

When important people enter an org and find its premises messy, themselves and their requirements neglected, the org not only loses their fee, it also loses the important friends who would actively protect it.

If an org and its staff display a downstat image, public confidence in Dianetics and Scientology is shaken.

By showing a good org mock-up, we are living examples of what Dianetics and Scientology can do.

There are several zones which comprise the org image.

1. Premises, particularly the entrances and interview and service areas. These should be neat, not cluttered up with baggage, paper, tattered notices or unsightly things.

2. Public comm lines. Letters and mailings should be correctly addressed with the right name and not sent to several addresses for the same person. The appearance and tone of any mailings and communications should be good and not offend. “Friendly and agreeable responses” was the first order I ever gave to an org.

3. Staff. Appearance and attitude to the public.

4. Service delivery, assurances of.

5. Publicizing values of service.

6. Publications, appearance and suitability of distribution.

7. Alliances with suitable groups and leaders, with due regard to local “ethnic” values (publicly admired values).

8. Eradication of enemies on public lines with due regard to local ethnic values (publicly detested values).
9. Alignment of promotion with things publicly admired and against things publicly detested.
10. Advertising, effectiveness, suitability and lawfulness of.
11. Membership expansion.
12. Group expansion.
13. Expansion planning of facilities.

Contemporary "Public Relations Officer" duties in business firms are not as embracive as the above 13 points by considerable. These are loosely classified as follows (quoted from their texts).

"1. To keep management informed of public opinion, and of events and trends likely to affect its reputation.

"2. To advise management on the policies and actions it should adopt in order to gain and keep public goodwill; and on the likely effects, in terms of public opinion, of any policies and actions dictated by other factors.

"3. To apply public relations techniques to solve problems in which the company's reputation is at stake and to maintain a continuing, positive program of action to secure goodwill, presenting the company in all its aspects to all its audiences by every appropriate means of communication.

"The executive side of the public relations man's work includes the company's relations with the press, radio and television; the production of many kinds of printed matter, including company reports, house magazines, wall charts, brochures and even books; films and film strips; exhibitions; the design of company stationery; the way a firm receives its visitors; a watching brief on the way it answers its telephone calls, writes its letters, handles complaints; its policy on donations to charity and an infinite variety of items beyond."

We often hear that we should hire a public relations firm to do all these things. The catch is that these firms have a high personnel turnover and new men on the "accounts" have to be rebriefed continually.

We have in the past hired contemporary, professional PRO men AND THEY LAID THE FOUNDATION OF OUR DIFFICULT TIMES WITH PRO ACTIONS.

In Dianetics and Scientology we have gone up against a totalitarian conspiracy using "mental health" to control populations. This was not a normal PRO atmosphere as encountered by business firms. It began with war where the enemy controlled all news media and governments.

We had to be very, *very* good indeed *to live through it at all*. Our "public" does not understand this. They are accustomed to sleek, untroubled firms selling them "Wheaties, the Breakfast of Idiots" or "Go Slow gasoline" or "You too can be insane."

So in Dianetics and Scientology we have a job in PRO which far exceeds the usual company demands.

In ordinary PRO actions we have not done too badly in the past. For instance our people handling congresses make the US Democratic Party Convention PROs look like rank amateurs.

The enemy has used all available PRO and intelligence techniques to hold us back, and as the enemy also controlled many key government figures, this has been a very rough time.

That we are alive at all and expanding shows we have not done too badly. The enemy is definitely losing.

The reason for this is INTEGRITY. By and large our people are sincere.

WORD OF MOUTH is a public relations comm line *superior* to press, radio, television or Mr. Big. Radio, press and TV only seek to create "word of mouth." This term means what people say to one another.

By standing for what people think is good and opposing what people think is bad greatly speeds WORD OF MOUTH.

We will go as far as Dianetics and Scientology work in the hands of auditors and no farther.

The enemy, lacking integrity, word of mouth and workable tech, has not won despite total control of governments, press, radio, TV and all standard PRO media, plus financing in terms of billions.

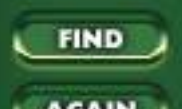
Thus we see that there are three commodities above contemporary PRO concepts. These are:

A. INTEGRITY

B. WORD OF MOUTH

C. WORKABILITY AND USEFULNESS OF PRODUCT

All the PRO advices and direction will not prevail if the above three things are not an integral part of "the company" PRO planning.



How much a product COSTS has some bearing on whether or not it is used. But unstabilizing prices, we have learned (such as a small increase), is utterly deadly. And reducing prices does not actually increase sales in our experience. The exception is the granting of 50 percent scholarships and giving certain courses as field staff member prizes. And here it does seem that the STATUS value outweighs the monetary saving appeal. Therefore STATUS INCREASE is a vital part of the product.

However, whether Dianetics and Scientology have been at war or not, the first 13 points are what we would consider routine PRO actions which, if neglected, would result in heavy income losses.

A staff idling in reception, offhand handling of callers, wrong address or names misspelled drive off customers. Aside from simply blocking sign-ups, these points also REDUCE CUSTOMER STATUS.

As our organizations are built (due to tech concentration) on handling the individual, any PRO must be very alert to any point which would seem to the "customer" to diminish his status.

A PRO should himself look at the given points from the viewpoint of an important potential "customer." Would the org environment and handling attract or drive off an important person (let us say, the mayor) as a "customer"? If the answer is "yes" in any point, then the org is losing up to 90 percent of its income through these PRO omissions.

If a staff is poorly paid or the premises are poorly furnished, cluttered or dirty, then the error lies in either the first 13 or the above A, B, C points of PRO.

A PRO in advising actions to the EC (and he should have direct access to the Executive Council or management) should be very wary of killing off the org's vitality with too much militant control. The PRO also has the staff as a public. If one wants to clear sandwich-eating staff off reception, the best way is to start a campaign for a staff lounge, get it and *then* forbid staff to clutter up reception.

The PRO in accomplishing PRO points is of necessity a creature of ideas even in getting his routine PRO actions done.

The enemy we have had gets very high points on 1 to 13 (omitting 4, assurances of delivery; and 7 and 8, ethnic points). Dianetics and Scientology orgs get rather low points on 1 to 13 (excepting 4, 7 and 8 which they do well).

Dianetics and Scientology orgs do well on A, B and C. The enemy utterly collapses on these.

If Dianetics and Scientology orgs did well on *all* points (1 to 13 and A, B and C), the battle would be won in very little time.

If a PRO is not working to bring points 1 to 13 and A, B and C all into full operation in his area, he is not doing his job. If he *is* doing all these things, he is a very, very valuable PRO and should be given every possible assistance on his job.

MISSIONS

FIRST POLICY

The first policy of a Scientology org, laid down on about 8 or 10 March 1950, is:

MAINTAIN FRIENDLY RELATIONS WITH THE ENVIRONMENT AND THE PUBLIC.

PEOPLE'S QUESTIONS

A congress *M U S T*

An organization *M U S T*

Answer people's questions.

This is the primary public complaint — that Scientologists in the organization or out won't answer directly questions asked about this or that.

Understand it, answer it, make friends.

Best,

L. RON HUBBARD

REMIMEO

PR SERIES 9

MANNERS

The original procedure developed by man to oil the machinery of human relationships was "good manners."

Various other terms that describe this procedure are politeness, decorum, formality, etiquette, form, courtesy, refinement, polish, culture, civility, courtliness and respect.

Even the most primitive cultures had highly developed rituals of human relationship. In studying twenty-one different primitive races, which I did firsthand, I was continually impressed with the formalities which attended their interpersonal and intertribal and interracial relationships.

Throughout all races, "bad manners" are condemned.

Those with "bad manners" are REJECTED.

Thus the primary technology of public relations was "manners."

Therefore a public relations man or team that has not drilled and mastered the manners accepted as "good manners" by those being contacted will fail. Such a PR man or team may know all the senior PR tech and yet fail miserably on the sole basis of "exhibiting bad manners."

"Good manners" sum up to (a) granting importance to the other person and (b) using the two-way communication cycle (as in *Dianetics 55!*). Whatever motions or rituals are, these two factors are involved. Thus a PR violating them will find himself and his program rejected.

Arrogance and force may win dominion and control but will never win acceptance and respect.

For all his "mental technology" the psychiatrist or psychologist could never win applause or general goodwill because they are personally (a) arrogant beyond belief, (b) hold others in scathing contempt ("man is an animal," "people are all insane," etc.). Born from Bismarck's military attitude these subjects have borrowed as well the attitude which made the Nazis an object of worldwide condemnation. No matter how many people were maimed or killed, the Nazi would never have dominated the world any more than their "mental scientists" will ever win over humanity.

They just don't have "good manners"; i.e., they do not (a) consider or give others a feeling of importance and (b) they are total strangers to a comm cycle.

SUCCESSFUL PR

All successful PR, then, is built upon the bedrock of good manners as these are the first technology developed to ease human relations.

Good manners are much more widely known and respected than PR tech. Therefore NO PR tech will be successful if this element is omitted.

Brushing off "mere guards" as beneath one's notice while one goes after a contact with their boss can be fatal. Who talks to their boss? These "mere guards."

Making an appointment and not keeping it, issuing an invitation too late for it to be accepted, not offering food or a drink, not standing up when a lady or important man enters, treating one's subordinates like lackeys in public, raising one's voice harshly in public, interrupting what someone else is saying to "do something important," not saying thank you or good night — these are all "bad manners." People who do these or a thousand other discourtesies are mentally rejected by those with whom they come into contact.

As PR is basically acceptance then bad manners defeat it utterly.

A successful PR person has to have good manners.

This is not hard. One has to assess his attitude toward others and iron it out. Are they individually important? One has to have his two-way comm cycle perfect, so perfect it is so natural that it is never noticed.

Given those two things, a PR can now learn the bits of ritual that go to make up the procedure that is considered "good manners" in the group with which he is associating.

Then given PR tech correctly used, one has successful PR.

IMPORTANCE

You have no idea how important people are. There is a reversed ratio — those at the bottom have a self-importance *far* greater than those at the top who *are* important. A charlady's concept of her own importance is far greater than that of a successful general manager!

Ignore people at your peril.

Flattery is not very useful, is often suspect, as it does not come from a sincere belief and the falsity in it is detectable to all but a fool.

A person's importance is made evident to him by showing him respect, or just by assuring him he is visible and acceptable.

To see and acknowledge the existence of someone is a granting of their importance.

To know their name and their connections also establishes importance.

Asserting one's *own* importance is about as acceptable as a dead cat at a wedding.

People have value and are important. Big or small they are important.

If you know that, you are halfway home with good manners.

Thus PR can occur.

COMMUNICATION

The two-way comm cycle is more important than the content.

The content of the comm, the meaning to be put across to another or others is secondary to the fact of a two-way comm cycle.

Comm exists to be replied to or used.

Comm with the comm cycle being in first must exist before it carries any message.

Messages do not travel on no line.

Advertising is always violating this. Buy Beanos! Into the empty air. Other things must establish the line. And the line must be such as to obtain an answer, either by use or purchase or reply.

A funny example was a letter writer who without preamble or reason told people to buy a multi-thousand dollar package without even an explanation of its use or value. Response zero. No comm line. He was writing to a name but not really to anyone.

In social intercourse a comm cycle must be established before any acceptance of the speaker can occur. Then one might get across a message.

Good manners require a two-way comm cycle. This is even true of social letters and phone calls.

Out of this one gets "telling the hostess good night as one leaves."

One really has to understand the two-way comm cycle to have really good manners.

Without a two-way comm cycle, PR is pretty poor stuff.

PRIMITIVES

If an American Indian's ritual of conference was so exact and complex, if a thousand other primitive races had precise social conduct and forms of address, then it is not too much to ask modern man to have good manners as well.

But "good manners" are less apparent in our times than they once were. This comes about because the intermingling of so many races and customs have tended to destroy the ritual patterns once well established in the smaller units.

So one appears to behold a sloppy age of manners.

This is no excuse to have bad manners.

One can have excellent manners by just observing:

a. Importance of people

b. Two-way comm cycle

c. Local rituals observed as proper conduct

These are the first musts of a PR man or woman.

On that foundation can be built an acceptable PR presence that makes PR succeed.

HCO PL	24 Aug. 65 II	CLEANLINESS OF QUARTERS AND STAFF, IMPROVE OUR IMAGE
HCO PL	11 Dec. 69R I Rev. 16.9.88	APPEARANCES IN PUBLIC DIVS

The amount of public demand for service and your future income are both largely dependent upon GOODWILL.

Goodwill is the reputation an organization has with its publics for integrity, good service, prompt bills paying, high quality delivery, friendliness, etc.

Excellent technical delivery is what generates a blaze of goodwill and PR that spreads by word of mouth like wildfire.

Events, open houses, tours, film or slide presentations — all such activities serve to generate public interest and goodwill.

Training and processing are commodities that are far, far more desirable than anything else this world has to offer. And when they are delivered with superlative technical application with the out-of-this-world gains that are possible, you would drum up so much public support that you would soon have an army of ardent supporters outside your door, no matter how much the psychs and press railed about us.

PR

Good technical delivery makes it possible to have good "PR" (public relations). By definition, PR is good works well publicized. When technical is creating miracles on a regular basis, it is simply a matter of making this broadly known. Your public will even do it for you on a "word-of-mouth" basis.

WORD OF MOUTH

Almost all Scientology prospects come from people who have had service who are urging other people to have service or read books on the subject. That is called WORD OF MOUTH. Word of mouth comes from having numerous people in the field who are happy and cheerful and satisfied with their service and who are active in the fields of Dianetics and Scientology. There is where the bulk of your income comes from.

Word of mouth is a superior form of advertising to newspaper, radio and TV ads. People tend to believe their friends. They are skeptical of advertising. "It worked for Joe, it will probably work for me" is what people think. And in Scientology they are correct.

When word of mouth and PR have been in neglect, it will be because the org has not worked on the basis of goodwill and has let its tech go out (and is therefore costing itself a mint). This applies to all organizations and missions all the way up to the FSO and includes other units and networks as well.

The "word," whether good or bad, spreads like wildfire. That's why you'll never see anything empty out quite as fast as an Academy that is run nonstandardly; or conversely, anything fill up as quickly as a tightly scheduled, smartly run, in-tech Academy.

SUMMARY

Other factors also enter in where goodwill, word of mouth and PR are concerned. The public, in dealing with the business world, has grown to expect clean, pleasant quarters and smart, friendly service.

There is nothing as destructive of goodwill as dirty quarters, sloppy, "help yourself" service and an unfriendly staff.

Clean quarters, professional conduct, good service and above all, a friendly staff, all go a long way to promoting goodwill.

It is not only the job of the Public Relations Officer to secure goodwill. It is part of *every* staff member's job to help build goodwill for the organization by doing those things that will cause the public to think well of it, and by refraining from doing those things that would result in bad PR for the organization.

Above all, it is every staff member's primary concern that the organization is delivering the best tech quality possible. This point *in* is *the* source of goodwill.

You must take a hand in creating goodwill. It is *your* org!

CONVERT (SEC ED)
ALL STAFF OF CENTRAL ORGS

OUTFLOW

Outflow is holier, more moral, more remunerative and more effective than inflow.

The order of priority of staff action follows for any department or staff member:

1. Outflow to general public using any comm particle or body,
2. Inflow of income-producing comm particles,
3. Outflow of finished work or reports to other org members,
4. Inflow of orders, requests, information from other org members.

Give priority in terms of time as above and increase your unit.

REMIMEO

SCIENTOLOGY ORGANIZATIONS COMMUNICATIONS SYSTEM: DESPATCHES

(Revises HCO PLs 8 Apr. 58 and 13 Dec. 62)*

An intraorganizational despatch is a simple thing. You can keep a copy if you want, but only one copy (the original) goes and comes back.

When writing a despatch, address it to the *POST* — NOT the person. (If a person changes post, or leaves, if you address the despatch to the post, it will be received by the new occupant of the post; but if you address it to the person, then if the person leaves it may not be received and handled.)

Set up a despatch as follows: (for information or advice)

Example:

Mimeograph Officer

Supply Officer (date) _____

Dear _____,

Your order of . . . (message).

(complimentary close),

Signature _____

or for a request or an order:

Mail Clerk
via Dir Comm (date) _____

HCO Area Sec

Dear _____,

Please see that . . . (order or request).

(complimentary close),

Signature _____

*Both of the PLs mentioned here have since been cancelled.

This form is used so that when it is ready to be returned, an arrow can be drawn pointing to the post to which it is to be returned, eliminating the need to write it. If the message is one that should go in your hat, either put it in your hat and acknowledge sender, or write it up for your hat, returning the original to sender. If the despatch comes to you from a junior, always insist the junior has attested "it is okay." If you in turn wish to send it on, you too must attest "it is okay" and send it on. If it is not okay return the despatch to the originator stating briefly why it is not okay.

The receiver handles the despatch and *retains* the despatch until such time as it has been completely handled. If it is a matter which involves days or weeks, you can despatch the sender stating that such and such is being attended to and expect it to be complete within a certain time — but retain the original despatch until job is done, *then* return it to sender marked "DONE." Do not return the original with "It's being attended to." Originals only return with "DONE" or "Can't be done." Otherwise the communication stays incomplete.

When replying to a despatch, put down the date of the message. Despatches are handwritten. Executives, other than Exec Secs, should not have their despatches typed by a secretary except where the despatch contains large volume.

COLOR FLASH SYSTEM FOR DESPATCHES AND LETTERS

The color flashes for paper for divisions are as follows:

HCO Division 1 — Gold

HCO Division 2 — Light Pink or Violet

Division 3 — Deep Pink

Division 4 — Green

Division 5 — Grey

Division 6 — Canary or Buff

Division 7 — Blue or White

White paper is also used for letters to the field, business houses, board minutes, and for manuscripts and research notes.

Copies of letters written are on the color flash of the division writing the letter.

WRITTEN REQUESTS

If you have a request, put it in writing. Do not go to the person and expect him to carry your request around in his head. Personnel are not supposed to present their body, nor their body with a despatch to other personnel except for actual conferences which are kept to a minimum. Few things need conferences. Despatches take care of 99 percent of organizational business.

COMM CENTER BASKETS

The Comm Center contains a basket for each staff member. Each basket is tagged with the person's name and underneath the name is their post or posts. Each person

is responsible for delivering his own despatches to the proper baskets and for picking up daily his own despatches. Do not fail to pick up your despatches at least twice a day (once in the morning and once in the afternoon — make your own schedule). But do not let despatches pile up in your basket.

In larger orgs a Comm Center and separate divisional comm centers may be instituted. The Comm Center would consist of one basket for each division plus a basket for L. Ron Hubbard and an outer org out-basket. Each divisional comm center is placed in the divisional, working area with a basket for each staff member in that division plus a divisional in-basket and a divisional out-basket. An HCO Despatch Courier would be responsible for delivering despatches into the divisional in-baskets and from the divisional out-baskets into the Comm Center baskets. The Sec Sec is responsible for the distribution of despatches from the divisional in-basket to staff members' baskets.

ORGANIZATION BOARD

Keep abreast of all post changes. As the org board is changed, the Comm Center baskets are changed. Always know who is occupying what post so that when you deliver a despatch you will always know whose basket it goes in. If you are not sure, check the org board.

RESPONDING TO COMMUNICATIONS

Handle your despatches daily. Do not let them stack up on you. When someone sends you a despatch let them hear from you. Do not get the reputation of "I hesitate to send so-and-so a despatch because I don't know when I'll hear from it, or if I'll ever hear from it." DO NOT LET YOUR DESPATCHES DEAD-END. When you let your despatches (or letters) stack up on your desk, you are in actuality chopping the comm lines of the organization and in so doing chopping your own paycheck.

ANSWERING LETTERS

Secretaries who type letters should always take care to staple the carbon copy on *top* of the incoming letter — do not use a paper clip. In answering letters, answer their questions. Give them the information they are seeking. Use the gradient scale method. DO NOT FAIL TO ANSWER THEIR QUESTIONS. If you don't know the answers, find out.

ORIGINATED DESPATCHES

The purpose of the Secretarial Unit is to type answers to letters. Most all intraorganizational despatches can be handwritten: this saves time in putting them on tape (when you could be writing them yourself) and saves the transcriber's time for replying to letters. Stay in communication with other staff members and with our correspondents. If you don't handle your despatches properly, don't reply to the sender, as I said before, you are cutting your own paycheck.

HCO POLICY LETTER OF 31 JANUARY 1961
ISSUE II

HCOs

MESSAGE PLACEMENT

HCO's first action is Communication. Everyone should know message placement.

Cables and Telex: Original is never put on comm lines. Only *copies* go on the comm lines.

Take the message out of the telex, date stamp each copy. Put original in telex basket. Hand deliver at once all copies to interested parties.

Place cable or telex in the exact center of the recipient's desk blotter. Do *not* place in in-basket. Do *not* mix with other papers.

Recipient of a cable copy (if by telex) may destroy it or route it to other interested persons.

If there is only a cable from the company, not a telex, as it has none but original copies, it must be held and filed.

Cable answers are always delivered to Communicator by hand and have priority. They do not go on routine comm lines.

DESPATCHES

Despatches marked rush are handled by special handling. They go on center of desk like cables and telexes.

Routine despatches go on comm lines.

Letters go on comm lines.

HCO POLICY LETTER OF 21 SEPTEMBER 1961
ISSUE I

STHIL

DESPATCH LINES

Every person must have a basket station.

Each domestic staff member has a single station located in the back hall.

Every office staff member or school staff member has a three-basket station located by his or her desk.

Every office staff member or school staff member must have a desk. The station baskets must be at that desk.

The staff member may also have a beanstalk properly labeled.

But all despatches and active work must be in the office staff member's station baskets or beanstalks and *no* work may be put in desk drawers or hidden off the lines that is active.

All active despatches must be delivered where they are going and must thereafter be visibly in stations or beanstalks under visible headings.

All *in*-baskets must be kept empty.

When an *in* is viewed but not done, it goes into the person's pending.

It *must* be possible to locate any active despatch on the lines whether it is a business day or not.

Keep your basket station straight. Keep your *in*-basket empty. And keep current work visible and where it belongs on the lines.

By the way, I can always judge the state of a department by the state of the station.

HCO POLICY LETTER OF 17 JULY 1966
ISSUE I

REMIMEO
ALL STAFF

DESPATCHES, SPEED UP
DESPATCHES, STALEDATE

INTERNAL DESPATCHES

Any staff member receiving an internal org despatch that has been en route more than three days (dated the fourth day earlier than date of receipt) must report the matter to the Director of Communications who must thereupon request the Director of Inspection and Reports to investigate and report to Dir Comm and order any resulting ethics action.

If an internal despatch is received back by the originator more than six days after origin, the same procedure must be followed.

If an answer to a despatch is not received back by the originator in a period of six days, the same procedure is followed.

These time lags of three days and six days are to be considered extreme.

If damage results or expense occurs because an urgent message was not marked RUSH or if a RUSH message did not promptly arrive, the same procedure is followed.

EXTERNAL DESPATCHES

Any external despatch received with a date of three days earlier plus ordinary transmission time must be so reported to Dir Comm and the procedure is the same as internal despatches.

If a despatch is not answered in six days plus double transmission time, the same procedure is followed.

On Rush Despatches, any despatch older than one day is considered staledated where telegraph or telex exists.

STALEDATE

The term “staledate” (used previously by banks on checks) means any despatch or answer that is older than one should reasonably expect when one receives it or any answer that is older in date from origin to answer or answer to receipt than one should reasonably expect.

VIAS

These regulations apply to all despatches and include all vias.

EXTRAORDINARY LOCATIONS

Locations which are not served by airmail, telex or telegraph are considered extraordinary locations and staledate occurs only when reasonable expectancy is exceeded.

TIME MACHINE

All orders or queries may go on time machine.

A junior may place queries or info on a time machine to a senior and may complain to Dir Comm re staledate.

A junior org may place queries or info going to a senior org on a time machine and may complain to Dir Comm re any staledate.

COPYING DESPATCHES

Anyone sending a staledate complaint to the Dir Comm must *first* answer or handle any despatch he is holding and send *it* to the Dir Comm with its answer.

Dir Comm copies or xeroxes the original and the answer promptly and sends the original on to its next recipient and uses the copy only for investigation.

ALL ANSWERS DATED

Answer notes on despatches and answers must hereafter be dated by the answerer.

All despatches are of course dated by the originator.

STAFF HATS

ORIENTATION

ROUTING DESPATCHES

It is the concern of anyone sending a despatch or mimeo to route it accurately.

A major part of an executive hat is "routing."

A vital part of any staff member's duties is proper routing.

Our orgs are too big for routing to occur to Bill, Jane or Pete.

Route to the hat only, give its department, section and org. Put any vias at the top of the despatch. Indicate with an arrow the first destination.

Sign it with your name but also the hat you're wearing when you write it. You might be holding several hats. Which one wrote?

Just as a post office can't find wrong addresses, so neither can we. If you want your despatch to arrive, do the above.

When you get a misrouted despatch, look it over and see how it erred and return it to sender with a copy of this policy letter.

That way we'll take a lot of confusion out of our orgs.

There *is* an org there, you know. A lot of new staff go about for quite a while never noticing there is an org there that has posts and functions.

If we all route to the right hat from the right hat according to our org board, we'll make it a lot sooner.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 2 APRIL 1965
ISSUE III

GEN. NON-REMIMEO

HEED HEAVY TRAFFIC WARNINGS

Any department which has been warned of heavy traffic coming is to take steps to see that the department is adequately supplied with the materials necessary to handle the coming traffic.

A covert block on the line to stop or slow down a line over which an important flow is going is the no-supply block. Then everyone has to stop because there are no supplies, emergencies develop trying to get new supplies in, the flow on the line jams — it is all dev-t.

Example: Promotion Department has a big program which will involve a lot of mimeoing, and warns Mimeo of coming traffic. Mimeo continues to order supplies in normal traffic quantities. The delay in delivery is greater than the supply Mimeo has to hand (the heavy flow is already on the lines). Mimeo runs out of stencils. WHAM! Emergency and the flow jams. Work time is lost, and the whole program goes off its time schedule.

This same principle applies to additional personnel, i.e., warning of heavy traffic coming — additional personnel needed.

It's just a case of having a little foresight!

Lots of students or pcs coming up in a division must also be a subject of warning.

Policy: WARN Org Sec of heavy increases or decreases in traffic volume so his division can BE READY.

L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 26 MAY 1965
ISSUE II

GEN. NON-REMIMEO

COMMUNICATIONS

REGISTERED MAIL

No org may accept any registered mail.

1. Long experience shows it comes only from psychos and governments.

2. It is a lot of trouble to obtain from the post office.

So just reject it.

There's no worry it may contain writs. It is just sent by nuts.

PHONE CALLS

Phones are psycho. They have no memory.

Overseas phone calls are often incomprehensible and start mysteries.

One often has to hang about for 6 or 8 hours in a mystery trying to connect with a call coming in.

CABLE or TELEX is *far* better. Use it.

All overseas phone calls are turned down by orgs.

Interorg phone calls even on one continent must be discouraged.

Use telexes and cables. Then we can find out what happened.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 10 JULY 1965

REMIMEO
ALL EXEC HATS

ALL DIVISIONS

LINES AND TERMINALS ROUTING

The most important things in an organization are its lines and terminals. Without these IN, IN AN EXACT KNOWN PATTERN the organization cannot function at all.

An executive putting in new lines and posts or making changes in old lines or terminals REQUIRES CLEARANCE FROM THE OFFICE OF LRH before the order can take effect.

Anyone following such an order, to alter lines and terminals in the org which are already established by policy, who does not file a Job Endangerment Ethics Report (a statement that his or her job is being endangered by the illegal order of a senior) must share any penalty for such alteration.

People who haven't a clue about the org pattern throw it into chaos by altering the established pattern. Then the org won't work and goes broke quickly.

Therefore the most serious threat to the stability of an org is shifting lines with no understanding of what is supposed to happen.

The lines and terminals (hats) outlined in policy are based on long, hard experience. When they short-circuit, the org ceases to function as an org and becomes a mad scramble.

When despatch and body routing charts laid down by policy are carefully followed, the org will function. When they are not, it won't.

A serious fault in any executive or staff member is unawareness of the *coordinated* functions of terminals, or complete unawareness of other org hats and functions.

A D of T trying to wear an Ethics hat, a Qual Sec shifting his internal lines, a Registrar who seeks to assign the hours of auditing would be enough in any large org to throw it into a jumble where nothing works or flows.

There *is* more to an org than one person wearing all hats plus another person wearing all hats, etc. Such an org just won't prosper.

The hardest job any top executive has is teaching the staff the lines and terminals and getting them followed. That is because green staff is unaware of the org itself, or its flow lines.

A lot of the time, when one sees a declining statistic, it is only that certain lines are out or being misrouted.

The lines *will* flow if they are all in and people wear their hats. If the body and despatch lines flow, the org will prosper. If they are disarrayed, they won't flow and won't prosper.

No executive or staff member has any right to establish or alter terminals and lines without express written permission from the Office of LRH.

Believe it or not there will be people around in orgs who have no faintest concept of its pattern — or the existence of an org. And these will be the first to attempt large changes. And these are the first you should send to the Staff Training Officer to get checked out on their posts.

It is an ethics offense to issue orders altering lines without clearance from the Office of LRH.

HCO POLICY LETTER OF 25 OCTOBER 1971
ISSUE I

REMIMEO
BASIC STAFF HAT

COMM ROUTING
HOW TO TIE UP A WHOLE ORG AND PRODUCE NOTHING

There are 3 types of communication routing.

They are:

1. Horizontal fast flow

2. Command channels

3. Conference

If these are not known one from another the whole org can get tied up. Despatches hide the desks *and* the executives. Independent policies cross up standard programs and chaos occurs.

HORIZONTAL FAST FLOW

The normal flow lines of an org are horizontal.

They do not go up, over and down on the org board. They pass from one unit to another sideways without going through seniors.

Almost all despatches should travel in this way.

It is fast flow, not inspected comm by seniors.

Examples:

Hatting Officer Dept 1 despatches Word Clearer Dept 13 directly and is answered back directly.

C/S Dept 12 despatches Supplies Dept 9 directly and is answered directly.

Tech Page despatches E/O directly and is answered directly.

None of the comm ever goes to the originator's senior or to the receiver's senior.

Only when something goes wrong or there is a conflict do seniors get consulted or dive in on the line.

COMMAND CHANNEL

Command channels go up through seniors over to a senior and down to a junior. Or they go up through all seniors and back through all seniors.

It is used UPWARD for unusual permissions or authorizations or information on important actions or compliances. Downward it is used for ORDERS.

CONFERENCE

This is a line usually from an executive to the chairman of a governing body such as Advisory Committee or Executive Committee or Aides Council or Commanding Officer Conference, etc.

It is used for program clearance or policy requests.

TABLE

Horizontal = used for all normal flow.

Command channel = used for unusual permissions or authorizations and downward for orders.

Conference = used for getting clearance for programs.

SCRAMBLE

Now if you scramble these, you get chaos.

More and more people produce less and less while working harder and harder.

You even get something that is a liability or a bureaucracy or a government.

Such a scramble leads to lots of motion but nothing done. Lots of "work" is visible but the org mysteriously gets insolvent.

Let us look at an example:

Magazine Layout sends a magazine dummy he wants okayed up to Magazine I/C to Director Promotion to Dissem Sec to HCO Exec Sec to Division 7 Sec to LRH Comm to Issue Authority who okays it and sends it back on same route.

This takes maybe 6 days.

It's idiotic. Why? Because an item that should be horizontal is routed on command channels. FIVE needless terminals get involved. Promo is delayed.

The correct routing is horizontal: Magazine Layout to Issue Authority. The correct time would be a few hours at most even on normal comm lines.

Example:

Suppose we sent the pc after session to the D of P, the C/S, the Tech Establishment Officer, the Tech Sec, the Qual Sec, the Director of Certs and Awards and then the Examiner. And returned him on the same route every session!

Nothing, but nothing would get done in Tech or Qual if one had such routing! But people sure would be "busy."

WHY

Why does a scramble occur?

Executives get anxious. They want to know everything. So they get themselves onto all comm lines.

Comm lines are a lousy source of data.

The executive should be watching PRODUCTS if he wants to know.

The org board up-to-date, the day's statistics investigations and inspections are the real sources of information. *Not* despatches.

Thus, by demanding to be on routing lines the executive can jam all lines.

One has to have a certain amount of trust in handling people.

By direct inspection of the org and its staff an executive learns who is or isn't on post, who is or isn't working. By sitting at a desk handling despatches the executive remains ignorant.

REVERSED

Many an org gets reversed in using comm channels wrongly.

Executives and staff activate programs without consulting any conference and inspect and relay every despatch!

The program one wants to do is thus unknown to others and crosses up all *their* programs. Yet at the same time the org is frantically curious about despatches!

ADVICE

If the org has lots of staff and no income, these conditions will be present:

A. The comm system is not in as above but is scrambled.

B. No exec is walking around inspecting and getting people to work on their posts.

C. Programs, uncleared with others, are being activated that tie up staff but produce little.

My advice is straighten it out and obtain production.

DEVELOPED TRAFFIC (DEV-T)

HUBBARD COMMUNICATIONS OFFICE
1812 19TH STREET, NW, WASHINGTON 9, DC

HCO POLICY LETTER OF 2 JULY 1959
ISSUE II

DEVELOPED TRAFFIC, THE DELIRIUM TREMENS OF CENTRAL ORGS

There is a phenomenon which costs a Central Org two-thirds of the effort of its staff members and executives. Stemming from various causes and cured by Process S2, it nevertheless deserves notice as itself.

I have been working for two years on "Analysis of Organizations by Inspection of Its Comm Lines." It is now a fairly complete little science in itself.

"Developed traffic" is a statement you will begin to see now. It is condemnatory. The symbol dev-t means on a despatch, "This despatch exists only because its originator has not handled a situation, problem or an executive order."

It also means "Responsibility for your post very low." Also it means "You should be handling this without further traffic." It also means "You are manufacturing new traffic because you aren't handling old traffic." Also it means "For Gawd's Sake!"

Every time traffic is developed somebody has flubbed.

"Developed" traffic does *not* mean usual and necessary traffic. It means *unusual and unnecessary traffic*.

Example: Dept Materiel is told "Buy some chairs for the Academy." If this goes properly, the chairs simply get bought, the Dept Materiel estimating students, state of exchequer and economical available materiel and arranging delivery. Dept Materiel may have to ask a couple verbal questions of other departments to execute, but this is routine and necessary.

This can be used to dev-t in this fashion. Issuing executive of order "Buy some chairs" is asked "How many?" "What style?" "How much?" "From what firm?" Or somebody else is asked these at length. Dept Materiel is now *worse* than a camouflaged hole. Dept Materiel is making the acquisition of chairs *costly* in terms of consuming despatch time, other staff members' time, upset and delay. This is dev-t.

Dev-t costs us the services of 66⅔ percent of our personnel. Hence, large staff, no effectiveness.

Unwilling personnel always makes dev-t out of every situation, problem, order and policy. Take unwilling personnel off the lines and traffic busyness drops by two-thirds and effectiveness increases by many times.

"I want a book" gets answered by dev-t, gets shunted into other depts, gets mixed up in billing, makes an ARC break in field which develops *more* traffic. Let an unwilling, irresponsible person on our lines, a real victim, and we get enormously increased busyness, enormously lowered dissemination.

Look for dev-t, Org Secs and HCO Communicators, and shoot it from guns hard before we all get shot.

NOTE: A request that a cookbook be bought developed 29 despatches in DC, all of major executive level. A presentation of a bill that the receiving terminal in the org knew was valid, and had money to pay, was used to develop 15 cables and 135 despatches and almost wiped out the office. An incorrect price on an item caused 235 internal despatches and major ARC breaks with Central Orgs. An order to mimeo a flier for one city caused 1½ hours of flashbacks to an Assoc Sec. All persons authoring the dev-t listed above are being suspended pending flattening of Process S2.

HOW TO HANDLE WORK

Do it Now.

One of the best ways to cut your work in half is not to do it twice.

Probably your most fruitful source of dev-t is your own double work.

This is the way you do double work.

You pick up a despatch or a piece of work, look it over and then put it aside to do later, then later you pick it up and read it again and only then do you do it.

This of course doubles your traffic just like that.

One of the reasons I can handle so much traffic is that I don't do it twice. I make it a heavy rule that if I find myself handling a piece of traffic, I handle it, not put it into a hold or a later category.

If I happen to be prowling through my basket in the message center stack to see what's there, I do what I find there.

If I am given a message or a datum that requires further action from me, I do it right when I receive it.

This is how I buy "loafing time."

Now I'm not trying to hold me up as a model of virtue as the man who always does his job; I do many jobs and many hats; I am holding myself up as an ambitious loafer and as a buyer of valuable loafing time.

There's no need to look busy if you are not busy.

There is no need to fondle and caress work because there isn't enough of it.

There's plenty of work to do. The best answer to work of any kind is to do it.

If you do every piece of work that comes your way WHEN it comes your way and not after a while, if you always take the initiative and take action, not refer it, you never get any traffic back unless you've got a psycho on the other end.

In short, the way to get rid of traffic is to do it, not to refer it; anything referred has to be read by you again, digested again, and handled again; so never refer traffic, just do it so it's done.

You can keep a comm line in endless foment by pretending that the easiest way not to work is to not handle things or to refer things. Everything you don't handle comes back and bites. Everything you refer has to be done when it comes back to you.

So if you are truly a lover of ease, the sort of person who yawns comfortably and wears holes in heels resting them on desks, if your true ambition is one long bout of spring fever, then you'll do as I suggest and handle everything that comes your way when it comes and not later; and you'll never refer anything to anybody that you yourself can do promptly.

That people begin to point you out as a model of efficiency, as the thing expected to cop the next world's speed record, that articles begin to appear about the marvels you are creating, is all incidental. You and I know we did it so we could be lazy and not have to work. For it can be truly said that the way to all labor of a long and continuous grind is by putting off the action when the message is received and in referring it all to somebody else; that's the way to slavery, to tired muscles and tattered brains; that's the route to baskets piled high.

So come loaf with me.

Do it when you see it and do it yourself.

COMPLETED STAFF WORK (CSW)— HOW TO GET APPROVAL OF ACTIONS AND PROJECTS

THE MOST IMPORTANT PIECE OF YOUR HAT

There is an old term called "Completed Staff Work" which we will now employ in order to reduce dev-t and increase speed of action.

The term "Completed Staff Work" means — an assembled package of information on any given situation, plan or emergency forwarded to me sufficiently complete to require from me only an "Approved" or "Disapproved."

Here is what slows down approval and action and develops traffic: Somebody sends me a skimpy piece of information and demands a solution. As more information is required than is presented, I must then take over the person's hat and assemble the missing data using my own time and lines. I must then dream up a solution and then order an action to be taken. This causes a slowdown on any action, causes my lines, already loaded, to be used for information assembly and brings about a feeling of emergency. My pending basket overloads and confusion results. This would be called "Incomplete Staff Work." It is incomplete because I have to complete it by:

1. Assembling the data necessary for a solution,

2. Dreaming up the solution based on written data only, and

3. Issuing orders rather than approving orders.

If you are mad at your boss, you can always ruin him with "Incomplete Staff Work." You forward him a fragment of alarming data without collecting the whole picture. This makes him do a full job of information collection. You give him no recommended solution. This makes him have to achieve a solution by remote examination of data; such solutions are often wrong as they are made without full data. Then you make him issue arbitrary and forceful orders that may ARC break some area and hurt his reputation. That's how to get even with a boss. And even if there's no intention of harming him, sending "Incomplete Staff Work" to your boss *does* harm him by making him send for information — getting despatches on already crowded lines, by making him guess at the situation, by making him cook up solutions which may be unreal, and by thrusting him into the role of an arbitrary tyrant.

Now that we've seen the negative side, let us examine the positive side.

"Completed Staff Work" is an assembled despatch or packet which:

1. States the situation,

2. Gives all the data necessary to its solution,

3. Advises a solution, and

4. Contains a line for approval or disapproval by myself with my signature.

If documents or letters are to be signed as part of my action, they should be part of the package, all ready to sign, and each place they have to be signed is indicated with a pencil mark with a note in the recommendations saying signatures are needed.

Wrong example: A despatch from Canada saying, "Central Organization here is spending large amounts." Look what I now have to do. I have to find out what is meant by "large amounts," who is doing it, if it is dangerous, figure out a way to curtail it and issue orders about it. *None* of this is my hat. I am being forced to wear the hat of the informing person.

Right example: I receive a packet (cable is no good and *delays* the situation's being handled as many more cables will be needed). This packet is covered with a despatch which says:

"145CA.* Central Organization here fast approaching insolvency. Data enclosed. I recommend: Director of Materiel be transferred to the post of Extension Course Director that is now empty and that Jules Bentley be hired on the Dir Mat post at 25 units; that the Assoc Sec be reprimanded for bad financial management and be ordered to budget his outgo; that a purchase order system be enforced; that a staff member ordering anything without permission have the item deducted from his pay; that the Dir of PrR be given lessons in letter writing.

Approved _____ Disapproved _____

Signed: Jane
HCO Sec Canada."

Attached are copies of Ad Comm reports showing insolvency, a summary of amounts spent in last two months, a summary of income for last two months, a list of trivial items bought lately at high cost.

What I do then is check the approval line and sign. A cable is sent by my communicator: "145CA2 OK. Best = Ron." The whole packet is airmailed back. But you must ask in your despatch to have a cable reply if you consider it that urgent.

On receipt of the cable the HCO Sec Canada issues the local Sec EDs and takes the other needed actions.

*145CA: the 145th sequential message from the Canadian office used in the example. This numbering system is explained in OEC Volume 1, HCO PL 2 Mar. 59, HCO CABLE AND DESPATCH DESIGNATION SYSTEM.

Action could occur because the data, solutions and orders were all assembled as "Completed Staff Work."

If you want to hold down your post or project, don't insist on my collecting the data you should collect, dream up the solution you, more familiar with the scene, should achieve, and don't put me in a position of issuing unreal orders you can't then carry out.

We are a big team and a good one. I know any error on this in the past has occurred because you didn't know exactly what I wanted.

"Completed Staff Work" is what I want. Then *you* have your hat, you can do more to help, and our lines can stay freer and faster.

There have been good examples of this in the past. Let's make the circumstances more general.

If you get the letters *CSWP* on an item, it means "Complete the Staff Work, Please."

HCO POLICY LETTER OF 23 APRIL 1965
ISSUE III

REMIMEO
ALL STAFF HATS
STHIL STAFF
EXEC HATS

ALL DIVISIONS

Use: Executives should keep a stack of these 23 Apr. 65 PLs near their desk and staple one to every despatch or report received which violates it. Circle para violated and return to staff member.

PROBLEMS

(Changes HCO PL on CSW slightly in that conclusions or solutions are no longer acceptable from a junior to a senior, only data.)

The most senior organizational policies there are follow:

1. NEVER solve the problem any junior presents to you. NEVER NEVER NEVER NEVER NEVER NEVER.

2. ALWAYS investigate for the true cause of the trouble. ALWAYS ALWAYS ALWAYS ALWAYS ALWAYS ALWAYS.

3. SOLVE only the problem you find after very careful investigation of the whole matter and after you have examined all possible causes of the problem.

4. NEVER solve a problem that has already been solved in general policy.

5. IF someone thinks the policy is wrong or is itself the source of the problem then (a) he or she must be made to fully read the policy, (b) demonstrate what it is supposed to solve, (c) look over the problem he or she thinks the policy is wrong on to find the actual causes of the problem he or she is trying to solve.

The primary aberration in situations that are being mishandled is:

6. THE PERSON IS UNABLE TO RECOGNIZE SOURCE.

Example: A person A sees another B drop a wall mirror and break it. A puts in a purchase order specifying thicker glass. B next day drops a chair down steps and A

puts in a PO for new stair carpeting. B a week later runs a car into a wall and A proposes a different design for the wall. If this kept on and B was never singled out by A or A's seniors, then dozens of unusual solutions are entered into the org, not just POs but policy changes as well! Why? A is "below source" and doesn't recognize the causes of his problems. Therefore his solutions are alter-is of existing situations and result in alter-is of tech, policy and orders. Soon the area around *A* is in a complete confusion. What about B? He probably generalizes with "they said," "everybody knows," etc., on entheta and so remains "invisible" behind his generalities. B can be spotted best by Damage Reports whenever damage occurs. As they are filed as a statistic in B's file, it soon becomes a visible datum. The cause of confusion in A's area is not A. It is A's inability to perceive *causes*. Thus any system which isolates actual causes disenturbulates a group and makes unusual solutions unnecessary and only then can policy go *in*.

Therefore we get some other very senior org policies:

7. NEVER accept a conclusion from a junior. NEVER.

8. ALWAYS demand facts of a junior. Always.

9. NEVER take a generality from a junior.

10. ALWAYS challenge any conclusion a junior offers.

11. NEVER act on a junior's data until you have fully investigated the situation.

12. ALWAYS investigate until you find the basic policy violation that started the problem in the first place.

TECHNICAL

13. Making Scientology work on pcs and students is the ONLY way you can salvage org situations.

14. If Scientology is not applied exactly per HCOBs and tapes, technical will "go out" and within a few months the area will be spinning with unusual solutions.

15. The fastest way for a technical executive to become overworked is to violate the policies in this policy letter.

16. The fastest way for a technical executive to get into trouble and a mess is to accept an auditor's conclusions and propose a solution.

Example: An Instructor says, "Process R0-0 doesn't work on certain cases. When these cases come on course could I please order them to Review auditing?" Serious blunder by a senior, "Yes." Why? Because the Instructor isn't capable of spotting an ARC broken student—can't confront ARC breaks. Therefore quite often the Instructor lets R0-0 be run on an ARC broken student. The *correct* technical executive action, and the ONLY correct one on receiving such a report, is to

promptly personally investigate. Investigation even of the students' case folders would disclose that the Instructor ignores ARC breaks from comm cycle blunders by new student auditors, that the Instructor won't give ARC break assessments (who else *could* give one on a Zero Level course?) but sometimes runs R6EW on the students under the guise of "an assist for a misunderstood word." I think that's enough trouble to get the Instructor's senior into a hurricane of trouble if only from blown students and no new enrollments! (This is an actual example. The final result was a Comm Ev for the technical executive and the Instructor, the first for proposing and alter-ising policy and technology, the second for forcing auditing [rather than doing assessments] on Zero Level students. The Comm Ev had to be ordered at the request of *their* tech senior because neither would accept orders to remedy the above conditions but just kept on fouling up students.)

NONCOMPLIANCE

17. If you think for one moment that a staff member who won't or can't follow clear, definite policy will follow *your* orders either, you dream.

18. The first thing you know about an off-policy-type personnel is that none of *your* instructions are being carried out either, usual or unusual.

19. Look, if they can't apply vividly clear policy, they sure can't apply a brief order.

SUMMARY

20. You can conclude that where you have a personnel who cannot perceive the causes of things you will have a continual spinning mess.

None of the problems presented for solution are the actual problems that exist. In A and B above, the problem presented was "How to get more durable things." This could not be solved because it was the wrong problem and didn't exist. The right problem was "How to get B to stop breaking everything in sight." A senior, not seeing B at all (not being around B), accepting a problem and a conclusion from a junior (A) soon is involved in endless discussions over "How to get more durable things." This never solves. Because it wasn't the problem. Further, any order the senior gives A *is also never put into effect without wild alter-is*. Why? A, unable to see sources, can't see the senior as a source either and really takes his orders from anyone who comes along! Students, pcs, the garbageman.

21. The basic problem of management then is the problem of cause blindness. People in the org who cannot see cause cannot solve problems, for to solve a problem one must see what is causing it!

22. And the solution to all this lies in the policies in this policy letter.

23. And auditing people up to an ability to perceive and perceive the causes of things is the primary solution to all problems.

24. Until you get them there, you use any mechanism necessary to follow orders. Only in that way will they ever make it.

25. When tech goes out, when HCOBs aren't followed or tapes known and used exactly, the road out is blocked.

26. *Nobody has any right to a bank.*

27. For when they are permitted such a right they block the road for the rest.

28. The only person you could completely trust is a Clear. And unless the Clear is also trained in Scientology tech and admin also, you could never accept his vote on org matters.

    That's the truth.

    And that's why we're going to make it all the way.

29. If we're determined we will make it, we will make it.

L. RON HUBBARD
FOUNDER

(*Note:* By organizational policy is meant that policy which makes the organization into an organization and keeps its flows fast and its design uncomplicated. In absence of these policies the design becomes altered and flows cease and the org dies.)

HUBBARD COMMUNICATIONS OFFICE

HCO POLICY LETTER OF 13 OCTOBER 1965

REMIMEO

ALL EXECUTIVES

DEV-T DATA
EXECUTIVE RESPONSIBILITY

Executives may not okay anything done or to be done below their level unless their immediate junior has also stated or attested with initial that it is okay.

Unless one can fix responsibility for actions there is no responsibility anywhere and the whole show goes to pot.

Never let a junior say "Is this okay?"

Always require the junior to state or initial "This *is* okay" on all work, actions or projects.

An organization permitting a lot of "Is this okay?" will soon go to pieces. Things are or aren't okay. Make them say so. Hang them if it's a false attestation.

"Is this okay?" is dev-t and should be chitted as such.

WHAT AN EXECUTIVE WANTS ON HIS LINES

There are only four things which an executive wants on his incoming communication lines.

These are:

1. Information,

2. Appointments and dismissals of personnel for his action or confirmation,

3. Financial matters,

4. Acknowledgments.

He does not want on his lines:

1. Demands for decisions,

2. Backflashes and can'ts,

3. Entheta.

Demands for decision are always indicative of irresponsibility; people want the executive to make the mistakes; and an executive can make mistakes if he is asked to make decisions distant from his zone of action equipped with insufficient data to make the decision correctly.

Backflashes, by definition, are an unnecessary response to an order. This can get fairly wicked. They are not acknowledgments, they are comments or refutals. Example: "Sell the bricks" as an order is replied to by "Bricks are hard to sell" or "We should have sold them yesterday." This is a disease peculiar to only a few staff members. They cannot receive an order directly and are seeking to be part of the comm, not the recipient. This goes so far as senseless "Wilcos" or "I'll take care of it" when the executive only wants to know Is it done? Despatches or orders, in most instances, are held until completed. We assume that they got through or rely on other means of saying they didn't. Only a few situations require an acknowledgment to an order over long lines and all of these occur when there is doubt that the recipient is there.

In the matter of can'ts, an executive seldom orders the impossible and generally consults with people before issuing an order. A persistent "Can't be done" means "I am unwilling." I have learned this the long way. Person A on a job, saying "Can't" all the time, changed to Person B, receiving the same orders, discovered to me that the job *could* be done since B, on the same post, receiving the same orders, never said "Can't" and the job did get done.

Entheta means embroidered reports. Data is data. It is not opinion. Data, not entheta, brings about action. All entheta does is cut the lines.

To jam an executive's lines is a serious thing to do. The result is a cut line. A bottleneck is created by staff when staff jams a line to an executive. Eating up an executive's time and patience destroys harmony, dissemination and income.

Depending on an executive for petty decisions is sure to jam lines and cost units.

The role of an executive is to plan and execute actions and to coordinate activities.

To do this he gets people to do their jobs and establishes the overall plan of action. Only an executive can string lines and coordinate actions and resolve the jams that impede things. For an executive to decide for people decisions applicable only to the sphere of *one* job is folly.

WHAT AN EXECUTIVE'S LINES SHOULD LOOK LIKE

INFORMATION:

When a member of an organization does something of importance, he should always info the executive after the fact. It is perfectly all right to take actions within one's organizational purpose. It is not all right to keep it a secret.

1. Do it.
2. Tell the right people and the executive by adequate communication at the speed necessary to the case.

Similarly, an executive ought to tell people his goals and plans and, when he does something of any importance to others, he ought to say so. The captain who tells the ship how the action is going saves a lot of nerves and useless motion.

APPOINTMENTS AND DISMISSALS:

Minor hirings and firings in a department by authorized persons should always be subject to confirmation at least after the fact. Major appointments and dismissals of key personnel must be okayed by a senior executive before the fact and action taken only on the senior executive's authority.

For example, it is a board action to appoint, transfer or dismiss an Association Secretary or an Organization Secretary. It is an Executive Director action to appoint or dismiss department heads and then only on the advices of an Association Secretary or Organization Secretary. It is an Association Secretary or Organization Secretary action to appoint, transfer or dismiss deputies or section chiefs. It is a department

head's action to appoint or dismiss other staff but always, in every case, with permission from the next superior and info all the way up.

FINANCE MATTERS:

Consistent finance information as in Advisory Committee minutes and authority for changes and capital expenditures are an executive matter. My own authority is needed only on major changes of policy or expenditures and on extreme financial emergencies. Ordinary financial planning and routine actions are better handled locally by the Association Secretary, Organization Secretary or the Director of Accounts. I do need financial information. But where I have done planning and promotion and it is agreed upon, further handling of finance is handled under a blanket authority from me except for extreme financial emergencies or major capital outlays which are local matters.

These are the things I want on my lines. I change personnel as the answer where information is chronically withheld, where appointments and dismissals are irregular, or when an organization starts getting insolvent. Where people are continuously demanding that I make the decisions they should be making, I again recognize other ills and again change personnel.

If we all understand what's wanted, we can do it.

Well, let's look this over and do it and win.

HCO POLICY LETTER OF 17 NOVEMBER 1964
ISSUE I

REMIMEO
STHIL STAFF

OFF–LINE AND OFF–POLICY
YOUR FULL IN–BASKET

(HCO Sec hat check on all executives and send me a despatch personally each time you have done so — one despatch per checkout.)

These two data are paramount in handling Scientology communication lines and your own in-basket.

1. The first duty of an executive is routing properly and seeing that others route properly. If an executive does not do this, then the lines in his or her area will stack up and become so tangled that nobody can follow them or get through them. This reduces income and dissemination-producing traffic volume and general effectiveness. By "routing properly" is meant to see that everyone around them routes properly. Forwarding something already improperly routed creates dev-t and fails to handle misrouting where it is occurring.

2. Know and make known policy. The first thought of an executive in handling a despatch requiring a decision must be "Is this already covered by planning or policy?" *If* the executive knows existing policy, he or she will find that 99 percent of despatches "requiring decisions or solutions" are already cared for by policy and, the policy being unknown or nonexistent, only *then* requires "special handling." In short, if the matter is (a) covered already by policy, (b) if the sender should know that policy or (c) if the first executive receiving the despatch knows policy, then the despatch should stop right there. This leaves flowing only traffic where policy does not exist or despatches about specialized matters.

The answer to put on a despatch demanding something already covered by policy is *not* some unusual solution. The answer on the despatch should be of two kinds — (a) to a person outside who would have no clue of policy or (b) to somebody in an org who should know policy. In the case where (a) originates a query, the proper answer is "Policy on this is _____." In the case of (b) originating a query already covered by policy, the answer is "Look up old (recent) policy on this."

To outside people, policy is largely unknown. Thus one has to look up the policy or recall it to handle. But such seldom have questions needing subtle points and field policy is very well known in orgs, such as "Give them what we promised if it was promised." "Keep entheta to a minimum," etc., etc. A simple "Sorry, it's against policy" is the simplest (and usually best) solution to outside wild queries or ideas. Why explain? You're not training a staff member.

Where a staff member is involved, it is expected he or she will know policy or can look it up.

If an executive gives the despatch querying for policy an "unusual solution" where policy already exists, then a problem will occur as this solution will clash with the *other* existing policy and the staff member goes spinning off to no-policy, no-org. And the organization eventually becomes paralyzed. Any org that has an executive who doesn't keep up with policy and general planning and who is always replying to queries with unusual solutions of his own will soon find its income dropping out the bottom, as it's being stuck on the track with counter-solutions. Soon, nobody will know what policy is, so in disagreement the org disintegrates. It is no longer an org — only a bunch of individuals working at cross-purposes.

MISROUTING

Routing consists of forwarding a *proper* communication to its proper destination or, more pertinent to an executive, indicating how types of despatches are routed to staff members who route org despatches.

Misrouting would be misrouting indeed if one forwarded an improper despatch to anyone else and failed to shoot it back to its originator.

An improper despatch is one which hasn't any business on the lines. This is the soul of dev-t (developed traffic) — the forwarding of improper despatches. One can forward all the proper despatches in the world without causing dev-t. The moment one forwards an improper despatch *to anyone but the originator,* one has involved other terminals and blocked their lines too.

When you forward a despatch which should never have been written you become a party to the original dev-t. Because the despatch *is* improper it will do nothing but snarl up in-baskets all the way along the line. The ONLY correct action is to send it to the originator as improper.

IMPROPER

By improper we don't mean insulting or obscene. We mean:

a. has nothing to do with the person to whom it is sent or forwarded, or

b. is already covered by policy which should be known to the originator or the forwarding person.

Under (a) we get nonsense despatches, despatches to the wrong people, obvious lies, "everybody says" despatches, despatches calculated only to make trouble, useless entheta and so on.

Under (b) we have (Aha! discovered!) the staff member who is ignorant of what's going on or what policies cover his or her post. We reasonably expect that, let us say, a Registrar has read those policies, old and new, that cover registration. From a general staff member we expect general planning to be at least known, as general policy letters all go into his or her basket and so have been available.

OFF–LINE

A despatch is off-line when it is sent to the wrong person.

OFF–POLICY

A despatch is off-policy when originated by or forwarded by someone who should know that the matter is already covered by policy.

DEV–T

Traffic is developed (developed traffic, dev-t) by originating *or forwarding an off-line or off-policy despatch to anyone but the sender*. This may seem obscure when we say a person *originating* an off-policy despatch should not send it to anyone but the sender — i.e., himself. He has the policy letters and general planning just as available to himself as they are to anyone in Scientology orgs. So querying by despatch about a policy that can be looked up is just being too lazy to look it up, isn't it? And putting the load on one's seniors to do one's own work.

When you forward an off-policy despatch to anyone but the sender, you, if you're an executive:

a. involve other lines and

b. fail to take the opportunity to spot a staff member weak on policy.

Your *duty* as an executive is to send the despatch to its source with orders to look up policy on this. Your duty is *not* to quote policy. He or she (the originator) is the one in mystery. Let the originator do the work. Nay, worse, prowl about that person a bit and see how bad it is and order if needed a full checkout of the person on policy letters applying to his or her post. *That's* one's job as a senior executive. Not being a computer for the org that turns out answers.

Those staff members who habitually forward queries or something adequately covered in write-ups of their own duties to others are DYNAMITE in an organization. The policy on them has always been THEY LEARN THEIR JOB AND DO THEIR JOB OR THEY GO. We can't afford them. They *can cost us the whole organization,* and in two or three cases almost have.

They're too expensive when they don't learn their hats and general policy or push their duties off on others. *One* of them in an org costs at least *two* additional staff members to take care of their dev-t and duties. Actual fact. Even where the dev-t doesn't blow up an org. I could not possibly exaggerate their dangerousness to an org, fellow staff members and Scientology.

People who won't or can't learn policy or who continually alter it have not progressed casewise to Level I. They cannot receive a comm so can't answer or respond properly and they do awfully wild things. They never dig what we're at, so they create a mess.

DUTIES OF AN EXECUTIVE

An executive keeps the organization on the road by getting people to get the job done. He may also have his own work and does that too and probably works very hard at it. But his *organization* duties are concerned mainly with enforcing proper routing and making people learn and adhere to policy. If an executive won't do that, his post area or org is in a continual mess.

FLOODED IN–BASKETS

All you have to do is look at an executive's in-basket to know whether he or she is performing his or her *executive* duties. Although he or she may empty it daily, if there's much org traffic flowing through it you *know at once* that the person does not properly handle off-line or off-policy despatches.

This executive may be working day and night on the in-basket. It's the *volume* of org despatches that says the executive is not handling off-line and off-policy despatches or who has not provided proper routing in his post area. Such an executive works himself or herself half to death and is still unable to get his people out of the red.

If the in-basket is merely stacked up, and isn't being handled at all, it tells us that this person simply doesn't do any job at all but is kidding people. In actual experience when we find a stacked up, unmoving in-basket we also find (a) pretended busyness or (b) just plain no action on post or (c) outright lies. But these conditions cause an area of upset in the org *because somebody else above* or *below* that person on the org board is unable to get his job done because of that "camouflaged hole" (means post not filled but only appears to be, thus leaving a hole in the lineup). Such people *always* cause overwork by persons above or below them and are pretty dangerous to have around.

POLICY ON DEV–T

Our *policy* on finding an habitually full in-basket which never gets handled is to (a) attempt to get the person's hat on and if that fails, (b) transfer them to a post they really can do and if they don't work there, (c) dismiss. We don't ever add "processing" into our policy of handling such people as they are well below Zero and take too much work on them to make them useful.

Policy now regarding the executives who work hard but have fantastic staff despatch volume is (a) have them read this policy letter and if their volume doesn't reduce, (b) hat check them on this policy letter and if their volume still doesn't fall to very little traffic, (c) have them do the org board in clay, do Scientology orgs over the world in clay, do their post in clay and review all policy letters relating to their post and the org and planning in general.

The complaint is not that this executive isn't working. The complaint is that this executive is not putting his post area together and helping, through discipline of off-line, off-policy despatches to put an organization there and put Scientology across over the world.

Such an executive, freed of the burden of handling off-line and off-policy despatches, will begin to do his own work industriously, will come out of protest and begin to handle and disseminate Scientology and will cease to flood Scientology lines by forwarding off-line and off-policy despatches.

Further, the executive will also supply routing directions for his general traffic that brings about a smooth flow in his unit or department or org or continent.

SUMMARY

You *never* send further an off-line or off-policy despatch. You *always* route it back to the source, the staff member who sent it.

On an off-line despatch you see to it that the source routes it properly whether it comes from above or below and that the originator of an off-line despatch from below studies the org board. On this last you must also be sure the org board reflects the actuality of the real organization and is functioning. When you skip doing that, you can't of course get off-line routing cured as there isn't a visible line. Nobody has put the org board there to be known. Hence, lots of off-line despatches.

On off-policy despatches, you yourself must be familiar with policy in order to tell if something is covered *by* policy. In order to get somebody to follow policy, you must of course be sure that the policy is available and that you have done everything you could to help get policy easily found and known. Time spent on the study of policy is very well spent. And when I ask for clarification of or existing policies in your area, you should give that *top* priority *as you won't be able to do your job* unless you help on policy when needed. And the way to help on policy is to write up all the policies for your hat or area and send them to me if I ask for them so I can review and publish them. A group cannot function *at all* without agreed upon policy and of course *it can never grow*. Its in-baskets get too full. There's no way to get a post filled and working. There's no real comm, only dev-t. The resulting confusion stops any expansion. So the org stays tiny and works madly and stays poor. No policy. All dev-t. Each person present wears all the hats and also wears them all differently. That's not an org. It's a bunch of auditors pooling their confusions.

We are suckers for origination acceptance. Being trained auditors we are conditioned to letting people originate. But that's *in session*. You're not auditing when you're an executive. An improper despatch is actually not an origin at all. It's a confession that one isn't on staff or should be trained to come on staff. Such a "staff member" is still a field auditor knocking around in the org if he doesn't know policy. Critical, blundering, creating dev-t, fouling up lines. Pretty grim.

An executive's job is first to put an org there by providing comm lines amongst the group and from the org to public and public to org. That's the first, the very first responsibility of an executive whether Assoc Sec or PE Director or D of T or *any* executive.

ROUTING

When routing arrangements are made *inside* the org — from staff member to staff member — we call it ORGANIZING.

When routing arrangements are made or communication invited from org to public and public to org, we call it PROMOTION.

The executive duties of an executive are primarily concerned, then, with ORGANIZING and PROMOTION and seeing that the arranged actions are executed.

Having put the lines there, the executive must see that they truly exist and go on existing. We call this "getting people's hats on" and "keeping people's hats on" inside the org, and public to org and org to public we call "making sure promotion is executed."

The bulk of any executive's job is seeing that things are *executed*. Seeing that lines are followed, policy followed, promotion carried out. Even the D of T, making sure students are taught only straight technology, is executing policy. The D of P, seeing that pcs get gains, is really only following policy and *making sure it is followed.*

For a very senior executive to actually forward further on a query he has received from a staff member the answer to which is already covered by policy is a *very* serious thing. Why? Because the action says this senior executive doesn't know policy, or at the very least isn't putting on the hats of his staff members and juniors and so hasn't got a functioning org.

For a very senior executive to forward an already misrouted despatch is a confession of the most gross ignorance of his or her own org board.

HARD WORK

It is not saintly, then, for an executive to merely work hard. In fact, where that work is mainly invested in handling the in-basket, that hard work is just causing hard work in other places too. It is quite stupid to get tied down to an in-basket full of staff despatches. The *only* way this can happen (countless staff queries or infos) is by failing to spot off-line and off-policy despatches and return them to source, saying "Misrouted. See org board," for off-line. Or saying for off-policy, "Policy already exists on this. Look it up, please," or saying "This is contrary to general planning. Please look up recent policy letters."

MAKE THEM WORK

The surest cure for such floods of despatches is *always* to make the source work harder because he or she goofed by sending an off-line or off-policy despatch.

Some off-line, off-policy despatches are originated out of pure laziness. "Takes too long to look it up, I'll ask the HCO Sec" is the usual line of thought. The poor HCO Sec, already too overworked to look up policy, gives in desperation an unusual solution. This really messes it up. The solution given can only be as good as the data offered; and if that data is wrong, the solution is very wrong; and as the query originated in laziness it is probably wrong in data, and so *any* effort to answer it at all will only louse things up.

Hence, it is contrary to the best interests of the org to give the source the proper routing for off-line despatches. If you do, you don't handle the real trouble — the

staff member doesn't know it's an org yet and so will not be able to do his or her job. You *must* get that staff member familiar with the org board or you'll have betrayed the org. You see, *other* staff members also suffer with the off-line originations from this person. And as an executive you aren't protecting your own people from off-line origins if you don't handle the person doing it when spotted. Cure it and you help not just your in-basket — you'll take a very heavy load off other staff members too. You see, yours isn't the only in-basket in the org, and if you are an executive you're the one who *must* handle the routing for only you have the immediate authority to do so. Expansion depends chiefly on your taking that action.

On *off-policy despatches,* by which we mean the staff member doesn't know his policy and so does things contrary to it or wants to know if it is policy, why should *you* study up your policy letters? You are probably fairly well up on them. The person who isn't is the source of that despatch. So you *must* make sure that that person gets industrious on the subject of policy and burns some midnight oil on old and new policies and general planning.

So again, by your looking it all up for the offender, you cripple your organization by leaving uncared for an area in it that will goof. And that staff member's goof can destroy the whole org! That's no exaggeration.

Why are you working so hard as an executive to put the org there and make it grow if there aren't elements around that are destroying it? If there were no such elements, your org would just grow and all your work would be promotional or service. That you are always continuously creating your department, unit or org or defending it somehow, means there must be something knocking it down. The symptom of that something is the off-line or off-policy despatch.

For you to be totally effective you yourself must know routing (the org board) and know policy and the general planning in progress.

And for an org board to be known it must exist and be real and must say what departments, units and staff members do.

And for policy to be known it must exist and be findable.

To make minor changes on an org board and double assign (two or more hats to one person) is quite usual in an org. To make major changes such as Ad Comm in charge of HCO or training done by the Accounts Unit would be a gross violation of policy. And so your org board must to that degree be a standard org board. But you still have to do routing on it and provide routing for it.

To invent policies or supplement policies without sending them through channels *as completed staff work* (which means routed to the board, with all related policy letters clipped to the requested change and the new policy letter all written, ready for issue) will break down the Scientology lines in that area.

You don't believe it? Australia got into its whole inquiry mess because the senior executives either did not know or follow the long-standing policy concerning the prompt return of money to a dissatisfied pc. That cost the org thousands and thousands, a year of grief, and risked getting Scientology banned in Australia. A policy

not known or altered is *death*. Not from me but from the community in which the org operates.

Still don't believe it? Washington, DC either did not know or did not follow the explicit policy concerning receiving favors from preclears but only half-heartedly reported them to an uninformed HCO which didn't know or didn't follow the full intent and spirit of the policy and never told me as was implied in the original policy letter. The wife of that person giving the favors brought on the *whole* FDA mess that cost us tens of thousands and *two years* of grief and almost knocked out Scientology in the US.

Policy is survival for a group.

ONLY PRACTICAL POLICY AGREED UPON AND FOLLOWED PROVIDES THE ARC THAT IS THE LIFE ITSELF OF ANY GROUP. It's the mores, the policies, whatever you want to call them that makes a group or an organization alive and breathing.

Bad policy, bad mores, and you have a dying group, a dying organization. Governments whose policies are unreal are perishing. They act like criminals. There's where anyone gets his distaste for "policy"—he has looked at the policies of dying groups and is imitating how they are regarded.

But as in control there is good control and "bad control," so in policy there is good policy and bad policy. It has a bad name with some people. It bores them. They also kill groups. So if your organization is going to live, it must have real, living policy and respect it and use it.

All right, so we're serious now. Org boards and policies must exist and be followed and the person who makes sure of that is a Scientology executive.

The clue to violations is the continuously full in-basket, whether moving or not. If an executive's in-basket is always full, then he or she either isn't (a) working at all or (b) is working like mad but is not handling off-line or off-policy despatches by getting the lines in and the policy known.

You can't escape it; there it is.

There is nothing wrong with working hard as an executive. I do. There is nothing wrong with having lots of traffic through an in-basket. A busy org does. There is everything wrong with an executive having a lot of staff traffic because 99 percent of it is off-line and off-policy; and if you don't act to correct it, you not only don't have time to breathe, you also will wind up with no income and no org.

Fact.

HCO POLICY LETTER OF 31 JANUARY 1965

REMIMEO
STHIL STAFF

DEV–T

(Adds to HCO PL 17 Nov. 64 I,
OFF–LINE AND OFF–POLICY, YOUR FULL IN–BASKET)

The commonest cause of OFF–LINE despatches is:

A staff member writes a despatch to himself but routes it to somebody else.

Example: Registrar writes a despatch to the Org Sec asking how to meet a quota of interviews. This is dev-t because it is off-line. Why is it off-line? The staff member responsible for increasing interviews is the Registrar, not the Org Sec. Therefore the despatch should be routed to the Registrar and routing it to anyone else is misrouting. *Informing* the Org Sec "I am doing so-and-so to increase the number of interviews" is quite in order, but it's a despatch containing a report, requiring no answer. The correct routing of a query about increasing interviews would be to the Registrar. Thus the above example's routing would be the Registrar to the Registrar.

When a staff member generates a lot of despatches about his post, these are usually misrouted if they go to anyone else but himself. Since who else should wear that hat? Not the Org Sec or Assoc Sec. Not the HCO Sec. Only the staff member himself or herself.

In orgs a goodly number of people think staff members senior to them also wear their hats. This is definitely not true. The Assoc Sec or Org Sec does not wear every other hat in the org. If he does, he is a pretty poor organizer. And if he lets staff force him to, then he isn't much of a leader.

You can detect people who fear responsibility or consequences of their most ordinary actions by the number of despatches they send others which should only have gone to the staff member himself or herself.

It's the figures on the weekly report sheet, the volume of work accomplished, the résumé of results that inform others about a hat and the activities and effectiveness of the person wearing it. An Org/Assoc Sec only needs to look at these reports, not his in-basket, to know if posts are being held. It may make one feel grand and responsible when others *must* come to one for help on their jobs but it sure doesn't make a strong org to have "what-do-I-do's" flying up to the head of the org day and night. People exist who do their jobs without a lot of dev-t about how to do them, what to decide, how to think. And people exist who do their jobs without getting everyone else in trouble.

There is another type of dev-t which one encounters. And that is the origination of comm that should have been originated by someone else.

This has several guises. You see it in a usual form in Academies where some student is always asking questions "so that the others will understand." The student himself or herself understood the Instructor but asks a question so "the others will understand also." This is of course a student trying to wear the Instructor's hat or another student's student hat. I can usually detect this one and break it right there with "Are you asking because you don't get it or because you think the others haven't?" Such a student can lengthen study hours horribly without helping anyone a bit.

A staff member occasionally tries to originate for another hat than his or her own. It is easily detected. The despatch has to do with the Academy but is from the HGC, etc.

Such a despatch is usually misrouted also. It is sent to a department head or the HCO Sec or somewhere. Trying to handle it gets pretty deadly as it's a double snarl. The originator shouldn't have originated it and also should have sent it elsewhere if he or she did originate it. If the HGC thinks it has to wear the Academy hat then the despatch should go to the Academy and nowhere else. At least send it to the hat it most concerns.

This gets even more snarled when it jumps an org — to wit, an HGC staff member originates a despatch *for* the Academy and sends it *to,* let us say, the national Central Org. In the other org, unfamiliarity with the org board of the originating org can cause action to be taken. It isn't noticed that the HGC is talking for the Academy.

When action is taken other than returning the *off-origin* despatch to its sender, a great many evils can result. The least of them is that it gets the sender in trouble when acted upon.

Example: A staff auditor proposes to the Assoc Sec that students be trained better in 8-C because of a recent HGC flub. The Assoc Sec jumps on the D of T. The D of T privately pounds the staff auditor into the ground.

Ill feeling in orgs usually stems from these *off-origin* despatches.

In the above example, the staff auditor should have taken it up emphatically on the basis of a flub in the HGC with the D of P who then would take it up with the D of T still on the basis of an HGC flub. Then it has a chance of straightening out. You see, lacking data, the person originating an *off-origin* despatch usually assigns wrong cause. In the above example it may have been Certification at fault, not the Academy at all. One can drown in a sea of errors on these off-origin despatches. Basically what ails governments is their dependence on spy reports, police reports, etc. The reporting person does not wear the hat which should have originated.

When a staff member does not himself originate when he or she should, it will show up in the OIC reports and in emergencies. It is handled by putting on the person's hat, auditing or personnel transfers, not by off-origin despatches.

Did you know you can let an entheta despatch drop right there and create less entheta by doing so? Try it sometime.

Not all off-origin despatches are entheta, of course.

Part of this type of despatch is of course off-zone. Perth originating for Sydney. Or Los Angeles originating for New York. Or Assoc Sec London (as once happened years ago) doing business *only* in Australia. Or LA getting pcs only from Nevada. Here one sees somebody operating for the wrong zone or for only part of their whole zone. On a smaller look, a staff member doing only part of his job produces a similar result. And somebody doing another staff member's job is another version of it.

Off-origin despatches or work can make an awful lot of dev-t — not always pleasant.

ORG BOARD DEV–T

An out-of-date org board can cause dev-t.

A staff that doesn't have a well-done org board cannot help but make dev-t.

An org board is what we use instead of appointment lists inside orgs. If it isn't posted on the org board, it hasn't been appointed. Why? Because an appointment is effective only if its work will be routed to it. If nobody knows about an appointment, then how can anything but dev-t occur?

Thus prime preventers of dev-t are

1. A well-done org board
2. A complete org board containing all appointments
3. A staff checked out on the org board
4. All new staff checked out on the org board
5. No appointments existing that don't appear on the org board.

A *lot* of dev-t occurs because some people are insufficiently aware of the existence of an org. They think "we're all here together working." They don't realize everybody in the org does a different job than the rest.

There is no one so eager to reorganize everything as a new staff member who has yet to discover the org board and its purposes.

And there is a flood of dev-t from anyone who

1. Doesn't know the org board well and who
2. Hasn't got his own hat on.

Obviously, to reduce dev-t and keep one's in-basket within reason, one must

1. Have a complete and well-done org board up-to-date and known and
2. Get individual hats on.

Otherwise people will misroute continuously — sending their own bits to others and flooding wrong others with despatches.

HATS

Given a good org board with the purpose of each post stated and the whole thing well known to staff, lengthy and complex hats become less important.

Hats, complete ones, *are* important and of value.

But did you know that a staff member will do best if he has to *evolve* his own hat before he reads up on it or afterwards?

The way to do this is on a clay table.

Take a very fundamental statement of the staff member's job — a complete, simple statement. Then, have the staff member

a. Work out the org in relation to the field and public in clay.

b. Work out his job in clay in relation to the rest of the org.

c. Work out his job in clay in relation to his job and himself.

After a staff member has done that (labeling every bit of everything he makes), and then done (a), (b) and (c) again, most of those misapprehensions and not-knows that cause dev-t will be gone.

And it pays off in the time spent by increased effective volume and decreased dev-t.

Very little dev-t is caused by viciousness or mean intent. It's just the accumulations of (1) not-knowns and (2) afraid-to-do's.

Cure them.

REMIMEO
STHIL STAFF

DEV–T ANALYSIS

(Continues HCO PLs 17 Nov. 64 I, OFF–LINE AND OFF–POLICY, YOUR FULL IN–BASKET, and 31 Jan. 65, DEV–T)

Probably the basic reason for the expansion of bureaucracies is dev-t.

When admin staff in one of our orgs begins to exceed tech staff, then it is obvious that a lot of dev-t is on the lines. Proof of this is the continual finding that an increase in admin staff does not lead to an increase in income but on the contrary often heralds an era of decreased gross income.

Within reason, you must not increase admin staff numbers until you have thoroughly hunted down all dev-t and taken adequate remedies for it.

When a government sees a lot of despatches it thinks it needs a lot of people. These, making more dev-t, then seem to need many *more* people, etc. The cure for a lot of despatches without a lot of new income showing up is a brisk analysis of the org's comm lines.

This is simply done.

1. Look around for constantly full and not emptied in-baskets. When you find one in which the traffic does not move, look the post over carefully and decide which one of the following to do on the basis of what you find on that post (a) educate or (b) replace. If, when (a) is done, the basket again remains as before, do (b).

2. Look into people's baskets for despatch and letter dates. If you find a basket where these are quite old, find out why and make up your mind what to do about it on the basis of what you find.

3. Look into drawers for cached despatches, letters, etc. If you find a drawer full, realize somebody is staying clean on the boards by hiding what should be visible. Find out why this violation is occurring and act accordingly.

4. Look over the traffic flow of the principals of the org (Assoc/Org Sec, HCO Sec) and analyze their traffic on the basis of the number of off-line, off-policy, off-origin despatches. Note what staff members are doing these and act accordingly.

5. Make the principals of the org keep logs of off-line, off-policy, off-origin despatches and *also* bodies brought with despatches. After one week, take these logs and, as they spot the dev-t artists in the org, act accordingly.

The main thing to know is *never* get reasonable about dev-t. If it doesn't cure by education or other means, then you have no choice but to act. The sooner you act, the better for everyone.

NO WORK

The Anglo-Saxon race has a crazy spot on the subject of work. The whole ambition is to *not* work.

This is quite at variance with several other races and normal thetan behavior.

Easily the greatest source of dev-t is noncompliance or no-comm.

You can say all you want about despatches and analyze them thoroughly and with benefit to all.

But the most *deadly* conditions, the things most likely to produce the greatest floods of traffic in the long run are noncompliance and no-comm.

One or the other of these is the basis of any emergency.

So in analyzing traffic to increase income and efficiency, be very, very alert to the points of noncompliance and no-comm.

In our ordinary despatch system these are not easily spotted as we seldom keep copies of our despatches.

The way to locate these spots is by questioning the principals of the org and getting a list of:

1. Emergencies of the past three months and what departments and personnel were most closely connected to them.

2. Present time problems of the principals with the org and the names of the staff members most closely connected with these.

Compare lists 1 and 2. You will find that there are names common to both these lists.

Query what despatches remain unanswered by these persons or what orders have not been complied with. This selects out one or two people.

You now have the basic sources of dev-t in the org which cause more visible dev-t to build up.

Act accordingly. And don't get "reasonable."

Principals seldom realize that their softness on bad dev-t offenders works great hardship on other staff members. The real overt is against other staff members by *not* acting effectively to locate and reduce dev-t.

As an example, I know of an instance where two staff members' noncompliance and neglect of orders cost an org £20,000 *cash* in one year alone and brought the org to a point where only heroic action saved it. Only two out of fifty were responsible. The other forty-eight were working their heads off trying to make a go of things.

These two, by noncompliance with despatches, with no-comm, sabotaged all promotion and the entire PO system and nobody could tell how it was happening. When they departed, not only the losses vanished but org income *doubled*.

So don't ever get soft where you see noncompliance or unanswered despatches. You're looking at trouble and future emergencies that may wipe out the org.

DEV–T ANALYSIS

You can pretty well size up a whole org just by watching its despatch lines and baskets.

If you were very skilled at this, you really wouldn't need to move out of the Communicator's chair to spot every bad and good point in the org.

Without analysis by dev-t, an org is carried on the backs of a few desperate staff members.

Why do it the hard way? Watch and handle dev-t sources and you'll be able to breathe again.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 5 JANUARY 1968
ISSUE I

REMIMEO

DEV–T SERIES, PART OF

OVERFILLED IN–BASKET BAD NEWS

If an executive is trying to do his or her job and looking ahead and handling things and yet is being hit constantly with bad news and problems and has his in-basket loaded continually,

a. HE IS GETTING NONCOMPLIANCE AND FALSE REPORTS

and

b. HIS JUNIORS ARE NOT GETTING HIS ORDERS EXECUTED

and

c. HIS JUNIORS ARE NOT PUTTING IN ETHICS BUT LEAVING IT ALL TO HIM.

What he sees is bad news and hard-to-handle items and an overfilled in-basket.

He does not see (a), (b) and (c) above as they are out of view and often blurred by efforts by juniors to LOOK and SOUND active in his sight while actually really loafing and goofing or outright betraying him.

This is the most senior datum in all dev-t policy — that

IF YOU ARE BEING HIT BACK BY LINES YOU ARE TRYING TO HANDLE then YOU HAVE UNSEEN NONCOMPLIANCE AND FALSE REPORTS ON YOUR LINES.

Therefore, to remedy this situation, when an executive is being knocked about by his lines, bad news, disasters, etc., and he feels PTS, he must apply this formula mercilessly:

A. MAKE THE PENALTIES FOR NONCOMPLIANCE AND FALSE REPORTS TOO GRUESOME TO BE FACED AND ENFORCE THEM

B. LOCATE AND DISCIPLINE THE JUNIORS WHO DO NOT EXECUTE OR DO NOT GET ONE'S ORDERS EXECUTED

and

C. SACK EVERY JUNIOR WHO WILL NOT PUT IN ETHICS IN THEIR OWN AREA ON THEIR OWN.

The *only* reason an otherwise competent and industrious executive gets hit by bad news and has an overloaded in-basket lies in (a), (b) and (c) above, and the only effective remedy is (A), (B) and (C).

It takes far more ethics and far steeper enforced penalties to make an organization work than Scientologists have been using.

If you don't learn and use the above, you will not be a big success and your life will be miserable and your post untenable.

We work in a jungle of noncompliance and false reports called the wog world. Our ethics must be proportional to our ability to do good or we will all vanish.

You must give attention to this PL or you'll *never* cure the dev-t on your lines. It all comes from noncompliance, false reports and your juniors patty-caking around and not getting in ethics on their own, no matter HOW it may look from your post.

Of course your lawyers and accountants "know best" and have OUT–ETHICS and therefore give you the most trouble as they are outside your control perimeter as "experts" and so you have more legal and accounts problems than others. This PL still applies to them too.

You CAN function as an executive if you do your job and do (A), (B) and (C) above. Otherwise, lord help you, your juniors will get you shot by (a), (b) and (c). A good fellow is a dead good fellow when he's dead. So being a good fellow is NOT the solution to getting a job done. The solution for an executive is (A), (B) and (C).

(Also issued as Flag Order 1174, same date, same title)

REMIMEO

DEV–T DATA

PEOPLE WHO DON'T DO THEIR JOBS

A Type S being is so devoted to stopping something that he has no time or energy to actually do his job.

We have long said that people never did nothing. They were always doing something. If they weren't doing their jobs they were not doing nothing. They were for sure doing something else.

I have found what I believe it must be — they are stopping something.

There is an exact point where a thetan goes mad. It is *not* a broad gradient. It is an exact point. It is the point when a thetan begins to be devoted to stopping something.

At this point also he ceases to do a job or carry out cycles of action.

He can't move through a cycle of action because, you see, he is stopping something.

The manifestations that grow out of this are nearly infinite. They sum up to a person being a liability on any post of responsibility as he uses his authority merely to stop the thing he is devoted to stopping.

As he is still clever in a way, he can give the widest and most varied appearance of being busy at his job, but the end product is routinely a flub.

When such a person is still able to reason, he is suppressive in a degree. The thing he is stopping has begun to generalize in quality so he stops many things without realizing what he is trying to stop.

As he becomes more stupid he then begins to act irrationally and exhibits what could be easily seen as insanity.

Getting even (revenge) is a method of stopping things by making others guilty of *doing* things or having done things.

This can go so far that an inexpertly processed or not processed or poorly trained or not trained Scientologist can knowingly get even by trying to demonstrate he has had no case gain. He does this by acting stupid and discreditably or out-ethics.

You can realize how far this goes when you see a thetan doing himself in to prove he is right. A thetan has been known to sit tens of millions of years, immobilized, just to prove he is right by showing he has been "done in."

All this begins by being devoted to stopping things.

The manifestations are continual flubs, bad or no job performance, incomplete cycles of action, dev-t.

The remedy casewise is of course real standard processing up through the Grades on the Grade processes by an auditor who himself isn't goofing up his TRs or metering.

A Type S S&D is vital. A Type W may have to be run first.

And as the person progresses, with his track opening up, more S&Ds can be run, affecting him to greater depth.

Somewhere along the line he'll come right. *BUT* until he does he is a pc and should not be on org lines until he is cured of the basics of his obsession. Why? Because they stop others, covertly or overtly, from getting anything done.

HCO POLICY LETTER OF 27 JANUARY 1969

REMIMEO

DEV–T SUMMARY LIST

(Add to dev-t policies)

The following list is a summary of items which *Dev*elop (increase) *T*raffic. It is based on years of experience with the subject of dev-t.

1. FALSE REPORTS

A report that is false can cause greatly increased useless action including at times B of Is, despatches verifying it, etc.

2. NONCOMPLIANCES

Failure to comply with an order can set an emergency flap going which crowds the lines with despatches. One consequence of noncompliance when repeated over a long period is to move a large number of targets into PT in a sort of frantic jam. Catastrophes can occur because of noncompliance.

3. ALTERED COMPLIANCE

Something was introduced or changed in the orders which made them nonoptimum. This sometimes wastes and repeats all earlier traffic.

4. NO REPORTS

The scramble to find out if something has been done increases traffic. This includes lack of data forwarded as it should have been. It causes as well anxiety and uncertainty.

5. COMM FORMULA UNUSED

All orders out — answers in are on the comm formula. Failing to answer the question asked can triple traffic.

6. INFO FAILURE

Those in charge fail to brief their juniors. These then have no idea of what's going on and develop other traffic in conflict. Reversely, juniors fail to inform seniors of data they have.

7. LACK OF CSW

Failure to forward an assembled package of information on any given situation, plan or emergency or failure to forward complete information on any despatch,

sufficiently complete to require only an approved or not approved slows down approval and action and develops traffic. It often requires returning for completed staff work, or the senior concerned must take over the person's hat and assemble the missing data using his own time and lines. And thus traffic develops.

8. SUPPRESSION ON LINES

Lines get closed by arbitraries so that vital info does not get through or vital action is not ordered.

9. CROSS ORDERS

Juniors issue so many orders unknown to a senior and *across* his lines that a senior's orders are obscured or lost. Things get very confused, very active but nonproductive.

10. PRESENT TIME ORDERS ONLY

Basic programs or standing orders or policy go out by not being enforced. PT orders only are being forwarded or handled. This eventually balls up in a big wad and an organization vanishes. Primary targets go out.

11. NONEXISTENT TARGETING

Targets are not set, major targets are unknown. Actions are then unproductive.

12. UNREAL TARGETS

Targets are set and worked on which are not derived from any useful major target.

13. CROSS TARGETS

The senior's target system is neglected due to conflicting targets being set on lower levels.

14. BUGGED TARGETS

A target develops bugs in its forwarding which are not seen or reported. The target stalls. A furious traffic burst may eventually occur to redo it and catch it up.

15. HOBBY HORSES

A staff member can "ride his favorite hobby horse," ordering and complying only in his favorite area, neglecting areas of greater importance. His orders often cross-order and distract from important targets and create dev-t, vital actions being neglected.

16. STALEDATED ORDERS AND DESPATCHES

Staledating delays action, often important, and creates anxiety and emergencies. New (developed) traffic results in an attempt to get an answer or compliance.

17. FORMULA EVASION

Areas or persons fail to follow the conditions formulas assigned or actually indicated and pursue the wrong or no formula.

18. INCORRECT CONDITIONS

Incorrect conditions are assigned or assumed with consequent ball-up of lines.

19. HAT DUMPING

This is referring everything to someone else. It greatly increases traffic without producing.

20. CHANNEL SKIPS

Something is not forwarded on channels but skips vital points and if acted on confuses the area of the points skipped.

21. VIOLATED PURPOSE

A division, dept or staff member or materiel used for things it was not organized to do. It disrupts its normal lines.

22. BACKLOGGING

If traffic or bodies begin to be backlogged, one can stall completely just handling the queries about the backlog without getting anything really done.

23. OFF ORIGIN (statements and despatches)

A terminal originates something not its hat.

24. OFF LINE

Despatches or orders are passed in a manner to deny info or record.

25. INCORRECT ORGANIZATION

The comm system or procedures are not organized so as to be easily used. They are either not organized at all or are made too complex to be useful.

26. ORG BOARD DEV–T

An out-of-date org board can cause dev-t. A staff that doesn't have a well-done org board cannot help but make dev-t. A staff that doesn't know the org board will make dev-t.

27. UNTRAINED STAFF

Staff not grooved in on the lines mainly deal in dev-t and, although they even look busy, seldom accomplish much.

28. UNPRODUCTIVE PERSONNEL

Keeping a personnel on a post who is a flagrant dev-t source.

29. PEOPLE WHO PRESENT PROBLEMS

Problems presented by juniors when solved by a senior cause dev-t because the source of the problem usually won't use the presented solution either.

30. HAVING TO HAVE BEFORE THEY CAN DO

Projects stall "because of FP" or "because it would be nice to have a . . ."

31. PERMITTING DEV–T

The biggest single goof anyone can make is failing to recognize something as dev-t and going on to handle it anyway. One's basket soon overflows. The reason for "overwork" and "heavy traffic" is usually traceable to permitting dev-t to exist without understanding it or attempting to put the *dev-t* right.

32. LACK OF EXECUTIVE RESPONSIBILITY

Is this okay?

Executives may not okay anything done or to be done below their level unless their immediate junior has also stated or attested with an initial that it is okay.

Unless one can fix responsibility for actions, there is no responsibility anywhere and the whole show goes to pot.

Never let a junior say "Is this okay?" Always make him state or initial "This is okay" on all work, actions or projects.

"Is this okay?" is dev-t and should be chitted as such.

33. EXECUTIVE ENTURBULENCE

An executive is seldom hit unless he has had noncompliance on his lines. He is almost never hit if he polices dev-t. When an executive is hit by a catastrophe, he should handle it and AT ONCE CHECK UP ON DEV–T AND HANDLE IT. I keep a daily log of dev-t and who and what every time I find my lines heavy or there is a threatened catastrophe. Then I handle the majority offenders.

34. USING DEV–T AS AN EXCUSE TO CUT LINES

An executive must really know what dev-t is and really say what the exact dev-t was in order to reject or handle dev-t.

35. CATASTROPHES

A catastrophe occurs by lack of prediction of a possible circumstance. Those things planned for do not become catastrophes. Catastrophes USUALLY FOLLOW A PERIOD OF EXCESSIVE DEV–T.

The above make a great many motions necessary where only the one correct one was needed.

Thus a crew or org can look *very* busy when it is only handling dev-t. It will get nowhere. Real targets are not done. Tempers go bad. Staff and crew are overworked.

Also when I get dev-t on my lines, I know that it is despite various screenings. If *I* get it, then it must be a hundred times that for the fellow who has no such admin defenses.

I routinely run a dev-t check on my lines and advise all officers and executives to do the same.

The way to handle this is REVIEW and CLASSIFY all targets into their types as per three recent policy letters.

Find and note all instances of dev-t as above with the person who did them.

Turn in KNOWLEDGE REPORTS or ethics chits concerning them.

Concentrate on *COMPLETING* proper targets set as per the recent policy letters.

ONLY REPORT COMPLETIONS.

Work to get *COMPLETIONS*. Then we'll get the job done.

REVISED 21 OCTOBER 1980

REMIMEO

DEV-T SUMMARY LIST ADDITIONS

(Adds to HCO PL 27 Jan. 69, DEV–T SUMMARY LIST)

(Add to dev-t policies)

An actual example of dev-t (*dev*eloped *t*raffic) follows:

A warm wind came up and the heating system on the MV *Apollo* was no longer required to be on. A message was sent to the engine room to "turn off the heat."

The order was not complied with.

The order was repeated some time later to a steward to send a messenger to the engine room and tell them to "turn the heat off the fans." The messenger was not sent by the steward, but the steward instead told the I&R (*I*nspections and *R*eports) of the engine room, who was making his inspection rounds, to turn *down* the heat.

Again the order had to be repeated, this time to a messenger who went to the engine room and gave the order to "turn the heat off the fans" to the Engineer of the Watch.

He replied, "We turned it *down* a short while ago!"

The messenger accepted this *ALMOST* and reported back to the senior executive, who again had to send the messenger to repeat the order to "turn off the heat." This time the messenger returned with the compliance that the heat had been turned off.

FOUR TIMES the message had to be repeated before compliance was reported.

*Dev*eloped *t*raffic.

From the above some new forms of dev-t can be isolated.

36. ACCEPTING AN ALMOST

The messenger accepted the ALMOST of turning *down* the heat. The order was to turn it *off*.

An executive or communicator or messenger who accepts and forwards an "almost" is permitting dev-t.

Orders given are to be executed and reported DONE, not to be nearly done or almost done.

A *communicator* can often be tripped up by this form of dev-t. It is most easily spotted by insisting that the original order or orders be returned with the compliance so that any terminal on the line can tell at a glance *what was ordered,* and *what was done.*

37. FAILURE TO GET AN ORDER CLARIFIED

Upon questioning, it was found that the messenger had not fully understood what was required and passed this uncertainty on to the Engineer of the Watch.

38. IRRELEVANT INFORMATION

The Engineer of the Watch, when told to "Turn the heat off the fans," gave the messenger the irrelevant information, "We turned it down a short while ago."

A later check revealed that he did indeed comply and turn the heat off but failed to inform the messenger of this, giving her only the irrelevant information that they had earlier turned it down.

This form of dev-t can also take the form of forwarding to a senior large quantities of irrelevant information, jamming his lines, and reducing his productiveness. The opposite of this of course is failure to inform one's seniors of relevant data (see HCO PL 27 Jan. 69, DEV–T SUMMARY LIST, point 6).

39. REASONABLENESS

A staff member or executive can be "reasonable" and accept reasons why something cannot be done, accept incomplete cycles as complete and fail to follow through and get completions.

All of which results in further traffic. This form of dev-t is best handled by knowing and applying HCO PL 19 Aug. 67, THE SUPREME TEST.

THE SUPREME TEST OF A THETAN IS HIS ABILITY TO MAKE THINGS GO RIGHT.

40. FAILURE TO TERMINATEDLY HANDLE, REFERRAL

The only tremendous error an organization makes, next to inspection before the fact, is failing to terminatedly handle situations rapidly. The fault of an organization's waffle, waffle, waffle, Joe won't take responsibility for it, it's got to go someplace else, and all that sort of thing, is that it continues a situation.

What you should specialize in is terminating the end of a situation, not refer it to someone else. Complete the action now.

41. FAILURE TO COMPLETE A CYCLE OF ACTION AND REFERRAL

One of your most fruitful sources of dev-t is your own double work.

You pick up a despatch or a piece of work, look it over and then put it aside to do later, then later you pick it up and read it again and only then do you do it.

This of course doubles your traffic just like that.

If you do every piece of work that comes your way WHEN it comes your way and not after a while, if you always take the initiative and take action, not refer it, you never get any traffic back unless you've got a psycho on the other end.

You can keep a comm line in endless foment by pretending that the easiest way not to work is to not handle things or to refer things. Everything you don't handle comes back and bites. Everything you refer has to be done when it comes back to you.

Complete the action; do it now.

42. FAILURE TO RECORD AN ORDER

Failing to make an adequate record of an order given, losing or misplacing the order can result in endless dev-t.

The original orders being lost or not recorded at all, wrong items are purchased, incorrect actions are taken, cross orders are given, and a tremendous waste of executive time and money occurs straightening the matter out.

This is one of the most serious sources of dev-t.

43. UNCLEAR ORDERS

An executive giving an unclear order puts uncertainty and confusion on the line right at the very beginning of the cycle of command.

The safe way on an important program or action is to target it.

44. MISUNDERSTOOD ORDERS

Orders misunderstood by the recipient will not be properly complied with as the order was misunderstood. The incorrect or no action following will require further traffic to correct.

As an executive, originate clear, precise instructions and orders.

As a junior, duplicate the order, and never fail to clarify if you have misunderstood.

45. RELAYING AN ORDER IN A CONFUSING MANNER

Communicators and messengers can create dev-t and foul up actions by poor relay of information.

46. CLEANING CLEANS

Doing something that is already done or ordering something to be done already done.

47. REPEATED TRAFFIC

The same traffic repeated to the same executive is dev-t. Often takes the form of information or compliance reported by telex and then the *same* information being sent by despatch. There are times when a telex is followed by a more lengthy despatch or report, but this should only occur when *extra* information is really needed.

48. FAILURE TO WEAR YOUR HAT

A person on one post not doing that post but doing every other post creates endless dev-t, all despatches and origins being off-origin and he covering the hole of his own post.

The person himself is the dev-t.

49. UNUSUAL SOLUTIONS

Requests for authority to depart from the usual are dangerous when okayed, as they then set up areas of difference and cause policy to wander and misfit at the joints.

Juniors who propose unusual solutions generally don't know the policy or orders anyway.

The proper thing to do is order a checkout on the appropriate policy.

50. REMOVING PARTICLES OFF THE LINE

Apart from being a serious offense, taking comm particles off another's desk or out of their in-basket or off the comm lines causes dev-t and lost time in searching for the missing particles and can sabotage projects or actions, vital data being missing.

51. SLOW COMM LINES

Despatches held up on lines cause other despatches to be originated about the same subject, causing dev-t to both sender and recipient.

The power of an organization is directly proportional to its speed of particle flow (letters, despatches, telexes, bodies).

REMIMEO

ADMIN KNOW-HOW SERIES 23

DEV-T

The entire, complete and only major source of dev-t is ignorance or failure to grasp CONFUSION AND THE STABLE DATUM as covered fully in *Problems of Work* (and LRH tapes of 1956).

Unless an executive or staff member fully grasps the basic principles of confusion and a stable datum then the org board is completely over his head, the reason for posts is not understood and dev-t becomes routine.

A post on the org board is the STABLE POINT. If it is not held by someone it will generate confusion. If the person that is holding it isn't really holding it, the confusion inherent in that area on the org board zooms all over the place near and far.

Any executive getting dev-t knows at once what posts are not held because dev-t is the confusion that should have been handled in that area by someone on post. With that stable terminal not stable, dev-t shoots about.

Excessive transfers in an org promote fantastic dev-t as the posts do not really get held as people are on them too briefly. "Musical chairs" (excessive transfers) can destroy an org or area.

The remedy is to get people trained up (OEC) to handle their posts, to get people on post who do handle their posts.

An essential part of such training is a *study* of *Problems of Work* and a full grasp of how a stable terminal handles and prevents confusion. If the person cannot fully grasp this principle, he is below the ability to conceive of terminals and barely able to perceive lines. He cannot communicate since there are no terminals to him.

REMOTE AREAS

If an area remote from an executive does not contain a stable point to which he can send his comm and get it handled, then his comm only enters dev-t into the area and he gets back floods of despatches and problems but no real handling. The area is not organized and does not have people in it who have grasped *Problems of Work* or how it applies to an org board or even why there is an org board.

Communicating into a disorganized area without first organizing it to have at least one stable terminal is foolishness.

An org board is that arrangement of persons, lines and actions which classifies types of confusions and gives a stable terminal to each type. It is as effective as its people can conceive of terminals and understand the basic principle of confusions and stable data.

A good executive arranges personnel and organization to handle types of actions and confusions. He does not broadly comm into disorganized areas except to organize them.

Any area which gives an executive excessively developed traffic (dev-t) is an area where the persons supposed to be the stable terminals in that area are *not* holding their posts and do NOT understand what they are or why and do not know what an org board is and have never understood the Scientology fundamental known as confusion and the stable datum. They are NOT doing their post or organizing their areas.

An executive's evidence of this is the receipt from there of dev-t.

The executive's action is to get somebody THERE, get him to understand confusion and the stable datum and how it applies to posts as stable terminals, get him trained up and use that now stable point to handle further confusions.

If an executive goes on handling dev-t of people who are not stable terminals that handle their areas, HE WILL BE FORCED TO WORK HARDER THAN IF THE POST WERE EMPTY. At least if it were empty, he would get only the confusion of that area. As it is, if the post is improperly held and wobbly he gets not only the area confusion but also the enturbulation of the wobbly incumbent.

Volumes could be written about this subject. But there is no reason whatever not to be able to grasp the fundamentals concerning confusion and stable data, confusion and stable terminals, apply it to org boards, to areas and to expansion.

Chaos is the basic situation in this universe. To handle it you put in order.

Order goes in by being and making stable terminals arranged to handle types of action and confusion.

In organizing units, sections, divs, depts, orgs or areas of orgs, you build by stable terminals.

You solve areas by reinforcing stable terminals.

Executives who do not grasp this live lives of total harassment and confusion.

The whole secret of organization, the whole problem of dev-t, the basic ingredient of all expansion is contained in this.

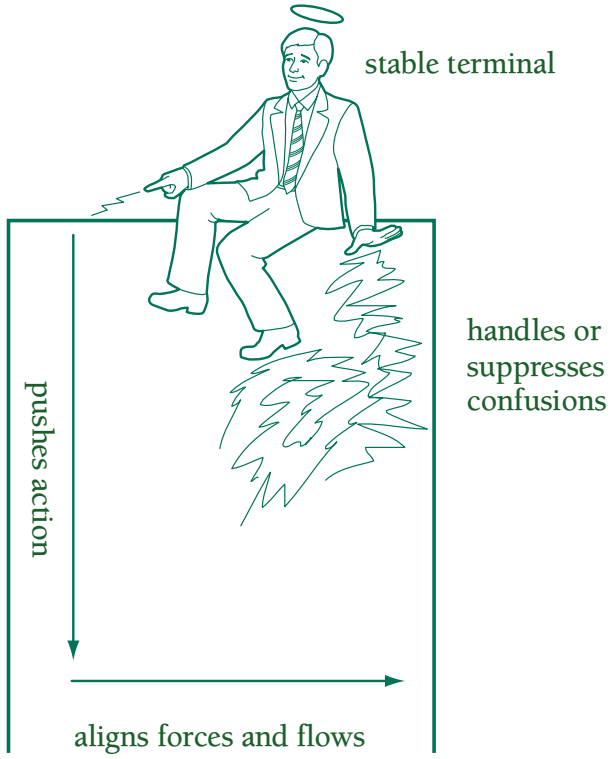
L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 4 NOVEMBER 1969

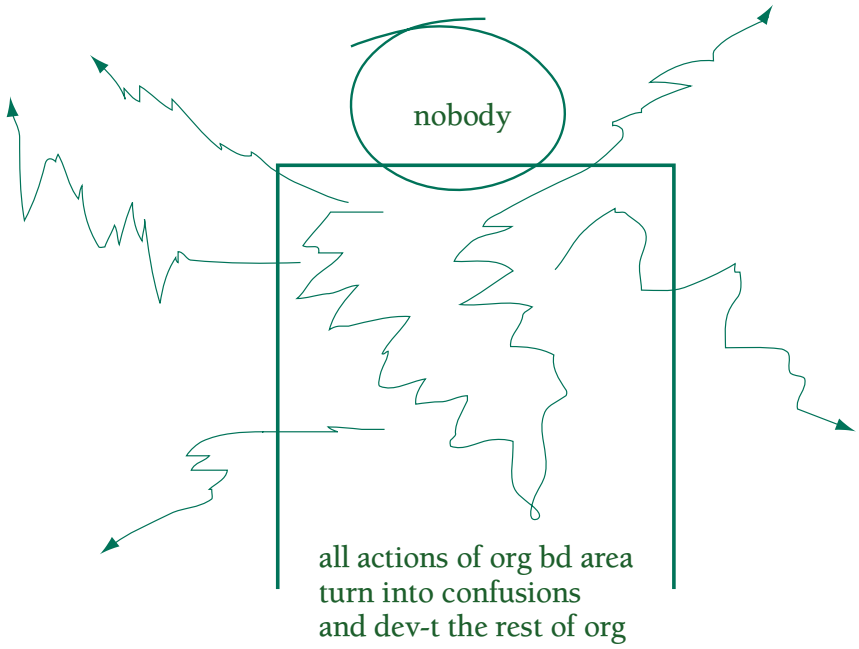
REMIMEO
DEV-T SERIES

DEV–T GRAPHED



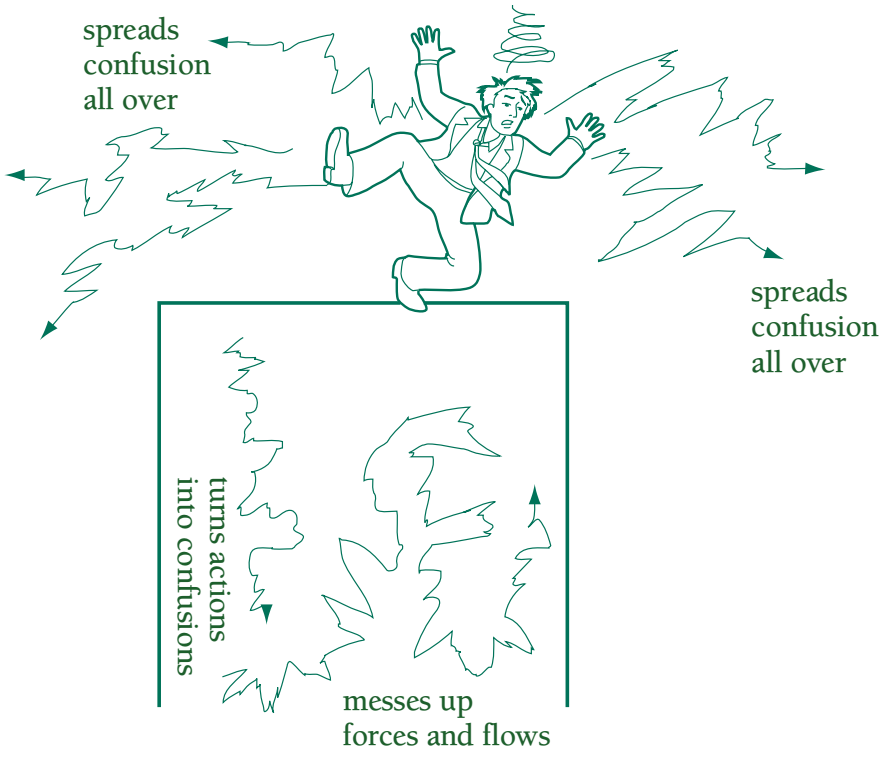
Confusion and the stable datum is graphed on every org board.

The stable terminals are at the top of every section, department, division or portion of the org, as seen on the org board.

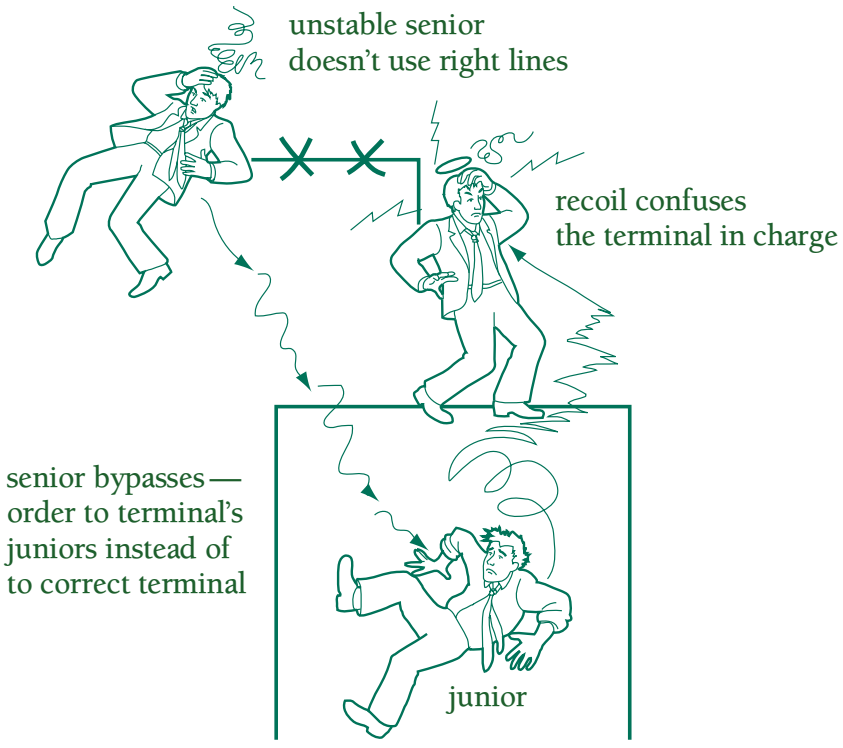


If you consider each area small or large as a BOX CONTAINING PUSHED ACTIONS AND RESTRAINED CONFUSIONS and its in-charge or executive the stable terminal that makes this happen, you will really grasp what dev-t is. Dev-t occurs when the stable terminal of a box on the org board is not stable but is itself a confusion.

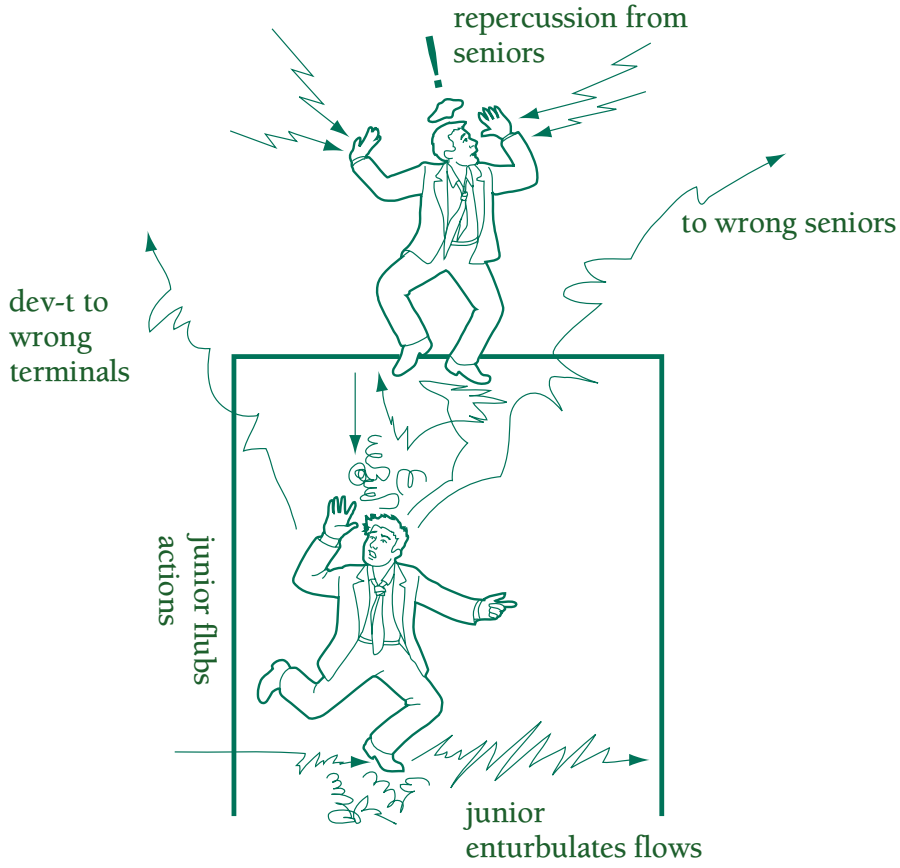
There are five major conditions on an org board, one right and four wrong.



1. CORRECT:



2. MISSING TERMINAL:



3. UNSTABLE TERMINAL:

4. UNSTABLE SENIOR TERMINAL:

5. UNSTABLE JUNIOR TERMINAL:

The *actions* that should be pushed in any box on the org board are labeled on the org board as belonging to that box. The confusions that are supposed to be handled in that box are easily deduced.

A stable terminal pushes the actions that belong to his area on the org board and handles or suppresses the confusions of that area or aligns them with the correct flows.

Many people do not relate an org board to reality or understand that it itself is a pattern which handles flows and actions and dispenses with confusions. However its stable points must be stable and held as stable terminals or the org board gets into confusions and develops dev-t.

All dev-t is a result of the above violations of staff members being stable terminals.

If you study this and really understand it, you will have made a big breakthrough in grasping the science of organization.

HCO POLICY LETTER OF 27 FEBRUARY 1972

REMIMEO

EXECUTIVE SERIES 9

ROUTING

Strangely enough, a major duty of an executive is ROUTING. This means pointing out the channels on which bodies, materials, products or despatches and letters flow. Or making channels on which such things can flow and putting terminals there to handle or change them.

An executive who does NOT route and who does not himself conduct a continual *line police action* is soon drowned. He will lose his grip on his post and his activity and "feel overwhelmed" and worked to death. Further, the whole unit under him and units around him will go to pieces.

The difference between order and chaos is simply straightforward planned flows and correct particles. It is the executive who controls this. So it is in his hands whether he or she has chaos (no line or particle control) or order (good line and particle control).

It is SO much simpler than it looks and SO easy to overlook that many persons on executive posts look everywhere for "the answer" to their troubles when it lies right under their nose — actually.

It begins with one's own desk and office. It is simple. Does one have an in-basket? Does one have an out-basket? Does one use them? Is there any way for things to get into the in and out of the out?

Does one spend a part of each day clearing ALL traffic at once?

Is the traffic divided up into areas and types?

You say, "That's too simple. It's even silly. Here I am a Big Executive and you're asking about these little pieces of paper . . ."

Those little pieces of paper are what keep one informed and extend one's reach! And they can turn into a blizzard and blow one right off post!

There is power in those lines.

So they must be in a neat pattern or the power recoils.

What drives one (and one's organization) off post is *mishandled* items. The *volume* is not at fault. One can handle TONS of this stuff. It is the mishandled bits that make the TONS look hopeless.

One often unwittingly generates mishandlings. And if he does NOT police his lines, he can snow the whole org under.

A sharp executive can spot "developed traffic" (needless) miles away. The slang term "dev-t" has been of vast use.

Pieces of paper that don't belong to one are sent back to originator.

Things originated by a post that aren't the business of that post.

These are the two basics of dev-t — "off-line" and "off-origin."

Juniors that don't do Completed Staff Work but load you up with problems *they* should have solved are responsible for the worst of one's traffic.

So if all you knew was the above — baskets in and out and ways for traffic to get in and out, what should come to you and what certain posts should be sending — AND POLICED IT, you could reduce your traffic worries by three quarters.

AN UNHATTED ORG is a madhouse to work in as no one knows what he's supposed to handle or what others should do. They don't go idle. They introduce Sahara sandstorms of dev-t.

An unhatted org is also a lazy org and *refers* everything to someone else.

Bodies won't channel, correct materials won't arrive, money can't get in or out, production is destruction and the place unpleasantly goes insolvent.

To move such a scene up toward the ideal, one can at least begin to police his own immediate desk and lines. Then one can police his own immediate staff's lines and clean that up.

He can HAT those around him. "This is what you're supposed to handle. This is what you DO."

He can even hat at a distance on his comm lines, "This despatch belongs to Supply. Send it to Supply, not to me."

"CSW please" = "Work out how this problem should be handled and recommend. Don't be dumping problems of your post on my plate" is the real meaning of "CSWP."

Get an Admin Cramming in and send anyone who is dev-ting to it to get checked out.

But mainly and foremost, get the place HATTED so it knows what it should handle.

And first, last and always conduct a line police action.

One of the first duties of an executive is ROUTING.

Now do you see where the "overload" is coming from?

Note: See dev-t policies, *The Problems of Work* and the Org Series to get the full scope and know-how of ROUTING. But the main thing is DO it. Do it before you drown.

HCO POLICY LETTER OF 29 FEBRUARY 1972
ISSUE I

REMIMEO

EXECUTIVE SERIES 10

CORRECT COMM

Dev-t (developed or wrong traffic) destroys any real production in an org while making the org seem frantically busy.

The downfall of HCO was THE FAILURE TO POLICE DEV-T.

The CAUSE of DEV-T is UNHATTEDNESS.

People who do not know what they are supposed to do or produce take on traffic that does not belong to them, originate traffic they have no business with *and* send it to wrong terminals who don't handle.

Not knowing their hats or posts, they *refer* things *they* should handle to others who don't handle them either. The org loads up with not-dones and half-dones and backlogs.

People who should refer what they know don't originate at all and sit on hot emergencies and leave them unhandled. And if they *do* send them on, not knowing the org board, they send them to the wrong terminals. And if they send it to the right terminal it goes in a way it can't be handled for lack of comm expertise.

This goes for any type of particle — despatches, letters, bodies, money, customers, materials, supplies, any particle.

Problems are brought to seniors instead of Completed Staff Work (requiring a recommendation).

DEV-T means an UNHATTED UNTRAINED OFF–POLICY STAFF.

It means loads of overwork and little production or income.

AND DEV-T AND UNHATTEDNESS MEAN THAT THE PERSON AT THE TOP OF A DEPARTMENT, DIVISION OR THE ORG HAS TO SINGLE–HAND.

It isn't an org, it's a mob.

Unhatted staff "go criminal," so ethics will be very heavy.

DISCIPLINE

A first action for an executive or any terminal is to demand CORRECT COMM.

In its basic elements this means:

1. The staff member originates things that apply or are the business of HIS OWN POST. *(On-origin)*
2. The origin is sent to the right terminal that handles that. (On-line)
3. If a post is supposed to originate, it does so. (Communicates)
4. If a problem is encountered it is forwarded ONLY with a full recommendation for handling. (Completed Staff Work or CSW)
5. One does NOT accept a comm that is not the post business of the originator. (Enforces on-origin)
6. One does NOT accept a comm that does not belong to him. (Enforces on-line)
7. One insists that a post should originate or do the duties or furnish the product or service of that post. (Enforces correct action)
8. One never accepts a problem unless it has with it a sound recommendation by the originator accompanying it. (Enforced CSW)
9. One demands specific names and instances, not generalities. (Nonsuppressive comm)
10. One demands full particulars, not half-reports or vague generalities. (Non-suppressive comm)
11. One demands comm be in proper form. (Correct despatch or completed)
12. One has a place to receive the comm. (In-basket or place in org)
13. One has to have a place to put the comm for delivery. (Out-basket or comm center)
14. One has to have standard lines and routes for particles to follow. (Comm system or lines)
15. One demands use of the system 1 warning, 1 admin cramming, 1 retread as an expeditor or in Estates to redo basics for frequent offenders.
16. One demands HATTEDNESS and people performing the duties of their posts!
17. One demands an up-to-date org board and staff drilled on it.
18. One NEVER STALEDATES. He handles when he is expected to.
19. One does NOT go soft in the head or get reasonable or find exceptions. THERE IS NO SUBSTITUTE FOR CORRECT COMM AND CORRECT LINES.

MADHOUSE

An org that has no comm discipline is a madhouse. It will be expensive. It will produce very little. It will try to deliver overt products.

And it will drive its execs up the chimney.

The immediate result will be a conclusion on the part of the execs, "These blankety-blank-blanks are doing us in!" "The place is full of suppressive people." "These guys are no-good bums!" And "Start shooting."

Heavy ethics and offloads occur. These are almost always the result of a whole org gone around the bend from dev-t.

Accidents happen. People get ill.

And the place falls apart.

CURE

The only known cure is TRAINING and HATTING.

For years we underestimated the number of persons needed to train and hat a staff. The whole civilization has troubles because it hasn't even known about hatting, much less that it took someone to do it.

Any failure of HCO was caused by its drowning in dev-t, even at last generating it because it never had enough people devoted to training and hatting, getting in org lines and comm lines.

HCO can do its job relieved of the whole burden of hatting.

The solution is THE ESTABLISHMENT OFFICER.

This person operates in a division, not under its secretary but under a senior Establishment Officer.

He performs the duties of the departments of HCO for that division.

In a small org it requires a trained Establishment Officer for Divisions 7, 1 and 2 and another for Divisions 3, 4, 5 and 6.

In a larger org there is one in charge of all Establishment Officers and an Establishment Officer in each division.

As the org grows, the larger divisions get assistant Establishment Officers to the divisional one.

They do not establish and run away. They establish and maintain the division staff, personnel hats, posts, lines, materiel and supplies.

Their first job is to get staff working at their posts producing something and their next task is TO DRIVE DEV-T OUT OF EXISTENCE IN THAT ORG.

SUMMARY

The booms and depressions of orgs, their successes and fall-aparts are signaled by

CORRECT COMM — SUCCESS
DEV-T — FAILING.

The underlying cause is unhattedness.

So we are dealing in dev-t with a symptom. Like any disease it soon catches up with the body of the org and its health.

Dev-t is an expression of untrained, unhatted staff. It shows they do not do the functions of their posts regardless of how busy or exhausted they are.

And most important for an executive to know: There is seldom any malice in it. It is just confusion. Even new people or new execs coming into such an area all full of enthusiasm and bushy-tailed will cave in from the fantastic do-less motions of such an org.

Morale will be bad because PRODUCTION IS THE BASIS OF MORALE and who can produce in the midst of all that noise????

The place will go into apathy and tiredness as one is hit all day with OFF–LINE, OFF–ORIGIN COMM.

The executive's solution is to HAT HAT HAT and get help hatting hatting hatting, get the org board up and DRILL, DRILL, DRILLED. Demand demand demand the products of the post the person holds and only those products. And police his lines and get the dev-t in his own area handled handled handled and never never never pull dev-t blunders himself and ALWAYS ALWAYS ALWAYS DO AND INSIST UPON CORRECT COMM.

The solution is do what you can and all you can to hat and reduce dev-t and scream for an Establishment Officer to save the org.

CORRECT COMM IS THE SYMPTOM OF A HEALTHY, PRODUCING ORG AND A VALUABLE EXECUTIVE AND STAFF MEMBER.

HCO POLICY LETTER OF 9 MARCH 1972
ISSUE III

REMIMEO

ESTABLISHMENT OFFICER SERIES 3

DEV-T AND UNHATTEDNESS

The first thing an Esto runs into in an area that is not hatted is DEV-T (developed unnecessary traffic).

People in an org can be working frantically, totally exhausted and yet produce nothing of value. The reason is that their actions are almost totally dev-t.

The WHY of this is UNHATTEDNESS.

The people on the posts do not know their own hats or even if some do they are dealing in the "NOISE" of other people who don't know their own hats.

Few if any of these people know the other hats or duties of the org and so don't know where to go for service or who to approach or despatch for what.

So it's not an org or a division. It's a nonproductive chaos.

The answers are three:

1. Get dev-t understood and

2. Get the staff at least instant-hatted at once.

3. Chinese school (staff or div staff all together in front of a big org board chanting together the hats, duties and products of the org as visible on the org board).

In order to get anything done at all or even begin this, an Esto Ethics Officer function has to be in.

A schedule has to be posted including exercise, post time and study and staff has to be mustered and handled at these periods. This gets some awareness of the org group as a team of people with similar purposes.

DEV-T

Dev-t packs are made up. These consist of:

HCO PL	2 July 59 II	DEVELOPED TRAFFIC THE DELIRIUM TREMENS OF CENTRAL ORGS
HCO PL	19 Aug. 59 III	HOW TO HANDLE WORK

HCO PL	4 Sept. 59 I	COMPLETED STAFF WORK
HCO PL	17 Nov. 64 I	OFF–LINE AND OFF–POLICY YOUR FULL IN–BASKET
HCO PL	31 Jan. 65	DEV-T
HCO PL	8 Feb. 65	DEV-T ANALYSIS
HCO PL	13 Oct. 65	DEV-T DATA EXECUTIVE RESPONSIBILITY
HCO PL	5 Jan. 68 I	OVERFILLED IN–BASKET BAD NEWS
HCO PL	27 Jan. 69	DEV-T SUMMARY LIST
HCO PL	30 Jan. 69 II	DEV-T SUMMARY LIST ADDITIONS
HCO PL	27 Oct. 69 I	AKH Series 23 DEV-T
HCO PL	4 Nov. 69	DEV-T GRAPHED
HCO PL	23 July 71	TELEX COMM CLARITY (Dev-t Series)
HCO PL	25 Oct. 71 I	COMM ROUTING, HOW TO TIE UP A WHOLE ORG AND PRODUCE NOTHING
HCO PL	27 Feb. 72	Exec Series 9 ROUTING
HCO PL	29 Feb. 72 I	Exec Series 10 CORRECT COMM

These packs are issued to staff members and they are required to check out on them.

Each staff member keeps a dev-t log and writes down the name of anyone he is getting dev-t from and also issues Dev-t Chits.

HATTING

The staff at the least are instant-hatted at once — place on the org board, work space, supplies, what his title is and what it means, org comm system, what he is supposed to produce on his post.

He is gotten producing what he is supposed to produce in some volume at once.

Hat checklists and packs are verified as there or are gotten ready.

A full hat checkout can then begin.

Courses he needs are done in staff study time.

Actually hat study and checkout is done on the post a bit each day.

This is in fact "on-the-job training," as he is expected to go on producing while he is being hatted.

ORG BOARD

Org bds are rapidly gotten up or up-to-date in the org (in HCO) and (full org bd) in each division.

Each division is Chinese-schooled, first on its own org bd, then on the org as a whole, in such a way that they know the duties of divisions, departments and posts and the flow lines of the org.

Wherever an org or even a division falls apart or slows up, this campaign is repeated.

SAMPLE ORG ED

This is a sample Executive Directive (ED) giving a program written for an actual org where the above was done to cure dev-t and get the org hatted and producing:

ED _____ Date _____

TOP PRIORITY

Takes priority over all other EDs
(as they can then be gotten done!)

CORRECT COMM PGM

SITUATION:

It has been very difficult to handle the org.

DATA:

A long and intensive collection of data has finally culminated in discovering, through reports on comm and inspections by showing why the org appears fantastically busy and overworked while producing very little even when it was found the org was insolvent.

Ethics has been very heavy for some time and has not led to any spectacular recovery.

But the comm line reviews and analysis reveal

INVESTIGATION:

The org and all its units is drowning in DEV-T. HCO is even generating it. This makes an appearance of frantic action and overload while little is produced.

And an analysis has produced a

WHY:

The org is almost totally unhatted and untrained.

DEV-T comes only from AN UNHATTED UNTRAINED ORG.

STATS:

Out the bottom and below the briny bedrock of the sea so far as finished products per man-hours and as far as GI by reason of the org are concerned.

IDEAL SCENE:

A whole staff and the org fully hatted and producing only correct comm without dev-t and at work actually producing things of real value which will *exchange* for value.

HANDLING:

THE ESTO SYSTEM AND DEV-T PLs HANDLE THIS.

1. Admin Cramming and each Esto to be furnished with packs of dev-t policies at once including last Exec Series PL Routing and new dev-t PL Correct Comm.

ALL HANDS DISSEM _____

2. FULL Esto setup to be gotten on post at once. They go on duty and part-time train.

HAS _____

3. Existing Estos and those to be put on at once to hammer, hammer, hammer all posts on off-line, off-origin and other points of dev-t so they are UNDERSTOOD.

EXEC ESTO _____

4. Big paper org bd with new complement to be gotten up at once in HCO.

HCO ESTO _____

5. Big paper org bds from it to be gotten up in each div and the div Chinese-schooled on it. Specializing in the div but also covering the whole org so people know where they are and what each handles and where other terminals in the org are so they can properly route to or go to them for the exact service of that exact post.

DIV ESTOs under EXEC ESTO _____

6. Straighten out the comm lines of each post.

EXEC ESTO/DIV ESTOs _____

7. Report to his div Esto (see org bd) or Ethics Officer any person originating off-line, off-origin traffic or failing to originate from his post paper or body or remark. Report by "Dev-t Chit."

EVERYONE IN THE ORG _____

8. Send flagrant offenders to Admin Cramming.

EXECUTIVES _____

9. Put in:

    1. Instruct, and if no improvement

    2. Cram, and if no improvement

    3. Retrain, and if no improvement

    4. Offload

    where hatting continues to fail to produce rapid comprehension of dev-t and/or persistent inability to actually DO his hat. Court of Ethics or Comm Ev on request to remedy any injustice.

    ESTOs _____

10. Excuses concerning hatting and arbitraries like "only study hat in hatting college" to be wiped out and any barriers to getting on-policy, on-FO-FSO wiped out by Ethics action or Cramming.

    ESTOs _____

11. Instant-hat every staff member.

    DIV ESTOs _____

12. Chinese-school every division.

    DIV ESTOs _____

LET'S MAKE THIS A CRACK ORG WE CAN BE PROUD OF!

EXECUTIVE DIRECTOR

The above program can be completed in a few days.

It is followed by further programs to get in lines of the org, full hatting, and proper comm setups for each staff member, etc.

If the program falls out or dev-t flares again, (A) REHAT Estos and (B) do the program once more.

The org will come right and begin producing PRODUCTS WHICH EXCHANGE FOR VALUABLES.

The org will become solvent.

Only the Esto system makes such a program possible.

We have long had the tech as you can see by the PL dates. Dev-t tech has existed since the mid-1950s. But it could not be gotten in swiftly enough to make a startling change in the org morale or stats until Estos were on post in an org.

If it does not go in rapidly even with Estos, then some of the Estos are not well enough or firmly enough hatted *as* Estos; and the answer of an Exec Esto or Esto I/C is to very rapidly cram his Estos or, following the (1) instruct, (2) cram, (3) retrain, (4) offload pattern, improve his Esto team.

Fully done, the program works like a beautiful breeze bringing peace and a cheerful staff.

HATS & HATTING

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 28 FEBRUARY 1957

(Originally issued as an HCO Bulletin
same date, same title)

REMIMEO

HATS

Every staff department head in every organization should have a folder in his desk in which to place all written material and bulletins which apply to his job.

This is not a casual action. It is vitally important. It is his "hat."

This folder should be labeled, for example, "Director of Training" or "Indoc Instructor" or "HCO Secretary" or any such post.

The folder should then receive, after study, any policy letter or executive order or HCO Bulletin applying in general or in particular to that job.

If you do not have a complete hat, obtain from HCO or elsewhere the missing pieces.

Also, and this is very important, write up and paste into the front of the folder a full description of your job.

Only in this way can we have use of such orders and bulletins. Only in this way could you be relieved in an orderly fashion for a vacation or transferred to another post.

Please do this at once. Whoever is in charge of supplies can make a folder available to you.

L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 15 SEPTEMBER 1959
ISSUE II

CENOCON
MISSIONS
FIELD

HATS AND OTHER FOLDERS

There are three classes of folders permanently assigned to each staff member of HCO and the Central Org.

The first of these is a hat folder. In it should be included only the hat write-up and policies issued which directly relate to the individual post.

The second of these is a technical folder into which one places all technical bulletins issued. These must never be put in one's hat folder.

The third of these is an organizational folder. All bulletins and policy letters relating to one's job but only by reason of one being a staff member are included in this folder.

These folders are the following colors for your info and ready reference:

Hat folders are Blue.

Staff folders are Yellow.

Technical folders are Goldenrod.

THE KEEPING OF THESE FOLDERS

The responsibility for keeping these folders straight lies with the individual staff member.

One must always have all the write-ups and policies governing his job ready to hand in his hat folder. The reason for this is basically to keep the structure of the organization in writing and straight for reference by the staff member. There is also a great advantage here in having a complete hat folder in one's desk when one is not present, for his duties and functions can be looked up and done by another when he is on vacation. Further, when one is promoted or posts are changed there is always a loss of the bits and pieces, and the person new on post needs constant guidance from the member leaving it unless all these bits are in the hat.

Random despatches, technical bulletins, general staff bulletins are never put in one's hat folder. To do so is to thicken the folder up to a point where it cannot be

used for ready reference. This defeats the purpose of the hat folder for the staff member himself and for his possible temporary relief.

Letters and policies governing the fact of being a member of staff, such as rules and regulations of HCO or the organization and hours and schedules for this and that, all belong in the staff member folder. This should include no technical.

All technical bulletins, policy letters and other technical matters, and even one's own notes on the technical aspect of keeping one's job straight, belong in a separate technical folder which, accumulating, becomes very valuable to everyone.

This then is the way we keep our posts and positions and functions straight in HCO as well as in Central Organizations.

These three types of folders are stored handily in one's desk and are the only pieces of paper allowed in one's desk. (Never make despatches or comm material vanish off the lines and into a desk.)

If these three folders are in good order one has a ready method of checking over all sides of his job and all policies relating to his job. If one has his folders it is possible to do many things. Not the last of these is to break down his job into various parts when the volume of the post gets too high, so as to have exact write-ups of instructions to pass over to newly acquired assistants.

Unless we have some visible record of our posts and functions we can easily get into a confusion of lines and actions, which has been known to bring chaos to an organization to say nothing of much extra work and dev-t to its individuals.

We have long since found that the old-time "organization chart" was inadequate for our complex functions and actions. We have also found that memory is inadequate in the supervision of posts and functions.

Your attention to and care of these three types of folders is recommended.

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 7 JANUARY 1966
ISSUE I

REMIMEO
STAFF HAT

URGENT

LEAVING POST
WRITING YOUR HAT

(A copy of this should be clipped to every transfer order issued in an org, but failure to do so does not relieve the transferee of responsibility.)

On changing post, it is *vital* for the staff member (executive or general) to write up his or her hat for the post being vacated.

A copy is furnished the HCO Exec Sec WW.

A person is still considered to *also* be on any post he is vacating until:

a. A new person is provided for the post.

b. He or she has written up a complete hat giving the duties, lines and peculiarities of the post.

c. Turned the hat over to the new staff member and a copy to HCO Exec Sec WW.

d. Turned over all the equipment and supplies of the post and gotten a receipt for them signed by the new person on the post.

e. Sent a copy of the items in (d) to the Supply Officer.

f. Settled the new person in the post so that it is operating.

If these are not done, an organization goes to pieces on expansion as it loses its lines and terminals and functions through promotions.

Staff members not doing the above may be called upon as responsible for the actions, failures and materiel of a post for up to two years after leaving it and his or her pay may be debited for any losses or damages on the post vacated without complying with the above, even though the loss or damage was done by a successor.

Note that a person ordered to a new post is also responsible (regardless of any other action by another to fill it) for seeing that the post is competently filled before he is legally off it. This is of long-standing custom.

None of this exempts Personnel or executives from filling posts, writing hats or accounting for materiel or supplies. But the staff member leaving a post has the greatest responsibility.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 4 JANUARY 1966RA
ISSUE IV
REVISED 25 MARCH 1989

REMIMEO
ALL STAFF HATS
A COPY GIVEN
TO EACH NEW
PERSON EMPLOYED

PERSONNEL
STAFF STATUS

(This is a policy letter. The basic law of this organization and its rules are found only on letters such as this one, printed as this one is, green ink on white paper and signed as this one is.)

A *Staff Status* is a number giving the value and promotion *eligibility* of a staff member in this organization.

The number appears after a person's name on the organization board in the Communication Center.

The numbers run from zero to ten. They designate the type of post to which a person may be promoted or the status of the person.

It is important to have a higher status number. Therefore do all you can to increase yours.

The status numbers most important to a new staff member are 0 (zero), 1 and 2.

0 = Temporary

1 = Provisional

2 = Permanent

Above that are the promotional numbers which must be earned by study and experience in the organization.

There are also technical status numbers. These are not necessarily required of personnel in nontechnical departments and are elsewhere described.

If you do your job in this org and study how to be a better staff member you will advance and will be secure.

The first three status numbers and the states follow:

TEMPORARY

A staff member who is newly hired is designated 0 (zero) status after his or her name on the organization board. The person is classed as TEMPORARY until he or she has been to the HAS after a few weeks on post. The TEMPORARY must obtain a slip from their immediate senior saying they are doing fine on post and present this to the HAS. The HAS may require they have a knowledge of the org board and comm lines and their own department before passing them. The HAS may give the person who bears a recommendation several interviews to pass the exam but after the third exam is failed, must dismiss. If they have no recommending slip, the HAS notes their name and tells the person to get one from their senior and come back. The HAS keeps a close record of all persons calling on him. The HAS, when a recommendation slip is presented, then may examine the person concerning the org board, etc., as per current "provisional" checksheet.

If the TEMPORARY is recommended *and* passes, the HAS assigns the person a PROVISIONAL Staff Status and advises Org Board and Personnel Files by sending them chits attesting the fact. The staff member also gets a copy.

While TEMPORARY a staff member may be dismissed with or without cause by his immediate superior or by the HAS or a Secretary or anyone senior to a Secretary.

If the HAS does not pass the Temporary, the HAS dismisses the person. However, if the person is to be dismissed, the HAS must inform the person what he must do to make himself more employable, get the person on a PE Course and processed, etc.

When the HAS tells a Temporary he or she did not pass or is dismissed, the HAS also informs Dept 1, Personnel Officer.

Any Temporary, dismissed, may apply again to the Personnel Officer for employment in another section or department of the org. Pay ceases while under dismissal.

Therefore when the HAS dismisses a TEMPORARY, the HAS:

1. Tells the person he has not passed and no more chances will be given.
2. Tells the person how to become more employable.
3. Puts the person in the files for possible future employment if the conditions are met (2 above).
4. Informs Dept 1.

   Dept 1, being advised of a dismissal:

   1a. Informs Accounts at once.

   2a. Makes a note of it in the person's file noting also Accounts is informed.

   3a. Notifies the person's immediate superior whether the superior is otherwise informed or not.

If a Temporary dismissed is upset about it, he or she is sent to the LRH Comm.

The LRH Comm, on any dismissed person coming to him, should ascertain if the above lines were followed properly, that no ethics policy or order was violated by superiors or org officers and that the person follows the advice to become more employable if the dismissal is in good order. If the LRH Comm finds a gross irregularity in a dismissal, he should bring the person to Ethics.

TEMPORARY is designated as 0 status on the org board.

Every quarter the HCO Exec Sec of an org must dismiss all persons who have Temporary status and have not become Provisionals. Such persons are sent to the HAS for dismissal.

PROVISIONAL

A staff member given a PROVISIONAL rating may have recourse to Ethics and have an Ethics Hearing if dismissed. He may be transferred to other divisions without a hearing if his division is overmanned.

A person, after 45 days, may apply for Permanent status.

A PROVISIONAL is designated as "1" on the org board after his or her name.

To obtain Permanent status a PROVISIONAL must obtain his or her Basic Staff Certificate. This has a checksheet for which the HCO Exec Sec is responsible for compiling. This is covered in earlier policy letters.

The certificate is examined for by the HAS and issued by Certs and Awards. The requirements are relatively elementary but are quite firm.

Ethics chits issued while the person was employed are taken into consideration.

The Secretary of the person's division must recommend Permanent status in writing to the HAS before an exam may be given.

PERMANENT

A PERMANENT STAFF MEMBER may not be demoted, transferred or dismissed without a full Committee of Evidence being held. The person may himself request a change of status or another post or may resign without a Committee of Evidence being convened. (The evidence and findings of a Committee of Evidence are taken by a committee composed of one's co-workers, and to be valid and put into effect must be passed by LRH personally.)

No person may be paid as Permanent or posted until the person's name appears in a Sec ED. LRH Executive Director may not at his own discretion wish to make the Permanent award and if not included in a Sec ED it is not awarded.

PERMANENT status is then designated on the org board by the numeral "2" after a person's name.

Certs and Awards issues the Permanent Certificate but only after a Sec ED so declaring has been issued.

The HAS, passing a person for Permanent, must advise Dept 1 Personnel and the Ad Council to prepare a Sec ED for LRH Exec Dir issue.

The Sec ED advises Accounts and Org Board, and no pay may be changed or the Permanent status posted until the Sec ED is issued.

A person failing to get a Permanent status remains Provisional.

A person with PERMANENT status gets longevity pay according to the number of years employed, at so much for each year. This is backdated to first employment.

HIGHER STATUS

The higher status numbers are given to staff members as earned by passing checksheets. Gaining a higher status does not mean promotion but eligibility for promotion, said eligibility being in plain view on the org board with higher status number.

No one may have a higher status than 2 after his or her name on any org board without meeting all requirements up to the new status sought and passing the checksheet for each status in sequence. Items already passed are credited on any future checksheet where the items occur on the checksheet and have been passed.

The HCO Exec Sec WW is responsible for all checksheets for staff status and the use and following of this policy letter via HCO Exec Secs in orgs.

Staff quotas for divisions and sections are set by the Advisory Council.

No hiring, promotions, assignment of status or appointments are made except as made above.

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 20 JULY 1966RB
REVISED 24 NOVEMBER 1985

REMIMEO

STAFF STATUS

(Corrects all earlier Sec EDs and policy letters)

The intention of the staff status system and the conduct of it requires a clarification as follows:

STAFF STATUS ZERO (TEMPORARY)

1. A newly hired staff member's first course is the Org Orientation Drill. This qualifies him as Staff Status Zero. Providing he has personal up statistics he is then eligible for student auditing. If a Staff Status Zero staff member can obtain a written recommendation from his immediate superior, he can report to the Staff Training Officer in the Qualifications Division, give him the recommendation and receive the training materials for provisional. He can then study these and get an examination in Qual and, if passed, get his Staff Status One, provisional. Fast flow students would not need an examination.

STAFF STATUS ONE (PROVISIONAL)

2. When the provisional staff member has his Staff Status One, he can receive the materials for Staff Status Two from the Staff Training Officer and begin to study and pass them by checkouts from day to day. When he has passed them all, he is given a written examination and, passing this, he obtains his Staff Status Two.

STAFF STATUS TWO

3. When a staff member has his Staff Status Two, he can apply for the materials for Staff Status Three, executive rating, and so on up the staff status levels.

Obtaining an executive staff status does not ensure the appointment as an executive but makes one eligible for such appointment.

The one-year service between One and Two is abolished.

Contracting of staff is done at the time of hiring before Staff Status Zero.

Students and TTC may audit staff who have Staff Status Zero, are under contract to the org and who have rising post stats.

Staff Status Two, if on contract, may receive free training and processing to the level of training and processing delivered by the org. He is entitled to a 50 percent discount on further training and processing at a higher org. He is also entitled to a uniform. On a five-year contract further technical or admin training may also be free at the discretion of the contracting org. (Ref: HCO PL 12 Mar. 75 I, GRADE SUBSIDY FOR STAFF FORBIDDEN IN OTHER ORGS) No lower status has these privileges. This is true for all orgs.

JUSTICE

A temporary status staff member may be dismissed, transferred or demoted without any ethics action. Any person still a temporary status after three months on staff will be let go.

A Staff Status One must have been given an Ethics Hearing and found guilty of a misdemeanor or more in order to be dismissed but may be transferred without a hearing.

A Staff Status Two must be given a Committee of Evidence and found guilty beyond reasonable doubt to be dismissed and an Ethics Hearing to be demoted or transferred.

A deputy or acting appointment may be demoted without ethics action, but only to the last permanent grade.

Staff members may request transfer or demotion without ethics action.

PENALTY

If a staff member breaks his contract, leaving employ or going to a higher org with contract incomplete, he is then liable for FULL PAYMENT of all courses and processing he has received at FULL RATE (not just 50 percent), and owes for all transport or expenses he may have been paid.

SECURITY CHECKS

Security Checks should be given any new staff on a meter.

When a theft or insecurity has occurred, staff should consent to such a check and such a consent is contained in the hiring contract.

CHECKOUTS

Any staff member receiving a checkout and flunking is told to go off and study some more. The item being checked out is marked with a date and initial at the point just about where the flunk occurred and if the staff member comes for reexamination within one week, the item being checked out is simply checked from the last mark on. But if more than one week elapses, the whole item must be examined again.

A staff member is sent to Cramming for remedies if his flunks have been continual or if he is not making progress at all.

A log, loose leaf, containing the names of a staff member per page is kept by the Staff Training Officer.

ORG BOARD

The org board must reflect the status of a staff member.

UPPER STATUS GRADES

Staff Status grades Three and above are earned by passing checksheets for the upper statuses.

EVENING STUDY

Staff members should study on their own time, not on the job. But they may be examined or reviewed while on the job.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 1 JULY 1965
ISSUE III

REMIMEO
BASIC STAFF HATS

ALL DIVISIONS

HATS, THE REASON FOR

HAT: Slang for the title and work of a post in an org. Taken from the fact that in many professions such as railroading the type of hat worn is the badge of the job.

Organization consists of certain people doing certain jobs.

Disorganization consists of each person wearing all hats regardless of assignment.

In a smooth organization that runs well and succeeds

EACH PERSON WEARS HIS OWN ASSIGNED HAT.

When a person has a job that belongs to another hat than his own, he passes the job to the other hat.

Each staff member is a specialist. He specializes in his own hat.

When people wear only their own hats then one has terminals in the org. If terminals exist then communication can flow correctly. If communication can flow correctly then work gets done and the org can get in income.

TERMINAL: A point that receives, relays and sends communication.

If people present each wear any old hat or all the hats, then no terminals exist, no communication can flow properly, work can't get done and there is no income. There is chaos and it is an unhappy place.

In a green org, staff members don't know what other staff members do. So they don't know where to send things so they do them themselves. Worse, they don't even know there is an org there. It is quite pathetic. Like rookie troops or militia or a mob. Of course, the place goes broke.

You can tell a good executive. He only hands out despatches and work to the correct hats. A lousy executive hands the work to anyone handy, regardless of title. He's in apathy and doesn't know there's an org there.

The whole theory of successful organization is to have posts that only do specific things, to have sections and departments and divisions which specialize, and to have people who only wear their own hats and know who is wearing the other hats and send *their* work to them.

A train crew has a conductor. He wears a conductor's hat. It has an engineer. He wears the engineer's hat. It has a fireman. He wears the fireman's hat. Where do you think the train would get to if each of these three didn't know who were the other two? The conductor wearing the engineer's hat would mean no fares. The fireman wearing the conductor's hat would mean no steam. And the engineer wearing the conductor's hat would mean no train going anywhere.

So beware of wearing other hats than your own, or of being ignorant of what other hats are being worn. For nobody will go anywhere and you'll find yourself overworked, dismayed and unhappy.

Each person to his own job and damn the fellow who tries to give you things which aren't your hat and doesn't know there's an org there.

Realize that the basic theory of organization is this:

1. SO LONG AS EACH KNOWS AND WEARS AND WORKS AT HIS OWN HAT ONLY, THINGS WILL BE SMOOTH.

2. AND SO LONG AS EACH PERSON KNOWS WHAT THE OTHER HATS AROUND HIM DO, HE CAN GIVE THEM *THEIR* WORK WHEN IT COMES HIS WAY AND ALL WILL BE SUCCESSFUL AND SMOOTH.

If you let somebody steal your hat (do your work for you that you are supposed to do) that person will soon have you in trouble or have your job so snarled it can't be done.

If you don't know who in the org is supposed to do what and make them do their own jobs when those drift your way, you'll be overworked like mad.

If somebody tries to get you to do something that isn't your job on the org board then FILE AN ETHICS CHIT FOR JOB ENDANGERMENT. For at the very least that person is reducing income by not knowing the lines and posts of the org.

When you are assigned an additional duty, make sure it is also properly in your department or division or you'll be messed up.

Don't permit people to mess up hats around you or *you* will be in chaos.

Only organization can make your job smooth. And wearing your hat and doing your own job and knowing and making other people wear only theirs and do their own jobs, is the total secret of organization.

ETHICS HATS

AN URGENT IMPORTANT AND STAR–RATE PL

PERSONNEL SERIES 9
ORG SERIES 4

HATS

HAT — A term used to describe the write-ups, checksheets and packs that outline the purposes, know-how and duties of a post. It exists in folders and packs and is trained in on the person on the post.

HAT TECHNOLOGY

"Hats" developed in 1950 for use in Dianetic orgs as a special technology. The term and idea of "a hat" comes from conductors or locomotive engineers, etc., each of whom wears a distinctive and different type of headgear. A "hat" therefore designates particular status and duties in an organization.

A "hat" is a specialty. It handles or controls certain particles in various actions and receives, changes and routes them.

A "hat" designates what terminal in the organization is represented and what the terminal handles and what flows the terminal directs.

Every hat has a product.

The product can be represented as a statistic.

Any job or position in the world *could* have its own hat. The reason things do not run well in a life, an org, a group, nation or the world is an absence of hats.

The reason why an org runs well when it does is hats.

Any protest of anyone against things not running right can be traced to lack of hats.

Any slump an org goes through can be traced directly and at once to an absence of one or more hats being worn.

HAT CONTENT

A hat must contain:

A. A *purpose* of the post.

B. Its relative position on the org bd.

C. A write-up of the post (done usually by people who have held it before relief and when so done it has no further authority than advice).

D. A checksheet of all the policy letters, bulletins, advices, manuals, books and drills applicable to the post. (As in a course checksheet.)

E. A full pack of the written materials or tapes of the checksheet plus any manuals of equipment or books.

F. A copy of the org bd of the portion of the org to which the post belongs.

G. A flow chart showing what particles are received by the post and what changes the post is expected to make in them and to where the post routes them.

H. The product of the post.

I. The statistic of the post, the statistic of the section, the statistic of the department and division to which the post belongs.

STAFF HAT

There is also a general staff hat.

This hat contains:

a. The overall purpose of the org, its aims, goals and products.

b. The privileges or rewards of a staff member such as auditing, training on post, general training availability, pay, vacations or leave, etc.

c. The penalties involved in nonproduction or abuse of post privileges or misuse of the post contracts.

d. The public relations responsibilities of a staff member.

e. The interpersonal relations amongst staff members including courtesy, cleanliness, attitudes to seniors and juniors, office etiquette, etc.

f. The MEST of posts generally, its papers, despatches, files, equipment.

g. The comm and transport system of the org.

GRADIENT SCALE OF HATS

A "gradient scale" means "a gradual increasing degree of something." A non-gradient scale would be telling someone to enter a skyscraper by a 32nd-story window.

Thus there is a gradient scale of organizing.

A key to this is found in the *Problems of Work*'s theory of confusion and the stable datum.

One in actual practice has to cope while organizing.

COPE means to handle whatever comes up. In the dictionary it means "to deal successfully with a difficult situation." We use it to mean "to handle any old way whatever comes up, to handle it successfully and somehow."

IF YOU *REMAIN* IN COPE, THE DEMAND TO COPE INCREASES.

In that you have the key to "exhausted executives" or staff members. You have why the president of the US ages about 20 years in one term of office as you can see by comparing dated photographs of past presidents. He is totally on cope. His government has an org board that looks like a pile of jackstraws. He has no hat. His staff have no hats. His government departments have no hat. The technologies of economics, law, business, politics, welfare, warfare, diplomacy have been neglected or lost (they *do* exist to some extent).

The guy is on total cope. And the post has been on total cope since it was created as an afterthought by the Constitutional Congress that began the post in the eighteenth century. Even what it says in US civics textbooks is not found in practice.

So "difficult situations" are the order of the day and are handled by special actions and appointments.

The people who *should* handle them haven't got real hats.

This is all catching up with the country at this writing to such a degree that the citizen cannot benefit from a stable society or social order. The country looks more like a war of insurgency.

In other words departures from hats has led into total cope and it is steadily worsening.

Any organization put in by one political party is knocked out by the next incumbent, and who could totally organize a country in 4 years? (The term of a president.)

Yet it is hanging together some way and some way meeting increasing demands and pressures.

I have stated this in a large example so that it can be seen in a smaller unit.

To handle this one would first have to want to straighten it out and then assemble the tech of admin to straighten it out. And then one would have to begin on a gradient scale of org bd and hats.

A cope sort of hat would be tossed-off orders to some other people on staff who have some title of some sort.

Along with this would be a posted org bd that has little to do with duties actually performed and used by a staff that doesn't know what it is.

One begins to move out of cope (as given in other series) by putting an org board together that labels posts and duties and getting people on them to handle the types of particles (bodies, mailings) of the org.

The next action would be brief write-ups of the posts and their duties and checking people out on them.

Actually if you only got to the middle of the last paragraph with an org the executives would remain in cope. So much know-how would be missing in the org's staff that every rough bit would shoot up to the executive for special handling. And that is *cope*.

Hats only in this far is not good enough as it still takes a genius to run the place.

The next gradient scale is to get the hat to contain:

i. The post write-up itself,

ii. The theory and practical necessary to run it.

This is done by a preparation of checksheets of data and a pack matching it for key posts.

Naturally the org bd now has to become more real and staff has to be checked out on it.

Then hats as post checksheets and packs are extended to the rest of the staff.

The mechanisms of training have to exist by this time.

Seniors have to be made responsible that every junior below them has a hat consisting of write-up, checksheet and pack.

Meanwhile one continues to cope.

Gradually, gradually staff begin to know (through checkouts) their hats.

New staff coming on are grooved in better.

Cope begins to diminish and the organization tends to smooth out.

Here and there competent handlings begin to show up brightly.

Now we find a new situation. With everyone throwing together checksheets and packs for staffs we find nonstandard checksheets. Some messenger has to do the full checksheet of the HCO Division pages and pages long. The HCO Sec has a checksheet with just 10 items on it.

So a central authority has to standardize post checksheets and survey and put in overlooked bits of data.

But that is way up the line. The org long since has become smooth and prosperous.

So that is the gradient scale of getting in hats.

EXPERTS

Here and there you find an area of special expertise in an org where the expertise is so expert in itself that it obscures the fact that the person does not also have a full post hat.

A lawyer would be a case in point. It takes so long to learn law in some law school that an org executive can overlook the fact that the *post* hat is missing. Org policy on legal matters and staff hat remain unknown to this legal post AND JAM IT UTTERLY. This came to light when a whole series of cases was being neglected because the legal staff member, an excellent lawyer, did not know how to make out a purchase order or that one could or should. Investigation found *no* post or staff hat. Only a legal degree.

Orgs continually do this with auditors. They are technical experts in *auditing*. So they get assigned to posts in the HGC WITH NO HAT. Backlogs occur, things goof up. Tech fails. All because it is overlooked that they are PART OF AN ORG and need staff and post hats and need to be trained on them.

Worse than that, a highly classed auditor is often put on an admin post without hat or training for it.

You would not take an admin trained person and without further training tell him to audit. So why take an auditor and tell him to handle an admin division?

Without his post write-up, checksheet and pack FOR THE POST and without training on it, the person just isn't qualified for it no matter what *other* line he is expert in.

It is great to have an expert who has been specially trained in some profession. But lawyer, engineer or public relations, he must have his hat for the *org* post and be trained on it or he will goof! Yet one won't suspect why that area is goofing because "he's a Class VI isn't he?"

UTILIZATION

Personnel can recruit madly, answering every frantic demand for personnel and yet HAVE THEM ALL WASTED for lack of full hats and full training on those hats.

An investigation of blows (desertions) from orgs shows that lack of a grooved-in hat was at the bottom of it.

People come on a job. It is at once a great mystery or an assumption of total know — one or the other.

Either one continued leads them into a state of liability to the org.

People who don't know what they are doing and people who don't but think they do are both NONUTILIZED PERSONNEL.

Pay and prosperity for the rest of the staff will go down unless this is remedied.

The whole org can sag and even vanish under these conditions.

So Personnel has a vested interest in hats being complete and staff trained on them. For Personnel people cannot possibly cope with "no pay so can't hire anyone" and "no people so can't produce."

The answer is H-A-T-S.

And a hat is a write-up, a checksheet and a pack.

And the staff member trained on them.

ETHICS

When a person has no hat he lacks purpose and value.

When he has no purpose and value he not only goofs, he will commit crimes.

It is apparently easier to hit with ethics than to program and give someone a full hat and get him trained on it.

Police action is not a substitute for having purpose and value.

This is so fundamental that one can even trace the unrest of a nation to lack of purpose and value. A huge welfare program guarantees crime and revolt because it gives handouts, not hats.

Even a field Scientologist should have a hat.

By doing only this over the world we would own the planet as in an expanding population individual purpose and value are the most vital and wanted commodities.

If there are no real hats there will soon be no money of any value and no bread!

SUMMARY

ANY HAT IS BETTER THAN NO HAT according to the way a thetan seems to think.

But be that as it may, the downfall of any org can be traced directly and instantly to no recruiting or no org board, no hats or unreal hats or no training on hats.

The sag of an org can be traced directly to lack of hats and lack of training on hats.

The overload of any post can be traced directly to lack of an org bd and lack of hats and no training on hats.

The way out is to organize the org board and hats while you cope.

If you do not, your cope will become an overwhelm. If you do, your burden will lighten and your prosperity increase.

It took 13 months of hard work and 20 years of org experience to learn that given a product lack of HATS was *the* WHY of departures from the ideal scene and that working toward providing full complete HATS was the way to get back toward the ideal scene.

WHY HATTING?

A few days ago when I found that musical chairs and flubbed hatting had unstabilized some areas, I wondered whether or not this might stem from some social aberration that was very general in the societies in which we are working.

And it seems to have been the case. I worked on it a bit and found this:

LAW: THE POWER OF A THETAN STEMS FROM HIS ABILITY TO HOLD A POSITION IN SPACE.

This is quite true. In *Scientology 8-80* the base of the motor is discussed. It holds two terminals in fixed positions. Because they are so fixed, power can be generated.

If a thetan can hold a position or location in space he can generate POWER.

If he cannot, he cannot generate power and will be weak.

We have known this for nineteen years. It applies here.

Observation: MODERN SOCIETY TENDS TO CONFUSE AND UNSTABILIZE PERSONS WITH ITS HECTIC PACE.

Observation: BEINGS WHO ARE AFRAID OF STRONG PEOPLE TRY TO WEAKEN THEM.

Observation: PERSONS WHO ARE PUSHED AROUND FEEL THEY CANNOT HOLD A POSITION IN SPACE.

Observation: PEOPLE HATE TO LOSE THEIR POSTS AND JOBS. THEY FIND IT DEGRADING.

In processing, picking up this chain of lost positions achieves very good gains and rehabilitates a person's ability to hold a job.

LAW: BY GIVING A PERSON A POST OR POSITION, HE IS SOMEWHAT STRENGTHENED AND MADE MORE CONFIDENT IN LIFE.

LAW: BY LETTING A PERSON RETAIN HIS POST, HE IS MADE MORE SECURE.

LAW: BY HATTING A PERSON, HE IS GREATLY STRENGTHENED AS HE IS HELPED TO HOLD HIS POST.

A basically insecure person who feels he is unable to hold his position in space is sufficiently strengthened by hatting to feel secure enough to do his job.

LAW: HAVING A HAT, BEING HATTED AND DEMONSTRATING COMPETENCE MAKES A PERSON FEEL CAPABLE OF HOLDING HIS POSITION IN SPACE AND HE BECOMES MORE STABLE, CONFIDENT IN LIFE AND MORE POWERFUL.

LAW: UNHATTED PERSONS ON A POST CAN BECOME CRIMINAL ON THE POST BECAUSE THEY FEEL INSECURE AND BECOME WEAK.

When a person is secretly afraid of others, he instinctively will not hat them or hats them wrongly and tends to transfer or move them about.

When a person is insecurely posted and insufficiently hatted, he can try to weaken others by trying to prevent their hatting and trying to get them transferred or even dismissed.

This is apparently the social aberration at work.

The answer to a sane org and a sane society is not welfare and removal. It is:

Recruit them,

Train them,

Hat them,

Apprentice them,

Give them a post.

This is so strong in truth it would de-aberrate the bulk of the crime out of a society.

And it sure will put an org in POWER.

HCO POLICY LETTER OF 23 JULY 1972RB
REVISED 11 JANUARY 1991

REMIMEO

EXECUTIVE SERIES 15
PERSONNEL SERIES 26
ORG SERIES 31
ESTABLISHMENT OFFICER SERIES 23

THE VITAL NECESSITY OF HATTING

On a graph analysis of past stats, my campaign on hatting where a hat was a checksheet and pack apparently introduced a steady rise of the International Gross Income.

Studying this further I discovered a new basic, simple fact:

HATTING = CONTROL

A person who is hatted can control his post.

If he can control his post he can hold his position in space — in short, his location. And this is power.

When a person is uncertain, he cannot control his post, he cannot control his position. He feels weak. He goes slow.

If he can control his post and its actions he feels confident. He can work effectively and rapidly.

The key is CONTROL.

Control is the ability to START, CHANGE and STOP.

When he is hatted he knows the tech of HANDLING things. Thus he can control them. He is at CAUSE over his area.

If you have an org composed only of weak wobbly posts, they tend to collapse in on each other. There is no POWER.

The org then cannot be CAUSE over its environment because it is composed of parts which are not cause. The whole is only the sum of its parts.

If all the parts are each one at cause, then the whole will be at CAUSE over its environment.

Only an org at CAUSE can reach and CONTROL.

Thus a fully hatted org can be at cause over its environment, can reach and control its fates and fortunes.

THUS THE PRIMARY TARGETS OF AN ESTO ARE:

A. ESTABLISHED ORG FORM and

B. FULLY HATTED PERSONNEL.

BASIC SEQUENCE OF HATTING

1. Recruited or hired. Signs contract.
2. Instant-hatted for the job assigned as an HCO Expeditor.
3. Staff Status 0.
4. Basic Study Manual (if the staff member has not previously done the Student Hat or Primary Rundown).
5. Staff Status I.
6. Staff Status II.
7. Posting as other than an HCO Expeditor.
8. Full hatting with a checksheet and pack fully done with M6, M7, M9, M3 and M4 Word Clearing.
9. Eligibility for study and auditing (OR for staff service or study).
10. Must have a stat and demonstrated he has produced on post.
11. Purification Rundown.
12. Objective Processes: CCHs, 8-C, SCS, Havingness, etc.
13. Scientology Drug Rundown (if required).
14. Method One Word Clearing, Student Hat.
15. Administrative or tech training (OEC or auditing).

Flag Orders in the Sea Org may change this lineup slightly but it is basically the same.

No one should have any other training, much less full-time training, before step 12 in the above.

After a staff member has completed Staff Status 0 he may receive PTS handlings and study the PTS checksheet and may have emergency assists. He may also be audited by students and TTC if he has rising stats.

There are time limits placed on how long it takes to do SS I and SS II. A person who can't make it is routed to Qual where he is offloaded with advice on how to get more employable. (In the SO it is Fitness Board.)

TIME–TESTED

The above is the route that has been tested by time and found good.

Other approaches have NOT worked.

Granting full-time training at once is folly. The person may get trained but he'll never be a staff member. This is the biggest failure with auditors — they don't know the org. Admin training with no org experience to relate it to is a waste of time.

This was how we built every great org. And when it dropped out the org became far less powerful.

Old-timers talk of these great orgs in their great days. And they will tell you all about the org boarding and hatting that went on. How the Hatting Officer in HCO and the Staff Training Officer in Qual worked as a team. And how fast the lines flew.

The above steps have stood the test of time and are proven by stats.

RECRUITING AND HIRING

You *never* recruit with a promise of free courses or free auditing. Not even HASes or HQSes. You recruit or hire somebody to be part of the team.

OPEN GATE

If *any* opinion or selection is permitted as to who is going to be let on staff, *all* recruitment and hiring will fail.

By actual stats when you let *anyone* say, "No! Not him! Not her!" the gate shuts, the flow stops. And you've had it.

Requirements and eligibility *fail*. The proof is that when they have existed in orgs, the org wound up with only PTSes and no-case-gains!

The right answer is FAST FLOW hiring. Then you have so many that those who can't make it drift low on the org board or off. You aren't trying to hold posts with unqualified people "who can't be spared."

In a short-staffed org "looking only for the best people" the guy nobody will have gets put in an empty "unimportant" department. He's now a Director!

It only happened because you didn't have dozens.

The answer is NOT lock the gate or have requirements. The answer is HAT.

An org that isn't hatted goes weak and criminal.

Don't be selective in hiring or recruiting. Open the gates and *HAT!*

Follow the steps given above and you have it.

Don't spend coins like training or auditing (or travel) on people until they have proven their worth. No bonuses or high pay for anyone until they have reached and attained step 10 (a good stat). The cost of such fast flow hiring is not then a big factor.

The only trouble I ever had with this was getting div heads to UTILIZE their staff. A FIRST JOB FOR AN EXECUTIVE IS TO GET THINGS FOR HIS PEOPLE TO DO. AND KEEP THEM BUSY AT PRODUCTIVE THINGS.

So I used to have to go through the org that did FAST FLOW HIRING regularly and get people to use their new people. And to move off those who could not work.

This was ALL the trouble I had with the system.

And until I enforced FAST FLOW HIRING there was always some effort by someone to close the gate.

ALL the great executives in Scientology came up in such orgs.

With a *flow* of people the best move on up. The worst, if any, drop off.

Only orgs with restricted hiring or recruiting give trouble.

IN A FAST FLOW HIRING ORG THE HAS AND ESTOs *MUST* BE ON THE BALL. THE BREAKDOWN OCCURS WHEN THEY DO NOT *HAT* AND KEEP ON TOP OF THE PERSONNEL SCENE.

Fast flow hiring only breaks down and gets protested where HCO and Estos are not doing a top job. They have to really *handle* the personnel, post them, hat them, keep the form of the org.

A fully formed org in a heavily populated location would need hundreds of staff. It would make hundreds of thousands.

But only if it is fast flow hiring, hatting, holding the form of the org, and only then could it produce.

HCO POLICY LETTER OF 2 AUGUST 1971
ISSUE I

REMIMEO
SCN ORGS
SO ORGS
CLOS
FLAG

STUDY TIME

A staff member is entitled to 2½ hours study or auditing time per day.

Executives are responsible for so scheduling work that this time becomes available to their staff but it must be additional to eight hours of post work.

All activities including Flag, CLOs or ships, must have a Crew or Staff Course Supervisor who observes "What Is a Course?" PL including suitable scheduling that does not interfere with work and makes supervision available to all crew or staff. Roll call, materials, stats, etc., must be part of this course.

Where a Foundation and Day org exist together, the staff may study in the other org *so long as that org does have* a Supervisor.

The Supervisor must at least have been hatted by the Mini Course Supervisor Hat and must know the Word Clearing Series of HCOBs.

A typical solution would be three to four crew or staff course periods a day, each of 2½ hours, morning, afternoon and evening with the crew or staff member enrolled and assigned to a specific course period and roll called for that period.

A crew or staff member must have gone through lines, be invoiced and enrolled, must have had his student hat put on and must in all respects be a student for that period to which he is assigned.

An exec which restrains such attendance is driving himself into cope by failing to take a routine organize action.

QUAL

Any crew or staff member must have been programed ONTO not off of his current post.

The question is what is he lacking to qualify for the post he is on? Staff Member Hat? SS I? SS II? AB and *Sea Watch Picture Book*? Post hat with checksheet and pack? Divisional hat? Officer's checksheet? Exec Cramming Course? Tech courses? OEC? What has he missed to fully qualify for the post he is now on?

When he's done all this up to the post he is on or the post (in case of a recruit) he will be on, he has arrived at "A" and only now could he think of going to "B" (see Supreme Test of a Thetan HCOB, 19 Aug. 67).

When this study is done, tech courses can be considered. But tech courses are in the same classroom under the same Super.

Qual does FULL Word Clearing rundowns in the same department as programing.

INCOMPLETES

You will find numerous incomplete courses amongst staff and crew. These became incomplete because of a misunderstood word or earlier misunderstood subject.

An exec who is a failed student also has misunderstood words.

So failure to sign up or attend are the business of the Course Super or the same dept in Qual. It comes down to a misunderstood word.

STRAIGHT ORG

The only way an org will come out straight is by forbidding musical chairs and getting in such a program as this.

AUDITOR HATS

Auditors have hats as well as tech. Lack of knowing their staff hats and auditor hats is a reason for losses. Student and staff hat come before tech.

AUDITING TECH

When an org expands it must observe its 2 to 1 admin/tech ratio.

Admin people can qualify as auditors part time.

Deserving staff members when properly replaced can go on full-time training. Only when a crew or staff member has been a good, attending, upstat student on part time with good post stats should he go on full-time training.

OTHER TECH

Posts often have other tech such as engines or cars or machine operation.

When possible this is studied part time in the usual way. Crew and staff members may also be sent to special outside schools for brief training periods.

When Qual does not do such programing, when the org has no on-policy part-time crew/staff Course Supervisor, then it unstabilizes its people by leaving them untrained and will be upset by any effort to expand.

HCO Expeditors just hired will be a hindrance unless they are rapidly put through basic training on part-time study, rigidly adhered to and well organized.

People already on post in orgs are seldom programed and trained, at this writing, to the post they are on.

Execs often mistakenly do not cooperate in such part-time training.

Such courses do not consider a nonattendee a blown student but should.

By following this PL expansion can occur and staff members can hold their posts much more easily.

This is a very rewarding program. It must be followed.

ORG SERIES 15
WORD CLEARING SERIES 18

ORGANIZATION MISUNDERSTOODS

By Scientology study technology, understanding ceases on going past a misunderstood word or concept.

If a person reading a text comes to the words "Felis domesticus" and doesn't know it simply means HOUSE CAT, the words which appear thereafter may become "meaningless," "uninteresting" and he may even become slightly unconscious, his awareness shutting down.

Example: "Wind the clock and put out the Felis domesticus and then call Algernon and tell him to wake you at 10:00 A.M.," read as an order by a person who didn't bother to find out that "Felis domesticus" means "house cat" or "the variety of cat which has been domesticated" will not register that he is supposed to call Algernon, will feel dopey or annoyed and probably won't remember he's supposed to wake up at 10:00 A.M.

In other words, when the person hit a misunderstood word, he ceased to understand and did not fully grasp or become aware of what followed after.

All this applies to a sentence, a book, a post or a whole organization.

Along the time track a crashing misunderstood will block off further ability to study or apply data. It will also block further understanding of an organization, its org board, an individual post or duties, and such misunderstoods can effectively prevent knowledge of or action on a post.

ALL THIS IS THE MOST COMMON CAUSE OF AN UNACCEPTABLE POST PRODUCT, OR NO PRODUCT AT ALL.

The difficulties of an organization in functioning or producing stem from this fact.

Personal aberration is the cause of products that are in fact overt acts.

Scientology technology today easily handles the personal aberration part of the problem, IF IT IS USED AND PROPERLY APPLIED. Leaving an org unaudited or being unable to figure out how to run a viable org so that it can afford to audit its staff members is asking for post or org products that are overt acts.

Employing persons of the Leipzig, Germany, death camp school (psychologists, psychiatrists) to handle personal aberration is like throwing ink in water to clean it up. Governments stupidly do this and wonder why their final product as an organization is riot, war and a polluted planet. The point is not how bad psychology and psychiatry are, but that one does have to *handle* personal aberration in an organization, and these schools were too vicious and incompetent to do so.

Those who are personally very aberrated are not about to produce anything but an overt act. They are difficult to detect as they are being careful not to be detected. Things "just sort of go wrong" around them, resulting in a product that is in fact an overt act. But these constitute only about ten or twenty percent of the population.

The remaining eighty percent or ninety percent where they are nonfunctional or bungling are so because they do not understand what it's all about. They have in effect gone on by a misunderstood such as what the org is supposed to do or the admin tech they use on their posts or where they are or what their product is.

Earth organizations like governments or big monopolies get a very bad repute because of these factors:

1. Personal aberration of a few undetected and unhandled,
2. Inadequate or unreal basic education technology and facilities.
3. Inadequate or unknown organization technology.
4. Noncomprehension of the individual regarding the activities of which he is a part.
5. Noncomprehension of the basic words with which he is working.
6. Purposes of the post uncleared.
7. Admin of the post not known or comprehended.
8. Technology in use not fully understood.
9. A lack of comprehension of products.

Out of these nine things one gets organizational troubles and the belief that it takes a genius to run one successfully. Yet all the genius in the world will fail eventually if the above nine things are not handled to some degree.

The common methods currently in use on the planet to handle these things are very crude and time-consuming as the items themselves are either dimly comprehended or not known at all.

1A. Personal aberration is met by torture, drugs or death when it is detected. Yet only the very serious cases who are obviously screaming, muttering or unconscious are singled out, whereas the dangerous ones are neither detected nor handled at all and become with ease generals or presidents or dictators, to say nothing of lesser fry. Ten percent to 20 percent of any organization is stark staring mad, doing the place in so adroitly that only their actual product betrays them.

2A. Basic education as well as higher general education has become a mass-produced area crawling with bad texts and noncomprehension and used mainly by hostile elements to overturn the state or pervert the race and its ideals.

3A. Organizational technology is so primitive as to change national maps and leading companies many times a century, an extremely unstable scene for a planet.

4A. Very few individuals on the planet have any concept of the structure of entities such as their country or state or company. Persons surveying the public in the US, pretending to advise acceptance of "new measures" already in the Constitution, were threatened for being revolutionaries. Hardly anyone knew the basic document of the nation's organization much less its rambling structure.

5A. The basic words of organization are glibly used but not generally comprehended, words like "company," "management," "policy." Vocabularies have to be increased before comprehension and communication occur and misunderstoods drop out.

6A. Post purposes are often glibly agreed with while something entirely different is done.

7A. Administrative actions involving posts are often only dimly comprehended and seldom well followed; but in this matter of communication, despatches, etc., the planet is not as deficient as in others except that these functions, being somewhat known, can become an end-all — tons of despatches, no actual product. In some areas it is an obsession, an endless paper chain, that is looked on as a legitimate product even when it leads to no production.

8A. The planet's technology is on the surface very complex and sophisticated but is so bad in actual fact that experts do not give the planet and its populations thirty years before the smoke and fumes will have eaten up the air cover and left an oxygenless world. (The converters like trees and grass which change carbon dioxide to oxygen are inadequate to replace the oxygen and are additionally being killed by air impurities coming out of factories and cities.) If the technology destroys the base where it is done — in this case the planet — it is not adequate and may even be destructive technology.

9A. The whole idea of "product" is not in use except in commercial industry where one has to have a car that sells or a washing machine that actually washes.

THE HARD ROAD

It is against this primitive background that one is trying to run an organization.

If it were not for improvements made on each one of these points, the task could be hopeless.

I have gone to some length to outline the lacks in order to show the points where one must concentrate in (a) putting an org together and (b) keeping it viable.

In these nine areas we are dealing with the heart of it in running orgs.

Enthusiasm is a vital ingredient. It soon goes dull when insufficient attention is paid to resolving and getting in these nine points.

Bluntly, if they are not gotten in and handled, the task of living and running a post or an org will become so confused that little or no production will occur and disasters will be frequent.

THE WORDS

The by no means complete list of words that have to be fully cleared and understood just to talk about organization as a subject, and to intelligently and happily work in an org EVEN AS ITS LOWEST EMPLOYEE is:

A company
A board of directors
Top management
Policy
Management
Programs
Targets
Orders
Technology
Know-how
Org bd
Post
Hat
Cope
Purposes
Organize
Duties
A checksheet
A checklist
A comm channel
A command channel
A relay point
A stable terminal
Double-hatted
A product
Aberration
VIABILITY

This is key vocabulary. One could draw up a whole dictionary for these things and no one studying it would be any wiser since it would become salted with other words of far less importance.

The way to do this list is sweat it out with a meter until one knows each can't mean anything else than what it does mean.

Out of a full understanding of what is implied by each, a brilliantly clean view is attained of the whole subject of organization, not as a fumble but as a crisp usable activity.

Unless one at least knows these words completely so that they can be used and applied, they will not buffer off confusions that enter into the activity.

Glibness won't do. For behind these words is the full structure of an activity that will survive and when the words aren't understood the rest can become foggy.

We *do* know all these needful things. We must communicate them and use them successfully.

REMIMEO
STUDENT HAT
STAFF HATS

IMPORTANT

WORD CLEARING SERIES 48

ETHICS AND STUDY TECH

The basic Why of the majority of cases of post nonperformance of a staff member and OUT–TECH in an org stems from misunderstood words.

The primary point that has to be gotten in is study tech.

This is also our bridge to society.

Yet study tech is the tech that includes misunderstood word tech.

Thus if study tech is not in, people on staffs see nothing wrong with hearing or reading orders containing words they do not understand and have no urge to look them up. Further they often feel they do know words that they in fact do not know.

When this situation exists, it is next to impossible to get study tech and Word Clearing tech in. For the orders seeking to get in study tech may contain words the person does not understand. Thus he doesn't really comply with the orders and study tech does not get *in*. Thus the ability to hear or read and understand continues to be missing.

Therefore these ethics actions become part of standard ethics:

1. A PERSON MAY BE SUMMONED TO A COURT OF ETHICS OR EXECUTIVE COURT OF ETHICS IF IT BE FOUND THAT HE HAS GONE PAST A WORD HE DOES NOT UNDERSTAND WHEN RECEIVING, HEARING OR READING AN ORDER, HCOB, POLICY LETTER OR TAPE, ANY AND ALL LRH WRITTEN OR PRINTED MATERIALS INCLUDING BOOKS, PABS, DESPATCHES, TELEXES AND MIMEO ISSUES WHICH RESULTED IN A FAILURE TO DO DUTIES OF HIS POST, WITHOUT HIS AT ONCE MAKING AN EFFECTIVE EFFORT TO CLEAR THE WORDS ON HIMSELF, WHETHER HE KNEW HE WAS MISSING THEM OR NOT, AS THE SOURCE OF HIS INACTION OR DAMAGING ACTIONS.

The charge is NEGLECTING TO CLARIFY WORDS NOT UNDERSTOOD.

2. A STAFF MEMBER WHO DOES NOT USE STUDY TECH OR GET IT KNOWN WHILE STUDYING OR INSTRUCTING MAY BE SUMMONED TO A COURT OF ETHICS OR AN EXECUTIVE COURT OF ETHICS.

   The charge is FAILURE TO EMPLOY STUDY TECH.

3. A STUDENT ALTER–ISING OR MISADVISING OTHERS ON THE USE OF STUDY TECH MAY BE SUMMONED BEFORE A COURT OF ETHICS.

   The charge is ADVOCATING A MISUSE OR NEGLECT OF PROPER STUDY TECH.

4. AN AUDITOR FAILING TO CLEAR EACH AND EVERY WORD OF EVERY COMMAND OR LIST USED MAY BE SUMMONED BEFORE A COURT OF ETHICS.

   The charge is OUT–TECH.

5. ANY PUBLIC DIVISION PERSON, STAFF MEMBER OR SCIENTOLOGIST FOUND USING TERMS, CIRCUMSTANCES OR DATA ON RAW PUBLIC IN PUBLIC LECTURES OR PROMOTION OR IN PR BEYOND THE PUBLIC ABILITY TO GRASP WITHOUT STRESSING STUDY TECH OR AT ONCE TAKING EFFECTIVE MEASURES TO CLARIFY, OR RELEASING MATERIALS BROADLY TO A WRONG PUBLIC MAY BE SUMMONED TO A COURT OF ETHICS IF ANY FLAP OR UPSET RESULTS.

   The charge is FAILURE TO APPLY STUDY TECH IN DISSEMINATION.

SUPPRESSIVE

Furthermore, as study tech is our primary bridge to society and the basic prevention of out-tech and out-admin, if any offense as above found guilty in a Court of Ethics is REPEATED and the person has had two such courts on this offense, the person may be summoned before a Committee of Evidence on a charge of COMMITTING AN ACT OR OMISSION UNDERTAKEN TO KNOWINGLY SUPPRESS, REDUCE OR IMPEDE SCIENTOLOGY OR SCIENTOLOGISTS, and if found guilty beyond reasonable doubt, may be declared a SUPPRESSIVE PERSON and expelled with full penalties.

AXIOM 28

Failures to teach or use study tech or alterations of study tech are actually offenses against AXIOM 28 as it is applied internally in an org on admin and tech and from the org to society.

Study tech including its technology of Word Clearing is in fact the technology of Axiom 28.

The Axiom (amended) follows:

AXIOM 28. COMMUNICATION IS THE CONSIDERATION AND ACTION OF IMPELLING AN IMPULSE OR PARTICLE FROM SOURCE–POINT ACROSS A DISTANCE TO RECEIPT–POINT, WITH THE INTENTION OF BRINGING INTO BEING AT THE RECEIPT–POINT A DUPLICATION AND UNDERSTANDING OF THAT WHICH EMANATED FROM THE SOURCE–POINT.

The formula of Communication is: Cause, Distance, Effect, with Intention, Attention and Duplication WITH UNDERSTANDING.

The component parts of Communication are Consideration, Intention, Attention, Cause, Source-point, Distance, Effect, Receipt-point, Duplication, Understanding, the Velocity of the impulse or particle, Nothingness or Somethingness. A noncommunication consists of Barriers. Barriers consist of Space, Interpositions (such as walls and screens of fast-moving particles), and Time. A communication, by definition, does not need to be two-way. When a communication is returned, the formula is repeated, with the receipt-point now becoming a source-point and the former source-point now becoming a receipt-point.

STUDY TECH AND POST

Ref: HCOB/PL 4 Apr. 72R III Word Clearing Series 48
Rev. 21.6.75 ETHICS AND STUDY TECH

It has just been found that certain staff could not perform their duties because they knowingly went by misunderstood words in despatches and telexes.

By this willful failure they had dumped their hats on seniors for two years.

They were wiped out on post, could not evaluate or find out what was going on. And spent a bulk of their time sleeping.

THEREFORE:

6. Any person who goes by misunderstood words or abbreviations in telexes or despatches or materials he handles on post without clarifying them SHALL BE SUMMONSED TO A COURT OF ETHICS.

   The charge is NEGLECT OF DUTY and the minimum sentence is TREASON.

7. Any auditor failing to write clearly on worksheets or put down enough text to make the worksheet understandable shall be summonsed to a Court of Ethics.

   The charge is NO REPORT.

8. Any Case Supervisor who permits an auditor to write incomprehensibly or omit data shall be summonsed to a Court of Ethics.

   The charge is CONDONING NEGLECT OF DUTY.

ADDITIONAL PENALTY

Whenever this policy letter or its references are found to be out in an area and not enforced there can be no plea of ignorance and the seniors of the area are themselves liable to Comm Ev.

Violations of study tech and failures to use this technology are responsible for great losses and out-tech, out-admin and overwork of seniors.

The matter has been regarded too lightly and has caused great losses, blows and has impeded progress on this planet.

TECH

(Originally written by LRH for the *Apollo* OODs of 22 June 74.
Issued as an HCO PL on 30 Oct. 80.)

Every action that results in a product has a certain tech.

One finds out about it or develops it.

When one adopts false tech he will then wind up with confusion as false tech will not deliver a product. It delivers a confusion — like psychiatry or Nixon economics.

The more false tech you hold onto or apply, the more confusions you will get.

When real tech is invalidated then false tech can enter in. So the test of false tech is does it give a confusion and the test of real tech is does it give a product.

A Mis-U word in real tech then can let false tech in.

If the tech is not available for a certain job one then has to develop it. His development will be correct only if it delivers a real product.

When one busily develops tech where proven tech already exists and is available, one is wasting his time.

Technology is that part of knowledge that is used.

So it is not enough just to know. One also has to apply.

If one *really* knows his tech it is very easy to apply it. When one is uncertain, his application is uncertain.

Life in living forms depends upon real products.

When products take too long to bring about or when they turn out to be overt products then they are not economical to produce. Overdue and overt products are both *very* costly in time and catastrophes.

If you find in any area you are taking too long to produce a product, then it's time to review your tech. (A) Does tech exist? (B) If yes, "Am I applying it?" (C) If no, "Do I have to develop it?"

If it is (C), then one had better get very busy sorting it out. It is easier and less expensive to do that than to go on turning out overt products.

Any product has its tech.

Do you know the tech to produce yours?

YOUR POST AND LIFE

A vital datum has emerged in my recent whole track research.

IF ONE KNOWS THE TECH OF HOW TO DO SOMETHING AND CAN DO IT, AND USES IT, HE *CANNOT* BE THE ADVERSE EFFECT OF IT.

This applies in many, many ways and is in fact a key point of life — a fundamental that may underlie all others.

And it applies to you directly on a post and in life.

If you know the tech — and that includes policy — of your post and apply it, you cannot be the adverse effect of it. FACT!

This has many ramifications:

1. A hatted staff member is not only at cause over his post, he is safe.

2. A well-trained auditor gets no adverse reaction from auditing others.

3. A well-trained Supervisor has no adverse reaction from students.

4. A fully trained and functioning staff can get no real adverse reaction from superiors or even an enemy.

5. An SP confronted by someone who knows and can use all the tech concerning SPs would shatter.

The list could go on and on since the datum pervades all sectors of life itself. In fact, it is almost mystical!

There is a corollary: If one is experiencing an adverse effect on a post or in life, then he does not know or has not applied the tech or policy covering it.

There is also a limiting factor: The full benefit of the datum is not sweepingly realized in all sectors until one is all the way up the Bridge. *BUT* the datum is so

powerful that it can be applied and will manifest itself even in small things like opening cans, much less doing a post.

And knowing that one datum can save you enormous trouble and grief and put you on the road to OT doing what you're doing and right where you are!

Nice, eh?

HATTING AND THE ENVIRONMENT

There is a single difference I have spotted between past environments I have hatted people in and the current environment. The sea, war, expeditionary wilds are all very dangerous places and a person either gets hatted or he kicks the bucket most gruesomely, not because some senior will clobber him, but because the environment will not only wipe him out but torture him in the bargain.

Now, suppose you had a junior who was always sending problems to you. He never handled them or recommended any handling or tried to prevent them. He even invented them. What would you think of a staff member who did that? Charitably, you could say that he is just green or untrained or deaf or blind or that he has lots of Mis-Us. In some cases these may account for this type of behavior. But there is also this other factor of the environment.

I have taken illiterate crews who were the dregs of the docks and hatted them up into a crack crew very quickly. These guys weren't just illiterate, they were even in awe of someone who could read because they couldn't. Yet, they could be hatted and rapidly. The difference between this and training staff in our orgs is that these guys had to be able to operate in an environment which would have no mercy on them if they failed. They were forced by the environment to know their hats and wear them if they wanted to survive.

A senior in an org can bring duress on his juniors to get the job done. However, this duress, or even threat, is only coming from a senior, not from the environment. A staff member might feel that he has nothing to lose if he doesn't get hatted. He won't get tortured or killed. He'll just have some senior a bit mad at him which is really a bit mild.

In other words, we are apparently trying to hat people in a totally safe space with no threat to them whether they get hatted or don't. After all, someone will pick up all the pieces and pay all the bills, or they can blow and go back to their pot.

Factually, the environment we live in could eat us up. There is more threat to a staff member personally in not doing his job right now than the sea or war or anything like that. The threat to us if we don't make it is eternity.

One could ask a staff member that refuses to get hatted how he would like to spend all of the coming eternity blind, in the dark and in pain. He would probably say he wouldn't like that. But if we don't make it, that's what we've got and that's what he is condemning this planet to.

This probably would sound quite mad to some, yet is the most stark truth I have ever uttered.

A staff member who refuses to get hatted and get out real products does not know what we are trying to do. He doesn't realize that he himself, next life, is for it if we don't make it.

If a sailor didn't get hatted, he only died once in his estimation. If staff in our orgs don't get hatted, they're condemning themselves and the planet to death a thousand times over.

So understand that no matter how mild the environment might appear to you, we are actually fighting a full-scale war against ignorance and enslavement. But we *do* have the tech to win.

ETHICS

IMPORTANT

EXECUTIVE RESPONSIBILITY FOR TRAINING STAFF

If at any time a staff member is found on staff who

a. does not know his hat,

b. is found not wearing the hat which he is assigned by the org board or

c. is found in ethics trouble;

and it is discovered that

A. he has no staff hat folder,

B. no post hat folder,

C. no checksheet of PLs and HCOBs or EDs or books or manuals concerning his duties or division,

D. has no pack of the materials of C above *or*

E. is not actively being remedied in these defects and/or in progress in learning them well

OR

F. the division is undermanned, by reason of no active demand for personnel or permitting transfers;

THE STAFF MEMBER'S IMMEDIATE SENIOR IS SUBJECT TO COMM EV on a charge of

TREASONABLE NEGLECT

and may thereby be

1. removed from post or

2. demoted.

No bonuses of any kind may be paid any executive who does not himself have and whose juniors do not have

i. a precise post assignment on the org board and posted on the org board;

ii. a full outline of purpose of the post and the division and the org and a complete staff hat;

iii. a post hat giving the purpose of the post and its precise duties;

iv. a checksheet covering with reality the data required to be known to perform the post with all relevant manuals, HCO PLs, HCOBs, EDs, orders, books or tapes;

v. a pack containing the material of the checksheet excepting tapes but with these available;

vi. a full Dept 14 program of post and study progress as well as case progress;

vii. adequate study progress on the post material;

viii. adequate acceptable statistics of each post production.

REWARD

Any Executive Director, Executive Secretary or secretary who achieves (i) to (viii) with his juniors and himself is entitled to a 25 percent bonus providing (vii) is completed in all cases and (vii) in satisfactory progress on all persons under him on staff less than 90 days.

The pay of a person fully on post with (i) to (viii) in and (vii) completed is the full units or pay of that post, the staff member being only on post in training until this is accomplished.

NOTE

Any and all troubles, ethics actions and org difficulties have been traced to failures to recruit, to hat, checksheet and pack and thus train for and on post every staff member.

While every effort will be made by Flag and its Liaison Offices to checksheet and assist and do the basic work, the absence of its materials or help or the absence of a Hats Officer or STO do not absolve any executive from his responsibilities for staff competence, hats, checksheets or packs or study thereof as laid down in this policy letter.

The viability and expansion of orgs and the power of Scientology in society depend utterly on recruitment and this policy letter being followed with intelligence and reality.

PRODUCTS & EXCHANGE

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 25 MARCH 1971

REMIMEO

ORG SERIES 26

VALUABLE FINAL PRODUCTS

By definition, a valuable final product is something that can be exchanged with other activities in return for support. The support usually adds up to food, clothing, shelter, money, tolerance and cooperation (goodwill).

On an individual basis this is easy to grasp. The individual produces a product or products which, flowed into the dept, div, org, company, community, state, nation or planet, then returns to him his pay and goodwill or at least sufficient goodwill to prevent his abandonment or destruction.

Long-range survival of the individual is attained in this fashion.

A valuable final product (VFP) is valuable because it is potentially or factually exchangeable.

The key word in this sense is EXCHANGEABLE. And exchangeability means outside, with something outside the person or activity.

A valuable final product could as easily be named a VALUABLE EXCHANGEABLE PRODUCT.

Sanity and insanity are matters of *motive,* not rationality or competence. The sane are constructive, the insane are destructive.

Thus insanity on the part of the potential receiver of a VFP can prevent an exchange of a final product the receiver should be able to use and for which he should be willing to give active support and goodwill to the producer. Example: Man starving; you try to sell him good food at reasonable price for which he has money to pay. He tries to shoot you and destroy the food. This is insanity since he is trying to destroy the product he needs and can afford.

Crime is the action of the insane or the action of attempting seizure of product without support. Example: Robbers who do not support a community seek to rob from it supporting funds.

Fraud is the attempt to obtain support without furnishing a product.

Sanity and honesty then consist of producing a valuable final product for which one is then recompensed by support and goodwill, or in reverse flow, supporting and giving goodwill to the producer of the product.

Ethical basics, morale, social subjects, law, all are based on this principle of the valuable final product. Previously it has been "instinctive" or "common sense." It has not before been stated.

Civilizations which facilitate production and interchange and inhibit crime and fraud are then successful. Those that do not, perish.

Persons who wish to destroy civilizations promote departures from these basic rules of the game. Methods of corrupting fair interchange are numerous.

The FACTORS are the first appearance of these principles.

The theory of the valuable final product is an extension of the FACTORS.

Parts of organizations or organizations, towns, states and countries all follow the principles which apply to the individual.

The survival or value of any section, department, division or org is whether or not it follows these principles of interchange.

The survival or value of any town, state or country follows these principles of interchange.

You can predict the survival of any activity by confirming its interchange regularities or can predict its downfall by irregularities in this interchange.

Therefore it is vital that a person or a section, department, division or part of an org or an org figure out exactly what it is interchanging. It is producing something that is valuable to the activity or activities with which it is in communication and for that it is obtaining support.

If it is actually producing valuable final products then it is entitled to support.

If on the other hand it is only organizing or hoping or PRing and is not producing an interchangeable commodity or commodities in VOLUME or QUALITY for which support can be elicited and even demanded, it will not be VIABLE.

It doesn't matter how many orders are issued or how well org boards are drawn or beautiful the plans to produce are made. The hard fact of production remains the dominant fact.

How well organized things are *increases* production volume and *improves* quality and thus can bring about viability.

But it is the valuable final product there and being interchanged that determines basic survival.

Lack of viability can always be traced to the volume and quality of an actual valuable final product.

Hope of a product has a short-term value that permits an activity to be built. But when the hope does not materialize, then any hoped-for viability also collapses.

One then must organize *back* from the actually produced product.

For instance, a technical subject is capable of producing an exact result.

IF persons are trained to actually produce the result AND THE RESULT IS PRODUCED then one can exchange the technicians with the community for support.

If the result is produced (by training the technicians well) then the result can be interchanged with an individual for support and goodwill.

Where any of these factors suffer in volume or quality then an interchange is difficult and viability becomes uncertain.

As individuals, communities and states are not necessarily sane, upsets can occur in the interchange even when production is occurring.

Therefore the producer has a stake in maintaining the sanity of the scene in which he is operating, and one of his valuable final products is a scene in which production and interchange can occur.

The basics of valuable final products are true for any industrial or political or economic system.

Many systems attempt to avoid these basics and the end result would be disaster.

The individual, section, department, division, org or country that is not producing something valuable enough to interchange will not be supported for long. It is as simple as that.

HCO POLICY LETTER OF 29 OCTOBER 1970
ISSUE I

REMIMEO
EXEC HATS

ORG SERIES 10

THE ANALYSIS OF ORGANIZATION BY PRODUCT

The different products involved in production are:

1. Establishing something that produces. (Product 1)

2. Operating that which produces in order to obtain a product. (Product 2)

3. Repairing or correcting that which produces. (Product 3)

4. Repairing or correcting that which is produced. (Product 4)

Example: A typewriter is manufactured and located on a desk. This is establishing something that produces as in (1). A typist operates or runs the typewriter which thus produces typed sheets, stencils, etc., which are the product produced. This satisfies (2) above. The typewriter from various causes eventually requires repair in order to continue to produce. This satisfies (3). The correction of things typed would satisfy (4).

These are the four basic PRODUCTS involved in production.

Thus there are really four basic products necessary to a production activity. These are:

1. The established machine

2. The machine's product

3. The corrected machine

4. The corrected product

That makes a minimum of four products for any production cycle.

Three major factors govern every product. These are:

A. Quantity

B. Quality

C. Viability

Quantity would be an acceptable, expected or useful volume.

Quality would be the degree of perfection of a product.

Viability would be the longevity, usefulness and desirability of the product.

As *each* product in the four listed above has *three* factors in each product, there are then twelve major points (4 x 3) regulating production.

Product 1 — Establishing the typewriter, contains:

i. The quantity of typewriters established

ii. The quality of the typewriters established

iii. The viability of the typewriters established

Product 2 — The product of the typewriter (typed things) also has three:

iv. The quantity of the typed things

v. The quality of the typed things

vi. The viability of the typed things

Product 3 — The repair of the typewriter itself also has three factors:

vii. The quantity (amount) of the repair

viii. The quality of the repair

ix. The viability of the repair

Product 4 — The correction of the thing produced.

x. The quantity (amount) of the corrected product

xi. The quality of the corrected product

xii. The viability of the corrected product

Thus to get a product “typed things” there are actually twelve separate factors.

This applies to all machinery. For instance, there is the generator that produces and there is the thing (electricity) produced by the generator. There is the repaired generator. And there is the corrected electricity (such as reducing its voltage or converting it).

Now if you did not know that you were handling twelve factors in producing electricity the tendency would be to "just run the generator" and ignore the actual factors governing production.

The results of this would be total operation only. The generator would soon go to pieces. The electricity furnished would vary all over the place and blow out other equipment. There would be no funds to repair or replace the generator when it broke down. By paying little attention to products (as the wog world often does) or by shifting their importances — giving total importance to running it — there would soon be *no* viability at all. The end result would be two wrong products — scrap metal that was once a generator and no electricity.

Now, surprise, surprise! An organization composed of people is influenced by these same things!

Org Product 1 is putting it there.

Org Product 2 is what the org produces.

Org Product 3 is the repair of the org.

Org Product 4 is the correction of the org's product.

If we do not know these products and factors exist, continual mistakes can be made just as bad as just running a generator. Instead of the desired final product which is offered and sold and delivered, we get scrap paper and insolvency.

To establish an org one has to put one there. This requires a desirable and economic product of the org envisioned, the technology of making the final product, the technology of making and handling the org, the procurement of a location, recruitment, an org bd, hats, and training and the equipment and materiel needed to produce the final product and the obtaining of the raw material to make the final product. Thus established, it must be done so that:

i. The amount of org is created proportionate to its final product demand.

ii. The quality of the org itself — shabby, posh, active or lazy, etc.

iii. The viability of the org (how long will it last economically, how will it expand, does income exceed outgo, etc.).

The product of the org itself is regulated by:

iv. The quantity of product produced (which must be of sufficient volume to satisfy demand).

v. The quality of the org's product or products (which must be adequate to satisfy those requiring and paying for the production).

vi. The viability of the org's product (how long does it last and is it adequate for its value).

The repair of the org itself must be:

vii. The quantity or amount of repair necessary to make the org functional (which may amount to simply giving it a new letterhead or rebuilding the whole place, nearly the establishing product again).

viii. The quality or expertness of the repair (a bad one could destroy the place).

ix. The viability of the repair (if the right Why is handled the repair as a product will last a long time and if a wrong reason for decline is handled the place will just cave in again).

The correction of the org's product to obtain a uniformly satisfactory product:

x. The quantity (proportion) of the org's product that has to be corrected (which might require, if too high, the repair of some part of the org itself).

xi. The quality of the correction (expert and can be afforded and itself nondestructive).

xii. The viability of the product corrected. (Will it last and be nearly as good as the better produced product?)

All these factors must be consulted.

ANALYSIS

If one understands these factors and realizes they are all present in running an eggbeater or the world's biggest oil company, one will not be groping around in rags.

A checklist of the twelve factors influencing the four major products can be made up and each point as it relates to an org can be studied about a particular org.

One has here the basics. From these there can arise a near infinity of lesser items.

When one does not know these basics one flounders endlessly while attempting to handle a post, a portion of an org or the whole org. One gets into a frantic correct the errors and outpoints or goes into apathy as he has no guidelines.

However, using these basics, one can easily check them off and so see what he has to do to more closely approach the ideal.

In Dianetics and Scientology, for example, the final pc product of Flag auditors trained on the same HCOBs as field auditors, on *rougher* pcs, is infinitely better than the pc product elsewhere. This is a puzzle. The clue is not in auditing at all. It lies in an earlier product — training. A Class VI or a Class VIII Auditor on Flag was trained (a) more rapidly (amounting to as little as $^{1}/_{6}$th of the time in an org) and (b) more honestly and (c) the Flag auditor is expertly corrected as a product when he begins to audit until the auditing product is perfect. The training (quantity, quality and

lasting quality) on the course is better and the training extends to training on post until the auditor's product (the auditing of the pc and the pc) need little or no product correction. The equivalent used to be required HGC training — on-post training — for a staff auditor to become a *staff* auditor. In no org did auditors go fresh from school into auditing with no further training. This went out in some orgs. The product "corrected auditor" became a missing product. Thus Flag auditing produces a better product as *that* product — corrected auditor — exists on Flag.

This is given to show the *use* of the product factors.

Where any of these products or factors are missing, the viability of the whole is shaken. By using them the whole becomes viable.

REMIMEO

ORG SERIES 13

PLANNING BY PRODUCT

One of the cycles or correct sequences of action is:

BE — DO — HAVE

This sequence is often altered in orgs and even in individuals. Be is first in the physical universe, Do is second, Have is third.

By getting it out of sequence a considerable confusion can be generated.

A lot of riddles of human behavior can be solved by realizing this goes out of sequence or gets omissions.

The Spanish peasant and the Spanish officials go to war at the drop of a straw. Their history is jammed with revolts. The peasant knows that if he is a peasant (be) and does his work (do) he should have. The Spanish official is stuck in BE. He *has* so he can *be* and he doesn't have to *do* anything. Also a degree or title in Spain is a BE and there is no *do*. So there is no *have* unless it comes from the peasant. The two altered cycles collide.

Juvenile delinquency and shattered lives in the West stem directly from corruptions of this cycle.

Children in the West are commonly asked, "What are you going to BE when you grow up?" It is a silly question and can drive any child up the wall. Because it's the wrong question — hits the wrong end of the cycle. He can't work out his personal org bd easily.

He is also asked, "What are you going to DO in life?" That's just as bad. It is quite difficult to answer.

You have to do an org bd backwards — establish the product (have), find out what to *do* to achieve it and only then really can you accurately discover what one has to BE to accomplish this.

A lot of people and businesses fail because they don't do this. A beingness taken first all too often winds up in a doingness without any havingness resulting.

If we asked children, "What do you want to PRODUCE in life?" we could probably get a workable answer. From *that* he could figure out what he'd have to do

to produce that and from that he could know what he had to BE. Then, with a little cooperation, he would be able to lead a happy and valuable life.

Concentrating on BE? one finds him ready to BE all right, but then he stands around the next fifty years waiting for his havingness to fall out of the sky or slide to him via a welfare state.

The above data, missing in society, contributes to juvenile delinquency, crime, the welfare state and a dying civilization.

It is a wrong personal org bd to BE only.

So it is with an activity or company.

What is the desired product that will also be desired by others? is the first question one asks in organizing. It must be answered before one can adjust or arrange finance or any org bd.

Then one asks what has to be *done* to produce that? And there may be a lot of dones figured out and put in sequence.

Now one can work on BE.

Thus you would have the basic ingredients of an org bd.

Here is a common altered cycle:

Mr. A has a truck — HAVE. He tries to figure out what to DO with it. He works it around to try to make money. He would usually go broke. As he supposes he already has a product — a truck, and he needs a product — "money," he rarely backs it up to a BE.

Some people's "think" gets all involved in altered sequences or omissions of the BE — DO — HAVE cycle.

An activity has several final products. All of them must be worked out and considered. Then one can work out the sequence of DOs (each with a product) in order to accomplish the final products. Only then can one work out the BE.

By omission or fixations on one of these points a person or an org can fail or perhaps never even get started.

Fixation on DO without any product in view leads to bored wandering through life.

Mothers even know this one. "Mama, what shall I do?" is a long-drawn refrain. Smart mamas often say "Make a cake" or "Make mud pies" or "Make a house." Dumb ones say "Go and play and stop bothering me!"

Armies, with guard or death "products," get obsessed with DO to a point where officers and noncoms will state "Get those men busy!" No product. Meaningless, often frantic and useless DO.

It could be said that any developed traffic (dev-t) comes from people who have no product.

Immense bureaucracies can build up where there are no realized or stated products.

Target policies and practice are successful because they state the desired product.

Unless one organizes from the final product the organization can get unreal and useless.

Even Russia could learn this one. Their "workers" are all trying to get to the university where they can BE. The Russian government was recently pleading with young people to become workers. But of course that's just another BE that implies DO. Russia has yet to realize her product was and is revolution. It's no wonder their main problem is how to feed and clothe and house their people.

Unless an org or a person knows exactly what the final product is for the org or a post, there'll be a lot of busyness but not very much havingness for anyone.

The answer is to figure out the final product and work back through the do of subprojects and you will then materialize a real org, a real beingness.

MORALE

(Originally written by LRH for the *Apollo* OODs of 14 May 72.
Issued as an HCO PL 21 Sept. 80.)

Production is the basis of morale.

If one can get a unit producing and actually accomplishing worthwhile production, then their morale will rise.

Thus, it does not matter too much how one starts a unit producing so long as it does get started.

I was given a good example of this with just one person who has been on MO lines. She is actually well now. She is *miserable*. There is nothing wrong with her at all except she is out of the action and is not producing anything.

This has been noted in other fields. The "idle rich" are the most miserable people you ever wanted to meet. "To Have and Have Not" or some such title by Hemingway talks about it for the best part of a book.

DONES

(Originally written by LRH for the *Apollo* OODs of 24 Apr. 72.
Issued as an HCO PL on 21 Sept. 80.)

Doing the work of the post *does* result in effective exchange.

If one confronts his post he will see there are things to do. These things result in both morale and viability.

"Do" is often defined as "talk" or "refer." But that doesn't get anything done. Do is the action which leads to *DONE*.

Doing something else does not lead to any done.

Do your jobs and get *dones*.

THE "ECONOMY"

(Originally written by LRH for the *Apollo* OODs
of 11 June 74. Issued as an HCO PL on 21 Sept. 80.)

Reports from experts and observers, Wall Street, *Times, Barron's* magazine, various sources, give a gloomy picture of the economy.

A lot of factors enter in, but money is suddenly very tight and many big corporations are threatened with bankruptcy.

Apparently some businesses are afraid to put ads in papers to employ people as they are unable to handle the resulting mobs of applicants.

In times like these one has to manage very industriously and watch outgo very carefully and somehow expand income.

This is no time to neglect areas or situations or to have an attitude of "nothing to do with me." It does!

What one can do about it is pretty simple: WEAR THE HAT ASSIGNED ONE AMBITIOUSLY, WORK AS A *TEAM*, GET OUT REAL PRODUCTS.

The usual reason one works hard with no product or an overt product at the end is lack of tech. One has not found or developed the tech necessary to do one's post.

Well, you'd be surprised how much time *I* spend in study. I find or develop the tech of what I do. Sure, there's trillions of years behind what I do. But the here and now is a planet of limited tech in almost every line of country. So what's here and now to do with and how is it done *here*?

One studies the area, one takes the data he can get, one develops what he can't, one applies what he finds. And the result is a real product.

When times get worse or conditions are not of the best, one has to study and work that much harder to make it.

There's no question of lying back and letting it ride. *That* would be pure self-destruction. So the way out in life is the way through.

I want us and I want you to make it.

HCO POLICY LETTER OF 14 NOVEMBER 1970

REMIMEO

ORG SERIES 14

THE PRODUCT AS AN OVERT ACT

When a product is nonexistent or bad it can be classified as an overt act against both the org and any customer.

You can estimate what the existing scene of a post really is by looking at its product.

When a flubby product is observed, you can at once approximate the existing scene.

The time it takes to achieve the product is also an estimation. A long time to achieve a small flubby product gives one a good idea of the existing scene.

This also estimates the amount of "noise" in an area.

Example: Post X is supposed to sort ruddy rods. There are no sorted ruddy rods ready. That's an omitted action. The post has to be ordered to sort ruddy rods. That's ordering someone to wear his hat which is altered sequence as he should have been wearing it already. The post must be a false terminal as it isn't wearing its hat. The product so far is no sorted ruddy rods. You order them sorted. You get bent tangled ruddy rods furnished after a long time period filled with dev-t. Estimate of existing scene — psychotic and an awful long way from any ideal scene. Actual quality of product — an overt act.

When several org members are furnishing a poor individual product, the org becomes difficult to handle as the person in charge is operating as correction not as establishment and org product.

Wherever an org's product is low in quantity and quality one must recognize that it contains several members who unconsciously furnish overt acts in the guise of post products and begin to straighten things out accordingly.

The road to sanity for such a person or org is a good grasp of organizing and products, making known the technology needed to produce a product, getting it properly done so that the person can then wear his hat.

If this still doesn't occur, personal processing is necessary as the personnel may well be dramatizing overt acts (harmful acts) by turning out a bad product.

The final product of an org is the combined products of all the members of that org directed to accomplish the final products of that org.

Stupidity, lack of a worked out org bd, lack of recognition of what the final org products should be, lack of training, lack of hats can produce poor final products. In an activity not doing well, the poor final product or its lack of any product is the compound errors in subproducts. An org where the product is pretty bad or nonexistent contains many elements — posts — in it which have as *their* individual "post products" not products at all but overt (harmful) acts.

Pride of workmanship is pride in one's own product.

Every post has some product. If the products of all posts in an activity are good and the product sequence is good then the final products of the org will be good.

INCOME CUTATIVES AND SALARY SUM

There are probably thousands of suppressive ways an org can be deprived of its income and the staff can be deprived of pay and welfare.

Whether done on purpose or "because it's unimportant" any action or inaction on a post that deprives other staff members of income, pay and welfare becomes important to every individual on staff.

One should not send to find why one's pay and welfare are low. One only has to look around him and spot careless or other-determined actions or inactions to locate the cause.

In an overpopulated world, if it is, a fad of "the other person doesn't matter" can easily start up. One hears, "I am interested in the first and second dynamics and the third doesn't matter." It is a symptom of extreme stupidity. One can ask such a person, "Well, then, who would audit you?" and "Who would feed you?"

The individual pay and welfare of a staff member is a matter of the third dynamic. And if the individuals in that group are so neurotically introverted they can't see what is going on around them and so lacking in personal presence and energy that they can't correct it themselves, why then in truth they will have low pay and no welfare. They will also get bad auditing! The surest way to wreck the first and second dynamics is to abandon the third. Even the hermits of long ago had visitors and banded together. And somebody has to sell the groceries to a recluse.

One can even say he craves to abandon his body and the planet. Yet, I guarantee you that after ten minutes spent, lonely, three hundred miles out in outer space, such a person would be screaming to get back and talk to Joe or Mabel.

And it is interesting that one of the favorite punishments of torturers past and present is to put someone in solitary confinement. If they also turn off the lights, such a person becomes a howling lunatic in most cases after thirty days.

So it is no good to say one is not interested in the third dynamic and ignore what others do unless, of course, one is also fixed on self-punishment and enjoys suffering.

It is a bit of a mystery why staffs do not act, when they do not, when they observe vivid examples of income cutatives around them. But if they do not and do not handle them, it is no mystery why their pay and welfare are low.

It is all very well to say that nothing is important anyway. But that is to say that dying is unimportant. But when you know what really happens to some thetans when they die, if the person saying it and even believing it were to experience it and experience the eternity it goes on, he would not be so casual as to infer that nothing, including his own future fate and that of the other fellow — since he is involved in it too — was important even including Scientology and its organizations.

Even in the so-called "welfare states" supposedly dedicated to supporting the individual, those groups that are not active and vigilant as individuals die. And those states that have indulged in this political philosophy are this very moment going bankrupt and are dying and the individuals in them are being eaten up by inflation.

Only a very suppressive person could work for the dream of dead people in a dead world. Yet there is where such actions wind up.

It is therefore of considerable interest to any individual staff member what other staff members do or don't do.

Here are a few examples of how a staff is deprived of its pay and welfare:

The Supervisors do not use Word Clearing or WHAT IS A COURSE? PL or COURSES — THEIR IDEAL SCENE and do not really make sure that auditors can really audit. So the auditors mess up the HGC, staff and field cases and public word of mouth steers new public away from the org.

Auditors have not done TRs the Hard Way or use a wrong can squeeze and so mis-set their meter sensitivity and do not word clear their materials and cannot make lists read and waste the org's income with demanded refunds.

C/Ses do not follow the C/S Series and do not cram or get crammed auditors and Supervisors and even Cramming Officers and mount up the red tags on staff and paying pcs and add up the refunds.

Qual Secs don't handle Tech staff and don't see that executives can study and are not failed students who can't even read a despatch.

Recruiters and Personnel people recruit only heavy LSD cases and clinic types.

Dissem Secs and Dissem staff never heard of Vol 2 and don't promote or know how to compile and keep up CFs and Addresses and write letters and don't insist on posting Registrars in the org but with the ED do the regging themselves for the bonus.

Ethics Officers assign wrong conditions and also never read or verify the formula has been done correctly and throw out ethics tech in the org.

Dist Secs don't train their FSMs thoroughly and don't pay them instantly and don't have any.

Book I/Cs don't run a good bookstore, don't advertise in magazines and sell to local individuals as well as by mail order and don't do the numerous other successful things that sell books, meters, tapes, cassettes and insignia to old and new public.

Or persons have a vested interest in making the org fail.

HCOs and executives do not insist on executives being trained and staffs being hatted and the busyness of the org does not result in real production.

The Registrars, instead of learning how to close sales, seek to make up for their inability by handing out huge illegal discounts to customers and personal friends or even refuse point-blank to sell services to the public.

The Director of Training and his Supervisors accept students on course without seeing the invoice of proper payment and train partial-paids and unpaids without even noticing — or for other reasons.

The Director of Processing and Director of Tech Services and auditors keep no track of the number of hours pcs have paid for and neglect to return the pc to the Registrar for re-sign and further payment for continuing.

The Public Division or Divisions seek to charge for little services that should be free — like intro lectures — but neglect to run good, good-paying services that build up their raw public to major services. And just so they can say their "Public Reg paid starts" are high.

There are many of these ways, many in every division and many on any post, by which the staff can be denied its pay and welfare.

But at least we can do this about it at policy level:

ANY FINANCIAL LOSS OCCASIONED BY ILLEGAL DISCOUNTS OR GIVING AWAY SERVICES OR MATERIALS SHALL BE RECOMPENSED TO THE ORG BY THE GUILTY INDIVIDUAL AND ANY SUMS SO RECOVERED SHALL BE PLACED IN THE SALARY SUM OF THAT ORG.

In short: if a staff member wishes to give away services or make illegal discounts, he is liable for the difference between the sale or delivery price or cost and what it should have been charged.

Any such charges to an individual staff member who discounted or gave away org services or materials may only be levied by reason of a Committee of Evidence duly convened. But if such losses are occurring and no Committee of Evidence is convened to recover, then the person who should have convened it shall be added to the Committee of Evidence by the next higher management body or a proper mission from it.

Are any of these present in your org? Look around and see. And then instead of just sitting down in apathy, start a campaign to get such things handled and listen to no reasonableness on how they must be. Because they must not be. Your case, your pay, your welfare and those of the whole staff depend on them being corrected. They won't get corrected and neither will your own personal well-being if you just walk

off and get a job mowing lawns or shoveling snow. You're looking at eternity as far as your case is concerned, let alone the org and the planet.

Verbal tech and crazy interpretations of tech because of somebody's Mis-Us make the tech of admin, auditing tech and ethics tech unworkable.

BTBs, BPLs, Bs of I, FDDs, which are patently destructive are accepted and followed even when they contradict HCO PLs or LRH EDs which have, when followed, improved things for decades.

Some income and salary and welfare cuts are occasioned by directives from other management bodies which are unreal in that they do not award a staff for its own production. Management bodies and various vital funds and reserves must, of course, exist and sources outside an org are entitled to these as they are also necessary to the org's survival. But where arbitrary and unreasonable orders which deprive a staff of pay and welfare exist and make no provision for increased staff productivity, then the matter must be reported to the Emergency Officer of the Office of Evaluation and Execution at Flag. The report can be made by the individual staff member or executives of the org. It can be made on channels or from outside the org. The report can be made on the org's own executives or those of any management or network. The report must contain all names and details and copies of any orders issued or report the failure to issue orders on any of the items mentioned in this policy letter. Your report must also contain what you and other staff members have done to handle the outness, otherwise the report will not be considered valid.

The individual staff of an org can not only help themselves and each other to obtain better pay and welfare. They can also seek outside and upper management help.

There has never been any intention whatever to deprive individual staff in any policy letter. Quite the contrary. This policy letter points out that the subject can be handled by them and gives them ways and channels to do so.

(*NOTE:* I realize that management units, orgs and staffs are daily pounded with false economic data. The real facts of life collide with much false data. Such crippling data comes from many sources — school, advertisers, government, bankers, propagandists, even parents who insisted Johnny be a doctor so he could "live well" or set a horrible example themselves. Many have had a hand in messing up people's wits on the subject. It is a factor in inhibiting the individual prosperity of executives, staff members and orgs. Where an area is not prospering, this PL should be star-rated on its people and the false data they have on this subject stripped so that they then can prosper as they should.)

"Standard of Living" can be defined as the relative quality of a person's or group's possessions, quarters, food, equipment, tools and conditions of their area of work and existence. It is the state of the person's living, including working, environment. Where its potential continuance exists it is related to survival. It is a basic natural economic law that personal production of VFPs and one's standard of living are intimately related.

This applies to the individual as well as the team.

Where violations occur, inequities exist.

At a personal level one must produce in excess of his standard of living just to retain and maintain it.

Actually the "excess" means that because of overload, taxes, services, plant, utilities, raw materials, machine and other costs additional to his own work sphere, a person cannot expect to get the full value of his VFPs all to himself. That is not economically feasible. The "excess" varies from post to post and job to job but is never less than 5x minimum. In industry it is considered to be at least 10x to maintain company standards and solvency. The "excess" can be very high indeed in some industries. But in any case any idea that it should be one-for-one is fatal. People who know little of economics or management sometimes propose a worker should get the full value of his VFPs — but all work and all VFPs require support services and to neglect these would quickly bring on poverty. Even when working for oneself alone these "excess" factors exist and seldom drop below 5x as one still requires support services. Corrected gross income divided by staff has to be at least 5x the cost of the standard of living of the individual staff member for that standard to be barely maintained. This does not mean staff pay should be 1/5 of that figure. It means that all the things (pay included) that go into maintaining their welfare and work environment would have to be covered by 1/5 of that figure. A fairly efficient and prosperous org with a hatted, industrious, gung-ho staff can very easily maintain quite acceptable standards at 1/10 that figure. The actual cash value of every piece of work done by a person can actually be calculated. It is intricate and tricky to do and much subject to over- and underestimation but it can be done. It is not vital to do this but one might just be curious about it. If so, do it for yourself. Thus VFPs can be priced against what they bring in as part of the overall scene even when they seem indirect. All the above figures are very rough and subject to variation but this gives you some idea of what is meant by "excess" in that law.

Where a number of people in a group or on a team do not produce VFPs in excess of their standard of living, they depress the standard of living of the group or team.

Where some in a group do not only not produce VFPs but produce overt products, they actively depress the standard of living of everyone in that group or on that team.

Many economists and theorists seek to avoid that law. They do it to gratify politicians or aggrandize some false philosophy whose true purpose is suppression under other colors. But the law remains and its violation breeds an epidemic of economic ills. Amongst such ills are inflation, superbureaucracy, chaos with the marketplace and a decay of the civilization.

When a whole society demands a high standard of living and yet doesn't concentrate on the personal production of VFPs, it is finished.

Products are the basis of a standard of living. They don't appear from midair. They come from work truly done. Not from hope or false data.

It is a druggie's dream that machines, computers, under the dictatorship will do it all. Machines can raise a standard of living by assisting in production. But they can't do man's living for him. Intelligently designed and used they permit, within limits, increases in population. But machines are just tools. They have to be thought

up, designed, built, run and serviced and their raw materials and fuel have to be found and delivered and their products promoted, delivered, used and often in their turn serviced. The machine age was actually recognized as failed when world leaders first began to urge population reduction on the planet to "improve the individual standard of living." If machines were going to solve it all, why is the civilization now in such a steep decline? It took producing men *working* in and with a machine age to make the society go. Not idle mobs on welfare expecting a high standard of living while a few guys work their guts out. Pie in the sky is nice but did anyone ever get to eat it? This misinterpretation of the machine age was a heavy violation of the above economic law. But the real harm of the machine age was creating a false belief that one did not have to produce much to survive. This lowered people's estimate of how much they would themselves have to produce to survive, much less have a high standard of living. Factually one normally has to work fast and expertly and in high volume to bring about any acceptable standard of living for himself and his group. This is a point the machine age obscures. But it remains vividly and demonstrably true.

An executive who works hard yet wonders about his own low standard of living should look over his people to find those who are not producing VFPs or who produce even overt products while yet demanding a living. *They* are absorbing the potential raised standard of living of the group.

Where a group has a very low standard of living, it need only review the above law and its potential violations to understand why.

One cannot, in fact must not, increase the standard of living of a group in ways that violate the above law. It will eventually bring calamity on that group.

In a society led astray by crackpot economics, violations of the above law create a vast number of wrong examples. The rich (most of whom work like mad) are seen as idle or even criminals. The best way of life is made to appear to be idleness. One seems to be owed a living without any effort on his own part. The producing worker should be fined by higher taxation. These are not seen to be simply false data spread about to wreck the place but are held as "truths." And in their wake comes a funeral for that group or society.

There is even an economic theory spread about today called "equalitarianism." It declares everyone should get the same pay and have the same standard of living. It does not mention that anyone should do any work. It holds that the better worker should not be better rewarded. It would crash any society.

Then there is the "monetarist" who believes you can manipulate a whole society with money alone. And no thought of any production. His answer to production? (You won't believe this.) Decrease demand! In other words, reduce everyone's standard of living!

Basic economics eventually catches up with all these weird false pretenses. It may take time but, as in the law of gravity, the apple eventually falls. No matter how many crackpots advance theories to say it can't fall, will go up or vanish. Real basic economic laws are like that. They catch up. So don't wonder about inflation and depression and decayed civilizations. Basic economics caught up with the crackpots.

An executive has to pay attention to the basic law about a standard of living. If he doesn't pay close attention to it, the standard of living of himself and of his group will cave in.

He can be "a good fellow" and seek popularity by attempting to raise the standard above what is earned. He and his group will crash.

He can be foolish and seek to raise his own rewards above what he personally is earning in terms of VFPs. But both he and his group will fail.

He can ignore the real producers of the group and not see that their standard of living is comparable to their individual production. And he and the group will fail.

He can ignore the nonproducers and the overt product makers and, by so ignoring them, tear his own and the group's standard of living to bits.

He can listen to a bunch of PR from a staff member about how valuable that staff member is and surrender to it without ever really counting up the real VFPs that staff member is not producing (or even preventing). (It happens.) Only real VFPs count.

He can work himself half to death without demanding production from others and have his own standard of living crash.

There are swarms of false data flying about today on this subject. It is taught in schools, the very best schools; it is heard on the radio and seen on TV and in the papers. The civilization, as it caves in, is blinded by literally thousands of false ideas about what and how a standard of living occurs. These, where they conflict with the basic law, actively prevent one from prospering as they blind him to the truth of his scene.

In an org or management unit in Scientology, the real VFP is valuable fine people who produce valuable final products who then make up a valuable fine public. Every piece of work and duty in a management unit or an org contributes to that.

The standard of living of an executive, a management unit, an org or a staff member is determined by that one basic economic law: The personal production of VFPs for the group and one's standard of living are intimately related.

FINANCE SERIES 28

EXCHANGE, ORG INCOME AND STAFF PAY

Sometimes the question of staff pay arises although, by survey, the condition with most staffs reportedly is secondary to org income and getting a show on the road.

So it is of interest what really underlies org income and staff pay.

There is a term used in business called "fair exchange."

Let us apply this to an activity engaged in servicing the public.

We could isolate four conditions of exchange.

1. First consider a group which takes in money but does not deliver anything in exchange. This is called rip-off. It is the "exchange" condition of robbers, tax men, governments and other criminal elements.

2. Second is the condition of partial exchange. The group takes in orders or money for goods and then delivers part of it or a corrupted version of what was ordered. This is called short-changing or "running into debt" in that more and more is owed, in service or goods, by the group.

3. The third condition is the exchange known, legally and in business practice, as "fair exchange." One takes in orders and money and delivers exactly what has been ordered. Most successful businesses and activities work on the basis of "fair exchange."

4. The fourth condition of exchange is not common but could be called exchange in abundance. Here one does not give two for one or free service but gives something more valuable than money was received for. Example: The group has diamonds for sale; an average diamond is ordered; the group delivers a blue-white diamond above average. Also it delivers it promptly and with courtesy.

Now, believe it or not, org income and staff pay depend upon *which* of the above four exchanges is in practice by (a) the org or group, or (b) the staff member in the group.

If no. 1 is in vogue, income will dry up with a thoroughness you wouldn't believe. Although the TV and movies try to tell one that robbery is the only way to get rich, this is not true. Those who engage upon it, whether they be stickup men, corporate con men or governments, are not long for this world. The bigger the group the longer it takes for it to fall but fall it assuredly does. And the individual who takes but does not give ends up with a deep-six in many ways quite rapidly.

The second condition of partial exchange can only keep a group or individual going just so long. The end result is painfully a demise of status or position and, most certainly, income. Many "third world countries" and even the bigger ones are in this plight right now. They take in but do not really produce or give. This is what inflation is all about. The unemployment ranks are full of such.

The third condition of "fair exchange" gives one a rather level progress. It is considered honest, is socially acceptable and very legal under law. It does not, however, guarantee any expansion or improvement of a group or the lot of a person. It is barely comfortable.

The fourth condition is the preferred one. It is the one I try to operate on and have attempted to for ages. Produce in abundance and try to give better than expected quality. Deliver and get paid for it, for sure, but deliver better than was ordered and more. Always try to write a *better* story than was expected, always try to deliver a better job than was ordered. Always try to — and deliver — a better result than was hoped for.

This fourth principle above is almost unknown in business or the arts. Yet it is the key to howling success and expansion.

It is true for the org, it is true for the individual staff member.

Where a group is concerned there is another factor which determines which of the four above is in practice. It is group *internal* pressure. Where this only comes from executives, it may not get activated. Where it comes from individual group members in the group itself, it becomes assured. The internal demand of one staff member to another is what really determines the condition of the group and establishes which of the four conditions above come into play.

Thus the org collectively, in electing which of the four principles above it is following, establishes its own level of income and longevity and determines its own state of contraction or expansion.

While this is a must in an executive — to establish the principle being followed — the *real* manifestation only occurs from pressure by individual staff members or others within the group.

Unions and workers in the auto industry elected to follow no. 2 above. This brought about the decline you see in auto companies. Had they elected to follow no. 3 they would not be in trouble. Had they elected to follow no. 4 they would now be in clover for the world today does not really have a truly good, economical, wreck-free car.

It is up to the individual staff members in a group what the org income is and what their own staff pay is. The org cannot earn more and the individual staff member cannot be paid more than will be established by which principle above they elect to follow.

If they follow no. 3 they will get along. But if they follow no. 4 they will really flourish and prosper. *And* it is the only one which guarantees expansion.

STATISTIC GRAPHS, HOW TO FIGURE THE SCALE

A graph is not informative if its vertical scale results in graph line changes that are too small. It is not possible to draw the graph at all if the line changes are too large.

If the ups and downs are not plainly visible on a graph then those interpreting the graph make errors. What is shown as a flat-looking line really should be a mountain range.

By SCALE is meant the number of anything per vertical inch of graph.

The way to do a scale is as follows:

Scale is different for every statistic.

1. Determine the lowest amount one expects a particular statistic to go — this is not always zero.

2. Determine the highest amount one can believe the statistic will go in the next three months.

3. Subtract (1) from (2).

4. Proportion the vertical divisions as per (3).

Your scale will then be quite real and show up its rises and falls.

Here is an *incorrect* example.

We take an org that runs at £500 per week. We proportion the vertical marks of the graph paper of which there are 100 so each one represents £100. This when graphed will show a low line, quite flat, no matter what the org income is doing and so draws no attention from executives when it rises and dives.

This is the *correct* way to do it for gross income for an org averaging £500/week.

1. Looking over the old graphs of the past 6 months we find it never went under £240. So we take £200 as the lowest point of the graph paper.

2. We estimate this org should get up to £1,200 on occasion in the next 3 months, so we take this as the top of the graph paper.

3. We subtract £200 from £1,200 and we have £1,000.

4. We take the 100 blocks of vertical and make each one £10, starting with £200 as the lowest mark.

Now we plot gross income as £10 per graph division.

This will look right, show falls and rises very clearly and so will be of use to executives in interpretation.

Try to use easily computed units like 5, 10, 25, 50, 100, and show the scale itself on the graph (1 div = 25).

The element of hope can enter too strongly into a graph. One need not figure a scale for more than one graph at a time. If you go onto a new piece of graph paper, figure the scale all out again; and as the org rises in activity, sheet by sheet the scale can be accommodated. For example it took 18 months to get Saint Hill statistics up by a factor of 5 (5 times the income, etc.) and that's several pieces of graph paper, so don't let scale do more than represent current expectancy.

On horizontal time scale, try not to exceed 3 months as one can get that scale too condensed too, and also too spread out where it again looks like a flat line and misinforms.

Correct scaling is the essence of good graphing.

READING STATISTICS

Refs:

HCO PL	9 Nov. 79R Rev. 27.8.82	HOW TO CORRECTLY DETERMINE A STAT TREND
HCO PL	3 Oct. 70RA Rev. 27.8.82	STAT INTERPRETATION
HCO PL	6 Nov. 66R I Rev. 9.11.79	AKH Series 5 STATISTIC INTERPRETATION, STATISTIC ANALYSIS
HCO PL	6 Mar. 66 II	STATISTIC GRAPHS, HOW TO FIGURE THE SCALE
HCO PL	27 Aug. 82	VITAL DATA: POWER AND AFFLUENCE CONDITIONS

In a local org area one reads the division stats for the WEEK. A dept reads its stats by the *DAY*. A section does it by the HOUR. You can also read all div GDSes by the day; successful orgs do.

TRENDS are used in more remote areas from the org to indicate successful leadership or broad admin or tech situations. TRENDS are used locally to estimate expansion or warn of contraction.

Thus in weekly condition assignments one only considers two things: that exact week and the slant of that one line. Steep near vertical down: Non-E. Down: Danger. Slightly down or level: Emergency. Slightly up: Normal. Steeply up: Affluence. (As Power is a *trend,* it is not judged on a one-week basis only nor by a single line on a graph. Power is a Normal trend maintained in a high, high range; thus a Power condition must be determined by more than one week's worth of stats.)

Note that these slants for Non-E through Affluence are used to determine the stat condition *for the week*. Measuring stat *trends*, a trend over a three- or six-week period or longer, is covered in HCO PL 9 Nov. 79R, Rev. 27.8.82, HOW TO CORRECTLY DETERMINE A STAT TREND. Additional data on Power as a trend is given in HCO PL 27 Aug. 82, VITAL DATA: POWER AND AFFLUENCE CONDITIONS.

The volume of the stat has little to do with it. Level at high or level at low are alike Emergency.

The *proof* of this is that you always find a Why and it's always some change.

Typical argument about stats: "I know it's down a bit but it's so high generally that it's Power." (Even with stats validly in a Power range, one would handle a dip in the stats with the appropriate condition formula.) Or: "I know it rose but it's so low that it's really Non-E." All this is being *reasonable*. Status think.

When you don't value stats this way you don't catch the improvements or flubs that, piled up, wreck an org.

I recall a D of T who had high high stats. One week they plunged. He said, "Oh, of course. We graduated some students and. . ." But I rejected that and looked and looked, and lo and behold they'd changed their method of handling students! This, found and repaired, sent their stats soaring!

When you let status reasoning get into stat assignment of conditions, the org has had it!

The weekly condition assignments must be accurate. Only in that way can one maintain expansion.

Also, it's a bit mean to nag around about a rise. "But it isn't much of a rise, you're really in too low a range to have a rise count. . . ."

A rise is a rise. They at least got more. Now, better organizing, they will get more than that. Week by week it goes up.

Similarly, to discount a fall just because stats are high high high is folly. They *could* do week before last's as they did it. So what was wrong that they couldn't do it again? If they got exhausted at it week before last, they need more help, obviously. Or better organization.

Only if you use the single week can you properly, locally manage.

If you keep it up, the org will start to occupy more space, need more people, need more equipment. Actually, the area control of the org increases and stability and viability increase.

If stat declines for the week are brushed off, the org will shrink, become less stable, will demand more work by fewer and will be a burden.

When you manage by the stat, you don't go wrong. But it has to be an honest stat, and explanations that aren't the real *Why* have to be rejected.

As you work with this, all becomes revealed. And one has a total control of survival.

ADMIN KNOW-HOW SERIES 18

STATISTIC RATIONALIZATION

"Rationalizing a statistic" is a derogatory term meaning finding excuses for down statistics.

Finding excuses or reasons why a stat is down does NOT bring it up and at best is a scathing comment on the lack of foresight or initiative of the executive in charge of the area.

What is wanted is (1) prevention of stats going down and (2) quick action to bring them up.

Being reasonable about their being down should be regarded as AGREEMENT WITH THEIR BEING DOWN. Which is, of course, suppressive.

"Well, the letters out stat is down because we were paying a girl so much per letter and 'policy' stated we could not hire anyone so we fired her and that's why letters out is down."

That was an actual rationalization given in Washington, DC, for the collapse of the org last year.

To begin, there is no such "policy" and surely no policy exists to have down stats. So, here the felony is compounded by seeking to blame policy for a down stat which for sure revealed the action as a suppressive effort to rationalize (and get away with) a down stat.

The only reason stats are down, ever, is because somebody didn't push them up. All other reasons are false.

IDÉE FIXE

Some people have a METHOD of handling a down stat which is a fixed idea or cliché they use to handle *all* downstat situations in their lives.

These people are so at effect they have some *idea* sitting there "that handles" a down statistic.

"Life is like that."

"I always try my best."

"People are mean."

"It will get better."

"It was worse last year."

They KNOW it isn't any use trying to do anything about anything and that it is best just to try to get by and not be noticed — a sure route to suicide.

Instead of seeking to prevent or raise a declining stat in life, such people use some fixed idea to *explain* it.

This is a confession of being in apathy.

One can always make stats go up. Hard work. Foresight. Initiative. One can always make stats go up. That's the truth of it, and it needs no explanations.

TO EVERY STAFF MEMBER

HOW TO RAISE STATS

Here is a bit of advice that will help you raise stats.

AUDITING

Auditing is for USE.

The service being supplied by your org is auditing even when you are training auditors — for if they are well trained good auditing is furnished to the area around them.

Staff members get auditing. They furnish auditing. Staff members get trained as auditors. By training other auditors well they furnish auditing.

The admin done is done to furnish auditing and training of auditors.

The ethics put in provides an environment in which auditing is possible and in which it can be taught.

All roads lead to auditing.

Stats depend on auditing being done and being taught.

People progress from left to right on the org board to be audited or trained in auditing.

You are raising your area little by little by auditing.

Auditing is something one does. It must be done.

The HCO ES, the OES and the PES act to keep the org there and pass people through who are audited or being trained to audit.

An org is an auditing factory that also trains people to audit.

That's the basic way we will win the world — auditing.

The divisions and posts flanking tech are all auditing and training support posts that move people down the assembly line of auditing and training.

That's why I say 2:1 admin/tech ratio. All persons on staff who are not needed on admin (exceed the ratio) should be in full-time training as auditors.

Auditors are valuable. An org is valuable if it audits and trains auditors. If an org is valuable, it will get paid by the public to be there. But it is only valuable if it audits and trains auditors.

Small livingness courses, defense, policy, the OEC, promotion, all these are valuable too. But only to the degree they get people in to get audited and trained as auditors.

The field is filling up with Dianetic courses and Dianetic auditors. That is great. But it means an org has to serve them and do even more auditing and upper-level training to handle their rougher cases and to make higher-level auditors.

That's the heart of it. A 49-man org with only 3 auditors and one Supervisor will flop. In a 49-man org 17 or more should be auditors and Course Supervisors. When more than 24 of them are (1 to 1), then the admin actions under the HCO ES and PES don't get done and the line slows.

An org gets people (on any gradient) to get audited and gets people to be trained as auditors.

That gives the org purpose — for only auditing can clean up a community. That gives action. That gives income.

If an org isn't so oriented, then no manner of highly skilled management will make it go.

That's the way it is.

SOURCE

I am the source of Dianetic and Scientology tech, know-how and org form.

A staff member is the source of his stats.

I am responsible for the potential of the auditing.

An auditor is responsible for the application of the tech.

I wrote the bulletins and data sheet.

The Course Supervisor is fully and the only one responsible for getting it to the student.

When you see this as a fact, you can easily become cause — over your post, over those about you, over your stats.

You are also a living, causative being.

I have faith in you.

YOU ARE AND CAN BE CAUSE.

Love,

Ron

CONTROL OF STATISTICS

(Originally written by LRH for the *Apollo* OODs of 28 Aug. 70. Issued as an HCO PL on 5 Nov. 80.)

I think GDSes are down in some sectors because some people just don't know how to get them up. Many watch them from a spectator viewpoint. Well, it's down. Fate. It recovered. Kismet (Russian for "fate"). It's level. "Will of Allah."

The missing datum is that an org's stats are *totally* under the control of that org. An org's stats totally reflect the production and competence of the org.

Let's take a letters in stat. You (a) increase letters out, (b) you check out letter writers on getting R in the letters wholly, (c) you use CF folders always when writing a letter, (d) you increase letters out, (e) you spot-check letters going out for R and on-policy, (f) you put hard-sell, good promo out, (g) you use info packets, and (h) you get out heavy bulk mailings on-policy, (i) you offer what you can deliver, (j) you deliver what you offer. Result, letters in soars! My own letters in stat (when I sign another name) is 1 for 1. In most orgs it's about 25 percent response.

But I'll bet a lot of orgs have it explained that it's fate or "promo doesn't work" or "local public interest is low."

A success story stat is totally under control. You really use the tech and really smooth out students and cases and you get 1 success story for every completion. Then, because you have a success story, you get a re-sign-up and get a *new* completion and a *new* success story.

Major service sign-ups depend on Testing, getting DMSMH read and an HAS Course. So you test in volume as a real public service, you have an HAS or study course for the book, you teach a marvelous HAS Course. You get a sign-up for a major service. To lose one guy off the line is strictly negligence.

So my attitude toward low GDSes is about the same as you'd feel for somebody who didn't know he was driving and ran the car in a ditch on a straight road!

I don't speak from lack of knowing. Because I've done it and it's about as easy as riding an armchair.

Staffs make their own trouble. Once in Joburg they tested a whole school of kids. Why, God knows. But they did. And then did the adult test grading on them!

"You see, Josie Ann (aged 10), you are having trouble with your husband." Didn't half upset the parents. Tailor-made down stats.

Somebody hadn't checked out on WHY they were testing people. Or what they were supposed to do with them.

Orgs are being penalized solely because of lack of training and understanding and grooving in people.

Every point of neglect, every half-worn hat, spoils our reach just that much. Every action well done, small or large, extends our reach just that much.

The more you know and the better you do your job, the sooner we will make it.

BASIC STAFF HAT

HOW TO RAISE YOUR OWN STATISTICS AND PAY

The welfare and pay of an organization come from its statistics.

The statistic of the individual staff member adds up to those of others in the division and makes up the divisional statistic.

The divisional statistic added to the statistics of other divisions add up to the delivery and income of the org.

There is a statistic for the Qualifications Division (Division 5) which measures the average valuable production of the individual. This is "number of staff members divided into the gross income of the org" for the week.

Let us say this figure is £18 or $43.20, for example. Now out of that gross income must come the expenses of running the org — the rent, phone, lights, promotion, etc. This runs to about 66 percent of the gross income. This means that there would be only £6 or $14.68 for pay for each individual on an average.

Well, that's low.

But it says clearly that the production value of many individuals in the org is far too low. They either aren't working or what they are working on adds up to too little production or they aren't working on what's really useful to the org.

Good pay is composed of:

Div 1 good recruiting, training, hatting of tech and admin personnel, smooth, fast comm lines, high ethics level;

Div 2 effective promotion, publication sales, good letter registration, good, "up-to-date Central Files and Address, good registration selling;

Div 3 good income and disbursement and materiel;

Div 4 excellent, friendly public customer handling, excellent fast training, flubless processing;

Div 5 accurate Word Clearing, good org staff and auditor correction, good examination and certification;

Div 6 public relations area control, voluminous public contact work, heavy public book sales, attractive, convincing introductory demonstrations and miniature courses, active groups and active and well-paid field staff members;

Div 7 knowledge, good guidance, defense, hard work, coordination and leadership — all these add up to delivery and income.

Each one of these divisions and each department has a statistic.

Those statistics are made up of the individual statistics of the staff members.

Thus, low delivery and low pay come directly from the production on post of each individual staff member.

There is no vague "firm" that supports the staff.

The staff receives pay in proportion to what they themselves produce, each one of them.

If a staff as a group tolerates out-ethics, loafing, poor delivery and low individual stats, it will be badly paid. That's the way it is.

They not only will be badly paid but will be letting the whole show down. They are also denying their community and funds to forward progress on the continent.

It is not hard to raise one's own stats. A personal project can do it.

Read the policy letter READING STATISTICS, HCO PL 5 May 71RA II.

a. Put up a daily statistic graph for one's own production.

b. Each morning set a stat ceiling, a bit higher than an earlier highest day's output.

c. Achieve this ceiling as a target each day and try to better it.

You will become cause over your environment instead of effect.

You will find out you cause your own stats.

Begin a campaign amongst the staff to get people to do the above. You will wind up more highly paid. Of course there's always the chance that if you do this you will wind up as an executive.

EXECUTIVE SERIES 7

TARGETING OF DIVISIONAL STATISTICS AND QUOTAS

According to HCO Policy Letter of 16 Dec. 65 II, STATISTICS OF THE INT EXECUTIVE DIV, a statistic is a number or amount compared to an earlier number or amount of the same thing and refers to the quantity of work done or the value of it in money.

In a Scientology organization every division, every department and every post has an assigned statistic which represents its work or production. Also in a Scientology organization there is always some individual assigned as responsible for the work or production of every division, every department and every post.

A staff member is required to report weekly the statistic of every post for which he or she is responsible. To do this the staff member has to keep a daily running record of such statistics; therefore, it is possible to compare the statistic of one day to the statistic of the day before, to predict by computation the projected statistic for the week as compared to the already reported statistic of the past week and to cause actions to occur which lead to the increase of the daily statistic and to the ultimate increase of the weekly statistic.

That the individual is directly responsible for being able to affect and increase such statistics is easily demonstrable — if a Letter Registrar spends most of her time wiping spilled coffee off Central Files folders rather than writing real letters which communicate and elicit responses for service, then her statistic will certainly drop.

With the advent of HCO PL of 31 Jan. 72, Data Series 22, THE WHY IS GOD, there is no justifiable reason left for anyone as to why statistics cannot be raised. Therefore the reason for so few people directed into the organization for Registrar interview will mean exactly and only that the Letter Registrar is not producing.

Having, therefore, defined what a statistic is and having firmly established that the individual is directly responsible for a statistic and so can increase it, the subject of how targeting and quotas relate to statistics can now be covered.

Quota is defined as a production assignment. It would be the number assigned to whatever is produced. As an example, the Director of Training is given the quota of 45 letters to produce per day or 225 letters per week as part of his standard promotional actions.

Targeting is defined as establishing what action or actions should be undertaken in order to achieve a desired objective. In the case of the Director of Training it

would be as simple as obtaining from Central Files the necessary 45 folders, writing the required number of letters, returning the folders to Central Files and determining to remain on post daily until this was accomplished no matter what (known as keeping his own ethics IN).

Any quota can be targeted for increase daily and weekly. For instance, the Director of Training can establish a quota of 5 extra letters per day over that of the day before. This would mean he would write 45 letters one day, 50 letters the next day, 55 letters the day after that, and so on.

In highly successful organizations the practice of setting quotas and targeting has been in use for some time.

The product officer (or in the absence of the product officer, the Executive Director) establishes with the divisional secretaries exactly what quotas will be for the weekly divisional statistics in order to increase them over those of the previous week and HOW this will be done. The divisional secretaries do the same with their department directors, the directors with their section in-charges and the section in-charges with the personnel under them.

The quotas established are real and are always higher than those of the week before, with the idea in mind of creating a continually rising statistical graph. If this is done, the statistics rise, the organization expands, and more personnel are recruited, apprenticed and trained on posts so that more production can occur to keep the statistics rising.

The targeting of actions necessary to accomplish the quotas are definite, conform to policy and *can* be *done*. Do not permit nebulous generalities to occur on the targeting cycle as nothing will be accomplished and no quotas achieved.

All staff must keep a daily graph of their statistic and an accumulating graph for the week, both on the same graph sheet. An accumulating graph merely means you keep adding one day's statistic to those of the day before. In the example of the Director of Training it would be 45 letters Monday, 95 letters Tuesday (the 45 letters of Monday added to the 50 letters of Tuesday and so on). Daily the persons responsible check these graphs with their juniors. From these graphs it is easy to see whether the statistics are rising, whether quotas are being met and whether the statistic will be higher than that of the prior week.

By such means targets can be unbugged, new targets established and new quotas projected; or hatting and more establishing can occur, or ethics can be put in where the individual appears incapable of keeping his own in (as in the example of the Letter Registrar who spends more time going to the canteen for coffee than on post).

A set time can be determined *daily* as to when each staff member should have his graph posted for inspection — probably 2:00 P.M. would be best as this is the time established as when the week starts and ends, from the Thursday of one week to the Thursday of the following week. Seniors can then easily make their inspection without being delayed while some staff member computes and posts his graph.

By setting quotas and targeting towards their production, get your statistics rising.

HCO PL	24 Feb. 72 I	INJUSTICE

Throughout the ages, man has struggled with the subjects of right and wrong and ethics and justice.

The dictionary defines *ethics* as "the study of the general nature of morals and of the specific moral choices to be made by the individual in his relationship with others."

The same dictionary defines *justice* as "conformity to moral right, or to reason, truth or fact," or "the administration of law."

As you can see, these terms have become confused.

All philosophies from time immemorial have involved themselves with these subjects. And they never solved them.

That they have been solved in Dianetics and Scientology is a breakthrough of magnitude. The solution lay, first, in their *separation.* From there it could go forward to a workable technology for each.

ETHICS consists simply of the actions an individual takes on himself. It is a personal thing. When one is ethical or "has his ethics in," it is by his own determinism and is done by himself.

JUSTICE is the action taken on the individual by the group when he fails to take these actions himself.

HISTORY

These subjects are, actually, the basis of all philosophy. But in any study of the history of philosophy it is plain that they have puzzled philosophers for a long time.

The early Greek followers of Pythagoras (Greek philosopher of the sixth century B.C.) tried to apply their mathematical theories to the subject of human conduct and ethics. Some time later, Socrates (Greek philosopher and teacher, 470?–399 B.C.) tackled the subject. He demonstrated that all those who were claiming to show people how to live were unable to defend their views or even define the terms they were using. He argued that we must know what courage, and justice, law and government are before we can be brave or good citizens or just or good rulers. This was fine but he then refused to provide definitions. He said that all sin was ignorance but did not take the necessary actions to rid man of his ignorance.

Socrates' pupil, Plato (Greek philosopher, 427?–347 B.C.) adhered to his master's theories but insisted that these definitions could only be defined by pure reason. This meant that one had to isolate oneself from life in some ivory tower and figure it all out — not very useful to the man in the street.

Aristotle (Greek philosopher, 384–322 B.C.) also got involved with ethics. He explained unethical behavior by saying that man's rationality became overruled by his desire.

This chain continued down the ages. Philosopher after philosopher tried to resolve the subjects of ethics and justice.

Unfortunately, until now, there has been no workable solution, as evidenced by the declining ethical level of society.

So you see it is no small breakthrough that has been made in this subject in the last 30 years or so. We have defined the terms, which Socrates omitted to do, and we have a workable technology that anyone can use to help get himself out of the mud. The natural laws behind this subject have been found and made available for all to use.

Ethics is so native to the individual that when it goes off the rails he will always seek to overcome his own lack of ethics.

He knows he has an ethics blind spot the moment he develops it. At that moment he starts trying to put ethics in on himself and, to the degree that he can envision long-term survival concepts, he may be successful, even though lacking the actual tech of ethics.

All too often, however, the bank is triggered by an out-ethics situation and, if the individual has no tech with which to handle it analytically, his "handling" is to mock up motivators. In other words, he tends to believe or pretend that something was done to him that prompted or justified his out-ethics action, and at that point he starts downhill.

It is *not* his attempt to get his ethics in that does him in. It is the automaticity of the bank which kicks in on him and his use of a bank mechanism at this point which sends him down the chute. When that happens, nobody puts him down the chute harder, really, than he does himself.

And, once on the way down, without the basic technology of ethics, he has no way of climbing back up the chute — he just caves himself in directly and deliberately. And even though he has a lot of complexities in his life, and he has other people doing him in, it all starts with his lack of knowledge of the technology of ethics.

This, basically, is one of the primary tools he uses to dig himself out.

BASIC NATURE OF MAN

No matter how criminal an individual is, he will be trying, one way or another, to put ethics in on himself.

This explains why Hitler invited the world to destroy Germany. He had the whole war won before September 1939, before he declared war. The allies were giving him everything he wanted; he had one of the finest intelligence organizations that ever walked; he had Germany well on the way to getting her colonies back and the idiot declared war! And he just caved himself and Germany right in. His brilliance was going at a mad rate in one direction and his native sense of ethics was causing him to cave himself in at a mad rate in the other direction.

The individual who lacks any ethics technology is unable to put in ethics on himself and restrain himself from contrasurvival actions, so he caves himself in. And the individual is not going to come alive unless he gets hold of the basic tech of ethics and applies it to himself and others. He may find it a little unpalatable at first, but when you're dying of malaria you don't usually complain about the taste of the quinine: you may not like it, but you sure drink it.

JUSTICE

When the individual fails to put in his own ethics, the group takes action against him and this is called justice.

I have found that man cannot be trusted with justice. The truth is, man cannot really be trusted with "punishment." With it he does not really seek discipline; he wreaks injustice. He dramatizes his inability to get his own ethics in by trying to get others to get their ethics in: I invite you to examine what laughingly passes for "justice" in our current society. Many governments are so touchy about their divine rightness in judicial matters that you hardly open your mouth before they burst into uncontrolled violence. Getting into police hands is a catastrophe in its own right in many places, even when one is merely the plaintiff, much less the accused. Thus, social disturbance is at maximum in such areas.

When the tech of ethics isn't known, justice becomes an end-all in itself. And that just degenerates into a sadism. Governments, because they don't understand ethics, have "ethics committees" but these are all worded in the framework of justice. They are even violating the derivation of the word *ethics.* They write justice over into ethics continuously with medical ethics committees, psychological ethics committees, congressional committees, etc. These are all on the basis of justice because they don't really know what ethics is. They call it ethics but they initiate justice actions and they punish people and make it harder for them to get their own ethics in.

Proper justice is expected and has definite use. When a state of discipline does not exist, the whole group caves in. It has been noted continually that the failure of a group began with a lack of or loss of discipline. Without it the group and its members die. But you must understand ethics *and* justice.

The individual can be trusted with ethics, and when he is taught to put his own ethics in, justice no longer becomes the all-important subject that it is made out to be.

BREAKTHROUGH

The breakthrough in Scientology is that we *do* have the basic technology of ethics. For the first time man *can* learn how to put his own ethics in and climb back up the chute.

This is a brand-new discovery; before Scientology it had never before seen the light of day, anywhere. It marks a turning point in the history of philosophy. The individual can learn this technology, learn to apply it to his life and can then put his own ethics in, change conditions and start heading upwards toward survival under his own steam.

I hope you will learn to use this technology very well for your own sake, for the sake of those around you and for the sake of the future of this culture as a whole.

HCO POLICY LETTER OF 9 JULY 1980R
REVISED 25 MARCH 1989

REMIMEO
ALL HATS

ETHICS, JUSTICE AND THE DYNAMICS

Every being has an infinite ability to survive. How well he accomplishes this is dependent on how well he uses ethics on his dynamics.

Ethics tech exists for the individual.

It exists to give the individual a way to increase his survival and thus free himself from the dwindling spiral of the current culture.

ETHICS

The whole subject of ethics is one which, with the society in its current state, has become almost lost.

Ethics actually consists of rationality toward the highest level of survival for the individual, the future race, the group, mankind and the other dynamics taken up collectively.

Ethics are reason.

Man's greatest weapon is his reason.

The highest ethic level would be long-term survival concepts with minimal destruction, along all of the dynamics.

An optimum solution to any problem would be that solution which brought the greatest benefits to the greatest number of dynamics. The poorest solution would be that solution which brought the greatest harm to the most number of dynamics.

Activities which brought minimal survival to a lesser number of dynamics and damaged the survival of a greater number of dynamics could not be considered rational activities. One of the reasons that this society is dying and so forth is that it's gone too far out-ethics. Reasonable conduct and optimum solutions have ceased to be used to such an extent that the society is on the way out.

By out-ethics we mean an action or situation in which an individual is involved, or something the individual does, which is contrary to the ideals, best interests and survival of his dynamics.

For a man to develop a weapon capable of destroying all life on this planet (as has been done with atomic weapons and certain drugs designed by the US Army) and place it in the hands of the criminally insane politicians is obviously not a survival act.

For the government to actively invite and create inflation to a point where a depression is a real threat to the individuals of this society is a nonsurvival action to say the least.

This gets so batty that in one of the South Pacific societies infanticide became a ruling passion. There was a limited supply of food and they wanted to keep down the birthrate. They began using abortion, and if this didn't work, they killed the children. Their second dynamic folded up. That society has almost disappeared.

These are acts calculated to be destructive and harmful to the survival of the people of the society.

Ethics are the actions an individual takes on himself in order to accomplish optimum survival for himself and others on all dynamics. Ethical actions are survival actions. Without a use of ethics we will not survive.

We know that the dynamic principle of existence is ***Survive!***

At first glance that may seem too basic. It may seem too simple. When one thinks of survival, one is apt to make the error of thinking in terms of "barest necessity." That is not survival. Survival is a graduated scale with infinity or immortality at the top and death and pain at the bottom.

GOOD AND EVIL, RIGHT AND WRONG

Years ago I discovered and proved that man is basically good. This means that the basic personality and the basic intentions of the individual, toward himself and others, are good.

When a person finds himself committing too many harmful acts against the dynamics he becomes his own executioner. This gives us the proof that man is basically good. When he finds himself committing too many evils, then, causatively, unconsciously or unwittingly, man puts ethics in on himself by destroying himself; and he does himself in without assistance from anybody else.

This is why the criminal leaves clues on the scene, why people develop strange incapacitating illnesses and why they cause themselves accidents and even decide to have an accident. When they violate their own ethics, they begin to decay. They do this all on their own, without anybody else doing anything.

The criminal who leaves clues behind is doing so in hopes that someone will come along to stop him from continuing to harm others. He is *basically* good and does not want to harm others; and in the absence of an ability to stop himself outright, he attempts to put ethics in on himself by getting thrown in prison where he will no longer be able to commit crimes.

Similarly, the person who incapacitates himself with illness or gets himself in an accident is putting ethics in on himself by lessening his ability to harm and maybe even by totally removing himself from the environment that he has been harming. When he has evil intentions, when he is being "intentionally evil," he still has an urge to also stop himself. He seeks to suppress them, and when he cannot do so directly, he does so indirectly. Evil, illness and decay often go hand in hand.

Man is basically good. He is basically well intentioned. He does not want to harm himself or others. When an individual does harm the dynamics, he will destroy himself in an effort to save those dynamics. This can be proven and has been proven in innumerable cases. It is this fact which evidences that man is basically good.

On this basis we have the concepts of right and wrong.

When we speak of ethics we are talking about right and wrong conduct. We are talking about good and evil.

Good can be considered to be any constructive survival action. It happens that no construction can take place without some small destruction, just as the tenement must be torn down to make room for the new apartment building.

To be good, something must contribute to the individual, to his family, his children, his group, mankind or life. To be good, a thing must contain construction which outweighs the destruction it contains. A new cure which saves a hundred lives and kills one is an acceptable cure.

Good is survival. Good is being more right than one is wrong. Good is being more successful than one is unsuccessful, along constructive lines.

Things are good which complement the survival of the individual, his family, children, group, mankind, life and MEST.

Acts are good which are more beneficial than destructive along these dynamics.

Evil is the opposite of good, and is anything which is destructive more than it is constructive along any of the various dynamics. A thing which does more destruction than construction is evil from the viewpoint of the individual, the future race, group, species, life or MEST that it destroys.

When an act is more destructive than constructive, it is evil. It is out-ethics. When an act assists succumbing more than it assists survival, it is an evil act in the proportion that it destroys.

Good, bluntly, is survival. Ethical conduct is survival. Evil conduct is nonsurvival. Construction is good when it promotes survival. Construction is evil when it inhibits survival. Destruction is good when it enhances survival.

An act or conclusion is as right as it promotes the survival of the individual, future race, group, mankind or life making the conclusion. To be entirely right would be to survive to infinity.

An act or conclusion is wrong to the degree that it is nonsurvival to the individual, future race, group, species or life responsible for doing the act or making the conclusion. The most wrong a person can be on the first dynamic is dead.

The individual or group which is, on the average, more right than wrong (since these terms are not absolutes, by far) should survive. An individual who, on the average, is more wrong than right will succumb.

While there could be no absolute right or absolute wrong, a right action would depend upon its assisting the survival of the dynamics immediately concerned; a wrong action would impede the survival of the dynamics concerned.

Let us look at how these concepts of right and wrong fit into our current society.

This is a dying society. Ethics have gone so far out and are so little understood that this culture is headed for succumb at a dangerous rate.

A person is not going to come alive, this society is not going to survive, unless ethics tech is gotten hold of and applied.

When we look at Vietnam, inflation, the oil crisis, corruption of government, war, crime, insanity, drugs, sexual promiscuity, etc., we are looking at a culture on the way out. This is a direct result of individuals failing to apply ethics to their dynamics.

It actually starts with individual ethics.

Dishonest conduct is nonsurvival. Anything is unreasonable or evil which brings about the destruction of individuals, groups, or inhibits the future of the race.

The keeping of one's word, when it has been sacredly pledged, is an act of survival, since one is then trusted, but only so long as he keeps his word.

To the weak, to the cowardly, to the reprehensibly irrational, dishonesty and underhanded dealings, the harming of others and the blighting of their hopes seem to be the only way of conducting life.

Unethical conduct is actually the conduct of destruction and fear. Lies are told because one is afraid of the consequences should one tell the truth. Destructive acts are usually done out of fear. Thus, the liar is inevitably a coward and the coward inevitably a liar.

The sexually promiscuous woman, the man who breaks faith with his friend, the covetous pervert are all dealing in such nonsurvival terms that degradation and unhappiness are part and parcel of their existence.

It probably seems quite normal and perfectly all right to some to live in a highly degraded society full of criminals, drugs, war and insanity, where we are in constant threat of the total annihilation of life on this planet.

Well, let me say that this is not normal and it is not necessary. It *is* possible for individuals to lead happy productive lives without having to worry about whether or not they are going to be robbed if they walk outside their door or whether Russia

is going to declare war on the United States. It is a matter of ethics. It is simply a matter of individuals applying ethics to their lives and having their dynamics in communication and surviving.

MORALS

Now, we have ethics as survival. But what of such things as morals, ideals, love? Don't these things go above "mere survival"? No, they do not.

Romantic novels and television teach us that the hero always wins and that good always triumphs. But it appears that the hero doesn't always win and that good does not always triumph. On a shorter view we can see villainy triumphing all about us. The truth of the matter is that the villainy is sooner or later going to lose. One cannot go through life victimizing one's fellow beings and wind up anything but trapped — the victim himself.

However, one doesn't observe this in the common course of life. One sees the villains succeeding everywhere, evidently amassing money, cutting their brother's throat, receiving the fruits of the courts and coming to rule over men.

Without looking at the final consequence of this, which is there just as certainly as the sun rises and sets, one begins to believe that evil triumphs whereas one has been taught that only good triumphs. This can cause the person himself to have a failure and can actually cause his downfall.

As for ideals, as for honesty, as for one's love of one's fellow man, one cannot find good survival for one or for many where these things are absent.

The criminal does not survive well. The average criminal spends the majority of his adult years caged like some wild beast and guarded from escape by the guns of good marksmen.

A man who is known to be honest is awarded survival — good jobs, good friends. And the man who has his ideals, no matter how thoroughly he may be persuaded to desert them, survives well only so long as he is true to those ideals.

Have you ever seen a doctor who, for the sake of personal gain, begins to secretly attend criminals or peddle dope? That doctor does not survive long after his ideals are laid aside.

Ideals, morals, ethics, all fall within this understanding of survival. One survives so long as he is true to himself, his family, his friends, the laws of the universe. When he fails in any respect, his survival is cut down.

In the modern dictionary we find that *ethics* are defined as "morals" and *morals* are defined as "ethics." These two words are *not* interchangeable.

Morals should be defined as a code of good conduct laid down out of the experience of the race to serve as a uniform yardstick for the conduct of individuals and groups.

Morals are actually laws.

The origin of a moral code comes about when it is discovered through actual experience that some act is more nonsurvival than prosurvival. The prohibition of this act then enters into the customs of the people and may eventually become a law.

In the absence of extended reasoning powers, moral codes, so long as they provide better survival for their group, are a vital and necessary part of any culture.

Morals, however, become burdensome and protested against when they become outmoded. And although a revolt against morals may have as its stated target the fact that the code no longer is as applicable as it once was, revolts against moral codes generally occur because individuals of the group or the group itself has gone out-ethics to a point where it wishes to practice license against these moral codes, not because the codes themselves are unreasonable.

If a moral code were thoroughly reasonable, it could, at the same time, be considered thoroughly ethical. But only at this highest level could the two be called the same.

The ultimate in reason is the ultimate in survival.

Ethical conduct includes the adherence to the moral codes of the society in which we live.

JUSTICE

When an individual fails to apply ethics to himself and fails to follow the morals of the group, justice enters in.

It is not realized generally that the criminal is not only antisocial but is also antiself.

A person who is out-ethics, who has his dynamics out of communication, is a potential or active criminal in that crimes against the prosurvival actions of others are continually perpetrated. Crime might be defined as the reduction of the survival level along any one of the eight dynamics.

Justice is used when the individual's own out-ethics and destructive behavior begin to impinge too heavily on others.

In a society run by criminals and controlled by incompetent police, the citizens reactively identify any justice action or symbol with oppression.

But we have a society full of people who do not apply ethics to themselves, and in the absence of true ethics one cannot live with others and life becomes miserable. Therefore we have justice, which was developed to protect the innocent and decent.

When an individual fails to apply ethics to himself and follow the moral codes, the society takes justice action against him.

Justice, although it unfortunately cannot be trusted in the hands of man, has as its basic intention and purpose the survival and welfare of those it serves. Justice, however, would not be needed when you have individuals who are sufficiently sane and in-ethics that they do not attempt to blunt others' survival.

Justice would be used until a person's own ethics render him fit company for his fellows.

In the past the subject of ethics has not really been mentioned very much. Justice was however. Justice systems have long been used as a substitute for ethics systems. But when you try to substitute ethics for justice, you get into trouble.

Man has not had an actual workable way of applying ethics to himself. The subjects of ethics and justice have been terribly aberrated.

We now have the tech of ethics and justice straightened out. This is the only road out on the subject that man has.

People have been trying to put ethics in on themselves for eons without knowing how. Ethics evolved with the individual's attempts at continued survival.

When a person does something which is out-ethics (harms his and others' survival), he tries to right this wrong. Usually he just winds up caving himself in. (Caved-in means mental and/or physical collapse to the extent that the individual cannot function causatively.)

They cave themselves in because, in an effort to restrain themselves and stop themselves from committing more harmful acts, they start withdrawing and withholding themselves from the area they have harmed. A person who does this becomes less and less able to influence his dynamics and thus becomes a victim of them. It is noted here that one must have done to other dynamics those things which other dynamics now seem to have the power to do to him. Therefore, he is in a position to be injured and he loses control. He can become, in fact, a zero of influence and a vacuum for trouble.

This comes about because the person does not have the basic tech of ethics. It has never been explained to him. No one ever told him how he could get out of the hole he's gotten himself into. This tech has remained utterly unknown.

So he has gone down the chute.

Ethics is one of the primary tools a person uses to dig himself out with.

Whether he knows how to or not, every person will try to dig himself out. It doesn't matter who he is or what he's done, he's going to be trying to put ethics in on himself, one way or the other.

Even with Hitler and Napoleon there were attempts at self-restraint. It's interesting in looking at the lives of these people how thoroughly they worked at self-destruction. The self-destruction is their attempt at applying ethics to themselves. They worked at this self-destruction on several dynamics. They can't put ethics in on themselves; they can't restrain themselves from doing these harmful acts, so they punish themselves. They realize they are criminals and cave themselves in.

All beings are basically good and are attempting to survive as best they can. They are attempting to put ethics in on their dynamics.

Ethics and justice were developed and exist to aid an individual in his urge towards survival. They exist to keep the dynamics in communication. The tech of ethics is the actual tech of survival.

An individual's dynamics will be in communication to the degree that he is applying ethics to his life. If one knows and applies ethics tech to his life, he can keep the dynamics in communication and continuously increase his survival.

That is why ethics exists, so that we can survive like we want to survive, by having our dynamics in communication.

Ethics are not to be confused with justice. Justice is used only after a failure of the individual to use ethics on himself. With personal ethics in across the dynamics, third dynamic justice disappears as a primary concern. That's where you get a world without crime.

A man who steals from his employer has his third dynamic out of communication with his first dynamic. He is headed for a prison sentence, or unemployment at best, which is not what one would call optimum survival on the first and second dynamic (not to mention the rest of them). He probably believes he is enhancing his survival by stealing, yet if he knew the tech of ethics he would realize he is harming himself as well as others and will only end up further down the chute.

The man who lies, the woman who cheats on her husband, the teenager who takes drugs, the politician who is involved in dishonest dealings, all are cutting their own throats. They are harming their own survival by having their dynamics out of communication and not applying ethics to their lives.

It may come as a surprise to you, but a clean heart and clean hands are the only way to achieve happiness and survival. The criminal will never make it unless he reforms; the liar will never be happy or satisfied with himself until he begins dealing in truth.

The optimum solution to any problem presented by life would be that which leads to increased survival on the majority of the dynamics.

Thus we see that a knowledge of ethics is necessary to survival.

The knowledge and application of ethics is the way out of the trap of degradation and pain.

We can, each and every one of us, achieve happiness and optimum survival for ourselves and others by using ethics tech.

WHAT HAPPENS IF THE DYNAMICS GO OUT–ETHICS

It is important to remember that these dynamics comprise life. They do not operate singly without interaction with the other dynamics.

Life is a group effort. None survive alone.

If one dynamic goes out-ethics, it goes out of communication with (to a greater or lesser degree) the other dynamics. In order to remain in communication, the dynamics must remain in-ethics.

Let us take the example of a woman who has totally withdrawn from the third dynamic. She won't have anything to do with any groups or the people of her town. She has no friends. She stays locked in her house all day thinking (with some misguided idea of independence or individuality) that she is surviving better on her first dynamic. Actually she is quite unhappy and lonely and lives in fear of other human beings. To ease her misery and boredom, she begins to take sedatives and tranquilizers which she becomes addicted to and then starts drinking alcohol as well.

She is busy "solving" her dilemma with further destructive actions. You can see how she has driven her first, second and third dynamics out of communication. She is actively destroying her survival on her dynamics. These actions are out-ethics in the extreme, and it would not be surprising if she eventually killed herself with the deadly combination of sedatives and alcohol.

Or let us take the man who is committing destructive acts on the job. These acts need not be large; they can be as simple as showing up late for work, not doing as professional a job on each product as he is capable of, damaging equipment or hiding things from his employer. He does not have to be overtly engaged in the total destruction of the company to know that he is committing harmful acts.

Now, this man finds himself sliding more and more out-ethics as time goes along. He feels he must hide more and more and he does not know how to stop this downward spiral. Very likely it never even occurred to him that he could stop it. He is lacking the tech of ethics. He probably doesn't realize that his actions are driving his dynamics out of communication.

This may affect his other dynamics in various ways. He will probably be a bit miserable, and since he is basically good, he will feel guilt. He goes home at night and his wife says cheerily, "How was your day?" and he cringes a little and feels worse. He starts drinking to numb the misery. He is out of communication with his family. He is out of communication on his job. His performance at work worsens. He begins to neglect himself and his belongings. He no longer gets joy out of life. His happy and satisfying life slips away from him. Because he does not know and apply ethics tech to his life and his dynamics, the situation goes quite out of his control. He has unwittingly become the effect of his own out-ethics. Unless he gets his life straightened out by using ethics, he will undoubtedly die a miserable man.

Now I ask you, what kind of life is that? Unfortunately, it is all too common in our current times.

A person cannot go out-ethics on a dynamic without it having disastrous consequences on his other dynamics.

It is really quite tragic, the tragedy being compounded by the fact that it is so unnecessary. If man only knew the simple tech of ethics, he could achieve for himself the self-respect, personal satisfaction and success that he only believes himself capable of dreaming of, not attaining.

Man is seeking survival. Survival is measured in pleasure. That means, to most men, happiness, self-respect, the personal satisfaction of a job well done and success. A man may have money, he may have a lot of personal belongings, etc., but he will not be happy unless he actually has his ethics in and knows he came by these things honestly. These rich political and financial criminals are not happy; they may be envied by the common man for their wealth, but they are very unhappy people who more often than not come to grief eventually through drug or alcohol addiction, suicide or some other means of self-destruction.

Let us look at the all-too-common current occurrence of out-ethics on the second dynamic. This is generally thought to be perfectly acceptable behavior.

It is easy to see how second dynamic out-ethics affects the other dynamics.

Let us say we have a young woman who is somewhat happily married and decides to have an affair with her boss, who happens to be a good friend of her husband. This is quite obviously out-ethics, as well as against the law, although an amazing number of people would find this sort of behavior acceptable or mildly objectionable at most.

This is quite a destructive act, however. She will suffer from guilt; she will feel deceitful and unhappy because she knows she has committed a bad act against her husband. Her relationship with him will certainly suffer and since her boss is experiencing much the same thing in his home, she and her boss will begin to feel bad towards each other, as they begin to target each other for their misfortune. Their dynamics end up quite messed up and out of communication. She will feel unhappy on her first dynamic as she has abandoned her own moral code. Her second dynamic will be out of communication and she may even begin to find fault with and dislike her husband. The situation at work is strained as she is now out of communication with her boss and her fellow workers. Her boss has ruined his relationship and friendship with her husband. She is so embroiled in these three dynamics that they go totally out of communication with her fourth, fifth and sixth dynamics. This is all the result of ethics going out on a single dynamic.

The repercussions spread insidiously to all the dynamics.

Our survival is assured only by our knowledge and application of ethics to our dynamics in order to keep them in communication.

Through ethics we can achieve survival and happiness for ourselves and for planet Earth.

MISSION HOLDERS

HONEST PEOPLE HAVE RIGHTS, TOO

(Originally issued as an HCO Bulletin same date, same title)

After you have achieved a high level of ability, you will be the first to insist upon your rights to live with honest people.

When you know the technology of the mind, you know that it is a mistake to use "individual rights" and "freedom" as arguments to protect those who would only destroy.

Individual rights were not originated to protect criminals but to bring freedom to honest men. Into this area of protection then dived those who needed "freedom" and "individual liberty" to cover their own questionable activities.

Freedom is for honest people. No man who is not himself honest can be free — he is his own trap. When his own deeds cannot be disclosed then he is a prisoner; he must withhold himself from his fellows and is a slave to his own conscience. Freedom must be deserved before any freedom is possible.

To protect dishonest people is to condemn them to their own hells. By making "individual rights" a synonym for "protect the criminal," one helps bring about a slave state for all; for where "individual liberty" is abused, an impatience with it arises which at length sweeps us all away. The targets of all disciplinary laws are the few who err. Such laws unfortunately also injure and restrict those who do not err. If all were honest, there would be no disciplinary threats.

There is only one way out for a dishonest person — facing up to his own responsibilities in the society and putting himself back into communication with his fellow man, his family, the world at large. By seeking to invoke his "individual rights" to protect himself from an examination of his deeds, he reduces just that much the future of individual liberty, for he himself is not free. Yet he infects others who are honest by using *their* right to freedom to protect himself.

Uneasy lies the head that wears a guilty conscience. And it will lie no more easily by seeking to protect misdeeds by pleas of "freedom means that you must never look at me." The right of a person to survive is directly related to his honesty.

Freedom for man does not mean freedom to injure man. Freedom of speech does not mean freedom to harm by lies.

Man cannot be free while there are those amongst him who are slaves to their own terrors.

The mission of a techno-space society is to subordinate the individual and control him, by economic and political duress. The only casualty in a machine age is the individual and his freedom.

To preserve that freedom one must not permit men to hide their evil intentions under the protection of that freedom. To be free a man must be honest with himself and with his fellows. If a man uses his own honesty to protest the unmasking of dishonesty, then that man is an enemy of his own freedom.

We can stand in the sun only so long as we do not let the deeds of others bring the darkness.

Freedom is for honest men. Individual liberty exists only for those who have the ability to be free.

Today in Scientology we know the jailer — the person himself. And we can restore the right to stand in the sun by eradicating the evil men do to themselves.

So do not say that an investigation of a person or the past is a step toward slavery. For in Scientology such a step is the first step toward freeing a man from the guilt of self.

Were it the intention of the Scientologist to punish the guilty, then and only then would a look into the past of another be wrong.

But we are not police. Our look is the first step toward unlocking the doors — for they are all barred from *within*.

Who would punish when he could salvage? Only a madman would break a wanted object he could repair — and we are not mad.

The individual must not die in this machine age — rights or no rights. The criminal and madman must not triumph with their new-found tools of destruction.

The least free person is the person who cannot reveal his own acts and who protests the revelation of the improper acts of others. On such people will be built a future political slavery where we all have numbers — and our guilt — unless we act.

It is fascinating that blackmail and punishment are the keynotes of all dark operations. What would happen if these two commodities no longer existed? What would happen if all men were free enough to speak? Then and only then would you have freedom.

On the day when we can fully trust each other, there will be peace on Earth.

Don't stand in the road of that freedom. Be free, yourself.

JUSTIFICATION

When a person has committed an overt act and then withholds it, he or she usually employs the social mechanism of justification.

We have all heard people attempt to justify their actions and all of us have known instinctively that justification was tantamount to a confession of guilt. But not until now have we understood the exact mechanism behind justification.

Short of Scientology auditing there was no means by which a person could relieve himself of consciousness of having done an overt act except to try to *lessen the overt.*

Some churches used a mechanism of confession. This was a limited effort to relieve a person of the pressure of his overt acts. Later the mechanism of confession was employed as a kind of blackmail by which increased contribution could be obtained from the person confessing. Factually this is a limited mechanism to such an extent that it can be extremely dangerous. Religious confession does not carry with it any real stress of responsibility for the individual but on the contrary seeks to lay responsibility at the door of the Divinity — a sort of blasphemy in itself. I have no ax to grind here with religion. Religion as religion is fairly natural. But psychotherapy must be in itself a completed fact or, as we all know, it can become a dangerous fact. That's why we flatten engrams and processes. Confession to be nondangerous and effective must be accompanied by a full acceptance of responsibility. All overt acts are the product of irresponsibility on one or more of the dynamics.

Withholds are a sort of overt act in themselves but have a different source. Oddly enough we have just proven conclusively that man is basically good — a fact which flies in the teeth of old religious beliefs that man is basically evil. Man is good to such an extent that when he realizes he is being very dangerous and in error he seeks to minimize his power and if that doesn't work and he still finds himself committing overt acts he then seeks to dispose of himself either by leaving or by getting caught and executed. Without this computation police would be powerless to detect crime — the criminal always assists himself to be caught. Why police punish the

caught criminal is the mystery. The caught criminal wants to be rendered less harmful to the society and wants rehabilitation. Well, if this is true then why does he not unburden himself? The fact is this: unburdening is considered by him to be an overt act. People withhold overt acts because they conceive that telling them would be another overt act. It is as though thetans were trying to absorb and hold out of sight all the evil of the world. This is wrongheaded. By withholding overt acts these are kept afloat in the universe and are themselves as withholds entirely the cause of continued evil. Man is basically good but he could not attain expression of this until now. Nobody but the individual could die for his own sins — to arrange things otherwise was to keep man in chains.

In view of these mechanisms, when the burden became too great, man was driven to another mechanism — the effort to lessen the size and pressure of the overt. He or she could only do this by attempting to reduce the size and repute of the terminal. Hence not-isness. Hence when a man or a woman has done an overt act there usually follows an effort to reduce the goodness or importance of the target of the overt. Hence the husband who betrays his wife must then state that the wife was no good in some way. Thus the wife who betrayed her husband had to reduce the husband to reduce the overt. This works on all dynamics. In this light most criticism is justification of having done an overt.

This does not say that all things are right and that no criticism anywhere is ever merited. Man is not happy. He is faced with total destruction unless we toughen up our postulates. And the overt act mechanism is simply a sordid game condition man has slipped into without knowing where he was going. So there are rightnesses and wrongnesses in conduct and society and life at large, but random, carping 1.1 criticism when not borne out in fact is only an effort to reduce the size of the target of the overt so that one can live (he hopes) with the overt. Of course to criticize unjustly and lower repute is itself an overt act and so this mechanism is not in fact workable.

Here we have the source of the dwindling spiral. One commits overt acts unwittingly. He seeks to justify them by finding fault or displacing blame. This leads him into further overts against the same terminals which leads to a degradation of himself and sometimes those terminals.

Scientologists have been completely right in objecting to the idea of punishment. Punishment is just another worsening of the overt sequence and degrades the punisher. But people who are guilty of overts demand punishment. They use it to help restrain themselves from (they hope) further violation of the dynamics. It is the victim who demands punishment and it is a wrongheaded society that awards it. People get right down and beg to be executed. And when you don't oblige, the woman scorned is sweet-tempered by comparison. I ought to know — I have more people try to elect me an executioner than you would care to examine. And many a preclear who sits down in your pc chair for a session is there just to be executed and when you insist on making such a pc better, why you've had it, for they start on this desire for execution as a new overt chain and seek to justify it by telling people you're a bad auditor.

When you hear scathing and brutal criticism of someone which sounds just a bit strained, know that you have your eye on overts against that criticized person, and next chance you get pull the overts and remove just that much evil from the world.

And remember, by the by, that if you make your pc write these overts and withholds down and sign them and send them off to me he'll be less reluctant to hold on to the shreds of them—it makes for a further blow of overts and less blow of pc. And always run responsibility on a pc when he unloads a lot of overts or just one.

We have our hands here on the mechanism that makes this a crazy universe so let's just go for broke on it and play it all the way out.

REMIMEO

RESPONSIBILITY

Note: This policy is extracted verbatim from HCOB 4 Feb. 60 I, THEORY OF RESPONSIBILITY PROCESSING. Certain paragraphs have been omitted where they applied specifically to auditing.

In order to make up one's mind to be responsible for things it is necessary to get over the idea that one is being forced into responsibility.

The power of choice is still senior to responsibility. What one does against his will operates as an overt act against oneself. But where one's will to do has deteriorated to unwillingness to do anything, lack of will is itself an aberration.

There is nothing wrong, basically, with doingness. But where one is doing something he is unwilling to do, aberration results. One does, in such a case, while unwilling to do. The result is doingness without responsibility.

In the decline of any state into slavery as in Greece, or into economic strangulation of the individual as in our modern Western society, doingness is more and more enforced and willingness to do is less and less in evidence. At length people are doing without being responsible. From this results bad workmanship, crime, indigence and its necessities for welfarism. At length there are so many people who are unwilling to do that the few left have to take the full burden of the society upon their backs. Where high unwillingness to do exists, democracy is then impossible, for it but votes for the biggest handout.

Where high unwillingness to do exists then we have a constant restimulation of all the things one is really unwilling to do such as overt acts. Forcing people who do not want to work to yet work restimulates the mechanism of overt acts with, thereby, higher and higher crime ratio, more and more strikes and less and less understanding of what it is all about.

The individual who has done something *bad* that he was not willing to do then identifies anything he does with any unwillingness to do — when of course he has done this many times. Therefore all doingness becomes bad. Dancing becomes bad. Playing games becomes bad. Even eating and procreation become bad. And all because unwillingness to do something bad has evolved and identified into unwillingness to do.

The person who has done something bad restrains himself by withholding doingness in that direction. When at length he conceives he has done many many bad things, he becomes a total withhold. As you process him you encounter the recurring phenomenon of his realization that he has not been as bad as he thought he was. And that's the wonderful part of it. People are never as bad as they think they are — and certainly other people are never as bad as one thinks they have been.

The basic wonder is that people police themselves. Out of a concept of good they conceive themselves to be bad, and after that seek every way they can to protect others from self. A person does this by reducing his own ability. He does it by reducing his own activity. He does this by reducing his own knowingness.

Where you see a thetan who sleeps too much and does too little, where you see a person who conceives bad doingness on every hand, you see a person who is safeguarding others from the badness of himself or herself.

Now there is another extreme. A person who must do because of economic or other whips, and yet because of his own concept of his own badness dares not do, is liable to become criminal. Such a person's only answer to doingness is to do without taking any responsibility and this, when you examine the dynamics, falls easily into a pattern of dramatized overt acts. Here you have a body that is not being controlled, where most knowledge is obscured and where responsibility for others or even self is lacking. It is an easy step from criminality to insanity, if indeed there is any step at all. Such people cannot be policed since being policed admits of some obedience. Lacking control there is no ability to obey, and so they wind up simply hating police and that is that.

Only when economic grips are so tight or political pressure is so great as it is in Russia do we get high criminality and neurotic or psychotic indexes. Whenever doing is accompanied by no will to do, irresponsibility for one's own acts can result.

Basically, then, when one is processing a pc, one is seeking to rehabilitate a willingness to do. In order to accomplish this, one must remove from the case the unwillingness to have done certain things and must rehabilitate the ability to withhold on the pc's own determinism (not by punishment) further bad actions. Only then will the pc be willing to recover from anything wrong with the pc — since anything wrong with the pc is self-imposed in order to prevent wrongdoing at some past time.

Responsibility *can* be rehabilitated on any case.

HCO BULLETIN OF 5 OCTOBER 1961

MISSIONS

CLEAN HANDS MAKE A HAPPY LIFE

For the first time in the soggy stream that's history to the human race, it's possible that happiness exists.

This goal, repeated many times and sought so heavily, has been ungraspable as sun motes, unattainable as a loved one's sigh.

What makes mankind, basically good beings all, such strangers far to happiness?

The rich man geysers out his wealth. The poor man peers in every crack. But wealth buys nought and crevices are bare. The child hopes he will realize it when grown and, grown, wishes he were happy as a child.

We grasp it but like gossamer, it's nought. We marry a most perfect girl or man and then throughout our lives weep to make the other make us glad.

Often sought, but seldom found, there are no riches, gems or palaces as valued as mere happiness.

But listen! Here is happiness, just at our fingertips, awaiting only magic words "Start Session" to begin its quest.

But like we walk through rain toward a banquet hall, our happiness in processing is gained by passing through the phantom shadows of our "sins."

What has made all man a pauper in his happiness?

Transgressions against the mores of his race, his group, his family!

We care but little what these mores were or are. It was transgression did the trick.

We agree to fixed moralities and then, unthinking, we transgress, or with "good cause" offend, and there we are, the first dull bars of misery draw stealthily behind us.

And as we wander on, transgressing more, agreeing to new mores and then transgressing those, we come into that sunless place, the prison of our tears and sighs and might-have-beens, unhappiness.

Mutual action is the key to all our overt acts. Agreement to what ought to be and then a shattering of the troth works all the spell that's needed for a recipe of misery.

There must be pain. So we agreed. For pain restrains and warns, shuts off, forbids. But goodness now must then consist of bringing in no pain.

Mutual motion is agreed. And then we disagree and part and so are tied no more — tied not save back there in our minds, with scars of broken faith. The faith we broke, and said it had to be.

We all agree to feel the sun and then protest it burns. We all agree to kiss and love and then are startled that such pain can follow in that wake.

Mutual motion is all right — until we act in cruelty to the rest.

Tied by agreements and coactions, we dare be cruel to that to which the hard steel clasps of promises have bound us.

And so in being cruel to part of self — extended self as in a couple or a group — we then find pain in self with great surprise.

The overt act sequence is simple now to grasp. The scope is limited. But it began when we first had a cruel impulse to others bound to us by mores or coacts.

Why does one suffer pain in his own arm when he or she has struck another's limb?

Because the cruel impulse has been a break of bond with others where pledge once lived.

The only overt act that can bring pain to self is that cruel act which then transgresses things to which we had agreed.

Share action with a group or person in your life, agree to mutually survive by some specific code and then be cruel to them and so transgress and you'll have pain.

All mankind lives and each man strives by codes of conduct mutually agreed. Perhaps these codes are good, perhaps they're bad, it's only evident they're codes. Mores bind the race.

Coaction then occurs. Thought and motion in accord. A oneness then of purpose and survival so results.

But now against that code there is transgression. And so because the code was held, whatever code it was, and man sought comfort in man's company, he held back his deed and so entered then the bourne in which no being laughs or has a freedom in his heart.

So down the curtains come across the brightness of the day and dull-faced clouds enmist all pleasant circumstance. For one has evilly transgressed and may not speak of it for fear *all* happiness will die.

And so we shut ourselves from off the light and enter gray-faced gloom. And seal within our deepest vault the reasons why we dare not face our friends.

And afterwards we go on making others guilty with the rest, when like some scrawny scarecrow of a priest whose tattered filthy robes are rough with sacrificial blood, we point the way to hell for those who kill.

And deep within us secret gnawings ache. And then at last we cannot even cry.

The road to hell — man's very good at painting ugly signs that point its course and way.

The road to heaven — man's often sent but never yet arrived — more like he found the "other place."

But now a road that's wide has opened up — in Scientology.

The meter and the process check, when done by auditors with skill, can open up transgression's rush and loose a cascade out until hell's spent.

And day will once more have a drop of dew upon the morning rose.

HCO POLICY LETTER OF 22 JULY 1963

REMIMEO
ALL STAFF

YOU CAN BE RIGHT

(Originally written by LRH as
HCOB 22 July 63. Issued as an HCO PL on 1 Nov. 70.)

Rightness and wrongness form a common source of argument and struggle.

The concept of rightness reaches very high and very low on the Tone Scale.

And the effort to be right is the last conscious striving of an individual on the way out. I-am-right-and-they-are-wrong is the lowest concept that can be formulated by an unaware case.

What *is* right and what *is* wrong are not necessarily definable for everyone. These vary according to existing moral codes and disciplines and, before Scientology, despite their use in law as a test of "sanity," had no basis in fact but only in opinion.

In Dianetics and Scientology a more precise definition arose. And the definition became as well the true definition of an overt act. An overt act is not just injuring someone or something: an overt act is an act of omission or commission which does the least good for the least number of dynamics or the most harm to the greatest number of dynamics. (See the eight dynamics.)

Thus a wrong action is wrong to the degree that it harms the greatest number of dynamics. And a right action is right to the degree that it benefits the greatest number of dynamics.

Many people think that an action is an overt simply because it is destructive. To them all destructive actions or omissions are overt acts. This is not true. For an act of commission or omission to be an overt act it must harm the greater number of dynamics. A failure to destroy can be, therefore, an overt act. Assistance to something that would harm a greater number of dynamics can also be an overt act.

An overt act is something that harms broadly. A beneficial act is something that helps broadly. It can be a beneficial act to harm something that would be harmful to the greater number of dynamics.

Harming everything and helping everything alike can be overt acts. Helping certain things and harming certain things alike can be beneficial acts.

The idea of not harming anything and helping everything are alike rather mad. It is doubtful if you would think helping enslavers was a beneficial action and equally doubtful if you would consider the destruction of a disease an overt act.

In the matter of being right or being wrong, a lot of muddy thinking can develop. There are no absolute rights or absolute wrongs. And being right does not consist of being unwilling to harm and being wrong does not consist only of not harming.

There is an irrationality about "being right" which not only throws out the validity of the legal test of sanity but also explains why some people do very wrong things and insist they are doing right.

The answer lies in an impulse, inborn in everyone, to *try to be right.* This is an insistence which rapidly becomes divorced from right action. And it is accompanied by an effort to make others wrong, as we see in hypercritical cases. A being who is apparently unconscious is *still* being right and making others wrong. It is the last criticism.

We have seen a "defensive person" explaining away the most flagrant wrongnesses. This is "justification" as well. Most explanations of conduct, no matter how far-fetched, seem perfectly right to the person making them since he or she is only asserting self-rightness and other-wrongness.

We have long said that that which is not admired tends to persist. If no one admires a person for being right, then that person's "brand of being right" will persist, no matter how mad it sounds. Scientists who are aberrated cannot seem to get many theories. They do not because they are more interested in insisting on their own odd rightnesses than they are in finding truth. Thus we get strange "scientific truths" from men who should know better, including the late Einstein. Truth is built by those who have the breadth and balance to see also where they're wrong.

You have heard some very absurd arguments out among the crowd. Realize that the speaker was more interested in *asserting* his or her own rightness than in *being right.*

A thetan *tries* to be right and *fights* being wrong. This is without regard to being right *about* something or to do actual right. It is an *insistence* which has no concern with a rightness of conduct.

One tries to be right *always,* right down to the last spark.

How, then, is one ever wrong?

It is this way: One does a wrong action, accidentally or through oversight. The wrongness of the action or inaction is then in conflict with one's necessity to be right. So one then may continue and repeat the wrong action to prove it is right.

This is a fundamental of aberration. All wrong actions are the result of an error followed by an insistence on having been right. Instead of righting the error (which would involve being wrong) one insists the error was a right action and so repeats it.

As a being goes down scale it is harder and harder to admit having been wrong. Nay, such an admission could well be disastrous to any remaining ability or sanity.

For rightness is the stuff of which survival is made. And as one approaches the last ebb of survival one can only insist on having been right, for to believe for a moment one has been wrong is to court oblivion.

The last defense of any being is "I was right." That applies to anyone. When that defense crumbles, the lights go out.

So we are faced with the unlovely picture of asserted rightness in the face of flagrant wrongness. And any success in making the being realize their wrongness results in an immediate degradation, unconsciousness, or at best a loss of personality. Pavlov, Freud, psychiatry alike never grasped the delicacy of these facts and so evaluated and punished the criminal and insane into further criminality and insanity.

All justice today contains in it this hidden error — that the last defense is a belief in personal rightness regardless of charges and evidence alike, and that the effort to make another wrong results only in degradation.

But all this would be a hopeless impasse leading to highly chaotic social conditions were it not for one saving fact:

All repeated and "incurable" wrongnesses stem from the exercise of a last defense: "trying to be right." Therefore the compulsive wrongness can be cured no matter how mad it may seem or how thoroughly its rightness is insisted upon.

Getting the offender to admit his or her wrongness is to court further degradation and even unconsciousness or the destruction of a being. Therefore the purpose of punishment is defeated and punishment has minimal workability.

But by getting the offender off the compulsive repetition of the wrongness, one then cures it.

But how?

By rehabilitating the ability to be right!

This has limitless application — in training, in social skills, in marriage, in law, in life.

Example: A wife is always burning dinner. Despite scolding, threats of divorce, anything, the compulsion continues. One can wipe this wrongness out by getting her to explain what is *right* about her cooking. This may well evoke a raging tirade in some extreme cases, but if one flattens the question, that all dies away and she happily ceases to burn dinners. Carried to classic proportions but not entirely necessary to end the compulsion, a moment in the past will be recovered when she accidentally burned a dinner and could not face up to having done a wrong action. To be right she thereafter had to burn dinners.

Go into a prison and find one sane prisoner who says he did wrong. You won't find one. Only the broken wrecks will say so out of terror of being hurt. But even they don't believe they did wrong.

A judge on a bench, sentencing criminals, would be given pause to realize that not one malefactor sentenced really thought he had done wrong and will never believe it in fact, though he may seek to avert wrath by saying so.

The do-gooder crashes into this continually and is given his loses by it.

But marriage, law and crime do not constitute all the spheres of living where this applies. These facts embrace all of life.

The student who can't learn, the worker who can't work, the boss who can't boss are all caught on one side of the right–wrong question. They are being completely one-sided. They are being "last-ditch-right." And opposing them, those who would teach them are fixed on the other side, "admit-you-are-wrong." And out of this we get not only no-change but actual degradation where it "wins." But there are no wins in this imbalance, only loses for both.

Thetans on the way down don't believe they are wrong because they don't dare believe it. And so they do not change.

Many a preclear in processing is only trying to prove himself right and the auditor wrong, particularly the lower case levels, and so we sometimes get no-change sessions.

And those who won't be audited at all are totally fixed on *asserted rightness* and are so close to gone that any question of their past rightness would, they feel, destroy them.

I get my share of this when a being, close to extinction, and holding contrary views, grasps for a moment the rightness of Scientology and then in sudden defense asserts his own "rightnesses," sometimes close to terror.

It would be a grave error to go on letting an abuser of Scientology abuse. The route is to get him or her to explain how *right* he or she is without explaining how wrong Scientology is, for to do the last is to let them commit a serious overt. "What is right about your mind" would produce more case change and win more friends than any amount of evaluation or punishment to make them wrong.

You can be right. How? By getting another to explain how he or she is right — until he or she, being less defensive now, can take a less compulsive point of view. You don't have to agree with what they think. You only have to acknowledge what they say. And suddenly they *can* be right.

A lot of things can be done by understanding and using this mechanism. It will take, however, some study of this article before it can be gracefully applied — for all of us are reactive to some degree on this subject. And those who sought to enslave us did not neglect to install a right–wrong pair of items on the far backtrack. But these won't really get in your way.

As Scientologists, we are faced by a frightened society who think they would be wrong if we were found to be right. We need a weapon to correct this. We have one here.

And you can be right, you know. I was probably the first to believe you were, mechanism or no mechanism. The road to rightness is the road to survival. And every person is somewhere on that scale.

You can make yourself right, amongst other ways, by making others right enough to afford to change their minds. Then a lot more of us will arrive.

BLOW–OFFS

Scientology technology recently has been extended to include the factual explanation of departures, sudden and relatively unexplained, from sessions, posts, jobs, locations and areas.

This is one of the things man thought he knew all about and therefore never bothered to investigate. Yet this amongst all other things gave him the most trouble. Man had it all explained to his own satisfaction and yet his explanation did not cut down the amount of trouble which came from the feeling of "having to leave."

For instance, man has been frantic about the high divorce rate, about the high job turnover in plants, about labor unrest and many other items all stemming from the same source — sudden departures or gradual departures.

We have the view of a person who has a good job, who probably won't get a better one, suddenly deciding to leave and going. We have the view of a wife with a perfectly good husband and family up and leaving it all. We see a husband with a pretty and attractive wife breaking up the affinity and departing.

In Scientology we have the phenomenon of preclears in session or students on courses deciding to leave and never coming back. And that gives us more trouble than most other things all combined.

Man explained this to himself by saying that things were done to him which he would not tolerate and therefore he had to leave. But if this were the explanation all man would have to do would be to make working conditions, marital relationships, jobs, courses and sessions all very excellent and the problem would be solved. But on the contrary, a close examination of working conditions and marital relationships demonstrates that improvement of conditions often worsens the amount of blow-off, as one could call this phenomenon. Probably the finest working conditions in the world were achieved by Mr. Hershey of chocolate bar fame for his plant workers. Yet they revolted and even shot at him. This in its turn led to an industrial philosophy that the worse workers were treated the more willing they were to stay, which in itself is as untrue as the better they are treated the faster they blow off.

One can treat people so well that they grow ashamed of themselves, knowing they don't deserve it, that a blow-off is precipitated, and certainly one can treat people so badly that they have no choice but to leave, but these are extreme conditions and in between these we have the majority of departures: The auditor is doing his best for the preclear and yet the preclear gets meaner and meaner and blows the session. The wife is doing her best to make a marriage and the husband wanders off on the trail of a tart. The manager is trying to keep things going and the worker leaves. These, the unexplained, disrupt organizations and lives and it's time we understood them.

People leave because of their own overts and withholds. That is the factual fact and the hard-bound rule. A man with a clean heart can't be hurt. The man or woman who must must must become a victim and depart is departing because of his or her own overts and withholds. It doesn't matter whether the person is departing from a town or a job or a session. The cause is the same.

Almost anyone, no matter his position, can remedy a situation no matter what's wrong if he or she really wants to. When the person no longer wants to remedy it his own overt acts and withholds against the others involved in the situation have lowered his own ability to be responsible for it. Therefore he or she does not remedy the situation. Departure is the only apparent answer. To justify the departure the person blowing off dreams up things done to him, in an effort to minimize the overt by degrading those it was done to. The mechanics involved are quite simple.

It is an irresponsibility on our part, now that we know this, to permit this much irresponsibility. When a person threatens to leave a town, post, job, session or class, the only kind thing to do is to get off that person's overt acts and withholds. To do less sends the person off with the feeling of being degraded and having been harmed.

It is amazing what trivial overts will cause a person to blow. I caught a staff member one time just before he blew and traced down the original overt act against the organization to his failure to defend the organization when a criminal was speaking viciously about it. This failure to defend accumulated to itself more and more overts and withholds, such as failing to relay messages, failure to complete an assignment, until it finally utterly degraded the person into stealing something of no value. This theft caused the person to believe he had better leave.

It is a rather noble commentary on man that *when a person finds himself,* as he believes, *incapable of restraining himself from injuring a benefactor he will defend the benefactor by leaving.* This is the real source of the blow-off. If we were to better a person's working conditions in this light we would see that we have simply magnified his overt acts and made it a certain fact that he would leave. If we punish, we can bring the value of the benefactor down a bit and thus lessen the value of the overt. But improvement and punishment are neither one answers. The answer lies in Scientology and processing the person up to a high enough responsibility to take a job or a position and carry it out without all this weird hocus-pocus of "I've got to say you are doing things to me so I can leave and protect you from all the bad things I am doing to you." That's the way it is and it doesn't make sense not to do something about it now that we know.

A recent Secretarial Executive Directive to all Central Organizations states that before a person may draw his last paycheck from an organization he is leaving of his own volition he must write down all his overts and withholds against the organization and its related personnel and have these checked out by the HCO Secretary on an E-Meter.

To do less than this is cruelty itself. The person is blowing himself off with his own overts and withholds. If these are not removed then anything the organization or its people does to him goes in like a javelin and leaves him with a dark area in his life and a rotten taste in his mouth. Further he goes around spouting lies about the organization and its related personnel and every lie he utters makes him just that much sicker. By permitting a blow-off without clearing it we are degrading people, for I assure you, and with some sorrow, people have not often recovered from overts against Scientology, its organizations and related persons. They don't recover because they know in their hearts even while they lie that they are wronging people who have done and are doing enormous amounts of good in the world and who definitely do not deserve libel and slander. Literally, it kills them, and if you don't believe it I can show you the long death list.

The only evil thing we are doing is to be good, if that makes sense to you. For by being good, things done to us out of carelessness or viciousness are all out of proportion to the evil done to others. This often applies to people who are not Scientologists. Just this year I had an electrician who robbed HCO of money with false bills and bad workmanship. One day he woke up to the fact that the organization he was robbing was helping people everywhere far beyond his ability to ever help anyone. Within a few weeks he contracted TB and is now dying in a London hospital. Nobody took off the overts and withholds when he left. And it's actually killing him — a fact which is no fancy on my part. There is something a little terrifying in this sometimes. I once told a bill collector what and who we were and that he had wronged a good person, and a half-hour later he threw a hundred grains of Veronal down his throat and was lugged off to the hospital, a suicide.

This campaign is aimed straightly at cases and getting people cleared. It is aimed at preserving staffs and the lives of persons who believe they have failed us.

Uneasy lies the head that has a bad conscience. Clean it up and run responsibility on it and you have another better person. And if anybody feels like leaving, just examine the record and sit down and list everything done to and withheld from me and the organization and send it along. We'll save a lot of people that way.

And on our parts we'll go along being as good a manager, as good an organization and as good a field as we can be and we'll get rid of all our overts and withholds too.

Think it will make an interesting new view?

Well, Scientology specializes in those.

O/W WRITE-UPS

Refs:

HCOB	3 Jan. 60	A THIRD DYNAMIC FOR SCIENTOLOGY
HCO PL	22 July 63 I	YOU CAN BE RIGHT
HCOB	5 Oct. 61	CLEAN HANDS MAKE A HAPPY LIFE
HCOB	21 Jan. 60 I	JUSTIFICATION

It has been longstanding knowledge in Scientology that in the presence of overts and withholds no gains occur.

An overt act is an act of omission or commission which does the least good for the least number of dynamics or the most harm to the greatest number of dynamics. Overts are the biggest reason a person restrains and withholds himself from action.

Man is basically good. When people commit overts and then withhold them it is because they conceive that telling them would be another overt act. By withholding overt acts, these are kept afloat in the universe and are themselves, as withholds, entirely the cause of continued evil.

A person who has overts and withholds becomes less able to influence his dynamics and falls out of communication with those people and things he has committed overts against.

Writing up one's overts and withholds offers a road out. By confronting the truth an individual can experience relief and a return of responsibility.

BASIC THEORY

The theory behind the action of writing up one's overts and withholds is contained in the Scientology Axioms, published in their entirety in the book *Scientology 0-8: The Book of Basics*.

Axiom 38 is particularly applicable:

1: *Stupidity is the unknownness of consideration.*

2: *Mechanical definition: Stupidity is the unknownness of time, place, form and event.*

1: *Truth is the exact consideration.*

2: *Truth is the exact time, place, form and event.*

Thus we see that failure to discover truth brings about stupidity.

Thus we see that the discovery of truth would bring about an as-isness by actual experiment.

Thus we see that an ultimate truth would have no time, place, form or event.

Thus, then, we perceive that we can achieve a persistence only when we mask a truth.

Lying is an alteration of time, place, event or form.

Lying becomes alter-isness, becomes stupidity.

(The blackness of cases is an accumulation of the case's own or another's lies.)

Anything which persists must avoid as-isness.

Thus, anything, to persist, must contain a lie.

Writing up one's overts and withholds can accomplish an as-isness and thereby relieve a person of the burden of his transgressions.

O/W WRITE–UP FORMAT

When people do O/W write-ups, abuses can occur if the specifics of the action are not known and followed.

The first step to be done before one undertakes the action of an O/W write-up is to word clear exactly how such write-ups are done.

Experience has proven that people have run into trouble on O/W write-ups when the format (including the key words and terms) was not word cleared before embarking on the action.

Format:

The format for doing an O/W write-up is as follows:

1. Write down the exact overt of commission or omission.
2. Then state explicitly the specifics regarding the action or inaction, including:
   a. **time:** *n.* the moment of an event, process or condition. A definite moment, hour, day or year as indicated or fixed by a clock or calendar; a

precise instant or date; the period during which something (as an action) exists or continues.

b. **place:** *n.* the location of occurrence or action. A specific location; a particular portion of space or the earth's surface of a definite or indefinite size but of definite position.

c. **form:** *n.* the arrangement of things; the way in which parts of a whole are organized. In general, the arrangement of or relationship between the parts of anything as distinguished from the parts themselves. A specific formation or arrangement.

d. **event:** *n.* something that happens or comes to pass; a distinct incident. A more or less important or noteworthy occurrence. The actual outcome or final result.

One has to get the time, place, form and event and one has to get a done or a failure in order to get as-isness.

Example:

"1. I hit a friend's car when backing out of my parking space at work and caused about five hundred dollars worth of damage to his car.

"2. On the 30th of June 1987, when I was leaving work, I was backing out of my parking space and hit the back end of my friend Joe's car. There was no one else around and the parking lot was almost empty. I drove away without leaving a note or telling Joe, knowing that I caused about five hundred dollars damage to his car which he had to pay for."

or, when there is a withhold or withholds to be gotten off:

1. Write down the withhold.

2. Then state explicitly the specifics regarding the action or inaction withheld, including:

   a. Time

   b. Place

   c. Form

   d. Event.

For example:

"1. I cheated on my wife (Sally) by seeing another woman and never told her about this.

"2. Three years ago, when I was first married to Sally, I cheated on her by seeing another woman. I have never told Sally about this. One morning (in June 1985) I had told Sally I would take her to the movies that night and on my way home from work, when I was at Jones' Department Store, I saw an old girlfriend of mine (Barbara). I asked Barbara to go out to dinner with me that night and she accepted. (She did not know that I was married.) I told her

I would pick her up at 8:00 P.M. that night. When I got home from the store I told Sally I had to go back to work to get some things done and would not be able to go to the movies with her.

"I then went out to dinner in another city with Barbara (at the 'Country Inn') so that I would not risk seeing any of my friends."

ADMINISTERING O/W WRITE-UPS

The action of writing up one's overts and withholds can be applied to anyone, and the breadth of its application is unlimited.

Examples:

A person is assigned a Danger condition and is instructed to write up his O/Ws per HCO PL 9 Apr. 72R, CORRECT DANGER CONDITION HANDLING.

A person is brutally critical and blows course and the Ethics Officer has him write up his O/Ws.

C/S Okay:

It is the responsibility of the person administering the O/W write-up, whether this is the Ethics Officer/MAA, an Esto, the person's senior or a Supervisor, to get the person's pc folder checked by a qualified C/S to ensure that they are not in the middle of a major case action such as Int repair or List repair or in the middle of an incomplete listing action, any of which would need to be completed before the pc started on an O/W write-up. (Ref: HCOB 10 June 71 I, C/S Series 44, C/S RULES, PROGRAMING FROM PREPARED LISTS)

This is not to be construed as a rule that someone needs a C/S okay to get handled in Ethics. It simply means that the C/S and Ethics must be coordinated when handling a pc who needs to do an O/W write-up as fully covered in HCOB 13 Oct. 82, C/S Series 116, ETHICS AND THE C/S.

End Phenomena:

In doing an O/W write-up a person writes up his overts and withholds until he is satisfied that they are complete. The person will feel very good about it and experience relief. One would not engage in carrying on an O/W write-up past this point.

Meter Check:

When a person has completed writing up his overts of commission and omission he gets meter checked by someone who can correctly operate a meter. One asks, "In this O/W write-up has anything been missed?" If it reads or doesn't F/N, send the person to complete the O/W write-up. (Once the O/W write-up is complete, the meter check is done again.) When the question F/Ns that is the end of the check.

The original copy of the O/W write-up must go into the person's pc folder, regardless of whether or not any copy is additionally given to the MAA or Ethics Officer. (Ref: HCOB 28 Oct. 76, C/S Series 98, Auditor Admin Series 26, AUDITING FOLDERS, OMISSIONS IN COMPLETENESS)

Repair:

When a person doing an O/W write-up bogs on the action at any point or gets sick or falls on his head shortly after doing an O/W write-up, he must be repaired at once by a qualified auditor using a Confessional Repair List. (Ref: HCOB 23 July 80R, CONFESSIONAL REPAIR LIST — LCRE)

O/W WRITE–UP PROCEDURE

The following steps are the full procedure for getting a person to do an O/W write-up:

0. The first action is for the person administering the O/W write-up to: (a) study and word clear this HCO PL, (b) clear the words included in step 4 below, (c) word clear the O/W write-up format.

1. Get a qualified C/S to check the person's pc folder to ensure that the person is not in the middle of a major case action such as Int repair or List repair or in the middle of an incomplete listing action that would be interrupted by an O/W write-up.

2. Ensure that a space is provided where a person can write up his overts and withholds undistracted.

3. Provide paper and pen.

4. Have the person clear the following words in the Tech Dictionary: overt, withhold, motivator, justification, overt–motivator sequence.

5. Have the person read this HCO PL and word clear the O/W write-up format as covered above, to full understanding.

6. Have the person write up his O/Ws, exactly per the O/W write-up format above. This is done until the person is satisfied that he has written them up completely and he feels very good about it.

7. Get the person a meter check once the O/W write-up is complete.

8. See that the original copy of the O/W write-up is filed in the pc's folder along with the worksheets of his meter check.

SUMMARY

Writing up one's overts and withholds is a simple procedure that has unlimited application. O/W write-ups can bring about great relief and enable a person to achieve greater happiness.

THE CONDITIONS OF EXISTENCE FROM NON-EXISTENCE

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 23 SEPTEMBER 1967

REMIMEO
PAGE 1 OF
EVERY HAT

NEW POST FORMULA
THE CONDITIONS FORMULAS

Every new appointee to a post begins in Non-Existence. Whether obtained by new appointment, promotion or demotion.

He is normally under the delusion that now he is "*THE* _____" (new title). He tries to start off in Power condition as he is usually very aware of his new status or even a former status. But in actual fact *he* is the only one aware of it. All others except perhaps the Personnel Officer are utterly unaware of him as having his new status.

Therefore he begins in a state of Non-Existence. And if he does not begin with the Non-Existence Formula as his guide, he will be using the wrong condition and will have all kinds of trouble.

The Non-Existence Formula is:

1. Find a comm line.

2. Make yourself known.

3. Discover what is needed or wanted.

4. Do, produce and/or present it.

A new appointee taking over a going concern often thinks he had better make himself known by changing everything, whereas he (a) is not well enough known to do so and (b) hasn't any idea of what is needed or wanted yet. And so he makes havoc.

Sometimes he assumes he knows what is needed or wanted when it is only a fixed idea with him and is only his idea and not true at all and so he fails at his job.

Sometimes he doesn't bother to find out what is really needed or wanted and simply assumes it or thinks he knows when he doesn't. He soon becomes "unsuccessful."

Now and then a new appointee is so "status happy" or so insecure or so shy that even when his boss or his staff comes to him and tells him what is needed or wanted he can't or doesn't even acknowledge and really does go into Non-Existence for keeps.

Sometimes he finds that what he is *told* is needed or wanted needs reappraisal or further investigation. So it is always safest for him to make his own survey of it and operate on it when he gets his own firm reality on what is needed or wanted.

If the formula is applied intelligently, the person can expect to get into a zone of bypass where people are still doing his job to fill the hole his predecessor may have left. This is a Danger condition — but it is the next one higher than Non-Existence on the scale. If he defends his job and does his job and applies the Danger Formula, he will come through it.

He can then expect to find himself in Emergency condition. In this he must follow the Emergency Formula with his post and he will come through *it*.

He can now expect to be in Normal Operation, and if he follows the formula of that, he will come to Affluence. And if he follows *that* formula, he will arrive at Power. And if he applies the Power Formula, he will stay there.

So it is a long way from Power that one starts his new appointment, and if he doesn't go UP the scale from where he really is at the start, he will of course fail.

This applies to groups, to organizations, to countries as well as individuals.

It also applies when a person fails at his job. He has to start again at Non-Existence and he will build up the same way condition by condition.

Most failures on post are occasioned by failures to follow the conditions and recognize them and apply the formula of the condition one is in when one is in it and cease to apply it when one is out of it and in another.

This is the secret of holding a post and being successful on a job or in life.

Here are the formulas of conditions given in order of advance upward:

NON–EXISTENCE

1. Find a comm line.
2. Make yourself known.
3. Discover what is needed or wanted.
4. Do, produce and/or present it.

DANGER

1. Bypass (ignore the junior or juniors normally in charge of the activity and handle it personally).
2. Handle the situation and any danger in it.

3. Assign the area where it had to be handled a Danger condition.

4. Handle the personnel by Ethics investigation and Comm Ev.

5. Reorganize the activity so that the situation does not repeat.

6. Recommend any firm policy that will hereafter detect and/or prevent the condition from recurring.

The senior executive present acts and acts according to the formula above.

EMERGENCY

1. Promote. That applies to an organization. To an individual you had better say produce. That's the first action regardless of any other action, regardless of anything else, why, that is the first thing you have to put their attention on. The first broad, big action which you take is promote. Exactly what is promotion? Well, look it up in the dictionary. It is making things known; it is getting things out; it is getting oneself known, getting one's products out.

2. Change your operating basis. If for instance you went into a condition of Emergency and then you didn't change after you had promoted, you didn't make any changes in your operation, well you just head for another condition of Emergency.

   So that has to be part of it; you had better change your operating basis; you had better do something to change the operating basis, because that operating basis led you into an emergency so you sure better change it.

3. Economize.

4. Then prepare to deliver.

5. Part of the condition of Emergency contains this little line — you have got to stiffen discipline or you have got to stiffen ethics. Organizationally when a State of Emergency is assigned, supposing the activity doesn't come out of that emergency, regardless of what caused the emergency, supposing the activity just doesn't come out of the emergency, in spite of the fact they have been labeled a State of Emergency; they have been directed to follow the formula; they have been told to snap and pop and get that thing straightened out, and they are still found to be goofing; the statistic is going down and continues to go down; what do you do? There is only one thing left to do and that is discipline, because life itself is going to discipline the individual.

   So the rule of the game is that if a State of Emergency is ignored and the steps are not taken successfully, then you get an announcement after a while that the condition has been continued, and if the condition is continued beyond a specified period of time, why that's it; it has to walk forward into an ethics matter.

NORMAL OPERATION

1. The way you maintain an increase is when you are in a state of Normal Operation you don't change anything.

2. Ethics are very mild, the justice factor is quite mild, there are no savage actions taken particularly.

3. A statistic betters then look it over carefully and find out what bettered it, and then do that without abandoning what you were doing before.

4. Every time a statistic worsens slightly, quickly find out why and remedy it.

   And you just jockey those two factors, the statistic bettering, the statistic worsening; repair the statistic worsening, and you will find out inevitably some change has been made in that area where a statistic worsens. Some change has been made; you had better get that change off the lines in a hurry.

AFFLUENCE

1. Economize. Now the first thing you must do in Affluence is economize and then make very, very sure that you don't buy anything that has any future commitment to it; don't buy anything with any future commitments; don't hire anybody with any future commitments — nothing. That is all part of that economy; clamp it down.

2. Pay every bill. Get every bill that you can possibly scrape up from anyplace, every penny you owe anywhere under the sun, moon and stars and pay them.

3. Invest the remainder in service facilities; make it more possible to deliver.

4. Discover what caused the condition of Affluence and strengthen it.

POWER

1. The first law of a condition of Power is don't disconnect. You can't just deny your connections; what you have got to do is take ownership and responsibility for your connections.

2. The first thing you have got to do is make a record of all of its lines. And that is the only way you will ever be able to disconnect. So on a condition of Power the first thing you have to do is write up your whole post. You have made it possible for the next fellow in to assume the state of Power Change.

   If you don't write up your whole post, you are going to be stuck with a piece of that post since time immemorial, and a year or so later somebody will still be coming to you asking you about that post which you occupied.

3. The responsibility is write the thing up and get it into the hands of the guy who is going to take care of it.

4. Do all you can to make the post occupiable.

There are only two circumstances which require replacement, the very successful one or the very unsuccessful one. What a song it is to inherit a successful pair of boots; there is nothing to it; just step in the boots and don't bother to walk. If it was in a normal state of operation, which it normally would have been in for anybody to have been promoted out of it, you just don't change anything.

So anybody wants anything signed that your predecessor didn't sign, don't sign it. Keep your eyes open, learn the ropes and, depending on how big the organization is, after a certain time, why, see how it is running and run it as normal operating condition if it's not in anything but a normal operating condition. Go through the exact same routine of every day that your predecessor went through; sign nothing that he wouldn't sign; don't change a single order; look through the papers that had been issued at that period of time — these are the orders that are extant — and get as busy as the devil just enforcing those orders and your operation will increase and increase.

Now, the fellow who walks into the boots of somebody who has left in disgrace — the post is in a condition of Emergency, its statistics have gone to hell causing the boss to be fired — all he has to do when he inherits one in Emergency is just apply the State of Emergency Formula to it, which is *immediately promote!*

WISHING YOU SUCCESS.

REMIMEO

NON–EXISTENCE FORMULA EXPANDED

Ref: HCO PL 23 Sept. 67 NEW POST FORMULA, THE CONDITIONS FORMULAS

Many staff misapply the new post Non-Existence Formula or the Non-Existence Formula by stats and then wonder why they seem to continue in trouble.

Executives sometimes wonder why certain staff personnel never seem to be able to do anything right and out of exasperation go into a PHASE I and wind up handling the whole area themselves.

The answer is a misapplication of and not really doing the Non-Existence Formula on post.

Recent experience has shown that even experienced executives and staff members have not in fact ever come out of Non-Existence. And where the org runs at all, it is carried on the back of one or two key seniors.

The phrase "find a communication line" is shortened down by too many to locating somebody's in-basket and dropping a "needed and wanted" request in it. This is not really finding a communication line.

To handle ANY post you have to have INFORMATION and furnish INFORMATION. Where this is not done, the person finds himself doing projects that get rejected, projects that have to be redone, restraints put on his actions and finds himself sinking down the conditions. He gets in bad with his seniors BECAUSE HE DOESN'T ACQUIRE AND DOESN'T FURNISH the vital information of WHAT IS GOING ON.

It is the duty of any staff member, new on post or not, TO ROUND UP THE COMMUNICATION LINES THAT RELATE TO HIS POST, FIND OUT WHO NEEDS VITAL INFORMATION FROM HIM and GET THOSE LINES IN IN IN as a continuing action.

When a person fails to do just that, he never comes out of Non-Existence. He isn't even up to Danger because nobody knows they are even bypassing him. In other words, when a staff member does not do that, in the eyes of the organization, he is simply a ZERO.

Orders being issued by him usually wind up CANCELLED when discovered by some senior because they are not real. Joe was already handling it. Bill's schedule was thrown out by it. Treasury yells, "How come this expensive dev-t!"

Pretty soon, when staff hears it's so-and-so's order they just ignore it.

The bright hopes of such a staff member usually wind up as hopes he will be able to get transferred, the sooner the better. Everybody is agin him.

But what really happened?

He never applied the Non-Existence Formula for real and so he stayed in Non-Existence. His actions do not coordinate because he does NOT HAVE THE LINES TO GIVE OR RECEIVE INFORMATION.

It is really and factually not up to anyone else to round up his lines for him any more than it is up to others to do his breathing for him. The inhale and exhale of an organization is the take and give of VITAL INFORMATION AND PARTICLES.

Any staff member who finds himself in apparent Non-Existence, Liability or worse should rush around and find the comm lines that apply to his activity and post and insist that he be put on those lines.

Sometimes he is balked by security measures. Messages going out and coming in in code are not likely to be pried out of communicators or External Comm with ease. Well, there's a thing called a security pledge. One signs it and if the information is not safeguarded by the person, he's for it. The bulk of such information does not relate to his post anyway. But some of it may.

Such a staff member or executive has to write down what information he has to have to handle his post and what information others have to have from him to do their jobs.

And then arrange comm lines so that he is an info addressee from communicators on those lines.

Senior executives such as div heads or heads of an org do have a responsibility for briefing staff. But they are usually also faced with security problems as well as a wish to look good. And their data is general for the whole division or org. It does include specifics like "Mrs. Zikes is arriving at 1400 hours" or "the telephone company rep says the bill must be paid by 1200 hours today or we got no phones" or "FSMs are sending their students to missions because the org abolished the Comm Course."

Havoc and Phase I occur where the bulk of the staff has omitted to get themselves on important comm lines and keep those lines flowing. Do not send to find why the stats are down if 90 percent of your staff is in Non-Existence or worse! Simply because they never really found any comm lines.

Therefore the EXPANDED NON–EXISTENCE FORMULA is:

1. FIND AND GET YOURSELF ON EVERY COMM LINE YOU WILL NEED IN ORDER TO GIVE AND OBTAIN INFORMATION RELATING TO YOUR DUTIES AND MATERIEL.

2. MAKE YOURSELF KNOWN, ALONG WITH YOUR POST TITLE AND DUTIES, TO EVERY TERMINAL YOU WILL NEED FOR THE OBTAINING OF INFORMATION AND THE GIVING OF DATA.

3. DISCOVER FROM YOUR SENIORS AND FELLOW STAFF MEMBERS AND ANY PUBLIC YOUR DUTIES MAY REQUIRE YOU TO CONTACT, WHAT IS NEEDED AND WANTED FROM EACH.

4. DO, PRODUCE AND PRESENT WHAT EACH NEEDS AND WANTS THAT IS IN CONFORMATION WITH POLICY.

5. MAINTAIN YOUR COMM LINES THAT YOU HAVE AND EXPAND THEM TO OBTAIN OTHER INFORMATION YOU NOW FIND YOU NEED ON A ROUTINE BASIS.

6. MAINTAIN YOUR ORIGINATION LINES TO INFORM OTHERS WHAT YOU ARE DOING EXACTLY, BUT ONLY THOSE WHO ACTUALLY NEED THE INFORMATION.

7. STREAMLINE WHAT YOU ARE DOING, PRODUCING AND PRESENTING SO THAT IT IS MORE CLOSELY WHAT IS REALLY NEEDED AND WANTED.

8. WITH FULL INFORMATION BEING GIVEN AND RECEIVED CONCERNING YOUR PRODUCTS, DO, PRODUCE AND PRESENT A GREATLY IMPROVED PRODUCT ROUTINELY ON YOUR POST.

I can guarantee that if you do this — and write your info concisely so it is quick to grasp and get your data in a form that doesn't jam your own lines — you will start on up the conditions for actual and in due course arrive in Power.

HCO POLICY LETTER OF 20 OCTOBER 1967R
ISSUE II
REVISED 4 MARCH 1975

REMIMEO

CONDITIONS PENALTIES NEW EMPLOYEES AND PERSONS NEWLY ON POST

(Refers to HCO PLs on conditions penalties.)

Persons newly employed or newly appointed to a post

ARE NOT SUBJECT TO CONDITIONS PENALTIES
OR AWARDS FOR THIRTY DAYS FOR THAT POST.

It is noted that all posts are begun in Non-Existence but it is without penalty for 30 days. If in that time (for a newly employed or new appointee) the post has not risen to Normal Operation the penalties are applied for the condition it has risen to.

A person assigned a low condition in a post or as a member of a part of the org or the org assigned a low condition who is then transferred to a new post carries to the new post the penalties of the old post for 30 days or until the old post's condition is upgraded, whichever is earlier. He then assumes the condition to which he has risen on the new post.

Persons newly appointed (not newly employed) or transferred into a new appointment who are in Normal or above at time of transfer are subject to the awards of their previous post for 30 days after which time they then assume the awards and penalties of the current condition of their new post.

HCO POLICY LETTER OF 16 JANUARY 1966R
REVISED 29 NOVEMBER 1979

REMIMEO
EXECUTIVE HATS

DANGER CONDITION

Refs:

HCO PL	9 Apr. 72R	CORRECT DANGER
	Rev. 1.12.79	CONDITION HANDLING
HCO PL	19 Jan. 66 III	DANGER CONDITION
		RESPONSIBILITIES OF DECLARING

The conditions of operation are (6) Power, (5) Power Change, (4) Affluence, (3) Normal, (2) Emergency, (1) Danger and (0) Non-Existence.

The formula of a Danger condition is:

1. Bypass (ignore the junior or juniors normally in charge of the activity and handle it personally).

2. Handle the situation and any danger in it.

3. Assign the area where it had to be handled a Danger condition.

4. Assign each individual connected with the Danger condition a First Dynamic Danger condition and enforce and ensure that they follow the formula completely, and if they do not do so, do a full Ethics investigation and take all actions indicated.

5. Reorganize the activity so that the situation does not repeat.

6. Recommend any firm policy that will hereafter detect and/or prevent the condition from recurring.

The senior executive present acts and acts according to the formula above.

A Danger condition is normally assigned when:

1. An Emergency condition has continued too long.

2. A statistic plunges downward very steeply.

3. A senior executive suddenly finds himself or herself wearing the hat of head of the activity because it is in trouble.

PERSONNEL

In step 4 of the Danger Formula, one has to call in Ethics to investigate and must order a hearing and also a Comm Ev as indicated on any person or persons whose negligence or noncompliance brought the situation about.

EXAMPLES

Example 1

The Ad Comm of the Distribution Division never orders or takes effective action to remedy the gross divisional statistic which has been at continuing emergency level for some time.

The Org Exec Sec is being pulled in to handle the situation, as the statistic's continuous low will swamp the org eventually and no reasonable advices from the Org Exec Sec have been accepted or used despite the continuing danger to the org from that division.

The Org Exec Sec therefore acts personally with personal work and (1) bypasses the Secretary, (2) gets the FSM program going and ads placed and a congress scheduled and advertised all on an urgent basis, all on a bypass of existing channels, (3) has the division assigned a Danger condition, (4) orders an Ethics investigation of all personnel in the division and brings any persons whose noncompliances or crimes were responsible before a Committee of Evidence including the Secretary, (5) appoints personnel and reorganizes the Distribution Division, (6) from the Ethics investigation and Comm Ev, sifts out any needful policy or change and forwards it to the Office of LRH for consideration for issue.

Example 2

The letters in–letters out statistic takes a very steep dive (perhaps only one-fifth the former number). The HCO Area Secretary instantly acts to (1) Bypass all lines, (2) Get mailings out urgently, put expeditors on writing letters, get a magazine in the mails, all off her own bat, using anyone to hand, (3) Demand the Dissem and Dist Divs be put in Danger condition, and if refused, cables LRH, (4) Order an executive Ethics investigation of all areas of outflow that would be responsible for org outflow and demands of the HCO Exec Sec a Comm Ev on any personnel found by investigation to have been negligent or noncompliant with policy concerning letters and any kind of mailing out, and failing to get such assignment, cables LRH, (5) Demand new personnel on key outflow posts, (6) Recommend any firm policy outgrowing from the investigation and Comm Ev to the Office of LRH.

Example 3

The Tech Sec suddenly discovers he or she is totally wearing the D of T hat and statistics are falling in that dept although there is a D of T. The Tech Sec has already attempted to get the D of T's hat on many times. The Tech Sec then: (1) Bypasses the D of T, (2) Immediately handles the Academy on a personal full-time basis to sort out the students, establish precise schedules, get in proper checksheets and routes slow students to Cramming and nattery ones to Ethics and gets completions going,

(3) Gets the department assigned a Danger condition, (4) Demands an Ethics investigation and a Comm Ev on personnel on whom noncompliance or crimes are discovered, (5) Gets a new D of T and/or Supervisors, (6) Recommends any firm policy found required in the Ethics investigation or Comm Ev.

EXECUTIVE DIRECTOR

When I find a hat forced upon me despite all efforts of mine to handle it previously, and which I have then to handle, I follow the Emergency Formula.

When an org is in general danger or a dangerous situation has arisen, I follow the Danger condition formula.

By the time anything gets to a point where I have to wear the hat, statistics on it must have been bad for some time and I find by experience that noncompliance will be discovered inevitably, which is why the situation rolled all the way up the lines to me.

As Danger condition is handled by a bypass of those who were supposed to handle it, then I also bypass in assigning a Danger condition, which is to say, the condition is assigned not by chain of command but by direct Sec ED.

SUMMARY

Emergencies when they continue are usually caused by crimes or negligence and are always accompanied by noncompliance.

A continued emergency inevitably results in real catastrophe for higher executives. It causes them heavy overwork at the very least. Sometimes a Danger condition threatens finally the whole org unless handled.

In the current society the manager or executive has no recourse to law or the culture. Errors can be made or omissions can occur unknown to him, which actually can threaten not only his job but his person.

The usual action in our organizations is to let things run as long as they run well. When they begin to show poorer statistics, an Emergency condition is assigned and we usually talk it over with the person who is head of that activity, and try to help. If the condition continues, we warn. And if the statistics still go down, we usually transfer and find somebody else. At the point where a senior executive finds he is being made to look bad by continued Emergency on a lower echelon, he has no choice but to assign a Danger condition. The head of the activity is not always removed but certainly must be investigated. If permanent, it takes a Comm Ev to remove or transfer.

It will always be found that noncompliance with policy and orders has for some time existed. It will sometimes be found that lies and false reports also existed. And one always finds negligence and idleness and inattention where statistics continue to go down.

It is *very* bad to assign a Danger condition or to bypass *unless* the statistics are continuing to go down or have continued at a dangerous level for some time without real improvement.

A senior executive is soft in the head if he thinks statistics just *stay* down. They are *always HELD* down hard. Emergencies don't just happen because someone is idle. Emergencies are made — actively. It takes a lot of counter-effort to jam an org's flows — if you don't believe it, then measure it by the effort *you* exert trying to get things going. What's pushing back so hard? Emergencies are *made.* They don't just happen. And any hearing in an area where statistics just won't come up will reveal not mere negligence but actual crimes as well.

The senior executive's only protection is to handle the bad situation and follow the Danger condition formula.

If that seems ruthless, it still is necessary if one is to be at all successful.

ASSIGNMENT

Only the Ad Council, an Executive Secretary or Secretary may assign a Danger condition. A director or officer may request one on their sections or personnel.

If one was incorrectly assigned and statistics were in fact up, it will of course come out in the hearing.

HCO POLICY LETTER OF 9 APRIL 1972R
REVISED 1 DECEMBER 1979

REMIMEO

ETHICS

CORRECT DANGER CONDITION HANDLING

(Cancels HCO PL of 7 Feb. 70,
DANGER CONDITION — 2ND FORMULA)

Refs:

HCO PL	16 Jan. 66R Rev. 29.11.79	DANGER CONDITION
HCO PL	19 Jan. 66 III	DANGER CONDITION RESPONSIBILITIES OF DECLARING

When the correct formula for handling a Danger condition is not done, an org or activity or person cannot easily get above that condition thereafter.

When we had the 2nd Danger Formula, apparently it was applied but the real Danger Formula wasn't. This made some orgs and people remain in or below Danger and made it very hard for them to get above that state.

A prolonged state of Emergency or threats to viability or survival or a prolonged single-handing will not improve unless the actual Danger Formula is applied.

DANGER FORMULA

The original formula follows:

1. Bypass (ignore the junior or juniors normally in charge of the activity and handle it personally).

2. Handle the situation and any danger in it.

3. Assign the area where it had to be handled a Danger condition.

4R. Assign each individual connected with the Danger condition a First Dynamic Danger condition and enforce and ensure that they follow the formula completely, and if they do not do so, do a full Ethics investigation and take all actions indicated.

5. Reorganize the activity so that the situation does not repeat.

6. Recommend any firm policy that will hereafter detect and/or prevent the condition from recurring.

The senior executive present acts and acts according to the formula above.

A Danger condition is normally assigned when:

1. An Emergency condition has continued too long.

2. A statistic plunges downward very steeply.

3. A senior executive suddenly finds himself or herself wearing the hat of head of the activity because it is in trouble.

FIRST DYNAMIC FORMULA

The formula is converted for the first dynamic to

1st 1. Bypass habits or normal routines.

1st 2. Handle the situation and any danger in it.

1st 3. Assign self a Danger condition.

1st 4. Get in your own *personal ethics* by finding what you are doing that is out-ethics and use self-discipline to correct it and get honest and straight.

1st 5. Reorganize your life so that the dangerous situation is not continually happening to you.

1st 6. Formulate and adopt firm policy that will hereafter detect and prevent the same situation from continuing to occur.

JUNIOR DANGER FORMULA

Where a Danger condition is assigned to a junior, request that he or she or the entire activity write up his or her overts and withholds and any known out-ethics situation and turn them in at a certain stated time on a basis that the penalty for them will be lessened but if discovered later after the deadline it will be doubled.

This done, require that the junior and the staff that had to be bypassed and whose work had to be done for them or continually corrected, each one write up and fully execute the FIRST DYNAMIC DANGER FORMULA for himself personally and turn it in.

ASSESSMENT

If the necessity to bypass continues or if an area or person did not comply, use a meter and assess or get assessed the following questionnaire.

THE TROUBLE AREA QUESTIONNAIRE

Person's Name _____ Post _____ Date _____

To be done on the person by one who can correctly operate a meter.

The list is done by telling the person you are about to ask him some questions on a meter, and then just assess this list for reads.

Mark each read properly.

a. Are you doing anything dishonest? _____

b. Are you more interested in something else than your job? _____

c. Are you falsely reporting about anything? _____

d. Are you doing something harmful? _____

e. Are you doing little or nothing of value? _____

f. Are you pretending? _____

g. Are you in disagreement with something? _____

h. Do you have overts? _____

i. Are you withholding something? _____

j. Do you know of some out-ethics around you? _____

k. Don't you know what your post product is? _____

l. Are the products of others around you unknown to you? _____

m. Do you have things about your post you don't understand? _____

n. Do you have words on your post you don't understand? _____

o. Don't you know grammar? _____

p. Is there some reason you are not quite on post? _____

q. Is someone giving you orders you don't understand? _____

r. Are you getting orders from too many places? _____

s. Don't you have a post? _____

t. Don't you know what your post is? _____

u. Have you really not read your hat? _____

v. Are you here for some other reason than you say? _____

w. Were you planning to leave? _____

x. Is your post temporary? _____

y. What about your post purpose? _____

z. Are you in any way misemotional or upset about your post? _____

aa. Are you actually doing fine? _____

When this has been assessed on a meter, one then takes the largest read or TA blowdown and handles it.

This is done by writing the question letter and the person's answers.

Each question that read is given two-way communication until each question that read has attained a floating needle.

The form used and the worksheets are placed in the person's folder so that other handling can be programed and done as needed.

_____
Operator's Name

Probable WHY _____

_____

_____

WHY

The above questionnaire can also be used to *help* find a WHY (it will not directly find one as the Why has to be rephrased for each individual).

A WHY should always be found for individuals in a Danger condition.

TROUBLE AREA SHORT FORM

_____ _____ _____
Person's Name Post Date

A short form can be done on someone who is an "old hand" and knows the tune.

SF 1. Out-ethics? _____

SF 2. Overts? _____

SF 3. Withholds? _____

SF 4. Disagreements? _____

SF 5. False reports? _____

SF 6. Product unknown? _____

SF 7. Products of others unknown? _____

SF 8. Post purpose? _____

SF 9. Situations not understood? _____

SF 10. Misunderstood words? _____

SF 11. Misunderstood grammar? _____

SF 12. Wrong Why? _____

SF 13. Omitted materials? _____

SF 14. Misemotional? _____

SF 15. False passes? _____

SF 16. Invalidation? _____

SF 17. Wrong orders? _____

SF 18. Not understood? _____

SF 19. No situation? _____

SF 20. Doing fine really? _____

(Handling is the same as in the long form.)

_____
Operator's Name

Probable WHY _____

_____

_____

ENDING A DANGER CONDITION

When production has again increased, the Danger condition should be formally ended and an Emergency condition assigned and its formula should be followed.

Recently after writing HCO PL of 9 Apr. 72R, CORRECT DANGER CONDITION HANDLING, I took a look at man's condition in being human. A human being is in danger all the time. With catastrophes, the elements, being eaten and car wrecks — he is in a sort of dangerous environment. That's the truth of the matter. He dies every sixty or seventy years or something like that. This isn't a healthy condition.

But do you know if the Danger condition were applied, totally applied, it would move one up the line, out of the condition of being human and toward OT!

Well the upshot of this new policy letter is that we now have a second Danger Formula which we call a First Dynamic Formula and I thought you would want to better understand this formula.

It says: "Bypass habits or normal routines." That's number one which is just the Danger Formula all over again.

"Two: Handle the situation and any danger in it."

"Three: Assign self a Danger condition." See? You've got to assign the condition. That is the only reason that is there.

"Four: Get in your own *personal ethics* by finding what you are doing that is out-ethics and use self-discipline to correct it and get honest and straight."

"Five: Reorganize your life so that the dangerous situation is not continually happening to you."

"Six: Formulate and adopt firm policy that will hereafter detect and prevent the same situation from continuing to occur."

Well that can be pretty rough. How is the guy going to detect any of that? The truth of the matter is if you do the Trouble Area Questionnaire and the Trouble Area Short Form of 9 April 72 on somebody, it will suddenly spot up whatever it spots up and on some guys ethics will be out and on some guys it will be in. These little assessments will show this up.

So it is really sort of find the Why on the person and you tell him to apply or not apply the First Dynamic Formula.

To get out of a Danger condition one would have to do this formula. It is relatively easy. You give an assessment (you can assess both of these, by the way, consecutively on one person). The assessment guides their attention so they won't get a Why that someone "was tired when he or she read the Study Tapes." If you listen to the person you'll think that is the Why and this goes into chaos. The assessment won't find the Why but will direct one's attention into the area where it is. A Why requires its own phrasing.

Because one is going to get in trouble here and there on this, I have included number 12 on the short form, "Wrong Why?" So when you get requests to redo this Why, one uses the short form in the 9 April 72 PL.

After the Why is found this is the formula they follow. The step "bypass habits or normal routines" means bypass doing all this stuff you've been doing which might be continuing the Why.

Let us say a fellow was accepting money from his uncle and saying he was buying a house with it and he wasn't. He was spending it on a blonde. Now he is in

continuous danger. His uncle might find it out at any moment and he expects to inherit his uncle's fortune someday. So he's in a sort of quasi-panic; even though he isn't thinking about it, it's still sitting there.

Now, "handle the situation and any danger in it" could be spotted as the Why. Because he has withholds and he is connected in some way and it's pretty weird and he's liable to be tripped. Well, all right, he'd have to quit doing that — bypass the habits or normal routines of the thing. In other words, quit accepting that money.

But he'd also have to handle the situation and any danger in it. It would be very dangerous to write, "Dear Uncle George: For the last year and a half, all the money you've been sending me to buy a house with, I have been spending on a blonde named Floozie." Well, he'd have to figure out how to handle that so that there wasn't any danger in it. And it might take quite a bit of thinking.

If he just jumped up and said to his uncle, "Well, I've been lying to you, Uncle George. I've been wasting all of your dough," the possibility is that this would come as such a shock to Uncle George that he'd disinherit him, shoot him and so forth. He would really be in danger. So he'd have to figure out how to handle it. It might be as simple as, "Dear Uncle George: I have been getting processed lately with Scientology, and it's making a more honest man out of me. And there are many dishonest things which I have done in my life and one of them is this. Now, you will probably shoot me for having done this, and it is not fair to you but actually I have been using this money to live off of and . . ."

Then "assign self a Danger condition" is only there because people forget to assign it. And then you "get in your own *personal ethics* by finding what you are doing that is out-ethics and use self-discipline to correct it and get honest and straight." Now there might be some other "Uncle Georges" (and we've still got to handle this blonde named Floozie). Even though one might have handled the uncle there might be some more.

And you could get a sort of Christian resurgence. Those are quite wild. They've got a lot of phrases for it such as: they felt "the touch of Christ" and "Christ is now in their heart" and all of that sort of thing. Actually, they usually proceed by just starting to be a decent citizen or something. "I was a sinner," they usually start out. "I was a dog." They start out with self-abasement. But very often those things are quite spectacular. The early Church was using this rather consistently — these fantastic resurgences. The guy was practically dying and a thief and a bum and nobody would ever talk to him and he was no good to anybody and he was sick and drunk — and all of a sudden he had a resurgence. Various creeds used various terms and praised this in various ways. "Saw the light" is the most common English cliché which has come out of it. But that wasn't really what they did. They came alive. In other words, they were able now to face the world and get back into communication. That is really what happened. The formula is quite interesting from that point of view.

Then "reorganize your life so that the dangerous situation is not continually happening to you" — well, that's easy, in this hypothetical case of Uncle George. Simply knock it off as far as this Floozie is concerned and instead of being up all

night every night and so forth, actually get some sleep and do your job and amount to something. That's a reorganization of it.

And then, "formulate and adopt firm policy that will hereafter detect and prevent the same situation from continuing to occur." In other words, "I'm not going to tell lies so that I can get money," or something like that, is all the guy would have to decide. It's like a New Year's resolution. But people don't keep them because they didn't get in the first five steps. That's why New Year's resolutions aren't kept. You are actually asking the guy at this point to reform.

ETHICS AND JUSTICE

Ethics in the past sometimes got into an outpoint-correct, outpoint-correct, outpoint-correct. But now you can find the Why on the guy. All of a sudden you don't have a continuous heavy ethics. One wouldn't keep shooting people for the wrong reason, shooting them for outpoints. You "shoot" them for the Why.

Therefore ethics really becomes an ethical subject not a justice subject. You're trying to improve the guy's ethics and then you get the product of an Ethics Officer as a more ethically acceptable person. It isn't a comm-eved person, a disciplined person, a punished person. It would have to be a person who was in trouble or upset and now he's a more ethically acceptable person in a more secure state.

If you find the Why on the guy he'll straighten out and this may be why out-ethics people can't make any case gain to amount to anything. For instance, we had one person with a crashing big withhold and he would have never been salvaged no matter how many Comm Evs you gave him or how many disciplines or how many transfers or how many days in jail.

There is a great oddity in this. In a marvelous book all about crime in the Victorian Age, entitled *The Victorian Underworld,* one of the data in it is of great interest. They hung people publicly in England, and they hung them very bloodily indeed; they hung, drawn and quartered them, which is half-hanged them, gutted them and it was quite a mess. And the public used to gather around and watch all this. Barbaric in the unbelievable extreme.

Now hear me: the murder rate did not change. That did not give one a higher degree of public safety. The exhibition of public punishment does not have a restraining effect on anyone.

It is the same thing a soldier thinks, "Well it will never happen to me." He sees a guy right next to him in the next file shot and blown all over the landscape and he says, "Well, that won't happen to me." They all must think this in going over the top, or they would never charge. So people think this at executions.

In other words, there isn't such a thing as setting an example. It does have a slight restraining effect but only in a fairly lawful group. So you won't get anywhere simply with straight punishment. That's why the society goes downhill. Just setting up the example of people being punished does not necessarily bring about an in-ethics situation.

SUMMARY

What we've done is crack the back of the subject called justice. The guy is in danger. If he applies the formula and if it is all applied and is straightly applied, why, he'll come out of it. So the past basic theories of justice are wrong.

It is totally possible to bring justice in on an area if one brings in ethics.

HANDLING DANGER CONDITIONS

(Originally written by LRH for the *Apollo* OODs
of 12 Apr. 72. Issued as an HCO PL on 13 Oct. 80.)

The right way to *really* handle a Danger condition assigned one is to get an assessment on HCO PL 9 Apr. 72R, CORRECT DANGER CONDITION HANDLING, and get a Why found and then do the 1st Dynamic Formula in that PL.

Esto Series 13, DOING WORK, is what the Why is actually trying to solve — "how doesn't he really do what he's supposed to be doing."

The assessment gives one the AREA of the Why.

That 1st Dynamic Danger Formula is quite something. It is written in a very short form. The 1st 1 really means, knock off doing the Why found!

When I was studying this subject, I found that this formula (fully laid out) would practically solve a case! At least the dangerous elements of one. (It doesn't change auditing tech.)

If you read Esto 13 and then 9 Apr. 72 PL, you'll see how it all fits.

FORMULAS

(Originally written by LRH for the *Apollo* OODs
of 27 Aug. 74. Issued as an HCO PL on 17 Sept. 80.)

I've just discovered why some people never really get on post!

They apply the Non-Existence Formula, get a reply, then probably do not produce it.

But whether they produce it or not, they rarely apply the First Dynamic Danger Formula. Not having applied it, they suck in a bypass somewhere and really catch it.

Then really they never get even to Emergency, to say nothing of Normal Operation.

Did you ever complete the Non-Existence Formula for your post by producing the needed and wanted?

Did you ever apply the First Dynamic Danger Formula or even ask for upgrade?

No?

Then don't wonder if you get hit. These things operate like natural laws.

See HCO PL 23 Sept. 67, NEW POST FORMULA, THE CONDITIONS FORMULAS, and HCO PL 9 Apr. 72R, CORRECT DANGER CONDITION HANDLING.

THE ACTION AFFLUENCE FORMULA

Ref: HCO PL 23 Sept. 67 NEW POST FORMULA
THE CONDITIONS FORMULAS

(In November 1968, the Flagship *Apollo* went into a strong Affluence condition caused by many contributing actions. LRH said in the OODs of 17 Nov. 68, "WE MUST CONTINUE TO PUSH EXISTING ACTIONS AND GENERATE NEW ONES OF THE SAME TYPE INTERNALLY AND EXTERNALLY." And "THIS HIGH VELOCITY MUST BE MAINTAINED TO MAINTAIN THE AFFLUENCE." LRH then went on to say, "As this Affluence is based on forward action not finance, it alters the formula of HCO PL 23 Sept. 67. . . ." What followed were the steps of the Action Affluence Formula as given verbatim below.)

ACTION AFFLUENCE

1. *Economize* on needless or dispersed actions that did not contribute to the present condition. Economize financially by knocking off all *waste*.

2. Make every action count and don't engage in any useless actions. Every new action to contribute and be of the same kind as *did* contribute.

3. Consolidate all gains. Any place we have gotten a gain, we keep it. Don't let things relax or go downhill or roller-coaster. Any advantage or gain we have, keep it, maintain it.

4. Discover for yourself what caused the condition of Affluence in your immediate area and strengthen it.

The Affluence Formula for *finance* is:

1. Economize.

2. Pay every bill.

3. Invest remainder in service facilities.

4. Discover what caused the Affluence and strengthen it.

HCO PL	17 Nov. 68	THE ACTION AFFLUENCE FORMULA

I have just uncovered what is probably a widespread misunderstanding of the difference between the condition of AFFLUENCE and the condition of POWER.

Looking at the following graph,

which had been MISCLASSIFIED as Power, revealed to me that Power was not understood. The graph shown above is in screaming Affluence. It is not Power since it is not maintained.

Power is not a high Affluence, as a good many people seem to think.

On spotting this misconception, I called for all of the references on Power and Affluence so these could be carefully reviewed and clarified or corrected if needed to ensure that Power is not susceptible to misinterpretation. A description of the slant of a Power line as "near vertical up" (HCO PL 5 May 71R II, READING STATISTICS) is erroneous as it gives the idea that Power could be judged from one line on the graph, and this has now been corrected. While that statement might describe the ascent of a stat up to a range where it can now *move into* Power (as Power would be high at the top of the graph), it does not accurately describe Power itself, as Power is a *trend.* Therefore, HCO PL 5 May 71R II has been revised to clarify this, and any extant sample graphs or issues put out by others which would forward the wrong concept of Power have been revised accordingly.

We need to get the facts regarding this condition very straight and clearly understood.

So now let us look at a very concise definition of Power, along with some further data on the subject.

CONDITION OF POWER

A Power stat is a stat in a very high range; a brand-new range in a Normal trend.

A Power stat is not just a stat that is steeply up for a long time. Nor is Power simply a very high stat. Power is not a one-week thing. Power is a *trend.*

DEFINITION: POWER IS A NORMAL IN A STELLAR RANGE SO HIGH THAT IT IS TOTAL ABUNDANCE, NO DOUBT ABOUT IT.

IT IS A STAT THAT HAS GONE UP INTO A WHOLE NEW, STEEPLY HIGH RANGE AND MAINTAINED THAT RANGE AND NOW, IN THAT NEW HIGH RANGE, IS ON A NORMAL TREND.

Operating in this new range you may get a slight dip in that stat now and then. But it is still Power.

There is another datum that is of importance if one is to correctly recognize and understand this condition:

Why do we call it Power?

BECAUSE THERE IS SUCH AN ABUNDANCE OF PRODUCTION THERE THAT MOMENTARY HALTS OR DIPS CAN'T PULL IT DOWN OR IMPERIL ITS SURVIVAL.

And THAT is POWER.

POWER CONDITION FOR INDIVIDUALS AND ORGS

If those who didn't understand the Power stat had asked one more question, they would have gotten a clarification.

The question would be "How much work can one guy do?" Or "How many bricks can a guy lay in a day?"

Of course, a person can only work so many hours in a day. He can only get so much individual production in a day. But he can get enough production in a day to support himself. He can get his production up into such abundance that he can take some time off. That depends on his efficiency and brightness.

At a certain peak of Affluence he will hit how many bricks he can lay. By increasing practice and efficiency he can keep that level of production going in a Normal.

If he's laying so many bricks that nobody is ever going to think of firing him, why, he's in Power. That's a Power condition for an individual.

That isn't true of an organization. An organization expands. It's got to expand if it is to stay alive at all and it's got to expand if it is to get into Power and maintain it.

Let us say an org or a portion of an org gets its production going into a series of increasing Affluences. Eventually it reaches a peak as to what it can honestly and actually produce with its current facilities (personnel, equipment, etc.). Now it is managing to maintain its new high range in a Normal trend. There is a good healthy abundance of production going on. That's excellent; the org has made it into Power and the Power Formula applies.

BUT for an organization, which can expand, there are new, higher ranges which can now be reached.

In the Simon Bolivar PL (HCO PL 12 Feb. 67, THE RESPONSIBILITIES OF LEADERS) I've given you a datum which is pertinent here: "When the game or the show is over, there must be a new game or a new show. And if there isn't, somebody else is jolly well going to start one, and if you won't let *anyone* do it, the game will become 'getting you.'"

So for an org there is a new level of Power now to be attained. It's done by applying the formulas exactly. And in the course of things, that includes bettering the quality and quantity of one's service, adding personnel and hatting, training, apprenticing them up to competence, improving facilities. Expanding.

I got Saint Hill into Power in the sixties and the FSO was in true Power in Daytona.* But that's about it.

There are higher potential ranges, always, that any org can reach. But it isn't a hit-or-miss thing; it's correct application of the correctly assigned conditions formulas. Prediction, planning and adhering to the principles for sound expansion enter into it.

POWER FORMULA

The Power Formula given in HCO PL 23 Sept. 67, NEW POST FORMULA, THE CONDITIONS FORMULAS, is the formula for the condition of Power on the *first* dynamic.

That is true for an individual in any organization, unit or government or civilization. To stay in a Power condition, you would apply the steps of that formula scrupulously.

Additionally, there is a formula for the condition of Power on the *third* dynamic, and that is found in the seven points regarding Power laid out in HCO PL 12 Feb. 67, THE RESPONSIBILITIES OF LEADERS.

If an org or an individual doesn't also get those seven points applied, it can be predicted with accuracy that they won't be in Power for long. That is a fact. Power carries with it those exigencies.

When these points *are* applied, you get an expansion of the Power factor, and if you continue to operate on these points, that Power factor will expand and expand again until there is a much, much larger sphere of Power realized than was originally achieved.

This is the forward look for the executives and staff of an org to take.

But you don't hit Power overnight. On the way up there will be some Affluences to handle.

*Daytona: a city on the eastern coast of Florida; original site of the Flag Land Base, before it was moved to Clearwater, Florida.

CONDITION OF AFFLUENCE

When you have a line going steeply up on a graph, that's AFFLUENCE. Whether it's up steeply for one week or up steeply from its last point week after week after week, it's AFFLUENCE.

When you've got an Affluence, regardless of how you did it, the Affluence Formula applies.

You MUST apply the Affluence Formula or you will be in trouble. Anyone dealing with Affluence should be aware of the following peculiarities about it.

Affluence is the most touchy condition there is. Misname it or handle it off formula and it can kill you! It is, strangely enough, the most dangerous of all conditions in that if you don't spot it and apply the formula, you spatter all over the street! Spot and handle it right and it's a rocket ride.

HANDLING AFFLUENCE

Let us say the key stat of some organization, operationally, is Total Income and it's in Affluence, so the condition of the organization, as an organization, is Affluence.

You had better do a stat analysis. You will need to review all of the GDS (gross divisional statistic) graphs and do a comparison of each set of stats in the same or related activity. For an org which has both external and internal stats, such as a management org, this includes doing an *internal* GDS analysis as there will be vital points there to be covered. GDS analyses are just that. In order to understand what has put a GDS up or down, you have to look at the minor stats and the associated stats.

A GDS analysis is not just pointing out which stats are down and handling with conditions, etc. It is finding the one order which will revert the scene; that is the ideal scene of GDS analysis. The purpose is not to see if they are going up or down, the purpose is to find what stat or stats, if handled forcefully and at once, will change the whole situation.

A GDS analysis, by the way, is a little bit different than a stat analysis. The GDS analysis normally takes up just GDSes but you still have to look at the minor stats. That is in order to understand why the GDSes are that way. But the broad embracive term of "stat analysis" is probably superior as a term, even though we use "GDS analysis." It doesn't really much matter which term you use but your subject is really "stat analysis" as that applies to anything everywhere, even in places where they don't even have any GDSes. You can do a stat analysis on the government and come up with a Why — bang!

All right, so you have an Affluence. The Affluence Formula, per HCO PL 23 Sept. 67, NEW POST FORMULA, THE CONDITIONS FORMULAS, is:

1. Economize. Now the first thing you must do in Affluence is economize and then make very, very sure that you don't buy anything that has any future commitment to it; don't buy anything with any future commitments; don't hire anybody with any future commitments — nothing. That is all part of that economy; clamp it down.

2. Pay every bill. Get every bill that you can possibly scrape up from anyplace, every penny you owe anywhere under the sun, moon and stars and pay them.

3. Invest the remainder in service facilities; make it more possible to deliver.

4. Discover what caused the condition of Affluence and strengthen it.

Your battle plan must include the first three targets of the formula. It goes without saying that these should be the first targets on your battle plan.

Now let's look at #4 of the Affluence Formula.

Let's look now at trends. What started this Affluence?

We find the date coincidence of the Affluence was Program A and Program B.

Good. Per #4 of the formula we must strengthen these!

All right, how? By looking over the rest of the stats and finding which are NOT in AFFLUENCE, of course.

List out the various stats and the state they're in: the non-Affluence, the broken Affluence, the Normal, the crashed stats.

So where did the Affluence come from? It's Division X, Div X Secretary and some others. Look over these stats. Some are, some aren't in Affluence.

Now take a look at the programs that started the Affluence.

Go over the targets on these programs thoroughly. Ensure the reports on the completed targets are correct. You want to be sure that what was said was done *was* done. False reports and half-dones can cause attention to drift off those targets as they're then *assumed* to be in when they're not.

Isolate the program actions, the targets done that caused or contributed to the Affluence, as you're going to strengthen them.

You might find that the monitoring reasons for the Affluence are majorly not done, incomplete or not marked to be maintained. That fact itself signals some of the actions to be taken to strengthen the Affluence.

Targets fully and honestly done once may have now dropped out and the successful actions are not being continued. You can be sure that if all of these points aren't carried through, you'll lose your Affluence.

Review the downstat areas. Find out what they were or weren't doing and what they *should* have been doing that would have contributed to the Affluence.

Here is Target "E," not done, and so you took a horrible beating. Aha! A departure from these programs caused disaster!

And somebody else went off the strategy and current planning against which the programs were written.

So will failure to follow these programs further break your Affluence? You said it!!!!!

Your GDS analysis, then, would conclude with:

1. To come off the cause of the Affluence will bring utter chaos and disaster.

2. The cause of the Affluence was Program A and Program B.

3. The whole handling of Programs A and B must be reinforced.

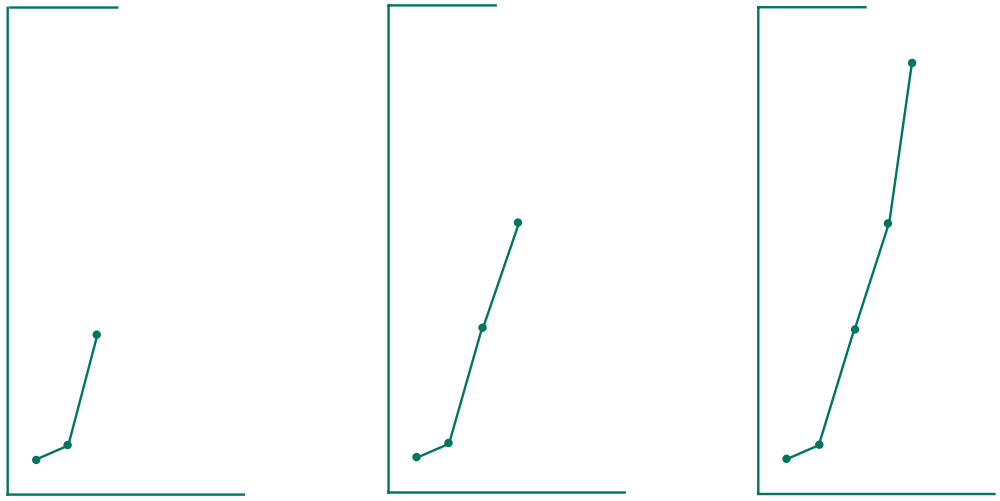
That gives you your battle plan!

So you go over the programs, target by target. Exhume every project written for those targets. Program out which actions need to be repeated, taken to full dones, maintained, whatever is called for. *Reinforce them*. Program out the production actions to be taken (in addition to correct condition assignments) in the downstat areas.

All of this makes up your battle plan. Now you go hellbent for leather and get that BP done!

And note: If the following week a new stat analysis is done, you don't then cancel everything, change course and go careening off on a tangent in another direction on some new program. That violates management by trend and results in incomplete programs. Whatever else needs doing, you'd better also relog any undone battle plan targets. And stay on the proven, successful programs until they are complete and being maintained.

An org or a unit or an individual can make the mistake of thinking it has exhausted its immediate resources for creating another Affluence. But with this kind of scrutiny and analysis of the scene, you'll find you do have the means to do it. True, it may take some beef-up or reorganization in certain areas, but it doesn't require going into a total organize. Any reorganization done would be done to strengthen the targets or actions which brought about the Affluence.



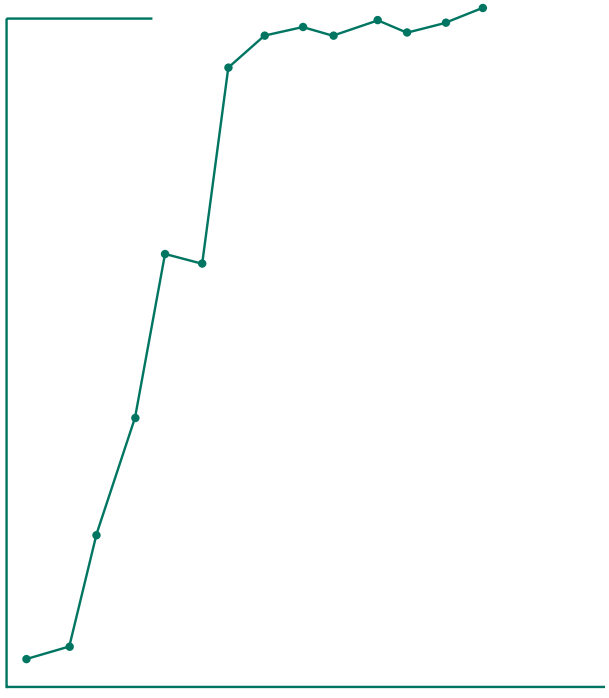
THE CAUSE OF THE AFFLUENCE IS STILL CAPABLE OF CAUSING IT!

This is the key tool of management: GDS analysis and conditions, strategy, programs and targets.

For a smaller unit or section of an org or an individual, you just transpose the handling given here over to the activity of that unit, section or individual and get it applied there. That you're now going to do it on a smaller scale doesn't change or negate any of the steps of the Affluence Formula.

Where it can go off the rails most easily is mistaking an Affluence condition for Power and thus applying the wrong formula, failing to find the true cause of the Affluence, assuming there's nothing more that can be done in the sector that caused the Affluence in the first place, or sloppy, inexact, incomplete application of any part of the formula.

When Affluence *is* handled with the correct condition assigned, an accurate stat analysis and an industrious application of the formula based on the true cause of the Affluence, you'll get something like this:



AFFLUENCE. Condition correctly assigned and the Affluence Formula carried out results in . . .

AFFLUENCE. Formula carried out standardly in a new unit of time results in . . .

AFFLUENCE.

By reinforcing what caused the Affluence each time, you keep boosting it up to a new higher point until eventually it peaks at what is truly a stellar range. Now you have a new scene.

AFFLUENCE GOING INTO POWER

When you're maintaining that new range and you've got it stabilized and going in a Normal *trend,* you had better get the Power Formula carried out and all the points of Power Change as they apply.

You're operating now in a new range. You continue to build it from there. At some point it may take off into another Affluence. But in any case, if you keep it all going standardly and keep getting the correct conditions applied, eventually you'll work it up to a new and even wider sphere of Power.

If any of this was misunderstood in the past, it is possible that some Affluences were broken because of the confusion between the two conditions. An org was in Affluence, a real Affluence, thought it was Power and applied the wrong condition. So the Affluence wasn't maintained and the org never really got into Power.

But a far, far more common occurrence would be that an Affluence trend was broken by orders given into the org by persons who have not taken into account (and didn't know) *why* the Affluence occurred.

History is strewn with examples of individuals, states, nations and whole civilizations violating these two conditions and their formulas.

We have a different route to travel. With the tools we have, we are capable of making a different kind of history and *are* making it right now.

You have a well-defined picture of Affluence and its handling. You now have a clear-cut definition of Power. And the twain *do* meet — I've just shown you how.

Study it well, get it all straight and *applied* and you'll reach a point where you're operating with such an abundance of production that momentary halts or dips can't pull it down or imperil its survival!

And that will be Power!

HCO POLICY LETTER OF 12 FEBRUARY 1967

(Also issued as an HCOB, same date and title)

ORG EXEC COURSE

ADMIN KNOW-HOW SERIES 13

THE RESPONSIBILITIES OF LEADERS

A few comments on POWER, being or working close to or under a power, which is to say a leader or one who exerts wide primary influence on the affairs of men.

I have written it this way, using two actual people, to give an example of magnitude enough to interest and to furnish some pleasant reading. And I used a military sphere so it could be seen clearly without restimulation of admin problems.

The book referenced is a fantastically able book, by the way.

THE MISTAKES OF SIMON BOLIVAR AND MANUELA SAENZ

Reference: The book entitled:

The Four Seasons of Manuela
by Victor W. von Hagen, a biography.
A Mayflower Dell paperback. Oct. 1966. 6 shillings.

Simon Bolivar was the liberator of South America from the yoke of Spain.

Manuela Saenz was the liberatress and consort.

Their acts and fates are well recorded in this moving biography.

But aside from any purely dramatic value, the book lays bare and motivates various actions of great interest to those who lead, who support or are near leaders.

Simon Bolivar was a very strong character. He was one of the richest men in South America. He had real personal ability given to only a handful on the planet. He was a military commander without peer in history. Why he would fail and die an exile to be later deified is thus of great interest. What mistakes did he make?

Manuela Saenz was a brilliant, beautiful and able woman. She was loyal, devoted, quite comparable to Bolivar, far above the cut of average humanoids. Why then did she live a vilified outcast, receive such violent social rejection and die of poverty and remain unknown to history? What mistakes did she make?

The freeing of things is the reverse unstated dramatization (the opposite side of the coin) to the slavery enjoined by the mechanisms of the mind. Unless there is something to free men *into,* the act of freeing is simply a protest of slavery. And as no humanoid *is* free while aberrated in the body cycle, it is of course a gesture to free him politically as it frees him only into the anarchy of dramatizing his aberrations with NO control whatever and without something to fight exterior; and with no exteriorization of his interest, he simply goes mad noisily or quietly.

Once as great a wrong as depraving beings has been done, there is of course no freedom short of freeing one from the depravity itself or *at least* from its most obvious influences in the society. In short, one would have to de-aberrate a man before his whole social structure could be de-aberrated.

If one lacked the whole ability to free man wholly from his reactive patterns, then one could free man from their restimulators in the society at least. If one had the whole of the data (but lacked the Scientology tech), one would simply use reactive patterns to blow the old society apart and then pick up the pieces neatly in a new pattern. If one had no inkling of how reactive one can get (and Bolivar of course had no knowledge whatever in that field), there yet remained a workable formula used "instinctively" by most successful, practical political leaders:

If you free a society from those things you see wrong with it and use force to demand it do what is right, and if you carry forward with decision and thoroughness and without continual temporizing, you can, in the applications of your charm and gifts, bring about a great political reform or improve a failing country.

So Bolivar's first error, most consistent it was, too, was contained in the vital words "you see" in the above paragraph. He didn't look and he didn't even listen to sound intelligence reports. He was so *sure* he could *glow* things right or fight things right or charm things right that he never looked for anything wrong to correct until it was too late. This is the ne plus ultra of personal confidence, amounting to supreme vanity. "When he appeared it would all come right" was not only his belief but his basic philosophy. So the first time it didn't work, he collapsed. All his skills and charm were channeled into this one test. Only that could he observe.

Not to compare with Bolivar but to show my understanding of this:

I once had a similar one. "I would keep going as long as I could and when I was stopped I would then die." This was a solution mild enough to state and really hard to understand until you had an inkling of what I meant by keeping going. Meteors keep going — very, very fast. And so did I. Then one day ages back, I finally *was* stopped after countless little stoppings by social contacts and family to prepare me, culminating in a navy more devoted to braid than dead enemies and literally I quit. For a while I couldn't get a clue of what was wrong with me. Life went completely unlivable until I found a *new* solution. So I know the frailty of these single solutions. Not to compare myself but just to show it happens to us all, not just Bolivars.

Bolivar had no personal insight at all. He could only "outsight" and even then he did not look or listen. He *glowed* things right. Pitifully, it was his undoing that he

could. Until he no longer could. When he couldn't glow he roared, and when he couldn't roar he fought a battle. Then civic enemies were not military enemies so he had no solution left at all.

It *never* occurred to him to do more than personally *magnetize* things into being right and victorious.

His downfall was that he made far too heavy a use of a skill simply because it was easy. He was too good at this one thing. So he never looked to any other skill and he never even dreamed there was any other way.

He had no view of any situation and no idea of the organizational or preparatory steps necessary to political and personal victory. He only knew military organization, which is where his organizational insight ceased.

He was taught on the high wine of French revolt, notorious in its organizational inability to form cultures, and that fatally by a childhood teacher who was intensely impractical in his own private life (Simon Rodriguez, an unfrocked priest turned tutor).

Bolivar had no personal financial skill. He started wealthy and wound up a pauper, a statistic descending from one of the, if not the, richest man in South America down to a borrowed nightshirt to be buried in as an exile. And *this* while the property of royalists was wide open, the greatest land and mine valuables of South America wide open to his hand, and that's not believable! But true. He never collected his own debt of loans to governments even when the head of those governments.

So it is no wonder we find two more very real errors leading to his downfall: He did not get his troops or officers *rewarded* and he did not aim for any solvency of the states he controlled. It was all right if there were long years of battle ahead for them to be unpaid as no real riches were yet won, but not to *reward* them when the whole place was at his disposal! Well!

The limit of his ability consisted of demanding a bit of cash for current pay from churches — which were not actively against him at first but which annoyed them no end — and a few household expenses.

He could have (and should have) set aside all royalist property and estates for division amongst his officers, their men and his supporters. It had no owners now. And this failure cost the economy of the country the tax loss of all those productive estates (the whole wealth of the land). So it is no wonder his government, its taxable estates now inoperative or at best hoarded by a profiteer or looted by Indians, was insolvent. Also, by failing to do such an obvious act, he delivered property into the hands of more provident enemies and left his officers and men penniless to finance any support for their own stability in the new society and so for his own.

As for state finance, the great mines of South America, suddenly ownerless, were overlooked and were then grabbed and worked by foreign adventurers who simply came in and took them without payment.

Spain had run the country on the finance of mine tithes and general taxes. Bolivar not only didn't collect the tithes, he let the land become so worthless as to be untaxable. He should have gotten the estates going by any shifts and should have state operated all royalist mines once he had them. To not do these things was complete, but typically humanoid, folly.

In doing this property division he should have left it all up to officers' committees operating as courts of claim without staining his own hands in the natural corruption. He was left doubly open as he not only did not attend to it, he also got the name of corruption when anybody did grab something.

He failed as well to recognize the distant widespread nature of his countries despite all his riding and fighting over them and so sought tightly centralized government, not only centralizing states but also centralizing the various nations into a federal state. And this over a huge landmass full of insurmountable ranges, impassable jungles and deserts and without mail, telegraph, relay stages, roads, railroads, river vessels or even footbridges repaired after a war of attrition.

A step echelon from a pueblo (village) to a state, from a state to a country and a country to a federal state was only possible in such huge spaces of country where candidates could never be known personally over any wide area and whose opinions could not even be circulated more than a few miles of burro trail, where only the pueblo was democratic and the rest all appointive from pueblo on up, himself the ratifier of titles if he even needed that. With his own officers and armies controlling the land as owners of all wrested from royalists and the crown of Spain, he would have had no revolts. There would have been little civil wars of course but a court to settle their final claims could have existed at federal level and kept them traveling so much over those vast distances it would have crippled their enthusiasm for litigation on the one hand and on the other, by dog-eat-dog settlements, would have given him the strongest rulers — if he took neither side.

He did not step out and abdicate a dictatorial position. He mistook military acclaim and ability for the tool of peace. War only brings anarchy, so he had anarchy. Peace is more than a "command for unity," his favorite phrase. A productive peace is getting men busy and giving them something to make something of that they *want* to make something of and telling them to get on with it.

He never began to recognize a suppressive and never considered anyone needed killing except on a battlefield. There it was glorious. But somebody destroying his very name and soul and the security of every supporter and friend, the SP Santander, his vice-president, who could have been arrested and executed by a corporal's guard on one one-hundredth of available evidence, who could suborn the whole treasury and population against him, without Bolivar, continually warned, loaded with evidence, ever even reprimanding him. And this brought about his loss of popularity and his eventual exile.

He also failed in the same way to protect his military family or Manuela Saenz from other enemies. So he weakened his friends and ignored his enemies just by oversight.

His greatest error lay in that while dismissing Spain he did not dismiss that nation's most powerful minion, the Church, and did not even localize it or reward a South American separate branch to loyalty or do anything at all (except extort money from it) to an organization which continually worked for Spain as only it could work — on every person in the land in a direct anti-Bolivar reign of terror behind the scenes. You either suborn such a group or you take them out when they cease to be universal and become or are an enemy's partner.

As the Church held huge properties and as Bolivar's troops and supporters went *unpaid* even of the penny soldiers' pay, if one was going to overlook the royalist estates, one could at least have seized the Church property and given it to the soldiers. General Vallejo did this in 1835 in California, a nearly contemporary act, with no catastrophe from Rome. Or the penniless countries could have taken them over. You don't leave an enemy financed and solvent while you let your friends starve in a game like South American politics. Oh no.

He wasted his enemies. He exported the "godos" or defeated royalist soldiers. They mostly had no homes but South America. He issued no amnesties they could count on. They were shipped off or left to die in the "ditch" — the best artisans in the country among them.

When one (General Rodil) would not surrender Callao fortress after Peru was *won,* Bolivar after great gestures of amnesty failed to obtain surrender and then fought the fort. Four thousand political refugees and four thousand royalist troops died over many months in full sight of Lima, fought heavily by Bolivar only because the *fort* was fighting. But Bolivar had to straighten up Peru urgently, not fight a defeated enemy. The right answer to such a foolish commander as Rodil, as Bolivar did have the troops to do it, was to cover the roads with cannon enfilade potential to discourage any sortie from the fort, put a larger number of his own troops in a distant position of offense but ease and comfort and say, "We're not going to fight. The war's over, silly man. Look at the silly fellows in there, living on rats when they can just walk out and sleep home nights or go to Spain or enlist with me or just go camping," and let anybody walk in and out who pleased, making the fort commander (Rodil) the prey of every pleading wife and mother without and would-be deserter or mutineer within until he did indeed sheepishly give up the pretense — a man cannot fight alone. But battle was glory to Bolivar. And he became intensely disliked because the incessant cannonade which got nowhere was annoying.

Honors meant a great deal to Bolivar. To be liked was his life. And it probably meant more to him than to see things really right. He never compromised his principles but he lived on admiration, a rather sickening diet since it demands in turn continuous "theater." One is what one is, not what one is admired or hated for. To judge oneself by one's successes is simply to observe that one's postulates worked and breeds confidence in one's ability. To have to be *told* it worked only criticizes one's own eyesight and hands a spear to the enemy to make his wound of vanity at his will. Applause is nice. It's great to be thanked and admired. But to work only for that?

And his craving for that, his addiction to the most unstable drug in history — fame — killed Bolivar. That self-offered spear. He told the world continually how to kill him — reduce its esteem. So as money and land can buy any quantity of cabals, he could be killed by curdling the esteem, the easiest thing you can get a mob to do.

He had all the power. He did not use it for good or evil. One cannot hold power and not use it. It violates the Power Formula. For it then prevents *others* from doing things if *they* had some of the power, so they then see as their only solution the destruction of the holder of the power, as he, not using power or delegating it, is the unwitting block to all their plans. So even many of his friends and armies finally agreed he had to go. They were not able men. They were in a mess. But bad or good, they had to do *something*. Things were desperate, broken-down and starving after fourteen years of civil war. Therefore they either had to have *some* of that absolute power or else nothing could be done at all. They were not great minds. He did not need any "great minds," he thought, even though he invited them verbally. He saw their petty, often murderous solutions and he rebuked them. And so held the power and didn't use it.

He could not stand another *personality* threat.

The trouble in Peru came when he bested its real conqueror (from the Argentine), La Mar, in a petty triumph over adding Guayaquil to Colombia. Bolivar wished to look triumphant again and didn't notice it really cost him the support and Peru the support of La Mar — who understandably resigned and went home, leaving Bolivar *Peru to conquer*. Unfortunately it had already been in his hands. La Mar needed some troops to clean up a small royalist army — that was all. La Mar didn't need Peru's loss of Guayaquil — which never did anybody any real good anyway!

Bolivar would become inactive when faced with two areas' worth of problems — he did not know which way to go. So he did nothing.

Brave beyond any general in history on the battlefield, the Andes or in torrential rivers, he did not really have the bravery needed to trust inferior minds and stand by their often shocking blunders. He feared their blunders. So he did not dare unleash his many willing hounds.

He could lead men, make men feel wonderful, make men fight and lay down their lives after hardships no army elsewhere in the world has ever faced before or since. But he could not *use* men even when they were begging to be used.

It is a frightening level of bravery to use men you know can be cruel, vicious and incompetent. He had no fear of their turning on him ever. When they finally did, only then he was shocked. But he protected "the people" from authority given to questionably competent men. So he really never used but three or four generals of mild disposition and enormously outstanding ability. And to the rest he denied power. Very thoughtful of the nebulous "people" but very bad indeed for the general good. And it really caused his death.

No. Bolivar was theater.

It was all theater. One cannot make such errors and still pretend that one thinks of life as life, red-blooded and factual. Real men and real life are full of dangerous, violent, live situations and wounds *hurt* and starvation is desperation itself, especially when you see it in one you love.

This mighty actor, backed up with fantastic personal potential, made the mistake of thinking the theme of liberty and his own great role upon the stage was enough to interest all the working, suffering hours of men, buy their bread, pay their whores, shoot their wives' lovers and bind their wounds or even put enough drama into very hard-pressed lives to make them want to live it.

No, Bolivar was unfortunately the only actor on the stage and no other man in the world was real to him.

And so he died. They loved him. But they were also on the stage too, where they were dying in his script or Rousseau's script for liberty but no script for living their very real lives.

He was the greatest military general in any history measured against his obstacles, the people and the land across which he fought.

And he was a complete failure to himself and his friends.

While being one of the greatest *men* alive at that. So we see how truly shabby others in leaders' boots amongst men must be.

MANUELA SAENZ

The tragedy of Manuela Saenz as Bolivar's mistress was that she was never *used,* never really had a share and was neither protected nor honored by Bolivar.

Here was a clever, spectacular woman of fantastic fidelity and skill, with an enormous "flair," capable of giving great satisfaction and service. And only her satisfaction ability was taken and that not consistently nor even honestly.

In the first place, Bolivar never married her. He never married anybody. This opened up a fantastic breach in any defense she could ever make against hers or his enemies who were legion. So her first mistake was in not in some way contriving a marriage.

That she had an estranged husband she had been more or less sold to was permitted by her to wreck her life obliquely.

She was too selfless to be real in all her very able plotting.

For this marriage problem she could have engineered any number of actions.

She had the solid friendship of all his trusted advisers, even his old tutor. Yet she arranged nothing for herself.

She was utterly devoted, completely brilliant and utterly incapable of really bringing off an action of any final kind.

She violated the Power Formula in not realizing that she had power.

Manuela was up against a hard man to handle. But she did not know enough to make her own court effective. She organized one. She did not know what to do with it.

Her most fatal mistake was in not bringing down Santander, Bolivar's chief enemy. That cost her everything she had before the end and after Bolivar died. She knew for *years* Santander had to be killed. She said it or wrote it every few days. Yet never did she promise some young officer a nice night or a handful of gold to do it in a day when *dueling was in fashion.* It's like standing around discussing how the plainly visible wolf in the garden that's eating the chickens must be shot, even holding a gun, and never even lifting it while all one's chickens vanish for years.

In a land overridden with priests she never got herself a tame priest to bring about her ends.

She was a fantastic intelligence officer. But she fed her data to a man who could not act to protect himself or friends, who could only fight armies dramatically. She did not see this and also quietly take on the portfolio of secret police chief. Her mistake was waiting to be asked — to be asked to come to him, to act. She voluntarily was his best political intelligence agent. Therefore she should have also assumed further roles.

She guarded his correspondence, was intimate with his secretaries. And yet she never collected or forged or stole any document to bring down enemies, either through representations to Bolivar or a court circle of her own. And in an area with that low an ethic, that's fatal.

She openly pamphleteered and fought violently as in a battle against her rabble.

She had a great deal of money at her disposal. In a land of for-sale Indians, she never used a penny to buy a quick knife or even a solid piece of evidence.

When merely opening her lips she could have had any sequestrated royalist estate, she went to litigation for a legitimate legacy never won and another won but never paid.

They lived on the edge of quicksand. She never bought a plank or a rope.

Carried away by the glory of it all, devoted completely, potentially able and a formidable enemy, she did not *act.*

She waited to be told to come to him even when he lay dying and exiled.

His command over her who never obeyed any other was too absolute for his own or her survival.

Her assigned mistakes (pointed out at the time as her caprice and playacting) were not her errors. They only made her interesting. They were far from fatal.

She was not ruthless enough to make up for his lack of ruthlessness and not provident enough to make up for his lack of providence.

The ways open to her for finance, for action, were completely doorless. The avenue stretched out to the horizon.

She fought bravely but she just didn't take action.

She was an actress for the theater alone.

And she died of it. And she let Bolivar die because of it.

Never once did Manuela look about and say, "See here, things mustn't go this wrong. My lover holds half a continent and even I hold the loyalty of battalions. Yet that woman threw a fish!"

Never did Manuela tell Bolivar's doctor, a rumored lover, "Tell that man he will not live without my becoming a constant part of his entourage and tell him until he believes it or we'll have a new physician around here."

The world was open. Where Theodora, the wife of Emperor Justinian I of Constantinople, a mere circus girl and a whore, ruled harder than her husband but for her husband behind his back — and made him marry her as well — Manuela never had any bushelbasket of gold brought in to give Bolivar for his unpaid troops with a "Just found it, dear" to his "Where on earth . . . ?" after the royalist captives had been carefully ransomed for jail escapes by her enterprising own entourage and officer friends. She never handed over any daughter of a family clamoring against her to Negro troops and then said, "Which oververbal family is next?"

She even held a colonel's rank but only used it because she wore man's clothing afternoons. It was a brutal, violent, ruthless land, not a game of musical chairs.

And so Manuela, penniless, improvident, died badly and in poverty, exiled by enemies and deserted by her friends.

But why not deserted by her friends? They had all been poverty-stricken to a point quite incapable of helping her even though they wanted to — for she once had the power to make them solvent. And didn't use it. They were in poverty before they won but they did eventually control the land. After that why make it a bad habit?

And so we see two pathetic, truly dear but tinsel figures, both on a stage, both *far* removed from the reality of it all.

And one can say, "But if they had not been such idealists they never would have fought so hard and freed half a continent," or "If she had stooped to such intrigue or he had been known for violent political actions they would never have had the strength and never would have been loved."

All very idealistic itself. They died "in the ditch" unloved, hated and despised, two decent, brave people, almost too good for this world.

A true hero, a true heroine. But on a stage and not in life. Impractical and improvident and with no faintest gift either one to use the power they could assemble.

This story of Bolivar and Manuela is a tragedy of the most piteous kind.

They fought a hidden enemy, the Church; they were killed by their friends.

But don't overlook how impractical it is not to give your friends power enough when you have it to give. You can always give some of it to another if the first one collapses through inability. And one can always be brought down like a hare at a hunt who seeks to use the delegated power to kill you — if you have the other friends.

Life is not a stage for posturing and "Look at me!" "Look at me." "Look at me." If one is to lead a life of command or a life near to command one must handle it as life. Life bleeds. It suffers. It hungers. And it has to have the right to shoot its enemies until such time as comes a golden age.

Aberrated man is not capable of supporting, in his present state, a golden declared age for three minutes, given all the tools and wealth in the world.

If one would live a life of command or one near to a command, one must then accumulate power as fast as possible and delegate it as quickly as feasible and use every humanoid in long reach to the best and beyond his talents if one is to live *at all*.

If one does not choose to live such a life, then go on the stage and be a real actor. Don't kill men while pretending it isn't real. Or one can become a recluse or a student or a clerk. Or study butterflies or take up tennis.

For one is committed to certain irrevocable natural laws the moment one starts out upon a conquest, either as the man in charge or a person near to him or on his staff or in his army. And the foremost law, if one's ambition is to win, is of course to win. But also to keep on providing things to win and enemies to conquer.

Bolivar let his cycle run to "freedom" and end there. He never had another plan beyond that point. He ran out of territory to free. Then he didn't know what to do with it and didn't know enough, either, to find somewhere else to free. But of course all limited games come to end. And when they do, their players fall over on the field and become rag dolls unless somebody at least tells them the game has ended and they have no more game nor any dressing room or homes but just that field.

And they lie upon the field, not noticing there can be no more game since the other team has fled and after a bit they have to do *something* and if the leader and his consort are sitting over on the grass being rag dolls too of course there isn't any game. And so the players start fighting amongst themselves just to have a game. And if the leader then says, "No, no," and his consort doesn't say, "Honey, you better phone the Baltimore Orioles for Saturday," then of course the poor players, bored stiff, say, "He's out." "She's out." "Now we're going to split the team in half and have a game."

And that's what happened to Bolivar and Manuela. They *had* to be gotten rid of for there was no game and they didn't develop one to play while forbidding the only available game — minor civil wars.

A *whole continent* containing the then major mines of the world, whole populations were left sitting there, "freed." But none owned any of it though the former owners had left. They weren't given it. Nor were they made to manage it. No game.

And if Bolivar had not been smart enough for that, he could at least have said, "Well! You monkeys are going to have quite a time getting the wheels going but that's not my job. You decide on your type of government and what it's to be. Soldiers are my line. Now, I'm taking over those old estates of mine and the royalist ones nearby and the emerald mines just as souvenirs and me and Manuela, we're going home." And he should have said that five minutes after the last royalist army was defeated in Peru.

And his official family with him, and a thousand troops to which he was giving land, would have moved right off smartly with him. And the people after a few screams of horror at being deserted would have fallen on each other, sabered a state together here and a town there and gotten busy out of sheer self-protection in a vital new game, "Who's going to be Bolivar now?"

Then when home he should have said, "Say those nice woods look awfully royalist to me, and also those 1,000,000 hectares of grazing land, Manuela. Its owner once threw a royalist fish, remember? So that's yours."

And the rest of the country would have done the same and gotten on with the new game of "You was a royalist."

And Bolivar and Manuela would have had statues built to them by the TON at once as soon as agents could get to Paris with orders from an adoring populace.

"Bolivar, come rule us!" should have gotten an "I don't see any unfree South America. When you see a French or Spanish army coming, come back and tell me."

That would have worked. And this poor couple would have died suitably adored in the sanctity of glory and (perhaps more importantly) in their own beds, not "in a ditch."

And if they had *had* to go on ruling they could have declared a new game of "pay the soldiers and officers with royalist land." And when that was a gone game, "Oust the Church and give its land to the poor friendly Indians."

You can't stand bowing back of the footlights forever with no show even if you are quite an actor. Somebody else can make better use of any stage than even the handsomest actor who will not use it.

Man is too aberrated to understand at least seven things about power:

1. Life is lived by lots of people. And if you lead, you must either let them get on with it or lead them on with it actively.

2. When the game or the show is over, there must be a new game or a new show. And if there isn't, somebody else is jolly well going to start one, and if you won't let *anyone* do it, the game will become "getting you."

3. If you have power, use it or delegate it or you sure won't have it long.

4. When you have people, use them or they will soon become most unhappy and you won't have them anymore.

5. When you move off a point of power, pay all your obligations on the nail, empower all your friends completely and move off with your pockets full of artillery, potential blackmail on every erstwhile rival, unlimited funds in your private account and the addresses of experienced assassins and go live in Bulgravia and bribe the police. And even then you may not live long if you have retained one scrap of domination in any camp you do not now control or if you even say, "I favor politician Jiggs." Abandoning power *utterly* is dangerous indeed.

   But we can't all be leaders or figures strutting in the limelight and so there's more to know about this:

6. When you're close to power get some delegated to you, enough to do your job and protect yourself and your interests, for you can be shot, fellow, shot, as the position near power is delicious but dangerous, dangerous always, open to the taunts of any enemy of the power who dare not really boot the power but can boot you. So to live at all in the shadow or employ of a power, you must yourself gather and USE enough power to hold your own — without just nattering to the power to "kill Pete," in straightforward or more suppressive veiled ways to him, as these wreck the power that supports yours. He doesn't have to know all the bad news and if he's a power really, he won't ask all the time, "What are all those dead bodies doing at the door?" And if you are clever, you never let it be thought HE killed them — that weakens you and also hurts the power source. "Well, boss, about all those dead bodies, nobody at all will suppose you did it. *She* over there, those pink legs sticking out, didn't like me." "Well," he'll say if he really is a power, "why are you bothering me with it if it's done and you did it. Where's my blue ink?" Or "Skipper, three shore patrolmen will be along soon with your cook, Dober, and they'll want to tell you he beat up Simson." "Who's Simson?" "He's a clerk in the enemy office downtown." "Good. When they've done it, take Dober down to the dispensary for any treatment he needs. Oh yes. Raise his pay." Or "Sir, could I have the power to sign divisional orders?" "Sure."

7. And lastly and most important, for we all aren't on the stage with our names in lights, always push power in the direction of anyone on whose power you depend. It may be more money for the power or more ease or a snarling defense of the power to a critic or even the dull thud of one of his enemies in the dark or the glorious blaze of the whole enemy camp as a birthday surprise.

If you work like that and the power you are near or depend upon is a power that has at least some inkling about how to be one and if you make others work like that, then the power-factor expands and expands and expands and you too acquire a sphere of power bigger than you would have if you worked alone. Real powers are developed by tight conspiracies of this kind pushing someone up in whose leadership they have faith. And if they are right and also manage their man and keep him from collapsing through overwork, bad temper or bad data, a kind of juggernaut

builds up. Don't ever feel weaker because you work for somebody stronger. The only failure lies in taxing or pulling down the strength on which you depend. All failures to remain a power's power are failures to contribute to the strength and longevity of the work, health and power of that power. Devotion requires active contribution outwards from the power as well as in.

If Bolivar and Manuela had known these things, they would have lived an epic, not a tragedy. They would not have "died in the ditch," he bereft of really earned praise for his real accomplishments even to this day. And Manuela would not be unknown even in the archives of her country as the heroine she was.

Brave, brave figures. But if this can happen to such stellar personalities gifted with ability tenfold over the greatest of other mortals, to people who could take a rabble in a vast impossible land and defeat one of Earth's then foremost powers, with no money or arms, on personality alone, what then must be the ignorance and confusion of human leaders in general, much less little men stumbling through their lives of boredom and suffering?

Let us wise them up, huh? You *can't* live in a world where even the great leaders can't lead.

HCO POLICY LETTER OF 4 APRIL 1970

REMIMEO

POWER CHANGE VIOLATION REPAIR FORMULA

(Originally written by LRH for the *Apollo* OODs
of 4 Apr. 70. Issued as an HCO PL on 27 Oct. 80.)

A Danger condition can be brought about by a violation of the Power Change condition.

A recent example was in some transfers to form the heads of a few orgs.

None of these orgs except one were higher than Emergency. There had been a false condition. The rule is that when a false condition is assigned, the org will drop one lower than the one it is actually in.

These orgs then compounded the felony by their new heads violating the Power Change Formula almost without exception.

The new heads of orgs and some juniors who were given new senior posts introduced new changes, violating Power Change.

Not being briefed in and not following existing successful patterns, three of these orgs are trying to operate with greatly changed patterns, losing touch with former actions.

Power Change must now, even this late, be followed by the heads and seniors. They must study what was going on previously.

Therefore, to all those who had a Power Change, we must apply the POWER CHANGE VIOLATION REPAIR FORMULA:

1. Observe, question and draw up a list of what was previously successful in your area or zone of control.
2. Observe and draw up a list of all those things that were unsuccessful in your area in the past.
3. Get the successful actions IN.
4. Throw the unsuccessful actions out.
5. Knock off frantically trying to cope or defend.
6. Sensibly get back in a working structure.

HCO POLICY LETTER OF 6 OCTOBER 1967R
ISSUE II
REVISED 25 SEPTEMBER 1977

REMIMEO

CONDITIONS OF LIABILITY AND DOUBT

Below Non-Existence there is the condition of Liability. The being has ceased to be simply nonexistent as a team member and has taken on the color of an enemy.

It is assigned where careless or malicious and knowing damage is caused to projects, orgs or activities. It is adjudicated that it is malicious and knowing because orders have been published against it or because it is contrary to the intentions and actions of the remainder of the team or the purpose of the project or org.

It is a *liability* to have such a person unwatched as the person may do or continue to do things to stop or impede the forward progress of the project or org and such a person cannot be trusted. No discipline or the assignment of conditions above it has been of any avail. The person has just kept on messing it up.

The condition is usually assigned when several Dangers and Non-Existences have been assigned or when a long unchanged pattern of conduct has been detected.

When all others are looking for the reason mail is getting lost, such a being would keep on losing the mail covertly.

The condition is assigned for the benefit of others so they won't get tripped up trusting the person in any way.

The formula of Liability is:

1. Decide who are one's friends.
2. Deliver an effective blow to the enemies of the group one has been pretending to be part of despite personal danger.
3. Make up the damage one has done by personal contribution far beyond the ordinary demands of a group member.
4. Apply for reentry to the group by asking the permission of each member of it to rejoin and rejoining only by majority permission. And if refused, repeating (2) and (3) and (4) until one is allowed to be a group member again.

CONDITION OF DOUBT

When one cannot make up one's mind as to an individual, a group, org or project a condition of Doubt exists.

The formula is:

1. Inform oneself honestly of the actual intentions and activities of that group, project or org brushing aside all bias and rumor.
2. Examine the statistics of the individual, group, project or org.
3. Decide on the basis of "the greatest good for the greatest number of dynamics" whether or not it should be attacked, harmed or suppressed or helped.
4. Evaluate oneself or one's own group, project or org as to intentions and objectives.
5. Evaluate one's own or one's group, project or org's statistics.
6. Join or remain in or befriend the one which progresses toward the greatest good for the greatest number of dynamics and announce the fact publicly to both sides.
7. Do everything possible to improve the actions and statistics of the person, group, project or org one has remained in or joined.
8. Suffer on up through the conditions in the new group if one has changed sides, or the conditions of the group one has remained in if wavering from it has lowered one's status.

HCOB	7 Aug. 79	Esto Series 36 Product Debug Series 8 FALSE DATA STRIPPING
HCOB	13 Oct. 82	C/S Series 116 ETHICS AND THE C/S

It can occur that a person working up through the lower ethics conditions can get hung up at Doubt and not be able to complete the formula.

In such instances a PTS condition or false data may be found to exist.

PTS

In the Doubt Formula one follows the steps of the formula and by doing so is then able to make up his mind as to the individual, group, org or project the condition is being applied to. But if he's PTS he is stuck in a problem and is unable to come to a decision.

When a person is faced with suppression, whether the actual suppression exists in present time or is a past suppression restimulated in present time, he is facing a counter-postulate.

A problem is a postulate–counter-postulate resulting in indecision: the first manifestation of and the first consequence of a problem is indecision.

Therefore a PTS condition can hang one up at Doubt.

FALSE DATA

False data can also cause a hang-up on the Doubt Formula.

In one case a person who couldn't get through Doubt was found to be PTS to someone from an earlier group he'd been in. This SP had fed him a bunch of false data on the tech of doing his post and on what the purpose of his post was. In present time he was still stuck with this suppressive false data — it was part of his PTSness. In addition to the usual de-PTSing actions done, the false data was cleaned up and he was then able to get through Doubt.

HANDLING

On somebody who hangs up at Doubt, the Ethics Officer or whoever is handling him should check for a PTS condition or false data.

It can be one or the other or both.

A PTS condition is of course located and handled as per the existing materials on PTS tech.

Getting rid of the guy's false data would have to be done by someone that had checked out on the HCOB on it (HCOB 7 Aug. 79, FALSE DATA STRIPPING).

RESULTS

When the ethics conditions formulas are correctly and standardly applied, the results can be nothing short of miraculous.

With this discovery you'll get the results smoother and faster.

Use it.

REMIMEO

HATS, NOT WEARING

The formula for Treason is very correctly and factually "Know THAT you are."

It will be found, gruesomely enough, that a person who accepts a post or position and then doesn't function as it, will inevitably upset or destroy some portion of an org. By not knowing that he is the _____ (post name) he is committing treason in fact.

The results of this can be found in history. A failure to be what one has the post or position name of will result in a betrayal of the functions and purposes of a group.

Almost all organizational upsets stem from this one fact:

A person in a group who having accepted a post, does not know THAT he is a certain assigned or designated beingness is in TREASON against the group.

ETHICS

CONDITION BELOW TREASON CONFUSION FORMULA AND EXPANDED CONFUSION FORMULA

Ref: HCO PL 14 Feb. 80 ORDER VERSUS DISORDER

(This HCO PL has been revised due to the discovery that the condition of Confusion can be far more extensive than was previously envisaged and may require additional steps to get out of it. The original formula is not cancelled as it has proven very successful but there are some additional steps that may be needed to get the person or area fully out of the condition.)

CONFUSION FORMULA

There is a condition below Treason.

It is a condition of CONFUSION.

In a condition of Confusion the being or area will be in a state of random motion. There will be no real production, only disorder or confusion.

In order to get out of Confusion one has to find out where he is.

It will be seen that the progress upward would be in Confusion, find out where you are; in Treason, find out that you are; and for Enemy, find out who you are.

The formula for Confusion is:

FIND OUT WHERE ***YOU*** ARE.

(*Note:* It is important that the person who is in Confusion be cleared up on the definition of Confusion as contained in *Modern Management Technology Defined.* This is done before the formula itself is started.)

The additional formula for the condition of Confusion is:

1. Locational on the area in which one is.

2. Comparing where one is to other areas where one was.

3. Repeat step 1.

EXPANDED
CONFUSION FORMULA

Where a person is in Confusion and his own MEST or the MEST of his post is messed up or in a state of disorder, then the Expanded Confusion Formula is done.

The Expanded Confusion Formula consists of all the steps given above for the Confusion Formula with the following additions:

4. The checklist given in HCO PL 14 Feb. 80, ORDER VERSUS DISORDER, lists all the points that need to be checked for and handled in order to get the basics of organization in on an individual or area, and all these points are checked for and handled as part of the Expanded Confusion Formula. Each point is checked and any handling needed for that point is done right away before continuing with the checklist.

5. Repeat step 1 (Locational).

Where a condition of Confusion exists, all these steps can be done to handle the condition. On the other hand, if someone has a huge win on the first steps and comes out of Confusion, one would not force him to do all the other steps and keep him in the condition when he has actually come out of it. He would still handle the points on HCO PL 14 Feb. 80, ORDER VERSUS DISORDER, but this must *not* be used to keep someone in a condition of Confusion and refuse to upgrade him when he has come out of the condition.

The purpose of the formula is to get someone located in his present time environment, knowing where he is and where the various things he needs to operate with are, so that he is no longer in a condition of Confusion.

For someone who is actually in a condition of Confusion this can be a huge win and it will start him on the road to Power. It can be a turning point in his life.

The formula is complete when the person has made it out of Confusion, knows where he is, has established order in his area and knows the basics of how to operate out of that area.

When this end result has been achieved, the person will be ready to be upgraded and move on up through the other conditions. The fact that he has not completed all steps of the formula must not be used as a reason to keep someone in Confusion when he has honestly made it out of that condition.

Lack of this condition sometimes brings about an assignment of Treason in which the person cannot actually find out that he is and so occasionally does not make it on up the conditions.

Many more persons are in this condition than is generally realized.

Now, with the expansion of the formula, anybody who is in this condition can really make it out of Confusion and on up through the other conditions.

Doing Confusion fully and properly gives one a very firm footing so that he can make it up the conditions and be truly successful in his area.

ETHICS HATS
EXEC HATS
OEC

COMPLETING CONDITIONS FORMULAS

Ref: HCO PL 2 Nov. 82 CONDITIONS HANDLINGS

The ethics conditions formulas flow, one to the next, with the first step of one formula directly following the final step of the previous formula.

But what do you do if your stat graph indicates you've moved up a condition before you even have a chance to finish a formula? Do you just drop that formula and start on the next one? The answer is "NO." One completes the formula he has begun.

I'll give you an example. An ED in looking over his stats sees that they are in Emergency. He immediately sees to it that the PROMOTE step of the Emergency Formula is begun. Once that is well in hand, he begins to CHANGE HIS OPERATING BASIS. He gets Reges onto daily drilling and puts three new auditors into his HGC.

But before he has a chance to do each of the remaining steps of the Emergency Formula, the income and delivery statistics move up into Normal Operation.

What does he do? Well, he is now in a condition of Normal by stats. But the Normal Formula would also cause him to complete the Emergency Formula, because in the Normal Formula you drop out what is unsuccessful and you push what was successful; what was successful here was the Emergency Formula. Thus, this ED can get continued improvement on the graph by *completing* the Emergency Formula, as the actions on the Emergency Formula are what got him to Normal so quickly. So he would push them until they were completed fully. This doesn't mean he is still in an Emergency condition — the stats are now rising and the condition *is* Normal. It's a bit of an oddball thing.

As another example, suppose someone is doing a Junior Danger Formula (per HCO PL 9 Apr. 72R, CORRECT DANGER CONDITION HANDLING). The person goes step by step through the procedure and writes up his or her overts and withholds and any known out-ethics situation, receives a Trouble Area Questionnaire assessment, has his Why found and starts applying the First Dynamic Danger Formula. But before he completes the formula, his stats rise. It would be dangerous indeed for this person to not finish the Danger Formula (e.g., getting done the

REORGANIZE YOUR LIFE and FORMULATE AND ADOPT FIRM POLICY steps of the Danger Formula).

That one's stats rise before completing a formula doesn't mean he can't go into the higher condition his stats now indicate. However, it would be a grave fault not to complete the undone steps of an earlier formula. So, as in the above examples, one has to complete the earlier formula, then complete the next formula and continue on as his graph dictates.

Completing a formula is very vital. One doesn't just name a formula. He gets it *completed.*

HCO PL	9 Feb. 74R Rev. 17.2.80	CONDITION BELOW TREASON CONFUSION FORMULA AND EXPANDED CONFUSION FORMULA
HCO PL	27 Aug. 82	VITAL DATA: POWER AND AFFLUENCE CONDITIONS
HCO PL	28 Sept. 82	THE BASICS OF STATISTICS AND MANAGEMENT

One has to *do* the steps of a condition formula in order to improve one's condition.

And those doingnesses, which will bring about a changed condition, will then be reflected in one's statistics.

A recent communication I had from a staff member illustrates this perfectly.

This staff member had, for years, started each new week with a battle plan that encompassed the exact actions she had worked out to take on her post, in order to actually apply the steps of the formula for the condition she was in.

Whatever her condition at the end of the week, she did a weekly conditions formula write-up, worked out how she would apply the formula steps in relation to her post, and added those actions at the beginning of her battle plan. Other battle plan targets would also be included but the weekly condition handling steps were always a part of it. This brought good results statisticwise.

When she ceased to do this and began simply battle planning needed actions without taking the condition into account, her application of the formulas on a routine basis also dropped out. The result was she suddenly found herself with crashed statistics and faced with post and production situations which needed resolving fast. And she experienced the phenomenon of feeling there was "no handling apparent" for the situation.

Of course, if one doesn't do the steps to handle a condition (the formula), then one has "no handling" for the condition!

Needless to say, this staff member, upon spotting what had happened, resumed doing her weekly formula write-ups at once!

I think there may be staff members who don't do any part of this. Aside from possibly not knowing what their stat is or what the org stat really is, they don't finish their week by assigning it a condition and writing up the formula. And so, of course, they wind up not doing the handling for the condition they're in.

There are undoubtedly some staff who think they don't have to do so if it is not in a *lower* condition. Yet they are upsetting their higher conditions by not doing so.

There is a law that holds true in this universe whereby if one does not correctly designate the condition he is in and apply its formula to his activities or if he assigns and applies the wrong condition, then the following happens: He will inevitably drop one condition below the condition he is *actually* in. Thus, if one incorrectly says he is in Power and tries to apply that formula when he is *actually* in Non-Existence, he will inevitably drop to Liability. If one incorrectly states he is in Normal when he is *actually* in Emergency, he will drop to Danger. Thus it is vital to accurately and honestly ascertain the condition one is in and apply that formula and actually do it. Otherwise one can go the route and drop down the conditions without ever understanding why. Whole nations do this and it is one of the reasons for the decline of civilizations. And while one is not a nation, one is still important enough to properly handle conditions.

And remember that it is not enough to do this as a simple administrative exercise; one actually has to *do* the formulas if he ever expects his condition to improve.

The way to never be faced with post situations for which there seems to be "no handling" is to routinely and regularly ascertain and apply the conditions formulas to one's post and activities.

HCO PL	18 Dec. 82	ETHICS CONDITIONS: HANG–UP AT DOUBT

The miraculous wins available from correct application of the ethics conditions formulas are well known, and the use of this technology is widespread. This policy letter presents some further tech on the subject of the conditions and their formulas that has proven remarkably workable.

Failure to apply condition formulas and fully handle a condition one is in can hang a person up later and actually prevent him from getting the full results available from the application of the condition formulas in present time. He can continue to have trouble with the area or activity of the unhandled condition or on that dynamic.

This not only applies to formal assignments or misassignments by Scientology Ethics Officers. Conditions occur in life that can go uninspected or unhandled, and conditions get assigned by self or other dynamics.

An example is somebody who had decided to commit suicide at some point in his life. He was either at Enemy or Treason at the time. It needs to be sorted out and he needs to be gotten through *that* condition for *that* period of time.

A person jailed has been "assigned" a condition of Liability, just by that action. The formula would have to be applied if the person is to operate in the society in any higher condition.

False or wrongly assigned conditions (such as being assigned a condition of Liability when you weren't in that condition) or failures to properly complete a condition formula

at some time in the past can cause a person to have difficulty applying conditions in present time.

The handling is simply to handle in present time the correct condition for that situation or time period. This will clear up the area and the subject and the person will be able to apply conditions in present time without being hung up in these past failures and will achieve the miraculous wins available from this tech.

PROCEDURE

1. The first step is to ensure that the person being handled understands the dynamics, the definitions of ethics and justice and what an ethics condition is, as well as each of the conditions and their corresponding formulas. He is not very likely to succeed in handling conditions if he does not have a good grasp of the above.

On a person who has had little or no contact with the subject, you would first have him study over materials on the dynamics, ethics, justice, the ethics conditions and their formulas.

When he has studied these, go over the data with him and consult his understanding. Have him explain what a dynamic is and give examples of each of the dynamics. Have him give you the definitions of ethics and justice and explain what a condition is, give examples of times he has observed people in each condition, and demonstrate each of the conditions formulas. Handle any confusion or question by referring to the materials, and finding and clearing up his misunderstood words.

With a person who is experienced with the ethics conditions, it would still be wise to briefly go through this same step. Have him review the materials, give demos and examples, etc. Spot and handle any confusions or questions he may have. It cannot necessarily be assumed that because a person has "been around a long time" or "has a lot of experience with the conditions" that he fully understands them. Particularly if he has been sent to you or pulled in by you to handle conditions! Don't get into evaluation or invalidation with this step — simply consult the person's understanding.

2. Ask the person: **H ave you ever failed to achieve the expected end phenomena of a condition, whether the condition was actually assigned or applied or not?** If the answer is "No" and the person is happy about it, the rest of the steps are not done as it would be unnecessary. (Make sure that it is understood that this question is not limited or restricted to only those conditions formally assigned to the person.)

3. If the answer to the above is "Yes," then ask: **What was the lowest condition that you didn t feel you achieved the expected end phenomena on?**

Make sure you get the earliest time this situation occurred. He may have attempted to apply the Treason Formula a number of times without getting the expected end phenomena, or he may never have even tried to apply the formula, despite having been in Treason at various times in his life. Get the *earliest* time this occurred for the lowest condition which he doesn't feel he got the expected end phenomena on.

4. When this question has been answered, ask him if it was a correct condition.

5. If it was a correct condition, he must now either *do* the formula (if he failed to apply it) or complete it (if it was incomplete). He is applying the formula to *that* unhandled condition, not a present time situation or anything else. He is doing a

formula not earlier applied or completing an old incomplete one. Have him do each step of the formula.

6. If it was not a correct condition at the time, the correct condition is established (refer to the conditions and their formulas to help him decide what the condition should have been). Then have him apply that formula.

7. When he has honestly completed the formula, he writes it up and takes it to the Ethics Officer or person doing the handling. This person verifies that it is complete and if so sends him to the Pc Examiner. If the Ethics Officer or person doing the handling is not satisfied that the formula is complete, it is returned to him, pointing out what is incomplete about it with reference to the relevant materials. Then he completes the formula and continues per the procedure below.

8. The Examiner puts him on the meter and asks, **Do you have any doubts or reservations concerning attesting to the _____ condition being complete?** If the person has an F/N on the question, the Examiner indicates the F/N and asks him if he wishes to write a success story. The wins on these formulas are very often quite incredible and so the person should be given a chance to write a success story. The person would go to the Examiner as above for each condition formula as it is completed.

9. CONDITIONAL: If the person doesn't have an F/N, the Ethics Officer or person doing the handling must take him back in and find out what is wrong and handle. You may find he was applying an incorrect condition, has misunderstoods on the condition or formula being applied, or simply didn't fully complete the formula. The handling is simply to ensure that any misunderstoods are cleaned up and the correct condition established and done fully in all of its steps. If the situation won't resolve, the person doing the handling writes up the full data and places it (along with all worksheets, exams, etc.) in his pc folder and sends it to the Case Supervisor.

10. Now that he has completed the condition formula, he applies the next higher condition and so on until he is up through Emergency and into Normal Operation. All worksheets, exams, etc., are then filed in the person's pc folder.

Following this procedure will normally be all that is necessary to put the person in shape to smoothly handle his present condition. This follows the basic auditing principle that handling earlier charge blows later charge.

11. Now get him to find and apply the correct current ethics condition.

(Note: It may be discovered while doing the present time conditions that the person has other previously mishandled conditions, including falsely assigned conditions. These would simply be handled with the above procedure.)

END PHENOMENA

The result of this action is that a person will now be able to look at his current conditions with a restored ability to apply the ethics conditions to himself and get all the gains available from these formulas.

TIPS AND CAUTIONS

A. *Roteness*

Roteness gets heavily in the way of administering ethics conditions. Life is full of complexities. We in Scientology are fortunate in that we have tech to handle all these

complexities and make them simple. There are a lot of tools available and they are there to be used: Word Clearing, Product Clearing, False Data Stripping, metered interviews and so forth are all used as needed to get the product.

The idea is to get the person to apply the conditions to his life so as to get his ethics in on his own determinism without duress or invalidation and you use whatever tech is necessary to do this.

B. *Completing the Formulas*

Sometimes the formulas require that the person go somewhere and do something to handle the condition. On a public person it may be necessary for him to go to his office or go home in order to complete a formula. Well, you let him go right ahead after you establish that is what is needed and that he knows what he is going to do. He may want to do amends or get in comm with someone or straighten something out. Obviously he must do the necessary steps to get through the condition.

C. *Twins*

When you are administering this action on a number of people who are twinned up and working to get each other through, you always work in the direction of having the twin handle the person he is working with, and you wouldn't step in and handle unless it was obvious that they really needed help. Encourage them to become skilled at handling one another's ethics as well as their own. HCOB 21 Aug. 79, TWINNING applies in full.

D. *Overrun*

A person doing this action could have a major win on one of the steps, continue past this point and bog. If the Ethics Officer or person doing the handling suspects this has occurred, he can check for this, get the data from the individual and, if necessary, the data is gotten to the C/S so the win can be rehabbed by an auditor.

E. *Misunderstoods*

Misunderstood words on the conditions and their formulas can raise hell. The Ethics Officer or person doing the handling should use Word Clearing liberally when the individual runs into difficulties in understanding or applying the conditions formulas.

F. *Doubt Hang-up*

If the person hangs up at Doubt, apply HCO PL 18 Dec. 82, ETHICS CONDITIONS: HANG–UP AT DOUBT, to resolve it and get him through the condition.

SUMMARY

It can be a tremendous relief to a person to handle some long-unhandled situation that had stuck him at that point in time and made it impossible to handle present time conditions. Whole areas of previous disaster can be totally straightened out.

By using this tech you can reap the rewards to be had from fully and smoothly applied ethics conditions formulas — rewards that extend straight across all the dynamics.

HCO POLICY LETTER OF 23 FEBRUARY 1966

REMIMEO
EXECUTIVE HATS

APPOINTMENTS AND PROMOTIONS

When a staff member is promoted, the principle will be solidly held that if the post just vacated by him or her goes into Emergency or Danger condition within 90 days the promotion is to be suspended and the staff member is to resume his or her former post.

It is obvious that a post which is not well organized or is held up by personality alone will slump if changed.

A staff member being promoted may therefore object to the Personnel Officer concerning a successor he does not believe capable.

The staff member being promoted has a dual responsibility — to learn his new post and to write up his old hat and break in his successor properly.

In expanding organizations our greatest liability is promotion. It is vital and necessary, but it tends to lose lines and leave a messy lower strata in the orgs which can swamp them.

This follows as well policy on undoing changes which occurred just before a slumped statistic.

The Advisory Council and Ad Comms must always look at this factor of persons promoted off a post just before a slump as the probable best reason for the slump.

Similarly a person taking over a new post is in a Power Change condition and must not alter anything or do anything rash until enough time passes for him to appreciate what the new post is all about. Most slumps following after a promotion occur because the new occupant of the old post has either lost the post's lines or has made some brand-new order that applies to nothing real. There is no majesty and innocence like ignorance. The first day of a yacht under a new owner is the hardest day of its life, as he throws all the bits overboard that propped open the hatches thinking they were kindling wood, tries to hoist the sails with a can opener and runs the engine on the galley fuel.

A staff member is rarely promoted unless his statistic is good. That means the old post he leaves is in good shape. If the old post slumps under a new appointee, then that new appointee must have thrown away the lines and ordered the main cabin turned into the sail locker and the engine into the anchor. It will take the old holder

of the post weeks to get it running again and he is obviously the only one that can. Further, he goofed in letting an incapable or fast-change artist fill his former shoes, and he didn't yell when he noticed next day that the keel had been hoisted as the mainsail as soon as he, promoted, left his old post.

New brooms love to sweep clean. Especially the competent orders of old brooms.

Taking over a post in Danger or Emergency is a feather in one's cap when it rises to Normal under new management.

Taking over a post in Normal Operation and getting it into Emergency or Danger requires a lot of stupid changes or no work at all and should be the subject of an Ethics Hearing.

But also, the old holder of the post *must* be returned to it regardless of holes left at the top, for otherwise a hole exists below and the org will sink into it.

I speak from long, hard experience. Time and again I have had to resume a post I had left because it collapsed. So I have become very careful of who succeeds me on a post. Very careful indeed. And I train them individually and heavily no matter what new post I now hold. The bigger we get the more I get promoted, so I have to keep it up.

ORDER VERSUS DISORDER

Refs:

HCO PL	9 Feb. 74R	CONDITION BELOW TREASON
	Rev. 17.2.80	CONFUSION FORMULA AND EXPANDED CONFUSION FORMULA
HCO PL	30 Dec. 70	Personnel Series 15 Org Series 20 ENVIRONMENTAL CONTROL

I made a breakthrough recently, while investigating low production areas, and realized that a good deal more needs to be said on the subject of order and disorder.

Order is defined as a condition in which everything is in its proper place and performs its proper function. A person with a personal sense of order knows *what* the things in his area are, he knows *where* they are, he knows *what* they are for. He understands their value and relationship to the whole.

A personal sense of order is essential in getting out products in an area.

An orderly typist, for instance, would have all the materials requiring typing, she would have ample paper and carbons within arm's reach, she would have her correction fluid to hand, etc. With all preparatory actions done, she would sit down to type with an operational typewriter and would know what that typewriter was and what it was for.

She would be able to sit down and get her product, with no wasted motion or stops.

But let's say you had a carpenter who couldn't find his hammer and he didn't even know what a hammer was for and he couldn't find his chisel because when he picked it up he put it down and couldn't find it again and then he didn't know where his nails were. You give him a supply of lumber and he doesn't know what it's for, so he doesn't categorize it where he can put his hands on it.

How many houses do you think he would build?

The actual fact of the case is that a disordered person, operating in a disorganized area, makes a ten-minute cycle into a three-week cycle (believe it, this is true) simply because he couldn't find his ruler, lost his eraser, broke his typewriter, dropped a nut and couldn't find it again and had to send off to Seattle for another one, etc., etc., etc.

In working with a group of nonproductive technicians recently, I discovered something interesting: out-basics. I actually found a lower undercut to what we generally think of when we say "basics."

These technicians had reportedly researched a key piece of equipment and had it all sorted out. But I found that they didn't even know the basic fundamental of what that machine was supposed to do and what they were supposed to be doing in their area!

That told me at once that they had no orderly files, no research data. They were losing things.

Now, if they were losing things, that opened the door to another basic: They couldn't have known where things were. They put down a tool over there and then when they needed it again they would have to look all over the place because they hadn't put it down where it belonged.

Their work was not organized so that it could be done and the tools were not known.

So I checked this out. Were they logging the things they were using in and out so they could find them again? Were they putting things away when they were done with them? No, they weren't.

This is simply the basic admin coupled with the knowledge of what the things one is working with are. It's orderliness and knowing what things are, knowing what they are for and where they are, etc. That's the undercut.

If people don't have a true knowledge of what the things they're working with are, if there are omitted tools, inoperational tools, if they don't know what their tools are supposed to do, if there are no files or if once used, files are not reassembled and put back in the file drawer, if things get lost and people don't know where things are and so on, they will be running around spending 3 or 4 hours trying to locate a piece of paper. That isn't production.

If a person can't tell you what the things he works with are, what they're for and where they are, he isn't going to get out any product. He doesn't know what he's doing.

It's like the carpenter trying to build a house without knowing what he's got to build it with, without understanding his tools and raw materials and the basic actions he must take to get his product. That's what was holding up production in the area: disorderliness. And the basics were out.

This is actually far *below* knowing the tech of the area — the actual techniques used to get the product. The person does not even know what his tools and equipment are or what they're supposed to do. He doesn't know whether they are operational or inoperational. He doesn't know that when you use a tool you return it to its proper place. When you have a despatch, you put it in a file where it can be retrieved. It undercuts even knowing the orders and PLs relevant to his hat.

What are the basics that are missing? The basics of sitting down to the table that one is supposed to sit down to, to do the work! The basics of knowing what the tools, materials and equipment he works with *are* and what he's supposed to do with them to get his product. Those are the basics that are missing.

We are down to a real reason why a person cannot turn out products.

That is what is holding up such a person's production. It is well below knowing the technique of his job.

Out-basics. Does the guy know where the file is? When he finishes with that file does he leave it scattered all over the place or does he put it back together and into the file where it can be found?

Now, a person who's working will have papers all over the place, but does he know where they are and is he then going to reassemble them and put them back in order or is he going to just leave them there and pile some more papers on top of them?

If you find Project No. 2 scattered on top of Project No. 1, you know something about that area. Basics are out.

This is a little piece of tech and with that piece of tech you've got insight. You would have to have an overall picture of what the area would look like when properly ordered and organized — how it would be organized to get optimum production.

Then you could inspect the area and spot what's going on. You would inspect on the basis of: How does the area compare with how it should be organized? You would find out if the personnel didn't know what the things in their area were or what they were for, you would see if they knew the value of things in the area or if there were altered importances, omitted files or filing, actions being done out of sequence, inoperational tools or equipment, anything added to the scene that was inapplicable to production, etc.

In other words, you can inspect an area by outpoints against this one factor of orderliness.

This sort of out-basics and disorderliness cuts production down to nothing. There just won't be any production at all. There will be no houses built.

What we are talking about here is an orderly frame of mind. A person with a sense of order and an understanding of what he is doing sits down to write a story or a report and he'll have his paper to hand, he'll have it fixed up with carbons and he'll have his reference notes to hand. And before he touches the typewriter he'll familiarize himself with what the scene is. He'll do the necessary preparatory work in order to get his product.

Now, someone else might sit down, write something, then dimly remember there was a note someplace and then look for an hour to find where that note was and then not be able to find it and then decide that it's not important anyway and then come back and forth a few times and finally find out he's typed it all up without a carbon.

There is a handling for this. Anyone trying to handle an area who doesn't understand the basics of what they're dealing with and is in an utter state of disorder must get a firm reality on the fact that until the basics are learned and the disorder handled, the area will not produce satisfactorily.

The following inspection is used in determining and handling the state of such an area.

This inspection is done in order to determine an area's knowledge of basics and its orderliness. It can be done by an area's senior for the purpose of locating and correcting disordered areas. It is also used as part of debug tech as covered in HCO PL 23 Aug. 79 I, Esto Series 38, Product Debug Series 1, DEBUG TECH. It is for use by anyone who is in the business of production and getting products.

The full inspection below would be done, clipboard in hand, with full notes made and *then* handlings would be worked out based on what was found in the inspection (according to the Handling section of this PL and the suggested handlings given in parentheses below).

1. **DOES HE KNOW WHAT ORGANIZATION, FIRM OR COMPANY HE S IN? DOES HE KNOW WHAT HIS POST OR JOB IS?**

   This is a matter of does he even know where he is? Does he know what the organization or company he works for is, does he know what the post he is holding is?

   (If he is so confused and disoriented that he doesn't even know the company or org he's in or doesn't know what his post is, he needs to apply the Expanded Confusion Formula, HCO PL 9 Feb. 74R, and then work up through the conditions.

   Of course the person would also need to be instant-hatted on his post — the organization, his post title, his relative position on the org board, what he's supposed to produce on his post, etc.

   If he is doing this handling as part of his Expanded Confusion Formula, simply have him get the instant hatting and carry on with his Confusion Formula.)

2. **ASK THE PERSON WHAT HIS PRODUCT IS.**

   Does he know? Can he tell you without comm lag or confusion?

   You may find out that he has no idea of what his product is or that he has a wrong product or that he has confusions about his product. Maybe he doesn't even know he's supposed to get out products.

   (If this is the case, he must find out what his product is. If the person's product is given in policy references, he should look these up. If his product is not covered in tech or policy references, he'll have to work out what it is.)

3. **CAN HE RATTLE OFF A LIST OF THE BASIC ACTIONS, IN PROPER SEQUENCE, NECESSARY TO GET OUT HIS PRODUCT OR DOES HE HEM AND HAW ON IT?**

   Does he know what to do with his product once it is completed?

   He may try to tell you what he does each day or how he handles this or that and what troubles he's having with his post. You note this, but what you're interested in is does he know the basic actions he has to take to get out his product? And does he know what to do with the product once it is complete?

(If he can't rattle off the sequence of actions 1, 2, 3, then he'd better clay demo the basic actions, in proper sequence, necessary to get out his product and then drill these actions until he can rattle them off in his sleep. If he does not know what to do with his product once completed, then he'd need to find out and then drill handling the completed product.)

4. **ASK HIM WHAT HIS TOOLS ARE THAT ENABLE HIM TO GET THIS PRODUCT.**

   Note his reaction. Can he name his tools at all? Does he include the significant tools of his area? Does he include his hat pack as a tool?

   (If he doesn't know what his tools are, he'd better find out what he's operating with and what it does. A good workman knows his tools so well he can use them blindfolded, standing on his head and with one arm tied behind his back.)

5. **ASK HIM TO SHOW YOU HIS TOOLS.**

   Are his tools present in the work area or does he have them out of reach, down the hall or in some other room?

   (He may have to reorganize his work space to get his tools within easy reach and to get in some basics of organization. The purpose of such organization would be to make production easier and faster.)

6. **ASK HIM TO TELL YOU WHAT EACH OF HIS TOOLS ARE.**

   Can he define them?

   Does he know what each of them are and what they are for?

   (If he doesn't know, he'd better find out.)

7. **ASK HIM TO TELL YOU WHAT THE RELATIONSHIP IS BETWEEN EACH ONE OF HIS TOOLS AND HIS PRODUCT.**

   (If he can't do this, have him clay demo the steps he takes to get out his products with each tool he uses, so he sees the relationship between each tool and his product.)

8. **ASK HIM TO NAME OFF THE RAW MATERIALS HE WORKS WITH. ASK HIM TO SHOW YOU HIS MATERIALS.**

   Does he know what his raw materials are? Are they in his work area? Are they in order? Does he know where to get them?

   (He may have to find out what the raw materials of his post are [by defining them] and where they come from. He should drill procuring and handling them and then run Reach and Withdraw on them.)

9. **DOES HE HAVE A FILE CABINET? FILES? ASK HIM WHAT THEY ARE.**

   Does he know what they are for? Does he know what a despatch is, etc.?

   (He may have to be brought to an understanding of what files, file cabinets, despatches, etc., *are* and what they have to do with him and his product. He may have to clay demo the relationship between these things. He will have to set up a filing system. Ref: HCO PL 18 Mar. 72, Esto Series 10, FILES.)

10. **DOES HE HAVE A SYSTEM FOR LOCATING THINGS?**

    Ask to see it. Check his files. Does he have logs? Does he log things out and correct the logs when he puts them back? Are the comm baskets labeled? Does he have a specific place for supplies? Ask him to find something in his files. How long does it take?

    Does he have an orderly collection of references or a library containing the materials of his field? Is it organized so as to be usable?

    (If he has no system for locating things, have him set one up. Have him establish a filing system, a logging system, label the comm baskets, arrange supplies, etc. Get a reference library set up and organized. Drill using the system he has.)

11. **WHEN HE USES AN ITEM, DOES HE PUT IT BACK IN THE SAME PLACE? DOES HE PUT IT BACK WHERE OTHERS CAN FIND IT?**

    He'll probably tell you, yes, of course he does. Look around. Are objects and files lying about? Is the place neat or is it a mess? Ask him to find you something. Does he know right where it is, or does he have to search around? Is there an accumulation of unhandled particles around?

    (Have him clay demo why it might be advantageous to put things back in the same place he found them. Drill him on putting things back when he's finished with them. Have him clean up the place, handling any accumulation of unhandled particles.)

12. **IF FEASIBLE, ACTUALLY GO WITH THE PERSON TO HIS PERSONAL LIVING AREA.**

    Is the bed made? Is the area clean? Are things put away? How much dirty laundry does he have? Is it stowed in a bag or hamper or is it strewn about the place? People who had disorderly personal MEST, one for one were *not* getting out any products on post — they had no sense of order.

    (If his personal quarters are a mess, have him — on his own time of course — straighten up his personal area and keep it that way on a daily basis. This will teach him what order *is*.)

HANDLING

Some areas, of course, will be found to be in excellent order and will pass the inspection. These will most likely be high production areas.

Other areas will be found to have only a few points out which would correct easily with the above handlings. These will probably be areas where some production is occurring.

Where personnel have a concept of what order is and why it is important, they will usually be eager to correct the points of disorder that have turned up on the investigation and may need no further urging, drilling or correction, but will quickly set about remedying outpoints. For many bright and willing staff members just reading this policy will be enough to get them to straighten out their areas right away.

There is, however, a sector which has no concept of order and may not have the slightest notion of why anyone would bother with it. You will most likely find them in apathy, overwhelm or despair with regard to their post areas. No matter what they

do they simply cannot get their products out in adequate quantity and quality. They try and try and try but everything seems to be working against them.

When you find such a situation, know that the area is in Confusion. You are trying to handle an area which is in a confirmed, dedicated condition of Confusion.

Such an area or individual would require the application of the Expanded Confusion Formula (HCO PL 9 Feb. 74R) including the handlings above. So if these things confirm in an area, you must use the Expanded Confusion Formula and the handlings given above to full completion. Because, frankly, such an area or individual *is* in a condition of Confusion and will remain in Confusion until the Expanded Confusion Formula, including the full handlings from the inspection, are applied.

Once out of Confusion the person would have to be brought up through the rest of the conditions.

CAUTION

The condition of Confusion is a very low condition and should never be assigned where it is not warranted. Where one or two points on the above inspection were found to be out in an area, and where these corrected easily, there would be no purpose in assigning Confusion to that area. In fact, it may worsen an area to assign an incorrect condition.

But where you have a long-term situation of no or few products combined with a state of disorder, know that the area or individual is in a condition of Confusion and that the application of the Confusion Formula plus the handlings given in this PL will bring the area out of the muck and up to square one where it can *begin* producing.

NOTE: If the inspection is done on a person or area and some of the points are found to be out and handlings are done but no condition of Confusion is assigned, the area must be reinspected about a week later. This way you will detect if an actual condition of Confusion was missed, as the area will have lapsed back into disorderliness or will have worsened.

SUMMARY

A knowledge of the basics of an area and having orderliness in an area are essential to production.

When you find a fellow who is a light-year away from the basics and doesn't have a clue on the subject of order and he's flying way up in the sky someplace instead of just trying to put together what he's supposed to put together or do what he's supposed to do, you've got your finger on his Why for no production.

With the inspection and handlings given in this policy, we can now handle any degree of disorderliness and disorganization.

And order will reign.

Nonproductive areas become capable of producing.

Already producing areas increase their production.

And production will roll.

THE BASIC PRINCIPLES OF PROMOTION

The following points are a summary of the basic principles of promotion. It is important that you understand them and apply them in your promotion.

1. The *basic* principle of promotion is to drive in more business than can be driven off by a service unit or mistakes can waste. This applies to any promotion anywhere.

Never allow your standard of how many people should be brought into the org to be set by any other division or part of the organization. Promote as far above as possible the present operating capacity of the organization and you will win.

From this it follows that Tech or any other part of the org can never tell the Dissemination Division when or how many customers to bring in or that "we can only handle ten preclears this week." It is the job of promotion to drive in as many preclears as possible. It's up to Tech to find the space and the auditors.

In other words, promotion must be so huge and effective so that, even if other divisions are blocking the line or driving people off, so many people are being crowded into the org by promotion that it makes up for any waste done by other parts of the org. You get the idea. It's not flattering but it is the stable datum that successful promotion anywhere operates on. By the way, the error does not necessarily have to be within the org. A bus strike could temporarily prevent people from across town being able to start the HRS Course. Promotion should have promoted so much the course is still full despite such an error.

The motto of promotion could be "we shall overcome — by numbers" — "Despite any errors, we bring in so many people into the org continually or sell so many books that even if the Body Registrar drives them off at gunpoint enough will get through to keep the statistics rising."

2. If a promotional program does not seem to work, find out where it is not being applied — don't Q-and-A and abandon the program. Spot instead the noncompliance which is preventing it from going into operation.

3. Later promotional programs will not work if earlier ones have not been executed. Example: the program is to send out fliers to sell bla-bla to all buyers of foo-foos. But it turns out that the original program to compile a list of the buyers of foo-foos off old invoices was not done, therefore a flier to sell bla-bla can't be sent to buyers of foo-foos. And since the invoices were burnt up by some long gone suppressive (let's say), the original program can't be carried out.

What to do?

Don't give up or abandon the program of selling bla-bla to buyers of foo-foos. Get clever and dream up some other way of compiling the list you want. Maybe it's as simple as a notice in your local newspaper or a questionnaire to everyone in your files: "Did you ever buy foo-foos?"

SUMMARY

Having a successful promotional program consists of getting it executed. If it seems to not be working, spot where it isn't being done. The nonexecution could be years earlier in a former program which was not executed.

We have had lots of workable programs in Scientology. It takes no cleverness to dig them up and use them. There is no need to embark on new programs until the earlier programs are completed.

Let's take the mission program as an example. The original order given to an ex-Mission Sec years ago was to get all mission holders trained at Saint Hill. Years later we find that that order has only been partially carried out. The mission program bogged down at exactly that point. Now the whole matter is being handled by getting the current Mission Officer to carry out the original order.

The cleverness required in promotion is not starting a new program or carrying out a program. But cleverness is required in getting an old program executed when the means to get it executed no longer exist, such as when a mailing list has been lost and you need to devise a means of recompiling the list.

Finally, promote until the floors cave in because of the number of people — and don't even take notice of that, just keep promoting.

THE PROMOTIONAL ACTIONS OF AN ORGANIZATION

(Contains 171 actions that ensure solvency and are vital in an org)

When one hears that an org or a division, a department or section or person has been ordered to *promote,* the question can be asked, "What does this mean?"

Some suppose it means get an incredibly brilliant new idea that has never been done before. Another thinks it means hiring an ad agency. Somebody else may think it means telling lies or working confidence tricks. It is none of these things.

Only in emergency promotion does one need new ideas, and these most often consist of how to accomplish a long-neglected action in some other department one doesn't have control over. The brilliance required here is how to get your part done anyway.

PROMOTION means *to make something known and thought well of.* In our activities it means to send something out that will cause people to respond either in person or by their written order or reply to the end of applying Scientology service to or through the person or selling Scientology commodities, all to the benefit of the person and the solvency of the org.

Now do you see that a staff member *smiling* is sending something out that will make someone respond and think better of the staff member and the org. That comes under the definition of promotion. A janitor making the steps clean is presenting something (the view of clean steps) that will make both himself and the org a bit better thought of. A mail clerk doing up a neat package is sending something out that will make the org well thought of. Do you see?

So *any* action that makes the staff member or the org visible and well thought of is promotion.

Furthermore, *any* job in the org well done makes it possible for others to promote but not done makes it very hard to promote or makes it impossible altogether. Every task in the org contributes to promotion. And without promotion there is no job.

There are, however, very standard promotional actions which we concentrate on in an org.

ROUTINE PROMOTION

Through the years orgs have developed various standard promotional actions which invariably achieve results if *done*.

Today these actions are woven into the standard organizational pattern as administrative activities.

If an org follows the organizational pattern and does what the hats say, then it will be promoting with no further strain.

The promotion ideas and patterns as they now exist are never at fault. Only failing to do them is at fault.

Promotion only fails because of nonexecution.

Without promotion one has insolvency.

Promotion without adequate delivery of service or commodity will eventually fail to deliver income.

THE PROMOTION ACTIONS

The Standard Promotion Actions of an org, by division and department, are:

(*Note:* There are other actions in these portions of the org. These are only the promotional actions.)

1. ***HCO AREA SECRETARY*** — Coordinates and gets done the promotional functions of Division 1.

2. **DEPARTMENT 1 (Dept of Routing and Personnel)** — Requires Reception to make known free introductory lectures to all callers.

3. Has books and cassettes on display at Reception.

4. Keeps staff from collecting in Reception Center and talking Scientology before callers.

5. Routes people swiftly and accurately to the required services.

6. Recruiting signs, tastefully done, to acquire new org staff.

7. Sees that a pool of PR trainees being trained in PR tech exists for eventual posting in Div 6 and in Department of Special Affairs, on current checksheet.

8. Sees that a pool of reserve Registrar personnel are in training part time while working in other Division 2 and Division 6 posts, for future use when fully trained on Reg and Tours posts, using the current authorized Registrar salesmanship course checksheet.

9. Sees that the full org board is sightly, properly done and up-to-date.

10. **DEPARTMENT 2 (Dept of Communications)** — Sees that mailings go out promptly and on schedule.

11. Controls public notice boards of the org and makes sure they also feature org services available.

12. Sees that internal despatches are swiftly delivered and are in accurate form.

13. Sees that letters and orders arrive safely and are quickly handled and not overlooked.

14. Oversees stationery and typing quality so that communications going outside the org look smart and sound bright.

15. Sees that mimeos look well when completed.

16. Issues the technical and policy materials of the org to get in policy and tech.

17. **DEPARTMENT 3 (Dept of Inspections and Reports)** — Sees that the org is there and functioning.

18. Sees that suppressives and enturbulative elements do not block dissemination.

19. Sees that service is accurately given and that no squirrel tech is used.

20. Prevents the phenomenon of no case gain by spotting potential trouble sources and handling.

21. Ethics gets case resurgences by finding the *right* SPs.

22. ***DISSEMINATION SECRETARY*** — Coordinates and gets done the promotional functions of Division 2 and makes the org and services known to Scientologists.

23. **DEPARTMENT 4 (Dept of Promotion and Marketing)** — Issues magazines on schedule.

24. Properly presents services in ads in org magazines and mailings.

25. Does promotional pieces for Publications Dept and for the Public Divisions.

26. Executes planned promotions as laid down in EDs.

27. Compiles promotional pieces and programs for issue to Scientologists.

28. Gets promotional pieces printed.

29. **DEPARTMENT 5 (Dept of Publications)** — Sees that good quantities of books, cassettes, meters and tapes are in stock.

30. Sees that books, cassettes, meters and tapes are attractively displayed.

31. Ships swiftly on receipt of orders.

32. Gets pins and insignia in stock and ensures broad issue so they will appear in the world and thus disseminate.

33. Sees that book, meter and cassette fliers (handbills) are shipped out regularly to Scientologists and bookbuyers.

34. **DEPARTMENT 6 (Dept of Registration)** — Letter Registrar works to accumulate questionnaires and mail from those responding to promotion. Follows exact policy and gets out floods of mail to all possible proper candidates for service.

35. Keeps Central Files right up and in excellent shape and adds all new names of buyers of books and services.

36. Uses Central Files to the limit to produce business and routes everyone in it individually by employing Gradation Charts and sending them out marked and devising other means of utilizing CF to produce business.

37. Sends out questionnaires with all offers which detect people's plans for training and processing.

38. Accepts advance registration and encourages more advance registration until her months ahead are scheduled full of students and pcs.

39. Does phone registration in city areas in addition to other registration actions such as Letter Registrar.

40. Registers everyone who comes in for service as pleasantly as possible with due regard for the solvency of the org.

41. Keeps a complete address file in such shape that mailings are wide and sent to people who will respond. *Never* lets go of an address or a mailing list and keeps them all properly corrected and up-to-date and in proper categories for ready use.

42. Sees that the files, addresses and requirements of persons interested in Scientology are used to the full.

43. ***TREASURY SECRETARY*** — Coordinates and gets done the promotional functions of Division 3.

44. **DEPARTMENT 7 (Dept of Income)** — Persuades payment of cash or increase in purchase whenever possible.

45. Collects outstanding notes by monthly statements.

46. Collects outstanding notes through field staff members via Dept of Clearing.

47. Sees that public persons' statements are accurate, on-policy and do not ARC break the public with errors.

48. Gets all mail orders invoiced and/or collected so they can be shipped at once.

49. **DEPARTMENT 8 (Dept of Disbursement)** — Keeps bills paid in such a way that the org is in excellent credit repute. (Promotes with good credit rating.)

50. Gets salaries accurately and punctually paid to keep staff happy.

51. **DEPARTMENT 9 (Dept of Records, Assets and Materiel)** — Acquires reserves to give a reputation of stability to org.

52. Keeps staff clothing issued and in good order (in those orgs providing uniforms).

53. ***TECHNICAL SECRETARY*** — Coordinates and gets done the promotional functions of Division 4.

54. **DEPARTMENT 10 (Dept of Tech Services)** — Makes the customers happy and glad to be there.

55. Gives brisk service.

56. Acquires for the org a reputation for swift and excellent handling of people.

57. **DEPARTMENT 11 (Dept of Training)** — Gives excellent training. (The soundest possible promotion, quickly mirrored in numbers enrolling.)

58. Routes dissidents quickly to Ethics and slows to Review.

59. Briskly and punctually schedules classes.

60. Accomplishes lots of completions.

61. Turns out very competent auditors whose excellence promotes the Academy (or College at SH) and Scientology.

62. Writes letters to possible prospective students to get the Academy (or College at SH) full. (This is an old, old activity of the D of T who never depends on Registrars or magazines.)

63. Makes sure the excellence of training that is there is bragged about in magazines, etc.

64. Gets students (Free Scientology Center) to find new, raw-meat pcs of their own around the town and audit them for student classification and gets them to bring such pcs in for Release examinations and declarations (during which they get routed through Registrar who presents the award) and refuses any for-classification case already known to be a paying pc of some org or auditor.

65. Popularizes the Tech Films and uses them to the full and sees that all audiovisual equipment (including tape equipment) is well maintained for professional, high-quality reproduction.

66. **DEPARTMENT 12 (Dept of Processing)** — Gets excellent results on all pcs.

67. Becomes well known for standard tech.

68. Spots SPs and PTSes early and routes to Ethics. Routes bogged cases quickly to Review.

69. Takes responsibility for all cases in the whole area where the org is.

70. Makes auditors look and act professionally outside the HGC so people will have confidence in them.

71. Insists on clean, attractive HGC quarters and helps Materiel to achieve and maintain them.

72. Gets pcs in such good shape they are walking advertisements for the HGC and Scientology.

73. Writes letters to possible pcs (the D of P has had this duty for 15 years).

74. *QUALIFICATIONS SECRETARY* — Coordinates and gets done the promotion functions of Division 5.

75. **DEPARTMENT 13 (Dept of Validity)** — Makes sure no untrained student or unsolved case gets past.

76. Finds the real errors in any failures (no student or pc ever gets upset if the actual error is spotted — they only get upset when a wrong error is found).

77. Refuses to get so concentrated on "validating people" that errors are overlooked, for this backfires also.

78. Routes those passed quickly to Certs and Awards and those failed quickly to Review and routes any ethics matters discovered promptly to Ethics.

79. Issues credentials that will be seen around — pins that people will wear, certificates they will hang up, cards they will show.

80. Never issues anything falsely as it will be hidden or discredited.

81. Issues literature to all new Releases and other completions that tells them what they have attained and what next to do and encourages them to do it.

82. Heavily promotes auditors outside the org to bring in their pcs for examination and Release declarations.

83. **DEPARTMENT 14 (Dept of Personnel Enhancement)** — Gets staff in such good shape they are walking advertisements for the org and Scientology.

84. Turns out very competent staff members whose excellence promotes the org and Scientology.

85. **DEPARTMENT 15 (Dept of Correction)** — Quickly repairs any flat ball bearings turned out by the Tech Division so they will be no discredit to org.

86. Gives brilliant standard isolation of any errors in students or pcs — discovers them with ease.

87. Repairs thoroughly.

88. Makes a continual effort to get failed cases in the field in for a review.

89. Sends to Ethics all ethics matters discovered. Cultivates an aura of effortless competence.

90. Review makes the dissatisfied satisfied with the org by remedying *all* tech misses.

91. Delivers excellent internships that turn out auditors whose excellence promotes the internship and Scientology.

92. *PUBLIC CONTACT SECRETARY* — Coordinates and gets done the divisional promotion functions of Division 6A and makes Scientology and the org known to the broad public.

93. **DEPARTMENT 16A (Dept of Public Book Sales)** — Gets books and cassettes placed in bookstores, reviewed and in the public view.

94. Gets LOTS of books and cassettes sold to the raw public.

95. Places ads in magazines, radio, TV, etc., to sell books and cassettes.

96. **DEPARTMENT 16B (Dept of Body Routing)** — Guides in new body traffic.

97. **DEPARTMENT 16B-1 (Dept of Public Contact)** — Advertises to the broad public.

98. Advertises public tape plays in the org, open house.

99. Promotes free intro films.

100. Acquires new mailing lists.

101. Sends out excellent info packets.

102. Hands out invitations to intro lecture in volume to keep intro lecture full each night.

103. Carries out the promotion of and conducts the current broad public promotional projects.

104. Works on the *public,* not on the Scientologists already known to Division 2.

105. **DEPARTMENT 16C (Dept of Introductory Services)** — Sees that the introductory lecture and introductory services use no words that will be misunderstood and makes people want to buy training and processing and offers it.

106. Sees that tapes and cassettes are available and that presentation of them is of good tone quality.

107. Gets public Dianetics and Scientology films shown to large numbers of public and sees that the film presentation equipment is clean and well maintained for high-quality, professional presentations.

108. Furnishes lecturers to groups.

109. ***PUBLIC SERVICING SECRETARY*** — Coordinates and gets done the divisional promotion functions of Division 6B and makes Scientology and the org known to the broad public.

110. **DEPARTMENT 17A (Dept of Public Registration)** — Does phone registration in city areas in addition to other public registration actions.

111. Registers Div 6 public who come in for service as pleasantly as possible with due regard for the solvency of the org.

112. Sees that the files, addresses and requirements of persons interested in Scientology are used to the full.

113. **DEPARTMENT 17B (Dept of the Hubbard Dianetics Foundation)** and **DEPARTMENT 17B-1 (Dept of Public Services)** — Sees that public services use no words that will be misunderstood and makes people want to buy training and processing and offers it.

114. Conducts an Extension Course and sees that it is well advertised.

115. Makes the customers happy and glad to be there.

116. Gives brisk service.

117. Acquires for the org a reputation for swift and excellent handling of people.

118. Gives excellent basic training. (The soundest possible promotion, quickly mirrored in numbers enrolling.)

119. Routes dissidents quickly to Ethics and slows to Review.

120. Spots SPs and PTSes early and routes to Ethics. Routes bogged cases quickly to Review.

121. Briskly and punctually schedules classes.

122. Accomplishes lots of completions.

123. Makes sure the excellence of public services that are there is bragged about in magazines, etc.

124. **DEPARTMENT 17C (Dept of the Chaplain)** — Gives excellent Chaplain services.

125. Gets ARC broken Scientologists in for a ruds session.

126. *FIELD CONTROL SECRETARY* — Coordinates and gets done the divisional promotion functions of Division 6C and makes Scientology and the org known to the broad public.

127. **DEPARTMENT 18A (Dept of Public Relations)** — Sees that the org has a good, clean appearance.

128. Sees that personnel are properly dressed, well conducted and give the org a good tone.

129. Handles press.

130. Makes Scientology popular or the thing to do.

131. Sells Scientology to governments and broad social stratas.

132. **DEPARTMENT 18B (Dept of Clearing)** — Recruits and handles field staff members to get in pcs and students for the org (and collect past debts).

133. Keeps in touch with mission holders and keeps them informed.

134. Carries out all FSM and mission activities and makes them head people toward the org.

135. Treats the whole departmental activity as salesmen are handled by any other business org.

136. Trains the FSMs and mission holders and makes them financially successful.

137. Gets all commissions owed promptly paid to encourage earning more commissions.

138. Gives FSMs and mission holders things they can use to disseminate and select.

139. Invites Scientologists to ask that info packets be sent to friends and relatives.

140. Finds and encourages the formation of Scientology groups and registers them and offers certificates.

141. Sends out mailings to groups.

142. Sees that missions are properly licensed with Scientology Missions International (SMI) and that field auditors are licensed with International Hubbard Ecclesiastical League of Pastors (I HELP).

143. Encourages broad public (lay) memberships.

144. Promotes the org and standard tech to the Auditors Association.

145. Pushes along the free membership program and re-signs the person for an annual or lifetime membership the moment the six months expires.

146. **DEPARTMENT 18C (Dept of Success)** — Contacts by letter all ex-pcs and students of the org. They should be written to at widening intervals after leaving org.

147. Collects by letters or verbally successful applications of Scientology.

148. Issues stories of successful application.

149. Issues projects of application to advanced Scientologists, particularly those projects involving artists or public figures.

150. Acknowledges the activities of Scientologists busy out in the world.

151. Appoints committees of Scientologists in various areas and groups to advise on improvements of the civilization.

152. Gets spectacular wins posted on the org's public notice boards.

153. Condenses wins into data of interest for mags and as handouts.

154. Makes a catalog of successes with various processes on various conditions.

155. Encourages and publicizes various applications of Scientology.

EXECUTIVE DIVISION

156. **DEPARTMENT 19 (Office of the Executive Director)** — The Executive Director or Commanding Officer on post and functioning to get the stats of individuals in the org up and staff and org expanding so that it can present a better image and afford better and broader promotion so as to expand.

157. The ED or CO sees that everything the org is allowed to deliver for which a demand exists is available and that the org is able to deliver it, including having on hand needful tapes, tape players, books, packs, checksheets, materiel, space and Supervisors, and that it is then heavily promoted and sold and delivered.

158. **ORG EXECUTIVE SECRETARY** — Oversees and gets execution on all promotional actions and functions in his or her three divisions.

159. **HCO EXECUTIVE SECRETARY** — Oversees and gets execution on all promotional activities in his or her two divisions and the Executive Division.

160. **PUBLIC EXECUTIVE SECRETARY** — Oversees and gets execution on all promotional activities in the three Public Divisions.

161. The Executive Council closely watches gross divisional statistics and quickly acts to handle any division of low gross divisional statistic. Acts to get into action all dropped or neglected standard promotions.

162. The Advisory Council develops new ways of making old promotion, as inherent in the org (detailed above), more effective and better executed. It never neglects old standard promotion to too strongly concentrate on new promotion.

163. The Executive Council primarily handles secretaries and acts through secretaries of divisions to get all the promotion actions done.

164. As Financial Planning, sees that pricing of everything sold is not too high to discourage the public and not too low to make the org insolvent.

165. **DEPARTMENT 20 (Dept of Special Affairs)** — Gains acceptances of Scientology and its Founder.

166. **DEPARTMENT 21 (Office of LRH) — LRH COMMUNICATOR** Sees that Ron's postulates stick! Sees that his comms fly, look well and that Ron's (not Executive Council's) EDs are complied with.

167. **ESTATES BRANCH** — Gets proper quarters to make the org look good, whether for momentary or permanent use for all divisions.

168. Gets any org that is far out in the suburbs relocated to busy areas where there is lots of foot traffic, easily reached and where display windows can exist.

169. Keeps materiel of org bright.

170. Keeps the posts of Cleaners filled and cleaning scheduled so the org is spotless every day.

171. Carries out a program of renovation and repainting using org staff and volunteers without getting in road of production.

These are the standard promotional actions of a Scientology organization.

Any org not in a high state of solvency and activity has omitted some or a majority of the above.

It is almost impossible to fail to succeed if one just does the listed actions.

There is a great deal of busyness connected with them. But they are essentially simple actions. Most of us have been doing them for years.

If there is any mystery felt about them, then one either hasn't read his policy letters or is in disagreement with promoting at all.

Actually it is too simple. I am often amazed when people want me to write tens of thousands of words to describe these actions.

The thing to do is do them. Then one quickly "gets the hang of" them. And they are easy.

As usually one at staff level is concerned with only one or two of these, they are very easy to learn all about and do. The thing to know is (a) they exist, (b) they are essential actions and (c) their details must be done for them to succeed.

I have made no attempt here to review the org or old promotions. All I've done is write what I would expect to have happening in any org or division of any org if I wanted a successful org. I've listed things which, if missing, would cave in a division or the HCO, Org or Public portions.

A far more thorough analysis could be done. This is only a list of the *essential* actions. If less than these are done, one will have poverty, not prosperity.

If one can't get them done in an org, then there is something awfully wrong.

When a staff member is in a part of the org that is in Emergency or Danger, he, not being a high executive, often feels he can do nothing. This is foolish. Solvency is not made by high executives. It is made by doing one's own job.

Every action in every department is linked with promotion. To get out of Emergency or Danger, one must first promote. That means, do the action that promotes in one's department or section or unit.

Solvency and org wins are made up of the small actions of the staff all added together.

Read again how promotion is defined. Read what is the promotional action of your immediate zone in your org. Ask yourself if you are giving it all you can. Then maybe you will understand whether you should be solvent or insolvent.

There is no other magic about it.

The one fatal error in promotion is to get so involved in worrying over things not your zone of promotion that you do not thoroughly execute your own role in promotion.

The most successful course of action you can follow is to do your part of the promotion in your own zone and do it so well it makes up for any shortcomings that might happen elsewhere in the org. Always promote more than can be wasted.

And also promote as a person and staff member. Even if you may not be an auditor, you never know what your smile, your helpfulness and your quick attention to another's confusion or difficulty might have cured.

Your actions and presence are meaningful and valuable too, you know.

CENTRAL FILES, VALUE OF THE GROSS INCOME OF THE ORG AND WHY

The easy way orgs give away their Central Files or pieces of them to other orgs indicates a complete miss on their value.

The average file folder in a CF file never costs less than $10 a folder to obtain.

When you think of all the work and mailings of the Public Divisions and realize that the direct product of that thought and activity is a CF folder, you begin to get some idea of what it cost to have a folder to file.

The gross income catastrophes that follow giving another org the CF folders of its area are fantastic. One check showed Washington, DC dropped and lost around $27,000 gross income in about one quarter after it gave away pieces of their CF to small East Coast US orgs which didn't even have the facilities to use them.

SH left half a ton of US CF folders in London unshipped to the US for a long time. The astonishing thing is the tame presentation of at least $280,000 worth of folders to ASHO with no thought of making any deal.

Joburg some years ago "misplaced" its basic 6,500 CF address list and lost the files utterly. It took two years to find the list (they had left it in an old attic) and then for two more years did nothing with it. Stats down all the time of course.

Treasonable propaganda to the effect "it's an old file," "those names aren't hot anymore" encourage the disuse and disposal of CF files.

Yet a five-year-old file where the person has been written to dozens of times can suddenly come alive, the person walking into the org.

I have seen dozens of "disposed," "inactive" files worked over and produce thousands of dollars.

So a file is worth at least $10 or more to get but it is worth hundreds when continually written to.

An org's potential fortune, its potential gross income is its CF. So what would you think of a staff member or executive who simply gave away big pieces of the gross income?

Well, think the same thing of someone who gives away CF folders. Or who lets their Address go stale. Or who fails to keep them up and work them over.

In the US if anyone changes his address, the post office only keeps the change of address card for six months. DC, failing to mail to a 40,000 CF list two or three times a year, lost 27,000 of those names because the people moved, the address change at the PO got torn up and nobody could be reached anymore.

The process by which you get your gross income, your portion of proportionate pay and which pays for further dissem and PRO and service is not a mysterious action. People don't just walk in out of the blue.

The Public Divisions get people into CF (by definition, CF is "people who have bought something from an org"). Then Div 2 gets them into higher services by Letter Reg or phone actions. Then upper orgs get them into upper services by paying FSM commissions to the lower orgs.

It can get very baffling how this simple and ONLY source of gross income can be so missed that an org gives away its CF.

Even if "that folder" has bought everything that org has, it is still worth a 10% FSM commission to the org who owns it if that org selects it and sends it literature.

Honest, believe me, this is the only route by which you get in gross income:

1. Public Div actions
2. Div 2 actions
3. Good service actions
4. FSM to upper orgs

There isn't any other route, for all other routes also have to follow this route. Even Pub Div FSM selections come back into CF for further action after first service.

Public Div actions mean "new names to CF."

Is CF then only able to sell to "new" names? If so, your Division 2 isn't worth scrapping. Or your Divs 4 and 5 need a hammering for having out-tech and muddying up a field.

Listen: There is no other route to gross income than via CF.

Aside from dead people or people who want off the list or people who move with no address change, THERE IS NO VALID CF AGE.

Address, of course, is the CF index as well as who gets the magazine.

"Yes," somebody says, "but Sioux Falls is west of our territory. . . . And the org there said. . . ." Listen, I wouldn't give another org the time of day if *my* org got the CF.

Stop being so big-hearted with your org's future gross income.

An OES, worried about having enough money to keep the org going and provide services, would be amazed to find out what would happen to his GI if he forced this policy letter to be checked out on the whole org. I'll bet better than 90% of staff haven't a clue as to how or why or by what route they get ANY income at all. It's all in this policy letter.

PR SERIES 31
MARKETING SERIES 1

DIANETICS AND SCIENTOLOGY ARE NEW

People who have been in Dianetics and Scientology for years see it as a way of life. They accept it.

But to listen to them you'd think Dianetics and Scientology had been around for the last 50 billion years at least!

They have lost their viewpoint of the newness of Dianetics and Scientology.

They do not realize that Dianetics and Scientology are new news to the bulk of the world's population.

They do not realize that the oldest Dianetics or Scientology books are *brand-new* books to the bulk of humanity!

Before 1949 man's knowledge of himself, the spirit and the mind was a black barbarism. Look over the psychology, psychiatric and religious texts of the 30s and 40s. Man could not change. He was a degraded animal. The way you applied therapy was dreams or drugs, ice picks and ice baths.

Only Dianetics and Scientology began the road out of that witch pit.

But the witch pit is still there for almost all the world!

Because Scientologists number millions, Scientologists do not look at the *billions* to whom Dianetics and Scientology are BRAND-NEW!

Those billions are still in the witch pit. They are still boiling.

Dianetics and Scientology are NEW NEWS.

We are the only road out.

Just because YOU are making it is no reason the world will. (If you *aren't* making it in auditing, if you are a "failed case," get yourself a repair — Scientology is the only approach ever developed that repairs itself too! And that is also new news!)

Let them in on the new news!

Cultures change slowly. It took centuries for man to realize that slavery was wrong and could be changed. Cultures don't shift overnight.

So write and act like you have *new* news.

Recover your viewpoint by comparing what you now know to what they still don't know in even "modern" institutions.

You have new news. And Dianetics and Scientology are good news. In fact, the best news man has ever had. Don't sit on it!

HCO POLICY LETTER OF 29 OCTOBER 1959
ISSUE II

ALL MISSION
HOLDERS

SERVICE

It has come to my attention that some Central Orgs are not quick to furnish service and cooperation to mission holders or field auditors. And also that these are sometimes upset with Central Orgs.

It is not true that mission holders are all out to destroy Central Orgs.

It is not true that all Central Orgs are out to do in mission holders.

Both Central Orgs and mission holders are interdependent. Further, I have never intended Scientology orgs or groups to be bits of third dynamic each opposed. For nine years Dianetic and Scientology orgs and groups have tended to individuate to my sorrow.

We will win if we *are* Scientology, not a lot of isolated groups.

The watchword is SERVICE.

I don't care how many rules you break if they're broken to give unselfish service to one another and the public. We live for service not for rules.

If the combined power of all of us and all organizations were exerted as a shoulder to shoulder effort, we would take this planet just as we are and with no more than we know.

"Competition" is a trick of the weak to fetter the strong.

Where there's a group to be helped or a preclear to be processed or a student to be trained, see that it's done and *if* it gets done don't count the costs in broken rules.

We are essentially an evolutionary group. All of us together. We must not fetter ourselves beyond increasing our own efficiency, nor must we entangle our purposes with arbitrary laws which do not further our cause.

Service is the watchword. Orderly service is preferable to disorderly service *but any* service is better than no service.

We are essentially breakers of "now-I'm-supposed-to's." Don't fall into our own new rituals so hard that we are no longer brave and effective.

Worldwide we are doing better today because of orderly comm lines and administrative patterns, we are making more headway and suffer less confusion. But *don't* worship our rituals. Be as orderly as you can. Follow our rules as best you can. But a rule can be wrong and service and our mission can never be wrong.

Use the rules until they prevent you from doing your job. But if these stop you, then to *hell* with the rules! Get the show on the road!

REMIMEO

DELIVER

Now that we *can* deliver, the first thought of every staff member in every org from Saint Hill through the main orgs down to the smallest mission should be to deliver Scientology training and processing to every person responding to their promotion. Books and all other items should be delivered effectively and rapidly to buyers. Certificates should be delivered to all who earn them. Classification should be delivered quickly to those who can pass.

The action of promotion is to offer as many as can be reached something each of those reached will want and buy.

After promotion obtains response, one must *deliver*. That means good case gains to preclears and students, good reality and useful knowledge and skill to every student.

Delivery, if not done swiftly and cheerfully and effectively, balls up the lines, retards growth and keeps everyone marking time.

The first job of the books personnel is to deliver books ordered. There is no other action to take. Just deliver. Keep the invoice line simple by simply invoicing everything ordered and note whether paid or not. In shipping books or such items not paid for, request the sum owing while holding the first invoice and when it comes let Invoicing make a new invoice showing payment and let Shipping relate it to the old. Refund overpayments regardless of what the customer said unless it's a donation. Keep book shipping simple. Deliver books. Be sure books are on hand and deliver them. That's all one does in Books.

When someone buys training, sign the person up and deliver the training and a good case gain too.

When someone buys processing, give them the processing called for at the pc's level whether you advertise you will or not and deliver a case gain and a completed level.

Deliver. When promotion has promoted a response, don't get chatty with the response. Just tell the person what it is, how much it costs, how easy it is and when he should get it; or to come in and get it and *deliver*.

Promote, organize and *deliver*.

We can now deliver technically.

You don't have to "make Scientology work." You don't have "to alter it so it will work." You don't have to dream it up. All you've got to do is be skilled in doing exactly what's taught and you'll deliver handsomely. You can deliver it, so deliver it.

On a pc who has never been processed, do Level 0. Give him or her an HCO Board of Review certificate as a pc for that level when it is complete. When a pc has Level 0 Grade Certificate, do I. Etc. Boot them up as fast as you can. Do only what the Levels are. Issue a certificate when they're all flat on the TA for that grade.

On people who have been scattered through one or another of the levels, finish up anything missed in the lowest level, then the next level, then the next, etc. When a pc has completed IV finally, be sure your staff can do VI on him.

To get an org or individual to deliver effectively, remove the distractions from the delivery channel, remove the barriers to delivery, detect and get rid of the noncompliance to orders to deliver. And deliver pure Scientology, effectively.

Get a move on. Learn what's to be delivered and deliver it.

Same with a course. Deliver it and certify you have. That's all.

You're selling wins. Deliver them.

The whole human race is about to start going up. They'll move to the degree you deliver and no faster. So let's get the show on the road.

Nobody now has to do anything arduous. Just find people, make them want and pay for delivery and then deliver.

That's all.

Let's go.

GEN. NON-REMIMEO

ALL DIVISIONS

HANDLING THE PUBLIC INDIVIDUAL

We have learned the hard way that an individual from the public must *never* be asked to DECIDE or CHOOSE.

Examining experiences we have had, I finally saw there was a hidden datum we had not been aware of in our orgs and particularly in handling the public. I finally dug it up and here it is:

TO DECIDE ONE HAS TO UNDERSTAND.

Examining our big org chart you can see quite plainly that *Understanding* is higher than the point of public entrance into processing.

Example: Mr. J is offered Particle A. He can accept it just because it is offered. He does not have to even perceive it or talk about it or recognize any condition. He needs to see only two things: (a) that it is being offered by somebody or something *(source)* and (b) that Particle A *exists*. All you have to do is show him where to obtain it and that it exists. This is acceptance without decision. Therefore he can have it.

Example: Mr. J is offered Particle A *or* Particle B. Now we have an entirely different situation. Mr. J must *compare* Particle A and Particle B in order to see which is best. Therefore he must see where each comes from (source), that each *exists,* establish the *condition* of each particle, *communicate* with and about them, *perceive* them, relate them to each other (become *oriented*), *understand* them, be *enlightened* and finally decide (establish own *purpose*). If he can do this, Mr. J can choose which he should have, A or B. If *Mr. J* can't do all these things, Mr. J is overwhelmed, gets confused and takes neither. One has asked Mr. J to jump up a lot of levels. Actually the ordinary Mr. Js when raw meat and even not so raw would have to have a Grade IX certificate to obtain a Grade I certificate. And that of course is impossible.

The door, then, is *barred* utterly for the majority of people into *any* department or function or org, let alone the promotion and accounts functions.

The moral is very plain. Never ask anyone in the public or field to Decide or Choose.

Erase from our org patter "Which do you want, Mr. J?" Don't ask which course, or what pin or what book or which auditor or what door or what time he or she wants to start anything or which door or which road or which membership.

Cultivate totally on a staff a didactic but pleasant approach. "Your intensive starts . . ." "This is your next book . . ." "Your next course should be taken on . . ." "Go to the third door." "I see you're a pc. You go up to the second floor . . ."

Erase even the banal "What do you wish?" or "What can I do for you?" as even that throws confusion into it.

Example: Miss N has heard of processing. She wants some. She never did *decide* to want some. She just wants some. Now to ask her to decide *anything* about it blunts that purpose. It is a thin purpose. It quivers. Don't ask her does she want a book or want training or want a pin or want anything else. Say only, "Ah. You want processing. That is a good thing to want. Be here on Monday and bring _____ funds." That's all. For heaven's sakes don't *sell* her processing or books or alternate schedules or ask her if she can pay or anything. That *want* is frail at best. Don't crush it! *If* she says timidly, "I only have _____ funds," say, "Good. Bring them; you can owe the rest. Be here on Monday."

In short MAKE Miss N RIGHT for WANTING, thus intensifying the want. Make her RIGHT when she talks about money. Then, being right, she *can* come in Monday. Simple. Chances are, even if she works, she'll still come in.

When she comes in she says, "I'm Miss N. I'm here for my processing." Reception MUST say, "Ah. You're Miss N. Good. There's the Accounts window. Sign up there." The Accounts says, "Here's the slip. Sign here. Take the slip to Room _____." Reception says, "This way Miss N." Estimations says, "Let me have your Accounts receipt. Good. That's fine. Have you been processed before? No? Well, you soon will be. This way please. Your auditor is waiting." The auditor says, "Over here, please," adjusts the pc's chair, etc., and sits down and says, "Start of session." At its end he says, "Be in this room at _____" for Miss N's next. And so on. When she gets her grade certificate she's told, "That means you're a Grade I preclear. Get the book _____ down in Reception. It will tell you all about Grade II." Miss N throughout is *never* anything but 8-Ced. The general promotion told her what to want by saying she could *have* it. She expresses the want. The org people say, "That's a good thing to want. You can have it." And gives it to her.

That's all.

Just as you'd never ask a pc which command he wanted, you never ask the public individual to decide.

You can teach them anything, particularly the truth. But never ask them to decide.

By processing up through the grades, this person will soon begin to see and be there and understand and decide. And she'll surely decide she's a Scientologist, as it's true all the way!

This is new admin tech.

You will see us knocking out now all requests to choose in all promotion and in all routing of the public in an org. If we do so we will succeed beautifully.

There is an even deeper fundamental at work here. It is quite startling.

You cannot get a flow without agreement. Examine your ARC triangle and you'll see why.

This is why an org won't *flow* traffic when policy is out or not formed.

That's why any policy, agreed upon, is better than points of individual decision on flow lines.

It's not that people can't decide in orgs. They can. *But when* a staff member makes an individual decision not laid out by policy, the flow *stops*.

Thus all flow and traffic lines including people and money and despatches will flow smoothly and rapidly only so long as the decisions that can be made are also part of policy and are simple decisions.

THE RAPIDITY OF PARTICLE FLOW ALONE DETERMINES POWER.

Thus an org's strength and its sphere of influence and domain are all regulated by the *speed* of flow, both inside and outside an org!

And an org particle inside or outside an org (promotion, books, people, money) flows as fast as it's free of independent, unagreed-upon decision points.

Example: A flow line can go to A or B. Unless policy says, "If it's above 80 it goes to A. If it's below 80 it goes to B," then that particle becomes the subject of a decision that is not covered by policy and *the flow stops*.

You can have a lot of choices on a comm line or traffic line but *none* may be random choices made by an individual at that moment. The flow will stop, not because the decision is wrong but because the next point on the flow doesn't know what it really is and so can't handle it except slowly or by stopping it at least to think it over.

An org full of individual *decision points* not covered by group understanding is no org at all and will fail. It is a bunch of individuals working at cross-purposes — each person okay, but the combined strength of the "org" is only that of one person in a state of confusion!

When the public is *also* being asked to decide about coming into an org full of individual decision points you get a total collapse.

The new org board overcomes all this. It has the choices laid out by policy and org form and formula. So it can grow, will be easy to work in and will remain a happy place unless somebody puts in some new decision points not on the chart. The result will be stopped flows, no traffic, no money, no org.

Never put in an "individual random decision point" on a chart! That's the moral.

Then all staff can look over and see easily on what's decided where.

A multiple decision point can work providing only that all the decisions to be made are already known to all. Take a communicator. She has to make many "decisions" that are known in advance. Which basket does what despatch go into? That's an easy multiple "decision" providing the org board is easy to read and staff understands it and is doing the jobs for which they are posted. The line stops when the posts cross or aren't being handled, or at an "individual decision point" not then easily knowable to the staff.

This was the main problem in working out the 1965 org board. For the first time even my own post was being clarified by the need for knowable decision. Every post on the board is like that. And it was all worked out. It could not have been worked out at all unless I had found some of the most fundamental formulas of this universe. The type of pattern used kept one org going for 80 trillion years, believe it or not. And to that was added some very basic laws that had been overlooked by that outfit and which caused its eventual decay. It couldn't correct itself!

We aren't actually radically changed by the org board as all our own customs are functional on it also.

But it will flow and prosper as long as the decisions to be made are known already. Example: A bill disputed: decision = deposit sum in Reserved Payment Account and get the bill straight then pay right amount. Example: Policy says Blue Students. They seem to be aquamarine colored, not blue. Report it to the Inspection and Reports Dept with all data. Inspection and Reports inspects and reports to the Office of LRH and policy is adjusted everywhere. Now we can handle aquamarine colored students — or see that the Office of Estimations is forbidden to wear sunglasses while estimating! And while the policy is under adjustment we stick by known policy until adjusted.

Frankly, the 1965 org board pattern, as posted, gives all the routing hats and therefore the "decisions" are already visible. If a flow stacks up or a basket fills or trouble occurs, we have an overload or an absence or an injected "individual decision point."

Far from robbing anyone of self-determinism, the 1965 board is welcomed by sighs of relief. Even I was glad to get my own work onto it. The whole room went bright when I cognited, "Gee, this is what everyone is trying to do to *me;* make me an individual decision point!"

One puts one's *baskets* and one's *"hands"* into the lines and *acts* on the lines. One doesn't put his decisions on the lines as the lines then hit him! A postulate or a decision is too close to a thetan's identity! It confuses him and makes him feel *hit* personally by the communications when he has to newly decide on each one. If the decision is already there, A or B, he can *then* route with his "hands," not with *himself*. If he is always newly and randomly deciding, he gets carried eventually on down the comm line himself and goes off post! A thetan can handle a vast volume of action so long as he doesn't have to make a strange or fresh decision in each act. We can tell in orgs *who* is making fresh individual decisions as that person has to bring each of his own despatches in personally. (We call it "bringing a body.") He routes himself too! Only a Communications Runner who is involved only with who and where can do this safely as *her* decisions are known beforehand. Thus she can move on lines

with impunity. Note that she only stops when she has to figure out who has now gone where and why she was not informed! Otherwise a Communications Runner could go through fire and war with impunity without a pause so long as the who and where are known. Thus an Investigations personnel cannot also be a Communications personnel without going half-mad! But an Investigations personnel with *her* set of "who to look for and where" can move swiftly too! They (the Communications personnel and the Investigations personnel) have entirely different *previously known* decisions to make. Both are who-wheres. But the comm who-where is the comm station of a known person. And the investigation who-where is composed of *types* of whos and *reported* wheres. The purposes are different. The Comm personnel sees to whom and where and delivers. The Investigation personnel sees what and finds out whom and where and reports. Other staff must know what decisions these two will make. Other staff sees a jam of traffic and will feel comfortable if a Communicator predictably sends an expeditor to help clear the jam. Also, seeing a confused area, other staff will feel all right about it if an investigator pops up and finds out what and whom and reports it accurately for a predictable decision. Thus a staff trained in the pattern of decisions that will be taken by the various departments only complains when somebody green puts somebody else's traffic on their lines or leaps in investigating the maintenance men when it's a bulldog a pc brought to session that's howling. Things get *predictable*. One sees a pile of traffic growing, one knows an expeditor will show up. One sees a student blowing, one knows an investigator will show up. One can live in a *predictable* environment. One gets nervy only in the presence of unpredictable decisions. Want to know why wog courts make people nervy? Who can predict a wog court decision? Who can even predict the sentence man to man for the same crime? It's not knowing that makes men stupid. Part of knowing is "In a given situation what should be decided?"

Only a new knowledge of universal laws has made it possible to make such an org pattern, for its decisions are then basic in every person and the universe in which we live. We need only avoid *bank* dramatizations to own the lot.

HCO POLICY LETTER OF 3 JANUARY 1968

REMIMEO

SPEED OF SERVICE

(Originally written as Flag Order 340,
3 Jan. 68. Issued as an HCO PL on 27 Dec. 72.)

In a matter of courses and students, SPEED of service is of vital importance.

The prosperity of a business is directly proportional to the speed of flow of its particles (despatches, cables, goods, messengers, students, customers, agents, etc.).

To prosper, service must be as close to instant as possible.

Anything which stops or delays the flows of a business or delays or puts a customer or product on WAIT is an enemy of that business.

Good management carefully isolates all stops on its flow lines and eradicates them to increase speed of flows.

Speed of service is of comparable magnitude to quality of service, and where exaggerated ideas of quality exist they must become secondary to speed.

Only then can a business prosper.

HCO POLICY LETTER OF 6 FEBRUARY 1968

REMIMEO

ORGANIZATION— THE FLAW

I looked for a long time for any flaw in the idea of organization. It does have a flaw.

The basic flaw in organization is INSPECTION BEFORE THE FACT. That means inspection before anything bad has happened.

Violations are so harmful they destroyed every great civilization — the Roman, the British, the lot. For every flow is slowed or stopped.

The prosperity of any organization is directly proportional to the speed of its particles — goods, people, papers.

World trade, world shipping, world prosperity is dying only because of the cumulative effect of inspections before the fact. Passports, customs, safety regulations, general government interference before anything bad has occurred add up to a SUPPRESSIVE SOCIETY and therefore, soon enough, a dead one.

Penalty *after* the fact has occurred disciplines the criminals and does not pull down the majority to criminal level.

Scientology organizations must never lose sight of the reason organizations have decayed.

HCO POLICY LETTER OF 4 MAY 1968

REMIMEO

HANDLING SITUATIONS

The only tremendous error an organization makes, next to inspection before the fact, is failing to terminatedly handle situations rapidly.

When I say terminatedly handle I mean finishedly handle. That it is handled and that's all, boy!

The fault of an organization's waffle, waffle, waffle, "Joe won't take responsibility for it," "It's got to go someplace else," and all that sort of thing, is that it *continues* a situation. It just goes on and on and on until it finally gets somewhere, goes snap, and that would be the end of that situation. So what you ought to do is *complete action* now, in the first place.

The other day I was looking at why I used to have a high stat businesswise and cinewise and otherwise, and I suddenly realized I was peculiar in the vicinity in which I operated. I *ended cycles*. I could end more cycles in less time than any organization could dream up. In other words I was CONCLUDING ACTIONS.

Ending cycles doesn't consist of shooting people. It consists of seeing that it *stays handled.*

One of the things that has happened in the past is that I have had to rehandle. Situations I had handled became unhandled someplace and I had to rehandle them again.

What you should specialize in is terminating the end of a situation, not refer it to somebody else.

If the situation comes up in your vicinity, well, handle it — that is, finish it off so that is the end of it.

Somebody comes along saying (natter, natter, natter). I've caught too many of these guys. Finally I handle the situation, if it hadn't been handled up to that point. He hadn't been handled up to that point.

When you have got this guy, handle him. Handle him, so that the fellow is handled from here on to the end of time. Don't try to patch it up so that it won't cause any trouble.

You have to be on the ball to do this, very much on the ball. An example was a dissatisfied steward. The guy was going around serving up spanners in the soup. He's going around, and he's going around and he's going around. Well, let's handle it right there, now, when he wants the situation handled. The guy appears for his pay and that's it! Do you get the idea. It's finished right now.

Please quit continuing situations by reference. Handle! You can develop more traffic internally, more upsets, more ARC breaks, than anything you can mention by simply continuing to shunt the responsibility for ending the cycle of action. That is all it is, just a refusal to take responsibility for ending a cycle of action.

Somebody comes over to the Registrar to sign up. Does she have to refer to eight different terminals as to whether or not this person is permitted to sign up? No. She either signs the guy up or she doesn't sign the guy up.

Take responsibility for the various cycles of action. When you have taken responsibility for them, let's hear no more about them anyplace.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 23 DECEMBER 1968

REMIMEO

GOOD SERVICE

(Originally written by LRH as LRH ED 74 Int
of 23 Dec. 68. Issued as an HCO PL on 28 Apr. 73.)

The public expects good service. By this they mean positive scheduling, accurate billing, accurate addressing, good technical rendition of training and processing.

The most frequent source of ARC breaks with the public, as has been pointed out many times in policy, is INACCURATE BILLING. This is handled by an invoice filing system and every person who buys anything has a folder *in Accounts* if he pays more or less than the actual cost of service. Giving credit is seldom done these days except in Qual. You can lose money and customers by inaccurate billing.

A second cause of ARC breaks is a person's name in the mailing address list twice or three times so he gets 2 or 3 mailing pieces.

A third cause is Letter Reg letters writing to offer a service the person has already taken. This only happens when Letter Reges write without the person's folder before them or when CF is backlogged.

A fourth cause is failing to answer a person's questions in letters.

Another cause is an ethics injustice.

Another is making it hard for people to help — too tough an Issue Authority.

Most orgs do face-to-face handling extremely well. It's the accounts, mailing and admin bits that go slack.

A source of down stats is making CF into "hot" and "cold" files and failing to write the cold ones. It's illegal to put tons of CF folders off the line. It ARC breaks people also not to hear at all.

Scientology org staffs do remarkably well.

It is almost unreasonable of the public to complain of things like billings as we always correct them. But the public does have for comparison sleek admin from airlines, etc.

I regard attacks on or criticisms of orgs and staffs as a personal affront, actually, and when somebody complains too hard about an org, I usually ask him why he or she isn't on staff straightening it up and making it go right. I recommend that approach to the critic.

And I also recommend admin attention to the items above.

HAS
STAFF HATS

SERVICE

The essential ingredient of any post is SERVICE.

A hat essentially is CONTRIBUTIVE. It contributes to the general production of the TEAM.

CONTRIBUTISM is a philosophy in itself. You find it in The Factors. You also find it would apply in economics. One CONTRIBUTES. One is CONTRIBUTED TO. By others CONTRIBUTING TO others who then contribute back, one is also benefited.

When contribution is cut or not allowed, denied or withheld, one gets the phenomenon of ARC break in the form of cut C — Communication. (Where A is Affinity and R is Reality.)

ARC breaks precede harmful intentional acts.

Thus you can expect that when CONTRIBUTION is not balanced to some degree, trouble and upset occurs.

From such breakdowns we get the violence of strikes, political philosophies and even revolution.

A welfare state requiring no contribution will at length be paid in revolution.

A hat "worn" without contributing to the team or without contributing one's real efforts will cause (a) an upset and discomfort in oneself, (b) a harmful reaction from others and (c) reactions within the remainder of the team.

Morale is dependent upon PRODUCTION. Production is accomplished by numerous contributions of thought or effort.

Any existing organization or civilization is the sum total of its past and current contributors in terms of thought and effort.

Some contribute much, some little.

Rewards are not necessarily proportional to contribution and do not necessarily establish the degree of contribution.

Actually a "reward" is what one desires, not what is given.

Approval and validation are often far more valuable than material rewards and are usually worked for far harder than mere pay.

Even being part of an important team is a return contribution. Thus "customer approval" of the team is part of the rewards one achieves.

The subject of what one receives in return for contributing is as variable as the desires of man.

Anyone who has a hat is expected to contribute the services outlined by the hat.

Other teammates and customers or clientele or "the public" expect a staff member to contribute his specialized services to those who seek them.

Thus SERVICE is a keynote of a hat.

Many years ago when I first looked this over, I had a high position of command. After a great deal of sorting out, I finally concluded that the only *privilege* it conferred on me was THE RIGHT TO SERVE. After that I could handle the post. And was happy with it.

Certain it is that degradation is inevitable when the Right to Serve is interrupted or denied.

It is worth thinking about in relation to happiness.

HCO POLICY LETTER OF 28 MAY 1971
ISSUE II

REMIMEO
HAS
STAFF HATS
PROD/ORG
CHECKSHEETS

SERVICE AND WORKLOAD

The way to decrease the traffic and workload of an org is to:

1. Get people to know their hats.
2. Deliver the service each hat calls for.
3. Check out all seniors on all the hats below them as well as the org board, functions, purposes of units, activities and current programs.
4. Be certain Personnel people know every hat in the org.

Production in terms of completions will soar.

Volume of work will drop.

Why is this?

NO SERVICE

If every staff member is on a no-service pitch, the body and despatch volume will rise at least fifteen times and production will decrease toward zero.

Look it over. Body A goes to Staff Terminal X for some service or other. Terminal X says, "I can't pay you because FP . . ." So Body A calls on another staff member who says, "Permission is required from G." So Body A goes to G and is told, "We haven't got a list to hand so . . ." So Body A goes . . .

Where's the production?

But there's lots of body volume!

Despatch To–From is received by Staff Member Y. He refers it to Staff Member Z. Who refers it to . . .

Where's the production?

But there's sure a lot of despatch traffic!

The system, in vogue in most bureaucracies, even has a name. It's called "the referral system."

No one gives service. No situation is terminatedly handled.

REHANDLING

When this is cured somewhat, a new situation can develop. A service facsimile (what one uses to make others wrong) develops.

"You handled it wrong!" is the cry.

So demands to rehandle occur.

This pushes the org back to DON'T HANDLE OR YOU'LL GET REPRIMANDED.

And the increased volume and lowered production set in again.

People who know their hats in the first place and give service don't have to be told to rehandle.

HAT KNOCKOFF

When a senior exec does not know all the hats and their duties, he misassigns duties.

This knocks off the hats that have been gotten on.

No service results.

When an exec knows all the hats, the org bd, the functions of units and activities and current programs, he routes and assigns properly and production goes up and volume decreases.

PERSONNEL GOOFS

When Personnel people do not know all the hats, they misassign. Some military services I know have this down to a fine art.

This increases hatting and training time. It increases confusion.

It reduces production and increases traffic volume.

The way to increase production and decrease traffic volume is to check out all Personnel people on all the hats of the posts they are assigning. Then they know.

MUSICAL CHAIRS

By playing musical chairs in an org — frequent changes of post, using areas of the org as a personnel pool — service is reduced so production is reduced and volume is increased.

There is a covert method of doing musical chairs. Go around and ask people if they want different posts. This unstabilizes them, puts them halfway between posts and reduces service, production and increases volume.

Laziness, fancied economies and lack of expertise in RECRUITING is always the bug back of musical chairs.

The answer is RECRUIT AND HIRE.

Probably other ways can be invented to prevent delivery and work everyone like mad but the above are the chief ones.

To increase production and decrease the volume handled, it is vital that people are:

A. Properly recruited and posted

B. Hatted with and trained for the post, and all theory and practical and post drills are done on them

C. Persuaded to deliver the expected service of the post held

D. Knowledgeable as seniors who must know their juniors' hats, the org bd, the functions as well as purposes of units and activities and current programs

E. Helped by signs, routings and forms to give the public or outside or internal traffic correct routes and terminals where handling will occur terminatedly

Want to increase production and lower the workload?

Get this PL in, in, in!

ORG SERIES 16

POLICY AND ORDERS

Probably the greatest single confusion that can exist in the subject of organizing is the reversal of "policy" and "orders."

When definitions of these two things are not clearly understood they can be identified as the same thing or even reversed.

When they are not understood plainly then staff members set their own policy and demand orders from top management, totally reversing the roles.

Confusion thus generated can be so great as to make an organization unmanageable. It becomes impossible for staff to do its job and management cannot wear its hat.

People in an organization obsessively demand orders from policy source and then act on their own policy. This exactly reverses matters and can be a continual cause of disorganization.

As policy is the basis of group agreement, unknown policy or policy set by the wrong source leads to disagreement and discord.

Demanding or looking for orders from policy source and accepting policy from unauthorized sources of course turns the whole organization upside down. The bottom of the org board becomes the top of the org board. And the top is forced to act at lower levels (order issue) which pulls it down the org board.

But this is not strange as we are dealing here with principles rather new in the field of organization, principles which have not been crisply stated. THERE IS NO EXACT ENGLISH WORD for either of these two functions.

POLICY as a word has many definitions in current dictionaries amongst which only one is partially correct: "A definite course or method of action to guide and determine future decisions." It is also "prudence or wisdom," "a course of action" and a lot of other things according to the dictionary. It even is said to be laid down at the top.

Therefore the word has so many other meanings that the language itself has become confused.

Yet, regardless of dictionary fog, the word means an exact thing in the specialized field of management and organization.

POLICY MEANS THE PRINCIPLE EVOLVED AND ISSUED BY TOP MANAGEMENT FOR A SPECIFIC ACTIVITY TO GUIDE PLANNING AND PROGRAMING AND AUTHORIZE THE ISSUANCE OF PROJECTS BY EXECUTIVES WHICH IN TURN PERMIT THE ISSUANCE AND ENFORCEMENT OF ORDERS THAT DIRECT THE ACTIVITY OF PERSONNEL IN ACHIEVING PRODUCTION AND VIABILITY.

POLICY is therefore a principle by which the conduct of affairs can be guided.

A policy exists, or should exist, for each broad field or activity in which an organization is involved.

Example: The company has a lunchroom for its employees. Top policy concerning it might be "To provide the employees cheaply with good food and clean fast service." From this the lunchroom manager could plan up and program how he was going to do this. With these approved they form the basis of the orders he issues.

Now let us say the manager of the lunchroom did not know organization and that he did not try to get a policy set or find if there was one and made up his own policy and planned and programed and issued his orders on that. Only the policy *he* makes up is "To make dough for the company."

Now the wild melee begins.

Top management (the lunchroom manager's highest boss) sees stenos eating cold lunches brought from home at their desks. And begins to investigate. How come? Stenos then say, "We find it cheaper to eat our own lunches." Top management finds coffee in the lunchroom is terrible and costs several shillings. Dried-out sandwiches cost a fortune. There is no place to sit . . ., etc. So top management issues *orders* (not policy). "Feed that staff!" But nothing happens because the lunchroom manager can't and still "make dough for the company." Top management issues more *orders*. The lunchroom manager thinks they must be crazy at board level. How can you make dough and still feed the whole staff? And top management thinks the lunchroom manager is crazy or a crook.

Now you multiply this several times over in an organization and you get bad feeling, tension and chaos.

Let us say top management had issued policy: "Establish and run a lunchroom to provide the employees cheaply with good food and clean fast service." But the lunchroom manager hired knew nothing of organization, heard it, didn't realize what policy was and classified it as a "good idea." Idealistic, probably issued for PR with employees. "But as an experienced lunchroom man I know what they really want. So we'll make a lot of dough for the company!"

He thereafter bases *all* his orders on this principle. He buys lousy food cheap, reduces quality, increases prices, cuts down cost by no hiring and does make money. But the company gets its income from happy customers who are handled by happy staff members. So the lunchroom manager effectively reduces the real company income by failing to cater to staff morale as was intended.

UNPREDICTABLE

It is a complete fact that no top management can predict WHAT policy will be set by its juniors.

The curse of this is that top management depends on "common sense" and grants greater knowledge of affairs to others at times than is justified. "Of course anybody would know that the paper knives we make are supposed to cut paper." But the plant manager operates on the policy that the plant is supposed to provide employment for the village. You can imagine the squabble when the paper knives which do NOT cut paper fail to sell and a threatened layoff occurs.

Nearly all labor–management hurricanes blow up over this fact of ignorance of policy. It is not actually a knowing conflict over different policies. It's a conflict occurring on the unknown basic of unknown or unset policy of top management and the setting of policy at an unauthorized level.

ORDERS

"Order" takes up two small print columns of the two-ton dictionaries.

The simple definition is:

AN ORDER IS THE DIRECTION OR COMMAND ISSUED BY AN AUTHORIZED PERSON TO A PERSON OR GROUP WITHIN THE SPHERE OF THE AUTHORIZED PERSON'S AUTHORITY.

By implication an ORDER goes from a senior to juniors.

Those persons who do not conceive of an organization larger than a few people tend to lump all seniors into order-issuers, tend to lump anything such a senior says into the category of order and tend to lump all juniors into order-receivers.

This is a simple way of life, one must say.

Actually it makes all seniors bosses or sergeants and all juniors into workers or privates. It is a very simple arrangement. It does not in any way stretch the imagination or sprain any mental muscles.

Unfortunately such an organized arrangement holds good for the metal section of the shop or a platoon or squad. It fails to take into account more sophisticated or more complex organizations. And it unfortunately requires a more complex organization to get anything done.

Where one has squad mentality in a plant or firm, one easily gets all manner of conflict.

Few shop foremen or sergeants or chief clerks ever waste any time in trying to tell the "rank and file" what the policy is. "Ours was not to reason why" was the death song of the Light Brigade. And also the open door to communism.

Communism is unlikely to produce a good society because it is based on squad mentality. Capitalism has declined not because it was fought but because it could not cope with squad mentality. The policies of both are insufficiently embracive of the needs of the planet to achieve total acceptability.

An order can be issued solely and only because its issuer has in some fashion attained the right to issue the instruction and to expect compliance.

The officer, the chief clerk, the shop steward, the sergeant, each one has a license, a warrant, a "fiat" from a higher authority which entitles him to issue an *order* to those who are answerable to him.

So where does this authority to issue orders come from?

The head of state, the government, the board of directors, the town council, such bodies as one could consider top management in a state or firm, issues the authority to issue orders.

Yet such top persons usually do not issue authority to issue orders without designating what the sphere of orders will be and what they will be about.

This is the policymaking, appointment making level at work.

All this is so poorly and grossly defined in the language itself that very odd meanings are conceived of "policy" and "orders."

Unless precise meanings are given, then organization becomes a very confused activity.

Understood in this way, the following sentence becomes very silly: "The board of directors issued orders to load the van and the driver was glad to see his policy of interstate commerce followed."

Yet a group will do this to its board of directors constantly. "You did not issue orders . . ." "We were waiting for orders . . ." "I know we should have opened the doors but we had no order from the council . . ."

The same group members, waiting for orders to sit or stand by special board resolution, will yet set policy continually. "We are trying to let others do their jobs without interference." "I am now operating to make each member of my department happy." "I am running this division to prevent quarrels."

Ask officers, secretaries, in-charges, "What policy are you operating on?" and you will get a quick answer that usually is in total conflict or divergence from any board policy. And you will get a complaint often that nobody issues their division orders so they don't know what to do!

The fact is that POLICY gives the right to issue orders upon it to get it in, followed and the job done.

A group of officers each one issuing policy madly while waiting for the head of the firm to give them orders is a scene of mix-up and catastrophe in the making.

Policy is a long, long-range guiding principle.

An order is a short-term direction given to implement a policy or the plans or programs which develop from policy.

"People should be seated in comfortable chairs in the waiting room" is a policy.

"Sit down" is an order.

If policy is understood to authorize people to issue orders, the picture becomes much clearer.

"Clearing post purpose" is another way of saying "Get the policy that establishes this post and its duties known and understood."

Unless an organization gets this quite straight, it will work in tension and in internal conflict.

When an organization gets these two things completely clear, it will be a pleasant and effective group.

ISSUE II

REMIMEO
EXEC HATS
COMM HATS
DEPT OF I&R HATS

ORDER BOARD AND TIME MACHINE

Executives must have and use an "order board."

In Scientology if it is not written it is not true. That's a major policy.

It applies to all.

Every order an executive issues must be in writing.

He does this on a clipboard. There is a sheaf of paper on it of his division's color. It has a sheet of pencil carbon and a ballpoint slipped through the top of the clip. It can have a hook on the back to slip on a belt for persons walking about. This is the order board.

Even when one gives a verbal order it is also written down.

The executive keeps no copies of his orders. This is done by the Department of Inspection and Reports.

The original is handed to the person being ordered. The other is sent to the Inspection Section of the Department of Inspection and Reports. If one is away from his comm station, the carbons are left on the order board until one returns, when the copies are all sent to Inspection.

COMMUNICATOR ACTION

The carbon of an order is sent to Inspection because it is obviously a carbon copy and an order. It is not otherwise designated.

An original sent through the comm lines is obviously an original order as it is not a carbon. It is simply delivered to the addressee's basket.

JUNIOR'S ACTION

The person receiving the order does it, says he has (or couldn't) on the original order he received and sends it TO INSPECTION. However even if he sends it to his issuing superior the communicator sends it to Inspection only.

INSPECTION ACTION

Inspection has a time machine. This is a series of baskets advanced one basket every morning.

A carbon of an order is placed in today's basket.

When the original comes in, the carbon is dug out of the basket (by date and color flash) and original and carbon are clipped together and routed to the issuing executive.

Orders not complied with in one week of course fall off the time machine by appearing in the basket being emptied today. (It was filled one week ago and advanced once each day.)

A copy is made of the order and it is sent to Ethics for filing in the staff member's ethics folder and counts as a report against the staff member.

The carbon is returned to issuing executive to show his order has not been complied with so that he can handle the situation. No report from the executive is required in this instance as a copy is already in Ethics.

The executive should investigate or ask Ethics to do so if the matter is of considerable importance.

If an original is returned to Inspection which has no carbon, it is copied and held and the copy is sent to the executive with a "Sir, there is a lost carbon of your order. Did you fail to turn one in?" This disciplines a forgetful executive. When Inspection receives the answer it attaches the original to it and sends it back to the executive.

VERBAL ORDER

A junior may report a verbal order to Ethics as it places his statistics and job in danger by leaving it open to have it said the order was otherwise.

PROJECT ORDER

If something requires more than two weeks to do, it is a *project* and cannot be ordered without clearance from the Office of LRH Design and Planning Authority Section. If a project has been okayed, it has a number and its number must be put on the order as Project Number _____.

Inspections files projects in their own files. This is also time machined by one month's emptying of a file drawer or one year's emptying of a file drawer. Projects run only for one month or one year and must be routinely inspected by Inspections which then reports to the Office of LRH with any progress or lack of it.

URGENT ORDERS

Orders marked Urgent by an executive are entered into a one-day time machine and handled in one day as described above for one week.

ALL DIVISIONS

POLICY, HOW TO HANDLE PEOPLE WHO QUOTE POLICY TO SHOW YOU THEY CAN'T FOLLOW IT

Some orgs will find that certain personnel will use policy to stop action.

When these just don't want to do their job, although it's easily understood in policy letters, they tell you certain policies are wrong or can't be followed.

The best and only effective way to handle this is to say:

"Since you are an expert on policy, permit me to ask you a few questions." Take up a PL applying to their post and start doing a hat check on it.

Since such a person is using policy to stop action and show policy wrong, a rebuttal such as the above will adequately discourage the practice.

If people won't work, they throw out lines and find ways to use policy to discuss it.

Policy is valuable.

But ALL policy exists solely to get the job done and establish points of agreement that permit flows of traffic.

When traffic doesn't flow and somebody says, "Policy so-and-so prevents it," then hat check at once and you'll be amazed to find they don't even know enough of it to disagree with it.

Disagreement with policy is disagreement with getting the job done. And is always accompanied by total lack of data on the policy being quoted.

It's a sure cure.

USING ORDERS OR POLICY TO CREATE PROBLEMS

Modifies: HCO PL 19 July 65 I POLICY, HOW TO HANDLE PEOPLE WHO QUOTE POLICY TO SHOW YOU THEY CAN'T FOLLOW IT

It can sometimes occur in an organization that certain personnel will use policy or an order to generate problems instead of production.

The exact phenomenon is this: *an order or policy is being used to create problems.*

Thus, the following are made ethics offenses and classified as crimes in Scientology:

1. CREATING PROBLEMS IN THE IMPLEMENTATION OF ORDERS.

2. USING POLICY TO CREATE PROBLEMS.

When such an offense is perpetrated, it can result in a Court of Ethics or Committee of Evidence being convened.

HCO POLICY LETTER OF 5 MAY 1974

REMIMEO

ORDERS

(Originally written by LRH for the *Apollo* OODs
of 5 May 74. Issued as an HCO PL on 28 Aug. 80.)

Orders become necessary only when COOPERATION fails.

Cooperation fails by lack of understanding of the scene and the tech to make things go right. When people do not keep themselves informed of what's going on at the time, they don't understand the scene.

Thus they begin to demand orders.

Cooperation is senior to orders at all times. But "co" means *together*. There isn't any together where there is no understanding of what's occurring. So cooperation depends upon being able to see and grasp the scene. And the tech to make things go right.

When I am asked for "orders" I know at once that understanding is missing. Therefore initiative cannot be practiced — orders take its place.

So — what *is* going on? What are seniors or myself trying to accomplish or get done? What's the scene?

There is no real *operation* without *co* operation.

And the seat of one's pants planted in a chair in a course room will give you all the tech you ever heard of in any field including your hat.

These are the elements of success — being in the know on the current scene (not rumor but fact); seeing what tech one needs and getting it grasped fast; *co* operation with the team.

If one did that he'd never hear an order (or get an ethics condition) for months — and he'd be *soaring*.

REMIMEO

ARBITRARIES

(Originally written by LRH for the *Apollo* OODs of 16 Apr. 70. Issued as an HCO PL and HCOB on 5 Nov. 80.)

An "arbitrary" is a false order or datum entered into a situation or group. It *is* third dynamic aberration.

An arbitrary is something entered without reason. For the tech on this I refer you to *Dianetics: The Evolution of a Science*. It is a fascinating subject, arbitraries.

I found one time that people hadn't read *The Problems of Work* where confusion and the stable datum is first covered. When I got that text across, then why we had stable terminals became very plain. Stable data is the other side of the coin. An arbitrary could be said to be a false stable datum.

Now if we can get arbitraries understood we will make some progress.

Whenever we as an organization violate the basic philosophy of Dianetics and Scientology we get into muddy water.

The whole trouble, for instance, with C/Sing is that the theory of the mind is not learned, only the mechanical processes. When one doesn't know the basic put-together of the mind but only knows processes, one never learns WHY the processes are used or *when* to use them. So one can be an auditor but can fail as a C/S if he doesn't know WHY and therefore WHEN to use a process.

A C/S should be an expert on *The Original Thesis* and the first few chapters of the *DMSMH* and on *8-80* and *8-8008*. I'll bet those studying "C/Sing" right now are still puzzling over processes!

Know your basics. They're in our very oldest books. All advances have been in how to handle basics better.

Applies to pcs *and* to organizations alike.

Know WHY and you can tell WHEN.

If you knew the most basic data given in Dianetics and Scientology books, and if you knew Scientology HCO Bulletins and Policy Letters and Sea Org Flag Orders, you would never need an order at all. You would know the true intention and could work it all out.

L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 22 MAY 1969

REMIMEO

ORDERS VERSUS ARBITRARIES

(Originally written by LRH for the *Apollo* OODs of 22 May 69. Issued as an HCO PL on 6 Oct. 80.)

The other evening, on a request, I said members of the company could do part-time study on the Dianetics Course. This became an absolute order, an arbitrary which was put in full force. Not only that, but nobody would handle it.

Why not?

If anyone had bothered to trace the order that "all must study" they would have found it was a false arbitrary.

Almost every outness around is of this breed of arbitrary.

A group that insists on sitting in the glorious irresponsibility of orders and only orders will never develop into a true group.

If you want to get a real look at what you're doing, ask yourself this question: Where do I get *my* orders from?

I get them from observation of the situation. And I give instructions based on a prediction of consequences.

Until you can do that you will feel harassed, ordered around and oppressed. Not because anybody is interested in oppressing anyone. Just because they try to make a safe environment, bump into people who haven't observed or acted, and so issue orders.

I don't think anybody fully understands the antipathy I have to authoritarian rule. The reason you see me get cross is in no small part protest at being forced to cope with a situation which occurs by neglect of others. Why elect me to save the day? This ship, this planet and universe are the concern of others too. I have no monopoly on the ability to observe and act.

The campaign to force into a dictatorship a group which has freedom as its main objective is about as popular with me as a fire in a powder factory.

Freedom depends on ability.

We can and will bring freedom to this planet. But only if and when we cease to demand orders and begin to observe and act on our own predictions.

You sure don't make a safe environment for me when I'm the only one to hear a man overboard and the only one to see that the stewards are allowed to wash dishes.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 15 DECEMBER 1969
ISSUE II

REMIMEO
ALL STAFF

URGENT

ORDERS, QUERY OF

It occasionally happens that an order is issued or a policy is enforced or is found to exist which if put into full effect in a certain area would result in loss or destruction.

Someone told to man up, for instance, all admin departments, sees that this would upset the tech/admin ratio.

Instead of putting the order into effect he should query the order with

A. the name of the issuer and the exact order,

B. the reason it would result in loss or destruction if put into effect,

C. a recommendation resolving the problem the order sought to solve.

Noncompliance as a method of avoiding a destructive order is very risky. It is far, far better, in writing, to make the above submission.

Going ahead and putting the order into effect even though it means loss and destruction without advising anyone is itself very destructive.

Sometimes a policy is interpreted incorrectly so that if one put it into effect fully as interpreted, loss and destruction would result. An instance of this was a type of course omitted from a policy letter. Someone did not query but instead closed the course and refunded thousands in advance payments. This was a misinterpretation of the policy which was only discussing course levels. The correct action of one and all would have been to have queried.

Another instance was an order that cancelled out and fired the personnel of a Letter Registrar because a fixed pay rate was being paid. The org followed the order and promptly went into debt as this was the only typist available and her dismissal was destructive of all income. Half a dozen people at least should have queried the order before executing.

A policy written for an affluent, large org is pushed on a tiny org. It executes even though it doesn't seem correct. The result is destructive.

The very meaning of policy can be shifted by reinterpretation. When this is done and is seen to be destructive, anyone following the reinterpretation is just as guilty as the misinterpreter. The correct action is query.

Even "You're fired" can be an incorrect order and can be queried if done as above.

"Your Class VIII is appointed HCO ES Canada." Great. But you know you've only got one VIII. To permit the order to be carried out is destructive. An order placing your best auditors into admin leaving tech crippled should have the living daylights queried out of it even by the janitor.

IT DOES NOT RELIEVE ONE OF RESPONSIBILITY WHEN ONE EXECUTES A DESTRUCTIVE ORDER. The one who follows it is in fact far more guilty than the issuer since the one following it is right there, able to OBSERVE whereas the issuer may not be.

The query should go to the issuer formed as ABC above. If it is still insisted upon and still is destructive, send it and all particulars to the nearest Sea Org unit. Label it DESTRUCTIVE ORDER and ask for help in handling. Refuse meanwhile to put it into effect.

NO ONE CAN BE COMM EVED FOR QUERYING AN ORDER IN PROPER FORM.

Using this policy to avoid routine actions plainly not resulting in loss or destruction WHICH NOT DONE do result in loss or destruction can result in an investigation and the one who refused the order can be held at fault for any resulting destruction.

This policy mainly applies to new, nonroutine orders or attempted changes.

Placing an org or person in an incorrect condition comes under this policy.

COMMAND INTENTION AND YOUR POST

(Originally written by LRH for the *Apollo* OODs
of 12 Mar. 71. Issued as an HCO PL on 2 Oct. 80.)

Have you worked out what command *intention* (not orders but intention) is for your post?

If you've done this, then work out — do the orders you give line up with command intention?

And then if you have worked that out, are the products you produce acceptable in volume, quality and viability to others of the group *and* command?

If so you'll have pushed it through the whole cycle.

1. Command intention for your post.

2. Do you push command intention forward from your post?

3. Are the products of your post acceptable to others and command?

ALL EXECUTIVE HATS
ALL BUREAUX HATS

SENIORITY OF ORDERS

No Aides Order or Flag Bureaux Data Letter or Executive Directive, Directive or Base Order of any type or kind, written or verbal, may alter or cancel any policy letter or HCOB. These remain senior.

HCO Policy Letters are senior in admin. HCO Bulletins are senior to all other orders in tech.

Only Policy Letters may revise or cancel Policy Letters. Only HCOBs may revise or cancel HCOBs.

No Aides Order or other directive or order may abolish a network or org or change the form of an org.

HCO PLs and HCOBs require passing by LRH or the full authority of International Board members as well as the Authority and Verification Unit.

Telexes which inform orgs or executives of modifications or cancellations of HCO PLs or HCOBs must quote the revision HCO PL or HCOB, and the revision must in fact exist and itself be issued and follow.

Any practice by which junior issues such as directives abolish networks or make off-policy changes can only result in the destruction of networks, orgs and tech.

This is therefore a HIGH CRIME policy letter and it is an offense both to follow or obey or issue any verbal or written order or directive which is contrary to or changes or "abolishes" anything set up in HCO Policy Letters or HCOBs, including the downgrade of "that's out-of-date" or "that's been cancelled" without showing the HCO PL or HCOB which revises or cancels.

HCO PLs and HCOBs are proven by time and are the senior data on which we operate.

ORDERS, ILLEGAL AND CROSS

HOW TO KEEP OUT OF TROUBLE

Sometimes a junior is put on a tight spot. He is given an off-policy order. He may know it is off-policy. However, if he says so or protests he can be subjected to harassment and can be forced to obey the off-policy order. In short, he is in a tough position. So smooth ways to handle this are quite valuable.

In the first place, one must know what an illegal order really is: It is an order that is contrary to HCO Policy Letters as issued in the Org Exec Course Volumes or subsequent to them or to LRH Executive Directives or the programs in LRH evaluations or LRH direct orders in writing.

These orders and policies, in the course of decades of experience, have been proven to improve the condition of the individual and orgs. Orgs which are "on-policy" prosper. Periods of depression provenly follow off-policy actions. Therefore it is good sense to follow policy. When people who are ignorant or destructive get into an org, issuing orders or "setting policy," it is quite certain that trouble will follow.

But aside from sensible considerations based purely on reason, there is safety for the junior in following policy. There is a prime policy as follows:

YOU CAN ONLY BE GIVEN A COURT OR COMM EVED FOR THINGS THAT VIOLATE POLICY.

You cannot be comm eved or given a Court or disciplined for not following Board Policy Letters, Board Technical Bulletins, or targets or orders that violate HCO Policy Letters.

The same applies for technical terminals. THEY CAN ONLY BE DISCIPLINED OR GIVEN COURTS OR COMM EVS FOR VIOLATIONS OF HCO BULLETINS, LRH TAPES OR ISSUES.

Technical terminals cannot be given Courts or Comm Evs or discipline for not following Board Technical Bulletins, local technical issues or verbal tech or Board Policy Letters.

It is very unsafe indeed to follow off-policy issues or orders as one then can be comm eved or given a Court or disciplined for it.

IT IS A TOTAL DEFENSE TO PLEAD ONE FOLLOWED CORRECTLY INTERPRETED HCO POLICY LETTERS, HCO BULLETINS, EXECUTIVE DIRECTIVES OR LRH ISSUES OR TAPES. All one has to do is produce the evidence.

A junior should beware of being TOLD it is "on-policy" or "an LRH order" or "in bulletins" or "on LRH tapes." The trick is very common. It is often used to get agreement to do an order or plan. The person actually issuing the order has found that he himself has inadequate authority or popularity to get cooperation and so pretends he has "an LRH order." Even people off the street try this trick. The answer to this is require to see it in writing. IF IT ISN'T WRITTEN IT ISN'T TRUE. That is the safe maxim.

One CAN be disciplined or given a Court or Comm Ev for following an order he was TOLD was valid as above only to find out it is NOT in policy or bulletins or actual. By taking somebody's word for it and doing it, he is guilty of following off-policy orders.

Now you may think this is all very extraordinary. But it isn't. It is almost commonplace for some junior to get totally tangled up in off-policy orders, fall on his head, have his stats crash and wind up in a mess. So he needs protection from this sort of thing.

This does not mean to say all seniors are bad. Far from it. But sometimes seniors go in for unworkable solutions born out of desperation and, not too well trained, resort to unusual off-policy solutions. Also there are people around who don't have the greatest good for the greatest number of dynamics at heart and for insane reasons try to get people in trouble and wreck the show.

It is quite common when some suppressive type gets found and disciplined that three or four actually innocent people get roped into the same scene. They didn't realize how off-policy or destructive the SP was and were stupid enough not to know his orders were off-policy and destructive. And they took them. And there they are in the same Comm Ev. It is, as I say, common.

Now, if any one of those otherwise innocent people had simply said, "No, I won't follow the order" to the SP or even "Let's see the policy letter" or "Let's see the bulletin" or "Let's see it in writing first," the SP never could have carried decent people down with him.

Cross orders come under the same heading. It sometimes happens that there is an LRH evaluation or policy covering some definite situation and some senior will cross-order it. Evaluations which, if done, would salvage the whole scene get cross-ordered. This causes them not to be done. And the scene worsens. This has happened often.

A junior who follows a cross order is in the same position as a junior who fails to follow HCO Policy Letters or HCO Bulletins. He lays himself open to discipline. If, as often happens, an investigator arrives and finds an undone program that has

been cross-ordered, he disciplines both the person who issued the cross order and anyone who followed it. So it is not safe to follow a cross order.

It is also not safe to fail to comply with a perfectly legal order or target or, worse, to falsely infer or report it is done when it isn't.

But how about the situation of this junior who stands up and says, "I can't do it. It's against policy," or "I won't use that verbal tech as it's contrary to HCOBs"? In his timid way, he could feel this was very adventurous. He could get personally harassed. The first thing he might hear is, "You are using policy to stop!" Well, if the order he is receiving is off-policy or out-tech, he very well better stop it! Otherwise, sooner or later, his own neck and those of the group will be in the noose from the pure pressure of the give and take of life.

But if one is too timid to outright refuse to comply, there are other ways. The easiest is to say "yes sir" and then just don't do it. One can't be hit for NOT doing it. He can only be hit for doing it. It doesn't matter if he is told he will be hit for not doing it. He can request a Committee of Evidence and of course no one is likely to convene it because he can't be pronounced guilty of noncomplying with an off-policy order.

But let us say it really gets rough. He doesn't do it and the pressure comes on. He still has recourse. He can report it as an off-policy or out-tech order, complete with references, to the LRH Communicator of the org or the LRH Comm Continental at the Flag Operations Liaison Office. Meanwhile he must not comply or it puts him at risk.

If this channel produces no results, the junior has a petition line. He should look up petition policy.

If he gets hit in the meanwhile, even if he got comm eved, he can demand an HCO Board of Review which in this case would have to cancel the whole thing.

The DANGEROUS thing to do is to comply with an off-policy or out-tech order.

But how would one, who has not studied policy or is not very far advanced in his tech training know when he was being given an off-policy or out-tech order?

1. If it seems kind of stupid it is probably off-policy or out-tech. Both tech and policy are anything but stupid. Most off-policy and out-tech orders are stupid because they are at a glance contrasurvival.

2. Require that one be shown in the exact issue or book what the policy or tech actually is.

3. Read it for yourself and don't listen to any interpretation that seems far-fetched.

4. Be sure the policy or tech you are being shown applies in the matter under discussion.

5. Ignore anyone who, with no written material or tape, chants at you the dates of policies or bulletins and claims they exist. See it for yourself.

6. Be sure to complete Volume Zero of the OEC Volumes as an early action.

7. Become an OEC grad yourself.
8. Do the Data Series Evaluator's Course so you can evaluate your position and get the real Why on what is going on.
9. Study LRH tech, books, tapes and issues so you know your subject.
10. Expedite valid orders.
11. Have good stats and never falsify them.
12. Keep your ethics in.

And boy will you be a howling success. Nobody could touch you.

A SMALL PLAY

SENIOR: "Count those intro courses as valid Public Reg paid starts."

JUNIOR: "But they are supposed to be free."

SENIOR: "Do what I tell you!"

JUNIOR: "Respectfully, sir, what problem are you trying to solve?"

SENIOR: "Getting the stats up, of course. Listen you idiot, if we report stats as low as last week's the FOLO will be down on us."

JUNIOR: "Golly, that's bad!"

SENIOR: "It sure is!"

JUNIOR: "Have you told them the finance people won't permit us to promote because our cash-bills is out of balance?"

SENIOR: "Well, no."

JUNIOR: "Policy says we have to spend a certain percent on promotion. And if we can't promote we can't get people."

SENIOR: "Anybody knows that! But these finance people have given me a direct order. . . ."

JUNIOR: "Sir, I wouldn't accept an illegal order if I were you. Honest I wouldn't."

SENIOR: "My God, you're right. I'll call the FOLO at once!"

JUNIOR: (soft voice to fellow staff member) "Well, that's two guys I saved from a Comm Ev. Him and ME!"

THE SUPREME TEST

(Originally issued as an HCO Bulletin
same date, same title)

THE SUPREME TEST OF A THETAN IS HIS ABILITY TO MAKE THINGS GO RIGHT.

This of course is a rather savage and brutal datum for it thrusts aside all justification, reasonableness, excuses and even does not take into account the size or obstacles of the opposition.

But please note that the datum is not "are things all right around him" as this is a passive test and could mean only that he was simply sitting still.

Whether things are *currently* all right or not is beside the point. The thetan who is making things go right may be tackling a mountain of confusion and of course things are *not* all right because what he is attacking is mainly wrong. It is whether or not he is *making* things go right in spite of "hell or high water" that is the test.

Many beings live lives of quiet correctness without ever once making anything do anything. Things around them just happen to be orderly. The social system props them up. But someday — bang — the society gets into a turmoil which knocks out the props. THEN we see that there were too few present who could MAKE things go right and that is the end of the society. Thus died all old civilizations. Their people lived in a system correctness and things went right only so long as nothing was going wrong. Then one day things go wrong. These sophisticated but weak beings never were able to MAKE things go right and so the whole society collapses.

One might also ask, "What is meant by *right*?"

This would be forwarding a purpose not destructive to the majority of the dynamics.

Aberration is by definition "a crooked line." It is from the Latin *aberratio,* "a wandering from" and from the Latin *errare,* to wander or to err.

A sane person thinks, looks and sees in straight lines. Black is black, white is white. The aberrated person looks toward black and wanders off in his gaze to something else and makes the error of saying it is "gray."

You can consider aberration in a passive way (supinely, of no force or action). A person is sane or not sane. He thinks straight or crookedly.

Now consider aberration in a forceful way. A person *looks,* then an opposing force to him pushes aside his gaze or distracts it. But the really sane, forceful person looks right on through and past the opposition and sees what is there anyway.

Let us take real action. Mr. Q rolls a ball from A toward B. En route Opposition X pushes the ball aside toward C. Mr. Q then shoves the ball toward C and says the reason he did not arrive properly at B was because . . .

Mr. S rolls a ball from A toward B. Opposition X diverts the ball toward C. Mr. S pulls the ball back into line and despite, over and through Opposition X arrives at B anyway.

You can see that Mr. Q in the first example is willing to be aberrated or pushed aside or at least does not contest it enough. Mr. Q is aberrated.

Mr. S on the other hand was not willing to be diverted and went right on to B. Mr. S is not aberrated.

Now society, being mainly suppressive, observes that Mr. Q never has much commotion around him. True, he never arrives and gets nothing done, but he isn't noisy so he is "okay."

Mr. S on the other hand makes an awful row and bashes Opposition X on the head and snarls his way onward toward B. Society says he is a bad fellow because he has fusses. Of course he also gets something done. But in a decadent society men are measured by how *pleasant* they are, not how effective they are, so Mr. S is regarded as a bit "mad." YET when trouble comes it is only the Mr. Ss who will save the day while the Mr. Qs all give up and die.

There is another point here, however. That is *purpose.* The difference between one thetan's forward thrust and another's is PURPOSE, validity of.

A madman can also go from A *toward* B relentlessly where B is a totally undesirable and destructive point. But in actual practice, real madmen never really arrive at the B they wanted to arrive at. A madman only goes *toward* but never really arrives. So he only makes everything go *wrong.*

B must be a desirable point not destructive to a majority of the dynamics for rightness to occur.

So there is the savage and bare datum:

THE SUPREME TEST OF A THETAN IS THE ABILITY TO MAKE THINGS GO RIGHT.

People who explain how wrong it is all going and who have reasons why and WHO AREN'T PUTTING IT RIGHT are the real crazy people in the universe. The only ones crazier than they are, are the ones who are quite happy to have everything fail and go wrong with no protest from them. And the only ones even worse are those who work endlessly to make things go wrong and prevent anything from going right and oppose all efforts instinctively.

Fortunately there are a few around who DO make things go right in spite of everything and anyone.

SPECTATORISM

(Originally written by LRH for the *Apollo* OODs
of 14 Jan. 69. Issued as an HCO PL on 13 Sept. 80.)

Spectatorism is very great in our modern society.

Because some people cannot conceive of *causing* anything, they just watch it. They don't *do* anything. They are not PARTICIPANTS. They are spectators.

You see this in magazines. Hee hee hee articles about how *odd* this is or that is. No understanding of it. It's just odd and one watches it in a detached sort of way.

Below this is somebody who doesn't even notice. Such a person has to come up scale just to be a spectator.

An unfinished cycle of action comes about because:

a. The importance of it is not grasped.

b. The cycle itself is not fully understood.

c. Noncompliance and false reports are given as a method of self-protection wherein one hopes it will not be noticed.

What we need are more PARTICIPANTS, more teammates.

The degree you can be cause in handling the targets and needs of the group determines right away how far you've come up the line.

Blaming *case* is effect, isn't it?

Sex is effect, isn't it?

I don't care what your grade is. You are alive. Your true ability depends on the degree you can exercise the definition of OT over your post in forwarding the purposes of the group.

REMIMEO

SOURCE AND CAUSE

(Originally written by LRH for the *Apollo* OODs
of 12 Mar. 70. Issued as an HCO PL on 21 Sept. 80.)

I've heard it said that as "source" I should handle something way outside my general activity.

This is a confusion between SOURCE and CAUSE.

Whereas I am source of data, overall coordination and planning, you are CAUSE over your area. Results are the effect of your own efforts. When these support general progress we all win.

You should not minimize yourself as CAUSE. It is your greatest ability.

Being blamed sometimes blunts being CAUSE. But if one's total ambition is to be blameless, the best situation is to get one's name on a tombstone. And it's no fun being dead.

Being CAUSE over Matter, Energy, Space, Time, Force, Form, Location and Life is just another way of saying "OT."

HCO POLICY LETTER OF 24 FEBRUARY 1971

REMIMEO

OPERATING AT RISK

(Originally issued as
Flag Order 2750 same date, same title)

Running or operating a ship at risk is not policy.

Giving something a "lick and a promise" and hoping it will somehow operate or be all right does not stem from courage. It stems from laziness and stupidity.

Instead of taking the time to tie up a boat properly, going off and trusting to luck it will be okay is not acceptable brightness or alertness. It is an invitation to disaster.

All this kind of "think" stacks up a lot of possible catastrophes and puts a whole ship at risk.

Not really securing a line, just hoping it will be all right; not really anchoring well, just hoping it will hold; not really cleaning a paint surface, just crossing one's fingers that the paint will stay; not really taping up live wires, just hoping they hold. A multitude of such things add up to one great big disaster in the future.

Ignorance and lack of observation play their role in this. But actually it's just laziness and not caring about doing the job well.

When there is no pride, things are done sloppily and things operate at risk. *But* the reverse is true. Where one does such things, he runs up a lot of overts of omission that kill any pride he could have.

Don't operate at risk. The way to save time and lives is do it right in the first place.

"Hope" is the byword of the down-and-outer, the bums of skid row.

Control your environment by doing things well and thoroughly.

Then you are secure.

HCO POLICY LETTER OF 8 SEPTEMBER 1972

REMIMEO

EFFICIENCY AND FLAPS

(Originally written by LRH for the *Apollo* OODs of 8 Sept. 72. Issued as an HCO PL on 8 Oct. 80.)

Every flap traces back to some error in admin or lack of precision.

Like a bank account. Somebody signs a slightly wrong bank mandate like Keokuk Mission instead of Church of Scientology Mission of Keokuk. Somebody overlooks paying a small corporate fee. Things like that. Eventually a small error then leads up to a flap. You suddenly have no money because you can't draw on an "erroneous" account.

Or somebody does all of a project except X. Then X shows up with a crash flap.

Or the Reg fails to get a person in for auditing, loses the letter or something. And the person has to be given a $5,000 refund that was already spent. And no bonuses *that* week!

It's these *little* points of neglect that make *big* flaps.

A small group can make it if they are very alert and very efficient. That means alert to small outnesses and *handling* them when seen and no drifting on about it. No "Oh yes, I knew the fire extinguishers were empty but FP . . . Why is God and . . . and . . . and . . ."

Refusing to let somebody handle an outness is of course suppressive to the group and an ethics matter. So where's the ethics chit filed? Where's the demand that the refuser gets a court?

When a group isn't alert or efficient, it has to have more and more and more people to be inefficient with. GI divided by staff drops to nonviable. There goes the group.

When a new group member doesn't get trained up, they are so inefficient it takes *two* more group members to handle his generated flaps. So where's the demand people get trained and hatted before full posting?

It's the small neglected bits that cause the disasters.

An efficient group doesn't tolerate them.

Life gets easy only when the small bits are handled.

CONTESTS AND PRIZES

In Scientology, we have a policy about CONTESTS and PRIZES.

The surest way to break a lot of hearts is to run a contest in which only a minority get prizes. That is very Homo sap.

In Scientology we never offer minority-type prizes.

Our CONTESTS must be planned so that EVERY ENTRANT gets a prize or *the* prize.

This comes from the nature of Scientology itself. Scientology is the only "game" in the universe where everybody wins.

We must mirror this fact and punch it home whenever we can.

From this various policies develop:

Scientology is open to *all* people.

In certificates and status the road is open to *all* Scientologists who can qualify level by level.

On any offering, anybody can have it if he or she qualifies.

We have lots of certificates and grades.

There are no exceptions. Anybody has a chance to go up in certificates, staff status and case gain and state of beingness.

Our posts are something else. Bill's top attainment is his recovery of self. His attainment is not becoming Joe.

Our posts we hold in trust as our appointed place. Though gained by ability, posts are not prizes. They are responsibilities we hold to help.

Therefore we do not seek each other's posts.

We respect the other fellow whatever his status and give him his right to win the biggest prize of all, himself or herself. That prize is won by dedicated, exact application of Scientology and full support of our mission in our organizations and the public.

Organized, we can each one win the biggest prize that can be offered — a full recovery of self.

As a team, helping one another, respecting each other's posts, our seniors and juniors on staff, and following our admin and tech procedures, we keep the door open and make the grade ourselves — the top can't be reached without help, without organization, without the policies that coordinate our actions and the exact technology we apply.

So we don't offer minority prizes. We symbolize in every contest an open door for case and status gain for all by giving everyone a prize in any "contest" we hold.

And we hold our posts, not as something to be contested for, but as a competent teammate in a strong and well-coordinated operation in which each one does his job.

There is no greater game in the universe than Scientology, for it is the only game in which everybody wins. And that places it far above all other games and makes it the game of games where everybody gets the ultimate prize of self — and sound companionship as well.

REMIMEO

PERFORMANCE

(Originally written by LRH for the *Apollo* OODs of 24 Oct. 71. Issued as an HCO PL on 30 Oct. 80.)

Most healing is in a primitive state. We are actually far more precise and organized in Dianetic and Scientology auditing than in any of the so-called healing arts (with which we have nothing in common).

Almost all of our troubles come from being flanked on all sides with incompetent "sciences." These include medicine, psychiatry, chemistry — you name it.

The world's "sciences" are so imbalanced they are delivering an overt product — a decaying Earth.

The animal kingdom is almost gone. The rivers and seas support less and less life.

If "science" was so good, there would be steady improvement in the planet itself. And there isn't.

This goes directly back to man's failure to solve the riddle of himself. This failure then opened the door to domination by destructive personalities.

If we ourselves get rid of the idea we are just drifting along with the tide and begin to demand and deliver high level performance on every post, we can get there while there's still a planet left.

We must raise our sights as to what we expect from ourselves and each other.

Only then can we arrest and then reverse the decline.

For this reason I am following a policy of demanding high competence on post and a total intolerance of slackness.

We must be and can be a very sharp, smart organization.

I am doing all I can to make it so. Help me out.

AUDITORS

(Reissued from Flag Order 808)

Auditors have since the first session of Scientology been the only individuals on this planet, in this universe capable of freeing man.

An auditor is one who has been trained in the technology of Scientology. An auditor applies standard technology to preclears.

At times some will forget or choose to ignore the fact that the auditor is not just another fellow or a guy who works in Scientology. An auditor is a highly trained specialist, no matter what level of auditor. He or she is the only one who can give man the truth, that man knows.

An auditor is to be respected. An auditor is very important in clearing this planet, and this universe. It's a big job and the auditor will do it. All auditors are appreciated.

Special designations and insignia are to be developed to distinguish the auditor from others and signalize his class.

HCO POLICY LETTER OF 13 FEBRUARY 1969

REMIMEO
ISSUED AS AN FO

ETHICS PROTECTION CONDITIONS, BLUE STAR, GREEN STAR, GOLD STAR

(Modifies, clarifies any earlier FO on Ethics protection)

BLUE STAR

A CLASS II Auditor who has his Staff Status II may assign his or her own ethics conditions when requested to do so.

He or she may be given Ethics Hearings or removed from post pending an ordered Comm Ev for crimes or high crimes.

GREEN STAR

Scientologists who are CLASS IV Auditors or above and who have graduated from an Org Exec Course may NOT be assigned arbitrary ethics conditions but may be required by seniors to assign themselves a condition. There is no penalty if they do not.

Such may not be given a Court of Ethics.

They may be comm eved for HIGH CRIMES only as per earlier PLs. These include failure to take responsibility and failure to act with initiative in circumstances which, not handled, bring damage to others or serious overwork.

Such a person duly appointed to a post or duty who then, by absence from it, neglect of it or failure to show initiative on it, brings about a decline of the post and damage to it or areas around it or HIGH CRIMES may be comm eved, but must be comm eved in order to remove him or her from the post.

Such a person is called a GREEN STAR.

A CLASS VIII Auditor who has completed the Org Exec Course has all the above Ethics protection and also may not have any Comm Ev finalized on him until the Comm Ev held and all evidence is forwarded to the Sea Org for review on his request.

He is called a GOLD STAR.

CERTS AND AWARDS

May issue an appropriate cert for the above awards when attested to by an HCO Area Sec in any org.

NOTE

None of these Ethics protections are valid and none can be claimed unless actually applied for and awarded by Blue, Green and Gold Star Certificates. These can be awarded in any official org and can be applied for also by mail.

The certificate must be explicit and quote the actual lines of this PL.

REMIMEO

CAUSE

(Originally written by LRH as OODs item
of 26 Mar. 75. Issued as an HCO PL on 28 Aug. 80.)

You have heard that a pc has to be audited at cause. That means he has to be audited in a way which puts him at cause over his bank and environment.

Posts are the same way.

The only way you can be successful on a post or win at it is to be at cause over it.

A way to sort of audit a post is to write down any and all points where one feels he is NOT at cause over his post.

Then to look at points one after another where one *can* be at cause.

One's vision of this gets bigger and bigger.

And one comes to cause over his post.

Try it.

ENVIRONMENTAL CONTROL

The differences between a competent person and an incompetent person are demonstrated in his environment (surroundings).

A person is either the effect of his environment or is able to have an effect upon his environment.

The nineteenth-century psychologist preached that man had to "adjust to his environment." This false datum helped begin a racial degeneration.

The truth is that man is as successful as he adjusts the environment to him.

Being competent means the ability to control and operate the things in the environment and the environment itself.

When you see things broken down around the mechanic who is responsible for them, he is plainly exhibiting his incompetence — which means his inability to control those things in his environment and adjust the environment for which he is responsible — motors.

When you see the mate's boats broken up, you know he does not have control of his environment.

Know-how, attention and the desire to be effective are all part of the ability to control the environment.

One's "standards" (the degree of rightness one is trying to establish and maintain) are directly related to one's desire to have a controlled environment.

The attainment of one's *standards* is not done by criticism (a human system). It is done by exerting control of one's environment and moving things effectively toward a more ideal scene.

Control of the environment begins with oneself — a good case state, a body that one keeps clean and functioning. This extends to one's own gear, his clothing, tools, equipment. It extends further to the things one is responsible for in the environment. Then it extends out into the whole environment, the people and the MEST.

One can get pretty dirty fixing things up. That's okay. But can one then also clean oneself up?

The ability to confront MEST is a high ability. After that comes the ability to handle and control it.

The ability to confront people is also a high ability. After that comes the ability to get along with them and to handle and control them.

There is the supreme test of a thetan — the ability to make things go right.

The reverse of this is the effort to make things go wrong.

Incompetence — lack of know-how, inability to control — makes things go wrong.

Given some know-how or picking it up by observation, sane people make things go right.

The insane remain ignorant intentionally or acquire know-how and make things go wrong.

Insane acts are *not* unintentional or done out of ignorance. They are intentional, they are not "unknowing dramatizations." So around insane people things go wrong.

One cannot tell the difference really between the sane and insane by behavior. One can tell the difference only by the product. The product of the sane is survival. The product of the insane is an overt act. As this is often masked by clever explanations, it is not given the attention it deserves. The pretended good product of the insane turns out to be an overt act.

A large percentage of this planet's population (undetermined at this time for the "general public" but in excess of 20 percent) are insane. Their behavior looks passable. But their product is an overt act. The popularity of war confirms this. The products of existing governments are mainly destructive. The final product of the human race will be a destroyed planet (a contaminated air cover rendering the planet unable to sustain life, whether by radiation or fumes).

Thus, due to the inability to detect and handle the insane, the sane majority suffers.

The hidden actions of the insane can destroy faster than an environment can be created UNLESS one has the know-how of the mind and life and the tech of admin and the ability and know-how to handle MEST.

An area or activity hit by an influx of new recruits or new customers tends to unsettle. Its MEST gets abuse, things go out of control.

Gradually, working to put in order, the standards are again being attained. The minority insane get handled, the know-how of groups and orgs becomes more generally known, the tech of MEST gets used again.

As an organization expands it goes through cycles of lowered condition and raised condition. This is normal enough since by taking on more and more area one is letting in more and more insane even though they are in a small proportion to the sane.

Order is reestablished and survival trends resumed to the degree that the sane begin to reach out and handle things around them and as the insane are made sane.

Thus one gets downtrends and uptrends. As soon as a group begins to feel cocky, it takes on more area. This includes more unhandled people, admin and MEST and a downtrend begins. Then the sane begin to handle and the insane begin to be sane and the uptrend starts.

This is probably even the basis of national economic booms and depressions.

This is only bad to the degree that the insane are put in charge. As soon as this happens the downtrend becomes permanent and cultural decay sets in.

A group expanding rapidly into a decadent culture is of course itself subjected to the uptrend–downtrend cycles and has to take very special measures to counteract the consequences of expansion in order to maintain any rate of growth.

The individual member of a group can measure his own progress by increased ability to handle himself, his post and environment and the degree of improvement of the group itself because of his own work within it.

A group that is messing up its gear and environment worse than it did a while ago and is not improving it of course has to be reorganized before it perishes.

No group can sit back and expect its high brass to be the only ones to carry the load. The group is composed of individual group members, not of high brass.

The survival of a group depends upon the ability of its individual members to control their environment and to insist that the other group members also control theirs.

This is the stuff of which survival is made.

A sane group, knowing and using their technologies of handling men and MEST, cannot help but control their environment.

But this depends upon the individual group member being sane, able to control his MEST and those around him and using the tech of life, the tech of admin, the tech of specific types of activity.

Such a group inevitably inherits the culture and its guidance.

HCO POLICY LETTER OF 15 FEBRUARY 1964

ALL HEADS OF
ORGANIZATIONS
HCO SECS
DIRECTORS OF
ADMINISTRATION
ADMINISTRATORS AND
SUPERVISORS OF
COMPANIES

THE EQUIPMENT OF ORGANIZATIONS

The person in possession of organization equipment is responsible for the equipment. On its loss or damage through carelessness or neglect the person in whose charge it had been *placed,* not only the person who damaged or neglected it, is liable to have to recompense the company or myself for the cost of the repairs or loss of the equipment or some portion thereof.

Stock cards for all equipment possession or issue in organizations shall be prepared by the administrative head of the organization. If equipment is not so accounted for and is lost or damaged the administrator of the company, not having a stock card of issue on it, becomes liable financially to the organization or myself for its repair or replacement.

The idea of "company property" is both stupid and dangerous. That which is "owned by everyone" is actually owned by no one and falls apart. A company, corporation or state does not live or breathe and so it cannot care for anything. The doubtless noble experiments of totalitarian communal states such as Cuba or Russia starve and fail because of this one *idée fixe:* only the state owns. That leaves nobody to have or take care of anything. Their enormous five-year plans never materialize because their tractors will not run. Their tractors won't run because they belong to nobody. Saying they belong to the state is a way of abandoning them. A company can't really own anything since it has no concept of ownership. And you see how "company property" falls apart.

Look at it this way: You own those things that are in your charge. When you take over a position you become richer by the things that go with it. You stay rich as long as you keep them in good shape. You get poor to the degree they go bad or won't work or get abused because you incautiously lent them to a careless fellow worker. Righteous indignation because "you messed up *my* typewriter" or "you scarred up my auditing table" is not peculiar, it's quite in order.

Look around you and see what you own in your position. If two people use it, only one, even so, can own it.

It is curious that around orgs my own personal possessions are given good care. I never worry about my MEST being in org hands. And a lot of it is. If it's Ron's, it's

taken care of. That's a long-standing observation. But "company property" gets badly abused at times. If you figure that I own everything in Scientology and you own the things that go with your position, we'll have more and have it longer.

There are three kinds of possessions in Scientology organizations.

TITLE A: These are permanent installations, buildings, walls, radiators, anything fixed in place.

TITLE B: Valuable equipment which is not expendable. These are desks, typewriters, mimeo machines, blackboards, chairs, furniture, rugs, decorations, cars, etc.

TITLE C: These are expendables. Office supplies, paper, chalk, stencils, dust rags, mops, etc. They are issued on the understanding they will get used up.

In inventorying and making up cards of issue to persons in charge, Title A is issued to the head of the organization or a department exclusively using them. Title B is made up to the head of the department or the person who is actually using them. Title C is issued to the person using the material.

Stock cards are kept on Title A and Title B. The administrative head has to have a signature for Title A and Title B as having given it to somebody who then signs for it.

No stock cards may be written as "Issued to Training Dept" or "Director of Training." They are issued to Richard Roe, the person himself. The main building is not issued to "Organization Secretary." It is issued to George George, a person who happens also to be Organization Secretary. A car is not issued to "Department of Materiel." It is issued to John John who happens also to be Director of Materiel.

When a person is transferred, his possessions are signed for by the person, as a person, who takes over that position. And so long as the person who owned them has failed to transfer them to the new person, he or she can be charged up for them. Regardless of post transfers, the person on the stock card remains the owner and is liable for any loss or abuse until the possessions are actually signed for by somebody else.

If it exists somebody owns it and has signed for it. And until a new person signs for it the old owner is liable for it regardless of his whereabouts or new post.

Until it is signed for initially, it is owned by the administrative head and if anything happens to it or it is lost, the administrative head is liable for it.

The stock cards should be stiff cards of good size kept in a box that fits them. There is only one card per piece of equipment. The card says where it is and what it is and when bought and has ample area for owning and transferring signatures.

Cards are prepared from inventory and are checked by Accounts records.

A new acquisition brings about a new card which is then signed for.

The head of the organization is accountable personally for any losses up to July 1, 1964 which occurred during his term of office.

To dispose of Title A or Title B or account for its loss, it is necessary to *survey* it. This is done by a board of three executives of departments who must see the equipment being disposed of or certify it as lost. A Survey Board is liable for any falsification of records.

In organizations that have no Director of Administration, the head of the organization acts in his capacity and is responsible for having stock cards.

We are pretty good withal on the subject of equipment. Its loss or damage is not one of our major problems. Only one organization, Johannesburg, has gone mad on the subject where one Senogles, temporary head of it, had a passion for "losing tapes and tape recorders."

However, we are expanding. Expansion needs some orderly ownership. There is not very much Title A and Title B about, so it is not a very heavy task to organize it. If we straighten this out now, we'll save ourselves a mess later.

Further, at this time inventories for corporation transfers have to be done anyway, so we may as well get it all done at once.

GEN. NON-REMIMEO

OPERATIONAL, DEFINITION OF

A lot of trouble in the Sea Org comes from lack of grasp of what we mean by *operational.*

Definition: AN ITEM THAT IS OPERATIONAL WORKS WELL WITHOUT FURTHER ASSISTANCE OR ATTENTION.

This does NOT say that operational means something *works*. It works *well*. It works without assistance or patch-up or holding on to it. It works without attention. It does not have to be continually watched.

The breakdown in mail comm stemmed in part from the photocopier. The error was not in the copier. The error was in having something around that doesn't work well, needs continual attention, breaks down regularly. That comes from not reading or understanding the *Ship's Org Book*. *Operational* was misunderstood. This photocopier was wholly nonoperational in that it had to be continually nursed, was operated in bright light and took up tons of time. Because it was there nobody simply typed a copy of the vital despatches. One must NOT keep nonoperational things around or they must be made operational by above definition.

Also the early Flag Order about fast communication being vital was not complied with.

A costly mess resulted from delayed comm. All because OPERATIONAL was not understood.

HCO POLICY LETTER OF 8 SEPTEMBER 1965

GEN. NON-REMIMEO

SUPPLY OFFICER

All divisions should have a quantity of Internal Requisition Forms to be filled in whenever supplies are needed.

The person who requests the goods signs his name at the bottom of the form and so does his department head. The exact reason why these goods are required should also be included on the Internal Requisition Form.

Only one type of requirement should be asked for on one form, e.g., "A black Biro and a red Biro." This would be okay as it is just on the subject of pens. But "A black Biro and a ream of foolscap paper" should be entered on two forms. This shows how many items each division orders per week.

Do not order extravagantly — you can only write with one pen at a time; otherwise the Supply Officer has to do the cutting down of requirements and this can lead to unnecessary ARC breaks.

All Internal Requisition Forms should be in the Supply Officer's basket by 12:00 P.M. each day. If you have ordered goods since 12:00 P.M. the previous day, then you or a representative should go to the place appointed by the Supply Officer between 1:00 P.M. and 1:30 P.M., where the Supply Officer will issue the requirements.

The supplies that are available at short notice are such items as folders of each division color, paper of each division color, black, red, green Biro pens, felt pens for poster work and make-up department, most envelopes, paper clips, drawing pins, typewriter ribbons, Sellotape, foolscap paper, ink for stamp pads, rubber bands, gummed labels and carbon paper.

However, if in doubt, present yourself at the appointed place between 1:00 and 1:30 P.M. The Supply Officer will then inform you if the requirement is in stock or if it has had to be ordered.

When a requirement has to be ordered, the Supply Officer will inform you when it arrives at Saint Hill. If it is a rush item, it can be issued as soon as it arrives, otherwise it is collected at the correct time.

HCO POLICY LETTER OF 22 SEPTEMBER 1965

GEN. NON-REMIMEO

KEYS

When a person receives a key from the Key Officer, he or she must immediately sign for it in the key book.

If at any time a person leaves that space for which he or she has a key, then sometime during that same day that person *MUST* take the key back to the Key Officer who will then give the key to the new occupier who then signs for it.

If the Key Officer finds that a space has been taken over by someone and that he or she has a key which has not been signed for in the key book, then the previous owner of that space gets fined 10 shillings, as he did not return the key to the proper source.

The new owner also gets fined 10 shillings, as he is using the space illegally.

A person is also fined 10 shillings if he or she loses a key.

STAFF REGULATIONS
AUDITING VERSUS JOB

(Effective on receipt)

It is an Academy maxim that if an auditor feels warm to the touch he or she can audit. There is no excuse of CASE. "I can't audit today because my case . . ." If this were not the maxim, a lot of auditing would never get done.

Now we are extending this to administrative staff members in Scientology organizations. Case is no excuse. If a staff member's breath can be detected on a mirror, he or she can do his or her job.

Further, case is not to be used as an excuse for errors or transfers off post or retraining or being ordered to the HGC, etc. Case is no excuse. Case is not a point.

This gives rise to the following regulations which become effective on receipt and which cancel any conflicting earlier policies.

A staff member may not be absent from his or her job to give or receive auditing during working hours. Exception: only staff members whose job it is to audit. Exception: *Severe* temporary illness or physical injury.

A staff member may not be ordered to training or processing as a disciplinary measure or as an effort to improve performance on the job.

A staff member may not be transferred to another post or dismissed because of "case difficulties."

All disadvantageous transfers, suspensions or dismissals shall be made only by reason of actual performance of duties and the usual and easily recognized sins of omission or commission.

The individual staff member's preclear classification may be taken into account in appointments and promotions just as his or her auditor classification would be, but may not be taken into account as a cause for demotion, suspension or dismissal.

Whereas it is of interest that all Scientologists have their cases in good condition to the extent of conducting co-audits on the individual's own time in instruction and auditing, it is also true that Scientology organizations are not huge HGCs for staff members and have their own functions.

A staff member may not use his working hours for being instructed or trained and, aside from Academy personnel whose job it is to train students, a staff member may not employ his or her staff time to instruct. Exception: Technical officers may give staff auditors instructions about their preclears or students, but no course or conference may be held for the purpose.

The possession of a certificate carries with it the responsibility of knowing the skills covered by it. Constant retraining within a level for which the auditor has already been classified is forbidden.

Staff members aspiring to the next higher classification should become part of evening or weekend courses teaching those skills. Enrollment in such courses may or may not be at the expense of the organization according to the decision of the Association or Organization Secretary.

Co-audit training or processing may not be undertaken during working hours.

An organization should arrange at its own cost the management of a co-audit for its staff members, providing all such training or processing is done on the staff member's own time.

Administrative staff members or executives may not audit during working hours unless specifically transferred temporarily or permanently to the HGC and no transfer shall be for less than one week, during which the duties shall consist exclusively of auditing and during which a minimum of 25 hours must be delivered.

A Director of Processing may not assign himself to audit individual pcs for full intensives.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 21 MARCH 1965

GEN. NON-REMIMEO
POST STAFF BOARDS
HCO SEC HAT
STHIL SCN STAFF

STAFF MEMBERS AUDITING OUTSIDE PCs

It is expressly forbidden that executives or staff members of Scientology orgs (which of course include Saint Hill) audit for pay any outside pcs while employed on staff in any organization anywhere in the world.

To do so with orgs on proportionate pay *robs* your fellow staff member.

Two executives have been relieved of post in the past two years for permitting this practice in their orgs.

If one has pcs they should be turned over to the org.

If staff works hard, pay, particularly under new promotion programs, is very adequate. Pay only becomes inadequate when policy is out. To keep pay up, keep policy in.

Staff auditors may only audit *family* and *friends* eight hours per week *without* pay. This is the original rule, to save them from demands on their free time. This is sometimes interpreted wrongly as permission to audit eight hours for fee. It is not so applicable. They must not receive pay for those eight hours.

Just think what you would do in Scientology if I started working for pay outside orgs. Things would get really upset and, as proven by the slump all orgs take whenever I move about or take time off (it just happened again), we need all of us on the team. When I have audited pcs for pay, ever since there have been orgs, I have turned over every cent to the org I was in — they were just org pcs even when they applied to me. (I haven't offered to audit anyone for years but it would still be done that way today if I did.)

Failure to report instances where the outside auditing policy is violated is also reprehensible.

If you don't have enough money, do your job well enough to put all of us in clover. That's how I do it. Try it if you need extra money. It works.

GRADE SUBSIDY FOR STAFF FORBIDDEN IN OTHER ORGS

Effective on receipt, no org may pay for the grades or auditing of any executive or staff member in another or higher org.

This means specifically that no executive or staff member may be sent at org expense for processing, Power or advanced grades.

The salary or expenses or travel of an executive or staff member may not be paid by an org while the executive or staff member is absent obtaining higher grades.

All debts so incurred by orgs in the past are valid and collectable. They may not be incurred in the future.

Where an org subsidizes a staff member's training in another or higher org, the staff member must sign a personal and valid note to the upper org for all his training, payable by him personally if the org does not pay.

Any such training begins or renews for full period a five-year contract to that org to start on his fully completed return.

He must likewise sign a note to his home org, valid and collectable for all travel expenses and pay incurred if he defaults fulfilling the contract.

Both the upper org note and the home org note are due and payable if the person is dismissed for incompetence on return. This does not absolve the org from also being liable for the debt.

Persons who have accepted training or processing in the past without competently fulfilling their contracts are personally liable for those debts incurred by them for the org.

The reason for this policy letter is that abuses have occurred where persons have used org status to be trained or processed without then completing their contracts and in some cases not even returning to their orgs.

All such cases should be looked up and collected from by the org that financed the service.

HCO POLICY LETTER OF 24 OCTOBER 1976RF
ISSUE I
REVISED 2 AUGUST 1990

REMIMEO
ALL STAFF

EX–STAFF FREE SERVICE

There are some practices and misconceptions in services to staff members which need correction and policy, effective at once.

BEGINNING SERVICES

No new staff member may have free org services until he has Staff Status II. Exceptions: he may attain his Sea Org Product 0 and 1 (which include Staff Status 0, I and II) in the Sea Org and Staff Status 0, I and II in Scn orgs, and may have PTS handling and study of the PTS checksheet. He may also have emergency assists. He may do a mini hat. He may have auditing from Academy students and from TTC, but only if he has done Staff Status 0 and has rising post stats. He may not have further training or processing until Staff Status II has been attained. This applies also to Tech Training Corps applicants.

SERVICE AFTER CONTRACT

A practice has occasionally been found of a staff member approaching the end of his 2½-year or 5-year contract and then just before it is up taking a leave of absence and thereafter continuing to obtain free services from an org as a staff member.

Besides being dishonest, this is made extremely illegal and any person receiving such service under these or similar conditions may not only not have further service but owes the org for all free services so obtained.

PROFESSIONAL RATES

To obtain professional rates a person must have a valid, in full force professional auditor certificate to the highest level of auditor training available at the organization, or must have paid for his training up to the class of the org in which he is seeking service and be actually attending an Academy course or internship on a standard course schedule. (Ref: HCO PL 13 Nov. 76RA, PROFESSIONAL RATES; and HCO PL 25 Oct. 76, PROVISIONAL CERTIFICATE EXPIRY)

They may not be given to persons who buy courses just to get a professional rate and then don't attend the course.

SCHOLARSHIP DISCOUNTS

Partial cash scholarships are being offered to some upstat and important people which count on their course fees. Its purpose is to remedy the scarcity of trained auditors and is intended to take over from psychs and people should be told so. There may be no additional discount of price when awarding scholarships. (Ref: HCO PL 19 Jan. 79RB I, SCHOLARSHIPS, NO DISCOUNTS)

A person to be trained by the org at no or discounted fee must sign a 5-year contract in advance with the beginning date at the completion of his training.

Failure on the course does not end the contract, which remains valid as a staff member.

Persons leaving the Tech Training Corps before completing their training or their contract shall be billed for and pay for that training and any org services obtained during that period.

RIP–OFF BY MISSIONS

Should any org staff, technical or admin, be found to have left staff before contract expiry and joined a mission, the mission is responsible for the payment to the org of all costs of training and processing of that person with the addition of a $2,000 fee "for apprenticing the mission's staff."

This rule is retroactive as the practice has been flagrant.

PC RIP–OFF BY MISSION

Any mission found to be continuing the processing of any org pc within two years of the pc's last service at the org shall be subject to a fine of $10,000 and its mission status reviewed by Scientology Missions International.

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 27 AUGUST 1965

STHIL
STAFF
STUDENTS
PRECLEARS

HOUSING
STAFF, STUDENTS, PRECLEARS

Any staff member, student or preclear living in rented quarters is to be held responsible for leaving the quarters in as good condition as he found them. This of course doesn't include normal wear and tear.

If a claim is presented by a landlord and the Scientologist feels it is unjust, it is a matter for the Inspection Officer to inspect and decide.

If the Scientologist is found to be at fault, the nonpayment of such damages will become an Ethics matter. The intention is that justice be given both the Scientologist and the property owner. Therefore damages may be awarded a property owner, but should be in proportion to the actual damages done.

There are many Scientologists living in East Grinstead, and with the course expanding, there will be a lot more in the future. Housing is limited already. There is no need to further this condition by creating bad will with the local property owners. This policy is in keeping with our Scientology Justice Codes.

HCO POLICY LETTER OF 20 OCTOBER 1961RB
REVISED 11 JANUARY 1985

REMIMEO
ALL ORGS

NON–SCIENTOLOGY STAFF

(This policy letter was written by LRH in 1961 when he was the Executive Director of Saint Hill, and was addressed to new staff being hired there. It is also applicable to any other Scientology organization and has thus been reissued to "All Orgs." — CSI)

Whether by fate or fortune, you have found yourself to be a member of a group that has an interesting technology and a definite set of standards of conduct.

Whether this is fortunate for you or unfortunate, you are yet a member of this group by the simple fact of working in it.

That you do not have any knowledge of its technology does not make you any less a member of this group.

You are only expected to uphold certain standards as a member of this group.

These standards are rather easy to understand:

1. This group has accepted you at face value. No one of this group will hold your past against you. A person entering a Scientology group is looked upon as a person whose conduct *now* is important, but whose conduct in the past is utterly unimportant.

2. This group is composed of people who want to get more able in life and to live a better life. These people have, unlike others, enough courage to face their own past and misdeeds and recover from them. Ordinary people most often run from their past or blame it on others. When you see a person upset in an auditing session, it is because he had enough nerve to try to face his past and get the better of it. Such people are stronger and saner than people who, like chips of wood, merely drift on life's river, or who cry and moan in the eddies that life has "done them in."

3. This group is composed of people who can handle insanity and psychosomatic illness by certain technology, or of people who do not think it is bad to cure insanity and such illness. A person does not have to know Scientology to be a member of a Scientology group. They only have to believe people can be or deserve to be helped.

4. This group believes that honest people have rights and that dishonest people have sacrificed their rights by being dishonest. The definition of dishonesty is whether or not a person is trying to hurt his fellow human beings with malicious talk, hidden actions and injustice or outright crime.

5. This group reserves the right to test the honesty of its members. It knows well that dishonest members destroy a group. If a member is being dishonest the group wants to know about it and can require that the dishonest person be given processing to make him or her sane.

6. This group frowns heavily on trying to prevent people from being processed by cautioning them against it, lying to them about it or just being ignorant of it.

7. This group believes that people who refuse Security Checking or processing are trying to hide something they are ashamed of in their lives. The group believes this because it has always been found to be the case.

8. This group believes that making a commotion around or talking around an injured person can hurt his chances of recovery. As this has often been proven to be true and can be demonstrated, members of this group do not talk to or around or make commotions around people who have just been hurt. They work quietly and silently to help the injured person.

9. A member of this group may be a member of any religion. There is no conflict of faith as Scientology is all-denominational.

10. This group refuses to speak ill of Scientology or criticize it to outsiders.

11. This group will not talk about Scientology to members of the press.

There are the Code of Honor, the Code of a Scientologist and the Auditor's Code. All other group standards are wholly technical. There are no secret standards.

As a member of this group, you are expected to uphold these elementary standards of conduct.

You are quite welcome to know more about Scientology, about life and about your life. But nobody is going to force you to study it.

Everyone on Earth has problems. They would not be human if they did not. Primarily, Scientology helps people to come up to handling their problems instead of being handled by them.

Just suppose for a moment Scientology *really* worked. Just suppose it could really free men from pain and suffering and help them with their problems.

Just suppose people you like or know were in need of help and Scientology could give it to them.

What problem do *you* have?

If you had processing, it would be to help you solve that problem.

Scientology can help you if you haven't done things to hurt its people.

But however that may be, by working at Saint Hill, you are a member of Saint Hill. Its standards are those of Scientology. This is a good group. Be proud to be here. We are glad to have you.

REMIMEO

PRESS POLICY

CODE OF A SCIENTOLOGIST

The Code of a Scientologist as per *The Creation of Human Ability* is withdrawn. It is reissued as follows:

As a Scientologist, I pledge myself to the Code of Scientology for the good of all.

1. To keep Scientologists, the public and the press accurately informed concerning Scientology, the world of mental health and society.

2. To use the best I know of Scientology to the best of my ability to help my family, friends, groups and the world.

3. To refuse to accept for processing and to refuse to accept money from any preclear or group I feel I cannot honestly help.

4. To decry and do all I can to abolish any and all abuses against life and mankind.

5. To expose and help abolish any and all physically damaging practices in the field of mental health.

6. To help clean up and keep clean the field of mental health.

7. To bring about an atmosphere of safety and security in the field of mental health by eradicating its abuses and brutality.

8. To support true humanitarian endeavors in the fields of human rights.

9. To embrace the policy of equal justice for all.

10. To work for freedom of speech in the world.

11. To actively decry the suppression of knowledge, wisdom, philosophy or data which would help mankind.

12. To support the freedom of religion.

13. To help Scientology orgs and groups ally themselves with public groups.

14. To teach Scientology at a level it can be understood and used by the recipients.

15. To stress the freedom to use Scientology as a philosophy in all its applications and variations in the humanities.

16. To insist upon standard and unvaried Scientology as an applied activity in ethics, processing and administration in Scientology organizations.

17. To take my share of responsibility for the impact of Scientology upon the world.

18. To increase the numbers and strength of Scientology over the world.

19. To set an example of the effectiveness and wisdom of Scientology.

20. To make this world a saner, better place.

POLITICS

Now and then you hear me speak derisively of governments and ideologies—including democracy.

If by seeing I criticize an ideology, anyone seeks to believe I embrace its opposite, he has failed to get the point.

What political system could work amongst very aberrated people?

A democracy or a communism would be a huge joke in an insane asylum. Well, isn't it?

The basic building block of any political system is the individual. One can seek to avoid this point by conceiving of the masses. But you can't have masses which aren't made up of single units. Therefore the single unit is the basis of a mass.

No political system applied to a colony of monkeys would have anything to govern but monkeys. That's plain, certainly.

A political system seeking to function amongst ignorant, illiterate and barbaric people could have marvelous principles but could only succeed in being ignorant, illiterate and barbaric *unless* one addressed the people one by one and cured the ignorance, illiteracy and barbarism of each citizen.

The collective think of apes is ape-think. A fascism led by and applied to idiots would be idiot-fascism.

So there is no reason to suppose *any* political system is any better than those who use it to govern or be governed.

The only difference in existing systems of politics is their relative values in giving the individual a chance to develop and receive a higher level of personal sanity and ability.

That rules out any system which witch hunts, freezes opportunity or suppresses the right to improve by any workable system or suppresses a workable system.

Watching the US and Australia fight Scientology with blind fury while supporting oppressive mental and religious practices proves that democracy, applied to and used by aberrated people, is far from an ideal activity and is only aberrated democracy.

Every human has in common with every other human the same reactive bank. This is the most they have in common.

The reactive bank — unconscious mind, whatever you care to call it — suppresses all decent impulses and enforces the bad ones.

Therefore a democracy is a collective-think of reactive banks. Popular opinion is bank opinion.

Any human group is likely to elect only those who will kill them. That's concluded from actual 1950 experiments.

The group succeeds only by the efforts of individuals who rise above their banks and do their best for their fellows *despite* the vicious character of groups and the idiot nature of collective-think.

Believe in the individual being and work with him and you will find he is basically good.

Work only with a group and you work with collective-think which is basically bank and therefore evil.

Scientology gives us our first chance to have a real democracy.

By freeing from the worst aberrations each individual, one then achieves a group which doesn't react only on bank and which will be, like the individual, basically good.

For the bank was made to keep people who were not bad from going bad. It was a mistake. So it is bad.

We prove daily in Scientology that an individual freed of aberrations reacts more decently toward his fellows and that an individual, restimulated, acts worse; we prove that the individual under stress of aberration is unreasonable and an individual freed is bright.

So we can conclude on actual evidence that the first true democracy will emerge when we have freed each individual of the more vicious reactive impulses. Such beings can reason, can agree on decent and practical measures and be depended upon to evolve beneficial measures.

Until we have done that we will continue to be critical of human "democracy" — and any other political philosophy advanced upon man as a cure for his ills.

A political philosophy can't audit. We can.

And don't be so sensitive to popular reaction. Just get on with making a saner world and it will all come out all right.

POLITICS, FREEDOM FROM

(Originally written by LRH as Sec ED 56 Int,
14 June 65. Issued as an HCO PL on 10 Jan. 68.)

1. I hereby declare Scientology to be nonpolitical and nonideological.

2. Politics and ideology may be no part of any decision to train or process individuals, and any such interrogation shall cease to be a part of any application for training, processing or membership.

3. This does not change any policy relating to suppressive persons. It does delete any words in any form which seek to bring about a statement of political allegiance or antagonism.

4. It must be kept in mind and brought forward emphatically that Scientology does not work in the absence of official control and, no matter who sought to use its principles, has uniformly failed in the hands of non-Scientologists and organizations not controlled by the Central Organizations of Scientology or myself.

5. The reason for this declaration is the consistent disaster visited upon her "allies" by the United States government and the efforts of that government since 1955, stepped up since 1963, to seize Scientology in the United States rather than forbid or stop it and the role played by the United States in inspiring the Victorian State attacks in Australia. Scientology technology is no longer offered to the United States government in any effort to assist her in political ends. Our participation extends only to our willingness to process US officials as individuals unconnected with their political aims, if as individuals they are not debarred by other existing policies relating to treating the insane or our ethics system.

6. All statements attacking any political entity or ideology are hereby withdrawn and cancelled in any lectures or literature.

7. Scientologists may be members of any political group on this planet without restraint only so long as these individuals or that group do not attempt to seize Scientology for their own warlike ends and so make it unworkable or distasteful by invidious connection.

8. Scientology is for a free people and is itself on this date declared free of any political connection or allegiance of any kind whatever.

MAG ARTICLE

SCIENTOLOGY MAKES A SAFE ENVIRONMENT

We're working to provide a safe environment for Scientology and Scientologists in orgs everywhere.

The dangerous environment of the wog world, of injustice, sudden dismissals, war, atomic bombs, will only persist and trouble us if we fail to spread our safe environment across the world.

It starts with our own orgs. They must be safe environments.

Only good tech and justice can make the org environment safe. Like an auditing room, we must be able to work undisturbed by the madness at our doors.

We can make every org a safe island and then, by expanding and joining those orgs, bring peace and a safe environment to all the world.

It not only *can* be done. It is happening this moment. Push it along. Support policy, good tech and justice.

(Also issued as FO 909)

REMIMEO

ETHICS

The purpose of Ethics is

TO REMOVE COUNTER–INTENTIONS FROM THE ENVIRONMENT.

And having accomplished that the purpose becomes

TO REMOVE OTHER–INTENTIONEDNESS FROM THE ENVIRONMENT.

Thus progress can be made by all.

Many mechanisms can exist to mask a counter-intention.

One has an intention to expand the org. An "expert" says it is difficult as "The building society . . ." The impulse is to then handle the problem presented by the "expert," whereas the correct ETHICS action is to remove his counter-intentionedness or other-intentionedness. If he were an EXPERT he would simply say, "Okay. I'll handle my end of the expansion."

There are many ways to handle counter- and other-intentionedness.

There is a fine line between ethics and tech.

The point where a thetan goes mad is very exact. It is the point where he begins to obsessively stop something. From this the effort becomes generalized and he begins to stop lots of other things. When this includes anyone who or anything that would help him as well as those people and things that help, the being is *suppressive.* His intentions counter any other intention, particularly good intentions.

Other-intentionedness comes from unawareness or dispersal. It is handled by removing things which disperse others. Offering bottled medicine to cure "the blues" is a direct distraction. It is the purveyor of the distraction who is the target.

The person who enters a Scientology group to then sell other-answer is of course an enemy.

However we go about accomplishing the above is the *action* of Ethics. The above is the purpose.

REMIMEO

ETHICS PRESENCE

(Reissued from Flag Order 1432)

The reason an executive can get compliance is because he has ethics presence. If you haven't got it, you won't.

When you issue orders you are using power and force.

If you are also *right* in what you get compliance with and your programs are clear, correct and beneficial — boy, do you win.

But it is not the rightness of a program that gets compliance. It is ethics presence.

Rightness does not get compliance because there are always counter-intentions in the way. If you go on the assumption that one and all want things to go right you are going to make a dog's breakfast out of it.

There are only a few with a good forward look and who are relatively unaberrated.

Men will keep the accounts straight only because you can muster bayonets to enforce that they do.

Ethics presence is an X quality made up partly of symbology, partly of force, some "now we're supposed to's" and endurance.

One of the reasons the press now print what we say is that we have *endured* the biggest shellackings anybody could muster up. We've gained ethics presence publicly by it.

Endurance asserts the truth of unkillability. We're still here, can't be unmocked. This drives the SP wild.

Because of the Sea Org we appear to have unlimited reach and in some mysterious way, unlimited resources. The ability to appear and disappear mysteriously is a part of ethics presence.

As an executive you get compliance because you have ethics presence and persistence and can get mad.

The way you *continue* to have ethics presence is to be maximally right in your actions, decisions and dictates. Because if you're wrong the other fellow gets wrapped around a pole for complying. And the *pain* of *that* starts to outweigh your own ethics presence.

So, when you issue orders you are using force and power. You can, however, get in such a frame of mind you cease to use the softer arts as well. Against noncompliance you add ferocity with the aim of continuing your comm line.

Wrath *is* effective but used in moderation and only in moments of urgency.

Man has been invalidated to such an extent that he starts to do *himself* in — that's the secret of aberration. He denies himself, then mocks up pictures to do himself in with.

If you continue to invalidate and chop people they will start to do themselves in even harder — so if you continue to use heavy ethics on someone you play right into the hands of his bank.

Self-invalidation is merely the accumulation of invalidation of oneself by others. The point being, that you better temper the lightning with sunshine occasionally.

If you use heavy ethics on wogs they are being invalidated from *altitude*. You can't build up competent people by invalidating them.

Without in any way softening your approach, you should know that real force is dependent upon ARC, and the major threat is the interruption thereof.

ETHICS, THE DESIGN OF

It is very easy for a staff member and even an Ethics Officer to completely misunderstand ethics and its functions. In a society run by SPs and controlled by incompetent police the citizen almost engramically identifies any justice action or symbol with oppression.

Yet in the absence of true ethics no one can live with others and stats go down inevitably. So a justice function must exist to protect producers and decent people.

To give you an example, when a little boy this life, the neighborhood a block around and the road from home to school were unusable. A bully about five years older than I named Leon Brown exerted a very bad influence over other children. With extortion by violence and blackmail and with corruption he made the area very dangerous. The road to school was blocked by the five O'Connell kids, ranging from seven to fifteen who stopped and beat up any smaller child. One couldn't go to school safely and was hounded by the truant officer, a hulking brute complete with star, if one *didn't* go to school.

When I was about six I got very tired of a bloody nose and spankings because my clothes were torn and avidly learned "lumberjack fighting," a crude form of judo, from my grandfather.

With this "superior tech" under my belt I searched out and found alone the youngest O'Connell kid, a year older than I, and pulverized him. Then I found alone and took on the next in size and pulverized *him.* After that the O'Connell kids, all five, fled each time I showed up and the road to school was open and I convoyed other little kids so it was safe.

Then one day I got up on a nine foot high board fence and waited until the twelve year old bully passed by and leaped off on him boots and all, and after the dust settled that neighborhood was safe for every kid in it.

So I learned about justice. Kids would come from blocks away to get help in *their* neighborhood. Finally for a mile around it was a safe environment for kids.

From this I learned two lessons:

1. Strength is nothing without skill and tech and reversely, without skill and tech the strength of brutes is a matter of contempt.

2. Strength has two sides, one for good and one for evil. It is the intention that makes the difference.

On further living I found that only those who sought only peace were ever butchered. The thousands of years of Jewish passivity earned them nothing but slaughter.

So things do not run right because one is holy or good. Things run right because one makes them run right.

Justice is a necessary action to any successful society. Without it the brute attacks the weak, the decent and the productive.

There are people who suppress. They are few. They often rise up to being in charge and then all things decay. They are essentially psychopathic personalities. Such want position in order to kill. Such as Genghis Khan, Hitler, psychiatrists, psychopathic criminals, want power only to destroy. Covertly or overtly they pay only with death. They arrived where they arrived, in charge of things, because nobody when they were on their way up said "No." They are monuments to the cowards, the reasonable people who didn't put period to them while they were still only small bullies and still vulnerable.

Ethics has to get there before tech can occur. So when it doesn't exist or goes out then tech doesn't occur and suppression sets in and death follows.

So if someone doesn't hold the line, all become victims of oppression.

TWO SECTIONS

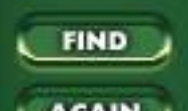
The Ethics Section is in Department 3. This department is called Inspections and Reports.

In small orgs there is only one person in that department.

Primarily his duties consist of inspecting and reporting to his divisional head and the Executive Council.

That is the first section's function.

WHEN inspection reveals outness and reports (such as graphs or direct info to the EC) do not result in correction THEN it is a matter for the second section.



The second section of Department 3 is Ethics.

Now it is an Ethics matter. If correctly reported outnesses that threaten the org are NOT corrected then one assumes that suppression exists.

Because he has files of Damage Reports and chits and because he can see and investigate, the Ethics Officer locates WHO is causing outnesses and suppressing the org. By condition assignments, publication and Comm Evs he gets in ethics.

It occasionally happens that it is someone high up in the org. It sometimes happens his seniors or the Exec Council scold him for daring to report on things or to them. Then he knows the suppression is high up and he is delinquent in duty if he does not report it to the next highest org and if no action there right on up to the Sea Org. Anyone removing him for daring to report the factual results of his inspections can be severely handled by upper organizations. The Ethics Officer can only be in trouble if he fails to do his job and keep in ethics.

Hitting people with conditions is such a small part of ethics that it is almost an abandonment of post. Letting people be hit with wrong conditions is a Comm Ev offense.

Letting an SP collapse stats or an org is a shooting offense.

An Ethics Officer uses ethics to protect ethics upstats and keep the stats up and to smoke out crimes that push people and stats down. It is a simple function.

The basic duties of Dept 3 are what it says. Inspection and reports. These alone usually work. When they don't and stats fall or people fall off the org board, one goes into ethics actions.

You don't let incompetent and suppressive people on staff in the first place and you crowd ethics in on them if they're found to be there.

You DON'T confuse an executive's effort to get the stats up with suppression.

The E/O is making the environment safe so that production can occur and service can be given. He is making it unsafe for those who by neglect or continual errors or suppression push stats down and get good staff members to leave.

If none of this is well understood and yet someone is making it impossible to work, find a nine foot high board fence . . .

The E/O must know his ethics policy. He must understand why he is there.

And the rest of the people in the org should understand it too.

REMIMEO

THE THIRD PARTY LAW

I have for a very long time studied the causes of violence and conflict amongst individuals and nations.

If Chaldea could vanish, if Babylon turn to dust, if Egypt could become a badlands, if Sicily could have 160 prosperous cities and be a looted ruin before the year zero and a near desert ever since — and all this in SPITE of all the work and wisdom and good wishes and intent of human beings, then it must follow as the dark follows sunset that something must be unknown to man concerning all his works and ways. And that this something must be so deadly and so pervasive as to destroy all his ambitions and his chances long before their time.

Such a thing would have to be some natural law unguessed at by himself.

And there *is* such a law, apparently, that answers these conditions of being deadly, unknown and embracing all activities.

The law would seem to be:

A THIRD PARTY MUST BE PRESENT AND UNKNOWN IN EVERY QUARREL FOR A CONFLICT TO EXIST.

Or

FOR A QUARREL TO OCCUR, AN UNKNOWN THIRD PARTY MUST BE ACTIVE IN PRODUCING IT BETWEEN TWO POTENTIAL OPPONENTS.

Or

WHILE IT IS COMMONLY BELIEVED TO TAKE TWO TO MAKE A FIGHT, A THIRD PARTY MUST EXIST AND MUST DEVELOP IT FOR ACTUAL CONFLICT TO OCCUR.

It is very easy to see that two in conflict are fighting. They are very visible. What is harder to see or suspect is that a third party existed and actively promoted the quarrel.

The usually unsuspected and "reasonable" third party, the bystander who denies any part of it, *is* the one that brought the conflict into existence in the first place.

The hidden third party, seeming at times to be a supporter of only one side, is to be found as the instigator.

This is a useful law on many dynamics.

It *is* the cause of war.

One sees two fellows shouting bad names at each other, sees them come to blows. No one else is around. So *they,* of course, "caused the fight." But there *was* a third party.

Tracing these down, one comes upon incredible data. That is the trouble. The incredible is too easily rejected. One way to hide things is to make them incredible.

Clerk A and Messenger B have been arguing. They blaze into direct conflict. Each blames the other. NEITHER ONE IS CORRECT AND SO THE QUARREL DOES NOT RESOLVE SINCE ITS TRUE CAUSE IS NOT ESTABLISHED.

One looks into such a case THOROUGHLY. He finds the incredible. The wife of Clerk A has been sleeping with Messenger B and complaining alike to both about the other.

Farmer J and Rancher K have been tearing each other to pieces for years in continual conflict. There are obvious, logical reasons for the fight. Yet it continues and does not resolve. A close search finds Banker L who, due to their losses in the fighting, is able to loan each side money, while keeping the quarrel going, and who will get their lands completely if both lose.

It goes larger. The revolutionary forces and the Russian government were in conflict in 1917. The reasons are so many the attention easily sticks on them. But only when Germany's official state papers were captured in World War II was it revealed that *Germany* had promoted the revolt and financed Lenin to spark it off, even sending him into Russia in a blacked out train!

One looks over "personal" quarrels, group conflicts, national battles and one finds, if he searches, the third party, unsuspected by both combatants or, if suspected at all, brushed off as "fantastic." Yet careful documentation finally affirms it.

This datum is fabulously useful.

In marital quarrels the *correct* approach of anyone counseling, is to get both parties to carefully search out the *third* party. They may come to many *reasons* at first. These *reasons* are not *beings*. One is looking for a third *party*, an actual *being*. When both find the third party and establish proof, that will be the end of the quarrel.

Sometimes two parties, quarreling, suddenly decide to elect a being to blame. This stops the quarrel. Sometimes it is not the right being and more quarrels thereafter occur.

Two nations at each other's throats should each seek conference with the other to sift out and locate the actual third party. They will always find one if they look, and they *can* find the right one. As it will be found to exist in fact.

There are probably many technical approaches one could develop and outline in this matter.

There are many odd phenomena connected with it. An accurately spotted third party is usually not fought at all by either party but only shunned.

Marital conflicts are common. Marriages can be saved by both parties really sorting out *who* caused the conflicts. There may have been, in the whole history of the marriage, several, but only one at a time.

Quarrels between an individual and an organization are nearly always caused by an individual third party or a third group. The organization and the individual should get together and isolate the third party by displaying to each other all the data they each have been fed.

Rioters and governments alike could be brought back to agreement could one get representatives of both to give each other what they have been told by *whom*.

SUCH CONFERENCES HAVE TENDED TO DEAL ONLY IN RECRIMINATIONS OR CONDITIONS OR ABUSES. THEY MUST DEAL IN BEINGS ONLY IN ORDER TO SUCCEED.

This theory might be thought to assert also that there are no bad conditions that cause conflict. There are. But these are usually REMEDIAL BY CONFERENCE UNLESS A THIRD PARTY IS PROMOTING CONFLICT.

In history we have a very foul opinion of the past because it is related by recriminations of two opponents and has not spotted the third party.

"Underlying causes" of war should read "hidden promoters."

There are no conflicts which cannot be resolved unless the true promoters of them remain hidden.

This is the natural law the ancients and moderns alike did not know.

And not knowing it, being led off into "reasons," whole civilizations have died.

It is worth knowing.

It is worth working with in any situation where one is trying to bring peace.

HCO POLICY LETTER OF 16 MAY 1965
ISSUE II

GEN. NON-REMIMEO

HCO DIVISION 1
DEPT OF INSPECTIONS AND REPORTS (DEPT 3)
ETHICS SECTION

INDICATORS OF ORGS

Just as pcs have indicators so do orgs.

There is a probable long list of good indicators. When these are present, Ethics is quiet and hangs on to an interrogation, etc., only long enough to get policy and technology in.

There is a probable long list of BAD indicators. When these are present, Ethics becomes industrious in ratio to the number of bad indicators.

The first indicators, good or bad, are statistics — the OIC graphs for units, sections, departments, divisions and the org. When these are rising, the rise is a GOOD INDICATOR.

When these are falling, the fall is a BAD INDICATOR.

The second of these indicators, good or bad, are TECHNICAL GAINS. When technology is *in,* cases are gaining. This is a good indicator. When technology is *out,* cases are losing. This is a bad indicator.

Ethics only exists to hold the fort long enough and settle things down enough to get technology in. Ethics is never carried on for its own sake. It is pushed home only until technology is functioning and then technology resolves matters and Ethics prowls off looking for other targets.

We don't hang people because we started to hang them and so must do so. We start to hang people and keep right on tying the noose in a workmanlike fashion right up to the instant we can get tech in — which of course makes the noose unnecessary.

But if tech never does get in then we complete the hanging.

You will find if you *label* a suppressive you will someday get him back and get tech in on him. If you don't ever label they wander off and get lost.

Labeling as a suppressive is our hanging.

When things are bad (bad indicators heavily visible) putting a body on the gallows is very salutary. We call it "putting a head on a pike." Too many BAD indicators and too goofed up a situation and we *must* put a head on a pike. Then things simmer down and we can begin to get tech in.

That's the whole purpose of ethics — to *Get Tech IN*. And we use enough to do so, to get correct standard tech in and being done.

When there are lots of bad indicators about — low and falling statistics, goofed cases — we get very handy with our interrogatories and put the place very nearly under martial law — we call this a State of Emergency. Once Emergency is declared, you usually have to put a head or two on a pike to convince people that you mean it. After that, necessity level rises and the place straightens up. If an Emergency is *continued* beyond a reasonable time, we resort to very heavy discipline and comm-ev the executives who wouldn't get off it.

Ethics, then, is applied to the *degree* required to produce the result of getting tech in. Once tech is really in on a person (with a case gain) or a Tech Division, let us say, and auditors actually audit standard processes by the book, we *know* it will resolve and we ease off with ethics.

Ethics, then, is the tool by which you get good indicators in by getting tech in. Ethics is the steamroller which smooths the highway.

Once the road is open we are quite likely to skip remaining investigation and let it all be.

But somebody *promising* to be good is never good enough. We want statistics. Bettered statistics.

SYMPTOMS OF ORGS

Orgs have various symptoms which tell us how things really are ethicwise.

One of these is dilettantism.

DILETTANTE–ISM

Dilettante = One who interests himself in an art or science merely as a pastime and without serious study.

In an org, this manifests itself with "people should live a little." "One needs a rest from Scientology." "One should do something else too." All that kind of jazz.

It also manifests itself in nonconsecutive scheduling, part-time students, "because things are different in this town and people can come only two nights ——." Ask what they do with other nights. Bowling. Horse racing.

Boy, you better maul the case folders of staff. You have a suppressive aboard. Maybe six.

Scientology, that saves lives, is a modern miracle, is being compared to bowling. Get it?

That org or portion just isn't serious. Scientology is an idle club to it, an old lady's sewing circle. And to somebody, selling training and auditing are just con games they put over on the public.

SUPPRESSIVES!

Root them out.

WILD RUMORS — This symptom is caused by potential trouble sources. Find whose case roller-coasters (gets better, gets worse). Investigate. You'll find a suppressive or two outside the org.

Put a head on a pike with an HCO Ethics Order and publish it widely.

ARC BROKEN FIELD — The Johannesburg Comm Ev Order of last week is a perfect method of handling the situation. Appoint a Comm Ev chairman to inquire into matters and form a list of interested parties based on reports he will now receive.

BAD TECH — When results just don't happen in the Academy, HGC or Review, one or another, look for the potential trouble sources and suppressives. Only they can keep tech out. Put a big head on a pike and then begin to interrogate every slip in the place. Suddenly tech is in again.

There are many such symptoms.

AT THE ROOT OF EVERY BAD CONDITION WILL BE FOUND A SUPPRESSIVE PERSON.

Locate your potential trouble sources by locating passers of rumors, etc. Then locate the suppressive and shoot.

Calm reigns. Tech is in.

And that's all one means to accomplish.

Today TECHNOLOGY WORKS ON EVERY CASE. If the local org can't handle a case, Saint Hill can.

If you get tech in well enough in an org, tech handles all. Beautifully. But if it is out, only ethics can bat down the reasons it can't be gotten in.

OPTIMUM STATE

The optimum state of an org is so high that there is no easy way to describe it. All cases getting cracked, Releases and Clears by the hundreds, command of the environment. Big. That's an optimum state for *any* org.

If it isn't rising *toward* optimum today, it is locally being held down.

The viewpoint of Ethics is there is no adequate reason why an org is stumbling except ethics reasons. Let others take care of any other lacks. Ethics *never* gets reasonable about lack of expansion. If Ethics shoves hard enough others will get a high enough necessity level to act.

So when an org is low:

Find out where its statistics are down and who is a PTS or an SP and *ACT*.

That's the job of Ethics. Thus little by little we take off the brakes for a cleared Earth.

HCO PL	7 Aug. 65 I	SUPPRESSIVE PERSONS, MAIN CHARACTERISTICS OF
HCO PL	17 June 65 I	STAFF AUDITOR ADVICES

SOFT SELL

You do not bring your dissemination down to your quality of delivery.

You bring your delivery up to your dissemination.

SOFT SELL means vaguely maundering about your product. Example: "Scientology sometimes makes people worry a bit less."

Now, of course, if you don't deliver good Scientology, that mirrors what you can deliver.

The *right* course is to figure out what you *should* deliver and promote it and gear up and polish up *and* deliver it.

The "little-brown-church-in-the-vale" mock-up where the community can come and sing and not be too unhappy is horrible. If Scientology is that in your area, you better really figure out what it *can* do and do it and say you do it. You're using an atom bomb to raise pigeons in.

THE WHOLE FAILURE OF CASES AND RESULTS LIES IN LACK OF AN EFFICIENT ETHICS SECTION IN AN ORG.

If ethics is out in your area you'll *never* get tech in. Auditors will goof and alter-is, Supervisors will foul up, and tech doesn't get run or taught. And this gives you a tendency to soft sell BECAUSE YOU AREN'T DOING SCIENTOLOGY!

ANY process we have ever had, had only TWO failure points — (1) pc was a PTS or SP, (2) auditor or Supervisor was not using standard processing procedure. There were NO other reasons.

This is a fantastic advance if you only realize it and get it fully used.

There is no reasonable reason about any of it except (1) pc was a PTS or SP, (2) auditor or Supervisor didn't practice standard procedure in delivery.

The answer is ethics. Lay off not wanting to commit overts. What size overt is it to let the whole human race rot because one didn't have guts enough to handle discipline? *That's* a gigantic overt — to have the tools and not apply them.

Execs, if there is any slightest bit of soft sell going on in your org, the actions that must be taken are:

1. Get in ethics hard in your org and area. Raise hell with it.

2. Upgrade and remorselessly standardize your HGC delivery. Never let a PTS or SP get by without full technical and ethics action. When you have a case flub in the HGC you get it promptly, same instant, to the Case Supervisor who determines whether it is (a) PTS or SP or (b) auditor goof or (c) nothing wrong and returns pc back where he came from — same auditor in HGC. If it is (a) the pc gets standard ethics and technical handling as per policy on PTS or SP. If it is (b) the auditor gets corrected with cramming and ethics. Don't do another thing than the above or you'll be messed up.

3. Upgrade and remorselessly standardize your Academy. If a student is not getting through material, send at once to Qual Div. It is (a) student is PTS or SP or (b) student has misunderstood or (c) nonstandard course such as shifted checksheet or refusal to check out or let the student have material. For (a) send the student to Ethics for standard policy handling. For (b) the student is sent to Dept of Correction for cramming and Word Clearing (at his own expense) and is then sent back, through the Examiner, to course. For (c) the Supervisor is sent to Ethics and Cramming and the student returned to course. Never vary, and be as hard on people who don't do the above exactly as you are on students.

4. Get executives turning in their 1 May 65 PL reports on goofs on staff. And turn in any executive who fails to so report a staff member who goofs or fails to comply.

5. Get a reality on what you should be producing and produce it. What *are* you trying to produce? Decide and do it.

6. Get a grip on the decisions of the org pattern — "Yes" greater than "No," "No" greater than "Yes" or no action. This means there are only two decisions possible *and* if neither is, you send the person or despatch back where he or it came from. If there are four or more choices, your org pattern is not in correctly.

7. GET RID OF DISTRACTIONS FROM SCIENTOLOGY in your org. Baby-sitting or raffle tickets and such nonsense. You need a Reception room that is not your Comm Center, but which *is* PLASTERED with charts and data about Scientology where loose bodies can wait — and learn.

8. Stop trying to cope with minor matters and get your org board in — that takes care of the lot. Get up an 8 foot 9 inches-long sheet of blue Formica with its bottom 3½ feet from the floor or more and the board 4 feet or more high, and put your new org pattern on it. Assign *all* your people to departments. And get more people.

9. Knock off the soft sell and flubbed delivery. You can make Releases with any level you've got *if* you get ethics in as above.

10. Recognize we're ready to roll. It's a new civilization we're after and we'll do it. And in less than five years!

You *won't* lose any people because of ethics. On the contrary, they'll swarm in. Only SPs will blow. So do it, do it, do it.

LRH COMM NETWORK SERIES 16

OUT–ETHICS INDICATORS

There are three indicators which, when present singly or collectively, point to possible out-ethics in an org, network or management body.

LRH COMM

The absence of an LRH Comm — none appointed or a sector of the network missing — can mean the org is possibly off-source, does not use policy and is subject to false reports.

HCO

An inefficient HCO, poorly organized or posted or absence of effort to post them up from management bodies, usually indicates out-ethics executives who would be discovered if an HCO existed.

TREASURY DIV

When no Treasury Div is formed or functioning or grossly undermanned, it can indicate there is rip-off or embezzlement present in an org or at management levels.

Recent experience in certain areas has pointed these things out. They are indicators, when present, which one should look into vigorously. Otherwise stats may remain depressed and a lot of work and progress may be wasted.

An org with a competent LRH Comm, a good HCO and a functioning Treasury Division will usually pick up and prosper, for its other divisions can now work and do their jobs.

CORRUPT ACTIVITIES

Ref: HCO PL 22 July 82 KNOWLEDGE REPORTS

The corrupt activities of a few deprive the many of their pay and an activity its prosperity.

The result of out-ethics in *any* long-run situation is contraction and poverty for all concerned, even the perpetrator.

A staff member who privately sells org prospect lists to a squirrel, the I/C who lets the org get ripped off for some personal favor, are actionable, of course, under criminal law. But their suicidal action is not the point here: They are selling out their friends and fellow staff members, messing up an org for no real benefit to anyone — not even the criminal rip-off artist.

The one who would do it, the org, the field, all suffer for it one way or another.

Only in-ethics can deliver standard tech.

Only a staff that is alert to such actions and reports those they cannot stop directly by a very stern direct confrontation with the culprit in private can be sure of their own pay and working conditions and can expand an org.

Why moonlight or be in poverty when in-ethics can bring prosperity to all?

	Rev. 7.5.84	BOARD OF REVIEW
HCO PL	5 Aug. 66RA II	CHAPLAIN'S COURT
	Rev. 7.12.88	CIVIL HEARINGS

We live in an era of "civilization" where it has become general not to care what is going on.

The first dynamic "nothing to do with me" attitude is the product of drugs, TV and the psychiatrists and psychologists who have perverted education and produced a criminal society wherein the individual is supposed to be the effect of everything, incapable of handling his environment.

Although we are changing this society, it is, nevertheless, a constant challenge to one's own ability to keep things going right.

Factually, to succeed in this "civilization" or *any* society, crude or sophisticated, one has to act continually to keep one's own environment under some control. To do otherwise results in a lingering or sudden and always painful death. It *does* matter what goes on around one. The only thing which does not care is a corpse.

It is a rather simple thing — not heroic. If one can't control a coffee cup he is likely to get scalded! If one can't control a car he is a statistic.

Extend this to one's fellows slightly and it is plain to see that total permissiveness (as loudly advocated by the psychs) is suicide. Standing with a bland look while Joe sticks pins in someone or something is not good manners, it's idiocy!

To live at all, one has to exert some control over his equals as well as his juniors and (believe it or not) his superiors.

When misconduct and out-ethics is occurring in a group it is almost impossible for other members of the group not to know of it. At least some of them are aware of the outness.

When a group has down stats, it is not true that *all* of them are trying to fail. Only a few are dedicated to not doing their jobs.

The question one can ask of any group that is not doing well is this: Why did the *other* group members tolerate and ignore the loafers or out-ethics cats in it?

In analyzing countless numbers of groups with whom it has been my good fortune — or misfortune — to be associated, I finally isolated ONE factor which made an upstat group upstat and a downstat group downstat and a horror to be around.

The single most notable difference between an upstat, easy to live and work with group and a downstat, hard to live and work with group is that the individual group members themselves enforce the action and mores of the group.

That is the difference — no other.

In an upstat group, at the first pinprick, Joe would probably have a black eye!

In a downstat group, Joe could go on and on with his pins, each group member watching and shrugging.

In a group where members have some concept of controlling their environment and their fellows, you don't have loafers or out-ethics cats. *Because* the rest of the group, on an individual basis, just won't tolerate it.

Those who would have a tendency to wreak havoc or loaf don't dare. And the group becomes easy to live with and work with.

It is not whether the group individuals should be preselected or carefully made ethical by some process or inspired leadership or a separate police force. It is whether the group members themselves exert any control on each other.

One can say, "Oh well! If I reported the Reg violating policy, the ED would fire me — she is his wife!" One can say, "If I complain they won't let me wear my hat, they'll comm ev me for third party actions." If such conditions prevail, the group has already lost the group ability to control the environment — and they will be downstat. Their pay will be low — their working conditions rotten.

Do we have a mechanism to prevent this?

Yes, we do.

It is called Knowledge Reports. (See HCO PL 1 May 65 I, STAFF MEMBER REPORTS, and the additional issues referenced at the beginning of this policy letter.)

And with this PL, Knowledge Reports are enforced as follows:

1. Anyone who knew of a loafing or destructive or off-policy or out-ethics action and WHO DID NOT FILE A KNOWLEDGE REPORT becomes an ACCESSORY in any justice action taken thereafter.

2. Forbidding anyone to write a Knowledge Report, makes the person forbidding it *and* the person accepting this illegal order, both accessories to any later action taken.

3. Failing to write down a disclosed crime in a worksheet or a report makes the person failing to do so an ACCESSORY to the crime.

4. Failing to file a Knowledge Report written by another makes one an accessory to the contents.

5. Removing Knowledge Reports from files makes one an accessory to the contents.

6. Failing to advise the International Justice Chief of serious charges in Knowledge Reports makes one an accessory to the reported outness.

7. Knowingly false statements made in Knowledge Reports, when proven false beyond any reasonable doubt, with intent to cause trouble, may become the subject of a Chaplain's Court with damages awarded. (Ref: HCO PL 5 Aug. 66RA II, CHAPLAIN'S COURT, CIVIL HEARINGS)

8. Any person who knew of an outness or crime and failed to report it and thus became an accessory receives the same penalty as the person disciplined as the actual offender.

With these policies, a person with knowledge of nonoptimum conduct by other group members cannot be stopped from writing and filing the report in the person's ethics file and cannot even be stopped from going outside the org and informing, by whatever comm line, the International Justice Chief. And that does not mean this policy letter is to be used to withhold from anyone that he is writing a report.

BOARDS OF REVIEW

(*Ref*: HCO PL 23 Feb. 78R, BOARD OF REVIEW)

It shall be part of *every* Board of Review action at any level to examine the status of Knowledge Reports as they relate to any case reviewed and to take any action indicated by these policies.

SUMMARY

This makes it a pretty rough group for a loafer or criminal to be around. UNLESS he or she decides to rise above the aberrations and get busy and go straight.

IT IS A FAILURE OF THE INDIVIDUAL GROUP MEMBERS TO CONTROL THEIR FELLOWS THAT MAKES A GROUP HARD FOR ALL TO LIVE AND WORK WITH.

If it is present, when that is cured, the group will become a joy to be with and work will become a breeze.

If the stats of a group, large or small, are down, try it.

And get a REAL group in return that, collectively, can control the environment and prosper because its group members individually help control each other.

HCO POLICY LETTER OF 1 MAY 1965
ISSUE I

REMIMEO
STAFF MEMBER HATS
EXECUTIVE HATS

STAFF MEMBER REPORTS

Staff members must personally make certain reports in writing.

Failure to make these reports involves the executive or staff member not making a report in any offense committed by a junior under him, or, in case of job endangerment, by a senior over him.

These reports are made to the Ethics Section of the Department of Inspections and Reports.

The report form is simple. One uses a clipboard with a packet of his division's color-flash paper on it. This includes a piece of pencil carbon paper. This is the same clipboard and carbon one uses for his routine orders.

It is a despatch form addressed simply to the Ethics Section. It is dated. It has under the address and in the center of the page the person or portion of the org's name. It then states what kind of a report it is (see below).

The original goes to Ethics by drawing an arrow pointing to "Ethics" and the carbon goes to the person or portion of the org being reported on *by channels* (B routing).

The following are the reports required:

1. *Damage Report.* Any damage to anything noted with the name of the person in charge of it or in charge of cleaning it.

2. *Misuse Report.* The misuse or abuse of any equipment, materiel or quarters, meaning using it wrongly or for a purpose not intended.

3. *Waste Report.* The waste of org materiel.

4. *Idle Report.* The idleness of equipment or personnel which should be in action.

5. *Alter-is Report.* The alteration of design, policy, technology or errors being made in construction.

6. *Loss or Theft Report.* The disappearance of anything that should be there giving anything known about its disappearance such as when it was seen last.

7. *A Found Report.* Anything found, sending the article with the despatch or saying where it is.

8. *Noncompliance Report.* Noncompliance with legal orders.

9. *Dev-t Report.* Stating whether off-line, off-policy or off-origin and from whom to whom and subject.

10. *Error Report.* Any error made.

11. *Misdemeanor Report.* Any misdemeanor noted.

12. *A Crime Report.* Any crime noted or suspected but if suspicion only, it must be so stated.

13. *A High Crime Report.* Any high crime noted or suspected but if only suspected must be so stated.

14. *A No-Report Report.* Any failure to receive a report or an illegible report or folder.

15. *A False Report Report.* Any report received that turned out to be false.

16. *A False Attestation Report.* Any false attestation noted, but in this case the document is attached to the report.

17. *An Annoyance Report.* Anything about which one is annoyed, giving the person or portion of an org or org one is annoyed with, but the Department of Inspections and Reports and a senior org are exempt and may not be reported on.

18. *A Job Endangerment Report.* Reporting any order received from a superior that endangered one's job by demanding one alter or depart from known policy, the orders of a person senior to one's immediate superior altered or countermanded by one's immediate superior, or advice from one's immediate superior not to comply with orders or policy.

19. *Technical Alter-is Report.* Any ordered alteration of technology not given in an HCOB, book or LRH tape.

20. *Technical Noncompliance Report.* Any failure to apply the correct technical procedure.

21. *Knowledge Report.* On noting some investigation is in progress and having data on it of value to Ethics.

These reports are simply written and sent. One does *not* expect an executive to front up to personnel who err. One *does* expect an executive to make a report routinely on the matter, no matter what the executive also does.

Only in this way can bad spots in the organization be recognized and corrected. For reports other than one's own collect and point out bad conditions before those can harm the org.

These reports are filed by Ethics in the ethics files in the staff member's folder or in the folder of the portion of the org. A folder is only made if Ethics receives an ethics report.

Unless the staff member is part of a portion or an org that is under a State of Emergency, FIVE such reports *can* accumulate before Ethics takes any action. But if the report is deemed very serious, Ethics may take action at once by investigating.

If a State of Emergency exists in that portion of the org or org, ONE report can bring about a Court of Ethics as there is no leeway in an Emergency condition.

The most serious reports, which are the only ones taken up at once, are technical alter-is, noncompliance, any false reports, false attestations, no-reports, misdemeanors, crimes and high crimes. The others are left to accumulate (except in Emergency when *all* reports on that portion or org are taken up at once).

CLEANING THE FILES

An amnesty for a portion or an org or a general amnesty can be declared by the Office of LRH Saint Hill. An amnesty will be effective up to a date three months before it is issued. The ethics files are therefore nullified previous to the date declared in the amnesty.

An amnesty signalizes a feat of considerable moment by a portion of an org or an org or Scientology.

An HCO Executive Letter can compliment a portion of an org or an org and wipe out the ethics files of the portion of an org or the org complimented. An award is usually added for the persons responsible.

An assignment of a State of Normal Operation after an Emergency (but not assigning Affluence) cleans the portion of an org or the org's ethics files.

An *individual* may clean his own file by approaching Ethics and offering *to make amends.*

The person may be shown but may not touch his ethics files which are always kept locked when the office is empty. The person should present a written and signed *amends project petition* to Ethics. Ethics attaches the person's file to it and sends it safely to the Office of LRH "Ethics Authority Section." If accepted as adequate amends by the Office of LRH, it is authorized by the "Ethics Authority Section" and returned to Ethics which places it on its "projects time machine."

When accomplished the *amends project* is taken off the time machine and forwarded to the Inspections Section which inspects and verifies it is done and sends all to the Office of LRH "Ethics Authority Section" which then authorizes the retirement of the reports on the person.

If the project comes off the time machine without being done, the matter goes at once to a Court of Ethics.

Any *amends project* must benefit the org and be beyond routine duties. It may not only benefit the individual. Offers to "get audited at own expense in Review" are acceptable as auditing will benefit everyone.

"To get trained at own expense up to _____ and serve the org two years afterwards" is acceptable amends. But the person's staff pay is also suspended entirely during any auditing or training undertaken as amends. "To get another department's files in order on my own time" would be acceptable amends. Getting a celebrity into Scientology would be acceptable amends. No work one would normally do himself on post is acceptable amends. A donation or fine would not be acceptable amends. Doing what one should do anyway is not amends, it is the expected. No org funds may be employed in an amends project.

No amends are thereafter accepted if the person has failed to complete an amends project since the effective date of the last amnesty applying to the person's portion or org.

Any bonus *specifically given by the person's name* also cleans the person's ethics files without comment.

The responsibility for handling the cleaning of files is that of the Ethics Section of the Department of Inspections and Reports which notes amnesties, compliments and specific bonus awards and handles its ethics files accordingly.

No *amends projects* may be accepted except through the Office of LRH, and a superior may not bring a junior who wishes his files cleaned by *amends* into Ethics and assist him to make the proper project applications. It must be voluntarily done by the junior.

No amnesties, compliments or bonuses may be made or declared except by the Office of LRH and authorized also from Saint Hill.

SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 15 AUGUST 1965

REMIMEO
ALL STAFF HATS
INSPECTIONS OFFICER

THINGS THAT SHOULDN'T BE

If you see something going on in the org or incorrect that you don't like and yet do not wish to turn in an ethics chit, or indeed don't know who to report, WRITE A DESPATCH TO THE INSPECTIONS OFFICER.

Tell him what you have noticed and give him what data you can.

The Inspections Officer will then investigate it and make a report to the right executives or turn in an ethics chit on the offending persons himself.

Don't just natter if there's something you don't like.

Tell the Inspections Officer. Then something can be done about it.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 15 NOVEMBER 1965

REMIMEO
ALL STAFF

REPORTING OF THEFT AND ACTION TO BE TAKEN

When a theft occurs in the organization, a routine set of actions should occur. These actions are as follows:

1. The person discovering the theft goes immediately to the Ethics Officer and makes a full verbal report of the article/articles stolen, when they were last there — who was responsible for their safety — and any further data that he has on it.

2. The Ethics Officer writes down all details of the theft and the articles stolen.

In the cases where large objects such as a machine, car, or the building has been broken into and something taken, he calls the police immediately giving full details of the theft.

3. The Ethics Officer then makes a xerox copy of the details of the theft and takes it to the Insurance Officer, Dept of Records, Assets and Materiel, Org Division.

4. The Insurance Officer takes the report and immediately notifies the insurance company with which the article was insured.

These actions should be done speedily, as in some cases unless a theft is reported immediately to the police and the insurance company, the insurance is not collectable.

It is the responsibility of the Insurance Officer to see that all articles of value are insured.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 31 OCTOBER 1966R
ISSUE II
REVISED 5 MARCH 1968

REMIMEO
STAFF STATUS II
CHECKSHEET

GENERAL FOR ALL STAFF

ADMIN KNOW-HOW SERIES 3

JOB ENDANGERMENT CHITS

If you are given orders or directions or preventions or denied materials which make it hard or impossible for you to raise your statistics or do your job at all, you MUST file a Job Endangerment Chit on your next highest superior.

If you are admonished or ordered to a Hearing for NOT doing your job and having low statistics and have NOT *previously* filed a Job Endangerment Chit at the time it occurred, you have no defense.

You should not come to a Hearing as a defendant and *say* you were prevented or inhibited from doing your job. Unless you have filed a Job Endangerment Chit previously when your job was endangered, the statement MAY NOT BE ACCEPTED by the Hearing Officer or the Comm Ev.

POLICY

Most people who have trouble with policy or admin do so simply because they don't know it or can't or don't use it.

Such a person can be told anything and tends to take it as fact.

Policy exists to speed the wheels and make a job doable.

But sometimes one has a senior who continually says this or that is "against policy."

Always respectfully ask for the date of the policy letter and to see a copy of it.

Then you will know that what you propose is or is not against policy. If no policy letter can be produced or if what you proposed is NOT against policy and is still refused, you must file a Job Endangerment Chit.

WHERE TO FILE

FORMERLY ONLY ONE COPY WAS WRITTEN. THIS IS NOW MODIFIED.

USING CARBON PAPER, MAKE AN ORIGINAL AND TWO COPIES.

SEND ONE COPY TO THE PERSON BEING FILED ON.

SEND TWO COPIES TO THE ETHICS OFFICER.

THE ETHICS OFFICER WILL FILE ONE IN THE FILE OF THE PERSON NAMED AND ONE IN THE FILE OF THE PERSON WRITING THE CHIT.

THESE COPIES MUST BE CAREFULLY PRESERVED IN EVENT OF A COMM EV OR HEARING AS THEY ARE NECESSARY DEFENSE PAPERS.

WHAT TO FILE

Full details, without rancor or discourtesy, must be given in the report, including time, places and any witnesses.

VEXATIOUS FILING

Anyone filing Job Endangerment Chits on superiors or equals or juniors must be able to back them up.

One cannot be given an Ethics Hearing or Comm Ev for a false Job Endangerment Chit unless it contains a willful and knowing false report which endangers somebody else's job. But even so, no Ethics Hearing may be ordered for the fact of filing, only for a willful and knowing false report.

So if your facts are straight there is no slightest risk in filing a Job Endangerment Chit. On the contrary, it is dangerous NOT to file one. For then one has NO defense.

PERSONAL MATTERS

Sometimes a staff member is imposed on in such a way as to prejudice his job such as having to do off-line favors.

This is an occasion for a Job Endangerment Chit.

If one is threatened with punishment if one files a Job Endangerment Chit, one must then file a second chit based on the threat.

If an org as a whole seems to refuse Job Endangerment Chits or ignore them, one can be filed with Worldwide simply by sending it direct to "HCO Ethics Worldwide, Saint Hill Manor, East Grinstead, Sussex."

WRONGFUL DISMISSAL

Dismissal without following proper procedure of a Hearing may be sued in the Chaplain's Court, Division 6. If no Chaplain's Court exists in the local org then one surely does in the Continental Org and one can file such a suit there or at Saint Hill.

CHITS BY SENIORS

Seniors let down by juniors had better file Job Endangerment Chits before calling a lot of ethics actions. Staff members are seldom willful, they are just unknowing. Senior chits on juniors should carry a copy to the junior on channels as well as Ethics.

FALSE REPORTS

When one finds he has been falsely reported upon, he should file a Job Endangerment Chit.

HEARINGS ON CHITS

Ethics action is not necessarily taken because a chit has been filed on one. But if too many chits occur in a staff member's file, an investigation should be ordered and only if the board so recommends does ethics action then occur.

STATE OF MIND

Don't sit around muttering because you are being kept from doing your job.

And don't be timid about filing a Job Endangerment Chit.

Don't accept orders you know are against policy or at least unworkable. File a Job Endangerment Chit.

There is no vast THEY weighing you down. There is only ignorance of policy or misinterpretation or arbitrary interference.

If you are willing to do your job, then *know* your job and do it. And if you are being shoved off so you can't do it, you MUST file a Job Endangerment Chit.

You have a right to do your job, you know.

HCO POLICY LETTER OF 15 DECEMBER 1965
ISSUE III

REMIMEO

ETHICS CHITS

When anyone receives an ethics chit which the recipient feels is incorrect, the answer is not to issue another chit naming the person that issued the first chit. Such action merely sets up a vicious circle of ethics chits going between two persons.

The purpose of Ethics is to get technology and policy in and get the org going, not to start slanging matches. Therefore if anyone receives an ethics chit, he or she should first take a good look at his or her actions and see what needs to be done in order to avoid a repetition of the offense.

If, however, after careful consideration they consider the chit really unjustified, they should politely despatch the Ethics Officer, stating briefly their reasons, supported where possible with data and ask for the chit to be withdrawn.

If, in light of the data received, Ethics is satisfied that the chit was incorrectly issued, he/she can return the chit and explanation to the originator asking for the chit to be withdrawn. If the originator decides now to withdraw the chit after seeing the explanation, he returns it to Ethics requesting cancellation and Ethics removes the chit from the file.

If the originator is dissatisfied with the explanation, the chit should not be withdrawn. The originator sends the despatch and chit back to the Ethics Officer with "To Ethics — File" written on it. Ethics infos the receiver and files. In this case, the receiver can if he wishes appeal by despatch to the Ethics Officer and ask for a hearing. Thereupon, the Ethics Officer calls both the originator and the receiver (unless the originator is a secretary or above) to his office and, taking only the facts set out in the receiver's despatch to Ethics, makes a quick investigation.

The Ethics Officer then makes one of the following adjudications:

1. Have the ethics chit destroyed.

2. Have the ethics chit destroyed and if he finds that the chit was carelessly or incorrectly issued (bearing in mind what information was available to the originator at the time of issue), indicate the incorrectness to the originator and order any necessary checkouts on the relevant policy letter(s) violated to correct the originator into future on-policy handling.

3. If he discovers the chit to have been a willful and knowing false report, convene an Ethics Hearing on the originator (not for the fact of filing, only for the willful and knowing false report); or if the originator is a director or above, request an Executive Ethics Hearing be convened by the Office of LRH via the HCO Area Secretary.

4. Order the ethics chit to remain on the file.

5. Take up all the receiver's ethics chits and hold the hearing accordingly.

If the originator is a secretary or above, the Ethics Officer and the receiver visit the secretary in his office for the hearing on appointment. But a secretary or above need not grant the appointment at all if so inclined. In such a case the hearing is held without the originator in the Ethics Office.

No person may be penalized for issuing an ethics chit.

This policy letter is retroactive from this date. In other words old chits may be protested as above.

REMIMEO

MORE ON STAFF MEMBER REPORTS

(Originally written by LRH for the *Apollo* OODs
of 7 Dec. 69. Issued as an HCO PL on 12 Sept. 80.)

Ref: HCO PL 1 May 65 I STAFF MEMBER REPORTS

The ethics that can be out in an org is the whole basic system of chits, hearings, Knowledge Reports, Damage Reports and Lateness Reports.

These are turned in by the members of the organization, are filed by the E/O and the body of them comprise the Ethics FILES so one can spot sources of dev-t, noncompliance and upsets and handle before they become general.

People had ethics just boiled down to conditions which are about a tenth of it.

An oppressive, confused and overworked org occurs when the usual actions are not taken by its E/O and members to send in Knowledge Reports, Damage Reports, Dev-t Reports and Enturbulence Reports. These, filed by the E/O, then let the E/O straighten out areas. When this report function vanishes, the situation goes bad and seniors have to take general actions which are often hard on many just to keep things going. Ethics is out on you when you don't report what you know and find to the E/O in a despatch. By not being cause you become an effect.

CONDITIONS ON ORGS OR DIVISIONS OR DEPTS CLARIFICATION

If an org or division or department is assigned a condition below Normal Operation as a whole entity, it applies to all staff members at once

EXCEPT

those individual staff members who can immediately show in person the org's Ethics Officer their true statistic as being Normal Operation or above.

The org's E/O issues at once an Ethics Order in a form to upgrade these individuals promptly.

FORM OF CONDITIONS CHANGE

ETHICS OFFICER ORDER

Org _____

Date _____

The (org) (_____ div) (_____ dept) having been assigned a general condition of _____, on inspection of the statistics of _____ (name) _____ (post) his/her condition is upgraded to

_____

(If this order obtained by false statistic or misrepresentation, a condition of Non-Existence will be assigned.)

Signed _____
Org Ethics Officer

This is placed in the staff member's file and that staff member assumes the upgraded condition, not the general condition.

If the statistic however is ever proven to be false or the order obtained by misrepresentation or coercion or bribe or favor, the staff member is then placed in a condition of Non-Existence for one week or until the Non-Existence Formula is followed, whichever takes the longer.

The heads of the org, division or dept may never be so upgraded. They may protest directly for a reevaluation to the assigners with statistical proof meanwhile assuming the assigned condition. In protesting they also send copies of all stats and order to the Int E/O.

REMIMEO

ETHICS

FAILURE TO FOLLOW OR APPLY CONDITION

Any executive failing to assign or enforce conditions penalties below Normal is himself assigned the condition he or she should have assigned until that post's stats are up (not necessarily that person's as transfer may be needed).

Any staff member failing to apply the formula or the penalties of a condition assigned unless relieved by the E/O or the assigning authority or review of actual stats shall be downgraded one condition level.

If he or she still fails to follow the downgraded formula and penalty within 24 hours of receipt of the downgrade, it is downgraded one more and so on.

Sagged stats or crimes or high crimes are inexcusable. Seniors must always seek to raise stats and prevent crimes and high crimes by condition assignments the moment they are aware of the sag or the crime or high crime.

Staff members who see in their own sagged stats a condition coming up should act *fast* to get the stat up up before a condition has to be assigned.

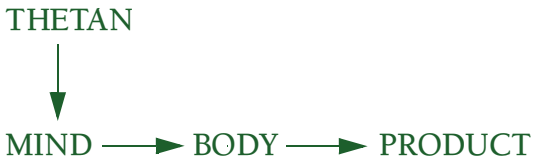
ADMIN KNOW-HOW SERIES 17



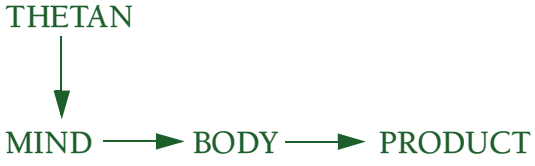
CONDITIONS, HOW TO ASSIGN

Every post and part of an org must have a statistic which measures the volume of product of that post. The head of a part has the statistic of that part.

Every post or part of an org has a product. If it has no product, it is useless and supernumerary.

An Exec Sec has the products of his or her portion of the org. The first product of an Exec Sec is of course his or her portion of the org's divisions. If the portion itself does not exist then of course the Exec Sec has no stat at all as an Exec Sec even if very busy—so he or she is not an Exec Sec despite the title. This is true of a department head, a section head and a unit head. One can't really be the one in charge if the thing one is in charge of doesn't exist. Also things that don't exist themselves can have no product.

The whole rationale (basic idea) of the pattern of an org is a unit of 3. These are:



In Division One the HCO Sec is the thetan, Department One the MIND, Department Two the BODY and Department Three the PRODUCT. The same pattern holds for every division.

It also should hold for every department and lower section and unit.

And above these it holds for a portion of an org.

In the HCO portion of the org we have the HCO Exec Sec as the thetan, the Exec Div (7) as the MIND, Division One as the BODY and Division Two as the PRODUCT. And so with other parts of an org. They always go:

Now, if you know and understand and can apply this, you can not only plan or correct an org or one of its parts, you can also assign conditions correctly. You need data gained from inventories or counts of items or the statistic assigned and drawn.

It is *not* enough to ***only*** follow graphs. That is a *lazy lazy lazy* no-confront method when used alone. Graphs can be falsified, can be too fixed on one thing and can ignore others unless you read *all* the graphs of the part you are interested in.

Graphs are a *good indicator* and should be used wherever possible. BUT you must also keep in mind that it requires ALL the graphs to be wholly accurate in a conditions assignment and the most accurate conditions assignment possible and that the graphs must be based on ACTUAL figures.

So, to begin, you look at the graphs. You look for recent ups and downs. Then you look for trends (long-range drifts up or down). Then you look for discrepancies. Like high enrollment–low income, high letters out–low enrollment weeks later.

It is safe enough *at first* to simply assign moderate conditions (Emergency, Normal, Affluence) by the current ups and downs of the graphs. This should result in *expansion*.

EXPANSION (product increase) is THE WHOLE REASON you are assigning conditions in the first place, so you expect reasonably that if you assign conditions by graph you will get *expansion*.

Now, after a while (weeks or months) you see you *are* getting expansion so you go on assigning conditions by graph. An Exec Sec would also inspect the physical areas of Dangers and Affluences as a matter of course.

BUT let us take the reverse case. You assign conditions by graph (and inspections of Danger and Affluence) and what you are assigning conditions to DOESN'T expand!

Well, now we get to work. There is something wrong.

The first thing that can be wrong is that what you are assigning conditions to really doesn't exist. The Director of Comm does not have a Department of Comm. He has only a messenger/telex operator, no way to handle his other departmental functions and answers the phone himself.

So, finding no department, REGARDLESS OF OTHER REASONS ("can't get staff," "income too low," "no quarters"), you bang him with a condition of Non-Existence. Because he obviously doesn't exist as a Dir Comm, having no Comm Dept. (Non-Existence is also assigned for NO USE and NO FUNCTION.)

Now, if this assignment to the Dir Comm of Non-Existence — with no further help from you, mind — does not result in a Comm Dept in a reasonable time, you assume he doesn't want one to be there and you assign a condition of Liability.

You don't *explain* it all away. That's what *he's* doing so why imitate him?

You don't say, "He's just overwhelmed — new — needs a review — natter natter figure figure." You simply ASSIGN!

He STILL doesn't get a Comm Dept there.

You inspect. You find the Ethics Officer isn't enforcing the Liability penalty ("Pete is my pal and I . . ."). So you assign the Ethics Officer a condition of Liability as he gets, naturally, what he failed to enforce.

Now they mutiny and you assign a condition of Treason, shoot both of them from guns and fill the posts.

The new incumbents you tell, "The boys before you aren't here now and aren't likely to be trained or processed until we get around to the last dregs so we hope you do better. You begin in Non-Existence. I trust you will work your way out of it at least into Danger before the week is out. As you are just on post, the penalties do not apply for Non-Existence. But they will after 30 days. So let's get a Dept of Comm and an Ethics Section."

Now of course, if the E/O had to be shot from guns, Dir I&R is at once assigned a DANGER CONDITION complete with penalties as that section was in his/her dept.

If there's no HCO (Div 7, 1, 2) part of the org, the LRH Comm of that org yells for the next senior org to act. And if there's no LRH Comm, the next senior org should see that it's gone by lack of stats or reports or expansion and act anyway.

Now you say, "But that's ruthless! No staff would . . ."

Well, such a statement is contrary to the facts.

The only time (by actual experience and data) you lose staff and have an unstaffed org is when you let low-stat people in. Low-stat personnel *gets rid of* good staff members. An org that can't be staffed has an SP in it!

Orgs where ethics is tight and savage grow in numbers!

Man thrives oddly enough only in the presence of a challenging environment. That isn't my theory. That's fact.

If the org environment is not challenging, there will be no org.

We help beyond any help ever available anywhere. We are a near ultimate in helping. At once this loads us up with SPs who would commit suicide to prevent anyone from being helped and it lays us wide open as "softies" to any degraded being that comes along. They are *sure* we won't bite so they do anything they please. Conditions correctly assigned alone can detect and eject SPs and DBs.

So if we help so greatly we must also in the same proportion be able to discipline. Near ultimate help can only be given with near ultimate discipline.

Tech can only stay itself where ethics is correctly and ruthlessly administered. Admin like ours has to be high because our orgs handle the highest commodity — life itself. So our admin only works where tech is IN. And our tech works only where ethics is in.

Our target is not a few psychiatric patients but a cleared universe. So what does THAT take?

The lowest confront there is is the confront of evil. When a living being is out of his own valence and in the valence of a thoroughly bad even if imaginary image, you get an SP. An SP is a no-confront case because, not being in his own valence, he has no viewpoint from which to erase anything. That is all an SP is.

BUT the amount of knowing havoc an SP can cause is seen easily if only in this planet's savage, cruel wars.

An executive who cannot confront evil is already en route to becoming suppressive.

Next door to the "theetie-weetie" case is the totally overwhelmed condition we call SP (suppressive person).

It is so *easy* to live in a fairyland where nothing evil is ever done. One gets the image of a sweet old lady standing in the middle of a gangster battle with bodies and blood spattering the walls saying, "It's so nice, it's only a boy's game with toy guns."

The low-statistic staff member who never gets his stats up is *making* low stats. He isn't idle. It's a goody-goody attitude to say, "He just isn't working hard." The chronic low-stat person is working VERY HARD to keep the stat DOWN. When you learn that, you can assign conditions and make an org expand.

When stats WON'T come up, you drop the condition down. Sooner or later you will hit the REAL condition that applies.

Conversely, as you upgrade conditions you will also reach the condition that applies. Some staff members are in chronic *Power*. Who ever assigns it? They take over a post — its stats soar. Well, to measure just stats of the post taken over as his condition is false since his personal condition is and has been *Power*. And if it *is* Power, then that personal condition should be assigned.

That is very easy to see.

BUT what if you have a personnel who whenever he or she takes over a post the stat collapses!

Well, you better assign that one too. For just as the one in Power *works* to maintain up stats, the one in the lower condition, whether one cares to confront it or not, works too and is just as industriously collapsing not only his own post stats but also the stats of posts adjacent to his! So he is at least a condition of Liability as the post if vacant would only be in Non-Existence! And as somebody next to it might do a little bit for it, it might even get up to Danger condition, completely unmanned!

DISCREPANCIES

When there are discrepancies amongst statistic graphs, SOME graph is false.

When you find a false graph, you assign anyone who falsified it intentionally and knowingly a condition of Liability for that action is far worse than a noncompliance.

And you had better be alert to the actual area where the false graph originated as it has a tiger in it. Only physical inspection of a most searching kind (or a board if it is distant) will reveal the OTHER crimes going on there. There are always *other* crimes when you get a false report. Experience will teach one that if he really looks.

RECIPROCITY

It is more than policy that one gets the condition he fails to correctly and promptly assign *and* enforce.

It's a sort of natural law. If you let your executives goof off and stay in, let us say, a Danger condition, yet you don't assign and enforce one, they will surely put YOU in a Danger condition whether it gets assigned or not.

Remember *that* when your finger falters "on the trigger."

That *natural* law stems from this appalling fact.

We didn't, a long, long time ago, get in ethics. We goofed. And the whole race went into the soup where it remains to this day.

And if we are to live in this universe at all, at all, we are going to have to get in ethics and clean it up.

Whether that's easy to confront or not is beside the point. The horrid truth is that our fate is FAR more unconfrontable!

Now we have to have highly skilled tech to bail us out. And I assure you that that tech will never get *in* or be used beneficially at all unless:

1. We get ethics in, and

2. Unless Scientology orgs expand at a regular rate.

Only then can we be free.

So that's how and WHY you assign and enforce conditions. It's the only way everyone finally will win.

HCO POLICY LETTER OF 5 JANUARY 1968
ISSUE II

REMIMEO

ETHICS
DEV–T
PL NO. 2 IN EVERY HAT

CONDITIONS ORDERS
EXECUTIVE ETHICS

ANY EXECUTIVE MAY ASSIGN ANY CONDITION AND IMPROVE ANY CONDITION HE ASSIGNS TO ANY PERSON IMMEDIATELY JUNIOR TO HIM ON HIS COMMAND CHANNEL OR WITHIN HIS OWN OFFICE OR AREA.

To assign or improve a condition it is only necessary to write the order and send it to Mimeo or the Duplication Unit which duplicates it and sends the copies to Dir Comm for issue.

The Ethics Officer files these in the ethics files and a copy in the file of the issuing executive.

The E/O must see that the order is complied with and the formula followed. The issuing executive must also demand compliance.

In event of a down statistic of an executive's area of control, the absence of personally issued Ethics Conditions Orders may constitute grounds for removal on a charge of out-ethics in his area.

An executive who tolerates noncompliance, false reports or down stats in his control area without taking personal ethics actions as above is not an executive.

AN ORDER SO ISSUED IS CALLED A "CONDITIONS ORDER" AND IS PUBLISHED ON THE DIVISIONAL FLASH COLOR PAPER, NOT GOLDENROD.

Where a mimeo or duplication line jams, an executive may post the order in his own handwriting on the staff notice board, filing two copies with the E/O, all on his division's color flash paper, using carbon paper and clipboard.

No executive may be removed for issuing Conditions Orders but may be removed for not issuing them in the presence of noncompliance, false reports or down stats.

An executive is defined as anyone in charge of an org, part of an org, a division, a department, a section or a unit.

As Scientology now brings TOTAL freedom, it must also have the power and authority to bring total discipline or it will not survive.

Heavy in-baskets, inability to get things done, down stats, failures, all stem from nonapplication of ethics. If ethics is in, one can get in tech. If tech is in, one can get in admin.

Fast flow depends on a total flow without inspection. Therefore ethics has to be very harsh when errors occur, otherwise the whole line stops.

Students and pcs are also subject to Conditions Orders from their Supervisors and auditors.

L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 12 JANUARY 1969

(Originally issued as Flag Order 1726 of 12 Jan. 69.
Issued as an HCO PL on 25 Mar. 74.)

REMIMEO

HIGH ETHICS FOR HIGH CONDITIONS

(In effect until suspended by HCO PL)

As a lot of us see it, the reason a ship or org can't hold an Affluence or high condition is that while in those high conditions, downstats claim ethics protection, foul up and goof off and crash goes the general condition.

These downstats are going the other way and probably can't stand to see the ship or org in a high condition and evidently actively work the other direction.

This means a few of us work our heads off to get somewhere and others can't pile enough debris on the track to stop it.

Instead of a general high condition protecting a downstat, real ethics protection should be given only upstats.

Therefore:

During the high condition period of an org or ship, THE PENALTIES ARE QUADRUPLE FOR BREAKING POWER, TRIPLE FOR BREAKING AN AFFLUENCE AND DOUBLE FOR BREAKING A NORMAL.

As ethics is heavy in Emergency on down for all, these require no reinforcing.

If it can be shown that a crew member or staff member, by neglect, noncompliance or false report contributed in ANY way to the breaking of a high condition, then any usual ethics action goes by the quadruple, triple, double formula.

Such a member assigned Liability for noncompliance or Doubt for a false report while the ship or org was in Power would have to come up to Normal on post FOUR times.

Each time he got to Normal he would start in again low.

A one week's pay fine becomes FOUR weeks.

Due regard must be taken for the usual stats of the person so that upstats are not hit.

While this might seem to restrain reaching a high condition for the whole activity, only a few of us are pushing it up anyway.

So a usual downstat goofing up during Affluence and getting an overboard goes overboard THREE TIMES.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 30 APRIL 1965

REMIMEO

EMERGENCY, STATE OF

When an org or portion of an org has consistently down statistics (OIC) or numerous noncompliances or offenses, it is declared to be in a STATE OF EMERGENCY. This can be assigned to a unit, subsection, section, department, division or the entire organization. It is not assigned to a person.

A small flag on a pin is placed on the org board at the end of the org board name of the portion or organization. The flag is bright red.

The condition is assigned *only* by the Office of LRH.

Flags are also used for other conditions assigned. These too are assigned *only* by the Office of LRH.

Conditions including Emergency are ended when a new condition is assigned or just ended. This is done *only* by the Office of LRH.

To end an Emergency condition, the portion of Scientology to which it is assigned must follow closely the Emergency Formula. On *any* condition assigned, its formula must be followed scrupulously and the steps taken must be reported one by one by the most senior person in the portion. In the case of an org in Emergency, the reports are made to the Office of LRH Saint Hill by the HCO Executive Secretary or HCO Area Secretary in the absence of an HCO Executive Secretary.

In addition to following the Emergency Formula closely, the following policies apply to the portion in a State of Emergency:

ETHICS STIFFENED

1. A report of an error, misdemeanor or crime on any staff member in that portion counts as five reports in other conditions and is acted on by a Court of Ethics at once.

CREDIT WORTHLESS

2. The credit of the portion is worthless and it may have only those bare things necessary to carry out the Emergency Formula so that it can promote or deliver.

NO NEW PERSONNEL

3. *No* personnel may be added to the portion in a State of Emergency. No new people may be hired on for the portion in a State of Emergency. No personnel may be transferred to a portion that is in a State of Emergency unless an incumbent is transferred off, and in such a way that the personnel of the portion does not increase in number.

RIGHTS

4. Precedent and privilege are suspended for the officers and staff members of a portion in a State of Emergency.

STATUS

5. No staff status may be increased in a portion in a State of Emergency.

If the State of Emergency is continued beyond the allotted time period, then these policies apply:

6. Deputy, Acting and Provisional assignments and appointments are cancelled throughout the portion.

7. The fact of having been part of a portion which did not recover is filed in the personnel files of each staff member present in that portion at the moment the State of Emergency was assigned, and the statement is made on a red sheet of paper.

8. The executive personnel will be ordered before a Committee of Evidence to the end of removing them from the portion or demotion. In the case of an org this is done by a senior org and in the case of Saint Hill by the Office of LRH.

The State of Emergency is a serious condition. For it takes a series of serious blunders to reduce statistics or bring about local infamy or a public or press smear campaign.

The state is not idly assigned and is assigned only after a steadily declining statistic or a series of noncompliances or offenses resulting in overwork for seniors of the org or near catastrophe.

Persons newly transferred into a portion in Emergency or promoted in it are governed by these policies:

9. Persons newly transferred into a portion in Emergency are only affected by the state if they succumb to their working conditions and cease to do a normal job of work.

10. An executive newly transferred to a portion in a State of Emergency is not personally liable to Ethics unless he or she fails to submit Executive Reports on what is observed and new offenses found in the portion.

11. Taking charge of a post in an Emergency portion by new assignment and bringing that post up to Normal Operation is credited in the Office of LRH

personnel records on a white sheet with blue ink and counts heavily in new appointments from Saint Hill.

12. A person in the portion to which the State of Emergency has been assigned at the time it was assigned who is promoted, is only assigned temporarily; but if he or she succeeds in restoring the post's statistics in a reasonable time period, the fact is noted in the Office of LRH personnel records, but the fact is also noted that the person was already in the portion at the time of Emergency and must be cleared of any suspicion that the original Emergency was not traceable to him or her before the assignment can become an appointment.

HOW TO PREVENT AN EMERGENCY

13. Don't accept illegal orders from anyone that are contrary to policy.

14. Do not let the orders of a higher superior be changed by one's immediate superior. Always follow the higher superior's orders and request to see them in writing when in doubt.

15. Don't "cover up" for others. Report offenses to Ethics in writing.

16. Report any immediate superior's illegal orders or alter-is as an effort to endanger one's job and statistics.

17. Do your post by the book.

18. When you actually can't apply a policy report it at once to the Office of LRH Policy Review Section *with all data* (not conclusions) so that it can be reviewed intelligently and meanwhile apply it as best you can.

19. Handle dev-t (off-line, off-origin, off-policy) by sending it back to sender and reporting it to Ethics.

20. If you see people standing about loafing when they should be working report it to Ethics.

21. Report things that need improving to your Secretary or to your Executive Secretary.

22. Don't let technology slip for technology going out is the only basic circumstance in your portion of an org or the org that can put it beyond rapid recovery. Report all alter-is or technical omissions or offenses to Ethics promptly.

23. Do your own job as well as you possibly can and aside from making required reports, let the rest of your portion or org get on with it.

24. If you are not being permitted to do your assigned job by being pulled off it or by being given off-policy orders or by letting an immediate superior endanger your job with illegal orders or alter-is, report it to my office at Saint Hill as well as to your own Ethics Section, even if you have to go outside the org and off channels to get the report (with your home address on it) to me; for there is no surer way to bring about or continue an Emergency condition than by failing to comply with the exact orders being issued in an effort to end it.

We have the whole world to handle now. We must set a high example of teamwork and dedication if we are to bring it off.

The scraggly militia usually go down before the regulars in any campaign. The regular is not even better, man for man, than the militia. The regulars know how to operate as a team. They have confidence in one another. And even when numerically inferior they bring off victory over a rabble by cooperation and discipline amongst themselves.

We are very very few in numbers compared to two-and-a-half billion wogs. We can easily make it technically the world around *IF* we are a high-precision team in a superiorly organized organization.

At the moment I write this policy letter, in the Case-Cracking Section at Saint Hill we are handling *every case* from psychotic or neurotic to Release in eight to thirty-five hours.

The technical impact of this alone is enough to tear man's faulty organizations to ribbons.

To that fact (itself enough) add the actual attainment of real clearing. Once more there goes man as he has known it.

To that add the upper structure of OT and there goes an aberrated universe.

And *only* if we ourselves are a highly functional precision team can we hope to stand up.

We are just at the end of our Dissemination Phase and just at the beginning of our Organization Phase (the Third Phase as you can see on the org board). Our militia days are over.

We have no choice whatever except to become the best organized precision team that has ever been known.

Therefore we must be able to recognize, assign and handle any Emergency that arises in our midst.

L. RON HUBBARD
FOUNDER

Note: Man's organizations never recognized the need for statistics and the recognition of Emergency or its signs. Therefore, for instance, a government bureau, in a condition of Emergency is given the right to buy anything it wants (thus breaking the government as Emergency-type people always have to have before they can do) and is given the solution of putting on personnel and more personnel "to get the work done" when actually it was dev-t of those already there that brought about their Emergency. Thus one realizes one must never pour in more and more personnel when a statistic goes down. One must change the situation, not multiply the numbers of those involved. It tells us at once that man is therefore least efficient in his biggest bureaus! And that his least efficient organization must be his largest organization — you have it — the government. An organization should only increase in size as things get better and never when things get worse.

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 1 SEPTEMBER 1965R
ISSUE III
REVISED 7 JULY 1983

GEN. NON-REMIMEO

MAILING LIST POLICIES

The elementary Emergency Formula for a down org is:

1. Promote Promote Promote.

2. Then change bad spots and reorganize.

3. *Then* economize, cut off *all* purchase orders except postage, communications and rent.

4. Get ready to deliver to the people who will be coming in as a result of the promotion, and deliver.

To promote you *must* have a full mailing list. Anyone who failed to get his mailing list back off old invoices will probably make about thirty or forty thousand pounds less between now and Christmas — which is punishment enough for not following my late '64 orders where the job was skimped.

I see two orgs that are limping also have a very small mailing list. Any connection?

Rush the project ordered in '64 wherein you culled your addresses back from old invoices and you'll have lots of people and money again. Scientologists never get truly lost.

Then get onto book promotion, put a return self-address card for "more info" in the back of every book you sell and get your list up both from the book sale and the card. Omitted that?

Look over the earlier 1965 policy letters that define promotion. That's all it is.

But promotion is successful when you use books to front for you and a flop when you don't. If you think promotion is costly it's because the money isn't invested in getting books sold. Books are your first line of promotion.

Reorganize your book department if it doesn't slam back a book at every orderer within twenty-four hours of the receipt of the order. Why be poor all the time?

1. Place ads.
2. Get mailing lists from anywhere.
3. Get mailing lists by selling books.
4. Sell more books to them.
5. Have good processing available for them and say so loudly.
6. Have good training available for them and say so loudly.

Do just those things and do only those things and you'll be ten times your size with a lot more pay.

It's very easy. Why keep doing it the hard way?

I'm interested in review that only those orgs are poor which haven't been following my direct orders. Well, anybody has a right to be poor, I suppose, if he has an appetite for it. Personally I don't care for it. It must be a carefully acquired taste. As a brand-new idea in those orgs that are struggling, why not get rich by doing what Ron says?

HANDLING NEW ADDRESSES IN CENTRAL ORGS AND OFFICES

Starting right away, this is the drill for new book buyers. This drill also will be kept in and followed.

1. A person buys a book personally or by mail *for the first time*.
2. The invoice is made out with the name and address bright and clear on all copies.
3. One copy goes to shipping or books whether mailed or just handed out.
4. One copy goes to own Address. (This is true of all orgs including city offices. Whatever is done with remaining invoice copies is according to standard accounts procedure.)
5. Address cuts a plate or stencil and puts a *date* on it and a designation like BB 3/3/65, meaning the person bought a book on 3/3/65.
6. This plate is put in File A and receives whatever goes out to File A for six months.
7. Any *new* invoice, indeed *all* invoices, go to Address. If a BB in File A buys more books or training or processing, Address obliterates the BB 3/3/65 on the plate or stencil either by just flattening it on a metal plate or cutting a new stencil in case of less durable stencils, and puts it in the regular active files.
8. The org must not place any lists in the hands of field staff members.

City offices must send a copy of the invoice of all memberships it sells or issues free to the continental office that issues the continental magazine. It must also send a copy of all other invoices for whatever service, including book sales, to the continental office, so that these people can get the minor issues of the continental magazine, plus any other promotional mailings that go out from the continental office. As the city office has collected the membership money for the memberships that the continental office is servicing with magazines, and as the continental office does promotion for the city offices, the senior org draws on the junior org's book account for promotion in the junior org's area.

A city office must maintain some sort of an Address Unit and Central Files. Until it has funds for buying addressing equipment, it keeps a card file for each name in its Central Files, which is anyone who has bought service (includes PE) or bought books, with appropriate abbreviations on the card to match tabbing of a full Central Org Addressograph. Of course, in such a case, when a mailing is to be done by the city office, then it will be necessary for someone to type duplistickers from this card file — but that is still an Address Unit functioning. As it can accumulate funds for equipment, it can get an Elliot addressing machine or some other piece of inexpensive equipment for addressing. It is not conceived that an Addressograph would be secured until the city office had reached full Central Org size. The silk-screen Elliot Addressograph is probably cheaper and easier to use than duplistickers even, as one can write one as fast as a duplisticker.

The names and addresses of city offices must be carried in each issue of every magazine mailed by the continental office, and other broad promotional pieces.

REMIMEO
EXEC SEC HATS
SECRETARY HATS

HOLD THE FORM OF THE ORG DON'T BRING ABOUT DANGER CONDITIONS

As long as executives fail to hold firm the form and channels of the org, their own posts *and* the org will be a confusion. Worse, it will cease to exist.

Executives *must* insist upon the privileges and responsibilities of their posts and not permit bypass and misrouting.

The whole org is run on statistics. It is not run on rumors. The more you follow statistics and the less you listen to rumor the better off you will be.

Orders are issued to form the org and better statistics and that's all. There are no other reasons for orders, chits and upsets. Actions which don't increase statistics should be eliminated. Irrelevant orders and chits having nothing to do with statistics should never be issued.

To hold the form of the org it is vital that:

1. The Ad Council minutes only order secretaries and only on gross divisional statistics as they appear.
2. Executive Secretaries order and chit only secretaries.
3. That secretaries order and chit only directors.
4. That directors only order and chit section officers.
5. That section officers only order and chit persons in charge or, if there are none, the staff directly under them.
6. Exec Secs and secretaries can cross-chit.
7. Directors can request and chit only via secretaries when they cross divisions.
8. Anyone can file a Job Endangerment Chit with Ethics on anyone. This however is normally filed on a direct senior and only when explicit policy has been violated by an order or chit on one's own post and only when the order or chit might worsen a statistic.
9. If all else fails, petition the Office of LRH.

SEC EDs

Sec EDs issued by the Ad Council may only change secretaries as personnel. They can advise the secretary on personnel but may not demote, transfer or dismiss a secretary's personnel (exception, when sweeping an org of temporaries, staff that hasn't passed Review for Staff Status I).

An Ad Comm's orders forwarded to the Office of LRH for a Sec ED always go via the Ad Council. But again an Ad Comm may only order directors and may not demote, transfer or dismiss a director's personnel.

A director should order officers.

Officers should order in-charges.

When personnel is assigned directly to an executive, such as a personal secretary, one may of course order or chit that person directly as there is no command echelon.

REASON

Danger conditions are handled on bypass. Where a Danger condition is assigned, the senior can bypass anyone to get the job done and does.

The conditions in sequence are:

6. Power
5. Power Change
4. Affluence
3. Normal
2. Emergency
1. Danger
0. Non-Existence.

It is true of all conditions that if you use one lower than you are in, you will bring the *next* lower one about. If you use the Normal Operation Formula when you are in Affluence you will certainly descend into Emergency.

Therefore, if you are in Normal or Emergency condition and start bypassing, you will quickly descend into Danger condition (statistics will drop steeply) and achieve the only condition below Danger which is Non-Existence.

Thus, if you bypass you infer the condition is Danger when it isn't. And you drop the org or any portion of it into Non-Existence.

So don't bypass unless you *are* in Danger condition. A Danger condition exists where statistics show continuing Emergency or a steep, steep fall. If a Danger

condition exists, you handle the situation, bypass anyone at all and then the personnel who ignored it. So if you bypass all the time (Exec Secs issuing orders to directors, secretaries ordering officers, directors ordering general staff members), you will infer a Danger condition and get Non-Existence of the section, department, division or the whole activity.

Moral: Only when a Danger condition exists should a senior bypass the command chain, so if you are only in Emergency or only in Normal Operation or even Affluence, DON'T BYPASS or you will crush statistics.

SUMMARY

Learn your org board.

Make your staff learn it.

Handle the org by statistics only.

Order only your immediate juniors.

Don't bypass (except in Danger condition).

Don't infer a Danger condition that doesn't show on a graph.

Hold the org firm by holding its lines and chain of command firm.

And you will prosper and expand.

REMIMEO
STAFF HAT

DANGER CONDITION, WARNING THE JUNIOR WHO ACCEPTS ORDERS FROM EVERYONE

It has been found in the hearings on personnel after a Danger condition was assigned that:

A PERSONNEL UNDER YOU WHO ACCEPTS ORDERS FROM ANYONE WHO COMES ALONG WHO HAS ANY RANK WILL PUT YOUR SECTION, DEPARTMENT OR DIVISION AND *YOU* INTO A DANGER CONDITION AUTOMATICALLY.

This operates as a permanent bypass.

If you allow it or don't catch it in time, your statistics will fall like a shot duck.

Therefore if you find a junior going off lines for his orders and not refusing all orders from others you *must* put him in a Danger condition. For if you don't you will soon be in one yourself.

Danger condition is a very funny thing. It actually exists as a natural phenomenon in organizations, hitherto undetected.

If bypass of command channels occurs, the exact formula will begin to operate whether anyone says so or not. And the only cure for this plague is to follow the formula itself. *That* works. Nothing else does.

Be careful of that junior who accepts anyone's orders. He or she is like a charge of dynamite under an executive. Someday it will all blow up.

Juniors must follow the orders of their own seniors or Danger condition results.

DANGER CONDITION
RESPONSIBILITIES OF DECLARING

BYPASS = Jumping the proper terminal in a chain of command.

If you declare a Danger condition, you of course must do the work necessary to handle the situation that is dangerous.

This is also true backwards. If you start doing the work of a post on a bypass, you will of course unwittingly bring about a Danger condition. Why? Because you unmock the people who should be doing the work.

Further, if you habitually do the work of others on a bypass, you will of course inherit all the work. This is the answer to the overworked executive. He or she bypasses. It's as simple as that. If an executive habitually bypasses, he or she will then become overworked.

Also the condition of Non-Existence will occur.

So the more an executive bypasses, the harder he works. The harder he works on a bypass, the more the section he is working on will disappear.

So purposely or unwittingly working on a bypass, the result is always the same — Danger condition.

If you *have* to do the work on a bypass, you *must* get the condition declared and follow the formula.

If you declare the condition, you must also do the work.

You must get the work being competently done, by new appointment or transfer or training or case review. And the condition is *not* over when the hearings are over. It is over when that portion of the org has visibly, statistically recovered.

So there are great responsibilities in declaring a Danger condition. These are outweighed in burdensomeness by the fact that if you DON'T declare one on functions handled by those under you which go bad, it will very soon catch up with you yourself, willy-nilly and declared or not *you* will go into a Danger condition personally.

There's the frying pan — there's the fire. The cheerful note about it is that if the formula is applied you have a good chance of not only rising again but also of being bigger and better than ever.

And that's the first time *that* ever happened to an executive who started down the long slide. There's hope!

There is one further footnote on a Danger condition. I have carefully studied whether or not HCOBs and policy letters and actions by me were bypasses. And a search of statistics refutes it, as when I give the most attention to all echelons of an org, wherever the org is, its statistics rise and when I don't they fall. Therefore we must assume that advice is not a bypass, nor is a general order by me.

Where there is disagreement on a command channel I am trying to forward *then* a bypass occurs.

So we can assume correctly on experience and statistics that Danger conditions occur only when there are fundamental disagreements on a command channel.

If you yourself then ferret out the disagreement ones of those under your orders, you will clear your command lines.

Review can always find disagreements when they exist with a meter.

Where Danger conditions are declared, the declaring executive should make an effort to find the disagreement with himself, policy, the org or Scientology as a basic review action on persons found responsible for a Danger condition. The only errors are not to look for them and not to find *all* the disagreements the person has on the subject of his superiors and post, policy, technology or orders.

This is why a low leadership-survey-grade person can be counted on to put wherever he is in Danger. His disagreements are too many and he doesn't execute and thereby secretly puts his superior into bypassing and a Danger condition inevitably occurs.

It needn't occur.

We have the data, now.

GEN. NON-REMIMEO
EXEC SEC HATS
LRH COMM HAT

EXEC DIV
DANGER CONDITIONS

INSPECTIONS BY EXECUTIVE SECRETARIES, HOW TO DO THEM

An Executive Secretary who does not get around his or her divisions now and then and see what is going on can make a lot of mistakes.

Inspections are desirable. But when an Executive Secretary makes one he or she commonly issues an order or two, and if this is done without that division's secretary being present it is a bypass and willy-nilly begins the formula of the Danger condition and can unmock a section or department or even that division.

A senior can inspect, chat, advise but must never issue an order on a bypass unless he or she means to handle a dangerous situation and start the formula. For the formula will run, regardless, if a bypass begins.

The way to inspect, then, is to collect the seniors and go around, and issue orders only to the next senior on the command channel, never to his or her staff.

Example: HCO Exec Sec wants to see if books are stored safely. The HCO Exec Sec can nip out and look on his or her lonesome *providing* no orders are issued. Or the HCO Exec Sec grabs the Dissem Sec and the Dir Pubs and the head of the books section and goes out and looks. And if the HCO Exec Sec wants a change in it all, the order is issued to the Dissem Sec only.

It is a great temptation to tell Books In-Charge how and where to put what, for an HCO Exec Sec is one normally because he or she is smarter and more knowledgeable about orgs. But if one is to advise Books In-Charge, one had better have the rest of the command chain right there and talk to the next senior below HCO Exec Sec.

You would be surprised how many random currents a senior-type senior like an Exec Sec can set up with a few comments that skip the command channels and what a mess it can make for a secretary or director, no matter how wise the comments.

Secretaries who order a director's officers in the absence of the director or, much worse, section staff without director or section officer thereby court and make trouble.

You can unmock a section or a whole department by sloppy command lines. It is not merely the "correct" thing. It's the vital thing to follow command channels as nobody can hold his job if he is being bypassed by a senior. He *feels* unmocked, and the Danger condition formula begins to unroll.

The correct way to route an order to a person two or three steps down the command channel is to tell the next one below you to order the next, and so on.

If you have to tell the Director of Tech Services to have his Housing Officer post a list of houses on the bulletin board, you really don't have a Director of Tech Services anyway as he would have done it as the natural thing. So an order in such an obvious case is not the right comm. The right comm is an ethics chit on the Dir of Tech Services for not posting the available houses on the bulletin board.

A smart senior is a senior because he is smarter. But when this is not true and the junior is smarter, you get an intolerable situation where the senior interferes. If a dull senior interferes continually on a bypass, it's a sure way to start a mutiny. And a senior who doesn't inspect or get inspections done does not know and so looks dull to his juniors who have looked.

The safe way in all cases is to issue orders that are very standard on-policy and obvious and to issue them to the next one on the command channel and then in the future inspect or get an inspection. If on the inspection one finds noncompliance with a standard on-policy order, one promptly calls for a hearing on the next one down the line who received the order.

Here's a terribly simple example: Org Exec Sec sees statistic for Tech Div down. Issues order to Tech Sec, "Get the gross divisional statistic up at once." Now nothing could be plainer or more standard. In two weeks the Org Exec Sec looks at the statistic, sees it is even further down and calls for a hearing on the Tech Sec for noncompliance or a Comm Ev to get all the evidence in about the matter.

This is about as basic as you can get with an inspection, an order and a further action all by a senior, the inspection being done by OIC and reported by graph.

Life in actual fact is very simple and an org is today a very elementary mechanism.

It is easy to run an organization providing one makes it run and handles things in it that refuse to run.

Where an Exec Sec is baffled on occasion is the apparent unwillingness of a section to function. Now this is so far down the command channel that info on it does not easily arrive back at the top.

The thing to do where possible is personally inspect, or get it inspected. One often finds the silliest things.

Example: Book Shipping statistic is really down, man, down. One orders and harangues and argues trying to get books shipped. One gets the quantity of books looked into. It's okay. One gets shipping materials looked into. They're okay. A Shipping Clerk is on the org board. But orders to the Dissem Sec just never get books

shipped. So finally one gathers up the Dissem Sec, Dir Pubs and Books In-Charge and goes down to Book Shipping. Lo! They have been building a machine that wraps books tightly when a rock is rolled off a bench! (This actually happened in DC in about 1958.) It has taken a month to build it and will require another to finish it and one and all in that division are convinced this is the answer. The order? "Break that machine up and start wrapping books by hand and I want that backlog gone in one week." To the Dissem Sec, of course, in front of everyone for his soul's sake. And publish the order in writing as soon as possible.

So you see, you have to inspect because what seems logical and okay to juniors may be completely silly. Remember, that is why they are juniors and have seniors.

Frankly you can never guess at what holds some things up. You have to look. Often you can solve it for them. But solve it with their agreement and on command channel if you want it done.

You can't always sit in an ivory tower and issue orders. You have to know the ground and the business.

Over a period of fifteen years of active management of these organizations I have a pretty good idea of what can happen in one. And to one.

I try to be right more often than wrong. I don't try to be perfect as one's best plans are often goofed. I try to get done what can be gotten done. And I carry a *little* more pressure on the org than it can really accomplish.

I inspect. You would be surprised at how often I do and what I find out.

It sometimes looks to people that I use a crystal ball in taking the actions I take because they see no possible route by which the data could have reached me.

They forget how many lines I keep in operation. And also, I *do* operate on a "sixth sense."

For instance all accounting summaries today are done for governments, not for management. A manager has to develop a sixth sense concerning financial status of the org. One has to be able to *know* when the bills are up, the income inadequate and to know when to promote hard and stall creditors *even with no data from Accounts* or *contrary data that proved false.*

Today with OIC this is easy. But I ran orgs successfully with no OIC for years just by sensing the financial situation. In theory Accounts keeps one fully posted. In actual fact they often goof in filing bills owed and even in depositing money.

There are many things one can sense, OIC or no OIC.

The thing to do is to inspect or to get the area you sense is wrong inspected.

I have today LRH Communicators. They are pushing projects home. They also can tell me why projects won't push home because they have *looked.*

An Exec Sec or a secretary has HCO's Inspection and Reports and a time machine to check compliance. And this is how it should be.

But nothing will substitute for inspection by one or for one.

And the Exec Sec who thinks it's a desk job is being very naive. The org would run better if Exec Secs had no in-baskets.

If an Exec Sec watched statistics like a hungry cat at a mousehole and inspected like fury every time one went down or stayed down, the org would expand and prosper.

Providing inspection was done.

DANGER CONDITION DATA

WHY ORGANIZATIONS STAY SMALL

The size of an organization depends upon this law:

A LARGE ORGANIZATION IS COMPOSED OF GROUPS. A SMALL ORGANIZATION IS COMPOSED OF INDIVIDUALS.

If you *really* understand this principle and use it properly you will be able to have a large organization.

There are other factors such as (1) the desirability and quality of one's commodity, (2) the able promotion of it, (3) the ability of the heads of groups in the organization to catch dropped balls and (4) the close following and comprehension of the policies of the organization and its groups.

But the gross monitoring law is as above. When one does not know this and apply it one has a small, semibankrupt organization that overworks everyone and underpays.

This rule applies to a planet or a nation and is most readily seen in these gross terms. A planet with nations will be far more prosperous than a planet with one central government governing the individuals of a planet.

Socialism fails (and it always fails) because of two factors:

a. The government seeks to run the individual, and

b. Socialism unmocks *companies*.

At this writing the prosperity difference (and there is one, Russia currently starving) between the democracy of the US and England and the Super Socialism of Russia is that the "West" still has companies and the "East" (Russia and China) have abolished them. Russia seeks to run the individual. It has collective farms, etc., but they won't leave a manager alone — to manage — they govern his workers.

To the degree that England and the US tax the *individual* and seek to govern him they will dwindle in size.

England at this writing is undergoing an unmock of the whole empire *solely* because it is bypassing the manager and the governor and directly seeking to govern individuals through income tax, "benefits," etc.

The US is about to come to pieces. Like all big countries on the way out, it never looks so good as when it is already about to fall apart. The US is bypassing the states and US companies and is therefore putting the governors, managers and the states and companies in Danger condition. This, unrepaired, will unmock states and companies and collapse the subgroup on which the big group called the US depends, for an organization is composed of *groups*. Non-Existence is the condition just below Danger. A Danger condition carried on too long drops down scale to Non-Existence. A large group made up of Non-Existences is of course nonexistent itself. Thus bypass by the heads of a big organization of the heads of its internal small organizations works toward Non-Existence. It is really quite simple.

To make an organization get smaller all one has to do is bypass the subgroups and run the individuals only and the org will collapse or struggle along at near-collapse; NO MATTER HOW BRIGHT ITS MANAGER MAY BE OR HOW HARD HE OR SHE WORKS OR HOW BRIGHT THE STAFF IS, OR HOW GOOD THE PRODUCT, the violation of the law in the second paragraph will bring decay.

Fantastic, isn't it?

All one has to do to make an organization grow is apply the law that a large organization is composed of groups. It is NOT composed of individuals.

In absolute proof of this, in a tiny org it is always observed that everyone there wears each one all the hats. It is a madhouse of individual cross-endeavor. Show me an org that stays small and I will show you an org where every staff member is wearing all the hats in the place. They *can't* grow because they violate the law that a large organization is composed of groups.

Russia, just yesterday sweeping the world, has begun to lose ground and her empire withdraws. Russia won't allow companies. She never says to the head of Georgia, "Get your statistics up, bub" and leaves him to it. Instead she governs the Georgian individual with spies, secret police and even income tax and is more apt to shoot the head of Georgia if his statistics *do* rise as he is then looked on by a paranoid central government as capable enough to be a menace. Russia once governed via cells and did so as long as she was expanding. Now she has income tax! Russia expanded despite bad management solely because she was composed of cells and collectives—but she went too far and erased the individual entirely, so, though growing, she starves. Her groups were mainly dedicated to politics, not production, which is a frailty of governments anyway. But the basic group *is* composed of individuals. (For heaven's sakes don't tell Russia as we don't want her growing—tell her she *must* govern her individuals individually and she'll vanish! You can tell the US, if you like, but only because no president yet ever listened to anything except his popularity poll and, with only a four-year career, isn't likely to. In the US, the government itself vanishes regularly and only the companies, with plenty of interference, keep the civilization going.)

England's sad old empire was great as long as India was run by the East India Company, etc., etc. Its colonies and dominions did fine right up to the moment the government in Westminster and Whitehall started to run the natives as individuals, bypassing the company-controlled colonies. Then the "Empire" started to go broke because *it never was a political empire* but a commercial one. As a political empire it uniformly failed until about 350 years ago it began to charter companies to rule and govern foreign lands. Then it got an "empire." When it began to bypass its company

heads and set up crown-controlled governors and then bypass these, it ceased to be an English empire and it looks today that soon there won't even be an England. It could not control even one colony the moment it started to govern individual colonial citizens on a bypass of the colonial companies.

You can use the same argument *they* use. That "concentrating only on groups is hell on the individual." Marx used that line. Well it isn't true. When you get too big a group, the individual in it, suffering the whole pressure of the state, *suffers*. The reverse is true — "by concentrating only on groups the individual is protected and prospers."

Now we get to the philosophic question in the law, how large is large, how small is small?

Oddly this is easily answered, unlike most philosophic conundrums. You have to have the answer to "how big should a group be in order for the individuals in it to be effectively managed without oppression in order to get the job done?" That asks and answers it. A correct group size is one where the individuals in it are not made too small by the group being too large. This is a ratio question. The government of England! and the individual Englishman are of incomparable magnitude. What the hell can Joe Cockney, a citizen, do against the government of England! Nothing! So Joe Cockney goes to pieces. You can't have a comm line between a Billion-horsepower motor and one grasshopper! Something is going to explode and it isn't the Billion-hp motor. It's the grasshopper. Therefore when the management unit is too big, the individual (despite all the protection laws in the world) becomes apathetic and can't work or doesn't see himself as important enough to bother about.

So what is a proper-sized basic group?

A GROUP IS A PROPER SIZE WHEN THE INDIVIDUALS IN IT CAN EASILY APPROACH THE MANAGER OF THAT GROUP ON A FAMILIAR, FRIENDLY BASIS AND BE SURE HE KNOWS WHAT THEY'RE DOING AND WHY AND IF THEY'RE DOING IT.

The individual in that group is not oppressed. His charm counts. He feels up to arguing with that manager. The executive (with a deputy on his side) feels up to confronting the rest of the group. His own personality counts.

The only reason you have strikes and labor unions is that this group law has been violated. Too many individuals in the group for them to know intimately their manager on a friendly, cooperative basis.

This is all Marx is about. Marx is really a protest against too big a group solved by creating a protective state (an overwhelmingly large group) that "rescues" the individual! So communism is a mess. For by making a state group, one overwhelmed the individual and sure enough the only criticism of communism that a communist will tolerate is that it has too big a "bureaucracy," by which he means too big a government for an individual to confront. Communism goes even further. It abolishes the individual utterly! It *forces* him to be a group. And that is very bad, for individuals are the building block of the small group. So Marx neither knew nor solved the basic problem of government. He didn't know the above two laws about organizations and groups so communism, supposed to solve individual oppression, is the most individually oppressive form of government on this planet.

How many individuals can effectively compose a group?

It depends on the ability of the manager to handle men on an individual basis. This varies. But such men or women as can handle a large number are very, very rare. So we take a *safe* answer.

A fairly safe answer is six — the manager of the group plus five individuals, one a deputy manager.

This is determined by the answer to this question:

How many subordinates are you willing to work with on the job? Five others is about all you'd care to stretch it. Two others would be too comfortable — even too dull. But you can stretch it up to five.

Thus we could stretch out an org composed of groups of six persons — a manager, a deputy and four — making six maximum in each group.

And you now have the size of the largest building blocks it takes to make a big org. Six persons in each.

If we pyramid this we have (each maximum):

Five staff members and their in-charge as a unit;

Five units and the section executive in a section;

Five sections plus the department's director in a department;

Three departments and the secretary, a deputy and a communicator in a division;

Four divisions in a portion and the Org Exec Sec and a deputy and a personal sec;

Three divisions and the HCO Exec Sec plus her deputy and a personal sec in the HCO portion.

Or with a full Exec Division setup:

Four Exec Sec Comms in an Office and the Org Exec Sec and a personal sec;

Three Exec Sec Comms in an Office for the HCO Exec Sec and her personal sec.

But we build *down*wards by groups of six if we expand further, rarely exceeding five and an executive.

You see then that the moment the HCO Exec Sec starts handling Address In-Charge, the jump is too great as it puts Address In-Charge up against the equivalent of the total executives of units and sections of HCO! It makes his group too big. It makes him too small (being such a small part). He gets rattled, feels oppressed, tends to snarl because he is overwhelmed — his group is too big so he is too small. Simple as that.

So long as an executive only handles two, three, four, five people, he *can* handle his job because they know him. The people under him can handle *their* subgroups so long as they contact only two, three, four, five people and themselves.

For instance, so long as there are only five Continental Orgs, Exec Sec Communicators will feel comfortable, providing the Continental Orgs have each two, three, four, five orgs under them and have in their turn Exec Sec Communicators.

So proper organization for expansion builds in blocks of six maximum — five plus an executive. That can be five groups plus an executive as you go up or five staff members plus an executive as you go to the bottom.

Wherever this is violated, the organization (whether a nation or a company or us) will dwindle. Where it is kept, the organization will grow.

I warn you that five-plus-an-executive-sized groups is hard work, even a strain at times, but it can be done. Six or seven plus an executive is quite too much. And a government versus Joe Doakes is a complete smash, as Joe is only maybe 1/70,000,000th as big as the government!

So *never* bypass. Completely aside from the true mechanics of the Danger Formula where bypass results in Non-Existence, it is hell on the executive *and* every member of the organization to have continual violation of the maximum group's size.

If an executive feels overworked, even with all dev-t cared for and policed, then that executive has below him violations of group size *and* is bypassing some point that should have an executive below him, with a group under that executive. The overworked executive is trying to handle more than five other people directly (five staff members or five group executives).

It's like boxes in boxes in boxes. But in this case six boxes at the most fit comfortably.

If a department has eight sections under its director, then we have to group the sections by giving the director two who each control four sections. This is a very comfortable director, for he has a group of two plus the director. He can loaf. But his assistants will sweat. So add one assistant and divide the department's sections into three groups — three, three and two — and you will have a more efficient department.

That's the way you juggle it about to prevent overwork by executives and overwhelm of individuals.

If you want to increase efficiency on a five-plus-executive group, always make one of the five a deputy and slightly senior to the other four. The four can then approach the deputy to see if they should approach the executive on matters they feel uneasy about. This adds a gradient.

There are various ways to juggle this about. An executive with seven sections can take three himself and give a deputy four, etc. Lots of ways to do it but just stay at or below one plus five if you can. The senior to the group exec is not counted as a member of the group.

Here and there we violate this. A Comm Ev is not as acceptable as a Hearing because one person faces more people. Jury trials are a horrible strain and a cruelty because one has to face about fourteen people! (Judge, prosecutor, jury.) Too many!

So those are the laws which underlie organization.

But you can have it all on the org board and not practice it and collapse. If an Exec Sec is approaching fifteen staff members past their executives, it can wreck the

place as the staff members go into apathy, the secretaries go into Non-Existence and bang! no org.

So completely aside from Danger condition violations of *following* proper group organization will bring any organization, a planet, a state, an org, into a mess.

This is what underlies the decline and fall of civilizations: the state begins to govern the individual!

An organization is composed of *groups,* not individuals. And that truth followed and practiced in the flesh as well as on paper will bring about a happy civilization, a happy nation and a flourishing org.

SUMMARY

A LARGE ORGANIZATION IS COMPOSED OF GROUPS, A SMALL ONE IS COMPOSED OF INDIVIDUALS.

The primary difference between the opulent West and the starving East is that the West still permits companies. This means to some extent the Western nations are composed of groups so they are still somewhat successful.

A GROUP IS A PROPER SIZE WHEN THE INDIVIDUALS IN IT CAN EASILY APPROACH THE MANAGER OF THAT GROUP ON A FRIENDLY BASIS AND BE SURE HE KNOWS WHAT THEY ARE DOING AND WHY AND IF THEY ARE DOING IT.

More than five persons plus their executive tends to be too large a group.

The five persons under an executive can of course be executives of groups. And the five persons below each of *those* executives can be executives of groups.

If things aren't organized this way, the individual is crushed. The executive is crushed by overwork and the persons under him are overwhelmed.

Bypass of an executive, aside from putting him in danger, overwhelms the members of his group and makes them do less and makes them feel attacked and lessens their sense of their own power.

Two plus an executive is also a group but the executive is not really working to capacity.

With all dev-t cared for, an executive will be overworked if he is over more than five subordinates.

The principal reason orgs stay small is no matter how fancy their org boards they do not actually practice what is on the board but bypass or pay no real attention to command lines and so in actual practice are only one or two oversized groups—which results in them staying small and being overworked and also underpaid as their system in actual practice is inefficient.

The moral is, practice proper grouping as provided by the org pattern, never bypass and so expand and have a happy staff.

RESPONSIBILITY, CONTROL AND DANGER CONDITIONS

Refs:

HCO PL	16 Jan. 66R Rev. 29.11.79	DANGER CONDITION
HCO PL	19 Jan. 66 III	DANGER CONDITION RESPONSIBILITIES OF DECLARING
HCO PL	9 Apr. 72R Rev 1.12.79	CORRECT DANGER CONDITION HANDLING
HCO PL	18 Feb. 72	Exec Series 8 THE TOP TRIANGLE
HCO PL	19 Dec. 82 II	REPAIRING PAST ETHICS CONDITIONS

An executive can tend to occasionally sever somebody's responsibility line. It's a technical point.

As one definition of responsibility is to defend one's control of an area, an exec can sometimes tend to sever that control point.

That's the mechanism of a Danger condition.

If every time an exec found it necessary to bypass it was accompanied with another Danger assignment and if those conditions were actually done, that would be handled.

That gives us the Why of how an exec can get repeatedly pulled into an area: It's failure to assign and get executed the Danger condition. That's the tech that's out. You see, the exec's juniors, by not doing their job, sever their control of their area.

PAST CONDITIONS

I recall a unit that was generating a lot of trouble and flak, and ended up being bypassed. Its stats crashed and they still had never really recovered six years later. And the reason was the undone Danger condition. They were never assigned a condition of Danger, and so those that had done the bypassing were stuck with this unit on their

plates right on up the line. So when you have an area that is continually a source of trouble, a past Danger condition never assigned can be looked for and repaired.

This is the tech on Danger conditions when seen against the definition of responsibility. It opens the door to a handling.

HCO POLICY LETTER OF 4 APRIL 1972
ISSUE I

REMIMEO

ESTABLISHMENT OFFICER SERIES 14

ETHICS

The normal level of an unhatted, dev-t, nonproducing org is out-ethics.

The reason you see so many heavy ethics actions occurring — or situations where heavy ethics actions should occur if they aren't — in such an org is that it has its EXCHANGE flows messed up.

It is important to know this fact as this factor alone can sometimes be employed to handle persons in the area whose ethics are out.

CRIMINALITY

Unless we want to go on living in a far nowhere some of the facts of scenes have to be confronted.

An inability to confront evil leads people into disregarding it or discounting it or not seeing it at all.

Reversely, there can be a type of person who, like an old-time preacher, sees nothing but evil in everything and, possibly looking into his own heart for a model, believes all men are evil.

Man, however (as you can read in HCOB 28 Nov. 70, C/S Series 22, PSYCHOSIS), is basically good. When going on some evil course he attempts to restrain himself and caves himself in.

The Chart of Human Evaluation in *Science of Survival* was right enough. And such people also can be found by the Oxford Capacity Analysis where the graph is low and well below a center line on the right.

This sort of thing can be handled of course by auditing but the Esto does not depend on that to handle his staff's problems.

Criminal actions proceed from such people *unless checked* by more duress from without not to do an evil act than they themselves have pressure from within to do it.

Criminality is in most instances restrained by just such an imbalance of pressures.

If you have no ethics presence in an org, then criminality shows its head.

Such people lie rather than be made to confront. They false report — they even use "PR," which means public relations, to cover up — and in our slang talk "PR" means putting up a lot of false reports to serve as a smoke screen for idleness or bad actions.

Unless you get ethics in, you will never get tech in. If you can't get tech in, you won't get admin in.

So the lack of ethics permits the criminal impulse to go unchecked.

Yes, it could be handled with tech. But to get money you have to have admin in.

Unless there is ethics and ways to get it in, no matter how distasteful it may seem, you will never get tech and admin in.

Of course there is always the element of possible injustice. But this is provided against. (See HCO PL 24 Feb. 72 I, INJUSTICE.)

When ethics is being applied by criminal hands (as happens in some governments) it can get pretty grim.

But even then ethics serves as a restraint to just outright slaughter.

Omitting to handle criminality can make one as guilty of the resulting crimes as if one committed them!

So criminality as a factor has to be handled.

It is standardly handled by the basic ethics PLs and the Ethics Officer system.

EXCHANGE

The unhatted, unproducing staff member, who is not really a criminal or psychotic, can be made to go criminal.

This joins him to the criminal ranks.

The ethics system also applies to him.

However there is something an Esto can do about it that is truly Esto tech.

This lies in the field of EXCHANGE.

If you recall your Product Clearing, you will see that exchange is something for something.

Criminal exchange is nothing from the criminal for something from another.

Whether theft or threat or fraud is used, the criminal think is to get something without putting out anything. That is obvious.

A staff member can be coaxed into this kind of thinking by

PERMITTING HIM TO RECEIVE WITHOUT HIS CONTRIBUTING.

This unlocks by the way an age-old riddle of the philosophers as to "what is right or wrong."

HONESTY is the road to SANITY. You can prove that and do prove it every time you make somebody well by "pulling his withholds." The insane are just one seething mass of overt acts and withholds. And they are very physically sick people.

When you let somebody be dishonest you are setting him up to become physically ill and unhappy.

Traditional Sea Org ethics labeled noncompliance as Liability and a false report as Doubt.

And it's true enough.

When you let a person give nothing for something, you are factually encouraging crime.

Don't be surprised that welfare districts are full of robbery and murder. People there give nothing for something.

When *exchange* is out the whole social balance goes out.

Every full scholarship ever given by an org wound up in a messy scene.

When you hire a professional pc who just sits around making do-less motions while people audit him and contribute to him DO NOT BE SURPRISED IF HE GETS SICKER AND SICKER.

He is contributing nothing in return and winds up in overwhelm!

Similarly if you actively prevented someone from contributing in return, you could also make him ARC broken and sick.

It is EXCHANGE which maintains the inflow and outflow that gives a person space around him and keeps the bank off of him.

There are numbers of ways these flows of exchange can be unbalanced.

It does not go same out as comes in. Equal amounts are no factor. Who can measure goodwill or friendship? Who can actually calculate the value of saving a being from death in each lifetime? Who can measure the reward of pride in doing a job well or praise?

For all these things are of different values to different people.

In the material world the person whose exchange factor is out may think he "makes money." Only a government or a counterfeiter "makes money." One has to produce something to *exchange* for money.

Right there the exchange factor is out.

If he gives nothing in return for what he gets, the money does not belong to him.

In Product Clearing many people it was found that some considered their food, clothing, bed and allowance were not theirs because they produced. They were theirs "just by being there." This funny "logic" covered up the fact that these people produced little or nothing on post. Yet they were the first to howl when not getting expensive (to the org) auditing or courses or tech!

Thus such a person, not hatted or made to produce, will get ill.

It is interesting that when a person becomes productive his morale improves.

Reversely it should be rather plain to you that a person who doesn't produce becomes mentally or physically ill. For his *exchange* factor is out.

So when you reward a downstat you not only deprive upstats, you also cave the downstat in!

I don't think welfare states have anything else in mind!

The riots of the ancient city of Rome were caused by these factors. There they gave away corn and games to a populace that eventually became so savage it could only enjoy torture and gruesome death in the arena!

A lot of this exchange imbalance comes from child psychology where the child is not contributing anything and is not permitted to contribute.

It is this which first overwhelms him with feelings of obligation to his parents and then bursts out as total revolt in his teens.

Children who are permitted to contribute (not as a cute thing to do but actually) make noncontributing children of the same age look like raving maniacs! It is the cruel sadism of modern times to destroy the next generation this way. Don't think it isn't intended. I have examined the OCAs of parents who do it!

So if a person is brought up this life with the exchange all awry, the Esto has his hands full sometimes!

He is dealing with trained-in criminality!

WHAT HE CAN DO

The remedy is rather simple.

First one has to know all about EXCHANGE as covered in the Product Clearing policy letters.

Then he has to specially clear this up with people who do not produce.

He should get them to work on it as it relates to ALL THEIR DYNAMICS IN RELATIONSHIP TO EVERY OTHER DYNAMIC.

That means he has to clear up the definitions of dynamics with *care* and then have the person draw a big chart (of his own) and say what he gives the first dynamic and what it gives him. Then what he gives the second dynamic and what it gives him. And so on up the dynamics.

Now, have him consider "his own second dynamic." What does his second dynamic give his first dynamic? What does his second dynamic give the second dynamic and what does it give him?

And so on until you have a network of these exchange arrows, each both ways.

Somewhere along the way, if your TRs are good and you have his attention and he is willing to talk to you, he will have quite a cognition!

That, if it's a big one, is the end phenomena of it.

And don't be surprised if you see a person now and then change his physical face shape!

CONDITIONS BY DYNAMICS

An ethics-type "action" can be done by giving the person the conditions formulas (pages 383, 438, 442, 443, 444, 445 of Vol 0, Basic Staff Hat. HCO PL 14 Mar. 68 — page 437 — gives one the table.)

Method 4 the person on the table of conditions and pick up any other misunderstoods.

Have the person study the *formula* of each of these conditions in the table so that he knows what they are and what the formulas are.

When he has all this now with no misunderstood words you must clear up the words related to his dynamics 1 to 8 and what they are.

Now you're ready for the billion-dollar question.

Ask him what is his condition on the first dynamic. Have him study the formulas. Don't buy any glib PR.

Don't evaluate or invalidate. When he's completely sure of what his condition really is on the first dynamic he will cognite.

Now take up the second dynamic by its parts — sex, family, children. Get a condition for each.

Similarly go on up each one of the dynamics until you have a condition for each one.

Now begin with the first dynamic again.

Continue to work this way.

You will be amazed to find he will come out of false high down to low and back up again *on each dynamic*.

Somewhere along the line he will start to change markedly.

When you have a person in continual heavy ethics or who is out-ethics (ethics bait, we say) and who is floundering around, you can do an S&D on him and quite often save his future for him.

When you have such a person you do this one first before you do the Exchange by Dynamics.

In other words, you use this on "ethics bait" and then when he's come out of such, you do Exchange by Dynamics on him.

SUMMARY

When all looks black, and you are getting false reports, and the things said done were not done and what was really being done were overt products and despite all your work the stats just *won't* go up, you still have three answers:

1. GET IN ETHICS ON THE ORG.

2. GET EXCHANGE DONE ON INDIVIDUALS.

3. GET IN CONDITIONS BY DYNAMICS ON THE ETHICS BAIT.

And after that keep a strong, just Division 1 Dept 3.

You'll be amazed!

FOUNDER

ADMINISTERING JUSTICE

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 17 MARCH 1965
ISSUE III

GEN. NON-REMIMEO

HCO (DIVISION 1)

JUSTICE HAT

ADMINISTERING JUSTICE

There are some things to firmly keep in mind when you have to use HCO's justice function:

1. Only the criminally inclined desire a society in which the criminal is free to do as he pleases.

2. Only the criminally inclined are frightened enough of justice to protest and complain that it exists.

3. Without order nothing can grow or expand.

4. Justice is one of the guards that keeps the channel of progress a channel and not a stopped flow.

5. All reactive minds can exert pain and discomfort on a being. They demand the suppression of the good and the production of the bad. Therefore, in administering justice, restrain just a trifle more than a bank can compel a bad action. The external threat need be just enough to make the internal pressure to do wrong the lesser of two discomforts. Judgment lies in how much external restraint to apply.

6. Decent people are in favor of justice. Don't confuse the opinion of the majority who wish it with the snarls of the few who fear it.

7. A person who is dramatizing his criminal intent can become very angry if he is not prevented from hurting others.

8. A thetan is good. He invented a bank to keep others good. That mechanism went wrong. And that's why we're here.

9. In a session you would keep a burglar from bursting in the room and disturbing the preclear. In Scientology you keep offenders out so we can get on with our session with society.

10. Look up the person who rails against justice most and you will have the one you have been looking for.

11. The only overt in handling justice is not to work for the greatest good of the greatest number.

FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 17 MARCH 1965
ISSUE II

REMIMEO

HCO (DIVISION 1)
JUSTICE
STAFF HAT

RIGHTS OF A STAFF MEMBER, STUDENTS AND PRECLEARS TO JUSTICE

1. HCO is the justice agency of Scientology and Scientologists in addition to other functions.

2. All matters of internal justice in orgs, Committees of Evidence and complaints are taken to the HCO personnel so indicated on the org board.

3. All Scientologists and staff members in accepting posts or membership agree to abide by the HCO Codes. These include the Justice Codes.

4. HCO justice applies to all Scientology and Scientologists.

5. When we say *legal* matters we mean outside law and law agencies such as attorneys, civil courts, suits, contracts and corporation and copyright matters. This comes under Division 3.

6. When we say *JUSTICE* we mean HCO, Division 1, internal activities such as Committees of Evidence, internal enforcement and discipline. Scientology justice safeguards the rights of Scientologists, prevents injustice, prevents punishment by whim, and brings order. Before the Justice Codes, discipline was inequitable and often unjust. The HCO Justice Codes bettered this by making offenses and penalties known and milder. HCO justice prevents wrongful disgrace, demotion, transfer or dismissal and protects the staff member's reputation and job from being falsely threatened.

7. In a condition of Emergency assigned to a department or org, staff members may be subjected to demotion, transfer or dismissal as the assignment of the condition of Emergency suspends the Justice Codes. There is no recourse, then. In addition, offenses may still be made the subject of Committees of Evidence. The thing to do is not get into such a state. Lessened traffic and other matters all found on the OIC charts of each week are the *sole* evidence used to assign a condition of Emergency. A condition of Emergency cannot be assigned unless these graphs show a declining condition.

8. When the org or department is not in a condition of Emergency, the protective Justice Codes are in full force.

9. A staff member who believes he has been falsely wronged (unless a condition of Emergency exists in his department or org) may request a Committee of Evidence of HCO with himself as an interested party and this *must* be granted him. He must however agree to abide by its findings. It can restore any lost pay in cases of injustice but not damages. No senior executive in the org may be named as an interested party in matters of recourse requested by a junior but *below* the level of executive councilman may be called as witnesses. An executive councilman cannot be called before *any* Committee of Evidence by anyone in his or her org including other councilmen of that org. Only a senior org may call executive councilmen of a junior org before a Committee of Evidence and then only for a crime or high crime and then only in the premises of the senior org. Do not then seek to name executive councilmen as interested parties in any Committee of Evidence and do not seek to name any member of any senior org in any Committee of Evidence requested by anyone in an org junior to it.

10. If a staff member wishes to sue a fellow staff member or right a wrong, he or she may request a *Civil* Committee of Evidence of HCO. HCO usually appoints *one* senior staff member on whom the two contenders can agree. The senior staff member holds a session or sessions and both contenders must abide by his findings and award of any money or damages or return of property. There is no further appeal. A *Civil* Committee of Evidence follows the same procedure and has the same rights as any other Committee of Evidence. A Civil Committee of Evidence may not be called by contending co-auditors. These must seek out the D of P and abide by the D of P's advice.

11. Students or pcs may not request Committees of Evidence for causes occurring during a course or an intensive but may appeal in writing to the Division 2 Service Executive. They must report matters covered under the Justice Code, however, to HCO.

    There are no student rules and regulations except the Justice Codes. All others are abolished. The penalties that can be awarded are: for an error, an Instructor reprimand; for a misdemeanor, a pink sheet which must be completed before classification is given; for a crime, one to three weeks at the student's expense in the HGC. A Committee of Evidence can also be convened on a student or preclear for offenses as covered in the Justice Codes.

12. In times of stress, commotion, riot or threats to person, an HCO personnel may instantly deputize any other Scientologist merely by saying loudly "HCO. Bring Order," making it known in any way that the Scientologist or Scientologists present should intervene or act. Any Scientologist whose help is thus commanded at once becomes deputized by Division 1 by the fact of required assistance and may not be charged before a Committee of Evidence for any act committed in rendering assistance to HCO during the period of stress and must be protected by the organization from any civil authority and the organization must pay any fines or expenses incurred or reasonable costs for damage to dress or hospital aid. When the incident is over, the HCO personnel must say "HCO thanks you for bringing order," thus ending the deputization.

An HCO personnel requiring an eviction of a person or persons from a premises or meeting or area need only point to the person or persons and say "HCO. Order!" Any staff member or Scientologist present is instantly deputized as above and must act promptly to carry out the eviction or be liable under Justice Codes when failing to do so. This can be used in any circumstances, no matter how mild the offender even down to slovenly or unauthorized persons on the premises or in an office. When the person or persons are removed, the HCO personnel removes the deputization by saying "HCO thanks you for order." These orders apply even when the person causing a disturbance is an officer, director or councilman of another division and none may be disciplined for complying but may be liable under Justice Codes for not doing so.

13. When personnel of other divisions foresee stress or danger, while they themselves have ample authority in their own divisions to handle their own personnel, where Scientologists in general are involved they may not take justice in their own hands as it is a Division 1 HCO hat and divisions must not cross in functions. Where mixed divisions or not-staff persons are concerned they should be careful to have an HCO personnel present or available, a wise precaution in event of the possibility of charges or Committees of Evidence resulting, in which case an HCO personnel as a witness would bear weight.

L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO EXECUTIVE LETTER OF 18 MARCH 1965

TO: ALL STAFF

FROM: RON

SUBJECT: **JUSTICE**

PROTECT YOUR JOB, YOUR POSITION, YOUR REPUTATION, YOUR ORG AND SCIENTOLOGY WITH HCO ETHICS CODES.

End insecurity and fear. The HCO Ethics Codes end these.

Be free of capricious punishment, dismissal by rumor and constant post changes. The HCO Ethics Codes let you know when you're right or wrong.

You are entitled recourse from injustice. The HCO Ethics Codes give it to you.

Standardize discipline in our organizations so a Scientologist knows where he or she stands.

There is freedom in knowing what is thought right, what is thought wrong. There is only slavery when nobody knows and the rules are all "off the cuff."

The turbulence of our organizations has been entirely the product of the society into which we are moving. Today, government by riot and intimidation finds a rising crime rate and sinking freedom. Ours is superior knowledge. We will grow to the degree we can manifest superior order. Our organizations and posts have been upset for 15 years, not by our own actions but by the decreasing ability of the society to handle people. We cannot look today for justice at the hands of what passes for civilization.

If we manifest in ourselves and our organizations a higher degree of order than that of the society into which we are expanding, *by that alone,* the society will move under us.

If in our groups there is better justice, easier recourse from injustice and a higher sense of order, people will move under us, finding in us a greater security and certainty than they do in the madhouse which passes for the "outside world" today.

That world will come our way as fast as and to the degree that we attain a superior culture.

All we have to do, each one of us, is insist upon our rights under and the uniform enforcement of the HCO Ethics Codes and we will achieve expansion and achieve as well dominion in the society.

It isn't hard to do. And we get paid for it. Under the Ethics Codes, whether we do our jobs well is analyzed wholly by statistics, never by rumor or opinion.

Under the Ethics Codes nobody can be demoted, transferred or dismissed without cause and must be reinstated if wrongly treated. Under the Ethics Codes no senior can "balance the budget" by wholesale dismissals — instead they must provide new work and find new income.

Under the Ethics Codes those who reduce your unit pay are located by statistics and educated better into their jobs or coached until they can do them. Only complete refusal to improve can bring them before their fellow staff members to explain why.

THE TOTALITY OF POWER IS ORDERLY PROGRESS.

Our organizations are being streamlined now to handle anything we meet. Our technology of organization comes from Level VII. A part of that technology consists of bringing order and making for us in Scientology groups a safe environment in which we can work. Just as nobody can audit in a constantly invaded room, so nobody can work without the protection of ourselves from the enturbulence of the society around us and its lack of order.

The Ethics Codes are part of our expansion programing.

Your maximum personal protection lies in knowing and understanding the Ethics Codes and getting only Ethics Codes used in all such matters. Your advancement as a staff member and an org depends on them.

Make them work.

Best,

Ron

L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 10 APRIL 1965

REMIMEO
ALL STAFF
STHIL STAFF
POST BULLETIN BOARD
ALL NEW STAFF
MEMBERS' HATS

DISMISSALS, TRANSFERS AND DEMOTIONS

It may not have come to the notice of all staff that HCO justice policy letters forbid staff members being sacked, demoted or transferred.

Only persons with "Temporary" or "Probationary" status can be dismissed as they are not staff completely as yet. Only persons with acting or deputy status can be demoted as the appointment is not permanent.

All others, to be demoted, transferred or dismissed without their consent, must be called before a Committee of Evidence. If the findings of the committee recommend dismissal, demotion or transfer, only then may it be done.

A Committee of Evidence is convened by Office of LRH through the HCO Secretary and is composed of other staff members like yourself. Its purpose is entirely to obtain evidence and recommend action which the Office of LRH then modifies or orders. No other justice actions or punishments exist in this org than those found in justice pamphlets or letters.

If a person is wrongly dismissed, demoted or transferred he or she may request a Committee of Evidence from the HCO Secretary and may have recourse. A person so requesting may not also request their seniors to also be tried but evidence may be obtained from them (seniors). If your seniors have acted outside the Justice Codes, they can be handled in exactly the same way by higher authority.

Your job is secure. It is also covered by the Justice Codes of HCO. These are found in HCO (Hubbard Communications Office) Policy Letters which arrive in mimeograph form in the HCO Secretary's office and which are also being made available in booklet form.

Keep the Justice Codes for a secure job and a peaceful organization.

HCO POLICY LETTER OF 29 APRIL 1965
ISSUE III

REMIMEO

ETHICS
REVIEW

(Correction to HCO PL 24 Apr. 65, REVIEW,
and additional ethics data)

As per HCO PL 28 Apr. 65 III, POWER PROCESSES, and others of later date, orders to auditing or training may not be made as a sentence or used in an ethics Court or by a Comm Ev or any other reason. Auditing and training are awards.

A student who is disruptive of discipline and acts contrary to the Ethics Codes may not be ordered to Review by the D of P, D of T or Ethics personnel or other persons in an org.

ORDERING
STUDENTS AND PCs

Tech and Qualifications personnel, particularly the Tech Sec and Qual Sec and D of Estimations, the D of P and D of T, D of Exams and D of Review and D of Certs may order students or pcs to Review or to course or to HGC or anywhere in and around these two divisions without any ethics action being implied. It is just normal, done to get students and pcs on the road to higher levels.

Ethics actions may only suspend training or deny auditing.

Therefore, a student ordered to Ethics for discipline who does not then give adequate promise and example of good behavior and compliance must be thoroughly investigated even to his or her own area and in the meanwhile may not be trained or processed.

The student, however, may not be dismissed or expelled unless full ethics actions and procedures have been undertaken.

All sentences carrying a denial of training or processing must carry a means of the right to be trained or processed being restored in a specified time or under specified conditions.

The routine action of Ethics is to request a reappraisal of behavior and a signed promise of good behavior for a specified time. If the student or pc refuses to so promise, then the next action of Ethics is an investigation of the student's course or pc's processing behavior. When then confronted with the data, if the student still refuses to promise, Ethics undertakes a full investigation in the student's or pc's own area. If the student or pc still refuses to cooperate, the student goes before a Court of Ethics which may pass sentence.

RECOURSE

Only after sentence has been passed by a legal body such as a Court of Ethics or Committee of Evidence or after an illegal disciplinary action may a student or pc ask for *recourse.*

Normally before asking for recourse a student or pc *petitions* the Office of L. Ron Hubbard if unwilling to accept the discipline but this must be done at once.

If the petition is unfavorably acted upon, the student or pc may ask for recourse.

Recourse must be requested of the convening authority that had local jurisdiction over the student or pc and may not be requested of higher authority. A request to higher authority than the Ethics activity that passed sentence is a *petition,* not recourse.

COMM EV

A Committee of Evidence is considered the most severe form of ethics action.

One must not be idly threatened or requested.

Only a Comm Ev can recommend suspension or remove certificates or awards or memberships or recommend dismissal.

The Office of LRH passes on all Comm Ev findings before they can go into effect.

A staff member may not be suspended or demoted or transferred illegally out of his division or dismissed without a Committee of Evidence.

Only after that action (or wrongful demotion, transfer or dismissal) as above, may recourse be requested.

Students or pcs, however, may be transferred, demoted in level or grade by a Court of Ethics. And the action of sending the student or pc to a Court of Ethics is of course a type of suspension which may be prolonged in the face of noncooperation.

A student or a pc is not a staff member in the ethics sense of the word by simple enrollment on a course or in an HGC or Review.

A staff member who is temporarily a student or pc in the Academy or Review or the HGC is not covered as a student or pc by his staff member status. He may be

transferred about or demoted as a student or pc by Tech and Qual personnel or suspended as a student or pc by Ethics. This however may not affect his staff member status as a staff member. Because he or she is transferred or demoted or suspended by Tech personnel or Ethics when a student or pc does not mean he or she may be transferred, demoted or dismissed from his or her regular staff post unless the person's staff status permits it.

POTENTIAL TROUBLE SOURCES

Staff members found to be potential trouble sources are handled like any other potential trouble source — but, unless Provisional or Temporary, may not be affected by this in their staff post. They are of course denied auditing or training until they handle or disconnect but this may not also suspend, transfer or dismiss them (unless of Provisional or Temporary status).

This ethics action (the potential trouble source) is in lieu of any discipline, and disciplinary actions that go beyond temporary suspension of training or processing until the matter is settled, must be undertaken by a Court of Ethics or a Comm Ev.

ARC BROKEN STUDENTS OR PCs

An ARC break is not an extenuating circumstance in ethics or disciplinary matters and is only taken into account on the person of the auditor who made the ARC break and didn't repair it.

The plea of "ARC broken" is inadmissible in any ethics matter as a defense or justification of misdemeanors, crimes or high crimes.

LIGHT TOUCH

Scientology ethics are so powerful in effect, as determined by observation of it in use, that a little goes a very long ways.

Try to use the lightest form first.

Students are quite caved in by it when it is applied, by actual observation.

Our lines are too powerful and direct and what we mean to a person's future, even while he or she is nattering, is so well understood down deep that ethics action is a far worse threat than mere wog law.

The being who is guilty knows with certainty that he is offending against the future of all, no matter what his surface manifestations or conduct. Further, while wog law at the worst can only cause him or her some pain and a body by execution or one lifetime's loss of liberty, we threaten his eternity. Even while he screams at us, he knows this down deep.

My first instance of this was a very dangerous psychotic who was largely responsible for a great deal of the public commotion in 1950. This person desisted and caved in the moment the thought was suggested to her by a non-Dianetic friend that she was threatening all mankind. She suddenly saw it as truth and instantly gave up all attacks and utterances.

Even the fellow who could push the button on atomic war knows, really, it's only one lifetime per person he is blowing up, only one phase in Earth's existence he or she is destroying. That we exist here could actually restrain him. The mere destruction of a planet might not, as it's temporary.

Our discipline is quite capable of driving a person around the bend because of what he or she is attacking.

Therefore, we can all too easily make a person feel guilty by just a whisper.

I've now seen a student, simply asked a question by Ethics, promptly give up and *ask* for his Comm Ev and expulsion. He hadn't done more than a poor auditing job. Nobody was talking about a Comm Ev or expulsion and he had not a bit of defiance in it. He just caved right in.

You are threatening somebody with oblivion for eternity by expulsion from Scientology. Therefore realize that an ethics action need not be very heavy to produce the most startling results.

Down deep they know this even when they are screaming at us.

One suppressive person who had committed a high crime of some magnitude went quite insane after departing Scientology and then realizing what he had done.

Therefore, use ethics lightly. It is chain lightning.

LEVELS OF ETHICS ACTIONS

Ethics actions in degree of severity are as follows:

1. Noticing something nonoptimum without mentioning it but only inspecting it silently.

2. Noticing something nonoptimum and commenting on it to the person.

3. Requesting information by Ethics personnel.

4. Requesting information and inferring there is a disciplinary potential in the situation.

5. Talking to somebody about another derogatorily.

6. Talking to the person derogatorily.

7. Investigating in person by Ethics.

8. Reporting on a post condition to Ethics.
9. Reporting on a person to Ethics.
10. Investigating a person by interrogating others about him.
11. Asking others for evidence about a person.
12. Publishing an interrogatory about a person that points out omissions or commissions of ethics offenses.
13. Assigning a lowered condition by limited publication.
14. Assigning a lowered condition by broad publication.
15. Investigating a person thoroughly in his or her own area.
16. Interrogation stated to be leading to a Court of Ethics.
17. Interrogation in a Court of Ethics.
18. Sentencing in a Court of Ethics.
19. Suspending a Court of Ethics sentence.
20. Carrying out a Court of Ethics discipline.
21. Suspension or loss of time.
22. A Committee of Evidence ordered.
23. A Committee of Evidence publicly ordered.
24. Holding a Committee of Evidence.
25. Findings by a Committee of Evidence.
26. Submitting findings of a Committee of Evidence for approval.
27. Waiting for the findings to be passed on or carried into effect.
28. Suspending findings for a period for review.
29. Modifying findings.
30. Carrying findings into effect.
31. Publishing findings.
32. Demotion.
33. Loss of certificates or awards.
34. Denial of auditing or training by a Comm Ev for a considerable period of time.
35. Dismissal.
36. Expulsion from Scientology.

The above is a rough guide to the severity of discipline.

Note that none of it carries any physical punishment or detention.

Short suspension of training or processing up to ninety days is considered under (18) above and is not to be compared with (34) where the time is measured in years.

Just issuing the Ethics Codes is itself a sort of discipline but it is more broadly welcomed than protested as it means greater peace and faster accomplishment.

HCO POLICY LETTER OF 17 MAY 1971

REMIMEO

JUSTICE—CORRECT APPLICATION

(Originally written by LRH for the *Apollo* OODs of 17 May 71.
Issued as an HCO Policy Letter on 4 Aug. 80.)

In matters of justice we do have the responsibility of seeing that fair play exists and that "justice" is not used as oppression.

Along with this comes the responsibility of not operating on isolated reports. Almost all injustice stems from operating on unsubstantiated reports. Honest stats are far more reliable. Injustice and false reports go hand in hand. Taking action on any single report is a very risky thing for any executive to do. It almost always results in an injustice.

The activity called "black propaganda" consists of spreading lies by hidden sources. It inevitably results in injustices being done by those who operate without verifying the truth.

For instance all the attacks on Scientology were black propaganda from hidden fascist sources. This has caused injustice. Black propaganda was a Nazi specialty.

But injustice recoils on those who deal in it.

Thus a hidden, lying source can cause authority to act. Thus authority can be undermined by being made to commit injustices.

There is also another side to this. When those in charge are directly attacked, they have to resort to defense in order to control the situation. That they so act to defend can itself be used to undermine. Once more it is vital for executives and organizations to act only on information that is fully verified. And when they do act it should be with due attention to the full formalities of justice.

To make the problem worse, the omission of enforcing truth and justice can damage many and can be itself a severe overt.

If the world were honest, justice and the need for it would vanish.

The road out is the Road to Truth.

HCO POLICY LETTER OF 24 FEBRUARY 1969

REMIMEO

AN ETHICS POLICY LETTER

JUSTICE

In an extension of third party technology (see HCOB of 26 Dec. 68, THIRD PARTY LAW) I have found that false reports and suppression are very important in third party technology.

We know as in the above HCOB that a third party is necessary to any quarrel. Basically it is a three terminal universe.

In reviewing several org upsets I have found that the third party can go completely overlooked even in intensive investigation.

A third party adds up to suppression by giving false reports on others.

In several cases an org has lost several guiltless staff members. They were dismissed or disciplined in an effort to solve enturbulation. Yet the turbulence continued and the area became even more upset by reason of the dismissals.

Running this back further one finds that the real third party, eventually unearthed, got people shot by FALSE REPORTS.

One source of this is as follows:

Staff member X goofs. He is very furious and defensive at being accused. He blames his goof on somebody else. That somebody else gets disciplined. Staff member X diverts attention from himself by various means including falsely accusing others.

This is a third party action which results in a lot of people being blamed and disciplined. And the real third party remaining undetected.

The missing point of justice here is that the disciplined persons *were not faced with their accusers* and were not given the real accusation and so could not confront it.

Another case would be a third party simply spreading tales and making accusations out of malice or some even more vicious motive. This would be a usual third party action. It is ordinarily based on false reports.

Another situation comes about when an executive who can't get an area straight starts to investigate, gets third party false reports about it, disciplines people accordingly and totally misses the real third party. This enturbulates the area even more.

The basis of all really troublesome third party activities is then FALSE REPORTS.

There can also be FALSE PERCEPTION. One sees things that don't exist and reports them as "fact."

Therefore we see that we can readily run back an investigation by following a chain of false reports.

In at least one case the third party (discovered only after it was very plain that only he could have wrecked two divisions, one after the other) also had these characteristics:

1. Goofed in his own actions
2. Furiously contested any Knowledge Reports or Job Endangerment Chits filed on him
3. Obsessively changed everything when taking over an area
4. Falsely reported actions, accusing others
5. Had a high casualty rate of staff in his division or area

These are not necessarily common to all third parties but give you an idea of what can go on.

After a lot of experience with ethics and justice I would say that the real source of upset in an area would be FALSE REPORTS accepted and acted upon without confronting the accused with all charges and his or her accusers.

An executive should not accept any accusation and act upon it. To do so undermines the security of one and all.

What an executive should do, on being presented with an accusation or down stats or "evidence," is conduct an investigation of false reports and false perceptions.

An area is downstat because of one or more of the following:

1. No personnel
2. Personnel not trained
3. Cross orders (senior orders unattended because of different junior orders)
4. Area doing something else than what it is supposed to do
5. An adjacent area dumping its hat

6. False perception leading to false stats

7. False reports by rumor or misunderstanding

8. False reports from single rare instances becoming accepted as the condition of the whole

9. False reports on others defensively intended

10. False reports on others maliciously intended (real third party)

11. Injustices cumulative and unremedied

12. Actions taken on others without investigation and without confronting them with their accusers or the data

This is a list of probable causes for an upset or downstat area.

SECURITY

The personal security of the staff member is so valuable to him apparently that when it is undermined (by false accusations or injustice) he becomes less willing and less efficient and is the real reason for a PTS condition.

JUSTICE

The only thing which can actually remedy a general insecure feeling is a renewed faith in justice.

Justice would consist of a refusal to accept any report not substantiated by actual, independent data, seeing that all such reports are investigated and that all investigations include confronting the accused with the accusation and where feasible the accuser, BEFORE any disciplinary action is undertaken or any condition assigned.

While this may slow the processes of justice, the personal security of the individual is totally dependent upon establishing the full truth of any accusation before any action is taken.

Harsh discipline may produce instant compliance but it smothers initiative.

Positive discipline is in itself a stable datum. People are unhappy in an area which is not *well* disciplined because they do not know where they stand.

An area where only those who try to do their jobs are disciplined encourages people to hide and be inactive.

But all discipline must be based on truth and must exclude acting on false reports.

Therefore we get a policy: Any false report leading to the unjust discipline of another is an act of TREASON by the person making the false report and the condition should be assigned and its penalties fully applied.

A condition of DOUBT should be assigned any person who accepts and disciplines another unjustly on the basis of a report which subsequently turns out to have been false.

This then is the primary breakdown of any justice system — that it acts on false reports, disciplines before substantiation and fails to confront an accused with the report and his accuser before any discipline is assigned, or which does not weigh the value of a person in general against the alleged crime even when proven.

HCO POLICY LETTER OF 24 FEBRUARY 1972
ISSUE I

REMIMEO
ALL STAFF
STAFF HATS

INJUSTICE

Any staff member who does not know ethics policy is a clay pigeon. "Clay pigeons" are used to throw up in the air and shoot at.

The cycle is, goofs are made. The real Why is not located or handled and when this happens angry executives, who have to pick up the ball, start shooting.

Staff members *are* expected to do their jobs and there are no excuses at all for not doing so.

But it sometimes happens that injustices occur. Goofs happen, then conditions are assigned, persons are removed from post or otherwise bashed about.

Usually this occurs because the staff member is pitifully ignorant of his rights.

Justice is expected and has definite use. When a state of discipline does not exist the whole group caves in. It has been noted continually that the failure of a group began with a lack of or loss of discipline. Without it the group and its members die.

Most people think discipline is bad because most wog discipline is simply harsh injustice.

Most people do not even know that "justice" means fair and equitable treatment for both the group and individual.

Commercial firms and credit companies have a level of injustice that is hard to believe. One is never faced by his accusers and may not even know he is accused until he is shot.

Psychiatry, as exposed in the brilliant book *Manufacture of Madness* by Dr. Szasz, uses the "justice" procedures developed in the days of witch burning, unknown accusers, opinions only, punished before being tried, etc. Psychiatric influence on contemporary court thinking may well be a major reason for the present disturbed condition of society.

Lord forbid we ever fall into such barbarism ourselves.

It is injustice that destroys discipline.

When you indicate the wrong bypassed charge on a case, the case caves in. When you accuse wrongly and punish unjustly, the group caves in.

The truth is, man cannot really be trusted with "punishment." With it he does not really seek discipline, he wreaks injustice.

Many governments are so touchy about their divine rightness in judicial matters that you hardly open your mouth before they burst into uncontrolled violence. Getting into police hands is a catastrophe in its own right in many places, even when one is merely the plaintiff, much less the accused. Thus social disturbance is at maximum in such areas.

Only where a group has a buffer against injustice is it safe to use discipline.

Posts are valuable to staff. Sudden removals, false condition assignments and other actions can do more harm than they achieve good.

Reversely, you can't expect a staff to fall all over a goofing staff member whose lack of performance upsets the lines and production. It does far more harm than good to let the situation continue without taking action.

Between the points of harsh injustice and required discipline there is a happy center ground where discipline, no matter how *severe,* is just and where goofs are not tolerated.

The achievement of this middle ground depends less upon educating and restraining executives than upon the staff member knowing his rights and himself using them.

This is hard to get across because some senior can say "that policy doesn't apply in this case" or "you report this and I'll have your head" or "I don't care what your rights are, you are REMOVED!"

Then again a Review Committee of Evidence can be so slow it never handles in time or it never gets held.

We are living — or trying to — in a very unjust culture. So most of our basic training was in injustice, not in correct discipline.

So you cannot look for a total perfection of justice. But we can make it better and less unjust.

RECOURSE

"Recourse" means "a turning or applying to a person or thing for aid or security."

Not only can one turn to a person but one can turn to a thing or a procedure to set the matter right.

In investigating why certain persons who had been posted did not do their post it was found they had been told to do something else instead. They had done this something else. They did not know they had any "recourse." Because they sought no recourse it had to be assumed they had willingly accepted illegal orders and so were comm eved.

Now, what is this point "they sought no correction" of this obviously illegal order? They simply did not make it known. They did not have to fly in the face of the person. They did not have to refuse.

The Comm Ev should have asked them, "Did you seek any recourse to being given an illegal order?" If the answer was NO, they were a party to the damage. If the answer was YES and they could prove it they would have to be found innocent of intent and the senior would have caught it.

What form would the recourse have taken?

A simple Knowledge Report to the Ethics Officer or the Master-at-Arms, "I have been given different orders in conflict with my post assignment and have made it known but am having to follow the illegal order," would have proofed them against severe action.

By NOT taking recourse the junior *thereby made himself a party to the act.*

The above is not very effective as it does not correct the order and so *some* penalty would have leveled at the person.

At the other end of MAXIMUM RECOURSE there would have been a telex to the Assistant Aide at a CLO or an Aide or Action Bureau at Flag stating, "JOE BLOW ED WILL NOT LET ME TAKE MY POST AS HAS AS ORDERED BUT HAS MADE ME AN AUDITOR."

Whether this was acted on or not, it would absolve the person. He or she would have "blown the whistle on" his or her illegal orderer. He could not be punished for it or for taking the auditor post instead of the ordered HAS post.

To understand RECOURSE one would have to know the seniority of orders. Policy (in PLs) and HCOBs come first. Then there is Flag, continental and local in descending order.

The org board tells one at a local level. The higher names are the more senior.

If a person does not SEEK RECOURSE for a wrong condition, a removal, an illegal order, a Court or a Comm Ev and, no matter how *unjust* the action is, the person has had it.

From a junior member of a mission:

"Dear Action Aide. This mission is going to fail. We are not following our orders, the I/C is not using my services. Signed _____" would remove the person as an interested party in a Comm Ev IF SENT DURING THE TIME OF THE MISSION.

You can't follow an illegal order and/or do other wrongs, get a Comm Ev and expect much help.

But if a Court or Comm Ev is wrong in its findings, a person has RECOURSE. He can ask for a REVIEW COMM EV and MUST receive one.

OUT OF SEQUENCE

To remove a person from post and then give him a Court or comm ev him is out of sequence.

The person has to have a Court or Comm Ev *before* he can be removed.

To assign a condition and then also comm ev is also out of sequence. One assigns a condition or a Comm Ev.

DISMISSALS

Dismissals or offloads once a person has been accepted as a staff member or crew member require a Court or a Comm Ev.

If the findings are protested, there can be a Review Comm Ev.

The Comm Ev can send the person to a Fitness Board or a Fitness Board can send a person to a Comm Ev.

A Fitness Board has the power to prevent taking someone on staff in the first place or someone into a crew. That needs no Comm Ev to reject.

BUT the person so rejected can ask for a Review Comm Ev.

And if the person is on staff one cannot be "removed from post, sent before the Fitness Board and dismissed." It requires a Court or Comm Ev to remove from post and/or to send before a Fitness Board.

STATISTICS

The best defense against *any* ethics action is good statistics. If one has no personal statistic, he is in a bad position and a very eligible clay pigeon if something goes wrong.

When personal statistics are challenged as "unreal" or "doesn't fit" or "falsified," one should have his section or department or divisional stat in very good shape indeed and point to that (and not permit it to be bad), as it is more visible and reliable.

REQUESTED COMM EV

Anyone can request a Comm Ev on himself for anything. An example would be an intern removed from course who does not believe he failed. He can request a Comm Ev. If he can prove he didn't, he has to be restored.

If one is being shot at or regarded with contempt through false accusations, his first action would be to ask the Ethics Officer or MAA for a third party investigation, and if that didn't work, request a Comm Ev to clear his name or repute. Or to get himself rightfully shot for that matter.

Example: Someone is being kicked around. He can't handle it himself. So he requests a Comm Ev.

This MUST be given him. And it must be SWIFT.

SENIORS

A person has a right to be tried only by seniors in rank or status.

Example: A Class VIII, on a tech matter, could not be legally tried by a Comm Ev whose chairman was a Class Zero.

Example: The Tech Sec cannot be tried by a Comm Ev chairmaned by a D of P or a Court held by one of his auditors.

An Executive Director or LRH Comm have to be tried by the next senior org and cannot be tried in their own orgs at all.

There have been flagrant violations of all these things. A CO and LRH Comm were once ripped off and sent home by being *told* it was "an LRH order," which it was not. They did *not* stay on post and do the normal things like "Let's see it in writing, signed." Or "We must query Flag" or "We request a Comm Ev." By NOT staying on post, by letting themselves be ripped off, by not using ANY recourse, they were actually guilty of desertion of post. They caught it from all sides BY NOT USING THEIR RIGHTS.

CONDITIONS

Gold Stars and Green Stars have certain rights in assignment of their own conditions. When they let these be ignored or flouted without taking any recourse they are guilty twice — they permitted injustice plus whatever else they did.

SUMMARY

This is not a full list of procedures and legalities.

All that is being set out here is that:

DISCIPLINE IS NEEDFUL IN A GROUP.

INJUSTICE INJURES DISCIPLINE.

INJUSTICE OCCURS WHEN PEOPLE PERMIT IT BY NOT KNOWING OR IGNORING THEIR RIGHTS AND NOT SEEKING RECOURSE OR REDRESS OF WRONGS.

It is a pitiful scene where executives and Ethics Officers don't know or use correct justice and where the staff members are ignorant of their rights or don't use them.

The result is a complete loss of discipline no matter how many get hanged! Or how many don't.

So where ETHICS IS OUT one really need only check out execs and Ethics Officers on ethics policy and check out the staff on their rights, and some semblance of order will occur in the most disturbed scene.

THIS is the remedy for better discipline and prosperity in a group. Not more shootings of clay pigeons.

It *can* be made a calm, happy scene.

BPI

ETHICS

PETITION

The right to petition must not be denied.

It is the oldest form of seeking justice and a redress of wrongs and it may well be that when it vanishes a civilization deteriorates thereby.

Therefore these policies apply:

1. Any one individual has the right to petition in writing any senior or official no matter how high and no matter by what routing.

2. No person may be punished for submitting a petition.

3. No two persons or more may simultaneously petition on the same matter and if so the petition must at once be refused by the person petitioned. Collective petition is a crime under ethics as it is an effort to hide the actual petitioner and as there may be no punishment for a petition, collective petition has therefore no excuse of safety and is to be interpreted as an effort to overwhelm and may not be regarded as a petition.

4. No generality may be used in a petition, such as a report of collective opinion unspecified as to identities. This is to be interpreted as an effort to ARC break a superior and the petition must be refused.

5. Only one person may petition on one matter or the petition must be refused.

6. Threat included in a request for justice, a favor or redress deprives it of the status of "petition" and it must be refused.

7. Discourtesy or malice in a request for justice, a favor or redress deprives it of the status of "petition" and it must be refused.

8. If a "petition" contains no request it is not a petition.

9. There may be no special form for a petition beyond these policies.

10. A petition which cannot be deciphered or understood should be returned to the sender with a request that it be made legible or comprehensible, but this should not be interpreted as a refusal or acceptance of the petition.

11. A copy of a petition seeking justice against another person or group must be sent that person or group to qualify the request as a petition. No action may be taken by the person or group but he or they should append the copy to their own statement of the matter and send it at once to the executive being petitioned.

12. Petitions are normally directed to the heads of activities such as the head of a portion of an org (HCO or the org in the persons of the HCO Executive Secretary and the Organization Executive Secretary) or the continental heads of orgs or L. Ron Hubbard.

13. Petitions may not demand Committees of Evidence or punishment for executives but may only state what has happened and request the matter be righted.

14. A petition is itself and is not a form of recourse and making a petition does not use up one's right to recourse.

15. All petitions delivered in person verbally or in person with a note, particularly when this restricts a senior's freedom of motion, must be refused.

16. HCO Secretaries or Communicators receiving petitions directed to be forwarded to higher executives which do not comply with these policies should append a copy of this policy letter to the petition and return it to sender. The sender should then re-form the petition into acceptable form and return it on the same channels. When receiving his petition back with this policy letter attached to it, the sender must not assume it has been refused and become apathetic. He or she should realize that a favor has been done, for a petition in violation of these policies would *have* to be refused by the person to whom the petitioner addressed it and that by rewording or complying with these policies the petition now has a chance and will undoubtedly be given courteous attention. A petitioner should consider himself fortunate if a discourteous or collective or threatening petition is returned as it would not be regarded as a petition by the executive to whom it is addressed and might color his or her opinion of the petitioner, perhaps obscuring some real wrong which might well have received attention.

SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 26 MAY 1965
ISSUE I

REMIMEO

ETHICS

PETITIONS

(Add to HCO PL 29 Apr. 65, PETITION)

No person under sentence or awaiting a Committee of Evidence may validly petition the Office of LRH.

A petition may only be submitted before or after the full course of Scientology ethics has been taken.

As all ethics actions such as a Committee of Evidence are reviewed, in effect a line already exists due to the ethics action and the facts will be on it.

Therefore a communication from a person under legal sentence from Ethics Officers or a person named in a Comm Ev may not petition. Ethics actions must be permitted to take their course.

A protest from ethics actions worded as a petition routinely causes further investigation as the "petitioner" is actually only protesting ethics actions and is handled as such.

FOUNDER

SCIENTOLOGY JUSTICE CODES

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 27 MARCH 1965

REMIMEO
MA
POST BULLETIN
BOARD

THE JUSTICE OF SCIENTOLOGY
ITS USE AND PURPOSE
BEING A SCIENTOLOGIST

The reason we have Justice Codes is to have justice. We don't want or need injustice.

When we have no codes, "justice" can be anything any authority cares to make it.

We have had too much caprice passing for justice. It is time we had justice.

Committees of Evidence work. I recall one Tech Director accused of tampering with a student. I was told he was about to be disciplined and sacked. I stopped that action and had a Committee of Evidence convened. Accurate testimony revealed the story false and the Tech Director innocent. Without that committee, he would have been ruined. I know of other instances where a committee found the facts completely contrary to rumor. Some are guilty, most are innocent. But thereby we have justice and our necks aren't out. If a person is to keep the law, he or she must know what the law is. And must be protected from viciousness and caprice in the *name* of law. If a person doesn't keep the law, knowing well what it is, he or she hurts all of us and should be handled.

The enturbulence of the society around us is fantastic. There is no just civil law left, really. It is that lawless and disorderly condition in the society about us which makes it hard for us to work. Shortly we will be even more powerful. That power must not be lawless or we will have anarchy and dismay, enough to stop our growth.

If we have a superior law code and legal system which gives real justice to people, we will simply flow easily over the society and everybody will win.

Where we fail to apply our own administration, technology and justice procedures to the society around us (let alone Scientology), we will fail.

There is too much truth in our lines not to cause a social upheaval. Therefore, let us have justice and expand into higher order, not plunge the world into darkness because our power as a group struck innocent and guilty alike.

A Scientologist must understand his own justice system. Without understanding, again there will be no justice.

Already the following points need correction in the uninformed person concerning our justice.

A Committee of Evidence is not a court. It is simply a fact-finding body with legal powers, convened to get at the facts and clean up the ARC breaks caused by rumor. When it has the truth of it, then a convening authority acts — but only in exact accordance with a Justice Code.

Our justice really rehabilitates in the long run. It only disciplines those who are hurting others and gives them a way to change so they can eventually win too — but not by hurting us.

A Scientologist who fails to use Scientology technology and its administrative and justice procedures on the world around him will continue to be too enturbulated to do his job.

That sounds extreme to anyone.

But if you look it over, you will find that the "power" of the "society" and "state" is pretended and is made from an effort to be powerful where they actually lack power. Our situation is quite the reverse. Ours is the power of truth and we *are* capable of power as a group, having power as individuals due to processing and power of wisdom due to superior technology.

Therefore when we grant too much beingness to *their* "power," we are granting validity to a falsehood and so it recoils on us.

We are, in short, knocking our own heads off by failing to use our knowledge and authority when we administer or handle our fellow man or society. It's like refusing auditing to somebody or not making it possible. It's also investing a lie with power. Society is losing ground because its "power" is based on a pack of falsehoods. *We* will lose ground if we empower those lies.

There's real magic to be seen here. For instance, every upset we have is traceable to *our* not knowing or failing to apply *our* technology and admin and justice procedures to the society around us and its individuals, firms and groups.

This is worse than you think. A Scientology executive not handling dev-t (developed and unnecessary traffic) from a government in accordance with our dev-t policies when it was off-line and off-policy recently caused an upset. A government official was off-policy (his own bureau's) and the Scientology executive did not follow *our* procedure of (a) send it back to source, (b) correct the policy error and (c) inform his superiors when results were not obtained. You say, "But that's wild! Run a government by Scientology admin?" Well, all I know is that it caused trouble when we didn't.

Evidently it's not "them" and "us." It's just "us" and a false "them."

So all we have to do is to get their hats on and they're *us*.

Failure to take our usual justice actions on offenders against us will result in eventual chaos. What matter if they don't appear before the Committee of Evidence

we convene on them? How do we know they won't? How could the Victoria Parliament ever come right if we failed to (a) convene a Committee of Evidence, (b) follow our legal procedures?

No, they just stay "them."

Has anybody informed the FDA of our amnesty? Well, did you know the FDA was looking for a way out of their mess for fear we'd sue for a million? They'd drop the E-Meter case if they thought we wouldn't sue.

How do we know if we don't try?

So therefore we *must* use Scientology tech, admin and justice in all our affairs. No matter how mad it sounds, we only fail when we don't.

And therefore every Scientologist should understand his own tech, codes and procedures.

Some Scientologists believe when a Committee of Evidence is convened that they are at once suspended.

Nobody *can* be suspended or punished by the *convening* of a Committee of Evidence. It's there to find the truth. *Only* when its findings are submitted to its convening authority and when the convening authority acts can anyone be suspended or transferred or demoted.

Don't react to Scientology justice as though it were wog law. In society's "courts" one is given the works, and truth has little bearing on the findings. A mean judge or clever attorney and small legal errors decide a lot of their cases. Wog courts are like throwing dice. There is huge cost and publicity and punishment galore even for the innocent.

So we must preserve our justice.

And use it.

That's the main lesson. If we don't use it in all questions where the truth of the matter is in doubt, we'll just go on being wogs.

If we don't exhibit our science as a *group* and show a good example, what can we achieve?

So let's grow up to our own technology and take responsibility for it.

And wear our hats as Scientologists to the world.

HCO POLICY LETTER OF 7 MARCH 1965RA
ISSUE II
REVISED 10 JANUARY 1991

GEN. NON-REMIMEO
POST ORG PUBLIC
BOARDS

HCO (DIVISION 1)

JUSTICE

OFFENSES AND PENALTIES

These are the penalties we have always more or less used, and these are the offenses which have been usually considered offenses in Scientology.

Formerly they were never written down or routinely enforced, there was no recourse, and these lacks made staff members uncertain of their fate. They knew something happened but not why. They knew certain things were frowned on but not how much or little. The penalties were suddenly administered without warning as to what they would be or for what offense.

This then is a code of discipline which we have almost always more or less used, made plain for everyone to see, with limits against overpunishment and recourse for those who are wronged.

Accordingly, this code of offenses and their penalties becomes firm and expressed policy.

Lack of specified offenses, penalties and recourse bring everyone to uncertainty and risk at the whim of those in command.

There are four general classes of crimes and offenses in Scientology. These are *Errors, Misdemeanors, Crimes* and *High Crimes*.

1. *Errors.* Errors are minor unintentional omissions or mistakes. These are auditing "goofs"; minor alter-is of tech or policy; small instructional mistakes; minor errors or omissions in performing duties; and admin errors or omissions not resulting in financial loss or loss of status or repute for a senior.

Errors are dealt with by corrections of the person, reprimand or warnings by seniors.

Certificates, classifications and awards may not be cancelled or suspended or reduced for an error. The offender may not be transferred or demoted or fined or suspended for committing an error. No Committee of Evidence may be convened because of an error.

Repeated corrections, warnings or reprimands by a senior can, however, bring the repeated error offenses into the category of misdemeanor.

2. *Misdemeanors.* These are:

Noncompliance.

Discourtesy and insubordination.

Mistakes resulting in financial or traffic loss.

Commissions or omissions resulting in loss of status or the punishment of a senior.

Neglect or gross errors resulting in the need to apply the Emergency Formula to their person, section, unit, department, organization, zone or division.

Knowing and repeated departures from standard technology, instructional procedures or policy.

Continued association with squirrels.

Abuse or loss or damage of org materiel.

Waste of org materiel.

Waste of funds.

Alteration of senior policy or continued ignorance of it.

Consistent and repeated failures to wear their hat regarding dev-t.

Refusing an E-Meter check.

Refusing auditing when ordered by a higher authority.

Disturbing a course or class.

Disrupting a meeting.

The discovery of their having an undisclosed criminal background in this lifetime.

The discovery of an undisclosed tenure in a mental hospital.

Processing a known trouble source or the family or adherents of a suppressive person or group.

Omissions resulting in disrepute or financial loss.

Inadequate or declining income or traffic in a section, unit, department, org, zone or division.

Assisting the inadequacy or decline of income or traffic in a section, unit, department, org, zone or division.

Failure to acknowledge, relay or comply with a direct and legal order from an executive staff member.

Auditor's Code breaks resulting in a disturbance of the preclear.

Failure to follow the Supervisor's Code resulting in disturbed students.

Contributing to a crime.

Failure to appear before a Committee of Evidence as a witness or interested party when personally given summons or receiving summons by registered post.

Refusing to testify before a Committee of Evidence.

Showing contempt or disrespect to a Committee of Evidence when before it.

Destroying documents required by a Committee of Evidence or refusing to produce them.

Withholding evidence.

False swearing on a signed statement or form.

Impeding justice.

Refusing to serve on a Committee of Evidence.

Refusing to vote while a member of a Committee of Evidence.

Misconduct.

Issuing data or information to wrong grades or unauthorized persons or groups or issuing data or information broadly without authority.

Invoicing and/or depositing checks obtained in confidence.

Giving org services on the basis of confidence checks received without having had the confidence check made good and correctly invoiced and banked first. (Definition of confidence check: a check known by the person accepting it as NOT valid and covered by funds at time of acceptance, but accepted nevertheless on basis of promise by the drawer to make it good at a later date.)

False report.

False attestation.

No report.

Refusal to report.

Verbal tech. This includes: giving out data which is contrary to HCO Bulletins or Policy Letters, or obstructing their use or application, corrupting their intent, altering their content in any way, interpreting them verbally or otherwise for another, or pretending to quote them without showing the actual issue.

Neglect of duty.

Condoning neglect of duty.

Out-tech.

Such offenses are subject to direct punishment by order, and for a staff member the punishment is the assignment of a personal condition of Emergency for up to three weeks and for an executive staff member the assignment of up to a three-month personal condition of Emergency.

Personal conditions of Emergency reduce pay or units one-third for the period assigned.

Recourse may be had by requesting a Committee of Evidence for return of pay but not damages.

The same offenses may be used for a Committee of Evidence but not both a committee and punishment by direct order — one or the other.

However, if any of these offenses become the subject of a Committee of Evidence, the penalty for a misdemeanor may be increased to include suspension of a single certificate and/or classification (but no more) or a minor demotion or transfer, but not dismissal. None of these offenses may be made the subject of dismissal by direct order or Committee of Evidence.

A Court of Ethics may be convened on any misdemeanor.

Persons may not be dismissed for misdemeanors. Nor may any certificates, classifications or awards be cancelled.

Nonstaff or field or mission Scientologists committing those of the above (except org) offenses applicable may have a Committee of Evidence convened on them.

Where serious, repeated or of magnitude harmful to many, the same offenses can be reclassed as crimes by a convening authority.

3. *Crimes.* These cover offenses normally considered criminal. Offenses which are treated in Scientology as crimes are:

Theft.

Mayhem.

Harmful, flagrant and continued code breaks resulting in important upsets.

Noncompliance with urgent and vital orders resulting in public disrepute.

Placing Scientology or Scientologists at risk.

Omissions or noncompliance requiring heavy intervention by seniors consuming time and money, with dev-t.

Failure or refusal to acknowledge, relay or execute a direct legal order from an International Board member or an assistant board member.

Being or becoming a potential trouble source without reporting it or taking action.

Receiving auditing while a potential trouble source.

Withholding from local Scientology executives that he or she is a potential trouble source.

Failing to report a potential trouble source to local HCO.

Organizing or allowing a gathering or meeting of staff members or field auditors or the public to protest the orders of a senior.

Being a knowing accessory to a suppressive act.

Using a local Scientology title to set aside the orders or policies from the International Board.

Following illegal orders or illegal local policies or alter-is, knowing them to be different or contradictory to those issued by the International Board.

Not directly reporting flagrant departures from International Board policy in a section, unit, department, org, zone or division.

Being long absent from post while a senior executive without advising the board member of his or her division.

Permitting a section, unit, department, org, zone or division to collapse.

Not taking over as a deputy in a crisis not otherwise being handled.

Passing org students or preclears to outside auditors for private commission.

Using an org position to build up a private practice.

Taking private fees while on staff to audit outside preclears, run private courses, coach or audit students or org preclears.

Embezzlement.

Taking commissions from merchants.

Reselling org materiel for private gain.

Using an org position to procure personal or non-Scientology funds or unusual favors from the public, a firm, student or preclear.

Impersonating a Scientologist or staff member when not authorized.

Inciting to insubordination.

Instigating a local power push against a senior.

Spreading destructive rumors about senior Scientologists.

Pretending to express a multiple opinion (use of "everybody") in vital reports, which could influence assistant board or board decisions.

Not reporting the discovery of a crime or high crime to HCO of the nearest Scientology organization while in authority or as a member of a Committee of Evidence or as a witness before a Committee of Evidence.

Refusal to accept penalties assigned in a recourse action.

Refusal to uphold discipline.

Getting another staff member disciplined by giving false reports about him or her.

Overworking an executive by ignoring one's duties.

Falsifying a communication from higher authority.

Falsifying a telex message or cable.

Causing a staff member to lose prestige or be disciplined by giving false reports.

Seeking to shift the blame to an innocent staff member for the consequences of one's own offenses.

Protecting a staff member guilty of a crime or high crime listed in this code.

Stealing or seducing another's wife or husband.

Committing offenses or omissions that bring one's senior staff member, unit, department, org or zone official to personal risk and/or a Committee of Evidence, civil or criminal court.

Willful loss or destruction of Scientology property.

Making out or submitting or accepting false purchase orders.

Juggling accounts.

Illegally taking or possessing org property.

Causing severe and disreputable disturbances resulting in disrepute.

Obtaining loans or money under false pretenses.

Condoning circumstances or offenses capable of bringing a course, section, unit, department, org, zone or division to a state of collapse.

Holding Scientology materials or policies up to ridicule, contempt or scorn.

Heckling a Scientology instructor or lecturer.

Falsely degrading an auditor's technical reputation.

Impersonating an executive staff member.

Pretending Scientology certificates, classifications or awards not actually held to obtain money or credit.

Selling auditing hours or training courses for advance which are not then delivered as to hours and time in training (but not results or subject matter).

Using Scientology harmfully.

Not bringing a preclear up through the grades but overwhelming the preclear with high levels.

Processing or giving aid or comfort to a suppressive person or group.

Knowingly using Scientology to obtain sexual relations or restimulation.

Seducing a minor.

Neglect or omission in safeguarding the copyrights, registered marks, trademarks, registered names of Scientology.

Issuing the data or information or instructional or admin procedures without credit or falsely assigning credit for them to another.

Issuing any Scientology data under another name.

Condoning the suppression of the word *Scientology* in its use or practice.

Allying Scientology to a disrelated practice.

Neglect of responsibilities resulting in a catastrophe even when another manages to avert the final consequences.

Committing a problem.

Committing a solution which becomes a problem.

Case on post.

Out-admin.

Giving any session or assist without making an auditor's report, or copying the original actual report after the session and submitting a copy instead of the real report.

Accepting for higher levels of processing persons who have not made their lower levels.

Processing persons at higher levels who have not made lower levels.

Training persons at higher levels who have not proven themselves as competent auditors at lower levels.

Permitting an ARC broken person to leave an org unhandled shall be deemed for the last auditor to audit him and for the PES and Director of Success a crime.

Treasonable neglect.

Missing a withhold on a pc.

Noncooperation with enforcing Confessional technology.

Letting a person get onto an OT section who is NCG, nattery, critical or otherwise exhibiting O/Ws or out-ethics without handling so that he can make case gains; also, continuing the error and not remedying the matter right away.

Violation of any of the eleven points listed in HCO PL 29 Feb. 84, COMPUTER ETHICS POINTS:

1. Misfiling in a computer.
2. Not filing in a computer.
3. Putting false data into a computer.
4. Making corrections to something and invalidating the data in a computer.
5. Failing to keep a computer clean and in repair.
6. Running a computer without fully checking out and star-rating on it.
7. Permitting unauthorized access to a computer.
8. Allowing dampness and/or magnetic fields in the vicinity of a computer.
9. Not using a computer once it is installed.
10. Pretending difficulties with a computer that do not exist.
11. Failure to recruit competent people to run a computer.

Creating problems in the implementation of orders.

Using policy to create problems.

Crimes are punished by convening Courts of Ethics or Committees of Evidence and may not be handled by direct discipline. Crimes may result in suspension of certificates, classifications or awards, reduction of post, or even dismissal or arrest when the crime clearly warrants it. But such penalties may not be assigned by direct discipline. Certificates, classifications or awards may not be cancelled for a crime.

4. *High Crimes.* These consist of publicly departing Scientology or committing suppressive acts.

Cancellation of certificates, classifications and awards are amongst the penalties which can be leveled for this type of offense as well as those recommended by Committees of Evidence.

A reward system for merit and good performance also exists.

HCO POLICY LETTER OF 22 FEBRUARY 1968

REMIMEO

ETHICS AND ADMIN

ADMIN KNOW-HOW SERIES 19

SLOW ADMIN

The secret of any executive success is the ability to Complete Cycles of Action Quickly.

The operative word is COMPLETE.

Ability is the ability to complete a cycle of action, to handle the matter so it does not have to be handled again.

Referral is irresponsibility. Executives who refer to others to make a decision aren't executives. They are irresponsible or are afraid of responsibility. People who are afraid of taking responsibility are not executives. They are laborers.

An executive who doesn't handle but puts something on wait is also irresponsible. Slowing an admin line by not acting NOW is also suppressive.

Suppressives cannot complete cycles of action. They either act in an altered direction or they continue an action beyond any possible expectancy. In either case they do not COMPLETE.

THEREFORE this ethics policy is brought into being:

EXECUTIVES WHO DO NOT HANDLE MATTERS SO AS TO COMPLETE THEM, WHO REFER OR SLOW ADMIN ARE LIABLE TO A COMM EV ON A CHARGE OF OUT–ADMIN.

PRODUCT ZERO
PAYROLL I/C

LEAVING AND LEAVES

It has occasionally happened in the past that a staff or crew member has used the fact that he or she was leaving an org to spread upset.

It is a common make-wrong in children to threaten to run away. And it is a common action of suppressives to spread upset and dissatisfaction by saying they are leaving.

There are some people who leave wherever they are obsessively and the most casual check reveals they have seldom remained anywhere; committing continual overts, they are routinely running away from any job, any post, any group and from themselves and life.

As the actual reason behind blows is overts and withholds, the excuses for leaving are usually simply justifications and are actually a third party action of associates, usually false reports.

Therefore, informing fellow staff members and others that one is leaving is hereby properly labeled a suppressive act.

Where it is found that this is occurring and if the person concerned does not report it to the proper terminals, HAS and Staff Chaplain, departure will be followed by a declare.

If one is going to leave an org the proper action is to report it only to the HAS and Staff Chaplain and not to fellow staff members.

Where a person is secretly planning to leave and making private preparations to do so without informing the proper terminals in an org and does leave (blow) and does not return within a reasonable length of time an automatic declare is to be issued. Should any monies or organizational property be found to be missing in consequence, action is to be taken on criminal charges.

All persons whose contracts expire without renewal and all persons who wish to leave are to be security checked by an auditor who is qualified in Qual to make prepared lists read. This will remove the overts and withholds inevitably connected and so relieve the person and the org of the usual justifications and false reports.

LEAVES

All persons before going on leave must be given a Security Check by an auditor qualified to make prepared lists read. Final pay before departure is to be withheld until this action has been done.

All persons returning from missions or leave must be security checked.

Any staff or crew member falsifying the reasons why a leave is needed or requesting a leave when in fact blowing is to be the subject of an automatic declare.

There is no intention of holding on to people who do not want to be where they are.

There is every intention to use our tech to prevent false reports and suppressive actions from occurring, both to the detriment of the person himself and to an organization.

There are enough lies in the world without generating more as to the "reasons" one is leaving or seeking to use the fact to damage an org or its staff.

The vast majority of staff want to be there and are NOT leaving and they don't need third-partying SPs around. The vast majority are good guys.

HCO PL	7 Mar. 65 III	OFFENSES AND PENALTIES
HCO PL	13 July 74 II	Org Series 34 WORKING INSTALLATIONS

There is a condition that can exist in orgs which differs slightly from "musical chairs" (the rapid transfer of personnel from post to post) but is akin to that and every bit as deadly.

We could call it a "quicksilver personnel" scene.

("Quicksilver" is another name for mercury, the silvery-white metallic element, liquid at room temperature, which is used in thermometers, barometers and similar instruments.)

Used figuratively, the term "quicksilver" means something that is quick-moving, unpredictable and as elusive as mercury, or "mercurial." Something that is mercurial is changeable, variable, volatile.

To anyone who has ever observed a drop of quicksilver, or mercury, in an open container or placed on a slab of glass, this will be real. One second it's here, the next second it's there. Just about all you have to do is breathe on it and it changes its position. And where it *was* a second ago there's now nothing.

It is miserable (if not impossible) for an executive or management body trying to run things with staff doing a quicksilver. One can hit up against some nasty surprises.

For example, an org's personnel scene may look great on the board, with posts filled, hats existing and known, production occurring and on the rise — all is looking good when suddenly the stats crash.

An initial check may show there haven't honestly been any post transfers, per se. But dig a bit further and you're likely to find a quicksilver personnel scene. The top delivery auditor is off on a two-week vacation. The Qual Sec has been fired on a recruitment tour. The Reg has gone out-ethics and been suspended, unreplaced, pending some ethics handling. The Chief Officer is off on maternity leave and the CO, holding her post from above, is being the guest speaker at an event in the next city.

It happens and it happens not only in Class IV orgs but in the higher service orgs and management units where tours are essential and missions need to be fired and other situations can crop up requiring personnel.

It has shown up drastically at times in several large orgs. In one, the head of a vital network went off on mission and, with no one left being the senior, the stats in the area crashed. In another, the sales manager took his leave, his routine functions were ignored and sales suffered severely. And in still another org, no less than *six* key delivery terminals were all found to be out on regging tours in one week, some of them over a period of several weeks, at a time when delivery of paid-in-full services was backlogged!

None of these terminals had been removed or transferred or promoted. And one could say the actions being done are all covered in some way in policy, are needed, and therefore justified. But these terminals were all off post unreplaced, weren't they?

That's a quicksilver personnel scene. It's unstable.

CONTRIBUTING FACTORS

Executives who issue orders that unmock working installations where production is occurring at "A" to get something done at "X" bring about such scenes.

Personnel who, like quicksilver, accommodatingly move off their assigned posts unreplaced to do something else at the first invitation or order, help to generate and sustain such scenes.

Seniors who permit or condone this are also a party to them.

Personnel can do a quicksilver for any of a number of reasons. For some, the chance to go off and see other people and new places may be an alluring prospect.

Some are too timid to refuse a destructive order and so they comply, under protest. For others there is financial gain involved — there are often commissions or a bonus at stake.

Tours have been used by some, apparently condoned by executives, to take longer leaves (more time off on leave per year) by combining 4 to 6 or even 8 weeks of a "regging tour" with a "leave," with the org paying both the person's fare and living expenses and no clear distinction made between the period of "tour" and the period of the "leave." (While this is part of an unstable personnel scene, it is also a situation requiring a separate ethics handling in itself.)

Sometimes a staff member is made to feel, by a very convincing exec, that the action which calls for his suddenly going off post with no or inadequate replacement is actually more important than his job. Where this threatens production and there is no adequate replacement, this is almost always a falsehood.

It is true that missions need to be fired. Tours are vital to income and delivery. Staff sometimes do need to go off post temporarily for handling of one type or another. Events are valuable in terms of promotion, goodwill, PR and sign-ups, and for certain types of these, key personnel or trained tech delivery personnel may be required. Emergencies do arise. Personnel are entitled to annual leave. And speed of operations is important.

On the plus side, we do have capable and versatile staff who are willing to extend themselves, when needed, to make things go right. We have demanding, fire-breathing executives who are out to handle situations and open up new fields for delivery which, in itself, is a good thing. And many of these go about it standardly.

But the senior or exec at any level who endangers ongoing delivery and production and/or unstabilizes a producing personnel scene to get these things done is simply advertising to one and all that he can't predict and plan and organize or get others to do so. Control is lacking here as well as just plain common sense. The kindest thing one could say about such an exec is that he is shortsighted. And "quicksilver" is a rather mild term for the staff member who steps so easily off his post and leaves a hole in the lineup with no thought of the consequences.

One could say that everyone has personnel problems. BUT that is no Why.

HANDLING "QUICKSILVER PERSONNEL" SCENES

The first policies *missing in application* are those covering replacements and hat turnovers.

BECAUSE IT IS A "*TEMPORARY*" ABSENCE, NO ONE IS DEMANDING REPLACEMENT AND TURNING THE HAT OVER TO SOMEONE WHO CAN COVER THE POST *COMPETENTLY*.

But policies exist in abundance on this subject. HCO PL 29 Aug. 70 I, Personnel Series 1, PERSONNEL TRANSFERS CAN DESTROY AN ORG, points up the outnesses which can destroy an org faster than any others. HCO PL 7 Jan. 66 I, LEAVING POST, WRITING YOUR HAT, covers the staff member's responsibility for

a post he is vacating under *any* circumstances. HCO PL 20 Apr. 69 II, HATS, NOT WEARING, emphasizes the staff member's responsibility for knowing that he *is* the Qual Sec, or Reg, or the post title for the post and functions he has accepted. HCO PL 11 Aug. 71 II, Personnel Series 22, DON'T UNMOCK A WORKING INSTALLATION, cites the main reason we have ever had slumps in orgs.

The personnel policies are there. But very often, where a "quicksilver personnel" scene is permitted, BECAUSE SOMEONE PULLS OFF A SUCCESS IN ONE AREA, EVEN THOUGH STATS IN HIS OWN AREA MAY CRASH, THE EXISTING ETHICS POLICIES THAT COVER SUCH A CRASH OR THE COLLAPSE OF AN AREA MAY BE OVERLOOKED OR DELIBERATELY IGNORED.

So how do we handle "quicksilver personnel" scenes?

The answer is to add some teeth to the existing policies:

1. AN ABSENCE FROM POST FOR EVEN A TEMPORARY PERIOD OF AS LITTLE AS HALF A WEEK IS AN ETHICS OFFENSE, UNLESS SOMEONE IS NAMED AND THERE AS A REPLACEMENT WHO HAS HAD THE POST PROPERLY TURNED OVER TO HIM AND WHO CAN COVER THE POST *COMPETENTLY*.

2. IF SUCH ABSENCE WITHOUT COMPETENT REPLACEMENT OCCURS *AT ALL,* AN IMMEDIATE COURT OF ETHICS MUST BE CALLED ON THE STAFF MEMBER WHO LEAVES HIS POST UNFILLED OR INADEQUATELY COVERED, AS WELL AS ON THE SENIOR OR EXECUTIVE ORDERING, CONDONING OR PERMITTING IT.

3. IF IT OCCURS AND RESULTS IN STATS CRASHING IN A COURSE, A DIVISION, DEPARTMENT, SECTION, UNIT, AREA, ZONE OR ORG, A COMMITTEE OF EVIDENCE MUST BE CALLED WITH *ALL* INVOLVED NAMED AS INTERESTED PARTIES.

The charges are:

CONDONING OR CONTRIBUTING TO CIRCUMSTANCES OR OFFENSES CAPABLE OF BRINGING A COURSE, SECTION, UNIT, DEPARTMENT, ORG, ZONE OR DIVISION TO A STATE OF COLLAPSE

and

NEGLECT OF RESPONSIBILITIES RESULTING IN A CATASTROPHE EVEN WHEN ANOTHER MANAGES TO AVERT THE FINAL CONSEQUENCES.

With this policy made known and enforced, there *is* a cure for those who do a "quicksilver" and for executives and seniors whose out-planning and out-prediction bring about quicksilver personnel scenes.

ORG PROGRAMING & TARGET ATTAINMENT

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 12 SEPTEMBER 1959

REMIMEO

PROGRAMING

(Originally written as an HCOB on 12 Sept. 59.
Issued as an HCO PL on 23 Oct. 69.)

(Refer also to HCO PL 4 Dec. 66, AKH Series 9, EXPANSION, THEORY OF POLICY, and HCO PL 24 Dec. 66 I, AKH Series 10, HOW TO PROGRAM AN ORG, SAINT HILL PROGRAMS.)

Dianetics and Scientology have never suffered from lack of programs. There have always been programs. And there will always be better programs and, maybe for dissemination purposes, the PERFECT program.

But what happens to all these programs?

Alas, I found out the facts of this some years ago, and out of it came the organizational pattern which is working so splendidly in Central Orgs. But the facts that I found out had all to do with execution of programs.

We get a wonderful idea. It's a slayer. It will tear the tops right off the skyscrapers and send them in for a book. And months later we wonder what happened to this marvelous program.

Well, I'll tell you what happened. Nobody did it.

That's the swan song of most every program that gets thought up. It was great, but nobody did it. . . .

And before you think I am being critical of all the staffs everywhere or that we're ever critical of all the staffs, I'll give you the rest of my findings on this subject.

Programs didn't get done because everybody was so overloaded with what they were already doing that they didn't have a chance to start the new program no matter how good it was. Programs were already in the run. Many of these were so fundamental — such as sale of books or answering letters to incoming preclears and students — that nobody could start on the new program. And as a result the new program didn't get started no matter how marvelous it seemed to be.

The reason executives used to keep pulling people off post all the time was this thing programing. The executive had, he thought, a better idea or was trying to carry out an old idea. And to get it going he would draft the whole staff to do it and the basic programs would go begging.

Do you know that nearly every function of a Central Org was at one time a brand-new wonderful program? Well, it was. And this gradually sifting out of activities brought us to a rather final form with one more step to go and that step is programs, a Department of Programs. A department which can carry through new or stunt programs without bringing the whole place in ruins by tearing everybody off their standard programs.

Programing is important enough to pay a lot of attention to. And there is a lot of gen about it. And the gen all adds up to no matter how many programs you have, each one consists of certain parts. And if you don't assemble those parts and run the program in an orderly fashion then it just won't spark off. These are some of the principles about programs. And you had better have them because your new HAS Co-audit Course is a program and has to be done like a successful program. And your preclears are a program and have to be done like a program. If you don't know these facts of life, here they are:

MAXIM ONE: Any idea no matter if badly executed is better than no idea at all.

MAXIM TWO: A program to be effective must be executed.

MAXIM THREE: A program put into action requires guidance.

MAXIM FOUR: A program running without guidance will fail and is better left undone. If you haven't got the time to guide it, don't do it; put more steam behind existing programs because it will flop.

MAXIM FIVE: Any program requires some finance. Get the finance into sight before you start to fire, or have a very solid guarantee that the program will produce finance before you execute it.

MAXIM SIX: A program requires attention from somebody. An untended program that is everybody's child will become a juvenile delinquent.

MAXIM SEVEN: The best program is the one that will reach the greatest number of dynamics and will do the greatest good on the greatest number of dynamics. And that, my people who want to become victims by going broke, includes dynamic one as well as dynamic four.

MAXIM EIGHT: Programs must support themselves financially.

MAXIM NINE: Programs must ACCUMULATE interest and bring in other assistance by the virtue of the program interest alone or they will never grow.

MAXIM TEN: A program is a bad program if it detracts from programs which are already proving successful or distracts staff people or associates from work they are already doing that is adding up to successful execution of other programs.

MAXIM ELEVEN: Never spend more on a program than the income from one person signing up can repay.

MAXIM TWELVE: Never permit a new program to inhibit the success of a routine one or injure its income.

Let us now take a squint at this all in one piece. *Wrong example:* We decide to run an ad in the Hatmakers' Weekly to attract people into the PE Course. We place the ad. We forget the time this special course is to start. We have nobody there to answer the phone on inquiries as to the course. We have nobody there to greet the people and make them feel at home when they arrive. We have nobody to instruct the course. We get a bill for monies three weeks later that we can't pay.

Right example: We decide to hit the hatmaker trade as a source of PE. We rule out seven other programs in favor of this one. We have a staff meeting on it and gen everybody in on the existence of this program. We see that we have made a lot of money from co-audit enrollments and we earmark this to pay for the advert, for the salary of the person who will run the program. We appoint a specific person to administer this program. When the advert has been placed and appears, our person appointed to it goes on to it full time. Reception is genned again to send all hatmaker calls to this person and to refer to this person all hatmaker bodies. All persons who may also be acting as Reception are genned with this data. The person appointed doesn't sit back to wait for the business to come in. This person reaches for hatmakers with letters and phone calls. This same person that has been contacted by the hatmakers is then on deck the zero-hour evening to greet them all and get them into their seats and to make sure the instructor is there and to instruct it himself if no instructor appears. If the program is sweepingly successful in terms of new enrollees, then we make sure we leave the person appointed for it in the first place right on duty pushing hatmakers into the PE. And we have a program. And it was successful. And we got somewhere.

A pitiful wrong example of the above was when I was running the first American College PE as the experimental setup some years ago. We started to get in longshoremen by the squad. And they brought in other longshoremen. The person in charge thought longshoremen were low cast and tried to get intellectuals in instead, thus switching off the program. You never saw a program dwindle quite so fast as the longshoremen did. The correct action would have been to notice that longshoremen were responding heavily and to put somebody maybe even out of their ranks onto the payroll to pressure away at longshoremen. A million-pound program was let go up in a puff of nowhere.

A wonderfully right example is the Director of Processing–staff auditor setup of a Central Organization. That was once just a program. It prospered. It's still with us. Every field auditor looks at it with envy and snarls and tries to copy it. But he doesn't program. He is doing everything else in the shop. He can't program a special

clinic drill with his attention everywhere at once. It's now thoroughly against the law in a Central Organization to let a Director of Processing take preclears. That's how far it goes. And we get wonderful results and all is well and the only squawks you hear about HGCs are from pure green-eyed jealousy or maybe an occasional real goof that the Central Organization jumped on days before anybody else did.

Programing requires execution. It requires carry-through. It requires judgment enough to know a good program and carry it on and on and to recognize a bad one and drop it like hot bricks.

There's nothing wrong with the will to do amongst Scientologists. Now let's see if we can't up dissemination by adherence to good, steady programing that wins.

TARGET SERIES 8

PROGRAMS, USE OF
HOW TO SAVE USELESS WORK

Staff time is very often wasted by the failure to use a program-project system.

Example: Dept 4 does a full layout for promo. Then finds it is off-policy and it isn't used. Means wasted work.

Example: Tech Pc Admin is ordered to make a huge board to give pc addresses. After a lot of work it is never used.

WHY? The job never had any part of a program in the first place. It was not part of any general activity. Thus it is not part of a team action.

The correct procedure in ordering staff to ANY project that is going to consume time is to:

1. See if there *is* a situation.
2. Find out its WHY.
3. Get a general program drawn up. Get it approved as a program with who is to do each part.
4. Get the different parts of the program drawn up as a TARGETED project. With who is to do each project. Get these approved.
5. Get the projects executed.
6. Complete *all* the projects.
7. Report the program as done.

This is a correct sequence. To do anything else is to omit steps in the sequence. This gives two outpoints — omitted steps and altered sequence.

Thus when this procedure is shortcut, the whole org can look batty. It can also have its staff frantic and overworked without producing anything.

Usually the product officer draws up a program.

It is vital that he refer to policy to support his program.

The LRH Comm should approve the program as not off-policy.

Division heads usually write up the projects. These are approved by the product officer and then the LRH Comm.

The program is issued as a local ED when approved.

The projects refer by number to the program and are issued separately as local EDs.

Their completion is chased up by the product officer.

The fully completed program is reported to the LRH Comm.

This *looks* like a lot of writing. It *saves* a lot of work.

Programs and projects are easily corrected and brought on-policy. The actual *work* is costly and impossible to correct.

The wise staff member would clamor for this system. Further he would ask, when told to repaint the students, "Where is the program and the project order?" He'd routinely find that he was often doing a job not approved by anyone but his senior. And disapproved of by the rest of the org.

Programs set priorities. They let a staff work as a team. They get the coins of the org correctly invested in needful work.

The Ad Council is a wise Ad Council if it demands the right to pass on all programs originated by its executives before projects are written or work is done.

Needless to say, a program must handle actual situations, the situations which depress production and prosperity.

These are vital steps in running an org or working in it.

Don't run about frantically or sink into apathy. Get your execs and staff program-project conscious, *save* work, get prosperous.

COMPUTER SERIES 3

TARGETS AND PRODUCTION

There is a direct coordination between the clarity and doability of the targets of a program and any increase in stats.

If one can write good, simple, doable programs on matters important to get done, they can get done. If the program is cloudy or the targets too general, little comes of it. It does not show up in stats and can even clutter up lines and impede production.

So it is *very* important to an exec and to staffs that the exec be able to write clean, concise programs and staffs to recognize when they are not and plead for correction.

Strategic planning gets bugged most often because middle management does not put it in target form or if they do, put it in such cloudy or general targets it cannot be done and does not achieve the desired result.

Faults in this can cost — factually — millions in unmade income or actual losses and overwork.

But now today *another* factor is entering the scene. The world has gone *computer*.

Computers can keep track of things and operate to catch things which, undone, wreck things.

In a very short while, at this writing, computers will exist at management echelons to keep track of stats, demand programs and keep track of their effectiveness. The computer will be able to detect very early noncompliance both in writing and getting done programs.

Life will be much smoother as debugs will be demanded more quickly and bad targets or line jams or staff overloads will be detected sooner and remedied, resulting in more income, more service and more pay.

But all this will depend on three things:

1. The existence and soundness of the strategic planning and evaluation. (This has never much been in doubt.)

2. The clarity with which planning can be programed. (This is currently not good at all.)

3. The execution of targets called for at various echelons and staff level. (This depends, to a large measure, on 2 above.)

To a computer, which cannot really think, a target is a target. If not done in the expected time, it will squawk. If still not done, it will demand a debug.

The debug will find (a) the organization ordered did not give it to a correct or the right staff member to do, (b) had no one there to do it or (c) the target was simply neglected at staff level or (d) the target was undoable in its existing form. The right one will be found, action will be taken and the overall scene will advance once more.

So it is *very* important, whether one is writing major, minor or mini programs, that they be written absolutely on-policy from here on out.

This starts now, not waiting for computers, as it is valid in its own right and Programs Ops are on the line. With computers there will still be Programs Ops to run them but the precision and speed will increase amazingly.

The organizations in the world are getting bigger. They have to be more efficient to also pay well. And this all comes down to the 1, 2, 3 above.

It is a miserable thing to be hit with a lot of confused, undoable orders. And dangerous to one at staff level for one can be charged with noncompliance when there was really nothing precise to comply with!

So the ability to coordinate programs and write excellent target-policy targets is vital to the ability of all to work.

And when computers get on the job, electronic sparks will be flying all over the place if target policy is not adhered to carefully and precisely.

So this policy is vital, computers or no computers.

OPERATING TARGETS MUST HEREAFTER BE WRITTEN IN SUCH A WAY THAT THEY ARE FINITE AND NOT A GENERALITY SO THEY ARE PRECISELY DOABLE. Targets like “Keep stats rising” or “Be nice to Joe” are not doable targets from a computer’s viewpoint or anybody else’s.

But, computers aside, the one that does the target is NOT a computer and with target clarity can do it far more easily.

Hear me, the 1, 2, 3 above are the make-break point of expand or not expand.

So heed it.

THE STAT PUSH

WHAT exactly is a stat push?

The danger in talking about this subject at all is that someone can do an immediate make-wrong by saying, "This means don't try to raise any stats."

So to understand this subject at all, one must have a pretty clear idea of exactly what is meant by "Don't push stats."

First of all one has to know precisely that STATISTICS ARE AN INDICATOR, THEY ARE NOT AN OBJECT.

WHEN YOU PUSH THE INDICATOR YOU DO NOT OBTAIN THE OBJECT IT REPRESENTS.

PRODUCTION IS COMPLETED CYCLES OF ACTION, NOT JUST NUMBERS.

The figure "1" in "1 apple" is not the apple.

Therefore pure, raw, naked stat pushing is an outpoint called "wrong target."

Pushing a stat without doing anything to bring about the stat is therefore an aberration.

Demanding a stat without doing anything to see that it occurs or putting anything there to make it or correcting anything that is preventing it is an aberration built out of either psychosis or ignorance of what should really be done.

It is quite true that stats must be kept up. But unless they are kept up by putting something there or correcting something that is there and getting all the cycles of actions done by all those who should do them, the stats will DECREASE and eventually vanish.

An order, a telex, a yell to the effect "GET THE STATS UP" is so much wasted time.

Further, such an order or telex or yell in any form has a very deteriorating effect. Individuals or staffs look at it in a properly weird light. They are there, they are doing what they can, they have problems and tangles and barriers. And telling them to

"Get the stats up" causes various reactions, none of them very good. Essentially, it gives them neither help nor direction and even subtly informs them that the person ordering either does not know or does not care what is going on and is not about to help. The eventual reaction can become an ignoring of that command channel.

There are some specialized actions in stat pushing. Chief amongst them is the "GI push."

The usual indicator of this is a neglect or abandonment of staff or caring about staff. One sees no real effective attention on recruitment, training, apprenticing, hatting, future execs. And when one sees this it usually follows that there is a "GI push" going on somewhere in the executive strata. Why this indicator? Well, you see, it only takes a small handful of people to get in GI, and where executive attention is fixated on a "GI push," the various production staff, HCO and the rest of the org aren't "necessary." You find this with EDs who reg instead of getting Registrars and putting an org there, with EDs who go for credit unions and odd financial deals. And you will also find they have the biggest number and amount of refunds and the biggest backlogs AND a shrinking and unhappy org. Unfortunately, they soon also get a crashing GI, for none of the support actions are being done across the divisions.

The reason "GI pushing" happens so often is the structure of the society itself. The only real crime for which one can be punished by the governments of today is lack of money. In other crimes if one has the huge sums necessary to hire lawyers, one can often get off. But the crime of having no money is the only crime one cannot get out of. There are even laws which cause the arrest on the street of persons who do not have so much money in their pockets or wallets: it is called "vagrancy." So with the whole aberrated society on a big "GI push," with Wall Street measuring values only in how much something costs, with wages and prices soaring, at this writing, to total social disaster, it is no wonder that shortsighted and untrained or even aberrated executives get into a "GI push."

The answer to not having money is, of course, to make more money. And there is nothing whatever wrong with that. BUT that is *not* done with a "GI push." It is done with putting a whole org there, every part of it functioning and delivering, with all the bugs out of its lines, *and* making a lot, lot, lot more money. Fifty trained staff producing everything an org is supposed to produce will make far more money than five guys concentrating on GI only and letting the rest of the org go to blazes. The GI made by the fifty will go on increasing. The GI made by the five (and not backed up by the rest of the org) will decrease week by week and then crash.

Let us take some examples of "stat pushing":

The room is cold and the staff is wearing overcoats and using blankets. Mr. Stat Pusher walks over to the thermometer on the wall and sees that it reads very low. So he yells at the thermometer, "Get the stat up!" Nothing happens of course, it still says 15 degrees, so he yells at the staff, "Get that stat up!" Now, in this instance, having a stat pusher around, the org has no Treasury Div and so there was nobody to pay the bills and the fuel company has refused to deliver further fuel. The janitor is missing because there is no HCO to hire one or keep one on post so there's no one to light the furnace even if it had fuel. And due to an unhatted Financial Planning

Committee, that also doesn't meet or exist, no new boiler was ordered when the old one blew up last year. The stat pusher seems incapable of observing these facts, and is too unskilled to bring them to rights. So he continues to yell "Get the stat up" and the staff wears more and more coats and blankets until at last it is just a quiet scene of solid ice.

If the letters out stat is down, this is a bad INDICATOR. It is vital that one keeps stats and observes when one goes down. It is extremely hard to manage on one's post or in an org unless one has a stat. But, in going down, WHAT is being indicated? A lack of letters out. So what does one do? Does he yell "Get the letters stat up"? Or does he look into this? If he looked into it, he could find the real Why, handle it and the letters stat would go up. He might find that the Letter Reges were all sacked so as to increase the unit pay one week and that he has somehow gotten a nut onto a personnel or finance post (whose R/Ses make even his head jerk back and forth). He might find that the typewriters had broken down. He might find that Dept 5 people were all being used by Div 5 to handle their files. At the very least he will find something aberrated or ignorant going on which has to be handled before the letters can be flooded out again. WHEN this is found and handled, THEN the letters out stat will go up.

So Mr. Stat Pusher is essentially operating on a short circuit. He cannot or will not look.

And there is another variety of stat aberration which comes about after a lot of "Get the stat up" has failed. This is Mr. Stat Ignorer.

Mr. Stat Ignorer is driving along in a car and he looks at the speedometer. It says 15 mph. He glares at the needle for a moment and then handles it. He pastes a piece of paper over it so it can't be seen. And sits back and drives contentedly. If he'd looked, he would have found he had three flat tires and an engine about to run out of oil and explode.

Then there is also Mr. Stat Faker. He knows that he will get in trouble if his STAT is down. So he simply dreams up a figure and puts it on graph paper. He is encouraged and rendered confident in this because he is sure that no senior will come around and notice the towers of unanswered letters or the huge backlogs of cramming orders or the mobbed waiting room of unhandled public or the mountain of uncorrected and unfiled address plates. He is confident because no senior has in the last year or two. And he can say "I'm an upstat" when the Ethics Officer tries to hit him for keeping the front door to the org obstructed with his motorcycle. And he is recognizable by a caved-in case, low morale and a hunted look of glee as he creeps through the org.

There is one common denominator the stat pusher, the stat ignorer and the stat faker have. And that is AN ABSENCE OF SKILLED MANAGEMENT.

We have investigatory tech. It is there for use. We have the Data Series evaluation tech. It is there for use. We have administrative tech. And it is all published and there for use. And further, when it *is* known and used, proven times without number now, production and prosperity occur AND show up as statistics which INDICATE that production and prosperity are occurring.

Yes, it is very, very true that an org or a manager or an auditor or file clerk gets in trouble if their stats are down.

Yes, it is true that stats should exist and be used.

But it is equally true that the way to get a stat is to put something there that can get something done and get the lines debugged and the scene handled.

The fate of the stat pusher, the stat ignorer and the stat faker is to look around one day and find no org.

It's a very long way between yelling or telexing or writing "Get the stat up" and handling things and getting production cycles completed so that the stat WILL go up.

The stat, properly stated and honestly kept, IS a vital indicator of the scene. If you know how to use them you can get the areas that have to be handled. And if you know your policy and tech you can find the real Whys and get real handlings and get things whizzing.

We mean to have all the stats going up because this INDICATES a bettering state of affairs for everyone.

The job of the product officer is NOT to yell "Get the stats up." The product officer is there to notice and order things like "Get those letters answered so they get answers." And the job of the org officer is to carry out the handlings the product officer finds necessary to get production rolling.

A fire-breathing product officer is worth his weight to every staff member IF he is trying to get and is getting production which results in bettered conditions, better products, better prosperity and THIS will incidentally show up in the stats.

It's a world of things that have to be done and coordinated before the stats go up.

We are in the business of people, we are in the business of a bettered world. We have to have completed cycles of action. And these are shown in stats.

We are also in a world of exchange and would be no matter what ideology we lived under. We have to "make GI" and we have to have "the stats up."

But our success is measured in terms of the ACTIONS we do, for only those show up in the indicators called statistics.

So, okay. Let's go about it the right way. And find what is holding the stats down and handle and correct those things and so, honestly and swiftly become upstat.

ORG SERIES 35-1

STAT PUSH CLARIFIED

This policy letter is revised. The second paragraph of the original said that it was dangerous to talk about the subject because somebody could do an immediate make-wrong by saying, "This means don't try to raise any stats."

Well, exactly that happened. There was a heavy campaign run into all Flag Operations Liaison Offices and to orgs designed to discredit asking for raises in stats. (The person who did it and failed to push production quotas is suspended and under Comm Ev.)

The whole point seems to have been missed. It was this: You can't ask for a NUMBER; you CAN and MUST ask for a SOMETHING.

That something is a *product.* It is a thing, a tangible item.

Right this minute, as a result of a mission, HCO PL 16 Nov. 76, Exec Series 19, Org Series 37, PRODUCTION QUOTAS, has now been provided with thoroughly researched subproducts one has to push in order to get the PRODUCTS. These are the real tangible actions you have to take to get a number of actual products. In other words, by getting many exact minor products, you then can achieve the valuable final product.

STATISTICS are those numbers which simply count the products attained or obtained.

Stat management is the only kind of management you can do on a production scene. Management by statistics was brought to a fine art in Scientology admin tech. To discredit it is, of course, to court failure.

Abusing statistical management is also something of a crime. It has been done by some managers who said "Get the stats up" without ever saying what subproducts you had to get that would then make up the product.

Stat management is a valuable tool and has gotten us over the years. To discredit it first by saying first just "Get the stats up" without saying how or what or why was one side of the pendulum. Then the pendulum swung clear to the extreme and

people were being made guilty for even watching stats or demanding or working to raise them.

So let's get a little middle swing of the pendulum now.

It is perfectly all right to demand that stats rise so long as one says what subproducts and products make up those stats and gives some indication of what people should do to get the stats rising.

It is perfectly all right to do stat management.

And it is perfectly okay to come down hard on people or orgs who fail to get their stats in viable range.

So long as you give them some idea of what small products (subproducts) they have to get to make up the real products, you are NOT doing a stat push.

So long as you give people some direction and guidance, you can yell for stat increases all you want.

And you better.

ADMIN KNOW-HOW SERIES 43
TARGET SERIES 10

BATTLE PLANS

A "battle plan" is defined as:

A list of targets for the coming day or week which forward the strategic planning and handle the immediate actions and outnesses which impede it.

Some people write "battle plans" as just a series of actions which they hope to get done in the coming day or week. This is fine and better than nothing and does give some orientation to one's actions. In fact someone who does not do this is quite likely to get far less done and be considerably more harassed and "busy" than one who does. An orderly planning of what one intends to do in the coming day or week and then getting it done is an excellent way to achieve production. But this is using "battle planning" in an irreducible-minimum form as a tool.

Let us take up definitions. Why is this called a "battle plan" in the first place? It seems a very harsh military term to apply to the workaday world of admin. I did not select this term, it sort of grew up by itself amongst Sea Org executives. But it is a very apt term.

A war is something that happens over a long period of time. The fate of everything depends on it. A battle is something which occurs in a short unit of time. One can lose several battles and still win a war. Thus one in essence is talking about short periods of time when one is talking about a battle plan.

This goes further. When one is talking about a war, one is talking about a series of events which will take place over a long period of time. No general, or captain for that matter, ever won a war unless he did some strategic planning. This would concern an overall conduct of a war or a sector of it. This is the big upper-level idea sector. It is posed in high generalities, has definite purposes and applies at the top of the Admin Scale. (Ref: HCO PL 6 Dec. 70, Personnel Series 13, Org Series 18, THIRD DYNAMIC DE–ABERRATION)

Below strategic planning one has tactical. In order to carry out a strategic plan one must have the plan of movement and actions necessary to carry it out. Tactical

planning normally occurs down the org board in an army and is normally used to implement strategic planning. Tactical planning can go down to a point as low as "Private Joe is to keep his machine gun pointed on clump of trees 10 and fire if anything moves in it."

"Middle management" — the heads of regiments right on down to the corporals are covered by this term — is concerned with the implementation of strategic planning.

The upper planning body turns out a strategic plan. Middle management turns this strategic plan into tactical orders. They do this on a long-term basis and a short-term basis. When you get on down to the short-term basis you have battle plans.

A battle plan therefore means turning strategic planning into exact doable targets which are then executed in terms of motion and action for the immediate period being worked on. Thus one gets a situation whereby a good strategic plan, turned into good tactical targets and then executed, results in forward progress. Enough of these sequences carried out successfully gives one the war.

This should give you a grip on what a battle plan really is. It is the list of targets to be executed in the immediate short-term future that will implement and bring into reality some portion of the strategic plan.

One can see then that management is at its best when there is a strategic plan and when it is known at least down to the level of tactical planners. And tactical planners are simply those people putting strategic plans into targets which are then known to and executed from middle management on down. This is very successful management when it is done.

Of course the worthwhileness of any evolution depends on the soundness of the strategic plan.

But the strategic plan is dependent upon programs and projects being written in target form and which are doable within the resources available.

What we speak of as "compliance" is really a done target. The person doing the target might not be aware of the overall strategic plan or how it fits into it, but I assure you that it is very poor management indeed whose targets do not *all* implement to one degree or another the overall strategic plan.

When we speak of coordination (Ref: HCO PL 1 July 82, Admin Know-How Series 41, MANAGEMENT COORDINATION), we are really talking about conceiving or overseeing a strategic plan into the tactical version and at the lower echelon coordinating the actions of those who will do the actual things necessary to carry it out so that they all align in one direction.

All this comes under the heading of *alignment*. As an example, if you put a number of people in a large hall facing in various directions and then suddenly yelled at them to start running, they would, of course, collide with one another and

you would have a complete confusion. This is the picture one gets when strategic planning is not turned into smooth tactical planning and is not executed within that framework. These people running in this hall could get very busy, even frantic, and one could say that they were on the job and producing but that would certainly be a very large lie. Their actions are not coordinated. Now if we were to take these same people in the same hall and have them do something useful such as clean up the hall, we are dealing with specific actions of specific individuals having to do with brooms and mops — who gets them, who empties the trash and so forth. The strategic plan of "Get the hall ready for the convention" is turned into a tactical plan which says exactly who does what and where. That would be the tactical plan. The result would be a clean hall ready for the convention.

But "Clean up the hall for the convention" by simple inspection can be seen to be what would be only a small portion of an overall strategic plan. In other words the strategic plan itself has to be broken down into smaller sectors.

One can see then that a battle plan could exist for the ED or CO of an org which would have a number of elements in it which in their turn were turned over to subexecutives who would write battle plans for their own sectors which would be far more specific. Thus we have a gradient scale of the grand overall plan broken down into segments and these segments broken down even further.

The test of all of this is whether or not it results in worthwhile accomplishments which forward the general overall strategic plan.

If you understand all the above (it would be a good thing to do it in clay) you will have mastered the elements of coordination.

Feasibility enters into such planning. This depends upon the resources available. Thus a certain number of targets and battle plans, to an organization which is expanding or attempting big projects, must include organizational planning and targets and battle plans so that the organization stays together as it expands.

One writes a battle plan, not on the basis of "What am I going to do tomorrow?" or "What am I going to do next week?" (which is fine in its own way and better than nothing), but on the overall question, "What exact actions do I have to do to carry out this strategic plan to achieve the exact results necessary for this stage of the strategic plan within the limits of available resources?" Then one would have the battle plan for the next day or the next week.

There is one thing to beware of in doing battle plans. One can write a great many targets which have little or nothing to do with the strategic plan and which keep people terribly busy and which accomplish no part of the overall strategic plan. Thus a battle plan can become a liability since it is not pushing any overall strategic plan and is not accomplishing any tactical objective.

So what is a "battle plan"? It is the doable targets in written form which accomplish a desirable part of an overall strategic plan.

When one is talking about "mini programs" in an org, one is actually talking about small battle plans at the lowest tactical levels. These must be based upon a middle-management tactical plan and this in turn must be based on a strategic plan.

The understanding and competent use of targeting in battle plans is vital to the overall accomplishment that raises production, income, delivery or anything else that is a desirable end.

It is a test of an executive whether or not he can competently battle plan and then get his battle plan executed.

HCO POLICY LETTER OF 4 JANUARY 1966
ISSUE I

REMIMEO
ALL STAFF MEMBERS

STAFF MEETING

Staff meetings should convene on the first Tuesday evening of any month at the organization headquarters.

The chairman of the staff meeting has always been and shall continue to be the Executive Director or his deputy, the LRH Communicator.

The business of the staff meeting shall be:

> To gather agreement and permit staff origination on matters relating to personnel and duties. To suggest promotional, maintenance and organizational changes to the executives of the organization.

For any staff resolution to be a staff resolution, a majority of staff members must be present, else there is no quorum. For any staff resolution to be passed or conclusively killed, a majority vote of those present is necessary. In case of a tie, only then does the chairman vote.

Robert's Rules of Order may be applied or not by the chairman to the staff meeting as the need of formality may seem to be indicated, but in no case should the business of staff meeting be unduly retarded by the introduction of rules for that purpose.

Staff meeting resolutions should be made into minutes. These are presented to the Advisory Council for information and the Executive Director for approval before they become law.

Special staff meetings, not on a regular meeting date, may be called (1) by the Executive Director or his deputy, the LRH Communicator, or (2) by a staff member on three days' notice by posting a notice on the Comm Center bulletin board stating the time (but not during business hours) and the exact business to be covered by the meeting, and the meeting shall be convened only if a majority of staff then sign or initial such notice. Neither meeting shall have legal force if a majority of staff members are not present and if the Executive Director or his deputy, the LRH Communicator, is not in the chair. Resolutions of such meetings must proceed in the usual channels.

The Secretarial to the Executive Director shall take down and type all minutes of staff meeting.

HCO POLICY LETTER OF 30 AUGUST 1990R
REVISED 14 JANUARY 1999

REMIMEO
ALL ORGS
ALL STAFF

WEEKLY STAFF MEETINGS

(Taken from an LRH despatch of 12 November 1981.)

Refs:

HCO PL	1 July 82	AKH Series 41 MANAGEMENT COORDINATION
HCO PL	22 Aug. 82	AKH Series 43 Target Series 9 BATTLE PLANS

Modifies:

HCO PL	4 Jan. 66 I	STAFF MEETING

Anyone serving on org staff should be gathered together, once a week, to hold a staff meeting.

Weekly staff meeting is not just a meeting where an in-charge lectures the group.

Each person is responsible for his own stat or stats of his sector and, at the meeting, must personally stand up and report on them and show the graph or graphs.

The evening of the day when all the weekly stats are in must be chosen as the staff meeting day. At that time all the stats of the past week would have been graphed.

The order of business of the staff meeting would be:

1. Flaps and handlings.

2. General business announcements.

3. Presentation of stats and trends by individual staff members and a condition assigned to each stat with a battle plan for each.

   In a large org where it is not feasible for each staff member to present their individual stat and battle plan, the org's Executive Council would determine which stats and battle plans are to be presented. Minimally, even in a very large org, this would include each department and division head and the Executive Secretaries.

4. Summary of conditions assigned to be the condition of the whole group.

5. Bonuses for the week announced.

6. Combined battle plan.

All stats must be included that should come under the group and they must be individually assigned to persons. And that person must report on them.

Stats must be real and represent actual production, leading toward a VFP.

The number of minor stats developed must not then overshadow the major stats of the group and if they do, then the major stats must be given greater weight in the assignment of the final group condition.

Each person in the group is personally responsible for:

a. having a correct stat which reflects production factually,

b. the stats of his area of responsibility,

c. graphing the stat or stats on time,

d. presenting the stat and any clarifications,

e. presenting a battle plan for each stat for the coming week,

f. full knowledge of reading stats, date coincidence, stat interpretation and conditions.

The staff meeting is chaired by the CO or ED.

The group as a whole is responsible for the accuracy of individual stat conditions.

The purpose of the staff meeting is to develop a team spirit of mutual cooperation and coordination. It links bonuses to production and gives the group, by that, control over their own income.

STAR-RATE ON
ALL EXECS

TARGET SERIES 1

OT ORGS

What it takes to make an org go right is the intelligent assessment of what *really* needs to be done, setting these as targets and then getting them actually fully *DONE*.

We have all the data necessary to make orgs boom.

Therefore we find that when they don't, these faults must be present:

1. Completely unreal analysis of what needs to be done to make things really *go*.
2. Cross orders - juniors setting other targets *across* vital targets.
3. Noncompliance with vital target accomplishment.
4. False reports on actions or false data concerning targets.
5. Failures to doggedly follow through on one action and get it done fully and completely.
6. Distractions leading to any of the above.

MAJOR TARGET

The desirable overall purpose being undertaken. This is highly generalized, such as "to become an auditor."

VITAL TARGET

By definition a VITAL target is something that must be done to operate at all.

Man's worst difficulty is his inability to tell the important from the unimportant. "Every target is the same as every other target" is part of A=A=A.

It takes good sense to be able to survey an area and find out:

1. What MUST be done.
2. What SHOULDN'T be done.
3. What is only desirable to be done.
4. What is trivial.

As man all too easily specializes in stops, he tends to stress what SHOULDN'T be done. While this enters into it, remember that it's a STOP.

STOPS ALL OCCUR BECAUSE OF FAILED PURPOSES.

BEHIND EVERY STOP THERE IS A FAILED PURPOSE.

A stuck picture or a motionless org are similar. Each has behind it a failed purpose.

THERE IS A LAW ABOUT THIS — ALL YOU HAVE TO DO TO RESTORE LIFE AND ACTION IS TO REKINDLE THE FAILED PURPOSE. THE STOPS WILL AT ONCE BLOW.

That law (it comes out of OT VIII materials) is so powerful it would practically revive the dead!

It applies to orgs.

It applies to cities or nations.

When you diverge from a constructive purpose to "stop attacks," the purpose has been abandoned. You get a *stop.* The real way to stop attacks is to widen one's zone of responsibility. And pour the coal on the purpose. Thus all attacks one makes should be in THE DIRECTION OF ENLARGING ONE'S SCOPE AND AUGMENTING BASIC PURPOSE.

Thus, in the case of Scientology orgs, one should attack with the end in view of taking over the whole field of mental healing. If our purpose was this then it had to be this on all dynamics. We only got into trouble by failing to take responsibility for the whole field!

We'll win back by reasserting that responsibility and making it good.

Targets, to that degree, are purposes.

Purposes must be executed. They are something to DO.

OT

Let us look at the definition of OT — cause over thought, life, form, matter, energy, space and time.

As one falls away from that one becomes a SPECTATOR. Then one becomes an effect. Then one is *gone.*

One causes things by *action.* Not by thinking dim thoughts.

One can be doing an IN-basket as simply a spectator.

In the society today *spectatorism* is very common. Magazine writers, reporters, write weird pieces that look at how odd things are. The writer doesn't understand them at all. He just watches them.

Spectatorism is not so low as total effect.

The total effect — no cause — person has mainly a case. He doesn't even *look*.

Thus there is a gradient scale of OT. It's not an absolute. One is as OT as he can CAUSE things.

One of the things to cause is target attainment. When somebody can push through a target to completion, he's to that degree OT.

People who don't push targets are either just spectators or they are total effect.

ORG STATE

An org is somewhere on the OT scale. Any org is. Of any kind.

An org can figure out the vital targets and push them through to completion or it can't.

It's a gradient scale.

An org succeeds or fails to the degree its individual executives and staff members can measure up to the OT formula: Cause.

Scientology orgs must become cause over their environments.

They do this by each executive and each staff member *accomplishing* targets, small and large.

Thus:

a. If the targets of what MUST be done to operate at all are set and

b. Are carried out with no noncompliance and

c. If no false reports are entered into it,

Then:

That org is way high on the OT scale

AND IT WILL CONQUER ITS ENTIRE ENVIRONMENT COMPLETE.

That's really all there is to it.

One way to fail at it is do (a) with things that are so general that they invite no doingness.

Some guys are so bad off they set targets like "move the mountain" and give one and all a big failure. Since there's no way to do it and probably no reason to either. That's an SP target. So what MUST be done means just that. What is vital and necessary. Not what is simply a good idea.

Here's some MUST targets as examples:

A. Get tech delivered 100 percent in the org itself.

B. Get the public aware of its being delivered and wanting it.

C. Get the admin machinery in to get the public in and out.

Or another series:

D. Get 10,000 trained auditors into the org field.

E. Get the public aware of the project and wanting training.

F. Set up terrific 100 percent snap-pop courses to handle the flow.

Or another:

G. Get a £100,000 reserve cushion.

H. Get all Accounts staff and executives checked out on finance policy.

I. Shove the throttle down on promotion.

J. Deliver fantastic service.

K. Get enough tech people in training to handle the flows.

L. Find bigger, poshier quarters to handle the flow *when* it rises.

M. Get all staff onto the OEC to diminish flow line flubs.

You get the idea.

An exec who is just a spectator to his in-basket flow is doing nothing but cultivating dev-t.

You *can* assess the situation.

You can drive targets home to full completion.

Every executive and every staff member is somewhere on the OT scale. And he can rise higher just by setting up the targets and plowing them through to done, done, done.

Yes, it requires ideas. But ideas come from interested looking and sizing it all up before you set the target in the first place.

You can even raise an org by gradients so as not to overwhelm it. Set and *make* small targets. Then bigger and bigger ones.

Well, you get the idea.

It's the ORG's road to OT.

FOUNDER

THE IDEAL ORG

L. RON HUBBARD

EXECUTIVE DIRECTIVE

LRH ED 102 INT 20 MAY 1970

TO: ALL STAFF

FROM: RON

SUBJECT: THE IDEAL ORG

REF: CURRENT "DATA SERIES" PLS

The ideal org would be an activity where people came to achieve freedom and where they had confidence they would attain it.

It would have enough space in which to train, process and administrate without crowding.

It would be located where the public could identify and find it.

It would be busy looking, with staff in motion not standing about.

It would be clean and attractive enough not to repel its public.

Its files and papers, baskets and lines would be in good order.

The org board would be up-to-date and where the public could see who and what was where and which the staff would use for routing and action.

A heavy outflow of letters and mailings would be pouring out.

Answers would be pouring in.

Auditors would be auditing in Div 4 HGC and Qual would be rather empty.

Supervisors would be training students interestedly and 2-way comming all slows.

The HCO Area Sec would have hats for everyone. And checked out on everyone.

There would be a pool of people in training to take over new admin and tech posts.

The staff would be well paid because they were productive.

The Public Divisions would be buzzing with effective action and new people and furnishing a torrent of new names to CF.

The pcs would be getting full Grades to ability attained for each, not eight minutes from 0 to IV, but more like thirty processes. And they would be leaving with high praises.

The students would be graduating all on fire to audit.

One could look at this ideal org and know that *this* was the place a new civilization was being established for this planet.

The thousand or more actions that made it up would dovetail smoothly one with another.

And the PR area control would be such that no one would dream of threatening it.

Such an ideal org would be built by taking what one has and step by step building and smoothing; grooving in and handling each of its functions, with each of its divisions doing more and more of its full job better and better.

The business is always there — the skill with which it is handled and the results on pcs and students is the single important line which makes it possible to build the rest.

The ideal org is the image one builds toward. It is the product of the causative actions of many. Anything which is short of an ideal org is an outpoint that can be put right. The end product is not just an ideal org but a new civilization already on its way.

REMIMEO

AN ESSAY ON MANAGEMENT

A knowledge of Group Dianetics should include a knowledge of management, its problems and optimum performances. In Group Dianetics, the best organization can be seen to be one wherein all individual members of the group are versed in all the problems and skills in the group, specializing in their own contributions but cognizant of the other specialties which go to make up group life.

It is an old and possibly true tenet of business — at least where business has been successful — that management is a specialty. Certainly it is true that ruling, as Group Dianetics concerns itself with government, is a specialized art and craft not less technical than the running of complex machinery, and certainly, until Group Dianetics, more complex.

MANAGEMENT IS A SPECIALTY

With our present technology about groups, it is possible to accomplish with certainty many things which before came out of guesses when they emerged at all. Management in the past has been as uncodified in its techniques as psychiatry and management, without reservation, has almost always been a complete failure. Men were prone to measure the excellence of management in how many dollars a company accumulated or how much territory a country acquired. These are, at best, crude rules of the thumb. Until there was another and better measure, they had to serve. To understand that these are not good measures of the excellence of management one has only to review the history of farms, companies and nations to discover that few have had any long duration and almost all of them have had considerable trouble. Management has failed if only because the “art” of managing as practiced in the past, required too much hard labor on the part of the manager.

Until one has considered the definitions of wealth and expanded territory, and has taken a proper view on what these things really comprise, one is not likely to be able to appreciate very much about management, its problems or its goals. Hershey, a brilliant manager with a brilliant managing staff, yet failed dismally as a manager because he neglected the primary wealth of his company — his people and their own pride and independence. His reign of a company ceased with his people — well-paid engineers and laborers, well housed, well clothed — shooting at him with remarkably live ammunition. The brilliant management of Germany came within an inch of restoring to her all her conquests of former years yet laid Germany in ruins.

ATTAINMENT OF GOALS

Before one can judge management one has to consider the goals of an enterprise and discover how nearly a certain management of a certain enterprise was able to attain those goals. And if the goal of the company is said to have been wealth, then one had better have an understanding of wealth itself, and if the goal is said to have been territory, then one had better consider what, exactly, is the ownership of territory.

Goals and their proper definition are important because they are inherent in the definition of management itself. Management could be said to be the planning of means to attain goals and their assignation for execution to staff, and the proper coordination of activities within the group to attain maximal efficiency with minimal effort to attain determined goals.

Management itself does not ordinarily include the discovery and delineation of the goals of a group. Management concerns itself with the accomplishment of goals otherwise determined. In large companies the goals of the group are normally set forth by boards of directors. When this is done, the goals are assigned the nebulous word "policy." In governments, goals, when they are assigned at all, generally stem from less formal sources.

Nations are so large that until they embark upon conquests they usually have few national goals which embrace all the group. The government personnel itself has the goal of protecting itself and exerting itself in management, and the remainder of the group bumbles along on small subgoals. When a goal embracing a whole nation is advanced and defined, the nation itself coalesces as a group and flashes forward to the attainment of advances. It is an uncommon occurrence at best that a nation has a goal large enough to embrace the entire group: thus governments are normally very poor, being management with only the purpose of managing. Asia Minor, given a goal by Mohammed, exploded into Europe. Europe, given a goal by certain religious men to the effect that the city of the Cross had better be attained, exploded into Asia Minor. Russia, selling five-year plans and world conquest plans and minority freedom plans, can have a conquest over any other nation without any large group goals. A good goal can be attained by poor management. The best management in the world never attained group support in toto in the absence of a goal or in the embracing of a poor one. Thus Russia could be very badly managed and succeed better than an excellently managed but goalless United States (for self-protection is not a goal, it's a defense). Marx is more newly dead than Paine. The goal is less decayed.

Companies obtain, usually, their "policy" from an owner or owners who wish to have personal profit and power. Thus a sort of goal is postulated. Nations obtain their goals from such highly remarkable sources as a jailbird with a dream of a conquered enemy, a messiah with cross in hand and Valhalla in the offing. National goals are not the result of the thinking of presidents or the arguments of assemblies. Goals for companies or governments are usually a dream, dreamed first by one man, then embraced by a few and finally held up as the guidon of the many. Management puts such a goal into effect, provides the ways and means, the coordination and the execution of acts leading toward that goal. Mohammed sat alongside the caravan routes until he had a goal formulated and then his followers managed Mohammedanism into a

conquest of a large part of civilization. Jefferson, coding the material of Paine and others, dreamed a goal which became our United States. An inventor dreams of a new toy, and management, on the goal of spreading that toy and making money, manages. Christ gave a goal to men. St. Paul managed that goal into a group goal.

In greater or lesser echelons of groups, whether it is a Marine company assigned the goal of taking Hill X428 by the planner of the campaign, or Alexander dreaming of world conquest and a Macedonian army managing it into actuality, or Standard Oil girdling the world because Rockefeller wanted to get rich, the goal is dreamed by a planning individual or echelon and managed into being by a group. The dreamer, the planner, is seldom an actual member of the group. Usually he is martyred to a cause, overrun and overreached. Often he lives to bask in glory. But he is seldom active management itself. When he becomes management, he ceases to formulate steps to be taken as lesser goals to greater goals and the group loses sight of its goal and falters. It is not a question of whether the dreamer is or is not a good manager. He may be a brilliant manager and he may be an utter flop. But the moment he starts managing, the group loses a figurehead and a guidon and gains a manager.

The dreamer of dreams and the user of flogs on lazy backs cannot be encompassed in the same man for the dream, to be effective, must be revered and the judge and the taskmaster can only be respected. Part of a goal is its glamour and part of any dream is the man who dreamed it. Democracy probably failed when Jefferson took office as president, not because Jefferson was a bad president but because Jefferson, engrossed with management, ceased his appointed task of polishing up the goals.

According to an expert on history, no group ever attains a higher level of ideal or ethic than the moment it is first organized. This observation should be limited, to be true, to those groups wherein management has been assigned to the dreamer of the dream. For in those cases where the dreamer was ably supported, the tone of the group remained high and the group continued to be brilliantly effective as in the case of Alexander whose generals did all the generaling and Alexander, a brilliant individual cavalryman, set examples and pointed out empires.

But whether a group has an Alexander or a wild-eyed poet or an inventor doing its goal setting for it, the group cannot be an actual or even an effective group without such goals for its achievement and without management brilliant enough to achieve those goals.

THE CHARACTER OF GOALS

Having examined the source of such goals, one should also examine the character of goals in general. There are probably as many goals as there are men to dream them, probably more. Goals can be divided into two categories, roughly. The first would be survival goals and the second would be nonsurvival goals. Actually most goals are a combination of both, for goals are occasionally set forth solely for their appeal value not for their actual value. One sees that the goal of a nation which directs it to conquer all other nations ends up, after occasional spurts of prosperity, in racial disaster. Such a goal is not dissimilar to the money goal of most “successful” industrialists or boards.

One might call such goals acquisitive goals entailing, almost exclusively, the ownership of the MEST accumulated through hard work, by others. Technically one could call these enMEST goals, for conquest of nations brings about the ownership of MEST which, by conquest, has been enturbulated into enMEST and which will make enMEST of the conqueror's own land eventually. Rapacious money-gathering gains enMEST, not MEST and makes enMEST of the rightful money of the acquisitor. Such goals, since they tend toward death, are then nonsurvival goals. Survival goals are good and successful in the ratio to the amount of actual theta contained in them, which is to say, the ability of the goals to answer up favorably on a maximum number of dynamics. A survival goal then is actually only an optimum solution to existing problems, plus theta enough in the dreamer to reach well beyond the casual solution. A group best catalyzes on theta goals, not only to a higher pitch but to a more lasting pitch than a group catalyzed by enMEST goals as in a war. It can be postulated that theta goals could bring about a much higher level of enthusiasm and vigor than the most grandly brass-banded war ever adventured upon.

Another postulate is that a goal is as desirable as it contains truth or true advantage along the dynamics.

SPHERES OF ACTION

A group, then, can be seen to have three spheres of interest and action. The first is the postulation of goals. The second is management. The third is the group itself, the executors of the plans, procurers of the means and enjoyers of the victories.

These three factors or divisions must be satisfied to have a successful group or, actually, a true group. The divisions are not particularly sharp. The desires and thoughts of the body of the group influence and catalyze and are actually part of the goal dreamer. Management has to have the support of the group and the provision of the group to proceed at all and thus must have the agreement of the group for the best and most economical execution of orders. Management must have the confidence of the planning echelon or the planning echelon is liable to include the reform of management as part of the dream. The goal maker must be accepted and trusted by management or management will begin to look around for a new goal maker and, being management, not a goal maker, may take up with some highly specious ideas which management might then seek to make a subechelon to itself (the thing which causes most nations to cave in and most companies to collapse).

There are three divisions of action, then, which are interactive and inter-dependent. ARC amongst these three must be very high. A group which is hated by its management (often the case in the military) often gets wiped out: a whole system may be destroyed (as in American industry) when management and the group decide to become two camps. The death of the goal maker is not destructive to a group but even sometimes aids it, but only so long as the dream itself lives and is kept living. A management, for instance, which would interpose (for the "good" of the group) between the goal maker and the group is leveling death at the group by perverting and interpreting the character of the goal. Management cannot concern itself with the overall goal or plan; it can only execute and expedite the plans of accomplishing the

goal and relegate its own planning to ways and means planning, not goal planning. The traffic between the group and the goal maker should be direct and clean of all "interpretations" unless management wishes to destroy the group, in which case it should, by all means, undertake an interruption of communication between the goal maker and the group. The place of the goal maker is in the marketplace with the group or off somewhere sitting down thinking up a new idea. The place of management is in the halls and palaces, arsenals and timekeepers' cages, behind the judges' bench and in the dispatcher's tower. Management leads the charge after goals has assigned the cause of the campaign.

Management is subservient to goals but goal making is not in command of management. So long as a management realizes this it will continue in a healthy state as a management and the group, modified by natural factors such as food, clothing and general abundance, will remain in excellent condition. When management fails to realize this, the goal maker, even when he is merely an individual who enjoys the making of vast fortunes, shifts the management. When the goal maker is actually high theta and management forgets this and forgets the quality of ideas (or doesn't ever quite realize their potency) then, again and more so, management will be tumbled around, for a theta goal maker has behind him a group and in a moment can become much more group than management and easily empties out the halls and palaces. A management that discredits its goal maker or perverts the communication of goals of course dies itself but, in dying, may also kill a group.

Management often takes the goal maker into its confidence and requests the solution to various problems. Management should understand that when it does such a thing it is not taking conference with more management, for the advice it will receive on technical problems, no matter how brilliant, is usually delivered with asperity, for the goal maker has no sight of tenuous lines of supply, quivering bank balances, raging labor leaders, leases and contracts unsigned or perilously inadequate. The goal maker sees goals, management sees obstacles to goals and ways of overcoming them. The first requisite of a goal maker is to see goals which are attainable only by the most violent ardures and which are yet sparkling and alluring enough to lead forward and onward his own interest (in the case of an enMEST goal maker) or (if he is a theta goal maker) his entire group. Management pants between the pressure of the group to attain the goal and the clarion call of the goal maker to go forward.

Yet there are specific means by which management can lighten the burdens for itself, recover and retain its own breath and be highly successful as management, which means that the group, by that management, must be highly successful if *its goals are kept bright.*

A TRUE GROUP

Let us concern ourselves only with true groups. The true group could be defined as one which has (a) a theta goal, (b) an active and skilled management working only in the service of the group to accomplish the theta goal and (c) participant members who fully contribute to the group and its goals and who are contributed to by the group; and which has high ARC between goal and management, management and group, group and

goal. Here we have no management problems beyond those natural problems of laying the secondary but more complex plans of accomplishing the goals, pointing out and laying the plans for the avoidance of obstacles en route to that goal or those goals and coordinating the execution of such secondary, but most vitally important, plans. Management, having the agreement of the participants, is immediately relieved, by the participants, of some of the planning and, that plague of management, the tying of loose and overlooked ends. Further, management is not burdened with the actual location or cultivation of food, clothing and shelter for the group as in a welfare state, but is only concerned with coordinating group location or cultivation along secondary plans laid by management for the location and cultivation. Management is enriched by the advice of those most intimately concerned with the problems of participation and is apprised instantly of unworkabilities it may postulate. On the goal side it is relieved of the problem management has never solved, the postulation and thetizing of the primary goals of the group. Further, management does not have the nerve-racking task of smoothing out enturbulations and confusions which are the bane of every semi-group.

Now let us consider what might be meant by a true group as opposed to a pseudo-group. A true group falls away from being a true group in the gradient that ARC breaks exist between goals and management, management and group, and group and goals. In the case of a high theta goal maker and a group in agreement with those goals, a bond between group and goal maker is so copper bound, cast-iron strong, whether the goal maker is alive or dead as a person, that a management out of ARC with either the goal maker or the group will perish and be replaced swiftly. But in the interim while that management still exists, the group is not a true group and is not attaining its objectives as it should. This would be the first grade down from a true group toward a pseudo-group. The condition might obtain for some time if management were not quite a true management and not flagrantly out of ARC. The duration that such a management would last would be inversely proportional to the completeness of the ARC break. A severe perversion or break of ARC would bring about immediate management demise. A continuing slight one might find the management tolerated for a longer time. The break with the group, while the goal maker lives, can be of greater severity than with the goal maker without causing management to collapse or be shifted. Break of ARC with a goal maker finds management under the immediate bombardment of a group catalyzed, as a small subgoal, into the overthrow of management. For this reason most managements prefer a good, safely dead goal maker whose ideals and rationale are solidly held by the group and most groups prefer live goal makers because so long as the goal maker lives (in the case of a true group), the group has a solid champion, for a theta goal maker is mainly interested in the group and its individuals and his goals and has very little thought of management beyond its efficiency in accomplishing goals with minimal turmoil and maximal speed.

The next step down from the true group toward a pseudogroup is that point reached where the goals exist as codes after the death or cessation of activity as a goal maker, of the goal maker. Management, always ready to assume emergencies exist, being hard-driven men even in the best group, breaks ARC to some slight degree with the codified goals in the name of expediency. Being interested in current problems and seeing the next hill rather than the next planet, management innocently begins a series of such breaks or perversions and begins to use various means to sell these to the

group. The group may resist ordinarily but in a moment of real danger may deliver to management the right to alter or suspend some of the code. If management does not restore the break with or perversion of the code, the true group has slipped well on its road to a pseudogroup.

The next major point on the decline is that point where management is management for the sake of managing for its own good, not according to the demised goal maker's codes of goals, but preserving only some tawdry shadow of these such as "patriotism," "your king," "the American way," "every peasant his own landlord," etc., etc., etc.

The next step down is the complete break and reversal of ARC from group to management at which moment arrive the revolution, the labor strikes and other matters.

If management succeeds the overthrown management without the simultaneous appearance of a new goal maker, the old regime, despite the blood let, is only replaced by the new one, for management, despite critics, is normally sincere in its effort to manage and strong management, unless a good theta goal maker springs up and carries through the revolution or strike, is faced with a continuing and continual emergency which demands the most fantastic skill and address on the part of managers and, oddly enough but predictably, the strongest possible control of the group.

We are examining here, if you have not noticed, the Tone Scale of governments or companies or groups in general from the high theta of a near cooperative state, down through the theta of a democratic republic, down through "emergency management," down through totalitarianism, down through tyranny and down, if not resurged by a new goal maker somewhere on the route, into the apathy of a dying organization or nation.

A true group will conquer the most MEST. Not even given proportionate resources with another group, it will conquer other groups which are not quite true groups. Brilliance and skill tend naturally to rally to the standards of a true group as well as resources. As a sort of inevitable consequence, MEST will move under a true group. The amount of MEST a true group will eventually conquer — but not necessarily OWN — is directly in proportion to the amount of theta that group displays — theta being many things including solutions along the dynamics toward survival. To display theta the group must definitely tend toward a true group.

A truly successful management, is a management in a true group. It is definitely in the interest of management to have as nearly true a group as it can possibly achieve. Indeed, management can actually go looking, for a group's completion, for a goal maker, or send the group looking for a goal maker and then, the goal maker proving himself by catalyzing the group's thoughts and ambitions, raise the goal maker's sphere of action as high as possible and abide thereby without further attempting to modulate or control the goals made (for management is necessarily a trifle conservative, is always liable to authoritarianism and is apt to be somewhat sticky of its power). Probably the most stupid thing a management can do is refuse to let a

group become a true group. The group, if at all alive as individuals, will seek (the third dynamic being what it is) to become a group in the true sense. A group will always have around it a goal maker. Management in industrial America and in Russia tries to outlaw, fight and condemn goal makers. This places the group in the command, not of management, but a would-be martyr, a John L. Lewis, a Petrillo, a Townsend, and management promptly has to go authoritarian and start killing sections of the third dynamic, which course leads to death not only of the management but to the business or the nation.

Likewise a group should be tremendously aware of the dullness or the real danger of putting a goal maker into management or insisting that the goal maker manage. Hitler had a battle. He probably had a lot of other battles he could have written about if one and all had recognized what goal maker there was in him and supported his goal making. Instead, current management threw him into jail and sorted itself out as a target for national wrath (for don't think the people weren't behind Hitler, regardless of what the Nazis try to tell our military government). Down went the Republic, up went Hitler as management. Down went Germany in a bath of blood. At best he was a bad goal maker because he dealt with enMEST, and very little theta. But he was a hideously bad manager for by becoming one he could no longer be a good goal maker but, made irascible by the confusions of management, went mad dog.

Being rather low on the Tone Scale initially, most managements would be very chary of creative imagination level goal making unless they knew the mechanics of the matter. And these demonstrate that it is unsafe to be without a goal maker, unsafe to suppress goal makers, unsafe not to keep trying for a true group continually and to fight very shy of letting anything drift toward the pseudogroup level. Management should stay in close tune with the group participants and give them as much to say about managing and ways and means as possible and avoid assuming the burden of caring for the group and assume the role and keep it as servants of the group, at the actual command of that group.

Management and enterprises are most highly successful when they attain most energetically toward true group status.

LAWS

There are certain definite and precise laws by which management can raise the level of its own efficiency and the level of production and activity of a group.

When it is necessary to establish a surprise element in an attack or to secure a portion of the group from attack, suppression of OPERATIONAL DATA is permissible to management. Suppression of any other than operational data can disrupt a group and blow management over. Any management which operates as a censorship or a propaganda medium will inevitably destroy itself and injure the group. A management must not pervert affinity, communication or reality and must not interrupt it. A management fails in ratio to the amount of perversion or severance of ARC it engages upon and its plans and the goals of the group are wrong in the exact ratio it finds itself

"forced" to engage upon ARC perversion or severance of ARC in terms of propaganda or internal relations.

A management can instantly improve the tone of any organization and thus its efficiency by hooking up and keeping wide open all communication lines — communication lines between all departments and amongst all persons of the group and communication lines between the goal maker and the group. Fail to establish and keep in open and flowing condition one communication channel and the organization will fail to just that extent.

Communication lines are severed in this fashion: (a) by permitting so much entheta to flow on them that the group will close them or avoid them; (b) pervert the communication and so invalidate the line so that afterwards none will pay attention to the line; (c) by glutting the line with too much volume of traffic (too much material for too little meaning); and (d) chopping the line through carelessness or malice or to gain authority (the principal reason why lines get tampered with).

He who holds the power of an organization is that person who holds its communication lines and who is a crossroad of the communications. Therefore, in a true group, communications and communications lines should be and are sacred. Communication lines are sacred. They have been considered so instinctively since the oldest ages of man. Messengers, heralds and riders have been the object of the greatest care even between combatants on enMEST missions. Priesthoods hold their power through posing or being communication relay points between gods and men. And even most governments consider cults sacred. Communication lines are sacred and who would interrupt or pervert a communication line within a group is entitled to group death — exile. And that usually happens as a natural course of events. Communication lines are sacred. They must not be used as channels of viciousness and entheta. They must not be twisted or perverted. They must not be glutted with many words and little meaning. They must not be severed. They must be established wherever a communication line seems to want to exist or is needed.

Any management of anything can raise tone and efficiency by establishing and maintaining zealously, as a sacred trust, communication lines through all the group and from outside the group into the group and from in the group outside the group.

The most vital lines of a group are not operational lines, although this may appear so to management. They are the theta lines between any theta and the group and the goal maker and the group. Management that tampers with these lines in any way will destroy itself. These actually have tension and explosion in them. It is as inevitable as nightfall that these lines will explode, when tampered with, at the exact point of the tampering. This is a natural law of communication lines.

A line is as dangerous to tamper with as it has truth in its channel. It is safe and even preserving of a line to cut it when it contains entheta. For example when a true line is cut, it charges a little power into the cutter and he has authority for a moment thereby. But it is only the authority of the cut line. If the line is thus made to perish, the cutter loses his authority. If there is much truth in that line, it does not give authority to the cutter, it explodes him.

A group has the right to exile anyone it discovers to be guilty of tampering with any communication line.

A management which will pervert an affinity or sever one may gain a momentary power but the laws here are the same as those relating to communication and an affinity tampered with will lower the tone of a group.

A management which will pervert or suppress a reality, no matter how "reasonable" the act seems, is acting in the direction of the destruction of a group. It is not what management thinks the group or the goal maker should know, it is what is true. A primary function of management is the discovery and publication, in the briefest form which will admit the whole force of the data, the reality of all existing circumstances, situations and personnel. A management which will hide data, even in the hope of sparing someone's feelings, is operating toward a decline of the group.

A true group must have a management which deals in affinity, reality and communication and any group is totally within its rights, when a full and reasonable examination discloses management in fault of perverting or cutting ARC, of slaughtering, exiling or suspending that management. ARC is sacred.

POWER

Management should be cognizant of the differences existing in power. Management undeniably must have power but a management which confuses authority with power is acting, no matter its "sincerity" or "earnestness" or even conscious belief that it is doing what is right and well, in the direction of decay of organizational efficiency. Power which is held and used by rationale alone is almost imperishable. That power deteriorates and becomes ineffective in exact ratio to the amount of pain or punishment drive it must use to accomplish its end. The theta of management becomes entheta in a dwindling spiral once this course is entered upon. For example, the punishment of criminals creates more criminals. The use of punishment drive on the insane creates more insane. Punishment drive against inefficiency creates more inefficiency and no management wisdom or power under the sun can reverse or interrupt this working law. Every management of past ages has been an enturbulated group rule seeking to rule an enturbulated group. Management has only succeeded when punishment drive was suspended or when theta moved in over the scene from a goal maker and by sheer theta power, disenturbulated the group.

The need of management is for power to advance secondary and vital plans and coordinate their execution by the group. The only power that ever works is derived from reason and the ability to reason. MEST surrenders only to reason when it is to become organized MEST. Punishment drive creates enMEST where MEST was sought. It is the boasted desire of every management to acquire MEST for the group. By employing punishment drive on the group or on MEST a management can acquire only entheta control of enMEST and that is death. Management, if enough free theta exists in the group or if the goal is sufficiently theta, gets away with punishment drive and can confuse the punishment drive it is applying with the existing theta in the group

and can delude itself into thinking that accomplishment occurs because of punishment drive not because of existing theta. Thus enthused about punishment drive, management then applies more of it with the result that the existing theta is enturbulated. Sooner or later the group perishes or, fortunate group, saves itself with a revolt which carries a theta goal. (Example—British Navy, bad conditions of discipline before first quarter of nineteenth century; mutiny of whole navy for humanitarian handling of men; result, a more efficient navy than Britain had ever had before.)

Power, and very real, forceful power it is, can be sustained only when it deals with theta goals and is derived from theta principles. Authoritarian power, held by breaking or perverting ARC, enforced by punishment drive, brings to management certain destruction and brings to the group reduced efficiency or death. One, in considering these things, is not dealing in airy philosophic impracticalities but in facts so hard and solid they can be worn and eaten and used as roofs. We are dealing here with the basic stuff of management and group survival. It is to be commented upon that management has succeeded despite its use of punishment drive and because of existing theta goals whether management knew it or not. This sums up not particularly to the discredit of managements of the past but to the highly resistant character of theta goals. Management, failing to understand the true force of its power and the source of that power, seeing only that if it cut and perverted ARC it had power of a sort, has been the yoke around the neck of mankind in most instances, not the proud thing management thinks it is or could be, keeping the wheels turning. Where wheels turned in the past it was usually because of highly vital theta goals and thoroughly despite management. Management, being a needful cog in the scheme of things, has been kept around by a hopeful mankind on the off chance that it someday might be of complete use. A punishment-drive management is the spoke in the wheel of an action being conducted by a goal maker and a group, not the grease for the wheel which management sincerely believes itself to be. A goal-maker–group combination action is only enturbulated because of the lack of a good management or the existence, much worse, of a punishment-drive management. Man would run better entirely unmanaged than in the hands of an authoritarian management for the end of such a management is group death. A group would run better theta managed with real theta power than a group entirely unmanaged.

Management derives power most swiftly by acting as interpreter between a goal maker and a group. The power of the management is effective in ratio to the cleanness with which it relays between the goal maker and the group on ARC. Management loses real power in the ratio that it perverts or cuts lines between the goal maker and the group. When the goal maker exists now only as a printed code, management can continue to prosper and can continue to serve only in the ratio that it keeps that code cleanly interpreted between archives and group. Management deteriorates and grows unprosperous in the ratio that it perverts or cuts the lines from code to group.

There is an intriguing factor involved, however—ARC lines. When they are slightly interrupted they deliver power to the individual that interrupts them. True, it is authoritarian power, death power. But a very faint tampering with a line gives authority to the tamperer since he is obscuring to some slight degree a section of theta.

His group is trying to see the theta and reach it and if they can do so only through the tamperer and if they are convinced that the tamperer or tampering is necessary (which it NEVER is), then the group tolerates the tamperer in the hope of seeing more theta. Mistaking this regard for him as something he is receiving personally, the tamperer cannot resist, if he is a narrow and stupid man, tampering a little more with the ARC line. He can live and is tolerated only so long as the theta he is partially masking is not entirely obscured. But he, by that first tampering, starts on the dwindling spiral. Eventually he is so "reactive" (and he would have to be pretty much reactive mind to start such an operation) that he obscures the theta or discredits it. At that moment he dies. He has put so much tension on the line that it explodes. If it is not a very theta ARC in the first place, he is relatively safe for a longer period. The pomp and glory he assumes are not his. He makes them enMEST and entheta and eventually corrupts them utterly and corrupts himself and all around him and dies as management.

PRETENDED GOALS

There is also a pretense of having a theta goal without having one which intrigues management. Lacking the actual article the management postulates merely the fact that such an article exists and that management is the sole purveyor of this theta goal. Usually such a management makes excuses for the goal not being in sight or existing by claiming that "it is too complicated for ignorant minds to grasp," "it is too sacred to be defiled by the hands of the mob." Management dresses itself in all the trappings of a theta relay station, but as there is no theta goal in the first place to give to the group, punishment drive has to be entered upon instantly. Hellfire has to be promised to those who won't believe a theta goal exists just over management's shoulder. A flog has to be used to convince the group that the cause is just. However, a group is capable of generating some theta on its own. There are always some minor goal makers around. Unfortunately these serve to buoy up a masking management by actually putting some theta into circulation. Management can then keep on masking an empty altar. But as the altar is empty such a management is always afraid instinctively. It starts to speak of rabble, the mob, the horrors of individual say in group actions. It speaks of anarchy and uses wild propaganda to stampede and enturbulate its group. The life goes, to some degree, down in every individual in that group and stays up only because of the minor goal makers in the group. Management, seeing here a rival or a threat of discovery that it exists not for the goal but for itself, starts in punishment driving the minor theta makers, calling them revolutionaries whenever they advance a goal or idea and having them torn down from any tiny eminence to which their meager supply of theta has lifted them. When the last of these goal makers is dead, the group is dead, management is dead and desolation reigns. THIS HAS BEEN THE CYCLE OF MANAGEMENT AMONGST MEN SINCE FIRST HE BECAME CIVILIZED, save in those times and places where a real goal maker existed and where management actually began by being a part of a nearly true group. (See the history of Greece, the history of Egypt, the history of Rome, trace the course of Greek tyrannies. See also the history of various companies, and one readily sorts out those which began because of a goal maker and those which pretended a goal existed but had no goal maker for the group but only made goals for individuals—management itself. Three life insurance companies began because of real goal makers

and they are the leading companies of America despite subsequent perversions of the goal and its subordination to individual profit.)

MASKED MANAGEMENT

Now it so happens that a culture which has within it many examples of punishment-drive masked management will begin to develop a spurious technology of management based upon mimicry of these masked punishment-drive managements. The technology is most ably put forward in Machiavelli's *Prince* for that period. Almost any text on "military science" is a technology of masked management. However, such texts exist and are useful because they furnish a short-term method of assembling a unit to follow a cause whenever one appears. The technology of how a company evolutes or a battery spots is not the technology of management but the technology of a coordinated group. Everywhere one looks in such a text on actual battle skill one finds cooperation and understanding are the essence and that ARC is stressed amongst the group itself at every period and paragraph. But alas, the technology of the military management itself is so far from useful or factual that wars get won only because most armies have the same management system and that one wins which makes less errors than another and which has a better "cause."

Example, the communist main group in Russia is not a true group. Probably the United States is much closer to (but very far from) a true group. Thus the nation of Russia vs. the nation of the US, in a battle of culture would lose miserably. But an army of communists, working for a management which only recently lost its goal makers, Marx and Lenin, can have a "cause" couched in modern terms. All armies are considerably entheta and take only enMEST. But a Russian army has a "cause" superior to a US army. Neither army has a true group cause, but the US "cause" has not been restated in convincing modern terms. A second-rate and obsolete "cause" is as dangerous to have around an army as an obsolete weapon. The US army "cause" does not include a conquest of MEST clause but contains only protection of status quo clauses. Once the US drove hard on theta goals. Because her people and culture are not much decayed and her technology is high, a US with a "cause," as before, could easily outreach any Russian culture. And a US army with such a "cause" would crush a vastly superior Russian force. Armies, understand, are short-term groups intimately concerned with the conquest of MEST which, no matter if they made enMEST of it, is still a MEST goal until conquered. Thus armies can be thrown into action with far less reason than a culture, and, not so closely, ARC within the unit itself can be catalyzed. An army, then, builds its technology on fantastically high ARC on the private–corporal level and is governed by a fantastically low ARC on the management level. Because ARC is high in the bulk of the group and is commanded to be high (management of armies would reverse such a thing if they knew what they were effecting, one fears) by a low ARC management. Optimum in armies is that high ARC on the private–corporal level and managed by a government which has high theta goals and is itself high ARC. When this is attained armies explode out of Asia Minor and overrun Europe.

With such bad examples in a culture, management can develop an entirely false technology. Managers have to be geniuses to work with such technologies and ordinarily work themselves into a swift demise as witness the presidents of the US who can be seen, if you compare the pictures of the same president after just two years of being president, to deteriorate swiftly. The group one way or another will try to knock apart an authoritarian management or a management even slightly authoritarian. The management thinks this is all because of bad planning, tries to plan better, and thinks all can be righted by just a little more emergency punishment drive. The group revolts more. Management punishment-drives more. And finally something has to explode. It is a lucky nation which blows into a theta goal revolt early in this cycle. The government of the United States is overworked and inefficient as management because all the principles of its original goal makers are not applied and those that are applied are slightly perverted. And the same thing obtains with Russian management. (Example: read the works of Paine and the works of Jefferson in their original form and read also the letters and personal opinions of these men: you will find more theta in those writings which has been overlooked than the whole US government is using from those same goal makers. Read Marx and Lenin and look at the tremendous quantity of theta untapped in those works.)

Bad management, then, like any aberration, goes by contagion. Because of a native existence of theta goals even as to common survival and a country wealthy in brilliant people and natural resources, management can become a sort of priesthood because success reigns and management has never been loath to take credit for a group's production. But statistics will tell you swiftly that the great god "modern business management" is in continual trouble, is expensive, is uneconomical and that, by the duration of large fortunes and businesses on the average, such management as has been purporting to be management is almost a complete failure and is murdering outright the majority of enterprises of this country, for one. The rise of unionism is not an index of the viciousness and willfulness of man but is, as it rises and wars against production, an index of the failure of management as it has been practiced as a technology. Unionism is not wrong. It is simply an unnecessary arbitrary existing because of the existing arbitrary of management operating on an authoritarian level, masking the absence of theta goal makers and seeking to enforce that lack with punishment drive.

America fought for independence from absentee management in 1776 and won. With the advent of Alexander Hamilton's banking system (a medal please for Burr, traitor though he may have been) that part of independence related to economics did a marked and remarkable slump back into the dark ages of fascism — or, tyranny, as they called it in those days. Senator Bone, USS, once remarked to me, "I have fought since 1905 to place public utilities in the hands of the people. But I believe that, by giving them at last to the government, I have exchanged a fairly unreasonable for a very unreasonable master. It seems to me that when this country got rid of slavery in the Civil War we changed an outright form of slavery for a far more insidious brand — the tyranny of modern management." Fascism exists in America as almost the sole modus operandi of big business. And fascism or authoritarianism almost

always murders itself swiftly since it is entheta and enturbulates the existing theta. This is best exemplified by the management–labor upsets which have been increasing in volume since the early 1900s.

Economic tyranny alone could make possible the far less than ideal group ideology of communism. Where fascistic business management exists there socialism and communism can grow. State ownership of everything including the human soul and a communal ideology conducted with false propaganda by a rather fascistic group in Moscow are equally undesirable. The world is in tumult today because of three schools of management: fascism reserves the right to fire at will and devil take the men of production; socialism outlaws private property and builds up staggering bureaucracies about as efficient as Rube Goldberg's machinery; communism buffoons around with one-time high ethic tenets, building an empire on deceits. None of the three are worthy of attention should a workable science of management come into being.

A WORKABLE SCIENCE OF MANAGEMENT

Such a science of management should obtain optimum performance potentialities and optimum living conditions for the group and its members. Such a science is postulated in Group Dianetics. It is not an ideology. It is an effort toward rational operation of groups. Its pilot project has worked. Other pilot projects will follow. In Group Dianetics, should its results continue to bear out its tenets, one is looking at the general form of the government of the world. That government will not extend, as administrator, out from the Dianetic Foundations. But the Foundation will probably train the personnel governments send to it and will probably be the adviser to all governments. No empty dreams, we have in Group Dianetics, a much better mousetrap.

However, if the Foundation is ever to accomplish a post as trainer of governing personnel, a tutor to the world of all management, the Foundation had better become, of itself, the best example of Group Dianetics in existence.

In accordance with an ambition to put its house in order, it is suggested that any organization so desiring put into practice the following tenets:

1. Consider well its ideal and ethics. This is the province of goal making.

2. Consider well its rationale. This is the province of management, its planning and coordination.

3. Consider well its execution. This is the province of staff and individual members of the group.

4. Establish a general, flexible plan of government; adopting a constitution; selecting its officers with full agreement; adhering to its establishment and establishers.

5. Ever lean toward creative and constructive goals and execute its ventures creatively and constructively as opposed to "saving things," "arbitrary emergencies," and destructive planning and action.

6. Choose in its posts of trust, high-theta personnel who plan creatively and constructively in expanding terms rather than "emergency" terms. Keep out of office the death-talkers who pervert or selectively censor communications or cut lines to gain power, who postulate opportunistic but dire realities and who, perverting affinity, have no love for man.

7. Hook up an abundance of communication lines to fill their various needs, keep the communications terse, keep the communications wholly honest and drop no curtains between the organization and the public about anything.

8. Incline in the direction of creating affinity from group to group and group to management. Create and maintain high affinity with the rest of the world.

9. Create a high and ethical reality of a better world and then make it come into being. Make the organization a model of that better world.

10. Persevere in the continual raising of group tone. Persevere toward the goal of the highest individual tone. It is theoretically true that a high enough group tone level almost nullifies the necessity of individual clearing and that high individual tone creates a high group tone.

11. Self-generate the organization into a model of efficiency in all its departments and with high pride in his performance on the part of every individual member of the group.

12. Operate on the principle that the failure, in any department, of one individual or subgroup, by contagion, threatens the survival of all.

13. Understand thoroughly the principle that the amount of theta in the group materially determines the longevity, greatness and general survival of that group and its members and that the amount of entheta in the group determines its proximity to death, and thus have done with the casualnesses and insincerities existing in a low-toned outer society.

THE CREDO OF A TRUE GROUP MEMBER

1. The successful participant of a group is that participant who closely approximates in his own activities the ideal, ethic and rationale of the overall group.

2. The responsibility of the individual for the group as a whole should not be less than the responsibility of the group for the individual.

3. The group member has, as part of his responsibility, the smooth operation of the entire group.

4. A group member must exert and insist upon his rights and prerogatives as a group member and insist upon the rights and prerogatives of the group as a group and let not these rights be diminished in any way or degree for any excuse or claimed expeditiousness.

5. The member of a true group must exert and practice his right to contribute to the group. And he must insist upon the right of the group to contribute to him. He should recognize that a myriad of group failures will result when either of these contributions is denied as a right. (A welfare state being that state in which the member is not permitted to contribute to the state but must take contribution from the state.)

6. Enturbulence of the affairs of the group by sudden shifts of plans unjustified by circumstances, breakdown of recognized channels or cessation of useful operations in a group must be refused and blocked by the member of a group. He should take care not to enturbulate a manager and thus lower ARC.

7. Failure in planning or failure to recognize goals must be corrected by the group member for the group by calling the matter to conference or acting upon his own initiative.

8. A group member must coordinate his initiative with the goals and rationale of the entire group and with other individual members, well publishing his activities and intentions so that all conflicts may be brought forth in advance.

9. A group member must insist upon his right to have initiative.

10. A group member must study and understand and work with the goals, rationale and executions of the group.

11. A group member must work toward becoming as expert as possible in his specialized technology and skill in the group and must assist other individuals of the group to an understanding of that technology and skill and its place in the organizational necessities of the group.

12. A group member should have a working knowledge of all technologies and skills in the group in order to understand them and their place in the organizational necessities of the group.

13. On the group member depends the height of the ARC of the group. He must insist upon high-level communication lines and clarity in affinity and reality and know the consequence of not having such conditions. AND HE MUST WORK CONTINUALLY AND ACTIVELY TO MAINTAIN HIGH ARC IN THE ORGANIZATION.

14. A group member has the right of pride in his tasks and a right of judgment and handling in those tasks.

15. A group member must recognize that he is himself a manager of some section of the group and/or its tasks and that he himself must have both the knowledge and right of management in that sphere for which he is responsible.

16. The group member should not permit laws to be passed which limit or proscribe the activities of all the members of the group because of the failure of some of the members of the group.

17. The group member should insist on flexible planning and unerring execution of plans.

18. The performance of duty at optimum by every member of the group should be understood by the group member to be the best safeguard of his own and the group survival. It is the pertinent business of any member of the group that optimum performance be achieved by any other member of the group whether chain of command or similarity of activity sphere warrants such supervision or not.

THE CREDO OF A GOOD AND SKILLED MANAGER

To be effective and successful a manager must:

1. Understand as fully as possible the goals and aims of the group he manages. He must be able to see and embrace the *ideal* attainment of the goal as envisioned by a goal maker. He must be able to tolerate and better the *practical* attainments and advances of which his group and its members may be capable. He must strive to narrow, always, the ever-existing gulf between the *ideal* and the *practical.*

2. He must realize that a primary mission is the full and honest interpretation by himself of the ideal and ethic and their goals and aims to his subordinates and the group itself. He must lead creatively and persuasively toward these goals his subordinates, the group itself and the individuals of the group.

3. He must embrace the organization and act solely for the entire organization and never form or favor cliques. His judgment of individuals of the group should be solely in the light of their worth to the entire group.

4. He must never falter in sacrificing individuals to the good of the group both in planning and execution and in his justice.

5. He must protect all established communication lines and complement them where necessary.

6. He must protect all affinity in his charge and have himself an affinity for the group itself.

7. He must attain always to the highest creative reality.

8. His planning must accomplish, in the light of goals and aims, the activity of the entire group. He must never let organizations grow and sprawl but, learning by pilots, must keep organizational planning fresh and flexible.

9. He must recognize in himself the rationale of the group and receive and evaluate the data out of which he makes his solutions with the highest attention to the truth of that data.

10. He must constitute himself on the orders of service to the group.

11. He must permit himself to be served well as to his individual requirements, practicing an economy of his own efforts and enjoying certain comforts to the wealth of keeping high his rationale.

12. He should require of his subordinates that they relay into their own spheres of management the whole and entire of his true feelings and the reasons for his decisions as clearly as they can be relayed and expanded and interpreted only for the greater understanding of the individuals governed by those subordinates.

13. He must never permit himself to pervert or mask any portion of the ideal and ethic on which the group operates nor must he permit the ideal and ethic to grow old and outmoded and unworkable. He must never permit his planning to be perverted or censored by subordinates. He must never permit the ideal and ethic of the group's individual members to deteriorate, using always reason to interrupt such a deterioration.

14. He must have faith in the goals, faith in himself and faith in the group.

15. He must lead by demonstrating always creative and constructive subgoals. He must not drive by threat and fear.

16. He must realize that every individual in the group is engaged in some degree in the managing of other men, life and MEST and that a liberty of management within this code should be allowed to every such submanager.

Thus conducting himself, a manager can win empire for his group, whatever that empire may be.

EXECUTIVES OF SCIENTOLOGY ORGANIZATIONS

(Originally written by LRH as HCOB 27 Aug. 58, same title.
Issued as an HCO Policy Letter on 30 Oct. 62.)

By definition an executive is one who obtains execution of duties, programs and actions in an organization to further the aims and purposes of that organization.

To forward dissemination of Scientology, to increase the income of Scientology organizations, and to accomplish what we are trying to do, it is vital that we have good executives who know what they are doing and who do it.

Basically, the work of the organization does not depend upon the executive. It depends upon his supervision. The work of the organization depends upon its staff personnel and their performance of duties in exact compliance with their hat folders to accomplish the purposes of their posts. However, it is very difficult for staff personnel to accomplish their duties when they do not have good executives to provide overall supervision and liaison amongst posts. Therefore, it is only necessary to have a bad executive who has a poor understanding of what his work is all about to reduce morale, cause turnover of personnel, to impede dissemination and to lower the income of organizations.

Understanding this I have completed a considerable study of the subject of being an executive. There is more to it than one would ordinarily suppose.

In the first place, an executive should be able to perform better every single job in the organization than the personnel performing it. In this way the executive will be effective, since he will know what these posts are doing. Thus, an executive is selected primarily for his knowledge of the organization. Another attribute of the executive is an ability to get along with people and to aid them to understand their duties, the whys and wherefores of their posts, and their relationships to other posts and the communication lines which connect them. Another attribute is the ability to get something done via another person. These three attributes are easily the most important. They are followed by the other side of an executive's activities which consist of planning, organizing and promotion, as well as either setting up or gaining compliance with organizational policy.

The stable datum on which most people operate in a Scientology organization is "Get the work done." This is as it should be. However, this as a stable datum in an executive is fatal. His stable datum cannot be otherwise than "Get people to get the work done."

Let us take a contrary view of this situation. Let us suppose we have an "executive" who can himself work hard and who has the datum "get the work done." This is what he does. He pulls off some odds and ends of organizational duties into his lap, sits at his desk and in a state of exasperation tries to do everything that comes his way. Under such an executive income will decline, morale will turn sour, and there will be a large staff turnover. This "executive" simply regards himself as a workhorse who is too overburdened to pay attention to details. He makes mistakes, he does not execute policy, and no matter how hard and how well he works at these jobs he has cut out for himself he never heads up or runs an organization and he never builds anything of any size. At length, he will begin to discourage business and activity on the part of the organization, since the work is already too burdensome for him to handle. Now he was chosen as an executive because he could do the job better on any post in the organization given that post, than the people present. He takes this as a license to "show people up" or to "show them how it really ought to be done." Let us look at this closely. He would not be an executive unless he could work better than each and every person on staff. He would not be there if he did not know these posts better. But let us add up for him the following activities: Director of Training, Director of Processing, auditing all preclears, keeping all accounts, writing all of the dissemination materials, running the mimeograph machine and the printing company, building and painting all of the quarters, personally writing on a typewriter all of the letters received by the organization, and a long time before we get down to typewriting we see that one person on a MEST universe time span could not perform all of these duties. Therefore, we draw the conclusion that we need many people to perform these actions. An executive who tries to perform many actions himself and does not "get people to get the work done" creates a leaderless organization. He is overworked, he cannot cope, he eventually goes out the bottom. Even more importantly, the personnel around him go out the bottom, a thing he commonly fails to observe.

We see, then, that an executive makes a mistake every time he takes into his own hands any portion of any job in the organization. There are two ways a "bad executive" can do this. The first way is quite obvious. He simply tries to do several posts, thus leaving many posts unsupervised and leaving many details uncoordinated and depriving staff of necessary liaison and supervision amongst the various posts. The other way is less obvious. He takes the juicy tidbits which require "command decision" away from the posts and leaves each post a naked drudgery of petty detail; in other words, he scoops off the cream and does, to a slight degree, each one of the jobs around and thus brings about a state of irresponsibility on the various terminals.

Furthermore, an executive who is not doing a real job of executing, "get people to get the work done," will not be in sufficient contact with the various posts in the organization and know which ones are underburdened and which ones are overburdened. Posts which are underburdened and do not have enough to do, who roam around inside the organization like billiard balls against the banks and break up other work. Posts which are overburdened confront the personnel occupying them with such a tremendous pyramid of work that they go into apathy trying to regard their job at all, and so cease to function, and quite ordinarily leave the organization (this is the primary reason people do leave an organization: they cannot do their work well and become convinced that they are badly placed).

Chaos and confusion are the result of an executive's (1) inability or unwillingness to simply supervise a post and do none of their work, and (2) inability to grant beingness or confront the good sense of other people.

Now let us see what a good executive really does and we will find that he is busy enough if he actually does his job. He does not call people into his office and have them stand in front of his desk while he explains their job to them. In fact, he spends very little time at his desk. In the first place, such a procedure has the earmarks of "being called on the carpet" and makes for ARC breaks. Further, outside of the familiarity of the staff personnel's surroundings the executive is not in effect running 8-C. To know anything about the post he would have to see the actual equipment, materials, files, etc., connected with that post. And thus, any good executive spends much less time at his desk than he does in various parts of the organization. A good executive actually goes to the post and looks it over. He does not work with the post with the aim in mind of showing the post how much faster and how much more expertly the post can be done. Admittedly he is an executive and the person occupying the post is occupying that post because the executive can do the post better than the person occupying it. Thus, an impatience and an intolerance is too easy to demonstrate.

The executive looks over the post on the site of the post by going through the individual's hat and finding out whether or not it really matches up the exact duties of the post. He will find if he is patient and a good auditor, that the post is quite routinely confused about his duties and this confusion makes the duties look too big or too hard to do, or he will discover that the post is not covering all of its duties, that it is specializing in some of them. This last is particularly true in an overburdened post. The answer to an overburdened post which is actually overburdened is, of course, not for the executive to take on some of the duties or to try to whip up the person doing the job but to split the hat along some natural division and put another personnel on the post in addition to the one already there.

Just as any Director of Processing is always being bombarded by the auditors to give them a new, fast, wonderful technique which will solve all of their own goofs, so an executive is always being asked by some staff personnel to do something new, wonderful and strange with the post hat. The hat, of course, containing all of the duties of the post was usually written up with great care and any real rearrangement of it or derangement of it will discover that some of the functions or liaisons of the organization will be lost. Therefore, a good executive does not succumb to the idea that something new, wonderful and strange must be done with the post simply because the personnel handling the post do not understand the procedure connected with it.

It is quite interesting to study the amount of explanation and the frequency of explanation necessary to put some personnel on post and to get them to understand and execute the exact duties as stated in the hat. Personnel usually try to run a more complicated post than is necessary. It is a natural instinct to complicate something which is simple. Therefore, the simplicities of the post, its purposes and goals, must be observed at all times in any smoothing or rearrangement of the post. For example, it took three full days in one instance to put the Membership hat on a personnel. The personnel was willing — and you will discover that nearly all personnel are — wanted to get the job done, and was perfectly happy with the routine of the job. But — for three full

days this personnel attempted to complicate the job of Membership, rearrange it or twist it about in some fashion so that it was more or less unworkable. This personnel could not understand the simplicity of the Membership routine until an executive had spent three full working days with him. At the end of that time it was possible to have good membership response and good membership handling. This condition continued from there on. If the executive in this case had simply said, "Well, this fellow is stupid" and if the executive had become impatient, the Membership job never would have gotten done. It required good ARC, it required good patience. If an executive doesn't have three full days to spend putting on such a hat or if he cannot have in the next four or five weeks the equivalent time of those three full days, then he is never going to have a Membership hat worn promptly and properly for the simple reason that the personnel available to him is the personnel available to him. He should not think that he is going to get out of the brow of Jove, springing fully armed, perfect personnel. It is amazing, the confusion of many personnel on their post, particularly on a new job. They are being asked to understand the whole working principle of the organization at one gulp, as far as they are concerned. They cannot see their role, they cannot see how they fit into the scheme of things, they cannot see where their communication lines are going or what they are supposed to do. The executive, of course, being able to understand this, nevertheless has no license to do anything whatsoever but straighten up the post and get the hat worn straight and get the work done.

In working around and about the organization it will be discovered that there are certain holes in the organization or there are missing communication lines or there are needful liaisons. But at this time Scientology organizations have been worked out to such a fine point that an executive would be much safer taking the posts as primarily put together on the original organization board and putting that structure back together again than in attempting to patch up some new and strange organizational pattern which has had no prior test. The patterns of Scientology organizations have been worked out over a period of many, many years. It is highly probable that we have made almost every mistake possible. We are a very complicated organization in that we have many posts. We have many communication lines. We have many functions. We have worked these out over a period of time and have come up with something closely approaching a perfect answer. Thus, it is only at this time that I can tell executives to follow that answer and to keep the organization running as it was planned to run. There is really not much reason for an executive to dream up something new, wonderful and strange to take care of some particular activity. However, a word of caution. All personnel on all posts will attempt to drive him into something new, wonderful and strange in the way they complicate their jobs and in their failure to understand those jobs.

Giving the inspection of a post a lick and a promise and passing on, with some impatience, to another post, is not being a good executive. One should view the organization or his department as a whole. He should see what it is trying to do. Then he should try to get it to do what it is supposed to do. To accomplish this, hats have already been written up for these various posts. If they are lacking in some respect, then he should have, in the case of a department head, consultation with his superiors and in the case of an Association Secretary correspondence or consultation with myself. He should then get the department running on some minimum acceptable basis by spending a short time with each one of the personnel and giving them that part of their job which they can understand to do and accomplish. Having done this,

he at least has a partially going concern. Now he should go back through his department or organization and make sure that each set of duties is fully understood and appreciated by the personnel holding each post. He should not be impatient, he should not look for the same level of understanding which he himself has for the post and he should not look for the same level of performance with which he could execute the post. The primary mistake an auditor can make is failing to estimate the case he is trying to process. The only thing which can give an auditor errors is to fail to estimate the case he is trying to process. The only way an auditor can be wrong is to fail to estimate the case he is trying to process. Therefore, the only way an executive can be wrong is to fail to estimate the personnel he is trying to get to get the work done. With patience, with good ARC, with good understanding, he should repeatedly go round and around and around these posts and instead of making the decisions (and thus skimming the cream off the post) he should show how the decisions to be made stem from the actual activities of the job. He should make the personnel occupying the post make the decisions relating to that post. These decisions in the main are minor to the executive, but they may appear very major to a personnel occupying the post. Only by getting the person to make his own decisions will he ever have a responsible occupation of the post. By seizing little pieces of the post to do himself, by running the whole show, decisions and all, the executive will wind up doing all the work himself because he has gradually forced the person for whom he is making the decisions off post. Little by little that personnel has been pushed off into an irresponsibility for his post. This is exactly contrary to the actual function of an executive. For instance, the Dir of Processing, given a well-trained auditor, should not go on forever and ever and ever dreaming new tricks and gimmicks which will "solve the preclear's case." In the first place, the auditor probably is not starting sessions, resolving PT problems, patching up ARC breaks and running a smooth session — that is why the case isn't running. The Dir of Processing should just go on putting the hat — that general hat known as staff auditor — back on the staff auditor's head. Auditors' conferences are actually totally unnecessary if auditors have been placed on post and if they are supervised on post and if they are given some feeling of responsibility and understanding of their post.

If an executive finds himself doing some particular job, he must realize that this job is either missing out of a hat or that he doesn't have a hat to cover that job. Where the idea of policy-making or enforcement becomes making all the decisions for the personnel, the executive has erred. Policy-making and enforcement is definitely his job, just as promotion and planning in general is his job. But if he finds himself doing some routine task, if he finds himself pinned down hour after hour, day after day, by some concern, then he is missing somewhere in putting hats on people's heads. Occasionally an executive is called upon to put a hat on the head of some outside firm, as in legal work. With what glee an organization's attorney will try to pass the hat back to the head of the organization. This is a task just as a staff post is a task of putting the hat on somebody's head. The attorneys of the organization, even occupying an outside office, should have their hat put on with regard to the organization so that all legal matters are simply referred and routed to them. If they do not act on this basis, then he either puts the hat more firmly on their head or, as in any case, despairing of this, one finds some new attorneys just as he would find new staff personnel if, after an investment of seven or eight days of patient work he still cannot get somebody to go through the routine of the job.

There are certain approvals an executive has to give, as Advisory Council minutes. There are personnel changes which an executive has to make, and therefore there are personnel files which he has to keep. If he is the head of a department he still keeps personnel files for that particular department and he still handles the personnel for that department. If he is a higher level executive he certainly cannot do otherwise than handle personnel as a hat for the entire organization. But the personnel for an entire organization hat is actually not as big a hat as personnel for a single department since it doesn't include procurement. Any department head has the right to do personnel procurement; this has to be okayed by the executive, of course, and to be posted on the org board actually requires my okay.

Now, in a small organization it will be found that three or four or five people working together can get quite a bit accomplished. The moment this goes up to eight or ten people, you have need of an executive. That executive, if he does not know his job as it is set down here, and if he thinks his job is something else than getting people to get the work done, will actually restrict and impoverish the organization. He will not permit it to grow, since he is still trying to run an organization the size of that which can be handled by four or five people, while in actuality he has a much larger area.

An executive doing good promotion and planning will, of course, drive in a great deal of business. All he has to do is to make sure that his shipping department gets books out; that his PR places ads; that his organizational services are of a quality to invite public confidence. He doesn't really need any bigger tricks of promotion than this. The big trick of promotion is to get everybody to do his job. If this is done, then you will see all manner of promotion being accomplished. Promotion dreamed of is not promotion accomplished. An executive dreaming up promotion and working hard himself is not nearly as effective as an executive getting promotion accomplished and getting people to take care of the resulting traffic. In a large Scientology organization, he cannot get business up to speed while trying to do all the work himself.

Naturally, there are executives who, by their personal presence, giving lectures, talking to people, can accomplish a great deal of promotion, just as I accomplish a great deal of promotion by writing a book. But my book-writing hat is not my executing hat and I do not get them confused. An executive can wear other hats than being an executive. But being an executive is an express and an explicit hat and its duties consist only and entirely of getting people to get the job done. If other hats are being worn along with the executive hats, then those duties should not be permitted to slop over and occupy and wipe out the executive hat since it's the more important of the two.

An example of this in a Central Organization of Scientology on another continent shows us that some organizations insist on learning always by their own experience, not by already won experience. This organization presents the picture of Scientology organizations in the United States in 1952—everybody was wearing all the hats, nobody was trying to put on any hats other than his own, but his own was all the hats. The resulting confusion, the lack of coordination, the failure to understand that an organizational pattern, orderly terminals and communication lines are vitally necessary to good progress of an organization, resulted in very low income and very hard work on the part of everyone. Contrast this with the 1958 orderliness and income of Scientology United States and we find the only great difference is that we

have learned the proper pattern of organization necessary to carry on our job and that we are executing that proper pattern.

You can toss all this aside and work yourself to death and compliment yourself on believing you are getting the job done, but don't wonder why the staff doesn't give you a pat on the back or why I don't give you a pat on the back, because I'm not interested in how many hours you put in. I am not interested in how many documents you handle. I am only interested in the executives who get people to get the work done. On a staff level I am perfectly content with people who take the easier course of simply getting work done. That is the simpler thing to do. These posts are interesting. To handle administration for an Academy is quite a job. Being a Receptionist in the front office is an interesting post — look at all the people you meet. These jobs which go many hours of the day and occasionally late into the night are interesting jobs, they are interesting and necessary terminals. Remember that they are the easier ones to do. Being an executive requires one to get the work done on a via, and that is one of the more difficult tricks demanded of a thetan in this universe.

Let's see if we can do it.

EXECUTIVES

A MODEL HAT FOR AN EXECUTIVE

(Originally written by LRH as HCOB 19 Sept. 58.
Issued as an HCO PL on 25 Mar. 63.)

—PRIMARY—

To accomplish the purposes of the organization and/or his department on a continuing basis by the use of adequate organization and personnel.

To get people in his or her department or organization to get the work done.

To understand the jobs of staff members and to get them to ably wear all of their hats.

—SECONDARY—

To gain compliance with old or create new standard policy as necessary and to gain compliance in particular with the policy laid down by the board and the policy already existing in standard hats.

Planning of campaigns and activities to create new or fulfill old demands and to utilize thereby personnel.

Personnel: Improving his personnel's understanding of their posts and duties and improving their interest and activity on that post.

Acquiring new personnel as needed and reducing personnel when not needed.

Adjusting work burden.

An executive must realize that this is his whole hat as an executive and that any other activity in which he is engaged than the above is another hat and should be written up as such and is no part of his executive hat. He must also be certain that an adequate amount of his time is spent filling his executive post, not another post he holds as a staff terminal.

See HCO Bulletin of 27 Aug. 58, entitled EXECUTIVES OF SCIENTOLOGY ORGANIZATIONS.

The task of an executive is to put hats *on* people. Therefore, he should be very careful not to violate hats by introducing *emergency* programs which pull off hats or by "temporarily" pulling people off post to do jobs not covered by their hats. If he has such jobs not covered by hats, he should make provisions for their accomplishment in existing hats or create new hats.

Executives should not write critical or confusing despatches to terminals having to do with their performance of duty.

Such matters as conduct or rearrangement of post should be taken up with the terminal directly. The only writing is done after the fact of arrangements.

Wide-open comm lines such as we have cannot tolerate critical, confusing or distempered despatches. There is no reason here to learn by experience what is already known — entheta on free comm lines can disturb an organization's comm system beyond belief. This applies equally to despatches from terminals to executives.

In the case of an executive in one part of the world having difficulty with the conduct of a terminal in another part of the world, do not despatch the terminal. Despatch instead the executive in that part of the world closest to the terminal — explain the situation to that executive and have him take it up personally with the terminal. Even in a local operation, if you cannot interview the terminal in question, do not send a critical despatch to him. Have the nearest executive to the terminal take it up with that terminal. No despatch goes directly to such a distant terminal.

(THE ABOVE IS FACT; THE FOLLOWING IS MY OPINION AND MAY BE CONSIDERED CONTROVERSIAL:)

Anyone will discover, in actually dealing with people, that these factors dominate:

1. People are willing to do their best and will until hammered about it.
2. Most causes for complaint are based not on misconduct but on misunderstanding.
3. Only personal contact can restore understanding.
4. Written criticism or anger is rarely repaired by more writing. A breach opened by writing is usually susceptible to being healed only by personal contact. The moral is, therefore, don't open the breach with a distempered despatch.
5. Don't let a detected error drift. Take it up and correct it when found.
6. Don't accumulate "bad marks" against a terminal before acting. Forget old "bad marks" when they have been corrected.
7. A terminal has his side of the story. As the person on the job he has more valid data than the executive. Listen and question before you decide you're outraged.

8. The only capital an executive has is the *willingness* to work. Preserve it. No person can be driven to labor—as every slave society has found out. They always lose. When a man is whipped, that work he then does still stems from his willingness alone. Anger made it smaller.

Terminals that are confused and have gone wrong are patched up just as an auditor patches up an ARC break. The terminal is also conscious of his own overt acts and thoughts.

The only persons an executive cannot handle are those who continually say or dramatize: "It can't be done." These persons are already spoiled by bad 8-C in life. No matter if the person is the attorney or the accountant or the head sweeper, if his response to all solutions offered is "It can't be done" (either stated or acted out), the executive has only two answers: order him to intensive intensives or fire him. Short of this action, the executive has no other course to take. Threats, penalties, scoldings, all accomplish nothing.

We have then three classes of possible personnel:

1. the Willing,
2. the defiant negative,
3. the wholly shiftless.

To handle these we have three classes of action only and none in between. (An authentic case of white is white and black is black.)

Class One (above): Handle them as outlined here with understanding, intelligence, helpfulness, courage and compassion.

Class Two (above): Process only or fire.

Class Three (above): Process only or fire.

Classes two and three are nonemployable. Why burden the staff or economics of the organization with them?

The Willing include the overbearing, the meek, the swift, the slow, the efficient, the worried. Threats and punishing regulations do not help them—only hurt the innocent with the guilty. Tight scheduling, insistence, reason, crispness, and ARC help them.

The Unwilling are bait only for auditors or the unemployment bureau. Leave a post vacant rather than hire them. You'll wish you had.

Don't confuse a clash of personalities, independence and lack of subservience with unwillingness to do. The military does this and look at it! If you only want a staff that won't talk back, join the army—they punish people for communicating or deserting. Some very high-class bastards can do some high-class jobs.

The Unwilling only do or say "can't" no matter what solution or task is offered. Usually they don't talk. Sometimes they are models of meekness. But like a hunting dog that won't kill chickens, they are no good to you. If they're out of your organization or

department, you have only the willing left — so why look further in executing than being decent. The man who doesn't appreciate it isn't with you anyway. So that leaves only one code of conduct for an executive to follow, the one outlined here. His personnel hat excludes the Mr. No and Miss Can't and Master Flop. An executive needs as much discipline and anger as he lets the Unwilling in. The first principle of an executive is to accomplish the goals of the organization and department. He must employ the Willing and maintain ARC. And remember that there's an R in it.

A quarter of a century of leadership in this life has taught me that the only underprivileged posts there are, are posts of leadership. As one rises on the scale of authority his flaws magnify and so does his power to hurt and destroy. It would take an archangel to be a perfect executive. Despite the trying nature of an executive post it yet must be filled — and filled with understanding, intelligence, helpfulness, courage and compassion. When a lack of these enter upon an organization's comm lines, the organization sickens and is gone — just as our world at large is doing.

Our staff are willing. I believe in them and trust them. Nobody could ever do the job we're all doing — but we're doing it.

A hundred thousand years of future are looking at us — we can only measure up by doing our jobs as best we can today — with understanding, intelligence, helpfulness, courage and compassion — to the greatest good of the greatest number of dynamics. It is a large order — but the first to fill it must be our executives.

HOW TO ISSUE INSTRUCTIONS TO PERSONNEL

1. Have a definite clear-cut and correct estimate of the situation.
2. Make a precise, properly communicative statement in writing of exactly what you want done.
3. Reissue 2.
4. Reissue 2.
5. Reissue 2.

There are no other steps.

Every time you issue a direct, precise and orderly order you may generate a confusion. It runs out as the order is repeated over and over. The "reasons why" "the order is hard to duplicate" is the runoff of a confusion. Don't Q-and-A with the confusion. Just issue the order again while maintaining good ARC.

ORG SERIES 12

THE THEORY OF SCIENTOLOGY ORGANIZATIONS

This "HCO Bulletin" 21 Sept. 58 explains how a Scientology organization differs from "the industrial ideal."

The industrial idea of organization is a cogwheel-type organization with each member of it totally fixed on post, doing only exact duties, with all cogwheels intending to mesh. The industrial idea does not differentiate between a *machine* and a human or live organization.

The product laws (Products 1, 2, 3 and 4 as given in this Org Series) apply to both a live organization and a machine organization and any organization. Since a live and a machine organization hold these laws in common, the industrialist confuses the live organization and the machine organization.

HCO PL 29 Oct. 70 I, Org Series 10, THE ANALYSIS OF ORGANIZATION BY PRODUCT, also carries a mention of this difference between a live and a machine organization.

As the industrial idea has already been mentioned in this Org Series, and as this Org Series mainly applies to live (not machine) organizations, and as people tend to fall into a machine organization pattern (and also to use a live organization to *not* know their own specialty best) this earlier issue on live organization is published in full:

HUBBARD COMMUNICATIONS OFFICE

HCO BULLETIN OF 21 SEPTEMBER 1958

FOR ALL STAFF
MEMBER HATS

THEORY OF SCIENTOLOGY ORGANIZATIONS

An organization is a number of terminals and communication lines united with a common purpose.

The actions of an organization can all be classified under the heading of particle motion and change. To analyze a post or a department or an organization, make a list of each particle it handles (whether types of bodies, types of comm or any other item) and follow each item from the point it enters the post or department or organization to the point it exits. If a particle isn't handled *properly* and passed along *properly* there is a confusion or a dead end. To organize an organization requires more than theory. One has to inspect and list the particles and get their routes and desired changes of character en route. Then he has to see that terminals and comm lines exist to receive, change and forward the particle. All types of particles belong to somebody, are handled some way, come from somewhere and go somewhere. There are no confusions when lines, terminals and actions exist for each type of particle.

Judgment and decision are needed in every staff post. If the handling of items are just "petty details" then so is your fellow man a "petty detail."

There are no laborers in a Scientology organization. We are all managers of these particles.

Routes of handling are not orders to handle but directions to go. A route is not necessarily correct for all cases. It is only correct for most cases. Robots can't handle livingness. Robot organizations and robot civilizations fail. They only *seem* to work — like the commie empire *seems* to work until you find out everyone is starving to death in it. A *perfect* organization is not a machine but a pattern of agreements. A route is only the *agreed upon* procedure. It is not only occasionally broken, it now and then should be. The terminals involved make the agreement or the route doesn't work. A route along terminals that never agreed is no route but a labyrinth. People agree to postulates they can understand and appreciate. Hence, a route and handling begins with a particle, develops with a theory, comes to life with an agreement and continues to work because of judgment and decision.

The routing, the comm lines, the pattern of an organization do not do the work. The work is done by living beings using good sense and skill. The organizational pattern only makes their work easier and lessens confusion and overburden. Governments, armies, big research bureaus reduce themselves down to routes and titles. They don't work. They don't do work. They allow for no human equation. Therefore, slave societies (composed only of routes and unthinking terminals) are always beaten eventually by free peoples. There is a point where routes and exact procedures become unworkable, just as there is a point, facing a volume of work, that individuality and no teamwork becomes unworkable. An optimum organization is never severely either one. Total individualism and total mechanization alike are impossible. So if you or your department or your organization seem to be too heavily inclined to either one, *yell* don't talk. A bad organization will fire you and you can do something more profitable. A good organization will listen. BUT — always have a *better* idea than the one in use. Grumbling, refusing to work don't work. A better idea, talked over with the terminals on either side of you, put down in concise writing, submitted, will be put into action in a good organization. Of course, there's always a chance that the new proposed handling throws something out of gear elsewhere. If it does, you have the right to know about it.

An "organization" doesn't get the work done. As an orderly plan it helps its terminals get the work done. The staff as individuals do the work. An organization can

help or hinder getting the work done. If it helps, it's good. If it hinders, it should be examined thoroughly.

An organization can work wholly at "taking in its own laundry." All the work that gets done is the work generated inside the shop by unreal routes and weird changes of particles. This is a government circa mid-twentieth century. Its highest skill is murder which in its profundity it makes legal.

A totally democratic organization has a bad name in Dianetics and Scientology despite all this talk of agreement. It has been found by actual experiment (LA 1950) that groups of people called on to select a leader from among them by nomination and vote routinely select only those who would kill them. They select the talkers of big deeds and ignore the doers. They seem to select unerringly the men of average skill. That is never good enough in a leader and the people suffer from his lack of understanding. If you ever have occasion to elect a leader for your group, don't be "democratic" about it. Compare records as follows: Take the person who *is* a good auditor, not just says he is. Take the person who has a good, not necessarily the highest, profile and IQ. Take the person who can grant beingness to others. And look at the relative serenity and efficiency of any past command he may have had. And even then you're taking a chance. So always elect temporarily and reserve the right of recall. If his first action is to fire people, recall him at once and find another leader. If the organization promptly prospers, keep him and confirm the election by a second one. If the abundance of the organization sags in a month or so, recall and find another. Popularity is some criteria — but it can be created for an election only, as in the US. Select in an election or by selection as an executive the person who can get the work done. And once he's confirmed, obey him or keep him. He's rare. But beware these parliamentary procedure boys and girls who know all the legal and time wasting processes but who somehow never accomplish anything except chaos. A skilled, successful leader is worth a million impressive hayseeds. Democracies *hate* brains and skill. Don't get in that rut. In the US War between the States militia companies elected their officers with great lack of success in battle. They finally learned after tens of thousands of casualties that it was skill not popularity that counted. Why be a casualty — learn first. Democracy is only possible in a nation of Clears — and even they can make mistakes. When the majority rules, the minority suffers. The best are always a minority.

WHAT IS YOUR JOB?

Anything in an organization is your job if it lessens the confusion if you do it.

Your being exactly on post and using your exact comm lines lessens confusion. *But* failure to wear another hat that isn't yours now and then may cause more confusion than being exactly on post.

The question when you see you will have to handle something not yours is this: "Will it cause less confusion to handle it or to slam it back onto its proper lines?"

Example: A preclear wandering around looking for somebody to sell him a book. You see him. The book sales clerk isn't there. The books are. Now what's the answer? You'll create a little confusion if you hand him a book, take his money and give it to the book sales later. You'll create confusion for your own post and the organization if you go chasing around trying to find "book sales terminal." You'll create a feeling of unfriendliness if you don't help the preclear get his book. Answer it by deciding which

is less confusing. You'll find out by experience that you can create confusion by handling another's particles *but* you will also discover that you can create confusion by not handling another's particles on occasion.

The only real error you can make in handling another's particles is to fail to tell him by verbal or written comm *exactly* what you did. You stole his hat for a moment. Well, always give it back.

Remember, in a Scientology organization every *Scientologist* on staff potentially wears not just his own but *every* hat in the organization. He has to know more jobs than his own. Particularly jobs adjacent to his post. He often has to do more jobs than his own because those jobs have to be done and he sees it. A non-Scientology member of an organization is only limited in what he can do in the organization by lack of know-how. But the limitation is applicable only to instruction and auditing. But a Scientologist: he may find himself wearing any hat in the place including mine. And others may now and then wear his hat.

A staff member gets the job done of (1) his own post, (2) his department and (3) the whole organization.

People who are *always* off-line and off-post aren't doing their own jobs. When we find somebody always off-post and in our hair, we know if we look at *his* post we'll find a rat's nest. So there are extremes here as well.

HOW TO HOLD YOUR JOB

Your hat is your hat. It is to be worn. Know it, understand it, do it. Make it real. If it isn't real, it is *your fault* since you are the one to take it up and get it clean with an executive. If he doesn't straighten it up so you can do it, it's still your fault if it's not done.

You hold a job in a Scientology organization by doing your job. There are no further politics involved — at least if I find out about it there aren't. So do your job and you've got a job. And that's the way it is.

But on post or off, we only fail when we do not help. The "public" only objects to us when we fail to help or when we fail to answer their questions. So we have two stable data on which we operate whether we're on post or not:

HELP PEOPLE!

ANSWER PEOPLE'S QUESTIONS EXACTLY!

When you don't you let everybody down.

NEATNESS OF QUARTERS

— THE PUBLIC KNOWS US BY OUR MEST —

A part of everyone's hats is keeping a good mock-up in people, offices, classrooms, quarters.

Keep your desk and your MEST neat and orderly. It helps.

And when you see things getting broken down or run down or dirty, fix them or clean them or if you can't, yell like hell on the right comm line.

THE DESPATCH SYSTEM

The despatch system is not there to plague you but to help you.

Except when you've got to have speed, *never* use an interoffice phone to another terminal. And never write a despatch and present it and *you* at some other point at the same time. That's "off-line" just as a phone is "off-line." A good use of the organization's lines reduces confusion. The other guy is busy, too. Why interrupt him or her unnecessarily with routine that should go on the lines? You'll usually get an answer in the same day or at least in 24 hours. The organization's comm lines are pretty good. They make it possible for this small handful of us to get more things done in this society than any other organization on Earth in terms of actual accomplishment.

A comm line can be jammed in several ways. Principal of these is *entheta.* Ask yourself before it goes on the lines — it's bad news but is it necessarily important? Another is *overburden.* Too much traffic jams a line. Too long a despatch doesn't get read. Another is *too little* data. That can jam a line but thoroughly. It takes more despatches to find out what goes. Another way is to bypass the line itself — this jams the terminal. The final way, in broad classes, to jam a comm line is to *put erroneous data* on it.

The last is a pet hate of Scientology people. Generally its form is "everybody knows." Example: "They say that George is doing a bad job," or "Nobody liked the last newsletter." The proper rejoinder is "Who is Everybody?" You'll find it was one person who had a name. When you have critical data omit the "everybody" generality. Say who. Say where. Otherwise, you'll form a bad datum for somebody. When our actions are said to be unpopular, the person or persons saying so have names.

IN SUMMARY

A post in a Scientology organization isn't a job. It's a trust and a crusade. We're free men and women — probably the last free men and women on Earth. Remember, we'll have to come back to Earth someday no matter what "happens" to us. If we don't do a good job *now,* we may never get another chance.

Yes, I'm sure that's the way it is.

So we have an organization, we have a field we must support, we have a *chance.*

That's more than we had last time night's curtain began to fall on freedom.

So we're using that chance.

An organization such as ours is our best chance to get the most done. So we're doing it!

WHAT AN EXECUTIVE WANTS ON HIS LINES

There are only four things which an executive wants on his incoming communication lines.

These are:

1. Information,
2. Appointments and dismissals of personnel for his action or confirmation,
3. Financial matters,
4. Acknowledgments.

He does not want on his lines:

1. Demands for decisions,
2. Backflashes and can'ts,
3. Entheta.

Demands for decision are always indicative of irresponsibility; people want the executive to make the mistakes; and an executive can make mistakes if he is asked to make decisions distant from his zone of action equipped with insufficient data to make the decision correctly.

Backflashes, by definition, are an unnecessary response to an order. This can get fairly wicked. They are not acknowledgments, they are comments or refutals. Example: "Sell the bricks" as an order is replied to by "Bricks are hard to sell" or "We should have sold them yesterday." This is a disease peculiar to only a few staff members. They cannot receive an order directly and are seeking to be part of the comm, not the recipient. This goes so far as senseless "Wilcos" or "I'll take care of it" when the executive only wants to know Is it done? Despatches or orders, in most instances, are held until completed. We assume that they got through or rely on other means of saying they didn't. Only a few situations require an acknowledgment to an order over long lines and all of these occur when there is doubt that the recipient is there.

In the matter of can'ts, an executive seldom orders the impossible and generally consults with people before issuing an order. A persistent "Can't be done" means "I am unwilling." I have learned this the long way. Person A on a job, saying "Can't" all

the time, changed to Person B, receiving the same orders, discovered to me that the job *could* be done since B, on the same post, receiving the same orders, never said "Can't" and the job did get done.

Entheta means embroidered reports. Data is data. It is not opinion. Data, not entheta, brings about action. All entheta does is cut the lines.

To jam an executive's lines is a serious thing to do. The result is a cut line. A bottleneck is created by staff when staff jams a line to an executive. Eating up an executive's time and patience destroys harmony, dissemination and income.

Depending on an executive for petty decisions is sure to jam lines and cost units.

The role of an executive is to plan and execute actions and to coordinate activities.

To do this he gets people to do their jobs and establishes the overall plan of action. Only an executive can string lines and coordinate actions and resolve the jams that impede things. For an executive to decide for people decisions applicable only to the sphere of *one* job is folly.

WHAT AN EXECUTIVE'S LINES SHOULD LOOK LIKE

INFORMATION:

When a member of an organization does something of importance, he should always info the executive after the fact. It is perfectly all right to take actions within one's organizational purpose. It is not all right to keep it a secret.

1. Do it.

2. Tell the right people and the executive by adequate communication at the speed necessary to the case.

Similarly, an executive ought to tell people his goals and plans and, when he does something of any importance to others, he ought to say so. The captain who tells the ship how the action is going saves a lot of nerves and useless motion.

APPOINTMENTS AND DISMISSALS:

Minor hirings and firings in a department by authorized persons should always be subject to confirmation at least after the fact. Major appointments and dismissals of key personnel must be okayed by a senior executive before the fact and action taken only on the senior executive's authority.

For example, it is a board action to appoint, transfer or dismiss an Association Secretary or an Organization Secretary. It is an Executive Director action to appoint or dismiss department heads and then only on the advices of an Association Secretary or Organization Secretary. It is an Association Secretary or Organization Secretary action to appoint, transfer or dismiss deputies or section chiefs. It is a department head's action to appoint or dismiss other staff but always, in every case, with permission from the next superior and info all the way up.

FINANCE MATTERS:

Consistent finance information as in Advisory Committee minutes and authority for changes and capital expenditures are an executive matter. My own authority is needed only on major changes of policy or expenditures and on extreme financial emergencies. Ordinary financial planning and routine actions are better handled locally by the Association Secretary, Organization Secretary or the Director of Accounts. I do need financial information. But where I have done planning and promotion and it is agreed upon, further handling of finance is handled under a blanket authority from me except for extreme financial emergencies or major capital outlays which are local matters.

These are the things I want on my lines. I change personnel as the answer where information is chronically withheld, where appointments and dismissals are irregular, or when an organization starts getting insolvent. Where people are continuously demanding that I make the decisions they should be making, I again recognize other ills and again change personnel.

If we all understand what's wanted, we can do it.

Well, let's look this over and do it and win.

HCO POLICY LETTER OF 12 SEPTEMBER 1959

REMIMEO

PROGRAMING

(Originally written as an HCOB on 12 Sept. 59.
Issued as an HCO PL on 23 Oct. 69.)

(Refer also to HCO PL 4 Dec. 66, AKH Series 9, EXPANSION, THEORY OF POLICY, and HCO PL 24 Dec. 66 I, AKH Series 10, HOW TO PROGRAM AN ORG, SAINT HILL PROGRAMS.)

Dianetics and Scientology have never suffered from lack of programs. There have always been programs. And there will always be better programs and, maybe for dissemination purposes, the PERFECT program.

But what happens to all these programs?

Alas, I found out the facts of this some years ago, and out of it came the organizational pattern which is working so splendidly in Central Orgs. But the facts that I found out had all to do with execution of programs.

We get a wonderful idea. It's a slayer. It will tear the tops right off the skyscrapers and send them in for a book. And months later we wonder what happened to this marvelous program.

Well, I'll tell you what happened. Nobody did it.

That's the swan song of most every program that gets thought up. It was great, but nobody did it. . . .

And before you think I am being critical of all the staffs everywhere or that we're ever critical of all the staffs, I'll give you the rest of my findings on this subject.

Programs didn't get done because everybody was so overloaded with what they were already doing that they didn't have a chance to start the new program no matter how good it was. Programs were already in the run. Many of these were so fundamental — such as sale of books or answering letters to incoming preclears and students — that nobody could start on the new program. And as a result the new program didn't get started no matter how marvelous it seemed to be.

The reason executives used to keep pulling people off post all the time was this thing programing. The executive had, he thought, a better idea or was trying to carry out an old idea. And to get it going he would draft the whole staff to do it and the basic programs would go begging.

Do you know that nearly every function of a Central Org was at one time a brand-new wonderful program? Well, it was. And this gradually sifting out of activities brought us to a rather final form with one more step to go and that step is programs, a Department of Programs. A department which can carry through new or stunt programs without bringing the whole place in ruins by tearing everybody off their standard programs.

Programing is important enough to pay a lot of attention to. And there is a lot of gen about it. And the gen all adds up to no matter how many programs you have, each one consists of certain parts. And if you don't assemble those parts and run the program in an orderly fashion then it just won't spark off. These are some of the principles about programs. And you had better have them because your new HAS Co-audit Course is a program and has to be done like a successful program. And your preclears are a program and have to be done like a program. If you don't know these facts of life, here they are:

MAXIM ONE: Any idea no matter if badly executed is better than no idea at all.

MAXIM TWO: A program to be effective must be executed.

MAXIM THREE: A program put into action requires guidance.

MAXIM FOUR: A program running without guidance will fail and is better left undone. If you haven't got the time to guide it, don't do it; put more steam behind existing programs because it will flop.

MAXIM FIVE: Any program requires some finance. Get the finance into sight before you start to fire, or have a very solid guarantee that the program will produce finance before you execute it.

MAXIM SIX: A program requires attention from somebody. An untended program that is everybody's child will become a juvenile delinquent.

MAXIM SEVEN: The best program is the one that will reach the greatest number of dynamics and will do the greatest good on the greatest number of dynamics. And that, my people who want to become victims by going broke, includes dynamic one as well as dynamic four.

MAXIM EIGHT: Programs must support themselves financially.

MAXIM NINE: Programs must ACCUMULATE interest and bring in other assistance by the virtue of the program interest alone or they will never grow.

MAXIM TEN: A program is a bad program if it detracts from programs which are already proving successful or distracts staff people or associates from work they are already doing that is adding up to successful execution of other programs.

MAXIM ELEVEN: Never spend more on a program than the income from one person signing up can repay.

MAXIM TWELVE: Never permit a new program to inhibit the success of a routine one or injure its income.

Let us now take a squint at this all in one piece. *Wrong example:* We decide to run an ad in the Hatmakers' Weekly to attract people into the PE Course. We place the ad.

We forget the time this special course is to start. We have nobody there to answer the phone on inquiries as to the course. We have nobody there to greet the people and make them feel at home when they arrive. We have nobody to instruct the course. We get a bill for monies three weeks later that we can't pay.

Right example: We decide to hit the hatmaker trade as a source of PE. We rule out seven other programs in favor of this one. We have a staff meeting on it and gen everybody in on the existence of this program. We see that we have made a lot of money from co-audit enrollments and we earmark this to pay for the advert, for the salary of the person who will run the program. We appoint a specific person to administer this program. When the advert has been placed and appears, our person appointed to it goes on to it full time. Reception is genned again to send all hatmaker calls to this person and to refer to this person all hatmaker bodies. All persons who may also be acting as Reception are genned with this data. The person appointed doesn't sit back to wait for the business to come in. This person reaches for hatmakers with letters and phone calls. This same person that has been contacted by the hatmakers is then on deck the zero-hour evening to greet them all and get them into their seats and to make sure the instructor is there and to instruct it himself if no instructor appears. If the program is sweepingly successful in terms of new enrollees, then we make sure we leave the person appointed for it in the first place right on duty pushing hatmakers into the PE. And we have a program. And it was successful. And we got somewhere.

A pitiful wrong example of the above was when I was running the first American College PE as the experimental setup some years ago. We started to get in longshoremen by the squad. And they brought in other longshoremen. The person in charge thought longshoremen were low cast and tried to get intellectuals in instead, thus switching off the program. You never saw a program dwindle quite so fast as the longshoremen did. The correct action would have been to notice that longshoremen were responding heavily and to put somebody maybe even out of their ranks onto the payroll to pressure away at longshoremen. A million-pound program was let go up in a puff of nowhere.

A wonderfully right example is the Director of Processing–staff auditor setup of a Central Organization. That was once just a program. It prospered. It's still with us. Every field auditor looks at it with envy and snarls and tries to copy it. But he doesn't program. He is doing everything else in the shop. He can't program a special clinic drill with his attention everywhere at once. It's now thoroughly against the law in a Central Organization to let a Director of Processing take preclears. That's how far it goes. And we get wonderful results and all is well and the only squawks you hear about HGCs are from pure green-eyed jealousy or maybe an occasional real goof that the Central Organization jumped on days before anybody else did.

Programing requires execution. It requires carry-through. It requires judgment enough to know a good program and carry it on and on and to recognize a bad one and drop it like hot bricks.

There's nothing wrong with the will to do amongst Scientologists. Now let's see if we can't up dissemination by adherence to good, steady programing that wins.

HCO POLICY LETTER OF 27 DECEMBER 1963

CONT DIRS
HCO CONT SECS
ASSOC/ORG SECS
HCO AREAS

THE "MAGIC" OF GOOD MANAGEMENT

(Some tips of value which, while they do not form the rationale back of my own actions, will be found of practical use.)

(Hat Check: HCO Secs should hat check this policy letter on Assoc/Org Secs and Assoc/Org Secs should hat check it on HCO Secs up to continental level.)

The sole actual criteria by which skill in management is estimated in this society and by us in any one management person is financial volume and solvency.

This does not mean that Scientology is obsessed with making money. But money does buy a lot of things orgs and staffs need and under poverty-inspired propaganda, "making money" has come into bad repute. In actual fact, the only real sin in our present system of economics is to be poor, even in Russia.

Financial volume and solvency are the final test of any manager of a Scientology organization or area, large or small. If the organization isn't making lots of money, if the staff isn't well paid, if there's no good cash surplus to hand, if book stocks are not well up and paid for, if the tape bills aren't paid up-to-date and the 10 percent is overdue and behind, then the natural conclusion at headquarters is that there isn't much good managing being done. The criticism is leveled solely at the person managing the org or its HCO and no other factors or explanations are taken into account.

Finance, in this society, is still our best index, and so we use it to judge the competence of management. People who say we shouldn't have money merely want us to fail. The data is looked at this way: A good manager's organization is highly solvent; a bad manager's organization is broke. Staff, conditions of the area, local flaps, these are never taken into account. There are no forgivenesses for insolvency from the society and there is no better index of the kind of job the manager is doing.

To have high financial volume and to be solvent, a manager need only (a) follow established patterns, (b) see that there are competent people on staff and that they are doing their work, (c) that service gets rendered on a highly personal basis, (d) that there isn't a lot of entheta and natter coming from disaffected staff members and hangers-on, (e) that the spirit of Scientology is recognizable in the organization, (f) that people aren't overrestimulated by the "dangerous environment," (g) that there are lots of bodies moving through the shop and (h) that the place is obviously for Ron and

in agreement with his plans. Given just these things, success is certain. Given one or more of these poorly done or badly out and failure starts to creep in; given several out and there's no org, much less no manager.

These points of success mean many other things but they also mean high-volume solvency. And high-volume solvency is the index of success in the present economic framework of society no matter how socialistic the society appears.

The route to volume and solvency is milestoned by following these few points:

A. ESTABLISHED PATTERNS

Follow established patterns of the org. Don't keep breaking them up (or distracting personnel on post) with new projects and wild ideas. And don't follow them so Simple Simon that there's no initiative ever displayed in handling org problems. The best promotion channels are already built into the org pattern.

B. UPGRADE STAFF STATUS

See that people want to work for the org and make it a pleasant and happy thing to work for the org. Stamp ruthlessly on propaganda that interferes with org personnel procurement in the field. Continuously hold up the proper image that staffs are made up of the better Scientologists and make it true. Make it worthwhile to be on staff. Arrange it so that a staff member has more status than a field Scientologist. Discourage the idea that a staff member is there "just to help out" as a favor. Permanent staff membership should be a coveted status and an enduring career. After all, we'll be running things one of these days. And who will we count on? Staff members of tried and proven record, of course. Get competent people on staff, give them status and hold them on staff. Don't go in for transience. And see that they do their own job, not a lot of others. And treat them with courtesy and respect.

C. SERVICE

Be sure service gets rendered. The person trained must be well and interestedly trained and his or her problems in training handled. The person there for processing must be processed at the case level to get a win and processed interestedly and personally to a win. Tear the place apart if nontrained students drift off or nonwinning pcs emerge from the HGC. Don't ignore these ever. Give good service. Give the people what they came for. Schedule their time briskly and oversee their progress alertly. Look at the students and pcs every week and see *how* they look and act accordingly.

D. MALCONTENTS

See that the place stays clean of entheta and natter. Use O/W liberally. Spot the spinning malcontent and do something energetic. Don't get reasonable about natterers. If they're hypercritical they have overts. If they have a real complaint they'd talk to the management, not everybody else. These people are just nuts and they spread disaster. They drive off all the good staff members and prevent new ones, yet there they stay nattering madly about things they don't understand and haven't read.

As they drive off good personnel, if you don't watch it you wind up with only nuts. So the natterer is no light problem. Don't hire them in the first place, but if you do by accident, deep-six them during the probation period provided. Don't fill up an org with disaffected persons just because you have to have bodies. This is a tough one because at least half the people about are incapable of understanding what's going on but capable of howling like mad about it. They prevent work. They're just chaos merchants. Natterers that hang around an org with "an apartment nearby where all the students go" should be processed or shot from guns.

E. THE ATMOSPHERE OF AN ORGANIZATION

The spirit of Scientology is one of help, a flippancy for the Authorities Who Know Best, a hope of getting onward, the one possible escape from the condemnation of this place. It doesn't include doubt and "I've an open mind" or reasonableness about those who would stop us. It's an aura of new horizons, a better life, an invitation out of the muck of all the misspent yesterdays. It's an offer to be born again. When it is discounted, played down, put alongside of psychology, medicine or self-betterment Carnegies, it's being betrayed. The door is being closed on the millions. Omit playing my tapes, omit remembering why we're here, go into agreement with the idea we're just another org like Murray's and you've had it. The atmosphere of Scientology is a lot more important than new buildings and modern furniture.

F. THE DANGEROUS ENVIRONMENT

Keep down the danger in the environment by actually winning steadily against it. As per Scientology Zero, don't increase it. Only the merchant of chaos does that. The natterer is obsessively selling a dangerous environment, trying to frighten others, trying to decry their belief in Scientology because it gets in the road of their desire to alarm and frighten others. Don't increase the danger in the staff member's environment by sudden firings, wholesale staff reductions, etc. It's the manager's job to find work for his staff to do, not reduce the staff to fit the work. Use job security, reassurance and nice steady wins to reduce the danger of the environment. Some day every Scientology org will be sanctuary for any person within it, by civil law. Just now, handle this by keeping morale up and winning against the outside. Don't fire or let off permanent staff members. Increase the volume of work to do. And laugh at these attacks. That's all such puny attacks deserve anyway, no matter the noise they make. The staff uncertain of its jobs, uncertain of the staying power of Scientology and the org, cowed by raging executives and threats is in an apathy of no-work. One sweeping firing can wreck a place for a year. One threatening staff meeting can reduce work for weeks. Raise staff tone with raised security, good temper, wins they know about, and steady even if small progress against our enemies. And publish the wins so they don't come only on a rumor line. And boot out the chaos merchant — whose sole task is selling "dangerous, hopeless environment."

G. BODIES IN THE SHOP

Make sure that lots of bodies move through the shop, no matter whether they're spending or not. Just work all the time to move lots of bodies through the place. Don't let Letter Registrars drive them off with high prices threatened. Don't let Reception

turn everybody away. Hold open evenings and Sunday teas and tape plays and congresses and co-audits. Move bodies through the shop in volume. The instinct unfortunately is to keep the place quiet and stop traffic. Don't let it happen. Just keep people pouring in and out, no matter how or for what. And your standard promotion lines if in place will get their shares of course sales and intensives and books. The manager's first job is not to "run an organization" but to see that bodies move through the shop and build an organization to care for them and then to keep bodies moving through the shop and increase the body volume. All else, if other points here are in place, will follow. You can forecast any slump coming by a body count. When that public body traffic drops, watch it. Within a few weeks, there goes the unit.

Mail in the mailbox is an index of how many bodies are going to be in the shop. Get large volumes of letters out and large volumes of answers. Any letters out are better than no letters out. Too much emphasis on quality of letters is just another way of excusing low mail volume. And will result in few bodies in the shop. Do your best to hold quality up and keep goofs down — but get mail pouring into the mailbox.

Get books avalanching into the public (your first line of reach, actually) and you'll have more bodies in the shop.

An org is home to Scientologists. If you've no place for them to sit and talk or leave the shopping bag, you'll have closed the door on a lot more bodies in the shop. So field auditors prowl and steal pcs. All right, hang up a sign: "We are not responsible for any bad results from cut-rate co-auditing or processing not supervised by us."

Open the door with books, mail, events and interest and keep it open. And you'll soon have a volume of bodies in the shop. *Then* accommodate the flow. And still keep the channels open for *new* bodies, no matter how crowded you get.

No organization was ever solvent without bodies in the shop and channels for new bodies to put in the shop. However you get them in or why, do it. Concentrate hard on new traffic flow.

H. A HUBBARD SCIENTOLOGY ORG

This final bit is added not out of any pride or conceit or bid for loyalty. It has been consistently observed by many observers that when a place seems to be critical of or in disagreement with Ron or cool toward his plans, the public falls rapidly away. No squirrel has ever survived. Treat a bust or a personal office of mine with disrespect and the public falls away. Apologize for my policies and the public stays off in droves. There's nothing of superstition about this. The public wants Scientology, Ron's brand and they don't buy other brands. In thirteen years, every squirrel or disaffected or critical office has miserably failed.

The "we agree in most things with Ron but ———" sees the coattails of the public, not their faces. Only recently a large office nearly crashed on this one alone. I repeat that this is no self-interested observation. It is just fact. "This office doesn't fully agree with Ron" is a sure trademark of failure. I can name nearly a hundred (independent, nearly all of them) failed centers who for all their work and often creditable actions, new furniture and exteriors, failed and failed hard on just that point. Just fail to keep the nameplate on the door of my personal office bright, just let some student's critical

remark about a tape go by and you've promptly got less public. Of course, the one who discounts this point of success the most is already failing the worst. It's bad taste for me to mention it but it is true and has to be brought up in any monograph on the success of a Scientology office. I know of two or three million dollars spent and lost on forming offices because this was not appreciated as a factor in success — and this at times when anti-Ron newspaper stories were at their peak!

Success in our times is measured by quantities and material gains. By our society's operational system, spiritual gains are often unobtainable in the absence of material things. However much you may regret this, we do live in this society and operate within its financial framework.

The manager's record before the board's eyes, whether he or she be Central Org or HCO, is considered basically successful or unsuccessful by measure of balance sheets. It is just a measure. Good income means good quarters, a cheerful staff, successful service and everything listed above in place. It means Scientology is winning. I do not receive direct benefit from that balance sheet. But I receive direct information from it. And the basic point, not forgiven by any other point, is that good and well-done organizational Scientology is high-volume and solvent Scientology. And all new appointments and changes in org top personnel are made by the board with that point in mind.

Of course, you can sell Scientology short, grab a lot of money for no service and have an apparent solvency. But I have found that this takes about six months to catch up with an org, at which time it starts to go broke in earnest in a soured community. So all solvency is measured by yearly averages, not sudden spurts. Consistent income means all above points in.

I just thought you'd like to know. We're not in it for money. But solvency is our best broad yardstick of consistent service and high activity and the quality of management of any org is judged accordingly.

SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 22 FEBRUARY 1965
ISSUE III

LIMITED NON-REMIMEO
SAINT HILL EXECUTIVES
HAT FILE

EXECUTIVE DIRECTOR COMM LINES

SEC EDs

The Executive Director comm lines now include *Secretarial Executive Director* in all orgs including Saint Hill. This consists of a note or cable typed out by the HCO Steno (or Communicator where no HCO Steno exists or by the HCO Area Secretary where no Communicator exists). It is sealed with the corporation seal in the lower left-hand corner over the signature of the HCO personnel typing it. It is headed "Secretarial Executive Director." It is on blue paper. The signature of the Executive Director or the Acting Executive Director is typed below the message. Date and subject are included. Each Sec ED is numbered by the issuing Executive Director. The exact text of the note or cable is duplicated without additions or deletions. This is *never* a mimeographed item. The original sealed Sec ED, with the note or cable, goes to HCO files. A copy is immediately posted on the staff bulletin board by the HCO personnel who typed it and signed and sealed it. Another copy goes to the Org/Assoc Sec. Another copy goes to the HCO Area Sec. All copies issued of Sec EDs are signed and sealed by the HCO personnel typing it, as well as the original.

The Executive Director makes a copy of the note or cable being issued, numbers it as part of the message and files it for own reference.

Sec EDs are high-speed, urgent communications having the force of policy and require instant emergency compliance. Nonissue by HCO personnel or noncompliance by the person or department to which it is addressed immediately becomes a matter of a Committee of Evidence and can result in the demotion, transfer or dismissal of the offender.

Falsification of or counterfeiting a Sec ED must result in a Committee of Evidence with dismissal as the minimum penalty.

The Sec ED is the high-velocity comm line used to change personnel, to handle emergencies or to make limited-time policies or to handle personnel conflicts or chronic slumps.

All Sec EDs expire fully one year from date of issue but are kept on record although no longer in force.

The subjects of Sec EDs are not general in application to all orgs but only to the particular org to which they are addressed.

ADMINISTRATIVE LETTERS

Normal, general policy enforcement or advices by the Executive Director are carried in Administrative Letters. These are on yellow paper, are mimeographed and are usually designated general non-remimeo. The Executive Director's Administrative Letters are different from others in being headed above their subject title: EXECUTIVE DIRECTOR DIRECTIVE.

They remain in force unless cancelled.

HCO EXECUTIVE LETTERS

The normal comm line from the Executive Director to Assoc/Org Secs and HCO Secs or department heads in orgs is the HCO Executive Letter of Date.

This is on legal-size blue paper, is mimeographed and is headed "TO:, FROM:, SUBJECT:, REFERENCE:," with numbered paragraphs.

It is always sent general non-remimeo and goes to all orgs even when addressed only to one org or even to a person in that org. It may also be meant for every org.

A copy of every HCO Executive Letter issued is distributed to all Saint Hill executive personnel and a copy is posted on the staff bulletin board.

HCO Executive Letters carry advices, how to do things, short-term projects, requests for data, information, reports on the state of things in general or some activity in particular or how some emergency was caused or how some emergency is progressing.

The Executive Director uses these rather than individual despatches in answering requests for instructions from some org officer so that these rundowns are available to everyone rather than just the querying person. In such cases the Executive Letter is addressed to the person, but the person's query begins the Executive Letter and is answered in the body of the Executive Letter.

The purpose is to save the repeating of similar orders or advices in numerous places by separate despatches which, received by only one person and having no publishing system, thereby lose technology and data.

When an Executive Letter requests data it is headed under the "HCO Executive Letter of Date" line "REPORT REQUIRED." This is done only when reports are required from all orgs. A report requested from one org is not so headed.

The International Org Supervisor at Saint Hill, on seeing a REPORT REQUIRED HCO Executive Letter, immediately makes a folder for it with title and date one month hence and holds it ready.

All reports received as a result (usually written on the Executive Letter received by the org by the reporting officer) are instantly and accurately filed in that folder by the Int Org Supervisor.

In exactly one month, as visible by its date on the folder, this folder is given by the Int Org Supervisor to the Executive Director, whether all orgs have reported or not.

The Executive Director then makes use of the folder and either gets the number of reports completed by cable action or otherwise handles or uses the data. It is not further handled by the Int Org Supervisor.

When such a folder is completed, a summary of the reported data received back by the Executive Director is commonly made the subject of a new HCO Executive Letter referring to the old and is issued, thus putting everyone in the picture. It is possible that this new HCO Executive Letter also carries a summary of the orders given by the Executive Director as a result, but the actual orders are issued as Sec EDs or Admin Letters. But when the Executive Director is through with it the folder and all notes and a record of all actions are filed in the Int Org Dept files at Saint Hill under Executive Director Executive Letter Reports.

The Executive Director tries not to pour out volumes of despatches and individual advices to isolated individuals but uses the Executive Letter system instead. This has the effect of staff audiences being given on all manner of interesting matters and is useful to many staff members and orgs.

Distribution of HCO Executive Letters is as by general non-remimeo but in the orgs the spare is posted on the staff board on a clipboard and a copy must go to the person or staff hat to which it is addressed. Saint Hill distribution is to all Saint Hill executives and a copy is posted on the staff board.

Addressees in an HCO Executive Letter as in all other comms are to a hat, not a person.

Comments on entheta despatches are avoided on the HCO Executive Letter line. Entheta can usually be dropped anyway in all comms unless it is a matter involving an emergency.

CLIPPINGS

The vast number of clippings from papers and magazines sent to the Executive Director can be filed in clipping books without further handling or acknowledgment. While they often have importance, people sending them expect no ack as the clipping is not really an origin by the person sending.

BOOKS AND MAGAZINES

The large flow of books and magazines should be filed properly or discarded.

Books sent by individuals are always acknowledged.

PRESENTS

Presents arriving for the Executive Director, board members or the chairman should have a thank you letter attached for signature and sent on to the intended person for receipt and signing the thank you letter. Presents must have a thank you letter attached before being forwarded to the Executive Director or board member or LRH.

ANNOUNCEMENTS

Births are acknowledged by an associate membership in the name of the new baby.

Marriages are replied to by a note of congratulations.

Divorces are neglected.

Deaths are acknowledged by a note of condolences for the signature of the chairman to the next of kin or informing person requesting condolences be given to interested parties.

HCO POLICY LETTERS

HCO Policy Letters (green ink on white paper) are not issued by the Executive Director or other persons than the Chairman of the Board.

HCO BULLETINS

HCO Bulletins (red ink on white paper) are not issued by the Executive Director but by the Coordinator of Research, which remains an LRH hat.

REPORTS

Reports from orgs including Saint Hill received by the Executive Director are usually due on Tuesday of each week. If the report is standard and not forthcoming the Executive Director chases it up.

A table of such reports should be kept and checked off as received.

The Executive Director handles any matters arising from the reports such as slumps or good news promptly, by rush despatch via the appropriate channels or cable or if general by Executive Letter or if emergency by Sec ED.

The full story of Scientology locally and over the world should be fully and precisely received every Tuesday by the Executive Director in such a form that it can be swiftly viewed and followed up if divergent.

The authority of the Executive Director is maintained mainly by being the person who receives reports and where these are neglected it is a symptom of deteriorating authority.

Therefore, routine reports are demanded crisply and received and reviewed with great attention and acted upon with great interest.

The number of different reports demanded by the Executive Director should not be great, and the form should not be complex, as these two things break down the line and burden reporting personnel, who, after all, have other duties. But once a routine report is arranged it must be demanded to be complete, accurate and punctual and when received must be given alert, interested attention by the Executive Director and

when not received must become the subject of urgent communications and if still not received must become the subject of a full investigation of the nonreporting area.

Data received at Saint Hill from other orgs is digested for the Executive Director by the department heads at Saint Hill. If the Executive Director sees reason for further interest the full data can be gone into in the department along with all related despatches *before* action is taken. Then the action is taken, the gains are complimented, the slumps scolded and whatever else that needs to be done or put right is done.

It is a word of warning here that data received from an ailing department or org is nearly always inaccurate and that to base decision or advice on that alone is to be accused of wrong solutions as the solutions the Executive Director applies would only be as good as the data supplied to the Executive Director.

Raw figures not otherwise evaluated, compared to similar periods or similar orgs tell the best story. Reasons why given by reporting agencies already in error are usually (but not always) worthless.

Bad spots in reports then must become the subject of intensive and intelligent personal investigation by the Executive Director. False bits in reports must be somehow ferreted out. And lack of reports must be dealt with summarily. Report analysis is a high skill requiring much personal experience, intuition, intelligence and other data for comparison.

The bulk of the job of the Executive Director is getting existing policy applied and detecting where it isn't being applied, forecasting slumps, repairing emergencies and keeping orgs on the increase, and all in such a way as not to add further upset to the mess. The power of the office is such and the velocity of the comm line so capable of impact that one has to take care to (a) get factual data without (b) upsetting the apple cart in order to (c) take intelligent measures which (d) do not bring about further confusion.

Usually one can forecast an org or department slump about a year before it happens if one has the report lines straight.

The Executive Director depends on routine reports rather than despatches or rumors for data and thereby keeps things going well without adding to the confusion.

Demands for data must be precise, detailed, exact and crisp without explanation and censures for not receiving it but only stating one has not, never why not.

If the report is still not received, bypass the nonreporting person but demand only the same report.

When reports are consistently not received, despite all efforts to obtain them, begin looking over personnel in that area and get somebody there who can function. You will never be wrong in this. People who can't report aren't too busy if the report volume is reasonable. They just can't work and so are the probable source of the slump.

Report lines are the most vital lines of the Executive Director.

COMM STRESS

The most attention, next to reports, is given by the Executive Director to the execution of programs already laid down and spotting and discouraging projects or actions not part of the basic programs.

The org pattern in any org is the most basic series of programs. Each department by the design of its actions is its own promotion and execution program.

Thus, nonfunctioning departments are broken-down programs. The Executive Director is mainly concerned with preventing orgs and departments from breaking down on standard actions and in units carrying out the admin to keep the org going.

Technical departments are given the greater attention as sudden spurts in income will collapse if not followed up by good tech. Solvency is based on good standard departmental actions backed up by good tech full of good results in students and preclears.

The whole organizational operation the world over as covered in earlier 1965 policy letters and in 1964 programs and org patterns and hats is very simple and straightforward so long as it is executed. When it isn't being done or has been unduly complicated or altered, avalanches of despatches and reports of slumps or absence of reports call the errors to attention.

Using the policies on dev-t and enforcing them keeps Executive Director comm within reason and brings the bad spots to attention, making supervision by comm line analysis a most effective means of getting the job done.

THE DATA THE LINES SHOULD CARRY

The primary commodity of the Executive Director is data.

The Executive Director should at all times know (a) the exact financial condition of every org, (b) the current traffic volume (pcs, students, book sales) of every org, (c) the condition of tech in every org, (d) the condition of the staff training program in every org, (e) the condition of the staff co-audit in every org and (f) the junior executive member efficiencies in an org so as to know who could replace what at any given moment in emergency. And this of course includes Saint Hill.

Knowing those things and enforcing policy where it is out or getting better personnel on the job, the hat of Executive Director becomes easy to wear and everything prospers.

All this data comes from the Executive Director comm lines. These therefore should be concentrated on (a) to (f) above and all other concerns given secondary importance. Despatches or comms which do not serve (a) to (f) above can be neglected or put on an automatic answer basis.

The Executive Director's task is to (1) get the important data in order to act if needed without (2) getting a volume of paper too heavy to review.

Therefore much of the comm of the Executive Director is predigested. This is done so as to not remove important data and not overburden the comm line.

Of all Executive Director duties, this is the neatest trick, and the post only fails when it is not pulled off.

The Executive Director hat does not conflict with the International Org Supervisor hat as the latter is only a portion of the sphere of responsibility of the former. The Executive Director deals mainly with Org/Assoc Secs and HCO Secs, and the Int Org Supervisor reaches much deeper into orgs. Further, the Int Org Supervisor has the responsibility of obtaining the 10 percent org payments for Saint Hill, that they are correct, and that all org bills are paid to Saint Hill. Additionally, the Int Org Supervisor lines are handled as whole lines to orgs, not predigested lines. The relationship of the two posts is similar to the relationship of Executive Director to every other hat in Scientology — the person wearing any hat acts on policies procured from the board or outlined or stressed by the Executive Director and coordinated by the Executive Director.

The Executive Director also obtains reports from the field, missions, books and advertising, even governments and the general public, and also Saint Hill departments and coordinates the whole with org activities.

MAGAZINE COMM LINES

The Executive Director has numerous magazine comm lines which are two-way, not one-way lines.

To the public the Executive Director has the minor issues of continental magazines.

To the field the Executive Director has *The Auditor* from Saint Hill and all major continental magazine issues.

Public answers and reactions concerning magazines should be watched but with the reservation that such mail is never a cross section of "public opinion" — that the true index of magazine acceptability is not letters from readers but traffic in orgs and book sales. It is fatal to modify magazines on the basis of "public letters" about them. Ten readers stuck in snarl don't make a public. Total absence of mail is more important as a gauge of ineffectiveness of magazines. The mail opinion is no opinion at all but is measured by volume, not content.

TECH ARTICLES

Part of the Executive Director comm lines is a copy of every magazine and brochure and pamphlet published by orgs.

These are carefully reviewed for the following points and/or actions:

1. Compliment an unusually good issue.

2. Call typographical errors to attention and warn that they can make a reader stop reading or even leave Scientology if a newcomer.

3. Technical material errors. These are made the subject of cables.

4. Hard sell. If the selling is soft and mousy, if ads for the Academy, HGC, books, memberships, extension course, congresses, etc., are omitted, investigate the connected personnel and get some hard sell going or some changes made in personnel. "Public criticism" brings about soft sell even though the "public" was always only one or two anti-Scientology bums. (London could have been saved earlier twice by this and Johannesburg twice and Washington once if this point had been used rather than more obvious symptoms seen and corrected months later.)

5. Articles or letters by other persons on tech. This is a sure sign of an org about to do a swan dive. The area of the mag is doing screwball tech because it doesn't think there is standard tech or isn't applying it.

6. Mentioning creditably people known to be rank squirrels. This is an org that can bolt, for it has a lot of squirrel connections, is therefore squirreling. A power push will develop from the area if rapid investigation is not undertaken and the facts *acted upon* swiftly.

7. Minors with big words in them.

8. Majors that have no appeal at all to old-timers.

9. Mags devoted entirely to local leaders.

10. Departures from byline policy.

11. Limited or curtailed distribution (for reasons of economy or others). This last is not detectable from the mag, so the Executive Director should require a circulation figure, as part of his reports, for both major and minor issues, PABs and *Auditors* as well as number of address plates currently in CF and number of brochures furnished mission holders each month.

OKAY TO MIMEO

The mimeo lines of any org are overused. Lack of planning causes heads of departments to fail to meet deadlines for printed mags. They then want to send mimeo mailings to everyone.

Sometimes it has to be done. But generally the Executive Director seeks to curb it.

Okay to mimeo by Executive Director before anything can be mimeoed is unreal for distant orgs. These should submit a copy of everything mimeoed to the Int Org Supervisor so that the Executive Director can occasionally review it and caution them, for it is very costly and poor. Receiving these also tells one when policies are being "interpreted" or local policies are being issued in divergence to mainline policies.

In the org where the Executive Director is located, this is easy. Therefore, the order is that *nothing* can be mimeographed by Mimeo in the Executive Director's nearest org unless it has "Okay to mimeo" and the Executive Director's initials on it must be enforced.

This is sometimes gotten around by an Executive Director's despatch saying, "Rewrite before mimeoing," and they then rewrite and mimeo without the actual copy being reviewed or okayed. Thus, the initial *must* be on the actual copy to be mimeoed.

This permits review and coordination of releases, curbs tech cross-advices and forces promotion into *The Auditor* or PAB and saves jamming mimeo lines. Mimeo is too costly for wide-distribution use and can get out of hand very quickly. When widely used (in hundreds or thousands of copies) it is prohibitive in cost — a thing an inexperienced org or executive never notices.

Hence, everything mimeoed in his nearest org and all repeats of existing stencils require Executive Director permission before being cut or run.

BOOKS

The Executive Director's comm lines include books. Selection of what books to reprint or push is the main part of this line. Indexes of what books are selling, what books obtain org traffic, are points of vital analysis by the Executive Director. This is the *primary* comm line of Scientology and it is regulated and reinforced by the Executive Director, and is one of the more vital portions of the hat.

ADVERTISEMENTS

As only book advertisements are placed, one is limited as to what one can say, but this advertisement copy is an Executive Director comm line and is watched carefully and straightened out when it goes wrong or started again if it ceases to exist. It is a definite comm line and an important one.

SO #1

The SO #1 line (formerly only for LRH addressed mail) is the public and general incoming mail line to LRH, MSH and the Executive Director, and is watched and kept in order by the Executive Director.

It is a very important line in that *no major org breakdown has ever occurred without being preceded by entheta* SO #1 mail from that area!

One can estimate the condition of service, admin and tech (dominantly the latter) from the character of SO #1 letters from an area.

A year before the Victorian Enquiry, SO #1 from the Melbourne area went bad and stayed bad.

Thus, this SO #1 line, we learn from this and other instances, is an important index of the character of Scientology operation in an area.

The SO #1 line is used by the Executive Director as an alerting bell, not as a subject to be responding to directly.

SO #1 answers are severely regulated by policy — the maxim is "Give them what they want and keep them happy."

Respond casually to entheta, or noncommittally.

Forward complaints received to the org or auditor involved for their or his or her comment. Forward the response from the org or auditor to the originator, when it comes, if it is politic to do so, or condense it if it is not as a second letter; the first written at once is only an ack. Never let orgs use the SO #1 line as a sales line. Never let a critical letter go to anyone in answer to an SO #1. Just listen and understand. Ask SO #1 writers for clarification if you don't understand and want to.

Keep the line itself all "Good Roads and Good Weather" (which everybody is in favor of). Never criticize an auditor or an org in responding to SO #1 letters. Peace and understanding is the keynote of responses to people writing SO #1 letters. Save the thunder for the true source of entheta in the area, such as a bad D of P, but even then only when the evidence of his guilt is in plain view.

This SO #1 line is a *detection* line. One never responds to originators in any other way than peace and understanding. One uses the condition (theta or entheta) of SO #1 letters from an area to get a view of how well the field, missions and orgs are practicing Scientology there.

There is *never* bad SO #1 from an area where the field, missions and org are doing their jobs well. So it is a reassuring point when SO #1 is all theta from an area.

But *no* SO #1 at all from an area is an index that that area is not pushing *us*. It may even be active, but if no SO #1 arrives then that area is pushing Joe Squirrel at our expense, or worse, running us down to the public.

BUSINESS MAIL

Great respect is generally shown on commercial lines to Saint Hill and the Executive Director.

Where it is not, somebody in some important staff position is goofing like mad. It could be said somebody amongst us is being outrightly destructive.

For we are commercially *very* well regarded and respected.

One always uses the commercial-line answers from the Executive Director (or Org/Assoc Secs) to *increase credit* one way or another — not by asking for it but by casually remarking how well we're doing, how we're expanding, etc.

Never pull a "poor mouth" in a business letter. "It's too costly for us." "We are a charitable organization so we should be given favors." Be bold in all such replies, be the image of success and expansion at the slightest pretext — which is, of course, the truth.

STATIONERY

Executive Director stationery must always be top grade. Never use regular org paper for despatches — use special paper with a printed caption.

Don't use air letters if you can possibly help it.

Hand-laid antique paper, heading embossed, for first and second sheets and envelopes is a *must* for all commercial letters from the Executive Director.

TYPING

Never let out-of-alignment typewriters, faint ribbons or erased messes go out on the Executive Director or SO #1 lines, no matter who is going to receive it.

Credit and importance is estimated by the only view they have of you — the letter in hand. Letters are small ambassadors.

MOOD

The mood of comm lines throughout Scientology is dependent on the Executive Director's alertness.

Scientology comms contain ARC. They are familiar.

Our lines are too wide open to put much entheta on. It arrives like a bullet when it was meant as a small tap.

You can blow up our comm lines with annoyance, much less anger, on them. So discourage anything but ARC.

If a long-distance comm line starts acting up, be very very careful how it's handled.

The safest course is don't reply directly to snarling or critical despatches from org personnel anywhere. Consider the line temporarily wrecked. Do something about it but use another line or approach. It's too risky in orgs to try to run off somebody's overts 12,500 miles away with a despatch to that person. Use it as a symptom and explore it carefully. How much of the org does it represent? Call for other filed despatches available to you at once from other persons in that org. Do they contain any misemotion? Trace it all down without sending a single cable or despatch back. *Never* surrender to an impulse to flash back. Use a misemotional despatch to correct an org *condition* and be very sure that you really know the exact condition before you try to correct it.

When you're sure, act. The action perhaps will be getting somebody audited, or a transfer, or getting somebody retrained or finding a new Org/Assoc Sec or getting an HCO Sec's hat on. But *don't* reply — just handle.

In his or her own turn, curb misemotional materials or origins from the Executive Director area or self.

You can be critical only if you have a remedy that will work. Example: "Ds of P should never Q-and-A with auditors; one recently messed up a case . . ." Never "You messed up a case! Stop your Q and A . . . !" It's a tolerant, sometimes tongue-clucking attitude. Not a bull charge.

RESTIMULATION

An Executive Director (or any staff member) is liable to restimulation by reason of comm lines or hats.

This nearly *always* comes from being forced to wear somebody else's hat without noticing it.

To remain sweet tempered, refuse to wear other people's hats for them and *always* check up at least once a month to see if you are wearing somebody else's hat. Otherwise your origins may become misemotional, whether verbal or by despatch.

Analysis of your comm lines will rapidly show whose hat you're wearing. Lots of despatches will concern that hat, not your own hat. Example: You have a mail clerk but you are always sorting mail or querying about lost or misrouted mail. You are wearing a mail clerk or a Communicator or an HCO Sec hat. You will soon be furious with somebody, not always the right person. Example: Keokuk is always involved with something you have to solve. Recognize you are wearing the Org Sec Keokuk hat or the HCO Area Sec Keokuk hat long before you start getting snarly, and act, not by wearing the hat but getting it worn by the incumbent or failing that finding somebody who can wear it.

Executives who sweep doorsteps instead of chewing up janitors are already in deep apathy from having had to wear, without noticing it, somebody else's hat too often.

It affects your comm lines this way: You are working to pay a janitor's salary. You are also being the janitor which detracts from the time you must spend to earn enough to pay the janitor. Thus, you *double* work, both to cover the salary and to do the work being paid for. Thus you must either get the janitor to do his job or transfer or fire him, thus reducing your load by twice. Even if you only fire the janitor without replacement *and* sweep up yourself, you have still reduced your load to the degree you had to earn his pay. So not noticing whose hat you're wearing when one is foisted off on you, increases your workload double and will shortly pull you off your routine lines which then again reduces income. The end product is a feeling you have no time to do your job. And this messes up comm lines remarkably by causing one to short-cut and omit which in turn develops new situations which further reduce one's available time.

So to handle a set of comm lines one must be very wary of inheriting a hat from somewhere.

This, as Executive Director, is very easy to do as one is responsible for such a multitude of things it seems natural to wear a lot of hats to the neglect of one's own hat of coordination and supervision.

VERBAL COMM

Executive Director verbal comm, by phone or in person, is usually denied comm and causes trouble unless special actions are taken.

The decisions or arrangements made by the Executive Director verbally with one or two people are unknown then to other staff and act as a withhold.

Always record conferences and originate at once orders that come out of them.

Discourage staff body traffic.

Also write down and publish any verbal order given.

Confirm arrangements made by letter or despatch.

PUBLISH DATA

If only the Executive Director knows it, that's not enough. It will cripple staff members and orgs.

Hidden data and information, particularly estimates of situations and reasons why, must be published so staff can see them.

Release lots of information, particularly by posting on boards. Staffs try to hide data from the public. Don't bother to hide anything.

JAMMED LINES

The Executive Director lines can be jammed by

1. Too complex a report system.
2. Letting others use Executive Director lines.
3. Failing to police dev-t.

If you outflow a lot, put it in a general form to reach many and don't make it a concentrated despatch line to one person. Thus people can read it at leisure when their own job lines are cleared. Use bulletin boards, Executive Letters, that sort of thing for the release of news and info. Keep such out of despatches. Never write newsy despatches or more than one subject per despatch. Write newsy Executive Letters instead. It is doubtful if you can jam your outflow lines by general releases in this fashion as people are interested and want the news and if they don't have to answer it always as a despatch it will seep in somehow. So the amount of outflow an Executive Director does would have to be huge before people totally ignored it.

However, one can jam one's own lines by getting too report-form happy. When getting up report forms remember it's you who must get data off them so make them awfully plain, concise and few. If you add a new type of form, always discard an old one if you can. Regularly review report forms with an eye to discarding some or condensing them. "What forms being sent directly to the Executive Director are really useful to the Executive Director?" is the main question. Amputate those forms or data that are not. Still, don't fail to make up a new report line if you really can use the data in the time you have to study it. And don't fail to kill it when you no longer want it.

Letting other more junior staff members use the Executive Director lines or sign a type of Executive Director comm (such as an HCO Executive Letter) is a certain way to jam its line and confuse everyone.

By letting dev-t exist and not policing it you jam everyone's lines. For not only you are getting dev-ted from a dev-t source.

Never sign isolated checks offered one by one.

Never sign checks unless you have

1. A tape adding up the full sum of all checks offered,
2. The bank statements in hand to make sure you can cover,
3. Copies or originals of the statements or bills being paid,
4. Assurance that "this packet" is *all* the checks to be signed for the next thirty days.

Always do "dateline paying" no matter what the account line is.

Never be eager to sign checks. If demanding better preparation by Accounts will consume time, consume it.

In disbursement, accuracy and safety are senior to speed.

In all accounts matters don't be afraid to overwork accountants and never listen to why it can't be well done. Just get another accountant.

Always cause to be transferred or sacked any Accounts personnel who (a) act like it's their money, (b) who won't dig up funds for LRH or Executive Director concerns, (c) who get you into danger by poor or false submissions or (d) who won't enforce PO systems. Such have too much wrong in their units to set right under their control. It just won't ever go right under them.

The above also applies to orgs who make the mistakes of (a) to (d), only in this case investigate the senior executives for any one of a dozen possible crimes or delinquencies and don't be afraid to act once you have the straight information on what's what.

In fourteen years I have never found any of the above (a) to (d) attitudes without also finding hidden insolvency or, usually, theft. That is what those data (a) to (d) always add up to when investigation is complete.

Assoc/Org Secs and HCO Secs who yowl at you about your money requests or orders should be promptly looked over and usually should be demoted and transferred. They're too parasitic or too proprietorish of our money to be trusted.

Lazy accounting units are equally dangerous. In this case too, doing the work is always substituted for by a lie of some sort. So accounts lies add up to either crooked or *no* accounting system, never to overwork.

With these above data one can handle Accounts comm lines easily without sudden shocks or financial emergencies, the two most detrimental things that can happen to an Executive Director. So preventing the shocks and emergencies when the symptoms above are first noted will save literally tens of thousands of pounds as well as Executive Director overwork and overloaded comm lines and getting all Scientology at risk.

SLOPPY LINES

Keep all comm lines and comm procedures taut and crisp.

The time to police sloppy lines is *not* when emergencies are in progress.

Any line may be needed suddenly without warning.

Therefore, be very harsh on floppy attitudes toward failures to acknowledge despatch forms, routings, distribution, copy filing, etc., etc. Then when they're needed, the comm lines are available and in working order. And you never know when you'll need them. They may be unused for months and then bang! they're vital. HCOs or orgs that don't answer up or properly should be investigated at once.

THE VASTNESS OF EXECUTIVE DIRECTOR LINES

One can easily be intimidated by the hugeness of expanse of Executive Director territory and lines.

Two errors can be made:

1. Fall back into specializing in some and ignoring the rest;

2. Trying to receive and answer *all* comm oneself.

About once a month solve (1) by viewing the whole network. Look for neglected areas and brush them up. Example: One, on review, finds he hasn't a clue what goes on in missions lately. Recognize it's an area of lines one is neglecting. Look over the report system on missions for faults or get one going. Look over the other lines one has been doing to find out what clandestine hats are being worn there or what makes them seem so important so as to exclude mission lines. Sort it out and regeneralize one's coverage. It's routine and common to be sucked into tech reports or finance and neglect other zones. The crime is not to discover it, find out why, act to handle the real cause and exteriorize.

In getting too much comm from too many places one gets to a point of being able to handle none of it. This happens only when one doesn't grant existence to relay points on one's lines or when one loses confidence in the ability or effectiveness of a lot of relay points or of really faulty relays. The thing to do is work on patching up relay points, not going on handling the huge volume, as the more you handle it the worse it will become.

SPHERE OF INFLUENCE

The Executive Director's sphere of influence is too large to be handled on a part-time basis. It is a full-time job even when its comm lines are predigested to next to nothing.

Therefore, an Executive Director must not take on specialized posts "in addition to . . ."

The symptoms of not handling the post are all to be found in:

1. Reduced overall org income and

2. Increase of Executive Director incoming traffic.

Thus, very heavy increases in Executive Director traffic will coincide with lowering org and mission incomes.

The things to do are (a) analyze the lines for dev-t and act on the analysis, (b) get neglected promotion policies and programs back in action fast, (c) trace back what old program has been dropped or replaced and get it back in force quickly and drop the later one substituted for it.

After any new program is put into action in any activity, be alert for dropping income in that activity for at least three months and don't breathe easy until income is shown to rise because of the new program. It's best to pretest. Use it in just one org before going all out in all orgs. Saint Hill sometimes serves to pilot.

Reports come into their own in scouting down a change that went sour.

When org incomes drop and Executive Director incoming traffic increases go into the files and trace the first recent symptom of failing incomes in orgs general to all orgs. Then go earlier by a few weeks and look for any new programs or changes. You will often find it easily. Act accordingly and *very fast* to get it straightened up (the new one out, the old one back in).

This done very broadly over a long time period will spot up all successful general programs subsequently abandoned and could increase org income everywhere.

LOCAL TRAFFIC

Give local comm traffic less attention than exterior traffic.

Because an Executive Director is in an org the org will pull him or her onto its lines for various functions. Seek to avoid this.

Concerns of the local org where the Executive Director is located should occupy the following fraction of Executive Director traffic: one over the total number of orgs in Scientology.

If that proportion is violated (taking into account reports from outside condensed or relayed by the local org for the Executive Director) then the local org has put one or more hats on the Executive Director. If these are not spotted and removed, Executive Director comm traffic will increase internationally and international gross income will reduce (also reducing the local org's income).

PURPOSE OF COMM LINES

The main reasons the comm lines to the Executive Director exist are:

1. To disseminate Scientology as widely as possible through standard channels;

2. To increase the international (as opposed to local) gross income steadily and stably;

3. To coordinate Scientology activities;

4. To keep top org executives on their toes and functioning;
5. To hold a high tech standard;
6. To hold in policy;
7. To detect new policy when really needed and get it formulated at board level;
8. To catch the ball when it's dropped at high executive levels (Org/Assoc Sec, HCO Sec);
9. To design new promotion, test it and get it going if successful;
10. To keep Scientology research and compilation well financed;
11. To keep everyone in the know on current Scientology actions and news.

These (not in order of importance) comprise most of the functions of the office and therefore regulate the character of the comm lines.

One can do these things only if one keeps his comm lines going and within reason as to volume.

When feeling one isn't getting anywhere, the first place to look is at the comm lines and the first thing to do is straighten up the comm lines so they can be used easily without strain.

Probably the first thing one notices about Executive Director comm lines is that one isn't originating anything; one is only answering up. If one is doing this then the whole of the lines have to be gone into, dev-t rooted out, clandestine hats shed, slack personnel demoted, transferred or sacked, and actions taken to get policy and programs back in.

If it has gone too long, one does the above on a gradient, not all at once, starting with crisp new promotion or a furious carrying out of old promotion; getting dev-t, getting that spotted and its chronic originators handled; looking for hidden hats on one's head and shedding them and so on.

I have found that when the Executive Director comm lines had me backed off from origin, I have always had to abandon the whole lot for a bit and, bypassing them, get promotion going fast. Because when lines get that way, income has dropped or will shortly drop and always, part of such a picture has *turned out to be* a forthcoming financial crisis. After furiously promoting and getting promotion done one usually can look back in view of what one *now* knows and say, "Whew! That was close! If I hadn't gotten promotion started in December, we'd now be wiped out."

Promoting into a comm-line overwhelm is nonsense. One acts by bypass of his in-basket. *Then,* having acted, one straightens up his lines by analyzing and tabulating every despatch as he answers it. Then one shucks the accumulated hidden hats by getting them worn where they should be.

And all turns out well.

The only genius required is fast reliable promotion action. Sometimes this requires a lot of inspiration. Example: Getting the idea to publish *The Auditor* and getting it in

the run over the near-dead bodies cluttering up the place. It took four months to get it out in people's hands, but during those four months, a lot of the other above actions were also taken. By the time it came out the org had almost collapsed, owed thousands and thousands. But it was out and the ball was caught. At the moment I started the promotion the only visible symptom of trouble was that I could not find time to originate anything and was smashed back into only answering. Things smelled bad but not one single cause could be isolated and little data was known about what might be wrong. I promoted, then found what was wrong. So always take that order of precedence of action. Get in old promotion or design new and get it in the run. Then, straighten up the comm lines and shed the hats. The latter two actions can take eight or nine months. The financial emergency which will occur after a period of sour, flooded comm lines will occur *before* the effect of straightening up comm lines will correct the financial situation. Hence, promote and then straighten up comm lines any time there has been a prolonged period of Executive Director overwork or nonorigin.

The only hitch is to promote so that income will flood in and no existing income will be blocked.

In this respect, I never abandon known income in favor of hoped-for income. So the promotion done must take that into account. Example: A promotion scheme advanced by executives consisted of selling a lot of different memberships instead of receiving mission 10 percents. A lot of reasons were given as to why the mission 10 percent idea was poor and how much money would be made by memberships. I looked up mission income and found it was one-tenth the income of Saint Hill! Without being worked on at all. It offered great potential increase. I did not therefore abandon missions but arranged promotion to improve it. The advice to abandon it, if followed, would have blocked the 1964 book-ad promotion!

So no new promotion should be allowed to knock out successful functions. The thing to do is increase successful functions by newly promoting them, not something new.

Also, never go outside Scientology for income. That's a symptom of sure flop. Every Scientologist who does lays an egg. Use Scientology to produce income always, and despatches or comms advising other courses should be put in File O and ignored.

Reports will tell you what actions are producing income where. Use *those* actions for increased promotion.

Example: The failure to send *Certainty* to the whole list and a gradual decay of content and abandoning hard sell was coincident with London income decline. Pepping up *Certainty* increased London income. Therefore publishing *The Auditor* was based on old known promotion. So it didn't require vast genius to dream it up after all. And that it would save the bacon at Saint Hill by April 1964 was a foregone conclusion.

Reliable old promotion prettied up *and done* is usually best.

So promotion takes precedence over the condition of comm lines on the Executive Director (or Assoc/Org Sec) posts.

Thus there is something routine comm lines are junior to — promotion.

If you try to straighten up comm lines and the org or orgs in the face of threatened financial disaster, you will always be too late. *When financial slumps are in view* or forecast, always promote first and fast, ignoring the lines and orgs, and straighten up comm lines and orgs afterwards.

If you know this and do it, you won't ever have a complete financial disaster.

If you tried to straighten up the lines and org or orgs in order to use them to promote, the disaster will be upon you before you have a straight set of lines and an org. So the result is always a *smaller org* if you reverse the correct sequence of action.

Orgs that grow smaller have not promoted first and reorganized second. They reorganize first and so can only save themselves by reducing staff. They should have promoted first and *then* reorganized in the time thus bought.

You buy time with promotion and in that time you can straighten up the house.

Never, when promoting orgs out of a threatened financial disaster, consider whether or not it is easy to do or if staff can do it. Remember that the staff involved started the slump. Just promote, and regardless of anyone and if necessary over any number of dead bodies, get it executed. Then revive or bury the corpses. Handling things otherwise when the future goes gray will ruin everything.

Years ago it was obvious to me, as Executive Director, that orgs either could not or would not promote and that *I had to do all their effective promotion.* I used to wait in vain for orgs to generate promotion. When they didn't, disaster would loom, then I would grab the promotion ball, promote like mad, save them and then wait again hopefully for orgs to promote.

I never realized why. Now I know. Orgs (any organization, not only a Scientology group) try to handle *everything* by administration first, last and always. They would promote routinely but when "organized for it."

Thus, when things were close to disaster financially (brink close and bill collectors calling, which alerted even the dullest person present) they sought to "change Registrars" or hire new typists or sit around and try to find out where the breakdown had been.

One, they hadn't any system to advise them of future slumps and wouldn't have put much time in using it, and it required an earthquake to alert them; and two, being introverted by threatened catastrophe, sought to remedy their org faults as the only solution.

True, if they had a smooth org the inherent promotional actions of departments would save them.

But it takes longer to repair an org system than it does to promote new business. So the length of time of their solution, begun on at the brink of disaster, overran the last possible moment available.

Promote, *then* repair the lines and personnel malfunctions or improper placements.

This is a new idea. The world of business and government does not know it. They sometimes accidentally use it. Some dynamic director or manager might instinctively

do it. But the high incidence of business failure (one in nineteen fail in the first year) and chronic governmental failures and insolvencies show the datum is not used by man even if known. Big businesses with huge sinking funds alone can use the system of "make it solvent next year by improving our structure" successfully. And even many of those miss and go bankrupt.

The shrinking empire has always (a) experienced but failed to handle financial emergencies, (b) sought to resolve the situation by administrative changes and economic measures.

Nobody can save himself or a country out of a slump. You can't save what you haven't got. Therefore, enforcing economy is aimed only at keeping outgo from being more than income. Enforced economies is no solution to a slump. When it is used as a sole salvage measure everything gets smaller and the former position is never regained. When politicians start talking economy more than they talk of prosperity, the country is going to shrink in its sphere of influence.

England has done and is doing just this. Its empire shrank for no other reason than that it sought to reorganize itself out of too many financial crises and failed to promote.

Talk economy, yes. But talk promotion harder and sooner.

No empire stands still. They expand or shrink. They expand by (1) intelligent promotion and (2) good administration and (3) sensible economy, in that order. They shrink by using the wrong order — (1) economy, (2) more administration and (3) some promotion. They shrink because they never regain the former position by administrative management alone and the economy has nothing to economize on.

The Scientology empire must continue to expand in order to live at all. Therefore, one (a) keeps promotion going, (b) administers intelligently, (c) practices necessary economies, in that order. And in emergencies one promotes before one even thinks about reorganization. Doing that maintains the expansion.

Where an org has the same income year after year they will soon begin to have less income. They are handling their various crises by administration and economy only.

If they watched their comm lines and every executive kept on his executive hat and corrected all dev-t, they would never have to do frenzied promotion as by the design of orgs they would be promoting constantly. And if they handled bad crises by everyone grabbing some old tried-and-true promotional project and making it fly before they even wondered why they got into a slump and afterwards put their house in order when the promotion project was done, they would only expand.

You use comm lines to detect areas of *potential* slump. By analysis of dev-t, by observance of non-ack, by watching volume of action, quality and content of magazines, the Executive Director can accurately predict future slumps — literally a year or two before they happen. Predicted at this remoteness one can make the small changes that will bring them up before they really start to fall. One has bought time. To do this one has to be very alert in comm analysis, believe its maxims and not "be reasonable about it," *and act* on what one finds when he really establishes what he thought he observed. This buys time.

When comm analysis and reports are not given close attention or when falsified for some time or bad spots don't come to view in spite of it all, then one approaches financial disaster.

When income itself starts to fall in an org or orgs, one then uses this datum — Promote first and ask questions afterwards. Always use sure-fire-type promotion, broad and huge, an old action in a bigger new dress; never use risky, untried ideas. Now, with *that* getting done (and making sure it is being done by inspecting its progress day by day personally or doing it yourself) start getting lines and personnel straight. If the promotion idea is big enough and practical enough it will pull through the period of reorganization and the resultant income should be arriving just before the sheriff or bailiff knock on the door. You then smilingly pay them off and the reorganized org is now capable of rendering the service sold.

Promoted business always has a delay. It takes six weeks to get the first response to a magazine or a barrage of letters. It may take five months to flood the place with money.

You can never promote too early. You can often promote almost too late.

My early days maxim about org finance was "make more than they can waste." Later it became "make more than they can waste and patch them up so they can deliver." Now it's "make sure they will make enough and hide some of it and make sure they deliver so they will make even more."

Intelligently observed and handled comm lines will buy enough time to make frenzied promotion unnecessary. Orderly promotion over a long term can then be done. It's the short-term money necessity that makes promotion genius level. The shorter the time available, the more genius it takes.

So vigilance on the comm lines and good analysis of them buys the time necessary to do long-term promotion and keep orgs grooved in before they go into a long slide.

All this — the prevention of shrink and the continuation of expansion — is the prime reason for the Executive Director's existence.

To do it the Executive Director must have the proper comm lines and handle them.

Beyond this there is no real reason for an Executive Director or the comm lines to and from that hat.

CSW

Completed staff work is always demanded by the Executive Director when asked to make any decision or okay anything.

This prevents errors.

However, requests for authority to depart from the usual are dangerous when okayed as they then set up areas of difference and cause policy to wander and misfit at the joints.

Given intelligent existing org patterns and programs, one would be right more often than wrong by far if one turned down all requests for authorities or changes in action.

So while one always demands *completed staff work* (CSW) on requests for decision, one tends to say "No." If one begins to say "Yes" the whole program begins to slide into some unworkable hash.

Many requests for decision from a post means either (1) the post is improperly held or (2) the hat of the post isn't understood. In either case one should originate despatches or Executive Letters to obtain data about the person and the hat and should either rewrite the hat or educate or transfer the person.

SUMMARY

The Executive Director comm lines are the carriers of data and commands and must be well handled. The traffic must be policed and kept grooved.

The lines must be handled with considerable speed. But no matter the urgency that may be urged upon the Executive Director, decisions or actions must be based on complete data.

If the Executive Director's comm lines are good and complete and well handled the position becomes very easy to deal with and all will go well.

Emergencies, on good lines, can be foreseen by at least a year and handled long before they happen.

The only real troubles on the Executive Director lines come from incomplete or random reports and a failure to believe the raw data of income and statistics in some area and act when bad spots are consistently observed.

L. RON HUBBARD
FOUNDER

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 13 MARCH 1965
ISSUE III

GEN. NON-REMIMEO

DIVISIONS 1, 2, 3

THE STRUCTURE OF ORGANIZATION
WHAT IS POLICY?

The only reason anyone fights good policy is they're too stupid or too inexperienced in an org to understand it. Unable to grasp it, they are too lazy to work at trying. They miss words, don't see reasons, imagine situations are otherwise and in general can't grasp it. So they try not to use it or dream up their own. People with bad study histories can't grasp policy. For policy also follows the rules of study.

Therefore never put a person with bad study history on a key executive post. They can't grasp policy as they can't study it either.

Only personnel with quick study histories, fast passages through courses, can be counted on to put in an org or department pattern and keep it wheeling. The others are too involved in their own troubles and too imperceptive to be of any use in making an org boom.

Such people do however sometimes have a use even when not straightened up. They do well in pioneer areas where they have to do it all off the cuff and where their very inability to accept anything causes them also to refuse defeats and discouragements. Their inability to grasp a situation is often of benefit when bravery is required. This does not however excuse efforts to make them more capable and as they grow older and more experienced, they will also become brave and quick and *will* follow policy.

Following policy is a matter of grasping situations and knowing policy well enough to apply the right policy to the right situation. Where no policy covers, an experienced, quick person can easily extend the idea of general policy to cover it, knowing it isn't covered.

The dull person has never even grasped basic general policy and so confronted with usual or unusual situations alike, can't find any policy to cover anything and so acts in any old way.

On the other hand, policy, to fit and be of benefit, must be itself born out of great insight *and* familiarity with the facts. Government policy is usually written by clerks who have never heard a shot fired in anger. Therefore almost all current government policy is completely silly. Nobody can apply it as it fits nothing and just gets everyone in trouble. Therefore a quick person with good judgment in the field and in the real

situation can get through only by following his own policies and insights. This is easily mistaken for a dull person acting against policy that is good.

But even dull policies provide wide agreement as a basis for work coordination and so something happens on a larger scale. Individual policy-making on every post is the definition of chaos. Thus even bad policy is usually more workable than individual policy and can make stronger orgs.

Brilliant policy based on experience of course can cause orgs to zoom.

We conclude then that where we see a person constantly off-policy in an area that has worked well when *on*-policy, that we must act.

Where we have a *large* organizational scope we must have workable policy that is followed. For just lacking policy, good or bad, and lacking its being followed, we stay small by definition.

NO POLICY EXISTING MAKES SMALL, NONEXPANDING DEPARTMENTS OR ORGS.

POLICY, GOOD OR BAD, EXISTING BUT NOT FOLLOWED MAKES CHAOTIC DEPARTMENTS OR ORGS AND CAUSES SHRINKAGE.

GOOD POLICY BASED ON ACTUAL SITUATIONS EXPERIENCED, FOLLOWED WELL, MAKES AN EXPANDING DEPARTMENT, ORG OR CIVILIZATION.

The smaller the org unit or department the less policy is needed. Reversely, the less policy is used the smaller will become the org unit or department.

One can always safely assume, when policy is available, that nonexpansion is the direct result of the policy remaining unknown or not followed. The steps to take are therefore:

Expansion formula:

1. PROVIDE GOOD POLICY.

2. MAKE IT EASILY KNOWABLE.

3. BE STRENUOUS IN MAKING SURE IT IS FOLLOWED.

This is the most broad possible formula for expansion.

Profitable expansion of a unit, department, org, company, empire or civilization depends utterly on the above formula being applied.

If it is well applied, literally thousands of other impeding factors drop into unimportance.

This applies to anything, even a person, but the bigger the number of individuals involved the more rigorously it has to be followed.

The bigger the size of the activity concerned (the more people involved in it) the more damage can result from failures to follow policy.

Thus orgs or companies which halt expansion mysteriously only need to have more policy, or to make policy more easily available or to be more vigorous in requiring it to be followed.

Policy is a *guiding* thing. It is composed of ideas to make a game, procedures to be followed in eventualities and deterrents to departures.

The basic policy of an activity must be the defining and recommending of a successful and desirable basic purpose.

Take a navy, to get a more distant comparison. If a navy has the basic purpose of defending a nation and its citizens and expanding their scope, and if the policy is the guiding principle behind all other policies and if these in turn are developed from experience and made known and followed, then oddly enough even new inventions or new philosophies of state could not prevent that navy from doing its job and expanding the nation. The US Navy might very well have won the war with Japan in its six weeks if those who headed it in Washington had not been mere political puppets subject to every Congressional and Presidential whim. The textbooks were very clear about what the navy should do. But King, Nimitz and Short, the admirals involved, had been chosen by whim, favoritism and capacity for liquor, not by raw statistics of "good navy activity." They had been trained at an academy where the basic principles of "good navy" and raw statistics on personnel had not been used to choose an academy head or instructors. So King, Nimitz and Short, as admirals, *listened to current political rumors or whims* (being only confirmed in political not naval policy) and so let Pearl Harbor happen. How? Their own naval textbooks said, "During times of negotiation with an unfriendly state, the position of the fleet should be at sea, whereabouts unknown." That is line one of the navy textbook on tactics and strategy. Where was it? In Pearl Harbor during many days of hostile negotiation between Roosevelt and the Japanese — the most dangerous naval rival. Where were King and Nimitz? At a cocktail party with the politicians. Where was Short? Giving his all ashore, having given his men full weekend liberty and having ordered all ammunition stowed below for a coming admiral's inspection. So Pearl Harbor could happen. But did the humans learn? No. True, Short, acting on his Washington orders notwithstanding, was removed and eventually court-martialed. But King and Nimitz took over the whole navy for more than four heartbreaking years of "promote by political whim," "what policy?" and defeat in battle after battle until aircraft turned the tide of war and the army and an atom bomb finally finished it. Now the navy is really no more. A few subs. A few patrol ships. The rest in mothballs. People think the navy is small now because of new weapons. No, it is small because it (a) didn't clearly express its basic purpose, (b) didn't educate its people well in the policy it did have, (c) let political opinion shift it about, (d) chose its officers by rumor, cabal and *social* presence and (e) forgot its texts when the emergency loomed. Result, long war, now no navy worth anything — officers palling with men, ships in the boneyard. Could the navy have done its job in 1941? Yes. Had its original policies regarding officer training and selection been followed ruthlessly despite all politics over the years, King, Nimitz and Short would not have been in charge or would have acted by policy had they been. The fleet would have been at sea during negotiations and the strike on Pearl Harbor would have been a Jap bust. The fleet would have been there to knock out the Jap in his own home ports. The war might have ended with Japan in the first six weeks. The

point is not whether it is good or bad to have a navy. The point is that here is an actual organization and an actual occurrence.

Therefore one can learn that:

An individual, species, organism, organization, to succeed, survive and expand in influence must have a formulated BASIC PURPOSE.

To keep beings from growing, the reactive bank is almost entirely made up of false and booby-trapped purposes. Thus we can see that, by its having been impeded so thoroughly in past ages, the idea of having a personal or organizational or group basic purpose is an extremely valuable one.

Without one expressed or unexpressed, a being or an organization or group without one doesn't grow but shrinks and becomes weak—in this universe nothing can remain long in an unchanging state. Given a potentially successful basic purpose that is acceptable to the being, organization or group, one can then formulate POLICY.

POLICY is a rule or procedure or a guidance which permits the BASIC PURPOSE to succeed.

The basic purpose runs through time. When it is impeded, distracted from, not complied with, thwarted or stopped, a state of failure of the basic purpose occurs in greater or lesser degree. Sometimes challenges to it cause it to strengthen but only when the challenges are consistently overcome.

A being, organism, organization, group or species or race *learns* in forwarding its basic purpose or meeting challenges to its basic purpose certain *lessons*. Certain procedures or courses of action, rules or laws were conceived at times of stress and some of them were successful. Those that were not successful or helped the opposition were *bad*. Those that were successful forwarded of course the basic purpose and were *good*.

The successful ideas or procedures that assisted the basic purpose were then dignified by the status of proper ideas, acts, procedure or *policy*.

Those that were unsuccessful in assisting the basic purpose became *bad policy*.

Ideas or procedures that distracted from or balked the basic purpose were called *offenses*.

Things, groups, other-determinisms that challenged or sought to stop or refused to comply with the basic purpose became *enemies* or opposition.

Therefore *policy* is derived from successful experience in forwarding the basic purpose, overcoming opposition or enemies, ending distractions and letting the basic purpose flow and expand.

Policy laid down which is thought up independent of experience in similar situations is either the result of great foresight and is successful or it is simply stupidity, in that it seeks to handle situations which will never exist or if they do, won't be important.

Policy based solely on bad rumors, unverified, which may or may not reflect actual existing conditions or which is laid down at the insistence of some self-interested person or minority without taking the rest of the group into account is very destructive policy simply because it does not match the conditions which actually exist and so, *in itself,* may impede or distract from the basic purpose. An example of this is legislation by legislators who, otherwise uninformed, act because of pressure groups, minority riots or simply sensational press that seeks not legislation but simply to feed the appetite of a disaster-hungry public.

If bad policy or laws or actions based on rumor rather than raw facts become too frequent and general, then the basic purpose of a being, organization or group becomes itself distracted, smothered and forgotten and the result is shrinkage, loss of power, death and oblivion. Although it is often too late when bad policies or pressure-group laws have been the order of the day to slash them all from the books and exhume the basic purpose, the action of sweeping away unreal, unapplicable and impeding laws and policies which were based originally on rumor and bad sources can have the effect of rejuvenation on a being, a group or an organization which has begun to die. Periodic sweep-outs of antiquated and didactic laws (rather than general concepts and subpurposes) *must* be undertaken by a being, organization, group or race or species. However, such an action must be carefully done, selecting only those laws or rules which came into being because of pressure groups or infrequent enemies or which were derived from no experience. And before throwing any policy away, one must carefully examine its history to see if it is still restraining an enemy or forwarding some subpurpose. For throwing away a *lot* of lessons could also collapse the forward thrust of the basic purpose which has "gotten this far for *some* reason."

SUBPURPOSES are the purposes of the various sections or parts of the being, organism, group, race or species which forward the basic purpose. They must amplify, qualify and/or describe the action or procedure of the part of the whole in a brief and crisp way so as to hold them in function in their support of the basic purpose. They could also be called, the PURPOSE OF A PART OF THE WHOLE, or as we use them, the purpose of a post, unit, department or an org with a special function. When one hears of the PURPOSE of his hat or section, unit, department, org or division, he is observing the SUBPURPOSE of a part of the whole organism which is vital to the action of forwarding the BASIC PURPOSE of the movement. Indeed he may never know what the BASIC PURPOSE really is and only know the SUBPURPOSE of his own hat, section, unit or department. However, by studying the various SUBPURPOSES of several hats or sections, he could probably figure out the SUBPURPOSE of the department and by studying the various SUBPURPOSES of the departments of an org, he could probably guess at the BASIC PURPOSE of the whole being or organization or movement. If study of SUBPURPOSES either fails to locate any or ends in being unable to relate them into any large PURPOSE, one is of course studying a disorganized movement.

One can change a SUBPURPOSE (cautiously indeed) or add parts with new SUBPURPOSES, and leave a movement (a) unaffected, (b) increased in scope or (c) decreased in size and influence.

One can, up to a point, add policies on and on, limited only by the ability to get them known and leave an organization or movement (a) unaffected, (b) increased in readiness to meet emergencies or (c) crippled. The wisdom of the policy and whether

or not it was a successful solution to some actually possible confusion or crisis determines whether or not it should be added or deleted. Foresight plays a large role in formulating a SUBPURPOSE or a policy. These two are never wholly the product of chance or experience; indeed they may be 80 percent wise foresight and 20 percent experience and still be good usable SUBPURPOSES or policies. Twentieth-century science sought to discount wisdom entirely and beings and organizations were educated or developed with no SUBPURPOSES whatever and all policies were developed either by clerks, teachers or legislators inexperienced in any part of life or were taken from past experience only, with no refinement of any wisdom. The failures of governments and systems and races in the first half of the twentieth century were wholesale and the wars frequent and senseless.

Personal, state, or organizational or social chaos results from adding parts with no well-defined SUBPURPOSES, enforcing policies based on rumor or taken from the data of mere theoreticians in their ivory towers, an irresponsible press or legislators in their self-interested heads and smoke-filled rooms. A study of how the pressure groups, clerks, theoreticians and irresponsible press and duly elected but completely unselected and uneducated legislators destroyed individualism, states, businesses, civilizations and races would be only a study of how not to organize and survive, how to ignore, abandon or discredit all basic purposes, subpurposes and successful policies. The scene was one of indescribable chaos that filled one with protest and dismay. If there was a wrong way to do things it became the order of the day and youth went into a complete apathy, purposeless and drifting, and the world began to die a little each day, the mental hospitals became flooded, life ceased to be any fun at all. Things are not always like this and indeed don't have to be.

Mismanagement or misgovernment of self, an organization, group or state would then consist of failing to forward the BASIC PURPOSE, not grasping and specifying SUBPURPOSES, and not experiencing and formulating policies to strengthen successful ideas or actions that forward the basic and subpurposes and impede ideas or actions that retard them, and not recognizing actual enemies or oppositions or planning and carrying out successful campaigns to handle them. Failing in any of these actions the individual, group, organization, state, civilization, race or species will falter, fail and die.

Recognizing the basic purpose, supplementing it with subpurposes for the parts of the whole, and learning and enforcing the policies which bring success, spotting actual enemies or oppositions and planning and carrying out campaigns to overcome them, removing distractions, rewarding the forwarding of basic purpose and subpurpose and penalizing actions which retard, an individual, group, organization, civilization, race or species survives, gets better, lives on higher and higher planes.

The game of life has the formula of having and forwarding a basic purpose and supplemental subpurposes.

This is done by the Formula of Policy which consists of:

1. Conceiving, recognizing, testing and codifying successful ideas, actions and procedures that forward the basic purpose and retard its opposition;

2. Making these policies known and in greater or lesser degree understood; and

3. Getting these policies followed.

If in (3) policy is to be followed, there must be discipline, but even more important, there must be ways of choosing personnel other than by sloppy rumor or social presence.

Personnel can *only* be chosen on raw statistics supported by ample data containing figures. If the raw data is good, then one assumes that basic purpose is being forwarded as it is meeting with success. The raw data already has a curve in it as it is tabulated against the success of basic policy. So the person whose raw data is good *must* have been forwarding basic purpose, therefore must be either a screaming genius at originating ideas that forward the basic purpose or a wizard at knowing, applying and following policy. Either way he or she is worth all the diamonds of Kimberley.

Such a person will inevitably rise in the organization or group if raw data alone is observed in selecting and promoting personnel.

If the person is a screaming genius at originating policy and has not made enough errors to reduce his successful raw data, and has stayed on-policy otherwise so as not to reduce the effectiveness of those around him, he will eventually rise to a level which makes policy and the whole organization will benefit. Similarly a person who grasps and follows policy very well and forwards the basic purpose well and who is very capable will sooner or later rise to a position of trust that safeguards against sweeping changes that will retard or crash the group or organization and so is vital at higher levels.

Out of these two general types of being one gets the leadership levels of a movement. But they will never arrive at all if those in charge ever use anything but statistics in judging them since their very success will cause enough cabal to influence high levels against them if these high levels ever use fragmentary rumors or opinions in handling personnel.

RAW DATA means assembled but otherwise unevaluated data. It is "uncooked" and "unflavored" and "untouched by human hands." It, in short, is uncontaminated or unchanged data. It is native and natural and unspoiled. And the only data that answers those qualifications is statistical data. "How many or how few and how much or how little in what time." That is the *only* data that a senior official in a group, organization or state ever *dare* use in selecting and promoting personnel.

The "state" of the person, the "result of his tests," "the examination figure," are all *useless* to a senior official deciding upon who to promote or pass over. His decision will be wrong in exact proportion that he permits opinion to enter and raw data to drop out.

Introducing opinion into personnel selection is a study of "how crazy can one get." How much liquor a man can hold, how acceptable socially is his wife, his breath, his taste in ties are all completely disrelated data. For how does anyone know at the top really what the environment is now like at the bottom? Maybe that lovely music room–board room requires a pink necktie, a purring wife and endless capacity for drink, but is that the organization's environment? It is not! Maybe the organization's environment demands an allergy to liquor, a complete tart for a wife, overwhelming breath and neon ties. And maybe tomorrow's board level will too! The world changes, it does not become softer. Only some people do.

The psychiatric or school test alike are written and administered by people in ivory towers who again have no contact with the organization's real environment. Statistical as they may try to be, such tests are utterly worthless. They are not on-the-job statistics. They are classroom or laboratory statistics. They are definitely cooked data. And when used for personnel and promotion they cook a lot of careers. And by putting eggheads on post, they cook a lot of parts of an org if not the whole thing. They have some small value in determining someone's quickness or slowness, but the conditions are too unreal and the necessity level of real environmental emergency is missing. It's like a plane crash synthesized in bed. No jolt. So, poor (but not the worst of) cooked data.

Maybe the working environment demands a dumb guy who is too slow to panic at awesome futures! Yet bright enough to see what policy applies. When men with small experience in it can qualify to run the world, they can only then administer tests to advise who should run it.

Only statistics that represent action and accomplishment are fair tests of ability and who deserves promotion or the gate.

Therefore the only organization that is a sound organization is one WHOSE EVERY ACTIVITY can be tabulated by statistics.

If you wish to reorganize you must do so with an eye toward "Can this post (dept or division) be statisticized?" Any body of people such as "the typing pool" or "the instructors" must be broken down to individuals one way or another. One has three things then that must be tabulatable: (a) the individual, (b) the part and (c) the whole. Each of these must be so organized as to be capable of being seen through accomplishment or lack of it. Only this is fair organization. All other types are unfair, will not select out leaders or good workers and subject these to the enturbulence of the lazy or those with other philosophies to fry.

If you have any other type, people are promoted or fired by rumor, backbiting or common brag, and either type have only liability. In using them one destroys empires and every great civilization that is dead died because opinion and rumor were the key causes of personnel changes.

It is unfair to every decent staff member to have an org that cannot be tabulated by relative income, work or traffic.

The common way of the dead-and-dying past was to put some fellow in charge and then shoot him or reward him if things went wrong or well and neglect the rest. This works unless a society only protects the man at the bottom and routinely weakens the man at the top. When that happens, the system is useless. Only by chance do things go well. So chance is added to rumor as the means of promotion or the gate. No wonder the Asiatic, a member of our oldest civilizations, says "Fate!" and explains it all. He had too many rulers who ruled by rumor or chance or didn't rule at all. And so the power died. Only when you can find out who did which or why can you be just. And only when an organization can be fully viewed top to bottom through raw data of how much or how little can individual show be rewarded and individual nuisance be weeded out.

REALITY

Reality in policy, in orders, in advice, depends upon either great insight or great experience. Combining both gives great success.

But no matter how great the insight may be, viewing the actual condition is a vital step to resolving it. Remote solutions not based on experience or close inspection are usually unreal.

Therefore no orders should ever be issued without data and experience and insight. Data comes from tabulation of actions and amounts in organizations. Experience comes from working in similar or parallel situations. Insight comes from the ability to observe coupled with the courage to see and the wit to realize without any thought of personal importance.

Therefore, the soundest leadership comes from the most extended experience and intimate knowledge of that or parallel circumstances. Leadership without this will lack judgment.

Remote leadership is best when it itself is involved close to its hand with the same problems. Therefore remote leadership must have under it similar organizational problems and traffic at home that exist at the remote point. Then understanding is quick and solutions are real.

For one organization to command another, they must be similar.

Management–labor problems evolve from the communications formula "cause-distance-effect with intention at cause, attention at effect, and duplication." A boardroom is not a machine shop. The machinists seek to duplicate the board or refuse to. If they fail to they always refuse to. Thus only a working org of similar pattern can command a working org.

The commanded org will always seek to follow the pattern of the commanding org and duplicate what it thinks the commanding org consists of. A great tension exists at all points of nonduplication. This tension stems from the effort to duplicate. If foiled, trouble or breakage will occur at that point. Where the subordinate org is unable to duplicate what it thinks exists at the senior org then it suffers an ARC break of greater or smaller magnitude. Patterns, officer authority, comm lines, all must be similar. Size is not important in this. Org pattern is. If the subordinate org has any hope of ever attaining the size, and if the purposes, pattern and policies are the same, that is enough. ARC will remain high, execution will be good and expansion is assured, providing of course that the basic purpose is good in the first place.

EXPANSION

All that is needed to expand an org or its business, given a good basic purpose and an area to expand into, is the knowledge of the expansion formula:

DIRECT A CHANNEL TOWARD ATTAINMENT, PUT SOMETHING ON IT, REMOVE DISTRACTIONS, BARRIERS, NONCOMPLIANCE AND OPPOSITION.

The basic formula of *Living* (not Life) is:

HAVING AND FOLLOWING A BASIC PURPOSE.

Thus expansion is an increase in living. To increase living and raise tone and heighten activity, one need only apply the expansion formula to living. Clean away the barriers, noncompliance and distractions from the basic purpose and reduce opposition, and the individual or group or org will seem more alive and indeed will be more alive.

All an executive has to do to expand a part or the whole of an org is to divine the basic purpose, divine or issue the subpurposes, point out an area to expand into and then remove the distractions from, barriers to and noncompliance with the basic purpose and subpurposes, and put something on the channels that augments existing impulses and expansion will begin. It will be successful to the degree that the basic purpose is good, the subpurposes real and the policies are taken from real experience and interpreted by persons facing similar current problems.

By the process, thereafter, of just removing barriers, distractions and noncompliance, expansion can be accelerated to a point where it overwhelms all hostile efforts to contain it and the result is extremely gratifying in terms of expansion at velocity. It seems completely magical. For life instantly appears.

One must remember to *channel* a basic purpose. A channel has two boundaries, one on either side of it. These must exist in an org. They consist of discipline of those who would distract or stray or wander or who help the opposition or suppress the basic purpose or subpurposes or who cannot seem to learn or comply with policies or orders. Discipline must only be aimed at the above and, where it is random or doesn't serve to channel, then it itself is a distraction or a barrier and will breed noncompliance. But when entirely absent, the force is let to wander and expansion does not occur. Discipline must be precise, known, uniformly applied and inevitable when the rules are broken. Those who do their job welcome it as it helps keep others from preventing them from working or acting or complying or getting their own jobs done.

ADMINISTRATION

FLOWS AND EXPANSION
THE FAST FLOW SYSTEM

We have introduced many new principles in administration in recent policy letters. Here is one which if left out would cause mystery.

This is the principle of traffic flows we now use. It is called the FAST FLOW SYSTEM OF MANAGEMENT.

A being controlling a traffic or activity flow should let the flow run until it is to be reinforced or indicates a turbulence will occur and only then inspects the part of the flow that is to be reinforced or is becoming enturbulated and inspects and acts on only that one flow.

This principle would operate on a committee of three in this fashion: The committee does not act as a body. Each member acts individually in three spheres of influence (three types of flow). There is no *committee* (collective) action until one of the three members wants concurrence from the other two on greatly reinforcing a flow or until the other two, by observation, see the third is going adrift. Only in these cases does the committee act as a committee. In other words all three members go about their work independently until there is a change in one of their three spheres and *then* they act. Otherwise the flows of orders and actions are independent. Not doing it like this is why committees have gotten the reputation of being unable and a waste of time.

To do this, one of course needs another principle: that of indicators.

An indicator is something that signals an approaching change rather than finding the change is already present and confirmed.

We get this from auditing. An auditor audits so long as things go evenly. He knows when they will *begin* to deteriorate or change by an indicator. He acts on seeing the indicator. He doesn't wait until the collapse or total change of the pc occurs and *then* look it over and act. The pc could be run into the ground or a good process that was bettering the case could be neglected if an auditor could not PREDICT from indicators how it was going before it was gone.

In supervising a number of sections or departments, it would work this way:

The person in charge does not examine *every* action or decision on the lines. If all despatches of all the activities went through his or her one pair of hands, the volume

would be too great and would jam. The executive's "plate" would be too full and this would *halt any expansion* of the activities as the executive would feel overworked, yet in actual fact would be getting nothing much done. The flows which *needed* watching would be buried in a huge volume of flows that did not need watching.

Instead, the principle of flows tells us that the executive should have statistical INDICATORS such as OIC charts on every part of the activity each week and should act only on the basis of the charts' behaviors.

If a chart went down, the executive would not wait for that area to collapse before inspecting it. At a dip point the executive should go over all the plans and traffic and despatches of the area dipping down and unearth the *real* reason why it did dip. If the matter needs minor remedy, it should be corrected. If then the graph still dipped down, the executive would not only be advised of it by the OIC indicators but would know, having inspected earlier, what had to be done on a more drastic scale to get the graph going up again.

The OIC system *must* be used and all data plotted and circulated to the executives in an org before this system will work.

If the OIC system is put into effect fully, the executive can then (and *only* then) let go the comm lines and let the traffic flow.

He then only needs to:

1. Keep alert for and correct dev-t (off-line, off-policy, off-origin and noncompliance),
2. Keep an eye on the weekly OIC charts,
3. Find from OIC the upward trends and inspect and find out what's working so well so it can be reported,
4. Be alert to any down dip and inspect the activity itself and correct the matter and
5. Spend most of his time getting his own job done (since executives *do* have jobs besides supervision).

The one thing he mustn't do is "get reasonable" about dips or zooms and not act to really check the decline or to reinforce the rise. (a) Thinking one does know when he has not gotten it inspected closely and (b) not believing the graph and indicators and (c) not acting, are the fatal errors. Doing (1) to (5) tells us who's an executive and doing (a), (b) and (c) tells us who shouldn't be an executive.

If this system is in effect the org can't help but boom.

We will call this the FAST FLOW SYSTEM OF MANAGEMENT.

It is a very precise art. It's like auditing. One predicts the slumps and reinforces the tendency to boom.

It can't miss. If it's done completely.

HCO POLICY LETTER OF 1 MAY 1965R
ISSUE III
REVISED 29 AUGUST 1990

GEN. NON-REMIMEO
HANG NEAR NEW ORG BOARD
VARNISHED OVER OR RELETTERED

ORGANIZATION
THE DESIGN OF THE ORGANIZATION

As our org board and org pattern we have not only an org board but a "philosophical system," which gives us the levels of able and extra able beings and an analysis of one's own life as well.

If you look at the levels written above the departments you find the spans of *the* Bridge which are followed to Release, Clear and OT. You can easily see which ones are missing in one's own life and the lives of others. These are the upper end of the awareness scale.

When you look at the department names you can see what is missing in your own life.

You can also see where your post or your job breaks down for every job has all these "department names."

When you look at the division names you see what the Cycle of Production must be in this universe to be successful. By studying this you can see why other businesses fail. They lack one or another of these divisions.

Although the organization seems to have a great many departments, and would fit only a large group, it fits any org of any size.

The problem presented me in deriving this board was how to overcome continual org changes because of expansion and applying it to organizations of different sizes. This board goes from one person to thousands without change. Just fewer or more posts are occupied. That is the only change.

The staff ratio here is one administration person in the five nontechnical divisions to one technical person in the Technical and Qualifications Divisions (excepting only Staff Staff Auditors and field staff members who count as admin personnel). Staff is added *in rotation* amongst the nontechnical divisions every time a technical person is put in the Technical or Qualifications Divisions.

The board is entered from the left and proceeds to the right.

It is actually a spiral with 7 higher than and adjacent to 1.

The organization corrects itself through the Qualifications Division, under the authority of the 7th Division.

Organizations go in phases. The phases agree with the Cycle of Production.

There are two tendencies man has that this board resolves.

Man's systems are based on groups and masses of people.

Every person on *this* org board is "statisticized." That means the job he does is a statistic that can be verified. He is not lost in a group.

The tendency of filling up every box indicated on an organization chart (which man usually does) is checked by the formula that there must be only one admin staff member for every tech as above. Thus Divisions 4 and 5 are heavy with personnel containing five times as many as all the other divisions.

In expanding, each department acquires seven sections, every section then acquires seven subsections, every subsection acquires seven units.

At this time of issue we find Scientology itself just at the end of its Dissemination Cycle (Division 2) and just entering upon the Organization Cycle (Division 3). There will be a full and long Organization Cycle. This will eventually be followed by a Qualifications Cycle in which we adjust civilization. After that will come a Distribution Cycle in which we use Scientology elsewhere in the universe and then will come the Source Cycle again, finding us all on a higher plane.

This pattern will probably be in use for a very long time.

This board is one of the *very* few things in Scientology which is not completely new. It is taken from an ancient organization and which I have refined through considerable experience by adding Scientology and our levels to it. It is based on an extremely successful pattern.

This org pattern is designed not to make money or Scientologists as one might think. Its whole purpose is to make the "Ability to Better Conditions," which is the mission of Scientology.

THE LEVELS

Your main interest in this board is of course its levels.

There are over thirty-two levels to the left of the board, covering the average human states.

Our board shows how we move up onto the Bridge at Communications (Level 0), and then progress division by division to Level VII. One division equals one level left to right.

The abilities recovered in these levels are marked above the department names (Communication, Perception, Orientation, Understanding, etc.) and take us all the way to a new state at VII.

As he progresses along this line left to right, a level is given the person each time a division is passed.

At Level V we find we can move people from the lowest human states onto the Bridge before we ourselves exit at the top.

Thus we leave behind us a Bridge.

In 1950 when I said, "For God's Sake Build a Better Bridge," I had to do it on my own.

But here it is, not only a bridge but also an organization to carry the weight of the spanning, a very needful thing.

HCO POLICY LETTER OF 15 JANUARY 1966
ISSUE I

REMIMEO
EXEC SEC HATS
SECRETARY HATS

HOLD THE FORM OF THE ORG DON'T BRING ABOUT DANGER CONDITIONS

As long as executives fail to hold firm the form and channels of the org, their own posts *and* the org will be a confusion. Worse, it will cease to exist.

Executives *must* insist upon the privileges and responsibilities of their posts and not permit bypass and misrouting.

The whole org is run on statistics. It is not run on rumors. The more you follow statistics and the less you listen to rumor the better off you will be.

Orders are issued to form the org and better statistics and that's all. There are no other reasons for orders, chits and upsets. Actions which don't increase statistics should be eliminated. Irrelevant orders and chits having nothing to do with statistics should never be issued.

To hold the form of the org it is vital that:

1. The Ad Council minutes only order secretaries and only on gross divisional statistics as they appear.
2. Executive Secretaries order and chit only secretaries.
3. That secretaries order and chit only directors.
4. That directors only order and chit section officers.
5. That section officers only order and chit persons in charge or, if there are none, the staff directly under them.
6. Exec Secs and secretaries can cross-chit.
7. Directors can request and chit only via secretaries when they cross divisions.
8. Anyone can file a Job Endangerment Chit with Ethics on anyone. This however is normally filed on a direct senior and only when explicit policy has been violated by an order or chit on one's own post and only when the order or chit might worsen a statistic.
9. If all else fails, petition the Office of LRH.

SEC EDs

Sec EDs issued by the Ad Council may only change secretaries as personnel. They can advise the secretary on personnel but may not demote, transfer or dismiss a secretary's personnel (exception, when sweeping an org of temporaries, staff that hasn't passed Review for Staff Status I).

An Ad Comm's orders forwarded to the Office of LRH for a Sec ED always go via the Ad Council. But again an Ad Comm may only order directors and may not demote, transfer or dismiss a director's personnel.

A director should order officers.

Officers should order in-charges.

When personnel is assigned directly to an executive, such as a personal secretary, one may of course order or chit that person directly as there is no command echelon.

REASON

Danger conditions are handled on bypass. Where a Danger condition is assigned, the senior can bypass anyone to get the job done and does.

The conditions in sequence are:

6. Power
5. Power Change
4. Affluence
3. Normal
2. Emergency
1. Danger
0. Non-Existence.

It is true of all conditions that if you use one lower than you are in, you will bring the *next* lower one about. If you use the Normal Operation Formula when you are in Affluence you will certainly descend into Emergency.

Therefore, if you are in Normal or Emergency condition and start bypassing, you will quickly descend into Danger condition (statistics will drop steeply) and achieve the only condition below Danger which is Non-Existence.

Thus, if you bypass you infer the condition is Danger when it isn't. And you drop the org or any portion of it into Non-Existence.

So don't bypass unless you *are* in Danger condition. A Danger condition exists where statistics show continuing Emergency or a steep, steep fall. If a Danger condition exists, you handle the situation, bypass anyone at all and then the personnel who ignored it. So if you bypass all the time (Exec Secs issuing orders to directors, secretaries ordering officers, directors ordering general staff members), you will infer a Danger condition and get Non-Existence of the section, department, division or the whole activity.

Moral: Only when a Danger condition exists should a senior bypass the command chain, so if you are only in Emergency or only in Normal Operation or even Affluence, DON'T BYPASS or you will crush statistics.

SUMMARY

Learn your org board.

Make your staff learn it.

Handle the org by statistics only.

Order only your immediate juniors.

Don't bypass (except in Danger condition).

Don't infer a Danger condition that doesn't show on a graph.

Hold the org firm by holding its lines and chain of command firm.

And you will prosper and expand.

DANGER CONDITION RESPONSIBILITIES OF DECLARING

BYPASS = Jumping the proper terminal in a chain of command.

If you declare a Danger condition, you of course must do the work necessary to handle the situation that is dangerous.

This is also true backwards. If you start doing the work of a post on a bypass, you will of course unwittingly bring about a Danger condition. Why? Because you unmock the people who should be doing the work.

Further, if you habitually do the work of others on a bypass, you will of course inherit all the work. This is the answer to the overworked executive. He or she bypasses. It's as simple as that. If an executive habitually bypasses, he or she will then become overworked.

Also the condition of Non-Existence will occur.

So the more an executive bypasses, the harder he works. The harder he works on a bypass, the more the section he is working on will disappear.

So purposely or unwittingly working on a bypass, the result is always the same — Danger condition.

If you *have* to do the work on a bypass, you *must* get the condition declared and follow the formula.

If you declare the condition, you must also do the work.

You must get the work being competently done, by new appointment or transfer or training or case review. And the condition is *not* over when the hearings are over. It is over when that portion of the org has visibly, statistically recovered.

So there are great responsibilities in declaring a Danger condition. These are outweighed in burdensomeness by the fact that if you DON'T declare one on functions handled by those under you which go bad, it will very soon catch up with you yourself, willy-nilly and declared or not *you* will go into a Danger condition personally.

There's the frying pan — there's the fire. The cheerful note about it is that if the formula is applied you have a good chance of not only rising again but also of being bigger and better than ever.

And that's the first time *that* ever happened to an executive who started down the long slide. There's hope!

There is one further footnote on a Danger condition. I have carefully studied whether or not HCOBs and policy letters and actions by me were bypasses. And a search of statistics refutes it, as when I give the most attention to all echelons of an org, wherever the org is, its statistics rise and when I don't they fall. Therefore we must assume that advice is not a bypass, nor is a general order by me.

Where there is disagreement on a command channel I am trying to forward *then* a bypass occurs.

So we can assume correctly on experience and statistics that Danger conditions occur only when there are fundamental disagreements on a command channel.

If you yourself then ferret out the disagreement ones of those under your orders, you will clear your command lines.

Review can always find disagreements when they exist with a meter.

Where Danger conditions are declared, the declaring executive should make an effort to find the disagreement with himself, policy, the org or Scientology as a basic review action on persons found responsible for a Danger condition. The only errors are not to look for them and not to find *all* the disagreements the person has on the subject of his superiors and post, policy, technology or orders.

This is why a low leadership-survey-grade person can be counted on to put wherever he is in Danger. His disagreements are too many and he doesn't execute and thereby secretly puts his superior into bypassing and a Danger condition inevitably occurs.

It needn't occur.

We have the data, now.

SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 1 FEBRUARY 1966
ISSUE II

GEN. NON-REMIMEO
EXEC SEC HATS
LRH COMM HAT

EXEC DIV
DANGER CONDITIONS

INSPECTIONS BY EXECUTIVE SECRETARIES, HOW TO DO THEM

An Executive Secretary who does not get around his or her divisions now and then and see what is going on can make a lot of mistakes.

Inspections are desirable. But when an Executive Secretary makes one he or she commonly issues an order or two, and if this is done without that division's secretary being present it is a bypass and willy-nilly begins the formula of the Danger condition and can unmock a section or department or even that division.

A senior can inspect, chat, advise but must never issue an order on a bypass unless he or she means to handle a dangerous situation and start the formula. For the formula will run, regardless, if a bypass begins.

The way to inspect, then, is to collect the seniors and go around, and issue orders only to the next senior on the command channel, never to his or her staff.

Example: HCO Exec Sec wants to see if books are stored safely. The HCO Exec Sec can nip out and look on his or her lonesome *providing* no orders are issued. Or the HCO Exec Sec grabs the Dissem Sec and the Dir Pubs and the head of the books section and goes out and looks. And if the HCO Exec Sec wants a change in it all, the order is issued to the Dissem Sec only.

It is a great temptation to tell Books In-Charge how and where to put what, for an HCO Exec Sec is one normally because he or she is smarter and more knowledgeable about orgs. But if one is to advise Books In-Charge, one had better have the rest of the command chain right there and talk to the next senior below HCO Exec Sec.

You would be surprised how many random currents a senior-type senior like an Exec Sec can set up with a few comments that skip the command channels and what a mess it can make for a secretary or director, no matter how wise the comments.

Secretaries who order a director's officers in the absence of the director or, much worse, section staff without director or section officer thereby court and make trouble.

You can unmock a section or a whole department by sloppy command lines. It is not merely the "correct" thing. It's the vital thing to follow command channels as nobody can hold his job if he is being bypassed by a senior. He *feels* unmocked, and the Danger condition formula begins to unroll.

The correct way to route an order to a person two or three steps down the command channel is to tell the next one below you to order the next, and so on.

If you have to tell the Director of Tech Services to have his Housing Officer post a list of houses on the bulletin board, you really don't have a Director of Tech Services anyway as he would have done it as the natural thing. So an order in such an obvious case is not the right comm. The right comm is an ethics chit on the Dir of Tech Services for not posting the available houses on the bulletin board.

A smart senior is a senior because he is smarter. But when this is not true and the junior is smarter, you get an intolerable situation where the senior interferes. If a dull senior interferes continually on a bypass, it's a sure way to start a mutiny. And a senior who doesn't inspect or get inspections done does not know and so looks dull to his juniors who have looked.

The safe way in all cases is to issue orders that are very standard on-policy and obvious and to issue them to the next one on the command channel and then in the future inspect or get an inspection. If on the inspection one finds noncompliance with a standard on-policy order, one promptly calls for a hearing on the next one down the line who received the order.

Here's a terribly simple example: Org Exec Sec sees statistic for Tech Div down. Issues order to Tech Sec, "Get the gross divisional statistic up at once." Now nothing could be plainer or more standard. In two weeks the Org Exec Sec looks at the statistic, sees it is even further down and calls for a hearing on the Tech Sec for noncompliance or a Comm Ev to get all the evidence in about the matter.

This is about as basic as you can get with an inspection, an order and a further action all by a senior, the inspection being done by OIC and reported by graph.

Life in actual fact is very simple and an org is today a very elementary mechanism.

It is easy to run an organization providing one makes it run and handles things in it that refuse to run.

Where an Exec Sec is baffled on occasion is the apparent unwillingness of a section to function. Now this is so far down the command channel that info on it does not easily arrive back at the top.

The thing to do where possible is personally inspect, or get it inspected. One often finds the silliest things.

Example: Book Shipping statistic is really down, man, down. One orders and harangues and argues trying to get books shipped. One gets the quantity of books

looked into. It's okay. One gets shipping materials looked into. They're okay. A Shipping Clerk is on the org board. But orders to the Dissem Sec just never get books shipped. So finally one gathers up the Dissem Sec, Dir Pubs and Books In-Charge and goes down to Book Shipping. Lo! They have been building a machine that wraps books tightly when a rock is rolled off a bench! (This actually happened in DC in about 1958.) It has taken a month to build it and will require another to finish it and one and all in that division are convinced this is the answer. The order? "Break that machine up and start wrapping books by hand and I want that backlog gone in one week." To the Dissem Sec, of course, in front of everyone for his soul's sake. And publish the order in writing as soon as possible.

So you see, you have to inspect because what seems logical and okay to juniors may be completely silly. Remember, that is why they are juniors and have seniors.

Frankly you can never guess at what holds some things up. You have to look. Often you can solve it for them. But solve it with their agreement and on command channel if you want it done.

You can't always sit in an ivory tower and issue orders. You have to know the ground and the business.

Over a period of fifteen years of active management of these organizations I have a pretty good idea of what can happen in one. And to one.

I try to be right more often than wrong. I don't try to be perfect as one's best plans are often goofed. I try to get done what can be gotten done. And I carry a *little* more pressure on the org than it can really accomplish.

I inspect. You would be surprised at how often I do and what I find out.

It sometimes looks to people that I use a crystal ball in taking the actions I take because they see no possible route by which the data could have reached me.

They forget how many lines I keep in operation. And also, I *do* operate on a "sixth sense."

For instance all accounting summaries today are done for governments, not for management. A manager has to develop a sixth sense concerning financial status of the org. One has to be able to *know* when the bills are up, the income inadequate and to know when to promote hard and stall creditors *even with no data from Accounts* or *contrary data that proved false.*

Today with OIC this is easy. But I ran orgs successfully with no OIC for years just by sensing the financial situation. In theory Accounts keeps one fully posted. In actual fact they often goof in filing bills owed and even in depositing money.

There are many things one can sense, OIC or no OIC.

The thing to do is to inspect or to get the area you sense is wrong inspected.

I have today LRH Communicators. They are pushing projects home. They also can tell me why projects won't push home because they have *looked.*

An Exec Sec or a secretary has HCO's Inspection and Reports and a time machine to check compliance. And this is how it should be.

But nothing will substitute for inspection by one or for one.

And the Exec Sec who thinks it's a desk job is being very naive. The org would run better if Exec Secs had no in-baskets.

If an Exec Sec watched statistics like a hungry cat at a mousehole and inspected like fury every time one went down or stayed down, the org would expand and prosper.

Providing inspection was done.

DANGER CONDITION DATA

WHY ORGANIZATIONS STAY SMALL

The size of an organization depends upon this law:

A LARGE ORGANIZATION IS COMPOSED OF GROUPS. A SMALL ORGANIZATION IS COMPOSED OF INDIVIDUALS.

If you *really* understand this principle and use it properly you will be able to have a large organization.

There are other factors such as (1) the desirability and quality of one's commodity, (2) the able promotion of it, (3) the ability of the heads of groups in the organization to catch dropped balls and (4) the close following and comprehension of the policies of the organization and its groups.

But the gross monitoring law is as above. When one does not know this and apply it one has a small, semibankrupt organization that overworks everyone and underpays.

This rule applies to a planet or a nation and is most readily seen in these gross terms. A planet with nations will be far more prosperous than a planet with one central government governing the individuals of a planet.

Socialism fails (and it always fails) because of two factors:

a. The government seeks to run the individual, and

b. Socialism unmocks *companies*.

At this writing the prosperity difference (and there is one, Russia currently starving) between the democracy of the US and England and the Super Socialism of Russia is that the "West" still has companies and the "East" (Russia and China) have abolished them. Russia seeks to run the individual. It has collective farms, etc., but they won't leave a manager alone — to manage — they govern his workers.

To the degree that England and the US tax the *individual* and seek to govern him they will dwindle in size.

England at this writing is undergoing an unmock of the whole empire *solely* because it is bypassing the manager and the governor and directly seeking to govern individuals through income tax, "benefits," etc.

The US is about to come to pieces. Like all big countries on the way out, it never looks so good as when it is already about to fall apart. The US is bypassing the states and US companies and is therefore putting the governors, managers and the states and companies in Danger condition. This, unrepaired, will unmock states and companies and collapse the subgroup on which the big group called the US depends, for an organization is composed of *groups*. Non-Existence is the condition just below Danger. A Danger condition carried on too long drops down scale to Non-Existence. A large group made up of Non-Existences is of course nonexistent itself. Thus bypass by the heads of a big organization of the heads of its internal small organizations works toward Non-Existence. It is really quite simple.

To make an organization get smaller all one has to do is bypass the subgroups and run the individuals only and the org will collapse or struggle along at near-collapse; NO MATTER HOW BRIGHT ITS MANAGER MAY BE OR HOW HARD HE OR SHE WORKS OR HOW BRIGHT THE STAFF IS, OR HOW GOOD THE PRODUCT, the violation of the law in the second paragraph will bring decay.

Fantastic, isn't it?

All one has to do to make an organization grow is apply the law that a large organization is composed of groups. It is NOT composed of individuals.

In absolute proof of this, in a tiny org it is always observed that everyone there wears each one all the hats. It is a madhouse of individual cross-endeavor. Show me an org that stays small and I will show you an org where every staff member is wearing all the hats in the place. They *can't* grow because they violate the law that a large organization is composed of groups.

Russia, just yesterday sweeping the world, has begun to lose ground and her empire withdraws. Russia won't allow companies. She never says to the head of Georgia, "Get your statistics up, bub" and leaves him to it. Instead she governs the Georgian individual with spies, secret police and even income tax and is more apt to shoot the head of Georgia if his statistics *do* rise as he is then looked on by a paranoid central government as capable enough to be a menace. Russia once governed via cells and did so as long as she was expanding. Now she has income tax! Russia expanded despite bad management solely because she was composed of cells and collectives—but she went too far and erased the individual entirely, so, though growing, she starves. Her groups were mainly dedicated to politics, not production, which is a frailty of governments anyway. But the basic group *is* composed of individuals. (For heaven's sakes don't tell Russia as we don't want her growing—tell her she *must* govern her individuals individually and she'll vanish! You can tell the US, if you like, but only because no president yet ever listened to anything except his popularity poll and, with only a four-year career, isn't likely to. In the US, the government itself vanishes regularly and only the companies, with plenty of interference, keep the civilization going.)

England's sad old empire was great as long as India was run by the East India Company, etc., etc. Its colonies and dominions did fine right up to the moment the government in Westminster and Whitehall started to run the natives as individuals, bypassing the company-controlled colonies. Then the "Empire" started to go broke because *it never was a political empire* but a commercial one. As a political empire it

uniformly failed until about 350 years ago it began to charter companies to rule and govern foreign lands. Then it got an "empire." When it began to bypass its company heads and set up crown-controlled governors and then bypass these, it ceased to be an English empire and it looks today that soon there won't even be an England. It could not control even one colony the moment it started to govern individual colonial citizens on a bypass of the colonial companies.

You can use the same argument *they* use. That "concentrating only on groups is hell on the individual." Marx used that line. Well it isn't true. When you get too big a group, the individual in it, suffering the whole pressure of the state, *suffers*. The reverse is true — "by concentrating only on groups the individual is protected and prospers."

Now we get to the philosophic question in the law, how large is large, how small is small?

Oddly this is easily answered, unlike most philosophic conundrums. You have to have the answer to "how big should a group be in order for the individuals in it to be effectively managed without oppression in order to get the job done?" That asks and answers it. A correct group size is one where the individuals in it are not made too small by the group being too large. This is a ratio question. The government of England! and the individual Englishman are of incomparable magnitude. What the hell can Joe Cockney, a citizen, do against the government of England! Nothing! So Joe Cockney goes to pieces. You can't have a comm line between a Billion-horsepower motor and one grasshopper! Something is going to explode and it isn't the Billion-hp motor. It's the grasshopper. Therefore when the management unit is too big, the individual (despite all the protection laws in the world) becomes apathetic and can't work or doesn't see himself as important enough to bother about.

So what is a proper-sized basic group?

A GROUP IS A PROPER SIZE WHEN THE INDIVIDUALS IN IT CAN EASILY APPROACH THE MANAGER OF THAT GROUP ON A FAMILIAR, FRIENDLY BASIS AND BE SURE HE KNOWS WHAT THEY'RE DOING AND WHY AND IF THEY'RE DOING IT.

The individual in that group is not oppressed. His charm counts. He feels up to arguing with that manager. The executive (with a deputy on his side) feels up to confronting the rest of the group. His own personality counts.

The only reason you have strikes and labor unions is that this group law has been violated. Too many individuals in the group for them to know intimately their manager on a friendly, cooperative basis.

This is all Marx is about. Marx is really a protest against too big a group solved by creating a protective state (an overwhelmingly large group) that "rescues" the individual! So communism is a mess. For by making a state group, one overwhelmed the individual and sure enough the only criticism of communism that a communist will tolerate is that it has too big a "bureaucracy," by which he means too big a government for an individual to confront. Communism goes even further. It abolishes the individual utterly! It *forces* him to be a group. And that is very bad, for individuals are the building block of the small group. So Marx neither knew nor solved the basic

problem of government. He didn't know the above two laws about organizations and groups so communism, supposed to solve individual oppression, is the most individually oppressive form of government on this planet.

How many individuals can effectively compose a group?

It depends on the ability of the manager to handle men on an individual basis. This varies. But such men or women as can handle a large number are very, very rare. So we take a *safe* answer.

A fairly safe answer is six — the manager of the group plus five individuals, one a deputy manager.

This is determined by the answer to this question:

How many subordinates are you willing to work with on the job? Five others is about all you'd care to stretch it. Two others would be too comfortable — even too dull. But you can stretch it up to five.

Thus we could stretch out an org composed of groups of six persons — a manager, a deputy and four — making six maximum in each group.

And you now have the size of the largest building blocks it takes to make a big org. Six persons in each.

If we pyramid this we have (each maximum):

Five staff members and their in-charge as a unit;

Five units and the section executive in a section;

Five sections plus the department's director in a department;

Three departments and the secretary, a deputy and a communicator in a division;

Four divisions in a portion and the Org Exec Sec and a deputy and a personal sec;

Three divisions and the HCO Exec Sec plus her deputy and a personal sec in the HCO portion.

Or with a full Exec Division setup:

Four Exec Sec Comms in an Office and the Org Exec Sec and a personal sec;

Three Exec Sec Comms in an Office for the HCO Exec Sec and her personal sec.

But we build *down*wards by groups of six if we expand further, rarely exceeding five and an executive.

You see then that the moment the HCO Exec Sec starts handling Address In-Charge, the jump is too great as it puts Address In-Charge up against the equivalent of the total executives of units and sections of HCO! It makes his group too big. It makes him too small (being such a small part). He gets rattled, feels oppressed, tends to snarl because he is overwhelmed — his group is too big so he is too small. Simple as that.

So long as an executive only handles two, three, four, five people, he *can* handle his job because they know him. The people under him can handle *their* subgroups so long as they contact only two, three, four, five people and themselves.

For instance, so long as there are only five Continental Orgs, Exec Sec Communicators will feel comfortable, providing the Continental Orgs have each two, three, four, five orgs under them and have in their turn Exec Sec Communicators.

So proper organization for expansion builds in blocks of six maximum — five plus an executive. That can be five groups plus an executive as you go up or five staff members plus an executive as you go to the bottom.

Wherever this is violated, the organization (whether a nation or a company or us) will dwindle. Where it is kept, the organization will grow.

I warn you that five-plus-an-executive-sized groups is hard work, even a strain at times, but it can be done. Six or seven plus an executive is quite too much. And a government versus Joe Doakes is a complete smash, as Joe is only maybe 1/70,000,000th as big as the government!

So *never* bypass. Completely aside from the true mechanics of the Danger Formula where bypass results in Non-Existence, it is hell on the executive *and* every member of the organization to have continual violation of the maximum group's size.

If an executive feels overworked, even with all dev-t cared for and policed, then that executive has below him violations of group size *and* is bypassing some point that should have an executive below him, with a group under that executive. The overworked executive is trying to handle more than five other people directly (five staff members or five group executives).

It's like boxes in boxes in boxes. But in this case six boxes at the most fit comfortably.

If a department has eight sections under its director, then we have to group the sections by giving the director two who each control four sections. This is a very comfortable director, for he has a group of two plus the director. He can loaf. But his assistants will sweat. So add one assistant and divide the department's sections into three groups — three, three and two — and you will have a more efficient department.

That's the way you juggle it about to prevent overwork by executives and overwhelm of individuals.

If you want to increase efficiency on a five-plus-executive group, always make one of the five a deputy and slightly senior to the other four. The four can then approach the deputy to see if they should approach the executive on matters they feel uneasy about. This adds a gradient.

There are various ways to juggle this about. An executive with seven sections can take three himself and give a deputy four, etc. Lots of ways to do it but just stay at or below one plus five if you can. The senior to the group exec is not counted as a member of the group.

Here and there we violate this. A Comm Ev is not as acceptable as a Hearing because one person faces more people. Jury trials are a horrible strain and a cruelty because one has to face about fourteen people! (Judge, prosecutor, jury.) Too many!

So those are the laws which underlie organization.

But you can have it all on the org board and not practice it and collapse. If an Exec Sec is approaching fifteen staff members past their executives, it can wreck the place as the staff members go into apathy, the secretaries go into Non-Existence and bang! no org.

So completely aside from Danger condition violations of *following* proper group organization will bring any organization, a planet, a state, an org, into a mess.

This is what underlies the decline and fall of civilizations: the state begins to govern the individual!

An organization is composed of *groups,* not individuals. And that truth followed and practiced in the flesh as well as on paper will bring about a happy civilization, a happy nation and a flourishing org.

SUMMARY

A LARGE ORGANIZATION IS COMPOSED OF GROUPS, A SMALL ONE IS COMPOSED OF INDIVIDUALS.

The primary difference between the opulent West and the starving East is that the West still permits companies. This means to some extent the Western nations are composed of groups so they are still somewhat successful.

A GROUP IS A PROPER SIZE WHEN THE INDIVIDUALS IN IT CAN EASILY APPROACH THE MANAGER OF THAT GROUP ON A FRIENDLY BASIS AND BE SURE HE KNOWS WHAT THEY ARE DOING AND WHY AND IF THEY ARE DOING IT.

More than five persons plus their executive tends to be too large a group.

The five persons under an executive can of course be executives of groups. And the five persons below each of *those* executives can be executives of groups.

If things aren't organized this way, the individual is crushed. The executive is crushed by overwork and the persons under him are overwhelmed.

Bypass of an executive, aside from putting him in danger, overwhelms the members of his group and makes them do less and makes them feel attacked and lessens their sense of their own power.

Two plus an executive is also a group but the executive is not really working to capacity.

With all dev-t cared for, an executive will be overworked if he is over more than five subordinates.

The principal reason orgs stay small is no matter how fancy their org boards they do not actually practice what is on the board but bypass or pay no real attention to command lines and so in actual practice are only one or two oversized groups—which results in them staying small and being overworked and also underpaid as their system in actual practice is inefficient.

The moral is, practice proper grouping as provided by the org pattern, never bypass and so expand and have a happy staff.

MISSIONS

CO/ED INSPECTIONS

(Originally written by LRH as Flag Order 2773 on 12 Mar. 71.
Issued as an HCO PL on 18 Aug. 81.)

To further the purposes of a Commanding Officer or Executive Director it is vital that the CO/ED make daily inspections of his org.

These are not just cleanliness inspections. They embrace general establishment and production observations.

Every smallest cranny is looked into to see if things are as they should be.

Personnel and their activities or absence of them in assigned areas are noted.

Usually a clipboard is carried to make any notes, plus or minus, of things that are observed.

Keeping such daily notes in a folder in consecutive date order then gives one some comparison over a period of time and answers the question of "Are we getting better or worse?" "Are ordered projects proceeding?" "Are we producing?" "Are there dangers in out-security?"

It is courtesy to pick up the I/C of an area one is entering so he overhears any remarks passed to his staff. The I/C is dropped on leaving the area. If there is no I/C to be found, one notes it and inspects anyway.

Receptions in orgs are generally queried as to knowledge of routing and duties to establish some idea of their competence.

The general tone level (by Tone Scale Chart) is noted on the clipboard by area. Low tones will indicate possible no production or faulty production as morale depends on production to a major degree.

The daily inspection is informal. One can have a formal inspection weekly or monthly.

The daily inspection is an effort to see the existing scene as it is when one is not there, rather than changing the scene by excessive formality.

Inspections are made at different hours, not as a set scheduled action.

Daily inspections are a morale factor in that it shows someone is interested and gives an acknowledgment whether voiced or not. It makes the work of the staff seem more valuable to them. They seldom realize how valuable their work actually is.

Obvious unworn hats, threats to materiel by neglect, general orderliness and busyness, state of lines, confusions, lack of signs, bad signs, these and many other points are observed.

Only in this way, by CO/ED inspection, is a CO/ED kept informed and staff advised of executive presence.

The CO/ED inspection action has no real substitute.

A survey by LRH Comms showed that the hardest thing to get an executive to do was inspect his own area. Thus a CO/ED cannot expect that executives will reliably and uniformly report the true state of their areas. Despite executive inspection or lack of it, a CO/ED should still inspect.

It is a fact that when a CO/ED does not inspect daily he does not make it *his* organization.

A CO/ED who is very well qualified such as an OEC Class VI or better, an FEBC Class IX who is also a Course Super can *also* do another type of action *in addition* to his inspection. (It does not substitute for informal daily inspections.) He can take over a jammed or faulty post for four or five hours and see *why* it is messed up. There is often some impossible situation — example, an illegal counter-policy that a student has to be star-rated first on anything he checks out on another which makes then all twin checkouts impossible — and can unjam the line by correcting what he finds. A 48-hour tour on a completely messed up post or area is an extreme action. It however pays off.

There are then two different types of actions a CO/ED does. One is a daily inspection pure and simple.

The other is a post and line survey and is part of a CO/ED's hatting and forming actions.

Both are needful. The daily inspection is mandatory.

A CO/ED who never looks, just issues orders, operates by reports only, has no stats available, is not totally in control of his command and is running at risk.

He can keep his own confront up and know what is going on only if he inspects daily.

SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 20 OCTOBER 1966
ISSUE II

REMIMEO
ALL EXECUTIVE HATS

ADMIN KNOW-HOW SERIES 1

EXECUTIVES AND GOVERNING BODY ERRORS AND ANSWERS

Anyone in an executive position must be in possession of information concerning his post and the functions of the organization or unit he is heading. Lacking it he becomes the effect of post and organization and begins to create unreal orders and situations which result in down statistics all around.

In principle anyone in charge of anything should know the workings and functions of every unit, item or action of which he has charge. If he lacks such he should be careful to take advices from his juniors before issuing any order to make certain it *can* be carried out, is necessary and conforms to workable practice.

Anyone while learning an executive post and yet acting as that executive should spend the bulk of his time in study and should issue NO orders and approve of NO orders until he has taken up the matter with those who will be affected by those orders before they are issued.

Eventually as one learns his post, after months or years, he or she can begin to issue orders independent of taking advices first from those the orders will affect.

In this way an executive not yet well trained or experienced can keep things going while he is studying his position and those things under him.

An executive cannot call himself fully competent or informed until he has studied all literature, past orders and policies which affect his position or any activity under him and can handle any machine or operation in any unit of which he has charge.

Until then he had better adhere closely to the rule that before he issues any order he had better consult with all those it will affect.

However, in doing this, he must not at the same time issue only popular orders or orders tending to break down the existing structure just to reduce labor or hours on the job or raise pay.

A great many persons fail as executives solely because they:

a. Do not proceed as above on a new job or promotion or

b. Fail to hold together and control the activities in which they find themselves in charge or

c. Use their position solely to buy popularity or

d. Form a clique for their own self-protection against the mob.

It takes a very sensible person to succeed on a new job as an executive without previous experience or previous study but if a person follows this advice as given herein, he or she can win and hold the statistics up and even raise them.

GOVERNING BODIES

Any council or conference or board becomes bogged only for one of the following reasons:

A. It is inactive or

B. It seeks to solve the wrong problem or

C. It fails to notice and nullify arbitraries that have been introduced.

(A) The inactive council or conference or board may be inactive for a number of reasons.

It can simply be inactive.

It can be inactive as a governing body while individually very busy issuing orders. This is quite fatal as such orders will conflict with orders issued by other members of the body also acting individually. The consequence is that the activity so governed will then seek orders elsewhere to resolve the confusion of conflicting orders from members of the governing body — this is how mutinies and revolutions occur and also why some activities will suddenly create dictators. To use one's *status* as a member of a governing body as an individual authority and yet not see that it is the body that governs will surely bring about mutiny and revolt and new leaders.

The remedy is of course to permit no orders not agreed to in the actual conference of the governing body and to reprimand and cancel any orders issued independently.

If the body is simply inactive and won't become active at all, despite everything, it should be disbanded as a governing body and its powers delivered to a single individual. A body inactive that won't act as a body must not be permitted any power. For example, if an Ad Council is actually inactive, it should be disbanded and its powers individually delegated to its individual Exec Secs. However, if this is done, no powers may overlap. Some "governing bodies" exist only to satisfy the law and have no power at all.

(B) Solving the *wrong* problem means also neglecting to locate the right problem. There is nothing wilder than orders to remedy situations which are not the real problems or the vital problems of an activity.

When a governing body is bogged, a well-schooled administrator should be able to see if the body is working on the right problem and, if not, to shift that body's attention to the real problem they should be solving.

An example would be a government seeking to resolve heavy spending when they have no earning. The real problem is lack of money. Conversely, a government can seek only to earn more money when they may have a real problem of fantastically foolish expenditure. In either case, by working on the wrong problem that government can fully crash a country.

A governing body can ride prejudices rather than handle existing problems, which is another way to solve the wrong problem.

(C) Arbitraries can be introduced which thereafter require constant and changing solutions which even then do not improve things.

When this happens, one must locate the arbitrary itself that is causing the need of solution and abolish it.

The only mistake one can make is calling *any* rule an arbitrary, thus destroying form. One has to isolate a *real* arbitrary that *is* causing needless solutions. When found, it should be removed.

However one can be so sweeping in doing this that it simply gets unreal and wrecks the lot. For example, one's laziness or unwillingness to confront can condemn something as an arbitrary which when removed causes one to collapse. It is not then an arbitrary but a form or necessity.

An arbitrary by definition is an interjected law or rule or decision which does not fit or is unnecessary.

Such things can cause a governing body to box about for years and eventually fail.

Here is an example of an arbitrary that caused endless solutions and which when not removed destroyed a nation. "Our currency must not circulate beyond our borders." This was kept unwittingly in force. As money depends for its value on its scope of potential circulation, the money became worthless and the country caved in. Literally millions of governmental and individual solutions became necessary after that one arbitrary was introduced.

So an "arbitrary" can be said to be something which actually violates natural law and which becomes, when held in place, an enforced lie. This causes endless board or governing body trouble wherever it occurs.

Here is another example: "Unions have the right to strike." This was assumed and is not part of any law code as it says, "A body of men has the right to injure business and property without at least civil recourse for damages by the business." Protection racketeers assumed the same right. This arbitrary is a lie since nobody has that right. It laid France open to World War II, for instance, as France through the 1930s was one long strike. True, *unions* have improved pay and working conditions. But there is no right to damage businesses which support one. By introducing this arbitrary without seeking sensible means, the Western world was opened to inflation, unrest and conquest by lawless political elements.

So an arbitrary must be something contrary to the general scheme of things and, while a lie, is yet held in place by law or public ignorance.

Arbitraries are usually introduced by those who aren't quite bright enough to achieve a result through wise measures. And otherwise wise men thereafter can spend decades and invent whole law codes trying to handle the problems so set up.

BOGGED ORG

When an org is bogged after a period of success, it is almost always true that an earlier program or order has been dropped or forgotten.

I have always been able to trace bogs to skipped orders.

An example is the Qualifications Division program order. Outer org recovery was planned so as to improve Qual in each org, then to get staff training in and then to improve the Tech Division. This order was at first executed, then was not followed up and the beginning recovery slumped again. The remedy was to reinstitute the original program.

Ordinarily one doesn't need new programs but needs the follow-through on programs that have not been complied with.

When I see a slump occur, I first ask what program wasn't executed or got dropped. I always find it and when reinstituted, things surge. *Then* I find who dropped it and reorganize personnel with nondroppers.

In this admin failure the dropped program is seldom a little one. Recently at Saint Hill when statistics slumped, I found the program that was out was selling the Saint Hill Special Briefing Course. It was being taught but never mentioned. Yet it, not Power Processing, was the mainstay of Saint Hill.

Look for the program or orders that were dropped or forgotten before you start originating new ones. You may find the dropped one is so huge that nothing could remedy it. In many orgs the dropped program was the original one — to put an org there! Of course no other order will revive the place as the org wasn't put there in the first place and people think they are *running* an org whereas they didn't finish up putting one there to be run. It's often as simple as that.

DEV-T

An administrator (any executive) who does not know and enforce dev-t policies is letting the org down severely. It isn't just his own basket or office, it's the fact that dev-ters are annoying *other staff* too if they are into an executive's hair.

A towering in-basket is *always* a sign of an executive not enforcing dev-t policy. The whole org will sag if executives don't enforce these.

WHOSE HAT

Once you have dev-t in hand, your basket traffic shrinks but you may still be overworking by reason of another factor — wearing, unknown, the hats of others.

I always look up every month or so to see whose hats I am wearing besides my own.

If I find I am wearing hats not mine, I begin to look around the people and areas that *should* be wearing those hats.

If I find the people whose hats I am wearing have seniors below me but above them, I then examine the work areas of the seniors.

I always find one of two things:

a. The seniors are not active at all or

b. The seniors are doing something else than their own hats.

On the staff whose hats I am wearing, I usually find they are doing something else — not just inactive.

I then examine the statistics involved. *And* any finances.

I can then clean up this area by reorganization.

As the seniors are being bypassed, I have to assign a Danger condition to them and apply the Danger Formula (ethics action vital).

I get the statistics up and things going in that area and then get the hats *worn*.

In this way only an executive can wear his *own* hats and do his own work.

So if you are training an executive or if you are seeking to get a governing body or council or committee to function or trying to make an org recover, you can use these bits of know-how.

They are vital, senior data which, properly employed, can make organizations run despite lack of training by executives and even very strange governing bodies.

Just apply the data contained herein and magic! — all will resolve.

ADMIN KNOW-HOW SERIES 2

ACTIONS, EXECUTIVE, FOR HANDLING DISASTROUS OCCURRENCES

There are three steps necessary on the part of a senior executive who discovers a situation which may be disastrous to the org.

The executive's actions are as follows:

1. Issue orders of a remedying or preventive nature instantly by directive, to remain in effect until all data is in. This is called an urgent directive.

2. Appoint a Board of Investigation to investigate the matter, with orders to investigate fully and couch findings in terms of a directive or policy for issue.

3. Pass or modify the board's findings as orders to supplant the urgent directive issued as (1) above. This is called the final directive or policy.

THE URGENT DIRECTIVE

To do (1) — issue a sweeping order to handle the situation. This is vital as there isn't time to get all the facts. The order may be fair or unfair, correct or incorrect, but at least it does *something* to arrest a deteriorating situation.

This urgent directive may however be in fact wide of the mark, but it is only going to remain in force until superseded by orders based on all the data obtained at leisure.

Dictatorships are somewhat successful as proven in the past and they run only on urgent directives. So the system is not all bad. However for such a directive to remain law forever is obviously wrong as it may be wholly arbitrary and may eventually get in somebody's hair. But not to issue it just because one has little data is to ask for disaster.

So in the face of disaster issue an urgent directive as best you can and hope you are right in your directed action.

THE BOARD

Convene now a Board of Investigation composed of impartial members who will investigate thoroughly.

Order them to turn in their findings in the form of law that can be issued exactly as they wrote it.

Trouble with such boards, they "recommend" in an often rambling way and, as they aren't really writing *law,* they tend to overlook things.

Democracies have a terrible habit of only appointing committees to investigate without issuing any urgent directive first. This leaves a vacuum of direction and courts disaster. Such bodies may take a long time to bring in their findings. This is a great weakness — to let an abuse go on while one investigates.

THE FINAL DIRECTIVE

When the Convening Authority has the board's findings to hand, he studies the proceedings and findings to make certain that the disaster is fully handled by the findings and that further disasters of like nature are inhibited by these findings from occurring.

If he is satisfied on this score (that the findings are adequate), he must now see that they do not violate the fast flow system of management to any great degree and that they are as adequate as the urgent directive in arresting the disaster. If so, the executive sends the findings through regular channels with all papers to make them into law. Until actually law, the urgent directive is still in force.

If he is *not* satisfied or doubtful that the findings are adequate, he can convene another board to do a better job. If he does convene another board, the urgent directive remains in force.

The findings actually become law only when:

a. The Convening Authority has passed them as they are or modified by himself or another board.

b. The findings have gone through all steps necessary to become law.

c. The findings are finally the law.

Then the urgent directive is cancelled. It *must* be cancelled when the findings become law and may not remain as a possible arbitrary.

The above is good administration.

Some governing bodies use only urgent directives.

Some use only committees or boards or senates.

To use less than all three in the face of a disastrous situation is poor admin.

Example: Income goes down like a shot. (1) Issue an urgent directive calculated to get income up like a shot, (2) Convene a board to find out why it went down and to discover what was dropped out and find how to get it back up, (3) Supplant the urgent directive with the findings.

Where policy is concerned, the channel is longer as more people must pass on it. But directives are also law. So one should not issue a directive in the face of disaster and just hope. One should do all three steps above.

By disaster is meant a circumstance or situation that is crippling and may adversely affect a whole or a part of an org. Low income is a heavy risk that may result in disaster. A heavy, continual expenditure may result in a disaster. Any gross divisional statistic going down and staying down is courting disaster. And such should be handled with the three steps as above. Then the org form and duties, if bent out of shape by the urgent directive, won't stay out of shape forever.

As a comment, statistics when they change suddenly and go down mean that something has been dropped or some arbitrary order has been given. Stats going steeply up also mean a change has occurred and it can be very disastrous not to find what it was that was so good. So one can also use the three steps to handle a sudden soaring statistic to maintain it rather than stay in the dark. Example: Letters out soars to an all-time high. Issue an urgent directive, "No person or line may be changed in the Dissem Division on peril of a Comm Ev." Then convene a board and find why and get some law on it. Then supplant the urgent directive with the new directive resulting.

This in no way alters the need of a directive to be passed by the LRH Comm or a policy letter to be passed by all specified terminals before it becomes policy.

PERSONNEL

Steps 1, 2 and 3 can also be used on personnel where the executive thinks a staff member is the reason. Suspension from post pending investigation would be the urgent directive in this case. However, the staff member so suspended may not be deprived of wages and must be given an apology if found not to be the reason. And no real action may be taken unless there is an ethics action recommended by the board and only if the person is found guilty in that ethics action.

In this case there are four steps:

1. Urgent directive

2. Board of Investigation

3. Ethics action or no ethics action

4. Final directive either (a) restoring the personnel and stating the real causes in the form of a separate directive with long-range actions to handle the situation or (b) appointing a new personnel and recommending in a separate directive long-range actions to handle the situation.

The steps are four because there are two matters involved: (a) the personnel and (b) the situation. Even if the personnel was at fault, there must be something else wrong too if a personnel got into a post who didn't belong there.

HCO POLICY LETTER OF 31 OCTOBER 1966R
ISSUE II
REVISED 5 MARCH 1968

REMIMEO
STAFF STATUS II
CHECKSHEET

GENERAL FOR ALL STAFF

ADMIN KNOW-HOW SERIES 3

JOB ENDANGERMENT CHITS

If you are given orders or directions or preventions or denied materials which make it hard or impossible for you to raise your statistics or do your job at all, you MUST file a Job Endangerment Chit on your next highest superior.

If you are admonished or ordered to a Hearing for NOT doing your job and having low statistics and have NOT *previously* filed a Job Endangerment Chit at the time it occurred, you have no defense.

You should not come to a Hearing as a defendant and *say* you were prevented or inhibited from doing your job. Unless you have filed a Job Endangerment Chit previously when your job was endangered, the statement MAY NOT BE ACCEPTED by the Hearing Officer or the Comm Ev.

POLICY

Most people who have trouble with policy or admin do so simply because they don't know it or can't or don't use it.

Such a person can be told anything and tends to take it as fact.

Policy exists to speed the wheels and make a job doable.

But sometimes one has a senior who continually says this or that is "against policy."

Always respectfully ask for the date of the policy letter and to see a copy of it.

Then you will know that what you propose is or is not against policy. If no policy letter can be produced or if what you proposed is NOT against policy and is still refused, you must file a Job Endangerment Chit.

WHERE TO FILE

FORMERLY ONLY ONE COPY WAS WRITTEN. THIS IS NOW MODIFIED.

USING CARBON PAPER, MAKE AN ORIGINAL AND TWO COPIES.

SEND ONE COPY TO THE PERSON BEING FILED ON.

SEND TWO COPIES TO THE ETHICS OFFICER.

THE ETHICS OFFICER WILL FILE ONE IN THE FILE OF THE PERSON NAMED AND ONE IN THE FILE OF THE PERSON WRITING THE CHIT.

THESE COPIES MUST BE CAREFULLY PRESERVED IN EVENT OF A COMM EV OR HEARING AS THEY ARE NECESSARY DEFENSE PAPERS.

WHAT TO FILE

Full details, without rancor or discourtesy, must be given in the report, including time, places and any witnesses.

VEXATIOUS FILING

Anyone filing Job Endangerment Chits on superiors or equals or juniors must be able to back them up.

One cannot be given an Ethics Hearing or Comm Ev for a false Job Endangerment Chit unless it contains a willful and knowing false report which endangers somebody else's job. But even so, no Ethics Hearing may be ordered for the fact of filing, only for a willful and knowing false report.

So if your facts are straight there is no slightest risk in filing a Job Endangerment Chit. On the contrary, it is dangerous NOT to file one. For then one has NO defense.

PERSONAL MATTERS

Sometimes a staff member is imposed on in such a way as to prejudice his job such as having to do off-line favors.

This is an occasion for a Job Endangerment Chit.

If one is threatened with punishment if one files a Job Endangerment Chit, one must then file a second chit based on the threat.

If an org as a whole seems to refuse Job Endangerment Chits or ignore them, one can be filed with Worldwide simply by sending it direct to "HCO Ethics Worldwide, Saint Hill Manor, East Grinstead, Sussex."

WRONGFUL DISMISSAL

Dismissal without following proper procedure of a Hearing may be sued in the Chaplain's Court, Division 6. If no Chaplain's Court exists in the local org then one surely does in the Continental Org and one can file such a suit there or at Saint Hill.

CHITS BY SENIORS

Seniors let down by juniors had better file Job Endangerment Chits before calling a lot of ethics actions. Staff members are seldom willful, they are just unknowing. Senior chits on juniors should carry a copy to the junior on channels as well as Ethics.

FALSE REPORTS

When one finds he has been falsely reported upon, he should file a Job Endangerment Chit.

HEARINGS ON CHITS

Ethics action is not necessarily taken because a chit has been filed on one. But if too many chits occur in a staff member's file, an investigation should be ordered and only if the board so recommends does ethics action then occur.

STATE OF MIND

Don't sit around muttering because you are being kept from doing your job.

And don't be timid about filing a Job Endangerment Chit.

Don't accept orders you know are against policy or at least unworkable. File a Job Endangerment Chit.

There is no vast THEY weighing you down. There is only ignorance of policy or misinterpretation or arbitrary interference.

If you are willing to do your job, then *know* your job and do it. And if you are being shoved off so you can't do it, you MUST file a Job Endangerment Chit.

You have a right to do your job, you know.

ADMIN KNOW-HOW SERIES 4

LEADERSHIP

Leadership is one of the most misunderstood subjects in man's dictionary. But it is based almost solely on the ability to give and enforce orders.

An order or directive is necessary to bring about coordination of function and activity without which there could be disagreement and confusion.

In an organization there is more than one person functioning. Being of comparable rank and having different purposes (hats) they can come into conflict and disagreement in the absence of a plan or order or directive. So, without orders, plans, programs, one does not have an *organization*. One has a group of individuals. We see in earlier policy letters that a group composed only of individuals cannot expand and will remain small.

Oddly enough, such a group will also remain unhappy. It will have a low affinity with the public and each other and if you know the affinity-reality-communication triangle, you will realize that all three points drop if one does. Agreement being the basis of reality, you will find a group of individuals will disagree with each other and have a low reality on what they are doing or what to propose and even what to do.

Most people confuse a "taut ship" with a harshly led ship. Actually harshness has nothing to do with it. The right word is *positiveness.*

If a group is led by someone whose programs and orders are very positive, then the group has a chance of going into agreement with one another and so their affinity improves and so does their communication and reality.

So if one issues *no* orders, a group will remain a group of individuals, out of agreement with each other, will do little and will remain small or at least nonexpanding.

Bill, of equal rank to Joe, cannot give an order to Joe nor vice versa. Thus no orders exist between them. Occasional agreements do occur but as their jobs are different, they rather tend to disagree on what is important.

A person with a senior standing to both Bill and Joe can give the two an order and this becomes the basis of an agreement.

The order doesn't even have to be liked by Bill and Joe. If they follow it, they thus "agree" to it, and being in agreement on this they get reality and communication on it as well.

Even poorly thought out orders angrily given, if issued and enforced, are better for a group than no orders at all. But such orders are the low end of the scale.

Positive, enforced orders, given with no misemotion and toward visible accomplishment, are the *need* of a group if it is to prosper and expand.

The group is full of "good fellows." This does not give it success.

The group is full of plans. These do not give it success.

What it needs are positive orders leading to a known accomplishment. Many obstacles can exist to that accomplishment, but the group will function.

We call it "leadership" and other nebulous things, this ability to handle a group, make it prosper and expand.

All leadership is, in the final analysis, is giving the orders to implement the program and seeing that they are followed.

One can build this up higher by obtaining general agreement on the how, why and what of programs. But to maintain it there have to be orders and directives and acceptance or enforcement thereof — else the group will fall apart, sooner or later.

Positive orders and directions on positive programs inevitably cause expansion.

Being wise or a good fellow or being liked does not accomplish the expansion. People in the group may be cheerful — but are they going anywhere as a group?

So the whole thing boils down to:

Positive directions and their acceptance or enforcement on known programs bring about prosperity and expansion.

No or weak orders bring about stagnation and collapse.

The ideal is to have programs with which the whole group or a majority agrees fully. Then to forward these with positive orders and obtain compliance by acceptance or enforcement.

But regardless of the enthusiasm for a program, it will eventually fail if there is no person or governing body there to issue and enforce orders to carry on the program.

Thus we have the indicators of a very bad executive whose group will disintegrate and fail no matter how cheerful they are with the executive.

Bad leaders:

1. Issue no or weak orders,

2. Do not obtain or enforce compliance.

Bad leadership isn't "grouchy" or "sadistic" or the many other things man advertises it to be. It is simply a leadership that gives no or weak orders and does not enforce compliance.

Good leadership:

1. Works on not unpopular programs,

2. Issues positive orders and

3. Obtains or enforces compliance.

These facts are as true of a governing body as they are of an individual.

A typical example of a bad governing body, at the present stage of its formation at least, is the United Nations.

It has great ideas about how better man should be perhaps, but

1. It issues a confused babble of orders when it issues any and

2. It issues orders for which it can obtain little or no compliance.

Note that it is also insolvent, at war within itself and that it has not made a dent in its prime program — the prevention of war.

However these things came about they are nevertheless true. It is a very poor governing body and far more likely to vanish than expand.

You can count completely on the fact that an executive or a governing body that does not adhere to not unpopular programs, that does not issue positive orders and does not obtain or enforce compliance will have down statistics.

And you can be sure that an executive or governing body that formulates or adheres to not unpopular programs, that issues positive orders and that obtains or vigorously enforces compliance, will have up statistics.

Wisdom? Popularity? These unfortunately have little or nothing to do with it.

The way to have up statistics, a prosperous and happy group, is far more simple than complex man has ever realized.

STATISTIC INTERPRETATION
STATISTIC ANALYSIS

Refs:

HCO PL	9 Nov. 79	HOW TO CORRECTLY DETERMINE A STAT TREND
HCO PL	3 Oct. 70R Rev. 9.11.79	STAT INTERPRETATION
HCO PL	6 Mar. 66 II	STATISTIC GRAPHS, HOW TO FIGURE THE SCALE
HCO PL	5 May 71R II Rev. 9.11.79	READING STATISTICS

The subject of making up statistics is probably well known. How one draws one. But the subject of what they mean after they are drawn is another subject and one which executives should know well.

Things are not always what they seem in statistics.

BACKLOGS

A backlog caught up gives one a high soaring statistic which promptly slumps. To call the soar Affluence and the slump Emergency is an executive error.

When you see a leaping and diving pattern on something that *can* be backlogged, you can be very sure it has been.

This activity is working in fits and starts, usually only occasionally manned.

For a long time, nothing is done or counted, then suddenly a month's worth is all counted in one week.

So when you see one of these, realize that the one surge in stats is averaged out with the smaller peaks and the depressions. You have to visually average the peaks and valleys and note the trend the entire stat is taking.

CAUSATIVE STATISTICS

In any set of statistics of several kinds or activities, you can always find one or more that are not "by luck" but can be directly caused by the org or a part of it.

Examples are the "letters out" and "completions." Gross divisional statistics. Whatever else is happening, the org itself can improve these as they depend only on the org, not on "fate."

So if you see the gross divisional statistics generally down or going down for the last couple or three weeks and yet see no beginning upsurge in the current week in "letters out" and "completions" you know that the org's management is probably inactive and asking to be removed. For if they saw all stats going down they should have piled in on "letters out" and "completions" amongst other things as the least they could do. They *can* push those up.

So amongst any set of statistics are those which can be pushed up regardless of the rest and if these aren't, then you know the worst — no management.

ENROLLMENT VERSUS COMPLETIONS

If you see a statistic going up in "completions" and see a falling "enrollment" statistic, you know at once the body repeat sign-up line is *out*.

People who graduate are not being handed their certs and awards by a Registrar but are being given them by Certs and Awards or in mass meetings, or in some way repeat sign-up is not being procured.

Thus the 40 percent to 60 percent repeat sign-up business is being lost.

This also means, if continued over a long period of time, that bad technology is present as poor word-of-mouth advertising is going around.

Look in such a case at a third statistic, Qual collections. If this is poor or very, very high, you can be sure that lack of enrollments is caused by bad tech.

A very high Qual collections statistic and a low enrollment statistic is a terrible condemnation of the Tech Division. Gross income will soon after collapse as tech service just isn't good.

COMPARING STATISTICS

Thus you get the idea. Statistics are read against each other.

A statistic is a difference between two or more periods in time so is always comparative.

Also two different statistics are comparative such as in examples above.

PREDICTION

You can predict what is going to happen far in advance of the occurrence, using statistics.

High book sales mean *eventual* prosperity. Low book sales mean eventual Emergency all along the line.

High gross income and low completions mean eventual trouble as the org isn't delivering but is "backlogging" students and pcs simply by not getting results. Carried on long enough this means eventual civic and legal trouble.

Low FSM commissions may only mean no FSM program. But if there is an FSM program, then it may mean bad tech. So a low completion and low Qual will mean an eventual collapsed FSM statistic also as the FSM's own area is being muddied up by failed cases.

High book sales, high letters out, high Tech and high Qual statistics mean the gross income statistic will soon rise. If these are low then gross income will fall.

Bills owed and cash in hand are read by the distance between the two lines. If it is narrowing, things are improving; if widening, things are getting worse. If they are far apart and have not closed for a long while, with the cash graph below, the management is dangerous and not at all alert.

THE DANGEROUS GRAPH

When all statistics on one set of graphs show a sinking *trend* line, it is a dangerous situation.

Trend means an inclination or tendency toward a general course or direction. Thus to get the trend one would look at several weeks' worth of stats.

To read the stat trend, one needs to visually average the peaks and valleys over a specific time period on the graph. It is done with the eye; there is no internal system of lines that can be drawn to assist this. One sits back and looks at the pattern as a whole and there is a definite pitch or slant that one can determine by this. That is the stat trend.

If all of these stat trends or most of them are down, the management is inactive.

FALSE COMBINATIONS

When a Continental Org includes its own org on its combined graphs for area orgs, it can have a very false picture.

Its own org's stats obscure those of the area orgs which may be dying.

Thus if you include a big function with a lot of small ones on a combined graph, you can get a very false idea.

Thus, graph big functions as themselves and keep them out of small functions of the same kind.

The Continental Org should not be part of a Continental Exec Div's statistics. Similarly SH stats should not be part of WW's.

A combined statistic is of course where you take the same stats from several functions and add them up to one line. A very large function added into a combined graph can therefore obscure bad situations. It can also obscure a totally inactive senior

management as the big function under its own management may be wholly alert and competent but the senior management is masked from view by this one going concern whereas all its other points except the big one may be collapsing.

THE BIGGEST MISTAKE

The one big god-awful mistake an executive can make in reading and managing by graph is *being reasonable* about graphs. This is called JUSTIFYING A STATISTIC.

This is the single biggest error in graph interpretation by executives and the one thing that will clobber an org.

One sees a graph down and says, "Oh well, of course, that's _____" and at that moment you've had it.

I have seen a whole org tolerate a collapsed completions graph for literally months because they all "knew the new type process wasn't working well." The Tech Sec had JUSTIFIED his graph. The org bought it. None thought to question it. When it was pointed out that with the same processes the preceding Tech Sec had a continual high graph and a suppressive was looked for, it turned out to be the Tech Sec!

Never JUSTIFY why a graph continues to be down and never be reasonable about it. A down graph is simply a down graph and somebody is goofing. The only *explanation* that is valid at all is, "What was changed just before it fell? Good. Unchange it fast!" If a graph is down it can and *must* go up. How it is going to go up is the only interest. "What did we do each time the last few times just before it went up? Good. Do it!"

Justifying a graph is saying, "Well, graphs are always down in December due to Christmas." That doesn't get it up or even really say why it's down!

And don't think you know why a graph is up or down without thorough investigation. If it doesn't stay up or continues down then one didn't know. It takes very close study on the ground where the work is done to find why a graph suddenly rose or why it fell.

This pretended knowledge can be very dangerous. "The graph stays high because we send out the XY Info Packet," as a snap judgment may result in changing the Dissem Sec who was the real reason with his questionnaires. And the graphs fall suddenly even though no info packet change occurred.

GROSS REASONS

Graphs don't fall or rise for tiny, obscure, hard-to-find reasons. As in auditing, the errors are always BIG.

Book sales fall. People design new fliers for books, appropriate display money, go mad trying to get it up. And then at long last one discovers the real reason. The bookstore is always shut.

A big reason graphs fall is there's nobody there. Either the executive is double-hatted and is too busy on the *other* hat, or he just doesn't come to work.

STICKY GRAPHS

Bad graphs which resist all efforts to improve them are *made.* They don't just happen.

A sticky graph is one that won't rise no matter what one does.

Such a graph is *made.* It is not a matter of omission. It is a matter of action.

If one is putting heavy effort into pushing a graph up and it won't go up, then there *must* be a hidden counter-effort to keep it down.

You can normally find this counter-effort by locating your biggest area of noncompliance with orders. That person is working *hard* to keep graphs down.

In this case it isn't laziness that's at fault. It's counter-action.

I have never seen an org or a division or a section that had a sticky graph that was not actively pushing the graph down.

Such areas are not idle. They are not doing their jobs. They are always doing *something else.* And that something else may suddenly hit you in the teeth.

So beware of a sticky graph. Find the area of noncompliance and reorganize the personnel or you, as an executive, will soon be in real hot water from that quarter.

Those things which suddenly reared up out of your in-basket, all claws, happened after a long period of sticky graphs in that area.

Today's grief was visible months ago on your stats.

SUMMARY

The simple ups and downs of graphs mean little when not watched over a period of time or compared to other graphs in the same activity.

One should know how to read stats and what they mean and why they behave that way so that one can take action in ample time.

Never get *reasonable* about a graph. The *only* reason it or its trend is down is that it is down. The thing to do is get it up.

HCO POLICY LETTER OF 10 NOVEMBER 1966

REMIMEO

ADMIN KNOW-HOW SERIES 6

GOOD VERSUS BAD MANAGEMENT

The difference between good management and poor management can be the loss or gain of the entire organization.

Financial planning is a vital part of management. Good financial estimations and the ability to figure out, without vast accounting, the way things are in an org is an ability which is vital to good management.

The manager, given a few vital facts, who then needs an accountant to tell him how things are is of course incompetent.

Management is a high skill. Socialist or worker governments are flat on their uppers because they do not comprehend the degree of insight required in a successful manager. When they harass, mess up and sometimes shoot their managers, they promptly begin eras of starvation as in Russia, China and to some extent under their socialisms in recent years, England and the US. The amount of time *any* manager has to spend in the US or England battling with government clerks who aren't skilled enough to run a tricycle, assisted, is easily a third of the manager's time.

The essence of good management is CARING what goes on. The worker-oriented fellow cares for the worker but not for the organization. So we have a final extinction of the worker by the organization vanishing and no longer able to employ. The consequence is the widespread depression just beginning. *Real* help for the worker is also making sure there will be work for him to do. When the organization is gone, there is only misery, the dole, revolution and sudden death. The "worker-oriented" manager lacks the insight into the skill necessary to manage. So to him an organization is something to be bled. It is a bottomless pit of money. Such a person's total "skill" is how to get something out of the organization. But you can't take out more than comes in. Management is entirely beyond the ability of such people. They don't know what it is all about. They do not care what happens to the organization. Then suddenly the machinery all stops and everyone starves.

Whole countries go this way when the mess begins.

The basic difference between organizations that run and those that collapse is simply somebody caring what happens to the organization itself.

A good manager takes care of the workers. He also takes care of the organization. A worker-oriented fellow — union leader, agitator, do-gooder — cares only for the

worker and *thus does the worker in*. So he is actually a suppressive. For the whole bang shoot goes to pieces and the end product is dismal unemployment, depression, malnutrition, starvation. You have to have lived through such a period to learn dread of it. And that's what caring nothing for the organization finally results in.

A worker-oriented person is deficient in pan-determinism. He or she cannot see that the health of all demands he take into account workers *and* the org. Therefore he or she is below the ability to determine both sides of things and so makes a very poor executive, being lopsided, given to "them and us," playing favorites and unable to see two sides of a question. Such abilities are *vital* in an executive, so he isn't one.

A worker-oriented person is not nice to individual workers — he or she may shoot them — but only about collective "workers."

Poor source identification goes with lack of pan-determinism so a person cannot see or solve the *real* problems around. So such people can't even operate as executives.

Thus you can know them. The org or country always fails.

So you want to watch this "poor-worker" pitch in an executive. If he cares only for the worker and nothing for the org, if he is only interested in what he or the workers can get out of an organization, then you are looking at somebody who in the long run will put one and all on the street.

You see here and there bared teeth at the org or the idea of the org. Along with it, if you look, you will find a heavy carelessness about the org's money and property and also a heavy effort to get something for the workers. Here you have a full-bodied case. This person won't ever succeed and should never be an executive. Never. For he'll do the workers in.

A good manager cares what happens, what's spent, what prosperity can occur, how the work is done, how the place looks, how the staff really fares. He is dedicated to getting the show on the road and he takes out of the lineup obstacles to the org's (and staff's) progress.

Caring what goes on and not caring is the basic difference. Caring for something else while working is the mark of the laborer, not the executive.

If you have to start an economy drive, look for the people who fight it. Quietly remove them from executive posts. You have a laborer, steeped privately in "us-poor-workers" and "get what you can" and "spend the org out the window."

If you care what happens to the org and the size of the paycheck as well, you will be very careful to develop an insight into finance, efficiency and the state of the org.

If you see bills owed soaring above cash on hand, you will also see executives who care nothing for the org. They are worker-oriented, anti-org people and you had better put a thumb down on continuing them as executives. Along with that unfavorable graph you will also find demands to borrow money, sell assets to pay bills and a near refusal to promote or make money.

I have learned all this the hard way. I pass it on for what it is worth. I can say these things because no man on Earth could seriously challenge me for not caring about

people or staffs. I do care. And the ultimate in caring is to make sure there is an org there.

So please be alert to these points in conducting Ad Council meetings. Inevitably the hardest job is financial planning. But in that sphere you will show up the executives and the laborers. Watch and when you find you have a worker-oriented person there, realize you don't have an executive. Get one.

SUMMARY

Bad management is therefore detectable on these points:

1. The bills-cash ratio will be high in bills and low in cash.
2. There is an effort to borrow money rather than earn it.
3. There is a heavy effort to sell assets rather than make money.
4. There is more effort to collect debts, particularly from seniors, than to make new income.
5. There will be an effort to be supported.
6. There will be low affinity in the org for the org and its public.
7. There will be protest and flashback at efforts to get them solvent.
8. There will be noncompliance with orders of senior management.

The remedy is to:

A. Find the most worker-oriented senior executive and remove him or her.

B. Find the anti-org executives and staff and remove them.

C. Put in the senior posts those who most care what happens to the org.

D. Enjoin and conduct careful financial planning and measures.

E. Remove from executive posts those who object to them or don't comply (that may have been missed in A and B).

F. Resurrect neglected orders and main programs and get them complied with.

G. Be exceedingly careful not to appoint people there in the future who don't care what happens to the org.

It does not much matter how one goes about this. If one wants the org *and its staff* to prosper, the above measures must be done and quickly when the bills-cash ratio of an org threatens the continuance of it and the staff their jobs.

ADMIN KNOW-HOW SERIES 7

EXECUTIVE FACILITIES FACILITY DIFFERENTIAL

When a senior executive has the ability to make money for the organization or greatly raise statistics and when this ability has been demonstrated, that executive should have facilities.

This ability is often discoverable by the absence of the executive from post for a period or when the executive is pulled off by emergencies. In such a time the income of the org may sink.

The degree the income shrinks is the "facility differential" of that executive. It is worth that much to the org in facilities to have the executive on post. Example: With that executive on duty — income $8,000 per week. With that executive absent — $5,000 per week. This is the "facility differential" of that *executive*. It is, in this example, $3,000 per week. This means that the org could afford $3,000 per week extreme to provide that executive with facilities for his work to keep him from overload. For it will lose $3,000 a week if this executive is distracted or overloaded. Of course nobody expects the org to spend $3,000. It just shows the extreme amount it could spend. One cannot afford not to spend *some* of it for facilities for this executive. The moment it does spend some of it — providing this executive does have this influence on income or production — the differential rises as the org makes more money or as the stat goes up. This trend can be pushed up and up.

Executives don't *deserve* secretaries or communicators. They earn them. If an executive has no "facility differential," he should not have special personal help.

The "facility differential" can also be judged from other statistics but income is the primary one.

For instance, we have just found my "facility differential" for Saint Hill org only. It is, based on losses during a six months' absence and gains for the last part of the year, £244,000 per annum for just this year. Thus the org *could* afford to spend £244,000 per annum to furnish me management facilities.

In this case the computation is made by the org's increased indebtedness for the first six months plus the lack of reserves set back and the rate of dismissal of debt in the last six months plus the reserves set aside. The increasing debt and reserve absence for six months is added to the debt reduction and reserve presence for the last six

months, giving the total. Income and other personnel remained similar all through the year but began to fail and was picked up by me at the half year.

The value is actual cash wasted in my absence and a beginning failure set up by bad tech and the recovery in terms of cash retained and income upsurge.

Naturally, this is a very high sum at this time (though quite accurate).

The org, however, cannot afford *not* to give me every facility required to keep me on its lines.

These total only a few thousand a year for extra personnel and admin facilities, not anywhere near £244,000. Thus, if the org (SH only) permitted me to move off its lines and failed to provide me facilities, it would lose on the current balance sheet, £244,000 per annum in actual cash and would in fact go broke. It can't stand that much loss. So the answer, nothing to do with my wishes, is that SH *must* provide me facilities for its own sake. Pay has nothing to do with it as I don't get paid. But SH staff pay would cease entirely as they would have no jobs.

An org is very lucky to have a few persons who can make money for it, fortunate to have one and in a mess if it has none.

Post title may mean nothing. A Registrar who, on post, brings in $5,000 a week and off post the org gets only $2,000 a week, is obviously such a person. The facility differential is $3,000 a week!

A Treasury Sec who on post has a cash-bills ratio equal but off post, the org, through lack of his financial planning, gets a gap of $20,000 for the three months he is off, means a facility differential of $80,000 a year for that Treas Sec.

The usual reward is promotion but the org often loses income by promoting a good Reg to a poor Dissem Sec.

The answer is to give the person facilities as there is a "facility differential." This may include more pay on post but *must* include more facilities, beyond that of other staff members.

Just doing a normal job on post is *maintaining* income. It takes quite an executive to raise it markedly beyond normal expansion.

Mary Sue, by actual data of times past, is worth to an org on any single executive post about 50 percent of its regular gross income. The fall and rise of about half the income has been demonstrated in several orgs over many years. Had she also been subtracted from the SH org, the facility differential added to my subtraction would have put it out of existence before the year was out.

It would be very foolish not to give her facilities. *Yet* she has never been known to ask for any and facilities have had to be *initiated* for her when they occurred. Thus top executives themselves have to notice this and demand facilities for the person. If they do not, the person at the very least will go off post or their services lost because of overwork.

So one doesn't have a communicator because one is an Exec Sec or senior executive. One has one if he or she has a "facility differential" beyond normal expectancy.

And that tells one who has communicators in an org. And who has the facilities.

And it says who *must* be given communicators and facilities and who shouldn't have them.

Granted it is sometimes hard to determine this "facility differential" in a staff member. But long experience will establish it.

FACILITIES

Facilities normally include:

a. Those that unburden lines,

b. Those that speed lines,

c. Those that gather data,

d. Those that compile,

e. Those that buy leisure,

f. Those that defend,

g. Those that extend longevity on the job.

One can think of many things that do each of these.

The bare minimum are accomplished by giving the executive a communicator.

The communicator more or less covers all the categories above. Then, as the facility differential rises, the communicator sheds hats by providing other people to take over these functions as outlined above.

ANALYSIS

The org board pattern (names of divisions, departments and their code words as per any of our org boards) is an analysis system which can be applied to any person or job. He is light or heavy on one or more of these and the pattern gives him or her a clue as to what is wrong.

Write them down for yourself and you will see. Which ones don't exist in your actions, which are in Emergency, which are Normal and which are high?

This is an ultimate analysis of the state of one's post. Or of one's life for that matter. One can progress simply by doing this now and then.

These also comprise a total pattern of facilities.

However one needn't go so far to help an executive with a facility differential at first. Later, such an analysis is absolutely necessary to keep facilities in balance.

At first one only need give the person a better desk in better space and a better phone and more ballpoints.

But a real facility differential amounting to 25 percent or more of the org's income (on or off job difference, proven) demands not only these but also a communicator.

WHAT IS A COMMUNICATOR?

A communicator is one who keeps the lines (body, despatch, letter, intercom, phone) moving or controlled for the executive.

The communicator, when not helped by others, really assumes all of (a) to (g) above and *does nothing else for anyone else.*

PRIMARY COMMUNICATOR DUTIES

The primary actions of a communicator concern despatch lines and are as follows:

1. Receives all written comm for the executive of all kinds with no bypass.
2. Identifies and returns to sender all dev-t. The executive never sees it. Notes the senders in a book. Attaches the appropriate dev-t PL to each returned despatch. Monthly reports the names of offenders and the number of times to the executive. (For these people are ruining other staff members too.)
3. Puts all directives, PLs, HCOBs and Ethics Orders and any statistics in a folder so marked each day.
4. Puts the org despatches in a folder so marked each day. (If several org areas or divisions are being handled, puts the despatches in folders by areas or divisions.)
5. Puts the personal despatches in a folder so marked each day.
6. Deletes from the lines anything that may be routinely answered by letter and answers it and puts the originals and typed answers for signature in a folder so marked each day.
7. Presents the folders named in 3 to 5 inclusive in the executive's in-basket at the beginning of the executive's workday (and holds all the rest that come in after, until the next day).
8. Puts the signature folder as per 6 above in the in-basket at the latest moment of the day sufficient to get them signed for the evening mail.
9. Lays cables and telegrams and phone messages in the center of the blotter on the executive's desk.
10. Comes in for cable answers when called.
11. Picks up and files properly for the executive all PLs, directives in the executive's own file.
12. Keeps the executive's own files for the executive's use.
13. Keeps excess paper, magazines, books picked up and filed.
14. Leaves alone things the executive is working on but files them if not being worked on after a while.

15. Oversees cleanliness and arrangement of desk and office.

16. Oversees ampleness of pertinent supplies: paper, pens, stapler, clips, etc.

17. Doesn't take up the executive's time with chitchat or verbal reports or rumors.

18. Handles by-hand rushes for the executive in and out.

19. Blocks all body traffic until its business established, then routes it properly (except where body traffic is the executive's business on post, in which case the communicator smooths and regulates it).

20. Handles phone traffic and keeps it very low, lists abusers as dev-t.

21. Takes down names of staff body traffic that is not a routine part of the line and reports it with the monthly dev-t report.

22. Takes the entheta off the lines but not items which if not handled will endanger the org.

23. Notes staff who hand the executive problems but do no compliance with solutions ordered and recommends ethics action.

24. Finds out bits of data when instructed to do so by the executive.

25. Keeps alert to malfunctions of lines and reports them for handling to appropriate persons.

26. Does not take up time of other staff or executives by unnecessary visits and does not prolong such visits beyond a crisp minimum transaction.

27. Blocks all lines if the executive engrossed in a project.

28. Keeps own desk and materials neat.

29. Demands a communicator's secretary if differential great enough and lines are jamming.

30. Demands other facilities as per (a) to (g) above if the facility differential is great enough and there is overload.

COMMUNICATOR'S TITLE

A communicator's title is always his or her executive's followed by "'s Communicator." To that, when there are more than one, may be added "for _____" being a function or division.

COMMUNICATOR'S PURPOSE

The communicator is to help the executive free his or her time for essential income-earning actions, rest or recreation, and to prolong the term of appointment of the executive by safeguarding against overload.

COMMUNICATOR EXEC ACTIONS

The communicator has his own executive actions. These come under the Admin Know-How HCO PLs of contemporary date.

If a communicator can get these and dev-t policies grooved in for the executive, the communicator is invaluable.

A communicator should know the dev-t and Admin Know-How policies star-rated.

It should be no surprise to an executive to receive from his or her communicator a notice that the executive is violating Admin Know-How or dev-t policy. "May I call to your attention that you are wearing the Dir Clearing hat and have been for two weeks," or "You should request from Ad Council appointment of a board after your 10 July urgent directive."

COMPLIANCE

Policing compliance for a senior executive is a vital function of a communicator.

When an executive issues orders and they are not complied with then, as this builds up, that executive will suddenly behold a shock situation squarely on his plate.

Noncompliance lets entheta situations backfire right up to the executive. The degree of noncompliance regulates the number of screaming emergency messes the executive will have to handle.

The communicator then keeps an LRH Comm-type log and notes in it the orders or directives issued and notes as well compliance (using Dept I&R and time machine). At length, the communicator will have a noncompliance list.

This usually involves only a few persons or outside firms.

The communicator should inform the executive of this by presenting orders ready to sign nominating Ethics Hearings or Executive Ethics Hearings (or dismissal of outside firm) on certain persons who consistently noncomply.

If the executive has a junior post and a communicator, then for noncompliance one substitutes "job endangerment" actions which harass the executive and must be filed and remedied before the executive's statistic is shattered.

Only in that way can a communicator defend his or her executive from being hit by sudden shocks. Noncompliance (or job endangerment) lets the barriers down on the whole incoming line to a nasty situation which will then, unhandled, hit the executive with no time lapse left. So he has to handle a deteriorated situation in a screaming rush. He probably handled it months before but noncompliance let it worsen. And job endangerment, let it build up, has the same effect on a junior executive. The amount of bad news an executive gets in is in direct proportion to the failure of compliance (or job endangerment) and the communicator's failure to spot it at the time. The shorter the time one has to handle a bad mess, the harder and more shocking it is.

This is the *sole* reason a competent executive grows tired, wants to quit, leaves his job.

ORG BOARDS
INDEX

It is basically communicator failure to warn him of noncompliance (or job endangerment) early, so he can get people who *will* comply (or get those who endanger him off his back with their ineffectiveness or suppression). Or who will do their jobs and not leave them to the executive or let the executive suffer from their deeds or lack of them.

The fashion of a "private secretary" for every title is of course nonsense. As not every title by far is an income producer or statistic raiser.

Giving facilities to titles instead of high statistics denies the real producer what he needs by soaking up available help into corners that cannot benefit the org with it.

A *normal* action of a post is the usual covered (not uncovered) post which if replaced changes nothing. A real facility differential is a large change.

Thus if you give facilities to those who have no more than normal (covered post) facility differential and those who have a marked facility differential are given no help, you will eventually wipe out by overwork those who have the facility differential and the org will collapse.

It is not flashy new ideas so much that raise income but efficient standard actions.

New ideas are fine. When all the old programs are *also* working.

An executive who is brilliantly successful is one who can get all the formal, standard functions going and then add the garnish of bright new angles that augment the proven track.

Facilities give a valuable executive "think time" and "consider time" and a fresh, alert attitude toward what is going on.

If you want to raise your income as an org, then:

a. Get all standard actions functioning and staff working and

b. Spot those with "facility differential" and give them facilities.

c. Don't falsify any "facility differential" for sake of face or status.

d. Make sure that facilities granted know their business or work.

REMIMEO

ADMIN KNOW-HOW SERIES 8

INTERVENTION

The urgent directive system (see HCO PL of 31 Oct. 66 I, Admin Know-How 2) is the one most commonly used, when they have to intervene, by senior executives such as the following:

Founder
A Senior Ad Council
Exec Sec
LRH Comm

The routine in this case is more or less as follows:

1. The senior on discovery of a bad situation or noncompliance issues an urgent directive. (If more than one is issued at the same time by different seniors, the list above is the precedence list of what order to follow.)

2. The senior directs investigation. A Senior Ad Council usually appoints a Board of Investigation, sometimes directly orders a Comm Ev. The Founder might only require an ED from his LRH Comm in that area. An Exec Sec might require only an ED from his or her communicator if he or she has one. Or any on the list may order a board.

3. The ordering senior, on receipt of the requested directive in draft form, then returns it to the Ad Council of the org or orgs to which it will apply. Until the Ad Council acts or *some* directive to handle the situation is passed, the original most senior urgent directive remains in force.

The above would be the most common admin action, most calculated to bring things right in the long run.

It is important that until some form of ED is formally passed by the Ad Council of the org or orgs concerned, the urgent directive must be followed by those to whom it is addressed.

This keeps arbitraries from entering into admin.

Nothing of course prevents a senior executive as listed above from simply issuing straight orders with no follow-through of an ED. In such case, the directive is not called an urgent directive but is simply an order in ED form.

DIRECT ORDER

Example: A senior executive discovers that a high unreasonable rental compared to income is being contemplated. By any means or ED, he forbids it and demands other quarters be looked for quickly. This requires no follow-through beyond the senior executive making sure other quarters ARE found and the order is complied with.

URGENT DIRECTIVE

Example: The Founder finds a long string of people are being labeled suppressive because they won't separate from Joe Blow. He writes an urgent directive to stop labeling people this way and convenes a board on the whole subject in that org, gets their findings in the form of an ED, sends it to that Ad Council. They pass it after some, none or many changes. The urgent order ceases to be in force at that moment. He could also have simply issued a direct order.

Example: An HCO Exec Sec finds Central Files is not increasing. She issues an urgent directive to round up all CF names lying around the org. Then investigates personally, writes an ED and puts it before the Ad Council. They work on it, modify it or expand it and pass it. The urgent directive ceases to be valid. Remember, she could as easily simply have issued a direct order as above. It could even have been in Executive Directive form.

PETITION

A direct order or a straight directive can be petitioned against *after* compliance. The Ad Council simply passes a petition and gives any data required or an ED to substitute.

It is usually wise to give a better remedy in the form of an ED and get that ED conditionally passed with the approval of the original issuer of the direct order or straight directive.

THEORY

Those who do the work sometimes know best and those nearest the scene are sometimes better armed with data.

A senior executive sometimes has to act without all the data and a wise senior often so acts when the situation is bad.

But the senior is only trying to remedy the situation in the final analysis. After his ordered fast action is taken, he is ordinarily quite happy to have help improving the remedy.

DIRECT SUBMISSION

An urgent directive or direct order may also be handled as follows by a senior:

1. Issue it.
2. Send it to the Ad Council of the org to which it applies with the note: "After you've done this, pass a directive to handle this sort of thing."

DEMANDED DIRECTIVE

A senior can simply demand an Ad Council pass a directive to remedy a situation and let them sort it out. This is only done when one has almost *no* data.

In this case the Ad Council passes one, puts it in force and sends a copy to the senior via channels stating, "Compliance herewith."

LABELING DIRECTIVES

When an Executive Directive is passed by an Ad Council, if it wipes out an urgent directive or a direct submission or a demanded directive, the resulting ED must bear the fact under its title: Executive Directive after Board of Investigation — "Cancels Urgent Directive PE 96 GET INCOME UP"; or direct submission after urgent directive — "As requested by HCO Exec Sec WUS to augment her direct order, 'Get Income Up'"; or by demand for a directive — "As demanded by Ad Council WW in their cable 239 WW, Pass a directive increasing income."

DANGER FORMULA

The Danger Formula applies when such orders bypass those responsible, meaning at least an ethics investigation must occur to find who was asleep if any.

However, the Founder can issue an urgent directive or direct order to any org and order the Ad Council of any org, as he is in fact a senior of that immediate org, without having to take ethics action on the Ad Council WW or the senior Ad Council to that org. However in such cases Ad Council WW and the senior Ad Council are informed.

If, however, the Founder has to do too much too often, he steps back upstairs and investigates the senior Ad Councils. This has been the usual practice.

The Founder usually uses his LRH Comm to effect orders, get data and submit to Ad Council.

A senior Ad Council uses its area representative in its own group or the LRH Comm in the junior Ad Council to do the same thing.

In practice one issues urgent directives when the situation is rough and simply demands a directive when things look like they will get rough.

Intervention by seniors is hard for juniors to cope with. The best defense is don't develop bad situations that then require intervention and keep all stats up and the org expanding.

ADMIN KNOW-HOW SERIES 9

EXPANSION
THEORY OF POLICY

It is not very hard to grasp the basic principle underlying all policy letters and organization.

It is an empirical (observed and proven by observation) fact that nothing remains exactly the same forever. This condition is foreign to this universe. Things grow or they lessen. They cannot apparently maintain the same equilibrium or stability.

Thus things either expand or they contract. They do not remain level in this universe. Further, when something seeks to remain level and unchanged it contracts.

Thus we have three actions and only three. First is expansion, second is the effort to remain level or unchanged and third is contraction or lessening.

As nothing in this universe can remain exactly the same, then the second action (level) above will become the third action (lessen) if undisturbed or not acted on by an outside force. Thus actions two and three above (level and lessen) are similar in potential and both will lessen.

This leaves expansion as the only positive action which tends to guarantee survival.

The point of assumption in all policy letters is that we intend to survive and intend so on all dynamics.

To survive, then, one must expand as the only safe condition of operation.

If one remains level, one tends to contract. If one contracts, one's chances of survival diminish.

Therefore there is only one chance left and that, for an organization, is expansion.

PRODUCT

To expand, any company needs a demanded product and will and skill to produce and deliver it. It can be a service or an item.

If a company has a demanded product and will and skill to produce and deliver it, it must organize to expand. If it does, it will survive. If it organizes to stay level or seeks to grow smaller, it will perish.

This is easily observed in nations. Whenever one seeks to remain the same or to lessen itself, it usually perishes. It need not seek only to expand its borders. It can also expand its influence and service. Indeed, the effort to expand borders in a nation without increasing a demand for its influence and products is a primary cause of war. If a nation expanded the demand for its influence and products, it would expand without war. When a nation seeks to merely expand by force of arms and does not expand the demand for its products, one gets a dark age or at least a social catastrophe.

Rome, early on, was in great demand for its social technology and manufacturing skill and only a cruel streak in her made her wage war to expand. Britain for instance was ready to welcome Roman baskets and pottery and art and had been demanding them for nearly a century when Caesar's vicious ambitions actually wrecked the smooth progress of Rome by enforced expansion by arms in excess of the demand for Roman products. This was one Roman product nobody wanted — Caesar and his legions.

Psychiatry's product of further insanity was not in demand by the people but by the state which sought to crush people or at least hold them down. So psychiatry expanded by government regulation, not by popular demand, and so at this writing stands in danger of complete extinction, for its influence depends utterly on "expanding" into the legislatures and government treasuries and no expansion whatever of any demand from the public and no product except slaughter.

The Roman Catholic Church once had a healing product, by actual treatment and by relics and miracles and was in great demand by the public and eventually even the barbarians. But she began to fight progress in science and knowledge and her product turned into exported ignorance backed by autos-da-fé (burning heretics) and thus ceased to expand and today is rapidly shrinking.

Buddhism, earlier than that, expanded continuously as it never sought new extension of territory other than that of learning. Buddhism failed in India alone because its monks became licentious, ceased to deliver true teachings and were swept up, most likely, in India alone, by the Muslim conquest of that unhappy country sometime around the seventh century.

Britain of the twentieth century actively sought to contract her empire and did so to the tune of internal economic catastrophe.

SINGLE PRINCIPLE

Thus it should be obvious that contraction leads to death and expansion to life, providing that one maintains a demand for itself and the will and skill to produce and deliver a product.

If, as ours is, the product is very beneficial and if we continue to produce and deliver, the demand is assured. In this we are fortunate. And we are also fortunate that, try as they will, no squirrel is ever able to duplicate our product since one variation (that of changed brand) leads to others and they promptly have neither product nor demand — that observation is itself empirical. No squirrel has lasted more than two or three years in the past sixteen years. And there have been many. That they squirrel shows enough bad faith to drive away the public the moment the public hears of the original.

Thus providing we maintain the will and skill to produce and deliver we can expand and proper expansion that will continue is possible.

All our policy then is built on EXPANSION.

It assumes we wish to survive.

And it stresses the production and delivery of a straight, nonsquirrel product.

It is calculated to ensure a continued and widening demand by ensuring that product remains good and beneficial.

The technology itself is complete but it expands also by experience of administration of it and simplifying its presentation.

But to alter the basics of the technology will stop expansion because it is what we are producing, not what we are building.

We are building a better universe. It has not been a good universe to live in so far but it can be.

Our punitive force is our ethics system and it exists to ensure the quality of the product and to prevent the blunting of demand for the product.

INTERPRETATION OF POLICY

The organization then has all its policy rigged to expand.

It takes many things to ensure expansion.

Thus when you are interpreting policy, it should be interpreted only against EXPANSION as the single factor governing it.

This can serve to clarify questions about policy. The correct interpretation always leads to expansion, not holding a level or contraction.

For example, policy bars the entrance of the healing field. This is solely because there is too much trouble with the occupiers of that field and only outright war (with no demand) could solve them. This seems to be a brake on expansion. It is only a brake on expanding by war in the absence of demand. Therefore the right way to expand is to gradually build up general public demand, let experience by the public see that we heal and when the demand is there and howling for us, reinterpret the policy or abolish it as a brake to expansion. As one can only expand by external demand for the product, if one seeks to expand in the absence of a specific demand for the product, one has war and war doesn't lead to expansion any more than burning heretics and other brutalities expanded the Catholic movement.

So one interprets policy against *proper expansion* that is proper.

CORRECT EXPANSION

Expansion which when expanded can hold its territory without effort is proper and correct expansion.

Hitler (like Caesar) did not "consolidate his conquered territory." It was not possible to do so, not because he did not have troops but because he didn't have a real demand for German technology and social philosophy before conquering. Thus Hitler lost his war and fascist Germany died. It is almost impossible to consolidate territory where one was not invited in in the first place and force had to be used in order to expand.

One can remove a real suppressive by force to ensure demand will then build, providing he does not seek to force the product on the suppressive and all those around the suppressive.

The suppressive, as an individual, can be removed by force because he is an antidemand factor using falsehood and lies to prevent demand from occurring. But one, in removing the suppressive, has to be sure one's own product and delivery are still correct and straight and in no way suppressive of anything but suppressives.

Further one must leave at least a crack in the door and never close it with a crash on anyone because a demand still may develop there.

The only way to start a full scale revolution is totally and thoroughly slam the door. One must always leave a crack open. The suppressive can recant and apologize. The pauper can by certain actions no matter how improbable secure service. Etc.

In short, use force only to shut down false antidemand factors. Yet leave the door at least a crack open in case demand without duress develops. Never finally shut off a possible demand.

You can stimulate demand. You can create it. But you may only comfortably and properly expand into demand.

Removal of a suppressive only brings a potential appearance of demand from the area he dominated. That potential, by some means, the best of which are good dissemination and service examples, must become demand before one can truly occupy territory.

Thus areas taken purely by force of arms can never be held by force of arms in the absence of demand for product and thus demand by the area for occupation and consolidation.

As we have a product that frees in an ultimate sense and de-aberrates, there is of course an end to the game. But it is so far ahead, embracing a whole universe, that it requires minimal consideration.

Expansion requires area to expand into. And we are in no danger of running out of that.

If we were dependent as nations often think they are on boundary expansion on one planet, or into one planet's populations as companies think they are, we would have brakes on expansion due to territorial or population limitations alone. But we are not likely to encounter such barriers for a period of time so long we can consider our expansion potential as infinite — and are the only organization that honestly can so consider. We are not conquering land in the government sense anyway.

All factors, then, in policy are rigged for expansion.

And this brings about a possibility one can be asked about, that of *over*expansion.

One can "overexpand" by acquiring too much territory too fast without knowing how to handle it. One can conquer new territory as fast as one wants IF he knows how to handle the situation.

There are several ways one can "overexpand." They all boil down to overextended administration lines in a *single* administrative unit.

In this, one must know the principle on which the org board was originally conceived. It is that of Thetan–Mind–Body–Product.

If there is a thetan, a mind (organization potential, not a harmful mass) can be set up — a mind which will organize a body which will produce a product.

If any one of these elements (Thetan–Mind–Body–Product) are missing, then an organization will fail.

Man is so aberrated all mental actions seem to him to be reactive mind actions. But there has to be in organizations a data and problem-solution coordination unit in order to set up a body. (A thetan can do this without a lot of mass, having his memory and perception and intelligence.) We have then an Advisory Council to coordinate acquired data, recognize and resolve problems. Above it, there has to be a thetan somewhat detached from it. This may be a higher mind (Ad Council) operating as a director to the lower Ad Council.

The mind must operate to form a body. This body is the MEST (matter, energy, space and time) and staff of the organization.

This body must produce a product. This in the HGC for instance is resolved cases.

Any smaller part of the whole organization is also a Thetan–Mind–Body–Product. Often the executive is both thetan and mind but as soon as traffic gets too heavy, he must form a separate mind such as an administrative committee or a personal staff to compose the mind. In such a smaller unit than the whole org, there is yet a body (the staff and MEST of the unit). And there *must* be a specific product. The product sometimes is absent and sometimes incorrectly assigned but if so the unit won't function.

Overexpansion occurs only when one tries to handle the larger volume with the same Thetan–Mind–Body–Product numbers one had before.

This tells you why single practitioners can't expand their practices without overwork.

It also tells you why some executives are upset at the idea of expansion as they (lacking organizational insight) see it solely as overwork. They don't see that when you expand volume and traffic you must expand the organization.

There is a wrong way and a right way to expand an organization.

The wrong way is to add staff and facilities endlessly (like governments tend to do) without adding to the organization itself.

If you had huge affluences occurring steadily, you would soon go into collapse if you did not expand also *by organizational units* or branches.

In taking over a new field or area of operation, for instance, one errs when he adds that traffic to the basic organization's traffic.

In the presence of huge escalating affluences, one must analyze what is causing them and reinforce them. BUT one must also see what new KIND of traffic is being added.

If one finds a new KIND of traffic, then one sets up a suborganization unit to handle it which is complete in itself.

If we are now getting "businessmen" in quantity, we set up, under the control of the original organization:

1. a thetan to supervise it,
2. a mind to coordinate it,
3. a body to handle it, and
4. a new product called "released/cleared businessmen."

If we then were to find the new unit (struggling to form itself into seven divisions on its own by now) gets a lot of demand and statistics on an Org Exec Course, it must cease to gratuitously coach it and set up its "Business Academy" teaching the Org Exec Course as Dept 10, appointing a thetan, mind, body and achieving a product "trained businessmen" and see that units to support it occur in other divisions and an ethics unit to prevent blunting of demand and re-aberration.

This can even go backwards. One sets up in Dissem a unit called "Business Course Project Promotion Section" and stimulates the demand and then when it is there puts in its Department 10.

Soon all seven divisions have extra units to care for this new action, each unit with a Thetan–Mind–Body–Product. The products are different but they all add up to "trained businessmen," whether they are creating demand, financing or servicing.

So *over*expansion is only underorganization in the main.

One can of course "overexpand" by attempted servicing in the absence of demand causing thus losses in finance. In such a case only concentrate on creating *new* demand, not on servicing old demands. This by the way is the most common error in organizations of ours. They shrink because they are not creating *new* demand and concentrate only on creating demand in those already demanding (which is lazy-easy).

New demand is expensive to develop. Thus you often see finance units frowning on "new demand" expenses and cutting down magazines in number of issue, not buying new mail lists, etc.

To start a new suborganization, one sets up on the basis of potential demand, sets up ethics to prevent demand-blunting or bad internal service or performance, works on increasing the demand, introduces service, sets up external ethics to prevent blunted demand, increases the demand by dissemination to *new* and *old* areas of demand, increases service, ensures product, increases the organization (not just staff), increases demand in new and old areas, stiffens up ethics, improves service facilities, etc., etc.

It's continuous expansion of volume, continuous expansion of organization, continuous expansion of demand. Where one lags behind the others one gets trouble.

It is almost impossible to run a nonexpanding organization with ease. One gets into financial crises, staff troubles and overwork. Decay has set in. And fighting it is sure to overwork an executive. The easiest course is to expand. Then one has the help.

Summary: In understanding policy one must understand its key and that is expansion.

Only a Scientology organization has an unlimited horizon. But any organization must expand to survive.

The only ways you can "overexpand" are to fail to expand with new demand and keep pace with it evenly with organizational expansion as well as numbers.

It is easier to expand than to "remain level."

Organizations and units which do not expand cannot stay level and so contract.

Org executives and personnel are overworked only when they cannot afford to expand and thus cannot get the help they need to do the work, quite in addition to there being more problems made by contraction than by expansion.

Scientology organizations are designed for expansion.

Expansion requires an expansion of all factors involved and when something expands out of pace with the rest which is not expanding at the same rate, trouble is caused.

Uniform expansion of demand, ethics and service into new fields and areas as well as old areas of operation are needful to trouble-free activities.

Each member and unit of an organization has a product which, if different, contributes to the whole product of an organization.

The ultimate product of Scientology is a universe that is decent and happy to live in, not degenerated and made miserable by suppressives as it has been. This is accomplished by the de-aberration of individuals and the prevention of blunted demand and re-aberration by suppressives and this is the method of expansion.

If in these early days of Scientology we have any troubles, they occurred by an earlier imbalance of expansion.

Demand was created without handling suppressives, which unequal expansion gave us a backlog of unhandled ethics in the society. All we need do is catch up our backlog in those organizational functions which were not expanded when they should have been and all will go smoothly.

Any time you do not expand uniformly with all functions you get an appearance of overexpansion by some functions. The best answer is not to cancel the expanded functions which overreached but to catch them up by expanding the ones one neglected in support. You will have trouble wherever you cut back an expansion as that is contraction. The answer, within reason, is to advance all else to catch up to the expanded portion while still, more calmly, expanding it.

ADMIN KNOW-HOW SERIES 10

HOW TO PROGRAM AN ORG
SAINT HILL PROGRAMS

In past years we have had many problems resulting in programs as follows:

The sequence of *major* programs at Saint Hill:

To provide a home for LRH and family in Commonwealth area so Commonwealth area could be organized and made self-supporting.

To provide admin facilities for LRH in Commonwealth area.

To make Commonwealth area self-supporting regardless of US funds or customers. (Not yet resolved.)

To train technical and admin staffs for Commonwealth orgs.

To make Commonwealth outer orgs run on their income without their using all the bills sums owed SH or Ron as part of their operating funds.

To find financial support for SH activities resulting in the SHSBC which also accomplished the next above.

To handle Commonwealth activities and organizations and also handle US activities. (Solved by telex and OIC and later the Exec Div WW.)

To establish SH general broad promotion. (Solved by *The Auditor*.)

To provide facilities for administering critical high-level tech such as Power Processes. (Solved by SH HGC.)

To organize SH so it could be administered (made needful by '63–'64 collapse of multiple corporative setup). (Solved by seven-div system completed by end of 1965.)

To refine the Qual Div to prevent all "failed cases," train staff and improve tech.

To get reports of tax, etc., off continual crash programs. (Solved by Treasurer but incomplete of any guarantee of chartered accountant compliance.)

To get field auditors to cooperate and stop conflicts with orgs. (FSM program.)

To refine the Tech Div. (Finished about August 1966.)

To get in smooth operation an Ethics system.

To operate the Clearing Course and to assembly-line Clears. (Still under refinement but more or less complete.)

To establish and operate OT Course. (Just now under development.)

To beat back continuous attacks by suppressives in the third and fourth dynamics. (Solved by establishing Intelligence Branch.)

To train up staffs at SH and in outer orgs by staff status and Org Exec Course.

To improve the cash-bills ratios of orgs.

To safeguard income once earned by better financial planning.

To reform Ad Councils into representative bodies (now complete with the formation of an Executive Council).

To assemble all Scientology materials. (Flopped by reason of noncompliance but lately reinstituted.)

Dictionary Project to prevent misunderstood words. (In sporadic and jerky action to this day.)

To handle legal situations which built up by noncompliance by attorneys internal and external in org. (Under solution.)

To improve and maintain affluences. (Just begun.)

To help Scientology dissemination and attack more broadly to prevent such quantities of legal defense. (OT activities program just begun.)

To safeguard, continue and expand all Scientology orgs. (Worked on a bit, not really concentrated on except for cash-bills and staff status.)

General improvement of finances. (OT activities.)

Buildings for Scientology orgs. (OT activities.)

To establish better audiovisio educational facilities. (Barely begun.)

These have been and are the major program steps which have been implemented or are under development at Saint Hill since 1959 and forward to the end of 1966.

Some of the years covered acquired names such as

1965 — The Year of Organization.
1966 — The Year of the Clears.
1967 — Will probably be the Year of the OTs.

It will be noted that each of these programs solved a self-evident problem.

It must be realized then that these problems did exist.

If the problems exist again, remember there was already a solution program and usually it has only been dropped and the problem reappeared because it had been dropped. The proper directive action is to reimplement and improve the solution which is to say, in the case of SH, the carrying out of the successful programs noted above.

Ad Councils are always advancing new programs and often it is only an old program dropped out that needs reinstituting, not a new solution. Certainly an old problem has cropped up again.

There have been other programs of course. Many solutions to old problems, and of major importance, are found in policy letters. Some programs, although necessary, have never been successfully implemented. There was the motion picture program but it is dogged by technical bugs and became part of the audiovisio program now being attempted. There has been the rewrite of all books program but I've been too overworked to attempt it.

Other future, self-evident programs will come into being. They will only fail if earlier programs, dropped out or not given reorganization when needed, bring old problems into view by exposing them. All the problems underlying the program solutions above still potentially exist, held in abeyance only by the programs.

The best way to form programs is to isolate *actual* problems at any level of operation and solve them either by removing elements that make them or by instituting a program. Sensible planning tends toward both actions.

An unsuccessful program usually will be found to be solving the wrong problem or is itself an improper solution to an actual problem.

If you want to establish the validity of a new program offered by someone, ask him what problem it is seeking to solve. You can then see if you already have a solution to the problem, but most often you will see that no clarified idea of the problem existed and so the solution is poor or inadequate.

The common problem of an org is not the development of programs but failure to execute existing ones.

Another difficulty with orgs is that they often alter the existing program so that it no longer resolves the problem the program was set up to handle. A current example is magazines. Magazines exist to solve the problem of public unawareness of an org. An org has no space unless it is sending out anchor points to make it. And it is in nonexistence for its *Scientology* public unless it mails magazines regularly. Magazines do not develop much new public — that is another, largely unsolved, problem. Magazines exist to continue the awareness of the existing Scientology public. Now as these people are already aware of Scientology, the awareness one is trying to develop is that of the org and its services. Recently continental magazines began to issue only Scientology *data*. The ads making the Scientology public aware of the *org* were toned down and omitted

and the cash-bills ratio worsened in orgs. The orgs started toward nonexistence. Significantly the trend was begun by a someone who did not like orgs but was in favor of Scientology. Issue Authority erred in not looking at old magazines and comparing them to the current layout. There was a vast difference. No ads in current ones. The program had been altered.

Artists are taught to be "original" and to alter. Yet successful artists painted the same picture their whole lives under different names. These just seemed new.

To change, alter or drop a program one must know what the program was there to solve. Just change for change's sake is mere aberration (making the lines crooked).

It's a good exercise for a senior executive to list the problems the org really does have. To know the programs of an org that are *in* is to see what problems an org *would* have if they were dropped.

It's healthy to revert a program now and then by meticulously examining how it was originally when it was very successful and then put it back the way it was originally. This is done not by adjusting lines but by looking up old magazines, old policy, old despatches and issue pieces, even old tapes. What did it used to consist of? If it is no longer successful:

a. The program was altered or dropped and

b. The org will have a problem it once had long ago or

c. (rare) The causes of the problem have been removed and the problem no longer exists.

There's lots of trial and error in developing a program. That's why any *new* program should only be a "special project" for a while, off the org main lines really, under special management. If a "special project" starts to show up well in finance (and only in finance), then one should include it "in" with its new staff as an org standard project.

To run new programs in on existing lines is to disturb (by distraction and staff overload) existing programs and, even if good, the new program will fail and damage as well existing programs.

Provide, then, staff and money to pioneer a new program as a "special project." If you don't have money or staff to do this, you would do far, far better simply looking over the problems the org faces and get in the *old* programs that handled them. These are known winners, and don't forget, they cost a lot to find and prove as *the* thing to do. And they took a long time.

Take the Central Files–Letter Reg setup in orgs. That's a standard program. Developed in London and DC in the mid '50s. If you dropped it out, an org would fail. The problem is "how to achieve special individual contact with *existing* clientele and maintain *existing,* already developed business." One large firm, I was told the other day, that has put in our seven-division system was stunned to find they had *never* contacted their existing business clientele. They only had done business with *new* clientele. This cost them perhaps 200,000 sales a year! They promptly put in our CF–Letter Registrar system with a vengeance.

In their case (as in a forming or reorganized org) they weren't even aware of the problem and so had no program for it.

It is often the case that one can develop a program that removes the need of some other program. If one removes the factors that make the problem, one can dispense with the program that solves it. But this is so rare it is nonhuman in most instances.

For instance, doctors are a public solution to the problem of human body illness. If one removed this problem, one could remove the "doctor program" safely. That's why doctors sometimes fight us. We are thought to be working to remove the problem to which they are a program. One would have to have more than a better *cure*. One would have to remove in the fourth dynamic (mankind) the *causes* of illness. These would not be what people think they are as the problem persists and so does the "doctor program" in the society. It can't be the right problem. Only enough is known of the causes of illness to make the problem *appear* to be handled. Actually the bad statistic of ill people is rising. We have entered the field in research only far enough to know that suppressives make people ill but that's a sufficient departure to make it an ethics problem, not one in treatment! By extension of this theory, one might find this problem not caused by Pasteur's germs but by suppressive groups. In that case one would increase ethics programs. Eventually, if this solved it, the "doctor program" would be diminished as no longer the only solution.

The above is not a statement of intention or a plan. It is an example of how an old standard program can become less important. Note that one would have to (a) state the problem better than it had been stated, (b) isolate causes of the real problem, (c) institute a "special project" to handle *those* causes, (d) see if the problem was now better handled, (e) abandon it if it didn't handle the problem, or (f) make it a standard program if it did prove effective, (g) diminish the old program.

So just dropping a proven program (without going at it as above [a] to [f]) can be a catastrophe as it can let in an old problem when one has quite enough problems already.

Abandoned programs that were successful are currently the main cause of orgs being in any difficulty.

You can always make an org run better by studying old successful programs and getting them back in.

If you were to take the above list at Saint Hill, the major SH programs since 1959, and simply *revert* them (make them more like the original) and reinforce them, income would probably double.

If we abandoned as few as five of these programs, the SH org would undoubtedly collapse.

If we added six new programs directly into the org without seeing the problem to be solved, we could distract staff to a point where the old standard programs would suffer and the org would collapse.

Sometimes, even in our orgs, we enter new arbitraries which make new problems we don't need. Those are the sources we can do without. If we didn't routinely abolish such org-generated problems, we would fade away in a year.

Therefore we cherish and forward the existing programs we have and study them continually to be sure they don't "go out."

This is not a list of the *problems* faced at Saint Hill; it is a list of solutions. For these programs may accidentally be solving problems we cannot yet clearly state.

This is not a list of all major programs in Scientology. These are found in the policy letters of past years and particularly 1965.

This is a list of the major SH programs for use by SH executives and as an illustration to others on how to program and to show them that as Scientologists we use our knowledge of the mechanics of life, problems and solutions to govern programs.

If *all* the problems we faced were ours only we could of course simply audit them out. But we exist in a third and fourth dynamic which is not merely aberrated but quite batty. This thrusts problems on us (finance, international ignorance and intolerance, religious and psychiatric cults, suppressive governments, retarded or misused scientific technology, lack of human dignity and a host of other factors).

We exist, therefore, in a rather madly tossing sea, beset by numerous counter-currents.

As we grow we can remove vicious causes that make our problems problems. Only then can we begin to drop certain programs as the problems will cease to exist. But at this writing those problems do exist and holding them in check are numerous solutions we call programs.

Where one of our standard programs fails through lack of recognition we then see a problem charging in on us demanding crash programing by higher executives.

When we let uninformed or worse people put in new arbitraries or solutions that solve no problem, we disturb old programs and soon have heavy trouble through unnecessary programing. (Watching a new, inexperienced Ad Council propose "programs" is a painful experience to a trained and effective executive. These proposed measures look silly because they confront no real problems of the org and are dangerous because they will distract the org from correct existing programs of which the new Ad Council seems blissfully unaware.)

When an org doesn't know its programs, it can get pretty silly and deeply in trouble. If it also knows its problems it is fortunate.

But any Scientology org is rich in programs already proven and tested and in exact drill. If it just keeps these going it will win even if it doesn't see the problems.

As it wins the org expands, can afford more assistance, is less under duress. Then it can begin to examine the problems themselves (still keeping the solution as a program) and possibly remove some of the causes of the actual problem. Only when the problem is gone can one drop a program.

A *Scientology* org is best fitted to do this as its staff is going uptone by processing and is more and more able to confront and see source. Therefore it eventually can remove the causes of its problems since it can (a) see the problem and (b) see the bad sources which make the problem.

Until it *can* see, it is not safe to drop any of the solutions. And as orgs are a channel or a way in themselves they always will have a bottom strata of people who cannot yet see the problems and so need explicit programs to follow. As the lower strata moves up, a new lower strata, by expansion, takes its place so there is no real end to programs until the day comes when the universe is sane.

And that's not tomorrow or even the day after.

But we *are* making steady, relentless progress in that direction. Mainly because of our programs, well applied.

CORRECTION AND ADDITION

GEN. NON-REMIMEO
EXECS SH
ORG EXEC COURSE

ADMIN KNOW-HOW SERIES 11

HOW TO PROGRAM AN ORG CORRECTIONS AND ADDITION SEQUENCE OF PROGRAMS CORRECTION

The sixth SH program from the top on page one states, "To find financial support for SH activities resulting in the SHSBC *which also accomplished the next above.*" This does not refer to "next above" but to two above, "To train technical and admin staffs for Commonwealth orgs." The Saint Hill Special Briefing Course was founded (a) to train tech and admin staffs for Commonwealth orgs and (b) was found to be the solvency factor of Saint Hill which was being looked for.

"Next above," "To make Commonwealth outer orgs run on their income without their using all the bills sums owed SH or Ron as part of their operating funds" has only partially been solved and the SHSBC was not founded to solve it although it helped. The 7 div system began to solve it (financial independence of outer orgs) but only where a *good* Qual Div was put in first and all area failed or overrun cases were picked up. It is notable that Sydney and Adelaide, reported by Auckland to have put in *no* Qual Div even after 2 years of urging, were low orgs on the totem pole. Others that did get in a Qual Div and pick up their failed cases and overruns improved very markedly. So the solution to solvent outer orgs that could run without using SH or Ron's income lay in (a) establishing a fine Qual Div, (b) picking up their area's "failed cases" and also repairing *all* overruns, (c) training their staffs on tech and admin in the new Qual and (d) putting in a fine Tech Div. Those that really did that are going very well. Sydney, which butchered cases once by overrun R2-12, evidently completely neglected the program and remains insolvent.

ADDITION

To make a simpler statement of What Is a Program, the following is offered:

1. The org has a problem relating to its function and survival.

2. Unless the problem is solved, the org will not do well and may even go under.

3. The *solution* is actually an org activity or drill. We call this a PROGRAM.

4. To find and establish a *program,* one conceives of a solution and sets it up independent of org lines with its own staff and finance as a SPECIAL PROJECT.

5. When a special project is seen to be effective or, especially, profitable, it is then put into the org lines as worked out in the "special project," bringing its own staff with it.

6. The usual place to carry a special project is under the Office of LRH or the Office of the HCO Exec Sec or Office of the Org Exec Sec. Programs go in their appropriate departments and divisions one to six, not seven.

OVERHAULING A PROJECT

When a program goes bad, gets altered to a point of unworkability or carelessly conducted or is dropped without orders to do so, two things may happen.

1. The Exec Sec (or LRH or the LRH Comm) over that division puts the executives which should have seen to the program in DANGER condition and personally pushes to get the program back in as a program.

2. If this fails, the Exec Sec (or LRH or the LRH Comm) hauls the whole program into his own office as though it were a new special project, gets it personnel and finance and sets it all up and then gives it over to its correct dept and division.

The second step comes about when one finds any noncompliance in doing (1) above. As a Danger condition was already set up and the Exec Sec (or other senior) is handling it on a bypass already, if one *still* can't get the program restarted there is no other action one can take than pulling the whole thing into one's own office. For sure somebody has a foot on it. Although one can try to find WHO has, this is no reason to continue to stall the program. After a Danger condition on a program has existed for a while with no change of activity, one is wasting one's time to keep pushing on a via. The *easier* course is simply to say, "As Address has been in Danger for some time and still continues to goof, I, the HCO Exec Sec, hereby take Address into my office in Division 7 where I will personally straighten it out and meanwhile the Ad Council is to nominate for the Exec Council a new HCO Area Sec."

In actual operation — I often do (1) above — call a Danger condition on a program that is not functioning, handle it personally and use ethics action on those bypassed.

Sometimes when (1) doesn't work, I realize there is interference still and haul the whole section into my office as a function of my office. It may stay there quite a while. Then I will put it elsewhere as a complete section transfer. Sometimes after the transfer I again have to haul it back. Usually that's because it went into the wrong place in the org. If you put a section in the wrong dept or division, it just won't function. The exception is the Exec Div and anything can be put in there for a while.

The common error in (2) is to forget one has it and forget to transfer it when formed up properly. If one looks over what hats he is wearing, one usually finds a program or two he has been handling and which he ought to finish up in final form and put into the org proper.

In theory any exec or even an in-charge can do (1) and (2) above.

If (1) doesn't work then do (2). The main mistake is to forget to complete the action of (2) by putting the program back in place in the org. To prevent that from happening, when you do (2), change it also on the org board. Then it stays in view. Otherwise one forgets and soon begins to feel overworked.

Almost any executive is holding on to a special project or two or even a program. So one should routinely look over one's own hats and refind these and complete cycle on them.

HCO POLICY LETTER OF 26 DECEMBER 1966

REMIMEO

ADMIN KNOW-HOW SERIES 12

PTS SECTIONS, PERSONNEL AND EXECS

An org has certain sections, units, personnel and executives who go PTS to suppressive elements in the society.

If one knows this, one becomes less puzzled by noncompliances and trouble in those quarters. One can also do something effective if one realizes why.

Legal, Accounts and Construction and lesser units tend to go PTS very easily.

A "PTS" is a *potential trouble source* by reason of contact with a suppressive person or group.

Suppression is "a harmful intention or action against which one cannot fight back." Thus when one can do *anything* about it, it is less suppressive.

Thus Legal goes PTS being in contact with SP courts and with SP or PTS attorney firms as well as confronting suppressives who are seeking to injure the org through various suppressive actions.

Accounts goes PTS through various tax and government supervision suppressions.

An Estate Branch listening to Town and Country Planning or zoning suppressives tends to go PTS.

In a standard issue corporation the labor relations contact point, continually messed up by labor agitators who could do the company in and regulations protecting such, tends to go PTS.

An Ethics Officer may become PTS.

The Dead File Unit may go PTS on all the entheta letters.

As such PTS personnel impinges on top executives, these can also go PTS and the org gets harmed to say the least.

HANDLING

As one cannot easily disconnect from suppressive society points without leaving the society, it remains that an executive must handle, if not the SP social groups, at least the situation developing from them and into the org.

Ideally one removes the SPs in the social groups. But where that is not possible one can do several things:

a. Limit the number of org personnel such groups contact.

b. Give such org personnel as do contact such suppressive elements S&Ds occasionally.

c. Change such personnel frequently.

d. Develop a system to restrain the SP from easily influencing such org personnel as may remain in contact.

e. Work gradually but steadily into a position to be able to remove suppressives from the social groups in question, such as becoming more influential as an org, suing, exposing, public education and other means.

INDICATORS

The first indicator an org executive has of a unit or staff member going PTS is noncompliance. Such personnel are being overwhelmed in various ways by the SP social groups and have no energy left to undertake their duties or forward org programs.

Another indicator is the amount of illness and lack of case progress on the part of such PTS staff members.

A third indicator is an executive getting the hat of such a personnel on his own plate.

An executive who doesn't notice such indicators and act is being in turn PTS, or simply isn't of executive caliber.

METHODS OF BALKING

There are several methods by which a staff member acting as an org contact point in connection with suppressives can balk the agents of SP groups.

One is to always tape-record *visibly* whatever the agent from such a suppressive group says. "Ah. Mr. Figuretwist of the Tax Division? Good. Now wait a moment so I can record whatever you say. Good. It's now recording. Go ahead." We used to handle the Internal "Revenue" Service of the US this way quite successfully. The org contact point always stopping the IRS inspector they sent around, turning on a portable recorder and then, and not until then, letting the man speak. Quite effective. That org only got into tax trouble when it stopped doing this. After the recording was dropped out as drill, the SP utterances of IRS agents were in full cry at the staff and they went PTS and began to make crazy errors and ignore org orders re tax.

Any time such agents come around they try to get as many staff into it as possible. And yap and yap and threaten and enturbulate. One *must* put them in Coventry (silence treatment) from staff other than the contact point. Staff members of a unit that could go PTS must be ordered to walk off without a word whenever such an agent

shows up. *No* "bull sessions" or arguments with such a person. The staff personnel who handles should point at the agent if other staff is about and say some key word like "This is a government man" at which all other staff in the unit turns its back or pointedly walks off. If you do this, such agents can't take offense but they get very uneasy, transact quickly, forget their mission to be enturbulative and go away soon. Don't ever think politeness will help you. Tipping one's hat to snakes never stopped a person getting bitten. Walking off has.

Staffs are so "reasonable" they think these SP group representatives are there for necessary purposes or serve some purpose or can be reasoned with — all of which is nonsense.

There are no good reporters. There are no good government or SP group agents. The longer you try to be nice, the worse off you will be. And the sooner one learns this, the happier he will be.

Some staff member in such contact points in the org should be the only one who handles and all other staff should be given chits for talking to such a person.

This limits the area of enturbulation. The handling staff member can become expert. But even so, watch for bad indicators in that staff member, and the moment they show up, change the contact point.

Never give such persons access to persons high up in the org — or unit. Turn such over to special personnel who can get the business over with at once and get the agent off the premises soon.

If you see a manager snapping terminals with such agents, transfer him to another post in the org. Unless you do so, he'll soon cease complying with policy and will soon have the place falling apart.

When such agents act or sound *very* suppressive, get them investigated, find the scandal and attack. It is a fortunate truth that such people *also* have crimes in their background that can be found. Find and expose them.

SPs are at war. Pleasant conduct, mean conduct, *any* conduct at all is simply more war. So wage the back action as a battle.

In all the history of Scientology no interviewing reporter ever helped. They all meant the worst when they acted their best and we are always sorry ever to have spoken. Even if the reporter is all right, his newspaper isn't and will twist his story. We have done best when we have blocked off reporters and worst when we've been nice. So the moral is, a person from an SP group will eventually make an org or some part of it PTS regardless of the agent's conduct.

These words may seem harsh and unreasonable, yet truth is truth and only when we ignore it do we get fouled up. Agents from SP groups lead to PTS staff, units or sections, leads to noncompliance, leads to a mess.

It isn't just imagination that SPs attack Scientology. The evidence has been around in plenty for sixteen years.

We began to prosper the day we cut public SPs' correspondence off the org lines and sent it to dead file. Our executives began to function, policy began to be followed and we began to grow.

So we'll attain new expansion just by applying what is in this policy letter.

I personally find such agents rather pitiful in their attempts to make trouble.

I think the contemporary attempts to upset us and accusations of things we never do quite prove the fact such mean us no good. But many staff and executives try desperately to be nice to them.

Handle the business they present as effectively as possible on special channels. Don't be nice. Limit their reach. And have less noncompliance and a far more effective and happier org. After all, real suppressives only constitute about 2½ percent of the total population. Why spend more than 2½ percent of your time on them?

The whole stunt is realizing that certain groups are SP and recognizing them and then handling them.

Be alert and stay alive. It won't always be this way.

HCO POLICY LETTER OF 12 FEBRUARY 1967
(Also issued as an HCOB, same date and title)

ORG EXEC COURSE

ADMIN KNOW-HOW SERIES 13

THE RESPONSIBILITIES OF LEADERS

A few comments on POWER, being or working close to or under a power, which is to say a leader or one who exerts wide primary influence on the affairs of men.

I have written it this way, using two actual people, to give an example of magnitude enough to interest and to furnish some pleasant reading. And I used a military sphere so it could be seen clearly without restimulation of admin problems.

The book referenced is a fantastically able book, by the way.

THE MISTAKES OF SIMON BOLIVAR AND MANUELA SAENZ

Reference: The book entitled:

The Four Seasons of Manuela
by Victor W. von Hagen, a biography.
A Mayflower Dell paperback. Oct. 1966. 6 shillings.

Simon Bolivar was the liberator of South America from the yoke of Spain.

Manuela Saenz was the liberatress and consort.

Their acts and fates are well recorded in this moving biography.

But aside from any purely dramatic value, the book lays bare and motivates various actions of great interest to those who lead, who support or are near leaders.

Simon Bolivar was a very strong character. He was one of the richest men in South America. He had real personal ability given to only a handful on the planet. He was a military commander without peer in history. Why he would fail and die an exile to be later deified is thus of great interest. What mistakes did he make?

Manuela Saenz was a brilliant, beautiful and able woman. She was loyal, devoted, quite comparable to Bolivar, far above the cut of average humanoids. Why then did she live a vilified outcast, receive such violent social rejection and die of poverty and remain unknown to history? What mistakes did she make?

BOLIVAR'S ERRORS

The freeing of things is the reverse unstated dramatization (the opposite side of the coin) to the slavery enjoined by the mechanisms of the mind. Unless there is something

to free men *into,* the act of freeing is simply a protest of slavery. And as no humanoid *is* free while aberrated in the body cycle, it is of course a gesture to free him politically as it frees him only into the anarchy of dramatizing his aberrations with NO control whatever and without something to fight exterior; and with no exteriorization of his interest, he simply goes mad noisily or quietly.

Once as great a wrong as depraving beings has been done, there is of course no freedom short of freeing one from the depravity itself or *at least* from its most obvious influences in the society. In short, one would have to de-aberrate a man before his whole social structure could be de-aberrated.

If one lacked the whole ability to free man wholly from his reactive patterns, then one could free man from their restimulators in the society at least. If one had the whole of the data (but lacked the Scientology tech), one would simply use reactive patterns to blow the old society apart and then pick up the pieces neatly in a new pattern. If one had no inkling of how reactive one can get (and Bolivar of course had no knowledge whatever in that field), there yet remained a workable formula used "instinctively" by most successful, practical political leaders:

If you free a society from those things you see wrong with it and use force to demand it do what is right, and if you carry forward with decision and thoroughness and without continual temporizing, you can, in the applications of your charm and gifts, bring about a great political reform or improve a failing country.

So Bolivar's first error, most consistent it was, too, was contained in the vital words "you see" in the above paragraph. He didn't look and he didn't even listen to sound intelligence reports. He was so *sure* he could *glow* things right or fight things right or charm things right that he never looked for anything wrong to correct until it was too late. This is the ne plus ultra of personal confidence, amounting to supreme vanity. "When he appeared it would all come right" was not only his belief but his basic philosophy. So the first time it didn't work, he collapsed. All his skills and charm were channeled into this one test. Only that could he observe.

Not to compare with Bolivar but to show my understanding of this:

I once had a similar one. "I would keep going as long as I could and when I was stopped I would then die." This was a solution mild enough to state and really hard to understand until you had an inkling of what I meant by keeping going. Meteors keep going — very, very fast. And so did I. Then one day ages back, I finally *was* stopped after countless little stoppings by social contacts and family to prepare me, culminating in a navy more devoted to braid than dead enemies and literally I quit. For a while I couldn't get a clue of what was wrong with me. Life went completely unlivable until I found a *new* solution. So I know the frailty of these single solutions. Not to compare myself but just to show it happens to us all, not just Bolivars.

Bolivar had no personal insight at all. He could only "outsight" and even then he did not look or listen. He *glowed* things right. Pitifully, it was his undoing that he could. Until he no longer could. When he couldn't glow he roared, and when he couldn't roar he fought a battle. Then civic enemies were not military enemies so he had no solution left at all.

It *never* occurred to him to do more than personally *magnetize* things into being right and victorious.

His downfall was that he made far too heavy a use of a skill simply because it was easy. He was too good at this one thing. So he never looked to any other skill and he never even dreamed there was any other way.

He had no view of any situation and no idea of the organizational or preparatory steps necessary to political and personal victory. He only knew military organization, which is where his organizational insight ceased.

He was taught on the high wine of French revolt, notorious in its organizational inability to form cultures, and that fatally by a childhood teacher who was intensely impractical in his own private life (Simon Rodriguez, an unfrocked priest turned tutor).

Bolivar had no personal financial skill. He started wealthy and wound up a pauper, a statistic descending from one of the, if not the, richest man in South America down to a borrowed nightshirt to be buried in as an exile. And *this* while the property of royalists was wide open, the greatest land and mine valuables of South America wide open to his hand, and that's not believable! But true. He never collected his own debt of loans to governments even when the head of those governments.

So it is no wonder we find two more very real errors leading to his downfall: He did not get his troops or officers *rewarded* and he did not aim for any solvency of the states he controlled. It was all right if there were long years of battle ahead for them to be unpaid as no real riches were yet won, but not to *reward* them when the whole place was at his disposal! Well!

The limit of his ability consisted of demanding a bit of cash for current pay from churches — which were not actively against him at first but which annoyed them no end — and a few household expenses.

He could have (and should have) set aside all royalist property and estates for division amongst his officers, their men and his supporters. It had no owners now. And this failure cost the economy of the country the tax loss of all those productive estates (the whole wealth of the land). So it is no wonder his government, its taxable estates now inoperative or at best hoarded by a profiteer or looted by Indians, was insolvent. Also, by failing to do such an obvious act, he delivered property into the hands of more provident enemies and left his officers and men penniless to finance any support for their own stability in the new society and so for his own.

As for state finance, the great mines of South America, suddenly ownerless, were overlooked and were then grabbed and worked by foreign adventurers who simply came in and took them without payment.

Spain had run the country on the finance of mine tithes and general taxes. Bolivar not only didn't collect the tithes, he let the land become so worthless as to be untaxable. He should have gotten the estates going by any shifts and should have state operated all royalist mines once he had them. To not do these things was complete, but typically humanoid, folly.

In doing this property division he should have left it all up to officers' committees operating as courts of claim without staining his own hands in the natural corruption. He was left doubly open as he not only did not attend to it, he also got the name of corruption when anybody did grab something.

He failed as well to recognize the distant widespread nature of his countries despite all his riding and fighting over them and so sought tightly centralized government, not only centralizing states but also centralizing the various nations into a federal state. And this over a huge landmass full of insurmountable ranges, impassable jungles and deserts and without mail, telegraph, relay stages, roads, railroads, river vessels or even footbridges repaired after a war of attrition.

A step echelon from a pueblo (village) to a state, from a state to a country and a country to a federal state was only possible in such huge spaces of country where candidates could never be known personally over any wide area and whose opinions could not even be circulated more than a few miles of burro trail, where only the pueblo was democratic and the rest all appointive from pueblo on up, himself the ratifier of titles if he even needed that. With his own officers and armies controlling the land as owners of all wrested from royalists and the crown of Spain, he would have had no revolts. There would have been little civil wars of course but a court to settle their final claims could have existed at federal level and kept them traveling so much over those vast distances it would have crippled their enthusiasm for litigation on the one hand and on the other, by dog-eat-dog settlements, would have given him the strongest rulers — if he took neither side.

He did not step out and abdicate a dictatorial position. He mistook military acclaim and ability for the tool of peace. War only brings anarchy, so he had anarchy. Peace is more than a "command for unity," his favorite phrase. A productive peace is getting men busy and giving them something to make something of that they *want* to make something of and telling them to get on with it.

He never began to recognize a suppressive and never considered anyone needed killing except on a battlefield. There it was glorious. But somebody destroying his very name and soul and the security of every supporter and friend, the SP Santander, his vice-president, who could have been arrested and executed by a corporal's guard on one one-hundredth of available evidence, who could suborn the whole treasury and population against him, without Bolivar, continually warned, loaded with evidence, ever even reprimanding him. And this brought about his loss of popularity and his eventual exile.

He also failed in the same way to protect his military family or Manuela Saenz from other enemies. So he weakened his friends and ignored his enemies just by oversight.

His greatest error lay in that while dismissing Spain he did not dismiss that nation's most powerful minion, the Church, and did not even localize it or reward a South American separate branch to loyalty or do anything at all (except extort money from it) to an organization which continually worked for Spain as only it could work — on every person in the land in a direct anti-Bolivar reign of terror behind the scenes. You either suborn such a group or you take them out when they cease to be universal and become or are an enemy's partner.

As the Church held huge properties and as Bolivar's troops and supporters went *unpaid* even of the penny soldiers' pay, if one was going to overlook the royalist estates, one could at least have seized the Church property and given it to the soldiers. General Vallejo did this in 1835 in California, a nearly contemporary act, with no catastrophe from Rome. Or the penniless countries could have taken them over. You don't leave an enemy financed and solvent while you let your friends starve in a game like South American politics. Oh no.

He wasted his enemies. He exported the "godos" or defeated royalist soldiers. They mostly had no homes but South America. He issued no amnesties they could count on. They were shipped off or left to die in the "ditch" — the best artisans in the country among them.

When one (General Rodil) would not surrender Callao fortress after Peru was *won,* Bolivar after great gestures of amnesty failed to obtain surrender and then fought the fort. Four thousand political refugees and four thousand royalist troops died over many months in full sight of Lima, fought heavily by Bolivar only because the *fort* was fighting. But Bolivar had to straighten up Peru urgently, not fight a defeated enemy. The right answer to such a foolish commander as Rodil, as Bolivar did have the troops to do it, was to cover the roads with cannon enfilade potential to discourage any sortie from the fort, put a larger number of his own troops in a distant position of offense but ease and comfort and say, "We're not going to fight. The war's over, silly man. Look at the silly fellows in there, living on rats when they can just walk out and sleep home nights or go to Spain or enlist with me or just go camping," and let anybody walk in and out who pleased, making the fort commander (Rodil) the prey of every pleading wife and mother without and would-be deserter or mutineer within until he did indeed sheepishly give up the pretense — a man cannot fight alone. But battle was glory to Bolivar. And he became intensely disliked because the incessant cannonade which got nowhere was annoying.

Honors meant a great deal to Bolivar. To be liked was his life. And it probably meant more to him than to see things really right. He never compromised his principles but he lived on admiration, a rather sickening diet since it demands in turn continuous "theater." One is what one is, not what one is admired or hated for. To judge oneself by one's successes is simply to observe that one's postulates worked and breeds confidence in one's ability. To have to be *told* it worked only criticizes one's own eyesight and hands a spear to the enemy to make his wound of vanity at his will. Applause is nice. It's great to be thanked and admired. But to work only for that?

And his craving for that, his addiction to the most unstable drug in history — fame — killed Bolivar. That self-offered spear. He told the world continually how to kill him — reduce its esteem. So as money and land can buy any quantity of cabals, he could be killed by curdling the esteem, the easiest thing you can get a mob to do.

He had all the power. He did not use it for good or evil. One cannot hold power and not use it. It violates the Power Formula. For it then prevents *others* from doing things if *they* had some of the power, so they then see as their only solution the destruction of the holder of the power, as he, not using power or delegating it, is the unwitting block to all their plans. So even many of his friends and armies finally agreed he had to go. They were not able men. They were in a mess. But bad or good, they had to do *something.* Things were desperate, broken-down and starving after

fourteen years of civil war. Therefore they either had to have *some* of that absolute power or else nothing could be done at all. They were not great minds. He did not need any "great minds," he thought, even though he invited them verbally. He saw their petty, often murderous solutions and he rebuked them. And so held the power and didn't use it.

He could not stand another *personality* threat.

The trouble in Peru came when he bested its real conqueror (from the Argentine), La Mar, in a petty triumph over adding Guayaquil to Colombia. Bolivar wished to look triumphant again and didn't notice it really cost him the support and Peru the support of La Mar — who understandably resigned and went home, leaving Bolivar *Peru to conquer*. Unfortunately it had already been in his hands. La Mar needed some troops to clean up a small royalist army — that was all. La Mar didn't need Peru's loss of Guayaquil — which never did anybody any real good anyway!

Bolivar would become inactive when faced with two areas' worth of problems — he did not know which way to go. So he did nothing.

Brave beyond any general in history on the battlefield, the Andes or in torrential rivers, he did not really have the bravery needed to trust inferior minds and stand by their often shocking blunders. He feared their blunders. So he did not dare unleash his many willing hounds.

He could lead men, make men feel wonderful, make men fight and lay down their lives after hardships no army elsewhere in the world has ever faced before or since. But he could not *use* men even when they were begging to be used.

It is a frightening level of bravery to use men you know can be cruel, vicious and incompetent. He had no fear of their turning on him ever. When they finally did, only then he was shocked. But he protected "the people" from authority given to questionably competent men. So he really never used but three or four generals of mild disposition and enormously outstanding ability. And to the rest he denied power. Very thoughtful of the nebulous "people" but very bad indeed for the general good. And it really caused his death.

No. Bolivar was theater.

It was all theater. One cannot make such errors and still pretend that one thinks of life as life, red-blooded and factual. Real men and real life are full of dangerous, violent, live situations and wounds *hurt* and starvation is desperation itself, especially when you see it in one you love.

This mighty actor, backed up with fantastic personal potential, made the mistake of thinking the theme of liberty and his own great role upon the stage was enough to interest all the working, suffering hours of men, buy their bread, pay their whores, shoot their wives' lovers and bind their wounds or even put enough drama into very hard-pressed lives to make them want to live it.

No, Bolivar was unfortunately the only actor on the stage and no other man in the world was real to him.

And so he died. They loved him. But they were also on the stage too, where they were dying in his script or Rousseau's script for liberty but no script for living their very real lives.

He was the greatest military general in any history measured against his obstacles, the people and the land across which he fought.

And he was a complete failure to himself and his friends.

While being one of the greatest *men* alive at that. So we see how truly shabby others in leaders' boots amongst men must be.

MANUELA SAENZ

The tragedy of Manuela Saenz as Bolivar's mistress was that she was never *used,* never really had a share and was neither protected nor honored by Bolivar.

Here was a clever, spectacular woman of fantastic fidelity and skill, with an enormous "flair," capable of giving great satisfaction and service. And only her satisfaction ability was taken and that not consistently nor even honestly.

In the first place, Bolivar never married her. He never married anybody. This opened up a fantastic breach in any defense she could ever make against hers or his enemies who were legion. So her first mistake was in not in some way contriving a marriage.

That she had an estranged husband she had been more or less sold to was permitted by her to wreck her life obliquely.

She was too selfless to be real in all her very able plotting.

For this marriage problem she could have engineered any number of actions.

She had the solid friendship of all his trusted advisers, even his old tutor. Yet she arranged nothing for herself.

She was utterly devoted, completely brilliant and utterly incapable of really bringing off an action of any final kind.

She violated the Power Formula in not realizing that she had power.

Manuela was up against a hard man to handle. But she did not know enough to make her own court effective. She organized one. She did not know what to do with it.

Her most fatal mistake was in not bringing down Santander, Bolivar's chief enemy. That cost her everything she had before the end and after Bolivar died. She knew for *years* Santander had to be killed. She said it or wrote it every few days. Yet never did she promise some young officer a nice night or a handful of gold to do it in a day when *dueling was in fashion.* It's like standing around discussing how the plainly visible wolf in the garden that's eating the chickens must be shot, even holding a gun, and never even lifting it while all one's chickens vanish for years.

In a land overridden with priests she never got herself a tame priest to bring about her ends.

She was a fantastic intelligence officer. But she fed her data to a man who could not act to protect himself or friends, who could only fight armies dramatically. She did not see this and also quietly take on the portfolio of secret police chief. Her mistake was waiting to be asked — to be asked to come to him, to act. She voluntarily was his best political intelligence agent. Therefore she should have also assumed further roles.

She guarded his correspondence, was intimate with his secretaries. And yet she never collected or forged or stole any document to bring down enemies, either through representations to Bolivar or a court circle of her own. And in an area with that low an ethic, that's fatal.

She openly pamphleteered and fought violently as in a battle against her rabble.

She had a great deal of money at her disposal. In a land of for-sale Indians, she never used a penny to buy a quick knife or even a solid piece of evidence.

When merely opening her lips she could have had any sequestrated royalist estate, she went to litigation for a legitimate legacy never won and another won but never paid.

They lived on the edge of quicksand. She never bought a plank or a rope.

Carried away by the glory of it all, devoted completely, potentially able and a formidable enemy, she did not *act*.

She waited to be told to come to him even when he lay dying and exiled.

His command over her who never obeyed any other was too absolute for his own or her survival.

Her assigned mistakes (pointed out at the time as her caprice and playacting) were not her errors. They only made her interesting. They were far from fatal.

She was not ruthless enough to make up for his lack of ruthlessness and not provident enough to make up for his lack of providence.

The ways open to her for finance, for action, were completely doorless. The avenue stretched out to the horizon.

She fought bravely but she just didn't take action.

She was an actress for the theater alone.

And she died of it. And she let Bolivar die because of it.

Never once did Manuela look about and say, "See here, things mustn't go this wrong. My lover holds half a continent and even I hold the loyalty of battalions. Yet that woman threw a fish!"

Never did Manuela tell Bolivar's doctor, a rumored lover, "Tell that man he will not live without my becoming a constant part of his entourage and tell him until he believes it or we'll have a new physician around here."

The world was open. Where Theodora, the wife of Emperor Justinian I of Constantinople, a mere circus girl and a whore, ruled harder than her husband but for her husband behind his back — and made him marry her as well — Manuela never had

any bushelbasket of gold brought in to give Bolivar for his unpaid troops with a "Just found it, dear" to his "Where on earth . . . ?" after the royalist captives had been carefully ransomed for jail escapes by her enterprising own entourage and officer friends. She never handed over any daughter of a family clamoring against her to Negro troops and then said, "Which oververbal family is next?"

She even held a colonel's rank but only used it because she wore man's clothing afternoons. It was a brutal, violent, ruthless land, not a game of musical chairs.

And so Manuela, penniless, improvident, died badly and in poverty, exiled by enemies and deserted by her friends.

But why not deserted by her friends? They had all been poverty-stricken to a point quite incapable of helping her even though they wanted to — for she once had the power to make them solvent. And didn't use it. They were in poverty before they won but they did eventually control the land. After that why make it a bad habit?

And so we see two pathetic, truly dear but tinsel figures, both on a stage, both *far* removed from the reality of it all.

And one can say, "But if they had not been such idealists they never would have fought so hard and freed half a continent," or "If she had stooped to such intrigue or he had been known for violent political actions they would never have had the strength and never would have been loved."

All very idealistic itself. They died "in the ditch" unloved, hated and despised, two decent, brave people, almost too good for this world.

A true hero, a true heroine. But on a stage and not in life. Impractical and improvident and with no faintest gift either one to use the power they could assemble.

This story of Bolivar and Manuela is a tragedy of the most piteous kind.

They fought a hidden enemy, the Church; they were killed by their friends.

But don't overlook how impractical it is not to give your friends power enough when you have it to give. You can always give some of it to another if the first one collapses through inability. And one can always be brought down like a hare at a hunt who seeks to use the delegated power to kill you — if you have the other friends.

Life is not a stage for posturing and "Look at me!" "Look at me." "Look at me." If one is to lead a life of command or a life near to command one must handle it as life. Life bleeds. It suffers. It hungers. And it has to have the right to shoot its enemies until such time as comes a golden age.

Aberrated man is not capable of supporting, in his present state, a golden declared age for three minutes, given all the tools and wealth in the world.

If one would live a life of command or one near to a command, one must then accumulate power as fast as possible and delegate it as quickly as feasible and use every humanoid in long reach to the best and beyond his talents if one is to live *at all*.

If one does not choose to live such a life, then go on the stage and be a real actor. Don't kill men while pretending it isn't real. Or one can become a recluse or a student or a clerk. Or study butterflies or take up tennis.

For one is committed to certain irrevocable natural laws the moment one starts out upon a conquest, either as the man in charge or a person near to him or on his staff or in his army. And the foremost law, if one's ambition is to win, is of course to win. But also to keep on providing things to win and enemies to conquer.

Bolivar let his cycle run to "freedom" and end there. He never had another plan beyond that point. He ran out of territory to free. Then he didn't know what to do with it and didn't know enough, either, to find somewhere else to free. But of course all limited games come to end. And when they do, their players fall over on the field and become rag dolls unless somebody at least tells them the game has ended and they have no more game nor any dressing room or homes but just that field.

And they lie upon the field, not noticing there can be no more game since the other team has fled and after a bit they have to do *something* and if the leader and his consort are sitting over on the grass being rag dolls too of course there isn't any game. And so the players start fighting amongst themselves just to have a game. And if the leader then says, "No, no," and his consort doesn't say, "Honey, you better phone the Baltimore Orioles for Saturday," then of course the poor players, bored stiff, say, "He's out." "She's out." "Now we're going to split the team in half and have a game."

And that's what happened to Bolivar and Manuela. They *had* to be gotten rid of for there was no game and they didn't develop one to play while forbidding the only available game — minor civil wars.

A *whole continent* containing the then major mines of the world, whole populations were left sitting there, "freed." But none owned any of it though the former owners had left. They weren't given it. Nor were they made to manage it. No game.

And if Bolivar had not been smart enough for that, he could at least have said, "Well! You monkeys are going to have quite a time getting the wheels going but that's not my job. You decide on your type of government and what it's to be. Soldiers are my line. Now, I'm taking over those old estates of mine and the royalist ones nearby and the emerald mines just as souvenirs and me and Manuela, we're going home." And he should have said that five minutes after the last royalist army was defeated in Peru.

And his official family with him, and a thousand troops to which he was giving land, would have moved right off smartly with him. And the people after a few screams of horror at being deserted would have fallen on each other, sabered a state together here and a town there and gotten busy out of sheer self-protection in a vital new game, "Who's going to be Bolivar now?"

Then when home he should have said, "Say those nice woods look awfully royalist to me, and also those 1,000,000 hectares of grazing land, Manuela. Its owner once threw a royalist fish, remember? So that's yours."

And the rest of the country would have done the same and gotten on with the new game of "You was a royalist."

And Bolivar and Manuela would have had statues built to them by the TON at once as soon as agents could get to Paris with orders from an adoring populace.

"Bolivar, come rule us!" should have gotten an "I don't see any unfree South America. When you see a French or Spanish army coming, come back and tell me."

That would have worked. And this poor couple would have died suitably adored in the sanctity of glory and (perhaps more importantly) in their own beds, not "in a ditch."

And if they had *had* to go on ruling they could have declared a new game of "pay the soldiers and officers with royalist land." And when that was a gone game, "Oust the Church and give its land to the poor friendly Indians."

You can't stand bowing back of the footlights forever with no show even if you are quite an actor. Somebody else can make better use of any stage than even the handsomest actor who will not use it.

Man is too aberrated to understand at least seven things about power:

1. Life is lived by lots of people. And if you lead, you must either let them get on with it or lead them on with it actively.

2. When the game or the show is over, there must be a new game or a new show. And if there isn't, somebody else is jolly well going to start one, and if you won't let *anyone* do it, the game will become "getting you."

3. If you have power, use it or delegate it or you sure won't have it long.

4. When you have people, use them or they will soon become most unhappy and you won't have them anymore.

5. When you move off a point of power, pay all your obligations on the nail, empower all your friends completely and move off with your pockets full of artillery, potential blackmail on every erstwhile rival, unlimited funds in your private account and the addresses of experienced assassins and go live in Bulgravia and bribe the police. And even then you may not live long if you have retained one scrap of domination in any camp you do not now control or if you even say, "I favor politician Jiggs." Abandoning power *utterly* is dangerous indeed.

   But we can't all be leaders or figures strutting in the limelight and so there's more to know about this:

6. When you're close to power get some delegated to you, enough to do your job and protect yourself and your interests, for you can be shot, fellow, shot, as the position near power is delicious but dangerous, dangerous always, open to the taunts of any enemy of the power who dare not really boot the power but can boot you. So to live at all in the shadow or employ of a power, you must yourself gather and USE enough power to hold your own — without just nattering to the power to "kill Pete," in straightforward or more suppressive veiled ways to him, as these wreck the power that supports yours. He doesn't have to know all the bad news and if he's a power really, he won't ask all the

ORG BOARDS
INDEX

time, "What are all those dead bodies doing at the door?" And if you are clever, you never let it be thought HE killed them — that weakens you and also hurts the power source. "Well, boss, about all those dead bodies, nobody at all will suppose you did it. *She* over there, those pink legs sticking out, didn't like me." "Well," he'll say if he really is a power, "why are you bothering me with it if it's done and you did it. Where's my blue ink?" Or "Skipper, three shore patrolmen will be along soon with your cook, Dober, and they'll want to tell you he beat up Simson." "Who's Simson?" "He's a clerk in the enemy office downtown." "Good. When they've done it, take Dober down to the dispensary for any treatment he needs. Oh yes. Raise his pay." Or "Sir, could I have the power to sign divisional orders?" "Sure."

7. And lastly and most important, for we all aren't on the stage with our names in lights, always push power in the direction of anyone on whose power you depend. It may be more money for the power or more ease or a snarling defense of the power to a critic or even the dull thud of one of his enemies in the dark or the glorious blaze of the whole enemy camp as a birthday surprise.

If you work like that and the power you are near or depend upon is a power that has at least some inkling about how to be one and if you make others work like that, then the power-factor expands and expands and expands and you too acquire a sphere of power bigger than you would have if you worked alone. Real powers are developed by tight conspiracies of this kind pushing someone up in whose leadership they have faith. And if they are right and also manage their man and keep him from collapsing through overwork, bad temper or bad data, a kind of juggernaut builds up. Don't ever feel weaker because you work for somebody stronger. The only failure lies in taxing or pulling down the strength on which you depend. All failures to remain a power's power are failures to contribute to the strength and longevity of the work, health and power of that power. Devotion requires active contribution outwards from the power as well as in.

If Bolivar and Manuela had known these things, they would have lived an epic, not a tragedy. They would not have "died in the ditch," he bereft of really earned praise for his real accomplishments even to this day. And Manuela would not be unknown even in the archives of her country as the heroine she was.

Brave, brave figures. But if this can happen to such stellar personalities gifted with ability tenfold over the greatest of other mortals, to people who could take a rabble in a vast impossible land and defeat one of Earth's then foremost powers, with no money or arms, on personality alone, what then must be the ignorance and confusion of human leaders in general, much less little men stumbling through their lives of boredom and suffering?

Let us wise them up, huh? You *can't* live in a world where even the great leaders can't lead.

ADMIN KNOW-HOW SERIES 14

ALTER–IS AND DEGRADED BEINGS

Alteration of orders and tech is worse than noncompliance.

Alter-is is a covert avoidance of an order. Although it is apparently often brought about by noncomprehension, the noncomprehension itself and failure to mention it is an avoidance of orders.

Very degraded beings alter-is. Degraded ones refuse to comply without mentioning it. Beings in fair condition try to comply but remark their troubles to get help when needed. Competent higher-toned beings understand orders and comply if possible but mainly do their jobs without needing lots of special orders.

Degraded beings find *any* instruction painful as they have been painfully indoctrinated with violent measures in the past. They therefore alter-is any order or don't comply.

Thus in auditing pcs or in org, where you find alter-is (covert noncompliance) and noncompliance, given sensible and correct tech or instructions, you are dealing with a degraded low-level being and should act accordingly.

One uses very simple low-level processes on a degraded being, gently.

In admin, orgs and especially the Tech Div where a staff member alter-ises or fails to comply, you are also dealing with a degraded being but one who is too much a pc to be a staff member. He cannot be at cause and staff members *must* be at cause. So he or she should not be on staff.

This is a primary senior datum regulating all handling of pcs and staff members.

A degraded being is not a suppressive as he can have case gain. But he is so PTS that he works for suppressives only. He is sort of a super-continual PTS beyond the reach really of a simple S&D and handled only at Section III OT Course.

Degraded beings, taking a cue from SP associates, instinctively resent, hate and seek to obstruct any person in charge of anything or any Big Being.

Anyone issuing *sensible* orders is the first one resented by a degraded being.

A degraded being lies to his seniors, avoids orders covertly by alter-is, fails to comply, supplies only complex ideas that can't ever work (obstructive) and is a general area of enturbulence, often mild seeming or even "cooperative," often even flattering, sometimes merely dull, but consistently alter-ising or noncomplying.

This datum appeared during higher-level research and is highly revelatory of earlier unexplained phenomena — the pc who changes commands or doesn't do them, the worker who can't get it straight or who is always on a tea break.

In an area where suppression has been very heavy for long periods, people become degraded beings. However, they must have been so before already due to track incidents.

Some thetans are bigger than others. None are truly equal. But the degraded being is not necessarily a natively bad thetan. He is simply so PTS and has been for so long that it requires our highest-level tech to finally undo it *after* he has scaled up all our grades.

Degraded beings are about 18 to 1 over Big Beings in the human race (minimum ratio). So those who keep things going are few. And those who will make it without the steam of the few in our orgs behind them are zero. At the same time, we can't have a world full of them and still make it. So we have no choice.

And we can handle them even when they cannot serve at higher levels.

This is really OT data but we need it at lower levels to get the job done.

USES OF ORGS

There are two uses (violently opposed to each other) to which Scientology orgs can be put. They are:

1. To forward the advance of self and all dynamics toward total survival.

2. To use the great power and control of an org over others to defend oneself.

When a decent being goes to work in an org, he uses (1).

When a suppressive goes to work in an org, he uses (2).

When you get in ethics the decent one raises his necessity level and measures up. The suppressive type blows (leaves).

It is of vital interest to all of us that we have orgs that serve to increase survival on all dynamics. And that we prevent orgs being used as means to oppress others.

The answer, oddly enough, is to GET IN ETHICS exactly on-policy and correctly. And we will advance.

ETHICS

ADMIN KNOW-HOW SERIES 16

SUPPRESSIVES AND THE ADMINISTRATOR
HOW TO DETECT SPs AS AN ADMINISTRATOR

There are three areas of detection which an administrator can utilize in the detection of a suppressive person.

These are:

1. no ethics change,

2. no case change,

3. no admin change.

An SP (suppressive person) is unable to change because he cannot, himself, confront. He is badly "out of valence." Therefore, not being able to look at things directly, he is unable to erase them or even see what they are. Such people often have a curtain of pictures they look at instead of the universe around them. They do not see a building. They see a picture of a building in front of the building. They are not at the point from which they view things.

Thus they are peculiar in that they can't change.

The three principal zones in a Scientology org are:

1. Ethics,

2. Tech,

3. Admin.

We have the natural laws of these subjects, each one.

If you can get in ethics, you can get in Scientology technology. If you can get in Scientology technology, you can get in admin. If you can get all three in, you have an org and have expansion.

If you can't get in tech, ethics is out. If you can't get in admin, both tech and ethics are out.

The sequence of things that have to be "gotten in" to make an org is first ethics, second tech, third admin.

Where one of these goes out, the org contracts.

We have these three sciences. To really handle things one has to be a master of all three, even to live a good personal life.

By "get in" we mean get it applied and effective.

We live in a very woggy world at this time. The wog is so out-ethics he is living in what amounts to a criminal society.

When we try to get tech in on the planet we run into the out-ethics areas and this is the real source of our troubles where we have any. We are getting in tech before we get in ethics. It *can* be done (obviously, since we are doing it). But it is a heavy strain at best.

Just because we do not at once get ethics in on the planet does not mean we can't get any tech in.

By handling small sectors, beginning with self and Scientology groups and orgs, we can continue to repeat the cycles of three — ethics, tech, admin. Gradually we enlarge the numbers we have and gradually our sphere of ethics-tech-admin expands. And we one day have ethics in on the planet, tech in on the planet, admin in on the planet.

The only stumbling block is the SP. This person (about 10 percent of the population) is unable to change. We can process them if we can get them to sit still.

But these are the hidden booby traps which make one's life, one's family, one's org, one's nation, one's planet a rough-rough proposition.

Ninety percent of the people say, "Ethics great. Tech great. Admin great." And away we go.

Ten percent say, "Horrible, horrible, horrible." And cannot *either see or change.* They are the true psychotics no matter how "sane" they sound. The people in institutions are generally only their victims.

This 10 percent, one must be able to detect and weed out so they don't contaminate areas we are bringing up in ethics, tech and admin.

Our policy is we don't waste time on them. To cater to them is to betray 90 percent of the population. So we set them aside for another day.

We get them off lines, out of orgs and to one side.

The true character of these people is usually masked in many ways. They are expert only in deception and can take on any guise.

To listen to them one would suppose he was talking to his best friend sometimes. Except the knife in one's back is also driven in by them.

We have much tech to describe them.

But one does not have to be an auditor with a meter to find these people.

An administrator only needs to know the three things about them:

1. no change in ethics,
2. no change in case,
3. no change in admin.

These people have:

1. thick ethics files,
2. thick (or no) case files,
3. thick, full (or no) comm baskets.

If you just dismissed anyone who had all three, you would have gotten rid of an SP.

It works this way. When you start to get in ethics, most people "learn the ropes" fast. They may have a few down conditions and chits or even Courts or Comm Evs but you see the frequency dwindles and eventually vanishes or nearly so.

When you start to get in tech on a person, it may be a hard haul for a while and then it begins to level out and get easier.

When you start to get in admin, the confusion around some person may be great but after a while the lines and policies straighten out.

None are good little angels. But 90 percent make progress in these three fields of ethics, tech and admin.

The SP does NOT make any consistent progress at all and lapses every time.

As only 10 percent of the people then are making nearly all the tough work in ethics, tech and admin, the thing to do then is to get them off the lines rather than betray 90 percent.

And the SP is detectable in ALL THREE AREAS. It needs no microscope to find out who on a staff has the seniors working so hard for so little gain.

Their ethics file is huge, their case file either doesn't exist at all or is very fat, their comm lines are jammed, their policy is out and their stats are on the bottom eternally.

So as an administrator you can detect SPs. You better had. YOUR OWN STATS WILL BE DOWN TO THE DEGREE YOU FAIL TO DETECT THEM.

Just go to your files and look at the desks and sack whoever satisfies all three conditions above and you can't miss and WILL be able to breathe.

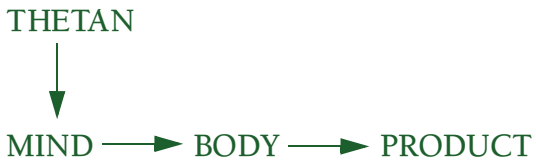
ADMIN KNOW-HOW SERIES 17



CONDITIONS, HOW TO ASSIGN

Every post and part of an org must have a statistic which measures the volume of product of that post. The head of a part has the statistic of that part.

Every post or part of an org has a product. If it has no product, it is useless and supernumerary.

An Exec Sec has the products of his or her portion of the org. The first product of an Exec Sec is of course his or her portion of the org's divisions. If the portion itself does not exist then of course the Exec Sec has no stat at all as an Exec Sec even if very busy—so he or she is not an Exec Sec despite the title. This is true of a department head, a section head and a unit head. One can't really be the one in charge if the thing one is in charge of doesn't exist. Also things that don't exist themselves can have no product.

The whole rationale (basic idea) of the pattern of an org is a unit of 3. These are:

In Division One the HCO Sec is the thetan, Department One the MIND, Department Two the BODY and Department Three the PRODUCT. The same pattern holds for every division.

It also should hold for every department and lower section and unit.

And above these it holds for a portion of an org.

In the HCO portion of the org we have the HCO Exec Sec as the thetan, the Exec Div (7) as the MIND, Division One as the BODY and Division Two as the PRODUCT. And so with other parts of an org. They always go:

Now, if you know and understand and can apply this, you can not only plan or correct an org or one of its parts, you can also assign conditions correctly. You need data gained from inventories or counts of items or the statistic assigned and drawn.

It is *not* enough to ***only*** follow graphs. That is a *lazy lazy lazy* no-confront method when used alone. Graphs can be falsified, can be too fixed on one thing and can ignore others unless you read *all* the graphs of the part you are interested in.

Graphs are a *good indicator* and should be used wherever possible. BUT you must also keep in mind that it requires ALL the graphs to be wholly accurate in a conditions assignment and the most accurate conditions assignment possible and that the graphs must be based on ACTUAL figures.

So, to begin, you look at the graphs. You look for recent ups and downs. Then you look for trends (long-range drifts up or down). Then you look for discrepancies. Like high enrollment–low income, high letters out–low enrollment weeks later.

It is safe enough *at first* to simply assign moderate conditions (Emergency, Normal, Affluence) by the current ups and downs of the graphs. This should result in *expansion*.

EXPANSION (product increase) is THE WHOLE REASON you are assigning conditions in the first place, so you expect reasonably that if you assign conditions by graph you will get *expansion*.

Now, after a while (weeks or months) you see you *are* getting expansion so you go on assigning conditions by graph. An Exec Sec would also inspect the physical areas of Dangers and Affluences as a matter of course.

BUT let us take the reverse case. You assign conditions by graph (and inspections of Danger and Affluence) and what you are assigning conditions to DOESN'T expand!

Well, now we get to work. There is something wrong.

The first thing that can be wrong is that what you are assigning conditions to really doesn't exist. The Director of Comm does not have a Department of Comm. He has only a messenger/telex operator, no way to handle his other departmental functions and answers the phone himself.

So, finding no department, REGARDLESS OF OTHER REASONS ("can't get staff," "income too low," "no quarters"), you bang him with a condition of Non-Existence. Because he obviously doesn't exist as a Dir Comm, having no Comm Dept. (Non-Existence is also assigned for NO USE and NO FUNCTION.)

Now, if this assignment to the Dir Comm of Non-Existence — with no further help from you, mind — does not result in a Comm Dept in a reasonable time, you assume he doesn't want one to be there and you assign a condition of Liability.

You don't *explain* it all away. That's what *he's* doing so why imitate him?

You don't say, "He's just overwhelmed — new — needs a review — natter natter figure figure." You simply ASSIGN!

He STILL doesn't get a Comm Dept there.

You inspect. You find the Ethics Officer isn't enforcing the Liability penalty ("Pete is my pal and I . . ."). So you assign the Ethics Officer a condition of Liability as he gets, naturally, what he failed to enforce.

Now they mutiny and you assign a condition of Treason, shoot both of them from guns and fill the posts.

The new incumbents you tell, "The boys before you aren't here now and aren't likely to be trained or processed until we get around to the last dregs so we hope you do better. You begin in Non-Existence. I trust you will work your way out of it at least into Danger before the week is out. As you are just on post, the penalties do not apply for Non-Existence. But they will after 30 days. So let's get a Dept of Comm and an Ethics Section."

Now of course, if the E/O had to be shot from guns, Dir I&R is at once assigned a DANGER CONDITION complete with penalties as that section was in his/her dept.

If there's no HCO (Div 7, 1, 2) part of the org, the LRH Comm of that org yells for the next senior org to act. And if there's no LRH Comm, the next senior org should see that it's gone by lack of stats or reports or expansion and act anyway.

Now you say, "But that's ruthless! No staff would . . ."

Well, such a statement is contrary to the facts.

The only time (by actual experience and data) you lose staff and have an unstaffed org is when you let low-stat people in. Low-stat personnel *gets rid of* good staff members. An org that can't be staffed has an SP in it!

Orgs where ethics is tight and savage grow in numbers!

Man thrives oddly enough only in the presence of a challenging environment. That isn't my theory. That's fact.

If the org environment is not challenging, there will be no org.

We help beyond any help ever available anywhere. We are a near ultimate in helping. At once this loads us up with SPs who would commit suicide to prevent anyone from being helped and it lays us wide open as "softies" to any degraded being that comes along. They are *sure* we won't bite so they do anything they please. Conditions correctly assigned alone can detect and eject SPs and DBs.

So if we help so greatly we must also in the same proportion be able to discipline. Near ultimate help can only be given with near ultimate discipline.

Tech can only stay itself where ethics is correctly and ruthlessly administered. Admin like ours has to be high because our orgs handle the highest commodity — life itself. So our admin only works where tech is IN. And our tech works only where ethics is in.

Our target is not a few psychiatric patients but a cleared universe. So what does THAT take?

The lowest confront there is is the confront of evil. When a living being is out of his own valence and in the valence of a thoroughly bad even if imaginary image, you

get an SP. An SP is a no-confront case because, not being in his own valence, he has no viewpoint from which to erase anything. That is all an SP is.

BUT the amount of knowing havoc an SP can cause is seen easily if only in this planet's savage, cruel wars.

An executive who cannot confront evil is already en route to becoming suppressive.

Next door to the "theetie-weetie" case is the totally overwhelmed condition we call SP (suppressive person).

It is so *easy* to live in a fairyland where nothing evil is ever done. One gets the image of a sweet old lady standing in the middle of a gangster battle with bodies and blood spattering the walls saying, "It's so nice, it's only a boy's game with toy guns."

The low-statistic staff member who never gets his stats up is *making* low stats. He isn't idle. It's a goody-goody attitude to say, "He just isn't working hard." The chronic low-stat person is working VERY HARD to keep the stat DOWN. When you learn that, you can assign conditions and make an org expand.

When stats WON'T come up, you drop the condition down. Sooner or later you will hit the REAL condition that applies.

Conversely, as you upgrade conditions you will also reach the condition that applies. Some staff members are in chronic *Power*. Who ever assigns it? They take over a post — its stats soar. Well, to measure just stats of the post taken over as his condition is false since his personal condition is and has been *Power*. And if it *is* Power, then that personal condition should be assigned.

That is very easy to see.

BUT what if you have a personnel who whenever he or she takes over a post the stat collapses!

Well, you better assign that one too. For just as the one in Power *works* to maintain up stats, the one in the lower condition, whether one cares to confront it or not, works too and is just as industriously collapsing not only his own post stats but also the stats of posts adjacent to his! So he is at least a condition of Liability as the post if vacant would only be in Non-Existence! And as somebody next to it might do a little bit for it, it might even get up to Danger condition, completely unmanned!

DISCREPANCIES

When there are discrepancies amongst statistic graphs, SOME graph is false.

When you find a false graph, you assign anyone who falsified it intentionally and knowingly a condition of Liability for that action is far worse than a noncompliance.

And you had better be alert to the actual area where the false graph originated as it has a tiger in it. Only physical inspection of a most searching kind (or a board if it is distant) will reveal the OTHER crimes going on there. There are always *other* crimes when you get a false report. Experience will teach one that if he really looks.

It is more than policy that one gets the condition he fails to correctly and promptly assign *and* enforce.

It's a sort of natural law. If you let your executives goof off and stay in, let us say, a Danger condition, yet you don't assign and enforce one, they will surely put YOU in a Danger condition whether it gets assigned or not.

Remember *that* when your finger falters "on the trigger."

That *natural* law stems from this appalling fact.

We didn't, a long, long time ago, get in ethics. We goofed. And the whole race went into the soup where it remains to this day.

And if we are to live in this universe at all, at all, we are going to have to get in ethics and clean it up.

Whether that's easy to confront or not is beside the point. The horrid truth is that our fate is FAR more unconfrontable!

Now we have to have highly skilled tech to bail us out. And I assure you that that tech will never get *in* or be used beneficially at all unless:

1. We get ethics in, and

2. Unless Scientology orgs expand at a regular rate.

Only then can we be free.

So that's how and WHY you assign and enforce conditions. It's the only way everyone finally will win.

ISSUE I

REMIMEO

ADMIN KNOW-HOW SERIES 18

STATISTIC RATIONALIZATION

"Rationalizing a statistic" is a derogatory term meaning finding excuses for down statistics.

Finding excuses or reasons why a stat is down does NOT bring it up and at best is a scathing comment on the lack of foresight or initiative of the executive in charge of the area.

What is wanted is (1) prevention of stats going down and (2) quick action to bring them up.

Being reasonable about their being down should be regarded as AGREEMENT WITH THEIR BEING DOWN. Which is, of course, suppressive.

"Well, the letters out stat is down because we were paying a girl so much per letter and 'policy' stated we could not hire anyone so we fired her and that's why letters out is down."

That was an actual rationalization given in Washington, DC, for the collapse of the org last year.

To begin, there is no such "policy" and surely no policy exists to have down stats. So, here the felony is compounded by seeking to blame policy for a down stat which for sure revealed the action as a suppressive effort to rationalize (and get away with) a down stat.

The only reason stats are down, ever, is because somebody didn't push them up. All other reasons are false.

IDÉE FIXE

Some people have a METHOD of handling a down stat which is a fixed idea or cliché they use to handle *all* downstat situations in their lives.

These people are so at effect they have some *idea* sitting there "that handles" a down statistic.

"Life is like that."

"I always try my best."

"People are mean."

"It will get better."

"It was worse last year."

They KNOW it isn't any use trying to do anything about anything and that it is best just to try to get by and not be noticed — a sure route to suicide.

Instead of seeking to prevent or raise a declining stat in life, such people use some fixed idea to *explain* it.

This is a confession of being in apathy.

One can always make stats go up. Hard work. Foresight. Initiative. One can always make stats go up. That's the truth of it, and it needs no explanations.

ETHICS AND ADMIN

ADMIN KNOW-HOW SERIES 19

SLOW ADMIN

The secret of any executive success is the ability to Complete Cycles of Action Quickly.

The operative word is COMPLETE.

Ability is the ability to complete a cycle of action, to handle the matter so it does not have to be handled again.

Referral is irresponsibility. Executives who refer to others to make a decision aren't executives. They are irresponsible or are afraid of responsibility. People who are afraid of taking responsibility are not executives. They are laborers.

An executive who doesn't handle but puts something on wait is also irresponsible. Slowing an admin line by not acting NOW is also suppressive.

Suppressives cannot complete cycles of action. They either act in an altered direction or they continue an action beyond any possible expectancy. In either case they do not COMPLETE.

THEREFORE this ethics policy is brought into being:

EXECUTIVES WHO DO NOT HANDLE MATTERS SO AS TO COMPLETE THEM, WHO REFER OR SLOW ADMIN ARE LIABLE TO A COMM EV ON A CHARGE OF OUT–ADMIN.

ADMIN KNOW-HOW SERIES 20
ADMINISTRATION

(Issued from Flag Order 805.)

When admin is OUT, tech is OUT and ethics has long ceased to exist.

You can never send administrative orders into an out-admin area; you can only get ethics in. To do other than to get ethics in is to only invite further noncompliance and dev-t.

In reality, *ANY* administration is a symptom of out-ethics. Any order is really a criticism. If a post was really being worn, orders would be unnecessary.

If someone started giving me orders, then I would wonder about my post. DO YOUR JOB WITH A PLUS AND A PREDICT. Wear your hat so well, you never need an order.

Remember: NEVER ISSUE AN ORDER TO GET AN ORDER YOU HAVE ALREADY ISSUED COMPLIED WITH. Ethics has gone out. When ethics has to be put in, responsibility is out.

ALL EXECS
REMIMEO
ORG EXEC COURSE
INTRODUCTORY

IMPORTANT

ADMIN KNOW-HOW SERIES 21

ADMIN KNOW–HOW

When trying to get stats up, you must realize that what GOT stats up will GET stats up.

Using new, unusual experiments can crash your full intention.

In *new* programs the BUGS have not been worked out. It's like a newly designed piece of machinery. The clutch slips or the hp is sour.

New programs are undertaken on a small scale as PILOT PROJECTS. If they work out, good. Spot the bugs, streamline them and prove them. Only then is it all right to give them out as broad orders.

So it isn't good for an EC to hand out strings of orders. Or for an executive to start a lot of new projects.

There is a thing called STANDARD ADMIN. It comes from the policy letters.

When we produced the wild, soaring tech stats with the Sea Org Class VIII Auditor program, IT WAS BY PUTTING IN THE EXACT PROCESSES AND GRADES. By going super *standard* we got 100 percent case gain.

It is the same with policy. If you get an org in with super standard policy—promotion, form and admin—the stats SOAR.

TELEX ORDERS

Instead of sending out a mad avalanche of orders on telex, an exec should only send the number and date of the PL he wants in AND THEN SHOULD RIDE THAT ONE ORDER until it *is* in.

To choose WHAT policy letter is of course the trick. One has to know something about the conditions of the org before sending the order.

TRYING TO GET ALL PLs IN at once can also swamp an org. "Get on policy" is a meaningless remark. Get on such and such a policy, if it is obviously out, is a very valuable action.

EDs are there to say WHAT policy should be concentrated on, not to give *new* orders.

An executive who is wise, gets in policy on a gradient (little by little, building it up higher and higher, keeping the old in while adding in the new).

To understand how to do this, one must be able to conceive of basic outnesses. It requires real genius to discover how gross and how basic an outness can be.

An exec pounds away with a high-level policy on how to do accounting. Is his face red when he finds the reason for the muddle is that there isn't anyone in the division!!!

Once we almost "did our nut" trying to find what outness had unmocked an org. All sorts of involved conclusions were reached. All manner of orders given without any improvement. And then "murder outed." EVERY Registrar in the org had been removed and no new ones appointed. The public couldn't find anyone to sign them up.

I once sent a continent into Power simply by discovering that it had not appointed people to the posts of Exec Sec in any org! How "out" can it get? As soon as Exec Secs were appointed, the whole continent went into Power.

I once read an ED which (a) removed all executives but one and then (b) gave 20 complex orders "to be done at once." The one remaining personnel could not have executed *any* of them. I at once cancelled ALL EDs not issued by myself and shortly up went the stats.

Wondering why no mail is ever mailed does not call for a complex policy. It calls for a policy about the form of the org, how it must have Exec Secs, divisional secs. For there to be no mail going out can only mean there's nobody on post!

A divisional sec trying to get in his division's policy must look first for GROSS outnesses. They are never small. And then he must get them in by policy. Then they'll stay in.

There IS a *standard admin.* It deals in simplicities. People are on post. Particles flow. Promotion is done. Tech is delivered. The org board is up and is followed.

If policy isn't in at *that* level of largeness, it will never go in on higher points.

Knowing an org inside out is also knowing who to tell to do what and what policy to get in when. It's like knowing how to drive a car. It won't go if you don't know where the ignition switch is located. Policy outnesses occur and unusual ideas are put forth only by those who don't know what is usual in the first place.

Like standard tech, in standard policy the results come from getting in the basics and doing them well.

ADMIN KNOW-HOW SERIES 22

THE KEY INGREDIENTS

When we look at organization in its most simple form, when we seek certain key actions or circumstances that make organization work, when we need a very simple, very vital rundown to teach people that will produce results, we find only a few points we need to stress.

The purpose of organization is TO MAKE PLANNING BECOME ACTUALITY.

Organization is not just a fancy complex system done for its own sake. That is bureaucracy at its worst. Org boards for the sake of org boards, graphs for the sake of graphs, rules for the sake of rules only add up to failures.

The only virtue (not always a bad one) of a complex, unwieldy, meaningless bureaucratic structure is that it provides jobs for the friends of those in control. If it does not also bring about burdensome taxation and threatened bankruptcy by reason of the expense of maintaining it, and if it does not saddle a people or production employees with militant inspections and needless control, organization for the sake of providing employment is not evil but beyond providing employment is useless, and only when given too much authority is it destructive.

The kings of France and other lands used to invent titles and duties to give activity to the hordes of noble hangers-on to keep them at court, under surveillance, and out of mischief out in the provinces where they might stir up their own people. “Keeper of the Footstools,” “Holder of the Royal Nightgown” and other such titles were fought for, bought, sold and held with ferocity.

Status seeking, the effort to become more important and have a personal reason for being and for being respected gets in the road of honest efforts to effectively organize in order to get something done, in order to make something economically sound.

Organization for its own sake in actual practice usually erects a monster that becomes so hard to live with that it becomes overthrown. Production losses, high taxes, irritating or fearsome interference with the people or actual producers invites and accomplishes bankruptcy or revolt, usually both even in commercial companies.

Therefore to be meaningful, useful and lasting, an organization has to fit into the definition above:

TO MAKE PLANNING BECOME ACTUALITY.

In companies and countries there is no real lack of dreaming. All but the most depraved heads of companies or states wish to see specific or general improvement. This is also true of their executives and, as it forms the basis of nearly all revolts, it is certainly true of workers. From top to bottom, then, there is in the large majority, a desire for improvement. More food, more profit, more pay, more facilities and, in general, more and better of whatever they believe is good or beneficial. This also includes less of what they generally consider to be bad.

Programs which obtain general support consist of more of what is beneficial and less of what is detrimental. “More food, less disease,” “more beautiful buildings, less hovels,” “more leisure, less work,” “more activity, less unemployment,” are typical of valuable and acceptable programs.

But only to have a program is to have only a dream. In companies, in political parties, useful programs are very numerous. They suffer only from a lack of execution.

All sorts of variations of program failure occur. The program is too big. It is not generally considered desirable. It is not needed at all. It would benefit only a few. Such are surface reasons. The basic reason is lack of organization know-how.

Any program, too ambitious, partially acceptable, needed or not needed could be put into effect if properly organized.

The five-year plans of some nations which are currently in vogue are almost all very valuable and almost all fall short of their objectives. The reason is not that they are unreal, too ambitious or generally unacceptable. The reason for any such failure is lack of organization.

It is not man’s dreams that fail him. It is the lack of know-how required to bring those dreams into actuality.

Good administration has two distinct targets:

1. To perpetuate an existing company, culture or society.

2. To make planning become actuality.

Given a base on which to operate, which is to say land, people, equipment and a culture, one needs a good administrative pattern of some sort just to maintain it.

Thus (1) and (2) above become (2) only. The plan is “to continue the existing entity.” No company or country continues unless one continues to put it there. Thus an administrative system of some sort, no matter how crude, is necessary to perpetuate any group or any subdivision of a group. Even a king or headman or manager who has no other supporting system to whom one can bring disputes about land or water or pay is an administrative system. The foreman of a labor gang that only loads trucks has an astonishingly complex administrative system at work.

Companies and countries do not work just because they are there or because they are traditional. They are continuously put there by one or another form of administration.

When a whole system of admin moves out or gets lost or forgotten, collapse occurs unless a new or substitute system is at once moved into place.

Changing the head of a department, much less a general manager and much much less a ruler, can destroy a portion or the whole since the old system, unknown, disregarded or forgotten may cease and no new system which is understood is put in its place. Frequent transfers within a company or country can keep the entire group small, disordered and confused, since such transfers destroy what little administration there might have been.

Thus, if administrative shifts or errors or lack can collapse any type of group, it is vital to know the basic subject of organization.

Even if the group is at effect — which is to say originates nothing but only defends in the face of threatened disaster — it still must plan. And if it plans, somehow it must get the plan executed or done. Even a simple situation of an attacked fortress has to be defended by planning and doing the plan, no matter how crude. The order "Repel the invader who is storming the south wall" is the result of observation and planning no matter how brief or unthorough. Getting the south wall defended occurs by some system of administration even if it only consists of sergeants hearing the order and pushing their men to the south wall.

A company with heavy debts has to plan even if it is just to stall off creditors. And some administrative system has to exist even to do only that.

The terrible dismay of a young leader who plans a great and powerful new era only to find himself dealing with old and weak faults is attributable not to his "foolish ambition" or "lack of reality" but to his lack of organizational know-how.

Even elected presidents or prime ministers of democracies are victims of such terrible dismay. They do not, as is routinely asserted, "go back on their campaign promises" or "betray the people." They, as well as their members of parliament, simply lack the rudiments of organizational know-how. They cannot put their campaign promises into effect, not because they are too high-flown but because they are politicians not administrators.

To some men it seems enough to dream a wonderful dream. Just because they dreamed it they feel it should now take place. They become very provoked when it does not occur.

Whole nations, to say nothing of commercial firms or societies or groups, have spent decades in floundering turmoil because the basic dreams and plans were never brought to fruition.

Whether one is planning for the affluence of the Appalachian Mountains or a new loading shed closer to the highway, the gap between the plan and the actuality will be found to be lack of administrative know-how.

Technical ignorance, finance, even lack of authority and unreal planning itself are none of them true barriers between planning and actuality.

Thus, we come to the exact most basic steps that comprise administration.

First is OBSERVATION. From beginning to end, observation must serve both those in charge and any others who plan. When observation is lacking, then planning itself as well as any and all progress can become unreal and orders faulty and destructive. Observation in essence must be TRUE. Nothing must muddy it or color it as this can lead to gross errors in action and training.

Next is PLANNING itself. *Planning* is based on dreams but it must be fitted to what is needed and wanted and what men can do, even with stretched imaginations or misgivings. Planning has to be targeted and scheduled and laid out in steps and gradients or one will be laying railroad tracks that pass through oceans or boring tunnels in mountains that do not exist or building penthouses without putting any building under them to hold them up.

The essence of planning is COMMUNICATION and the *communication* must be such that it can be understood and will not be misunderstood. For unless those who oversee and those who do know what their part of the plan is, they cannot execute their share and very well may oversee and do quite some other action, leaving a monstrous gap and even a structure that ate up their time and funds but now has to be torn down.

The next is SUPERVISION and supervision is dually needful. It serves as a relay point to which plans can be communicated and from which observations as reports can be received; and it serves as the terminal which communicates the plans as orders and sees that they are actually done. This gives one the genus of the org board as a central ordering point which has other relay ordering points taking care of their part of the whole plan or program. These points are often also the points which care for local occurrences which must be handled, and their frailty is that they become so involved with local occurrences, oddities and purely local concerns that they do not or cannot give any attention to receiving, relaying and overseeing their part of the main plan.

Then there are the PRODUCERS who *produce* the service or the structure or the product required by the plan. Many plans are marvelous in all respects but putting somebody there to actually DO the required actions that make the plan real. The primary fault is to use persons who already have projects and duties to which they are committed and, with their local knowledge, see must be continued at any cost but who are forced to abandon existing programs or duties to start on this new activity, solely because the new activity has the stress given it in orders and the old activities are seemingly ordered left alone. Old companies and old countries could be said to be "that collection of incomplete and abandoned projects which is confused and failing."

Finally there is the USER, those who will *use* or benefit from the program when it is realized and completed. When planning fails to take this element into account, only then can the whole program fail utterly for it, regardless of dreams, labor and expense, is finally seen to be of no value anyway. Thus all great programs begin with an understanding or a survey of what is needed and wanted and a nose and value count of those who will use it and a costing action in time, labor, materials and finance, compared to the value of it — even if only aesthetic — of those who will use it in any way, if only to know they have it or to be proud of it or to feel better or stronger because they have done it.

Thus one gets the points which are the true administrative points:

1. OBSERVATION even down to discovering the users and what is needed and wanted.
2. PLANNING which includes imaginative conception and intelligent timing, targeting and drafting of the plans so they can be communicated and assigned.
3. COMMUNICATING which includes receiving and understanding plans and their portion and relaying them to others so that they can be understood.
4. SUPERVISION which sees that that which is communicated is done in actuality.
5. PRODUCTION which does the actions or services which are planned, communicated and supervised.
6. USERS by which the product or service or completed plan is used.

Administrative systems or organizations which lack at least the rudiments of the above system will not bring off the dream and will accumulate an enormous lot of uncompleted actions. Not a few failures, bankruptcies, overthrows and revolutions have occurred because one or all of the above points were awry in an existing organization.

The amount of heroic executive overwork which comes from the omission of one or more of these vital essential points accounts for the ulcers which are the occupational disease of those in charge.

When some or all these points are awry or gone, an executive or ruler or his minister is reduced to an anxiety which can only watch for the symptoms of bankruptcy or attack or revolt.

Even if so reduced, an executive who fends off disaster while getting in a system which satisfies the above points has an enormously bettered chance of winning at long last.

The dual nature of an administrative system or an organization now becomes plain.

Let us pry apart (1) and (2) above. The effort to hold an existing organization together is really different than trying to get a plan into actuality. In practice one *has* an organization of some sort. It has functions and it has local concerns and problems. And it has programs and actions from past control centrals or which were locally generated.

To push in upon this plans which, no matter how well conceived or intentioned, are additional to its load will cause a great deal of confusion, incomplete projects left dangling and general upset.

To place new programs into action, two prior actions are necessary:

A. Put in a whole new system paralleling the old existing system.

B. Survey the old system and its existing programs to preserve them, eradicate them or combine them with the new plans.

To leave (A) and (B) undone is to court disaster. Whether one is aware of the old programs or the old organization or not, THEY REMAIN AND WILL CONTINUE even if only as a pile of undone, unsorted papers nobody knows where to file or as a pile of odd unfinished masonry some future generation can't identify or will identify with scorn of administrations in general.

New leaders are sometimes looked upon as a worse scourge than a foreign enemy and new patterns of rule are often subjected to overthrow simply because they did not, out of ignorance or laziness, do (A) and (B) above.

One sometimes finds a company unit or a military officer left in some unheard-of place for years, at continuing expense, guarding or nibbling at some project in a bewildered or philosophic fashion. The activity remained unremembered, unhandled when a new broom and new planners entered the scene.

This can get so bad that a company or a nation's resources can be broken to bits. The old plans, disorganized, not known, discredited are superseded by new plans and new ambitions. The old plans are in the road of the new plans and the new plans prevent old plans from completing. The result is an impasse. And the men in charge, even at the level of junior executives, become even more puzzled and bewildered than the workers and begin to believe no new plans can ever be done, blame the ignorance of the populace and the cruelty of fate and give up.

All they had to do was put in a complete new parallel system as in the (1) to (6) outline above for their new plans and to meanwhile preserve and continue the old system while they surveyed for preservation, eradication or combination of it. It is sometimes even good sense to continue old projects to completion currently with new projects just to maintain stability in the company or country and somehow find new finance and new people for the new plans. It is often far less costly than to simply confuse everything.

Furthermore, all NEW and untried plans should have PILOT PROJECTS which by test and use must be successful before one incorporates them and their new workers into the old system as a parallel dependable activity.

A "chicken in every pot" as a campaign promise could easily succeed if organized as in (1) to (6) above.

There is a lot to organization. It requires trained administrators who can forward the programs. But a "trained" administrator who does not grasp the principles of organization itself is only a clerk.

At this current writing man has not had administrative training centers where actual organization was taught. It was learned by "experience" or by working in an organization that was already functioning. But as the principles were not the same company to company and nation to nation, the differences of background experiences of any set of administrators differed to such a degree that no new corps could be assembled as a team.

Thus it was said to require a quarter to a half a century to make a company. But the number of ineffective bureaucracies and national failures which existed stated clearly that there were too few skilled administrators and too few training activities.

Man's happiness and the longevity of companies and states apparently depend upon organizational know-how. Hiring specialized experts to get one out of trouble is a poor substitute for knowing what it is all about in the first place.

Organization is actually a simple subject, based on a few basic patterns which if applied produce success.

If one would dream and see his dreams an actuality, one must also be able to organize and to train organizational men who will make those dreams come true.

HCO POLICY LETTER OF 7 OCTOBER 1969

REMIMEO

ADMIN KNOW-HOW SERIES 22-1

FUNDAMENTALS OF ADMINISTRATION No. 2

(No. 1 is HCO PL 14 Sept. 69, AKH Series 22, THE KEY INGREDIENTS.)

(See also HCO PL 28 Feb. 66, WHY ORGANIZATIONS STAY SMALL.)

An expert on administration, called in to straighten out or develop admin for a company can ALWAYS be sure of one thing: IT WILL BE JAMMED AT THE TOP.

Thus he can always do one thing very effectively: HE CAN UNJAM IT AT THE TOP.

Old-time business efficiency experts sometimes knew that the jam was at the top but considered this meant it was necessary to retrain the top man, and this being infeasible and unpopular, went down into the plant to do time-motion studies. As it remained jammed at the top, the firm seldom got more efficient.

Many tales are told about how the top needed retraining, was old-fashioned and hampered things and almost none of them were true.

All organizations that are surviving at all are driven directly from the top or by a strata of executives immediately below the top and senior to anyone else.

The first action in any attempt to improve an organization is, of course, observation. The first thing to observe is who at or near the top in executive capacity is driving the organization.

Someone, at the top or several someones just below the top are overloaded.

This will be the one or several most important logjams or bundles of stopped flows.

A jam or inefficiency can exist on very low stratas of an organization without greatly impeding much of anything. But when such a jam occurs high up it can reduce efficiency, revenue and threaten the whole organization.

The one or more at the top are trying. They are trying hard. Otherwise nothing would be going at all.

To even hint that any retraining is needed at the top is an invalidation. Further, there is no time available there for retraining.

What is wrong and what causes overwork and despair is that the staff-type persons serving the high-level people are not trained or organized to handle the abundance of action.

This is well within the province of an administrative expert to handle. Here he is dealing with secretaries, typists, phone operators and junior executive types who are only too willing to learn how to expedite the action for the high-level key people.

All one needs to tell the key person is that he needs administrative help and that you'll see that he gets it to take the load off.

Then you organize and groove in those who directly serve him.

He operates actually on a 9 div, 27 dept system as a person and as an executive. Those services are fully listed on a standard org board.

The larger the organization being headed, the more numerous must be the service corps that serves the key executive.

If the organization is small or he is a very junior exec he often has a secretary but really does not have a communicator. If he can't have more than one person, one would convert the secretary to a communicator who is trained to be aware of all the functions involved in a 9 div, 27 dept org board. When his secretary learns all this well, in terms simply of basic duties, the load will come off.

But let us go much bigger. In a million man organization, the personal staff of the upper exec who carries the load would have to be several dozen people who comprise his personal admin staff only.

All the training the top man would need would come when the rest were organized and trained and would consist only of "This is your personal staff. For these functions (divisional) here is who you call." You give him the personal org board like a new phone card and let him play with it until he learns it in actual use.

The load would come off, the lines would speed up and the result in production or accomplishment would be fantastic.

This personal staff would be trained by the admin expert, not to run the business but simply to handle and expedite all the actions of the top exec.

Overloaded execs who are near the top should also have an organized personal staff, less numerous, but still with the basic org board fully covered.

Training these personal staff members is not hard. They are usually very willing and very amazed that order can exist and that there *is* a way to help.

Unless one has sat in or near a top spot he might not have any idea of how overloaded these are. Or how this overload can delay or prevent expansion. Where every interview is personal and where every action contains minor confusions, the brilliance and competence of the most well-meaning high executive is drained into minor chaos.

The president of the United States usually ages twenty years for every four in office. They go in looking well, they come out of office a wreck. Look at their pictures before and after. This is the toll of a relatively efficient if poorly organized personal staff.

Therefore, to handle this, a *real,* an efficient, a fully trained personal staff that is groomed to near perfection is vital.

The jammed condition is at the top.

If the top is served by people who fully understand admin (as per Key Ingredients, an org board based on natural laws instead of whim, precise duties and hats) then the observations and inspections bring in the data, plans go out, get followed up, get executed, the lines fly, the users are satisfied and the load comes off.

The exact adaption of the standard org board has to be worked out on a basis of what the top exec or execs have to handle. But it will contain every division and every department and will be capable of sending out observation or supervision missions and survey users or voters and doing all the other things expected of that executive.

The admin expert will find, with one look at the top execs in almost all companies and countries where this has not been done that no one man can possibly carry the loads and functions required of his post. Yet in almost all cases the job is somehow being done.

What an admin expert has to do is study and list all the functions — unobtrusively — of that post and recruit and train a personal 9 division, 27 department-type staff for it, even though it is as few as one or three or as many as hundreds, depending on the organization size.

The result will be magical in its effectiveness throughout the entire organization. Plans become actuality, confusions vanish and the statistics rise.

You can thereafter work out ways to unstop lower executive posts. But you begin and make your biggest increase at the top.

They need help up there.

ADMIN KNOW-HOW SERIES 22-2

OUT–OF–SEQUENCE

(Originally written by LRH for the *Apollo* OODs on 14 May 71.
Issued as an HCO PL on 3 Sept. 80.)

Refs:

HCO PL	14 Sept. 69	AKH Series 22 THE KEY INGREDIENTS
HCO PL	14 Sept. 70 I	Org Series 2 COPE AND ORGANIZE
HCO PL	19 Sept. 70 III	Data Series 18 SUMMARY OF OUTPOINTS

Out-of-sequence is the most common outpoint according to a survey of despatches and projects a couple months ago.

The thing which gets most commonly out of sequence is the pattern of the Key Ingredients.

The correct sequence for a piece of work would be to plan, obtain materials, and then work.

If this is made into work — plan — materials, everyone works hard but no product will result.

As production is what morale depends upon, a smash of morale would occur if the Key Ingredients were thrown out of sequence.

Omitted data runs a close second to out-of-sequence as the most common outpoint.

When the sequence of a work project is thrown out and then data like technology of how to do it is omitted, a group could work itself half to death and have down morale as well from no product.

The right way to go about it is to have the tech of a job, plan it, get the materials, and then do it. This we call *organizing*.

When this sequence is not followed, we have what we call *cope*. Too much cope will eventually break morale. One copes while he organizes. If he copes too long without organizing he will get a dwindling or no product. If he organizes only he will get no product.

Coping while organizing will bit by bit get the line and action straighter and straighter and with less work you get more product.

HCO POLICY LETTER OF 27 OCTOBER 1969
ISSUE I

REMIMEO

ADMIN KNOW-HOW SERIES 23

DEV-T

The entire, complete and only major source of dev-t is ignorance or failure to grasp CONFUSION AND THE STABLE DATUM as covered fully in *Problems of Work* (and LRH tapes of 1956).

Unless an executive or staff member fully grasps the basic principles of confusion and a stable datum then the org board is completely over his head, the reason for posts is not understood and dev-t becomes routine.

A post on the org board is the STABLE POINT. If it is not held by someone it will generate confusion. If the person that is holding it isn't really holding it, the confusion inherent in that area on the org board zooms all over the place near and far.

Any executive getting dev-t knows at once what posts are not held because dev-t is the confusion that should have been handled in that area by someone on post. With that stable terminal not stable, dev-t shoots about.

Excessive transfers in an org promote fantastic dev-t as the posts do not really get held as people are on them too briefly. "Musical chairs" (excessive transfers) can destroy an org or area.

The remedy is to get people trained up (OEC) to handle their posts, to get people on post who do handle their posts.

An essential part of such training is a *study* of *Problems of Work* and a full grasp of how a stable terminal handles and prevents confusion. If the person cannot fully grasp this principle, he is below the ability to conceive of terminals and barely able to perceive lines. He cannot communicate since there are no terminals to him.

REMOTE AREAS

If an area remote from an executive does not contain a stable point to which he can send his comm and get it handled, then his comm only enters dev-t into the area and he gets back floods of despatches and problems but no real handling. The area is not organized and does not have people in it who have grasped *Problems of Work* or how it applies to an org board or even why there is an org board.

Communicating into a disorganized area without first organizing it to have at least one stable terminal is foolishness.

NAVIGATE
FIRST PAGE
SEARCH
FIND
AGAIN
EXIT
CONTENTS
ORG BOARDS
INDEX

An org board is that arrangement of persons, lines and actions which classifies types of confusions and gives a stable terminal to each type. It is as effective as its people can conceive of terminals and understand the basic principle of confusions and stable data.

A good executive arranges personnel and organization to handle types of actions and confusions. He does not broadly comm into disorganized areas except to organize them.

Any area which gives an executive excessively developed traffic (dev-t) is an area where the persons supposed to be the stable terminals in that area are *not* holding their posts and do NOT understand what they are or why and do not know what an org board is and have never understood the Scientology fundamental known as confusion and the stable datum. They are NOT doing their post or organizing their areas.

An executive's evidence of this is the receipt from there of dev-t.

The executive's action is to get somebody THERE, get him to understand confusion and the stable datum and how it applies to posts as stable terminals, get him trained up and use that now stable point to handle further confusions.

If an executive goes on handling dev-t of people who are not stable terminals that handle their areas, HE WILL BE FORCED TO WORK HARDER THAN IF THE POST WERE EMPTY. At least if it were empty, he would get only the confusion of that area. As it is, if the post is improperly held and wobbly he gets not only the area confusion but also the enturbulation of the wobbly incumbent.

Volumes could be written about this subject. But there is no reason whatever not to be able to grasp the fundamentals concerning confusion and stable data, confusion and stable terminals, apply it to org boards, to areas and to expansion.

Chaos is the basic situation in this universe. To handle it you put in order.

Order goes in by being and making stable terminals arranged to handle types of action and confusion.

In organizing units, sections, divs, depts, orgs or areas of orgs, you build by stable terminals.

You solve areas by reinforcing stable terminals.

Executives who do not grasp this live lives of total harassment and confusion.

The whole secret of organization, the whole problem of dev-t, the basic ingredient of all expansion is contained in this.

REMIMEO

ADMIN KNOW-HOW SERIES 24

DISTRACTION AND NOISE

Noise is a technical term used in the field of public relations to describe the medley of messages hitting a member of a public besides one's own message.

The clamoring for attention of many different people, firms, situations brings about a condition where another voice or despatch is just ONE MORE DISTRACTION.

We can profitably use NOISE to describe the demands for attention put upon a staff member, executive, office or org that is being distracted off a main line of action.

A law evolves — THOSE INDIVIDUALS OR AREAS THAT ARE THE LEAST WELL ORGANIZED ARE AFFECTED THE MOST BY DISTRACTIONS.

Let us take an office in Gus Falls, south Alabama. The Public Exec Sec chooses personnel and audits, the HCO ES lectures, the OES mows the lawn. The rest of the staff are assigned to no divisions particularly, they try to cope but the org makes little money naturally so they "moonlight" (have other jobs).

The place is a mess, of course. Public, bills collectors, salesmen all clamor endlessly for the org's attention. The more disorganized the place is, the more messages each distractor has to originate to get anyone there to listen. Routine actions, having no lines on which to travel and no one to handle them, become frantic *oft* repeated emergencies, each one with multiples of messages.

SO, you are an executive in a remote city. This Gus Falls office is in your area.

SO, you write them despatches.

You get no answers.

You write more despatches.

And they go unanswered.

Gus Falls just isn't reporting up.

WHY? You are just one more noise in a screaming chaos.

The office manifests mainly DEFENSE. It is being hit so hard with random voices and despatches that it develops a ridge against all voices, all despatches.

Anything from you, if it gets read at all, is resented as it's "just one more awful impossible."

So there are only three conditions wherein you get no answers or compliance:

1. There is no one there.

2. Your terminal there isn't wearing his or her hat.

3. The place is a howling disorganized madhouse.

The remotely located executive who keeps writing despatches into an area and gets no action or answers has these situations:

A. His orders are unreal in that they are not based on good observation.

B. His orders are contrary to policy and would produce upsets or disorganization.

C. There is no one there at the receipt-point.

D. The terminal addressed isn't wearing his/her hat.

E. The place is a howling disorganized madhouse.

In any of these cases we get this law:

> WHEN YOUR DESPATCHES OR ORDERS AREN'T GETTING ANSWERED OR ACTIONED, DON'T EVER KEEP ISSUING MORE OF THE SAME.

In the special case of (E) you haven't got a chance of attracting attention.

There are many things you can do in the case of (E).

Whatever you do, if observation and real data to hand (not rumor or opinion) shows (E) to be the case, there is one basic rule:

> WHEN A PERSONNEL OR PLACE IS DISTRACTED, GET IN ONLY EASY BASICS ONE AT A TIME.

Problems of Work data applies. Stable datum and confusion.

Whatever you do, you have to get correct factual observation that is actual data, not propaganda or opinion.

It could be somebody there is suppressive and is tearing the place apart.

It could be they just don't know what organization is, that it means that specialized personnel are assigned to different posts with specific duties and that command and flow lines are established throughout the organization. Maybe they don't know that.

It could be only the top strata is in a mess with the staff working well out of sight from a remote observer. That has happened.

A remote executive or one on the ground confronting this sort of thing gets his first inkling of it from no-reports or noncompliance or slow compliance.

His next action is to collect factual data on actual conditions.

His next action is to find out WHO if anyone is disorganizing the place and handle that one. But this is with care as such action if remotely taken can be wrong and the place will just disintegrate.

His next action is to get in simple basics like an org board, then hats, then a Comm Center, then recruitment, then decent promotion and decent service.

Often such a group as in (E) has generated howling financial or even public emergencies and these are what are screaming for attention. The thing to do is to put a special section IN CHARGE OF THAT EMERGENCY and route anything related to it to that special section for full orderly handling. Get the rest of the place properly organized and conducting business as usual.

It takes a while for an organized activity such as an office to become a shattered wreck. However, an SP put into it as an exec can speed this process up greatly.

Therefore, anyone seeking to handle the confused area must detect the symptoms early and handle early.

THE LATER THE SITUATION IS NOTICED THE HARDER IT WILL BE AND THE LONGER IT WILL TAKE TO BUILD IT BACK UP AGAIN.

The next time you get a DEFENSIVE ANSWER, a SLOW COMPLIANCE or a NO–REPORT, realize that you have on your hands right there, whether in one person or an org, the symptoms of a situation you must handle. It is any one of from (A) to (E) above.

Honestly and dispassionately figure out which one it is. And realize if it is (D) (not wearing a hat) it could be a symptom of an SP so watch it until you know his (a) case status, (b) ethics record and (c) production record or you could make a mistake.

If it's any one of these, (A) to (E), you can find out by dispassionate analysis based on facts.

But in any event the situation MUST be handled. What is wrong *must* be remedied.

CLOs, OTLs AND FLAG

Refs:

HCO PL	14 Sept. 69	AKH Series 22 THE KEY INGREDIENTS
HCO PL	8 May 70	AKH Series 24 DISTRACTION AND NOISE

The PLs of the Data Series

PURPOSE OF CLOs

TO MAKE PLANNING BECOME AN ACTUALITY is the key message of the Key Ingredients.

This also unlocks the door to an understanding of Continental Liaison Offices and Operation and Transport Liaison Offices.

Unless the staff of a CLO or OTL knows the purpose of its existence it ceases to exist as it will be of no real use.

A CLO or OTL must be of USE to FLAG and ORGS and missions and the public. If it is not, then it will become valueless and a burden.

If it does know and if every staff member in it knows its purpose then it will prosper and its staff will prosper. If not it will become unmocked and confused.

THE MAJOR PURPOSE OF A CLO OR OTL IS TO MAKE FLAG PLANNING BECOME AN ACTUALITY IN ORGS, MISSIONS AND THEREBY THE VARIOUS PUBLICS.

STEPS

In THE KEY INGREDIENTS you find a cycle of management as follows:

1. Observation
2. Planning
3. Communicating
4. Supervision

5. Production

6. Users

Plans in this PL include programs and projects and are the duty of FLAG.

CLOs and OTLs fit exactly at (1) *Observation* and (4) *Supervision.*

Orgs fit at (5) *Production* and the Publics at (6) Users.

(3) Communication occurs internally at Flag; between Flag and CLOs; internally at CLOs; between CLOs and orgs and missions; and between orgs and missions and the publics. There is also internal communication amongst the publics and within each public, known as "word-of-mouth advertising" and "goodwill." Laying out this network of communication is an interesting exercise for you will see that it is becoming global — over the whole world. In addition to increasing understanding this will give one a concept of the true size of the operation. "Publics" is a public relations term meaning a type of "users."

OTLs are an extension of CLOs for the CLO.

If you can conceive of this network of communication you can then work out the remaining KEY INGREDIENTS.

OBSERVATION

Orgs observe for CLOs. OTLs observe for CLOs.

The Stats In-Charge of an org, the Finance Banking Officer of an org, the Bureaux Liaison Officer in an org, the mission holders and individuals of the publics are all *Observers* (No. 1 of Key Ingredients). They send their observations to OTLs and to CLOs.

In the Data Bureau of a CLO these observations are duplicated and CIC processed for local CLO use but are at once also sent swiftly on to Flag.

In the Data Bureau at Flag all these observations are assembled by continent and org and evaluated.

From this Flag evaluation (see Data Series on how it is done exactly), (2) of the Key Ingredients, PLANNING can occur. This step, for our purposes, includes finding the major international successes and outnesses and the big WHYS or reasons for them. Flag puts these into programs and projects and sends them out via CLOs to orgs and sometimes missions.

CLOs and their OTLs now come into their own. They SUPERVISE getting these programs and projects in and done. This is the bureaux system's PRODUCTION.

The organization and its production results are of course expressed with the publics which are thereby served and increased as USERS.

Thus all the KEY INGREDIENTS line up.

FLAG PLANNING

On Flag the basic overall effort is *designed* and *planned*. The *big broad* situations are spotted and the WHYS (reasons for them) found.

The plans, programs and projects turned out by Flag are designed to press on with the major international designs and to spot major falterings or outnesses.

The results are policy, tech, programs and projects.

In general Flag does not work on things that fit only an individual org.

What Flag plans and makes projects for fit a type of org or all orgs and are for the applications of orgs to the various publics.

By proven statistics, what Flag plans will improve or boom an area if it is applied.

Where Flag planning, represented by programs or projects, is actually gotten into full action in an org, that org will boom.

Also, by long historical proof, where an org or area neglects or doesn't execute Flag planning and its programs and projects, there is a collapse.

This isn't PR. This is the story of the years.

If Flag planning got into full activity in every area we would have the planet.

For instance the GI boom is the old Flag Tours orders suddenly reactivated and carried brilliantly into effect in the Pac area. Flag was putting tours data and tours training together for a year before the present GI boom. This was then beautifully carried out by splendid initiative in the Pac area and spread.

The resulting production of GI came about because Sea Org officers brilliantly did it with a spark and spirit beautiful to behold. And it was successful because orgs were now being headed by Flag-trained Flag Executive Briefing Course grads. *Policy* was now going in. And the only falter was where policy was departed from or was not asked for.

So Flag planning *if executed* has a long historical background of huge success.

CLO ACTIONS

This brings us straight to the real duties of a Continental Liaison Office and its branches called OTLs.

A CLO is in charge of its continental areas. It has direct comm with orgs. Has or will have Finance Banking Officers and Bureaux Liaison Officers in each org.

The first duty of a CLO is to observe and get those observations into its own Continental Information Center (CIC) and observations and reports and lists of *its own activities* to Flag.

What are these activities? They are:

A. To observe.

B. To send observations by users, orgs and the publics to Flag.

C. To push in Flag programs and projects.

D. To FIND the WHY (reasons) that any *Flag* program or project is *not* going in in an org or mission or public and REMEDY THAT WHY so the Flag program or project DOES go in.

E. Keep itself set up and operating on the pattern planned for its establishment by Flag.

F. Handle sudden emergencies.

Those are the TOTAL duties of a CLO.

They are also the duties of an OTL in respect to its CLO.

ORGS

Orgs and missions push in Flag programs and projects by department and division and also by individual staff members.

At org level and the level of its publics the org is doing (A) to (F) above.

A Bureaux Liaison Officer or an FBO in an org is doing (A) to (F) and answering to an OTL or CLO.

The OTL handles one or more orgs as an expanded arm of the CLO and it is doing (A) to (F).

The CLO is working at the level of individual orgs and missions and their publics through them.

Flag works through CLOs then to OTLs or orgs to the publics.

It would be highly informative to lay all this out in clay. For it IS the winning pattern. Where it is not understood an area breaks down and needs emergency actions.

SIMPLICITY

The floods of information pouring through these lines make them appear far more complex than they are.

That a CLO runs its own service org does not violate this in any way. That's just another *org* to run.

Let us take an actual example.

Data coming in to Flag over a long period indicated few auditors being made and slow (unbelievably slow) courses over the whole world. Several observations were ordered by Flag at one time and another.

The situation was very serious. Slow courses meant no real delivery. It meant an org had to work too long for too low a payment. It meant no auditors available. It meant no students would enroll because they couldn't spare that much time. Orgs couldn't get Class VIs home from SHSBCs.

Observations piled up and up and up. A three-week course on Flag would become a six-month course in orgs. It defied belief.

After a long long study of all this and firsthand experience at Flag, some Whys began to show up. The HCO PL 16 Mar. 71R I, KSW Series 27, WHAT IS A COURSE? was one answer. The Flag Course Supervisors Course designed to be taught in the service org of a CLO. TRs the Hard Way came out of this.

Each one of these and projects based on them went out from Flag to CLOs and thus to orgs.

Then the big outness exploded into view. The June–Sept. 1964 Study Tapes were NOT in use in courses!!!! That was the major WHY.

At once the Word Clearing tech was repiloted on Flag. Simplified versions were worked out. HCOBs were written.

Projects to get them in were written.

A whole series of drills, one for every possible Supervisor action, were swiftly put into form by an on-Flag mission and piloted.

These, as programs and projects, are pouring out to CLOs to orgs by rapid communication as fast as packaged from Training and Service Bu Flag.

Assistant Training and Service Aides in CLO Training and Service Bureaux should see that they get into each org and mission, using CLO's LRH Comm and External Comm Bureaux.

In orgs, LRH Comms or Bureaux Liaison Officers should get them checked out and *in*.

And EVERY ORG WHICH DOES NOT AT ONCE GET THEM IN AND IN FULL USE is of immediate interest to the CLO Data Bureau. The Training and Service Assistant Aide should be working to get his org contacts to give him data to find out WHY they are not IN. And Action should be alerted so it can send a CLO mission to find out WHY or remedy the already found WHY.

OTHER DUTIES

"Noise" (HCO PL 8 May 70, AKH Series 24, DISTRACTION AND NOISE) is the main reason this does not happen.

The org is in a flap of unworn hats, no personnel and the milk bill.

The CLO Training and Service Bu is trying to handle a sick exec.

Noise! Every bit of noise being generated is because the main situations are not being handled, only the dev-t around them.

Like an HAS who has no time to hire because he is so busy with internal personnel demands, an org or CLO can be so knocked around by nonsense generated on the fringes of an unhandled situation that the real reasons do not get handled.

So "other duties" seem to be so important in an org or a CLO that they do not carry the line through. Why are they so distracted by so many outnesses? Because the main line is not in!

There are NO other duties more important than remedying the reason one has so many other duties!

FLAG REMEDIES

The remedies come from Flag. They are based on area observations from many sources.

CLO DUTY EXAMPLE

To construct an example of a real CLO in action:

The Asst Management Aide of a CLO finds her project board blank for Bongville. CIC of the CLO states no reports are coming in from Bongville org. The last stats sent were poor. There is natter in Bongville's field.

On A/Mgmt Aide request, CLO's Action Bureau writes the MOs for, briefs and fires a single observer missionaire.

In Bongville, the CLO's missionaire manages to find the "Exec Director" Bongville (who is not the ED supposed to be there according to CLO personnel records).

The following conversation takes place:

The org's ED says, "Your CLO has no reality on what's going on here in this org." Question: (from CLO missionaire) Do you ever send any data or reports or stats? "No, we haven't time for that. We keep going broke." Question: Do you know Flag policy relating to pricing and financial planning? "No, we're too busy. All this questioning is just too distracting. The landlord is threatening eviction." Question: How much money have you invoiced in the last month? "Oh, very little." Question: But I see you have a full classroom of students. Have they all paid? "Oh, they've been here a year. They paid long ago . . . I think." Question: Have you put the Flag Word Clearing Project into effect so they'll finish their courses? "The what?" Question: Have you sent anyone to the CLO Tours Course? "Please, I've got to go now. The HAS just transferred the Course Super to the Estate Section and our only auditor to Ethics Officer and I've got to tell our afternoon pcs to come back tomorrow . . ."

TELEGRAM: TO CO CLO. ADVISE YOU SEND A MISSION WITH A HAS AND AN AUDITOR AND FBO TO BONGVILLE FAST TO HOLD IT. SUGGEST TWO

BONGVILLE STAFF MEMBERS TO CLO TOURS COURSE AND TWO OF THESE EXECS TO FEBC. NO FLAG PROJECTS IN. CURRENT ED JOQUIM SOKUM DISTRACTED DISCOURTEOUS TO S.O. CHECK OF INVOICES REVEALS $18,000 UNCOLLECTED FROM STUDENTS NOW ON COURSE. NEEDS FBO AND FINANCE INSPECTOR TO SET UP TREAS AND COLLECT. ADVISE OFFICE OF SPECIAL AFFAIRS RE LANDLORD EVICTING ORG. NO DSA HERE. BEST = MISSION BONGVILLE OBSERVER.

Now the observation mission went out because the CLO Data Bureau found Bongville was not reporting.

This telegram meets up in CLO's Data Bureau CIC with a ton of public complaints in the Bongville area.

A rapid evaluation is done by the CLO CIC Evaluator using any current data on Bongville.

The WHY taken from CLO CIC evaluation turns out to be an illegal promotion to Bongville ED of a blown PTS staff member from Chongton org who put the whole staff in Treason and blew them.

The CLO Product Officer goes into action for the product of a functioning org.

CLO Action Mission Orders for a new SO temporary ED and HAS for Bongville are quickly written, the mission briefed and 24 hours later they are in Bongville handling. The Office of Special Affairs is put in touch with the landlord. The CLO Finance Office sends an FBO. A/Dissem Aide reroutes a tour to include Bongville.

The new FBO forces $7,000 in collections by Friday and gets a Treasury Sec on post and hatted and the Flag invoice pack goes in.

The HAS phones the fired Bongville auditors, gets three back. Auditing resumes. Six students are word cleared and completed on course and the Flag Intern program goes in and they begin to work in the HGC making nine auditors now delivering.

The tech member gets the Mini Super Hat on the Course Super. The Flag Word Clearing pack goes in.

Two tours students and two execs get routed via the CLO for training on the Flag checksheet courses.

The ex-ED and the ex-HAS are put on as "HCO Expeditors" pending further handling.

The HAS reverts the org to cancel out the mad musical chairs, begins to recruit, form an expeditor pool, train and hat by Flag project orders and checksheets.

The temporary SO ED produces by coping.

The scene begins to untangle to the degree that policy and Flag projects begin to go in.

The Flag ARC break program begins to go in and begins to straighten out ARC breaks in Central Files.

One month later, the Tours students are back from CLO. The org is rebuilt enough to deliver. Money begins to roll in.

Two months later the first FEBC comes back, is genned in as Exec Dir.

The second one returns. Is genned in as HAS.

They are told to get two more people to the FEBC fast and a DSA is sent for training at OSA request.

Flag projects are well in.

The CLO mission pulls out.

The org remains stable but is carefully watched by the Asst Management Aide at the CLO via her project board.

Meanwhile all reports and data have been flowing to the CLO and to Flag.

Flag compares its data, evaluates this and other orgs. Finds ex-staff members who have blown from an org are uniformly PTS. A local Flag project to develop more data and tech on PTS begins . . .

And the cycle repeats.

The CLO gets in the PTS project.

When an org doesn't get it in according to a CLO Management Bu project board, data is looked for in the files and an evaluation is done on the orgs that didn't get it in. If no data, an observer is sent . . .

And that's the cycle.

The Flag WHY for the Bongville incident would be a CLO in that area not manned up and operating fully and not getting Flag projects in.

The CLO basic WHY that let Bongville go to pieces would be that the CLO did not watch its Flag project board and did not notice Bongville was not getting in any projects and was not reporting.

The basic WHY in Bongville was the promotion of unqualified persons to ED and HAS who did not know or try to get in Flag projects and instead went ethics-mad when they began to fail.

SUMMARY

A CLO is there to observe and to get Flag programs and projects in.

When a CLO doesn't report or backlogs, it gets Bongvilles.

It handles Bongvilles. It must have its Assistant Aides, its bureaux, especially a Data Bu, and a management project board, a Missionaire Unit, and an Action Bureau to handle Bongvilles.

But every Bongville it has to handle will be because Flag programs and projects weren't going in in Bongville and the CLO didn't find WHY they weren't going in soon enough.

Flag Level — International WHYS applying to all orgs.

CLO Level — Continental WHYS to remedy to get Flag programs and projects in.

Org Level — Divisional and departmental and individual WHYS that prevent Flag programs and projects from going in.

So that's the reason for a CLO:

To observe and to send all data to Flag and to continentally find out WHY Flag projects and programs are not going in in an org and remedy that WHY and get the programs and projects in.

That's a CLO.

HCO POLICY LETTER OF 28 JULY 1971

REMIMEO
EXEC HATS

ADMIN KNOW–HOW No. 26

(Cancels HCO PL 19 Dec. 69, EXECUTIVE DUTIES, which cancelled HCO PL 19 July 63.)

Note: HCO PL 19 July 63, ADMINISTRATIVE STABLE DATA, stated that an executive should "get people to get the work done." HCO PL 19 Dec. 69, EXECUTIVE DUTIES, cancelled it and stated other duties.

This cancellation probably robbed some people of a stable datum that they got people to get the work done.

When an executive was no longer told he should get people to get the work done, hatting tended to go out and a great deal of overload began to occur on executive posts.

From an executive not doing "work" the viewpoint swung to the other extreme that executives only do all the work.

Both policy letters (HCO PL 19 Dec. 69 and 19 July 63) were correct in their way.

Therefore they are restated as follows.

PHASE I— BEGINNING A NEW ACTIVITY

AN EXECUTIVE SINGLE–HANDS WHILE HE TRAINS HIS STAFF.

When he has people producing, functioning well and hatted, he then enters the next phase:

PHASE II—RUNNING AN ESTABLISHED ACTIVITY

AN EXECUTIVE GETS PEOPLE TO GET THE WORK DONE.

SINGLE–HANDING

By "single-handing" one means do it himself, being the one responsible for actually handling things.

This phase occurs when an executive is forming up his personnel.

(HCO PL 19 Dec. 69, EXECUTIVE DUTIES, is therefore requoted for this phase of the activity — he is on the post, most of the rest are new and flubby.)

An executive handles the whole area while he gets people to help.

An executive in charge of an org would "single-hand" (handle it all) while getting others to handle their jobs in turn.

This gives a practical and workable approximation of what top-stat executives actually do do.

The executive who sits back and waits for others to act when a situation is grave can crash an entire activity.

Essentially an executive is a working individual who can competently handle any post or machine or plan under him.

He is a training officer as well. He designates who is to do what and sees that a training action is done by himself or others to be sure the post will be competently held. An executive who accepts the idea that if a person has a school degree in "waffing wogglies" or sewing on buttons he can at once be trusted to waff wogglies or sew buttons is taking a personnel by recommendation, not by his experience with the personnel whose work-organization potential has never been tested *under that executive*. A camouflaged hole (undetected neglect area) may very well develop in such a circumstance, which can suddenly confront the executive with a time-consuming disaster.

Thus an executive accepts help conditionally until it is demonstrated to be help, and meanwhile does not relax his control of a sector below him until he is sure it is functioning.

In this way an executive is one who does and backs off spots continually. He could be said to always be doing himself out of a job by getting the job competently done. However, in actual practice, as post personnel does shift, he has to be prepared at any time to wade back in and put it right.

The supreme test of an executive (as in the HCOB SUPREME TEST OF A THETAN) is to MAKE THINGS GO RIGHT.

To the degree he can maintain his observation, communicate and get supervision done (see HCO PL on the Key Ingredients), he can achieve production or service and satisfy users.

As observation is often faulty, especially over long distances, as communication is not always received or studied and as supervision is often absent, the executive must develop a sensitivity to indicators of outnesses and systems to correct them.

A very good executive knows how to "play the org board" under him. He has to know every function in it. He has to know who to call on to do what or he disorganizes things badly.

An executive also has to know neighboring org board arrangements in the same org, the org board of allies and of enemies.

An executive has to know what users need and want and furnish it. When normal and routine posts fail under him, the executive is of course forced into Non-Existence as an executive, has to find what is needed and wanted and produce it. He applies the whole Non-Existence Formula to the situation.

Only if he does not handle fully once he does see an outness does an executive go into Liability.

An executive deals with the frailty of human variations and distractions. When these engulf his area and he is confronted with the fruits of alteration and noncompliance, of posts not held and duties suddenly found left undone, it is up to the executive to get them done any way he can. Having handled, he applies the Danger Formula (or lower as it appears) to the neglected area.

An executive has to be somebody who cares about his job and wants to get things done. If he only wishes the title for status, he is of course heading himself and his area for disaster and it could be said that such an executive, not meaning to do the job but only wanting the title, is in Doubt or lower on the third dynamic.

The executive thinks of the area and organization first and repairs. Then he thinks of the individual and straightens him out.

An executive who is worker-oriented winds up hurting all the workers. The workers depend on the organization. When that is gone they have nothing.

An organization cannot have more taken out of it than is being put into it. Efforts to bleed an organization of more blood than it has destroys it.

The preservation of his organization is a first consideration of an executive.

In an executive's hands an organization or one of its areas must be "VIABLE." That is, it must be capable of supporting itself and thus staying alive. When his area is parasitic, dependent on others outside it, without producing more than it consumes, the area and its workers are at severe risk and in the natural course of events will be dispensed with, if not at once, eventually.

Thus an executive is someone whose own sweat and energy keeps an organization or an area of it functioning. In this he earns and uses help and they in turn take over executive roles in their subordinate areas and keep them alive and producing.

An executive is in the business of SURVIVAL of his area and its people and providing with service or production an abundance which makes the area, his own services and that of his subordinates valuable.

If an executive so functions his own survival and increase is guaranteed even by natural law. If an executive functions for other reasons it is certain the ground will vanish from under him eventually again by natural law.

An executive is in fact a worker who can do all and any of the work in the area he supervises and who can note and work rapidly to repair any outnesses observed in the functioning of those actions in his charge.

The best liked executive who is most valued by his workers as someone they need is an executive who functions as described above. One who seeks to survive on favors given and does not otherwise measure up is not in fact regarded highly by anyone.

Whatever ideology one finds himself in, the above still applies. The way to the top may well be marrying the boss's daughter, but the way to stay there still requires the elements described herein. As bosses' daughters are few, a sounder way is to learn all the jobs well and study this policy and just become an executive.

PHASE II IN FULL

Now we come to PHASE II. The executive has inherited from a competent former executive or has himself built (and has prevented transfers and lack of apprenticeship from destroying) his unit, department, division, org or orgs.

Now to continue to single-hand will destroy anything that has been built.

The other policy letter (HCO PL 19 July 63) now applies and is so reissued.

When an executive in charge of a working activity continues to retain the idea "Do all I can," chaos then results. An already formed activity will collapse.

The only possible datum on which an executive could work effectively in a formed activity is *"Get people to get the work done."*

Otherwise the executive does as much as he can and leaves the willing personnel standing around unhelped and unguided. If we all did this, Scientology would go nowhere. One auditor can't audit the world. One personnel cannot do all the work of a Scientology organization.

If each person in the organization wears all the hats or one wears all and the rest wear none, you will have:

1. Bad morale,
2. Overburdened personnel,
3. Underburdened personnel,
4. Rapid staff turnover,
5. Bad dissemination, processing and instruction,
6. Low income,
7. Even lower income,
8. Public flaps,
9. Chaos.

An executive in a formed org has only two jobs:

1. Policy, promotion and planning,

2. Getting people to get the job done.

A post or terminal is an assigned area of responsibility and action which is supervised in part by an executive. Supervision means helping people to understand their jobs. Supervision means giving them the responsibility and wherewithal to do their jobs. Supervision includes the granting of beingness. Supervision does not mean doing the job supervised.

Thus you have two phases and shades of gray in between.

At a slight sag or a mess-up or failure to hire and hat and apprentice properly, a PHASE II situation can drop back into a single-handing PHASE I. An executive who again doesn't see that he has dropped out of comfortable Phase II and gotten into a PHASE I must at once again single-hand, if only for a day.

But now the executive MUST get in ethics, hire, hat and apprentice people and build once more to PHASE II.

In short, an executive has to know how to change gears!

To BOOM dissemination and income and hold the boom, study this well and be able to shift not only from comfortable II to hectic, overworked I but also to push back to Phase II.

This is the reality of it.

HCO PL	9 Jan. 80	Exec Series 20 DEPARTMENTAL MINI PROGRAMS: THE KEY TO ACHIEVEMENT
HCO PL	19 Aug. 71	AKH Series 28 Target Series 8 PROGRAMS, USE OF — HOW TO SAVE USELESS WORK
HCO PL	12 Sept. 59	PROGRAMING

(The data in this issue has been excerpted from CBO 129, WRITING PROJECTS, 9 Aug. 71 as it contains pertinent and valuable data for hatting those engaged in writing programs or projects. Issued as an HCO PL on 30 Dec. 82.)

Some years back, in hatting an Aide, I asked her to visualize a project she had written being read and done at the receipt-point — in other words to assume the viewpoint of the receiver, and to see if she would then do the project.

After a study of this she wrote the following excellent analysis of the action.

"COMPLIANCE REPORT

8 August 1971

Re Hatting Action

Dear Sir,

I reread five of my projects to visualize a project of mine being done and to see if I would do it and could easily do it if I received it.

I then also read some LRH written projects to see the difference and compare.

1. I found I would not do a project or would not be interested in doing it if:

   a. I didn't understand it well at first reading (unclear).

   b. If it was too long and complex and therefore unconfrontable.

   c. If the reality of WHY it was needed and what improvements it would bring to my post or area was not clearly expressed in the INFO or SITUATION of the project. In other words if the purpose of the project wasn't real.

   d. If, just in reading the project, I didn't KNOW what I was supposed to *DO* with it or while it was underway.

2. Then I would have difficulty doing it:

   a. If each target didn't call for an ACTION, a DOINGNESS.

   b. If each target called for more than one action (confusing).

   c. If each target was not specifically directed to or assigned to one person (me) or to somebody else on my orders.

   d. If NO ONE in particular was responsible to get the project done.

   e. If it went in such detail that it didn't give me any leeway to operate in the existing scene and achieve the target, and if I was left without any initiative to do it.

   f. If each target wasn't a START–CHANGE–STOP with a definite time sequence, it would be more difficult to put it in.

From this I get some POSITIVE points to look for when writing a project:

1. Clearly assign project responsibility to one terminal or group of terminals.

2. Make the info and the situation REAL to the person by showing what the existing scene is.

3. Show why the project needs to be done and what it will accomplish, and *sell* it by doing so.

4. Have one ACTION per target and not more than one.

5. Have the time sequence properly indicated and visible in the project and make it a clear start-change-stop cycle.

6. Don't go into too many details. Better even, refer to a PL where details on HOW to do an action are contained.

7. On the other hand, don't assume that the receipt-point knows policy at the fingertip. He most probably doesn't. Don't skip gradients on the receipt-point.

8. Make it very clear as to who does what target.

9. Keep it short and simple, and each target short and words simple.

10. Watch for outpoints.

There are also the regular policies about targets and their types and how they relate, which are observed.

I'm not saying all my projects were bad and not getting done! FEBC projects are a bit too long maybe, but do have lots of doingness in them. One project is too detailed. One project, as you indicated, has good info but is unclear as to who does what.

A good one, which had most points above in, got completed well.

Thank you for the hatting action."

ADMIN KNOW-HOW SERIES 28
TARGET SERIES 8

PROGRAMS, USE OF
HOW TO SAVE USELESS WORK

Staff time is very often wasted by the failure to use a program-project system.

Example: Dept 4 does a full layout for promo. Then finds it is off-policy and it isn't used. Means wasted work.

Example: Tech Pc Admin is ordered to make a huge board to give pc addresses. After a lot of work it is never used.

WHY? The job never had any part of a program in the first place. It was not part of any general activity. Thus it is not part of a team action.

The correct procedure in ordering staff to ANY project that is going to consume time is to:

1. See if there *is* a situation.
2. Find out its WHY.
3. Get a general program drawn up. Get it approved as a program with who is to do each part.
4. Get the different parts of the program drawn up as a TARGETED project. With who is to do each project. Get these approved.
5. Get the projects executed.
6. Complete *all* the projects.
7. Report the program as done.

This is a correct sequence. To do anything else is to omit steps in the sequence. This gives two outpoints — omitted steps and altered sequence.

Thus when this procedure is shortcut, the whole org can look batty. It can also have its staff frantic and overworked without producing anything.

Usually the product officer draws up a program.

It is vital that he refer to policy to support his program.

NAVIGATE
FIRST PAGE
SEARCH
FIND
AGAIN
EXIT
CONTENTS
ORG BOARDS
INDEX

The LRH Comm should approve the program as not off-policy.

Division heads usually write up the projects. These are approved by the product officer and then the LRH Comm.

The program is issued as a local ED when approved.

The projects refer by number to the program and are issued separately as local EDs.

Their completion is chased up by the product officer.

The fully completed program is reported to the LRH Comm.

This *looks* like a lot of writing. It *saves* a lot of work.

Programs and projects are easily corrected and brought on-policy. The actual *work* is costly and impossible to correct.

The wise staff member would clamor for this system. Further he would ask, when told to repaint the students, "Where is the program and the project order?" He'd routinely find that he was often doing a job not approved by anyone but his senior. And disapproved of by the rest of the org.

Programs set priorities. They let a staff work as a team. They get the coins of the org correctly invested in needful work.

The Ad Council is a wise Ad Council if it demands the right to pass on all programs originated by its executives before projects are written or work is done.

Needless to say, a program must handle actual situations, the situations which depress production and prosperity.

These are vital steps in running an org or working in it.

Don't run about frantically or sink into apathy. Get your execs and staff program-project conscious, *save* work, get prosperous.

ADMIN KNOW-HOW SERIES 29
EXECUTIVE SERIES 5

NOT–DONES, HALF–DONES AND BACKLOGS

There is a very definite, often unsuspected effect concealed in a backlog. And it is of such violence that it can crash an area's stats while seemingly working frantically.

BACKLOG *(Webster's)* noun: 3. an increasing accumulation of tasks unperformed or materials not processed; verb: to accumulate as a backlog.

NOT–DONES AND HALF–DONES

Backlogs occur for various reasons. But the two main classes are (1) NOT–DONES and (2) HALF–DONES.

For lack of seeing that a backlog exists, lack of supervision of existing personnel, other-intentionedness of personnel, lack of personnel to handle the usual or peak volumes, lack of know-how to handle, lack of resources, and outright sabotage are some of the reasons that account for NOT–DONES.

HALF–DONES are as bad as NOT–DONES as they bit and piece an area into a quagmire. Suppose Detroit began to make half-cars. All their resources would be devoured, yet nothing would really be produced, yet everyone would look frantically busy; the executive worries would mount up to an inconceivable fever pitch unless the half-done factor was handled.

But half-dones are not always as visible as half-cars. "Have you handled Bets and Company suit?" "Oh yes." But the case is lost because the filing papers were only half-prepared and half-filed.

The same reasons apply for HALF–DONES as are listed above for NOT–DONES.

The Why of many failures is found in NOT–DONES and HALF–DONES.

The primary effect (there are others) of NOT–DONES and HALF–DONES is the building up of *backlogs*.

Now, no backlog ever quietly lies there. So long as anything else depended upon the actions being done, there will be pressure or threat of one kind or another on the backlogged area.

Thus when an activity becomes backlogged IT GENERATES NEW WORK NOT CONCERNED WITH REDUCING THE BACKLOG AMOUNT.

Example: An insurance company backlogs claims payments. Torrents of queries then demand why. The claims section spends its time answering the queries, not reducing the number of claims. The volume of work doubles, trebles, but no claims get paid.

BACKLOGGING AT ONCE DOUBLES THE WORK BY THE ADDITION OF DEMAND HANDLING.

Example: A Central Files fails to stay filed into up to present time. Demands for items in it cause others to consume all the file clerk's time tearing CF apart to find particles.

A BACKLOG CAN INCREASE ITSELF BY ADDING DISORDER THAT UNDOES THINGS ALREADY DONE.

Thus a backlog tears up the past work while building up future work.

Example: Personnel backlogs its files, causing it to backlog appointments. This overloads areas. These areas start crashing down on Personnel in mobs demanding it provide people. Personnel is then so busy fending off people it can't appoint. Yet is in frantic action.

A BACKLOG PREVENTS ITSELF FROM BEING HANDLED.

An org that has several backlogs in it becomes frantic and then goes into apathy.

The cure is to:

1. Get people and do ALL HANDS actions to get the most important backlogs done.
2. To find the real WHY of the backlog and handle it so a present time state is then maintained. (Requires a program, followed and *done*.)
3. Check out staff on the book *The Problems of Work*.
4. Get staff to do Training Drill Zero on their work areas.
5. Get staff to reach and withdraw from their materials of operation or areas.
6. Do a survey of attitudes which reveal complaints and reasons for not-dones, half-dones, backlogs.
7. Based on the survey, campaign hard to remedy NOT–DONES and HALF–DONES.
8. Be very severe with any beginnings of any future backlogs.

When you see an area or org in apathy, know it has gone the route of not-dones, half-dones and backlogs and handle.

When you see an area going frantic, know you are looking at not-dones, half-dones and backlogs and handle fast before it goes into the much worse condition of apathy.

Production is the basis of morale.

Not-dones, half-dones result in backlogs.

Backlogs destroy the possibility of future production.

Thus you know the situation of not-dones and half-dones will result in backlogs.

The backlogs will prevent further handling.

This subject *is* the subject which makes executives harassed.

Behind every upset there will be NOT–DONES, HALF–DONES and BACKLOGS.

So be very alert.

Dynamite is stick candy alongside of this very explosive subject.

Don't say I didn't tell you.

HCO POLICY LETTER OF 1 SEPTEMBER 1973

REMIMEO

ADMIN KNOW–HOW No. 30

How is it that the highest paid salaried men in our current civilization are administrators? They draw from a quarter to a third of a million dollars per year. They are paid far, far more than professional people, far more than scientists, more than politicians who above all people should be excellent administrators. Why? Because they are so rare. Business schools may turn out graduates by the millions but very, very, very few of them ever become top-flight executives who can really administer. Why does the civilization develop so very few of them? Because this civilization has not had much workable administrative tech and has not even known the basic natural laws which underlie administration.

The subject of administration is so poorly known because there is so little data. And because there is so little, the subject itself is not understood at all by the general population of the planet. Yet there are very few on the planet who are not the direct effect of administrators.

You hear an administrator talk about PRODUCTION or GROSS INCOME and possibly suppose this is just a peculiarity or a fixation and that these facts are distant from general living. Perhaps some people suppose that such talk and urgings is part of the capitalistic system or something for a board of directors. General public reaction to such things is usually a nothing-to-do-with-me. The usual attitude to law and accounting is a "beyond me" and an "it's confusing" yet the person is subject every day of his life to them. It is quite similar but even more mysterious with administration.

Administration is not peculiar to capitalism. Or to any special field. It embraces all of them, even law and accounting which are, in actual fact, administrative specialties.

Let us look at this abundant and glaring evidence: Russia cannot feed her people. She cannot clothe them. She has fantastic troubles in moving them about. Russia, despite her PR, is a failure. She is a failure not because few people agree with her ideology, indeed, that ideology has crept reachingly over the world.

And let us look at the capitalist juggling money, moneybags and paper gold and look as well at the health problems and cultural unrest that ride as problems in his train. The severest criticism of the capitalist is that communism and socialism grew up and flourished during his reign.

And look at the clanking, swanking military dictators who have replaced the weak and diseased kings who once ruled the world. They are themselves replaced by their own kind as fast as firing squads can be assembled by newly ambitious dictators.

Why do these ideologies fail and why are they so oppressive while they last?

THEY HAVE TOO FEW TRAINED AND SKILLED ADMINISTRATORS WHO CAN GET A SHOW ON THE ROAD.

The SURVIVAL of any group depends utterly upon things like PRODUCTION and EXCHANGE. That is the way the universe runs. When these factors are not competently handled, the group is in poverty or vanishes.

Civilizations have not vanished because they had the wrong ideologies or ran out of resources. First and foremost they vanished because they had no technology of the mind and could not handle people because they did not know the basic fundamentals of life. And right along following that they did not really know the tech of administration or even what administrators were or could do.

Their survival was in question the moment they did things with individuals contrary to the basic laws of life: They began to believe they would get reaction A by some strange rite, but instead of that got reaction B. They not only did not have mental technology, they adopted practices contrary to basic laws. And so they were torn with revolts. And wars.

And their survival fell to nothing when they did not know or practice fundamental administration and violated the basic rules through ignorance or sloth.

If one is going to have a group in this universe that survives and wins through its obstacles, it must have and apply basic laws. It does not have to be a perfect group but it must not be an ignorant group.

While the happiness of the individual may depend upon mental tech, apart from any group, he cannot survive well as a group member if he has no knowledge or understanding of administrative tech.

If one goes on living in this universe, he is sooner or later the subject of administration as a member of a group. In cave days, if one had to stay in his cave starving because of a saber-toothed tiger prowling, he would have had two choices: He either stayed in his cave and starved to death or he learned about saber-toothed tigers; when he knew about saber-toothed tigers he would now have new choices of how to avoid, how to kill or even how to employ saber-toothed tigers; when he had settled this he would now have a path of action he could predict. The jungle in which he lived was subject to certain rules, no matter who laid them down, God or the old, old Biological Survey. In other words, even in cave days one was the effect of an administrator.

When one had solved the crude tooth-and-claw existence, one could rise to a small niche of administering on his own; animals could be domesticated, plants when planted would grow, wood when carved would make things, metal when formed would make things that made things.

The moment one was headed in the direction of survival he was headed in the direction of production. So many killed deer made so many meals, it also made so many hides which made so many beds and jackets. The exchange with the deer was quite unequal as there was nothing for the deer and the deer protested by ceasing to exist and one got into goats and cattle. Similarly when the wild roots gave out, for

there was no exchange for the roots, one had to plant them and tend them. Consumption any way one looked at it eventually got into production that equalized or tended to, exchange.

When one could administer a small area, so many plants, so many goats, he was in his own right something of an administrator. He learned there was technical tech and he learned there was administrative tech also. And these things of all others continued to guide his survival.

One can of course decide not to go on living in this universe. But now he falls into two new choices: He either goes to another universe or drops into a sort of self-cave. In the other universe he will probably find himself under a new administrator or a new set of rules even if he alone makes them. And if he chooses a sort of nowhere self-cave, he has done so because he never solved the saber-toothed tigers.

Thus one is confronted with certain incontrovertible facts. (1) HE MUST SEEK THE TECH OF SURVIVAL AND APPLY IT; (2) HE WILL SURVIVE AS WELL AS HE CAN ADMINISTER OR HANDLE ADMINISTRATION.

As a member of any group, the PRODUCTION and GROSS INCOME or EXCHANGE he hears his executives talking about APPLIES TO HIM DIRECTLY. What ideology or system one embraces, his well-being, his safety, his happiness, will relate to PRODUCTION and EXCHANGE and the ease with which these are attained or maintained is determined directly by his understanding of and ability to handle administration.

There are thousands and thousands and thousands who might give you far, far different basics for life. But watch it! They are touting for some administrator or seeking to avoid ALL administration in every case, one or the other!

One either lone-wolfs his life or one gets through with a group. In the first place one must think mainly of personal money or one must think of the group's survival. The regulating factors in either case are ADMINISTRATION resulting in PRODUCTION and EXCHANGE.

Bank robber or bank president, these harsh facts of life still apply. Democratic politician or autocratic commissar, these are still the main determining factors of life.

The welfare state seems so wonderful a dream to the socialist: Why is it then that ghetto people riot because THEY HAVE NO JOBS but are only on welfare? It is true, surveys show. The recipients of welfare, whether a Roman guttersnipe, a white Swede or a Black American become crippled as beings: They are the TOTAL effect of administration, they have no cause factor short of a riot. They want JOBS. For they instinctively realize that they are in little better position than the cave man with the saber-toothed tiger outside. They have been disenfranchised as members of the group, dwellers of the universe. They cannot exchange, a somewhat fearful thing, they do not produce and they are forbidden causative control or causative administration. They recognize no matter how dimly that they have been set up as zeros. And this is not only unhappy, it is dangerous.

Reversely, when people offer nothing in exchange, do not produce and cannot or will not administer, they become pawns. Sometimes they think they are merely the

subject of meanness or rancor. But if they do not produce or exchange and cannot share in administration, they become zeros. Their fate is decided already, by themselves. It would not matter for a moment what some administrator did or did not do, such people have reduced their survival to a point that it is prey to the lightest wind. These facts are as inevitable as "apples fall," as harshly real as a tiger's claw and as predictable as tonight's darkness. Their only possible choices are (1) to cease to exist (which is impossible for a thetan) or (2) get in a position or situation or state of mind to produce, exchange and administer. There is a third choice — to leave this universe.

Life is, or can be, a pretty grim proposition. One may float along on the production of others like the recently demised "leisure class" of nineteenth century infamy or like a hobo being chased by every householder and cop. One can go along in the numb world of the middle class watching his public docility while he hypocritically sins behind doors and conforms with a capital C. One can creakingly labor in the world of the endlessly being dug ditch for some unknown pipe. Or one can simply confront the whole thing, pain, misemotion, punishments, rewards and all and produce and exchange and learn to handle the administrative system he is in and himself administer his life and environ.

One can hear countless reasons why it is too awful or too deadly to find out about the tiger. But you hear these reasons from the cowardly dead.

One can hear a million arguments against being a tiger or the administrator who orders tigers about. But one is talking to people who are not *living*.

The stark facts are these: One knows and handles administration, one produces, one exchanges OR one dies as far as this universe is concerned.

That's why you hear an administrator who means well for the group talking about PRODUCTION and EXCHANGE. That is why one never hears a politician who means ill for the group mention them.

And that's why the person who can use administration to bring about production and exchange is so highly paid by status and respect or why his group is so highly paid. He is dealing in SURVIVAL. And the skills he uses are well worth knowing and using.

Caves are damp.
Bring on the tigers!
The sun is shining.

ADMIN KNOW-HOW SERIES 31
ESTABLISHMENT OFFICER SERIES 29

ADMINISTRATIVE SKILL

An administrator is one who can make things happen at the other end of a communication line which result in discovered data or handled situations.

A very good administrator can get things handled over a very long distance. A mediumly skilled administrator has a shorter reach.

As this scale declines, we get people who can make things happen only at arm's length.

It is interesting that administrators are valued in direct proportion to the distance they can reach and get things handled over. Persons who can handle things only at arm's length are valued but not in proportion to a long-reaching administrator.

The complexity of situations and things handled is also a test of the administrator. If one began at the highest level of capability of handling things thousands of miles away and at the bottom of the scale handling things at arm's length, one would also find complexity entering the picture.

The artisan can, by means of heavy MEST communication lines and tools, make all manner of things occur but mostly within his visual sight line.

The day laborer who can only handle a shovel usually can only handle the simplicity of lifting a few pounds of dirt to a definite position.

One of the troubles PTS people have, as an example, is handling something over a long-distance communication line. One can tell them to handle the suppressive, but one must realize he may also be giving the order to someone to handle another person several thousand miles away. This is a high level of administrative skill and is usually no part of a PTS's ability, whatever other technical considerations may intervene.

Estimating situations thousands of miles away and handling them terminatedly is actually comparable to an OT ability.

There is no effort here to include artists and technicians who do work with their hands, for this is another class of activity requiring enormous technical skill and ability.

However, very few people understand the administrator or what he is or what he can do, yet the whole world is the effect of good or bad administrators.

The administrator has technology with which to discover and handle situations and if he is a very good administrator his handling is ordinarily constructive; but whatever it is, it is firm.

A skilled administrator therefore can be defined as ONE WHO CAN ESTABLISH AND MAINTAIN COMMUNICATION LINES AND CAN THEREBY DISCOVER, HANDLE AND IMPROVE SITUATIONS AND CONDITIONS AT A DISTANCE.

When you fully grasp this and realize it is the basic simplicity that is the basic all of an administrator's further complex technology, you can estimate an administrator's efficiency or effectiveness.

If you are engaged in administration, this basic truth will serve you very well if you fully understand it and use it.

PRODUCT–ORG OFFICER SYSTEM
NAME YOUR PRODUCT

The product–org officer system, covered fully in Flag Executive Briefing Course tapes, contains the key phrase for any product officer. This is:

NAME, WANT AND GET YOUR PRODUCT.

Breaking this down into its parts we find that the most common failure of any product officer or staff member or Purchaser lies in the first item, NAME YOUR PRODUCT!

On org boards and even for sections, one has products listed. Departments have valuable final products. Every staff member has one or more products.

IF PRODUCTION IS NOT OCCURRING, THE ABILITY TO NAME THE PRODUCT IS PROBABLY MISSING.

Misunderstood post titles were collected once on a wide survey. Whenever it was found a staff member did not seem to be able to do his job, it was checked whether he knew the definition of the word — or words — that made up his post title. It was found, one for one, that he could not define it even though no unusual or special definition was being requested. In other words, the first thing about the post could not be defined — the post title. This may seem incredible, but only until you yourself check it out on staff that habitually goof.

The ability to NAME the product required goes further than a mere, glib definition. Some engineers once drove a Purchaser halfway up the wall by glibly requesting "one dozen bolts." The Purchaser kept bringing back all different thicknesses and lengths and types of bolts. The Purchaser was going daffy and so were the engineers. Until the engineers were forced to exactly name what they were seeking by giving it ALL its name. The Purchaser trying to purchase could not possibly obtain his product without being able to FULLY name it. Once this was done, nothing was easier.

A product officer can ask, beg, plead, yell for his product. But maybe he isn't naming it! Maybe he isn't naming it fully. And maybe even he doesn't know the name of it. A product officer should spend some time exactly and accurately naming the

exact product he wants before asking for it. Otherwise he and his staff may be struggling around over many misunderstood words!

When you see a staff whirling around and dashing into walls and each other and not producing a thing, calmly try to find out if any of them or their product officer can NAME what products they are trying to produce. Chances are, few of them can and maybe the product officer as well.

Handle and it will all smooth out and products will occur.

ADMIN KNOW-HOW SERIES 34
ESTABLISHMENT OFFICER SERIES 32

PRODUCT–ORG OFFICER SYSTEM
WANT YOUR PRODUCT

A product officer has to name, WANT and get his product.

Where no real or valuable production is occurring, one has to ask the question, does the product officer really WANT the product he is demanding? And does the staff member or members he is dealing with WANT the product?

The reason that a psychotic or otherwise evilly intentioned person cannot achieve anything as a product officer or staff member is that he does NOT want the product to occur. The intentions of psychos are aimed at destruction and not at creation.

Such persons may SAY they want the product but this is just "PR" and a cover for their real activities.

People who are PTS (potential trouble sources by reason of connections with people antagonistic to what they are doing in life) are all too likely to slide into the valence of the antagonistic person who definitely would NOT want the product.

Thus, in an org run by or overloaded with destructive persons or PTS persons, you see a very low level of production if you see any at all. And the production is likely to be what is called "an overt product," meaning a bad one that will not be accepted or cannot be traded or exchanged and has more waste and liability connected with it than it has value.

One has to actually WANT the product he is asking for or is trying to produce. There may be many reasons he does not, none of which are necessarily connected with being psycho. But if it is a creative and valuable product and assists his and the survival of others and he still does not want it, then one should look for PTSness or maybe even a bit of psychosis. And at the least, some withholds.

One does not have to be in a passionate, mystic daze about wanting the product. But one shouldn't be moving mountains in the road of a guy trying to carry some lumber to the house site either.

The question of WANT the product has to be included in any examination of reasons why a person or an org isn't producing.

ALL EXECS

ADMIN KNOW-HOW SERIES 35
ESTABLISHMENT OFFICER SERIES 33

PRODUCT–ORG OFFICER SYSTEM TO GET YOU HAVE TO KNOW HOW TO ORGANIZE

A product officer and ESPECIALLY an org officer has to know how to GET a product.

All science and technology is built around this single point in the key phrase "Name, want and get your product." Managers and scientists specialize in the HOW TO GET part of it and very often neglect the rest.

There are many product officers who do NOT know enough about organization to organize things so they actually GET their product. These, all too often, cover up their ignorance on how to organize or their inability to do so by saying to one and all, "Don't organize, just produce!" When you hear this you can suspect that the person saying it actually does not know the tech or know-how of organizing or how to put an organization together. He may not even know enough about organizing to shove aside other paper on his desk when he is trying to spread out and read a large chart — yet that is simple organization.

A bricklayer would look awfully silly trying to lay no-bricks. He hasn't got any bricks. Yet there he is going through the motions of laying bricks. It takes a certain economic and purchasing and transport tech to get the bricks delivered — only then can you lay bricks.

A manager looks pretty silly trying to order a brick wall built when he doesn't have any bricks or bricklayer and provides no means at all of obtaining either one.

A product officer may be great at single-handing the show. How come? He doesn't realize that building a show comes before one runs it. And even though economics demand at least a small show before one builds a large show, a very bad product officer who can't really organize either, will, instead of making the small show bigger, make the small show smaller by trying to run a no-show.

There is a HOW of organization. It is covered pretty well in the Org Series and elsewhere. Like you can't put in comm lines unless you put in terminals for them to connect with. Like you can't get particles flowing in a profitable way unless they have something for them to run *on*. That's simply the way things go in the universe in which you are operating. Now of course you could build a new universe with

different laws but the fact is, that would require a knowledge of organization as well, wouldn't it?

The tech of how to produce something can be pretty vast. One doesn't have to be a total expert on it to be able to manage the people doing it, but one has to have a pretty good idea of how it goes and know enough NOT to stop the guys who do know how to make bricks when one wants bricks.

If the product is to get somebody to come in to see you, then you have to have some means of communication and some tech of persuasion to make him want to come in to see you. Brute force may seem okay to cops but in organization it seldom works. There is more tech to it than that.

If a product officer does not know there is tech involved in GETTING the product, then he will never make his staff study it or teach anybody to do it. And he will wind up with no product. So beware the product officer who won't give time off for hatting! He doesn't know one has to know the tech of getting his product. What do you think the OEC (Org Exec Course) Volumes and the technical bulletins are all about?

One has to spend some time organizing in many different ways — the organization itself, the hatting, the technical skill staff members would have to have, to get anywhere in GETTING a product.

Sure, if you only organize and never produce you never get a product either. But if you only produce and never organize, the only brick wall you'll ever see is the one you run into.

MANNING UP AN ORG

THE SEQUENCE OF POSTING DEPTS AND DIVS

You need an org board first and an allocation board.

The sequence in which an org is manned up is roughly:

– Dept 1

– Dept 11

– Reg and Body Routers and Intro people in Div 6

– Dept 12 (enough auditors and C/Ses to approach 2 admin to 1 tech in org)

– Dept 6

– Dept 7

– Dept 3

– SSO and Supers in Qual to train staff

– Dept 5 for CF, Address and Letter Reges

– Dept 4 for promo

– Dept 21 (LRH Comm)

– Dept 10

– Dept 20

– FR and execs

– Full Div 6

– Full Div 1

– Full Div 4

– Full Div 2

– Full Div 5

– Full Div 7

– Full Div 3

(Note, an AO always mans up the AO Dept or Div along with the SH one in each case.)

Wrong sequence of manning is Dept 6, Dept 12, Dept 6, Dept 12, Dept 6, Dept 12, as you wind up with a stuck clinic that won't expand.

Wrong sequence will contract an org while trying to expand it, as the org will go out of balance, bad units, noisy and unproductive.

If manned in a correct sequence, its income has a chance to stay abreast of its new staff additions.

Emphasis on GI without comparable emphasis on delivery and organization can throw an org into such a spin only a genius can run it.

Manned in proper sequence, and hatted as it goes, an org almost runs itself.

Single handing from the top comes from long-standing failures to man or man in sequence, from earlier noncompliance with explicit orders or from not understanding orgs in the first place.

An unhappy org that doesn't produce has usually been manned only partially and out of sequence.

The trick is planned manning, ignoring the screams of those who know best or demand personnel; just manning by posting those who have been screamed for the loudest is a sure way to wind up with no people and total org problems instead of a total org that is prosperous and producing.

Incidentally, this is a rough approximation of the sequence of hats the ED gradually unloads as his org takes over.

HOW YOU HANDLE DEMANDS FOR PERSONNEL

Refs:

HCO PL	15 Sept. 59 II	HATS AND OTHER FOLDERS
HCO PL	1 July 65 III	HATS, THE REASON FOR
HCO PL	22 Sept. 70	Personnel Series 9 Org Series 4 HATS

HCOs get continual demands for personnel from all areas of an org. To keep an HCO from going mad with all these demands, they must, on every request, (1) have the Dir of I&R do a full utilization survey on the division, dept or section requesting personnel and (2) do a full hat inspection on all personnel in that division, dept or section.

Only if these two steps are done for *each* personnel request will sanity reign in HCOs on the subject of personnel.

HCO PL 15 Sept. 59 II, HATS AND OTHER FOLDERS (Vol 0), HCO PL 1 July 65 III, HATS, THE REASON FOR (Vol 0) and HCO PL 22 Sept. 70, Personnel Series 9, Org Series 4, HATS (Vol 0) must be well known by all staff in Depts 1 and 3.

Personnel can recruit madly, answering every frantic demand for personnel, and yet HAVE THEM ALL WASTED for lack of full hats and full training on those hats.

The whole org can sag and even vanish under these conditions.

So Personnel has a vested interest in hats being complete and staff trained on them. For Personnel people cannot possibly cope with “no pay so can’t hire anyone” and “no people so can’t produce.”

So for every demand for personnel, *ALWAYS* demand a utilization survey *AND* an inspection of hats in that area.

HCO PL	10 July 65	LINES AND TERMINALS, ROUTING

The post of SERVICE PRODUCT OFFICER is hereby established in the Office of the CO/ED, Dept 19, of all Class IV and Sea Org orgs. His direct senior is the CO/ED.

Until such time as a SERVICE PRODUCT OFFICER is posted the responsibilities and duties are covered by the Service/Call-in Committee as fully laid out in HCO PL 9 Aug. 79 I, CALL–IN: THE KEY TO DELIVERY AND FUTURE INCOME and HCO PL 9 Aug. 79 III, SERVICE CALL–IN COMMITTEE.

The VALUABLE FINAL PRODUCTS of this post are (1) flawlessly serviced and completed paid pcs and students who re-sign up for their next service, and (2) high quality promotional items in the hands of volumes of public who come in, sign up and start an org service.

The main statistics for the SERVICE PRODUCT OFFICER are:

1. Number of pcs and students completed and re-signed on to their next service. (This includes those actually routed on to the next upper org for services and who do re-sign.)

2. Number of public in and started on to a service.

Completion: By completion is meant those actions completed and attested at C&A and accompanied by an acceptable success story.

Re-sign: By re-sign-ups are meant pcs and students who, after completion of a service, see the Registrar to sign up *again* for another service while in the org.

Promotional Items: Those items which will produce income for the organization. By promotional items are meant those things which make Scientology and our products known and will cause people to respond either in person or by written reply to the result of receiving Scientology commodities. These are: tours, book outlets, Sunday services, events, upstat image, fliers, info packs, handouts, books, ASR packs, specified service promotion, etc.

There are of course many other stats that reflect the SERVICE PRODUCT OFFICER'S subproducts and these are: VSD, TOTAL GI, INTENSIVES COMPLETED, BULK MAIL OUT, NUMBER OF PROMOTIONAL ACTIONS OF THE ORG IN, NUMBER OF FULLY AND PARTIAL PAIDS GOTTEN INTO THE ORG AND ON TO THEIR NEXT SERVICE. These are very important parts of the SERVICE PRODUCT OFFICER HAT, as they reflect his subproducts which lead to his valuable final product.

SERVICE PRODUCT OFFICER RESPONSIBILITIES AND DUTIES

The purpose of an organization is to deliver service to the public. The primary functions which add up to delivery to the public are: promotion, sales, call-in, delivery itself and re-sign. The Service Product Officer is responsible for the flow of *products* through these areas. He is a *product officer*. He names, wants and gets products in these areas and thus ensures that the organization is accomplishing its purpose of service to the public.

The full technology of product officers is explained in the Flag Executive Briefing Course lectures, where the product–org officer system was developed. This system is still fully valid and is, in fact, the tech of the Service Product Officer. He is solely interested in products. When the Service Product Officer comes across a situation that

requires organizing, he gets his organizing officer to handle it. The O/O (organizing officer) should actually be operating a few steps ahead of the Service Product Officer at all times — organizing for immediate production, per the product–org system. A full study of the product–org system, as contained in the FEBC tapes, the Org Series and AKH Series 33, 34 and 35, NAME, WANT AND GET YOUR PRODUCT is recommended in order to attain a thorough understanding of the actions of the Service Product Officer and his organizing officer.

The Service Product Officer is not a stopgap at any point of the promotion, sales, call-in, delivery and re-sign lines, where executives have failed to post and hat staff. This would be the responsibility of the Exec Establishment Officer per Esto Series 1. Establishment Officers see that short- and long-range establishment are occurring in the organization in the form of recruiting, hatting and training of staff. The Esto system is a necessary and very vital tool for the Service Product Officer and the organization and should definitely be in full use.

The Service Product Officer has the authority to directly order or work with any terminal involved in the promotion, sales, call-in, delivery or re-sign areas so long as he maintains direct liaison with their seniors.

The Service Product Officer must be fully aware of every post in the org and what their jobs consist of. He must know who handles what cycles and what cycles are on the lines. For instance, it is up to the Service Product Officer to be aware of all promotional actions occurring in the org and who is doing them, or if they aren't getting done. He must be aware of what public aren't getting serviced and he ensures those responsible get them serviced. He doesn't do this himself, as a serious goof of any product officer would be to go down the org board and do the job himself. The Service Product Officer *must* ensure others get the work done. Otherwise, he would wind up doing everyone's post and not getting anything done. It's actually pretty overwhelming to think of a Service Product Officer as responsible for doing everyone else's post duties. That's the surefire way to sink fast. Where a product isn't getting out the Service Product Officer debugs it using HCO PL 23 Aug. 79R I, DEBUG TECH, in order to get production. He is not interested in first finding the person's Mis-U or excuse, he is interested in getting production occurring now. Let the org officer and Qual worry about the staff member's Mis-Us.

Divisional Secretaries are the product officers for their division per the product–organizing officer system. The Service Product Officer sees that the product officers over the whole delivery cycle are getting their products. He coordinates the flow of products from division to division. A Service Product Officer doing his post fully and properly is, in fact, the person that makes the org board work. He sees that products aren't jamming up at one point of the line, but that they continue through the organization.

The Service Product Officer walks into the Tech Div and finds the Tech Sec sitting at his desk, shuffling paper and the pcs are piling high and complaining about no service. The last thing the Service Product Officer would do is start organizing the Tech staff around and scheduling the pcs. No sir, that's a serious offense. The first thing he would do is find out what can be produced RIGHT NOW, what auditors can be gotten into session right now and make the Tech Sec do it and GET IT DONE. This all takes about fifteen minutes and he gets the area flowing again and then,

WHAM! . . . he's out and into his next area. The Service Product Officer would not sit down and just start word clearing or doing Exchange by Dynamics on the Tech Sec. He would unstick the flows and get them moving. Then he would alert HCO and Qual to this serious problem of unhattedness and demand it be handled.

The basic sequence of the Service Product Officer on getting the products flowing off the lines is PUSH, DEBUG, DRIVE, NAME IT, WANT IT, AND GET IT. That's the only way you ever get a product. Products don't happen on their own.

This means he tells the Tech Sec to get Joe Blow there in session now! There is no general "audit these pcs." You'd never get a product that way.

The CO/ED has no authority to order the Service Product Officer to perform the total duties of any one post. The Service Product Officer must guard against being stuck into one post after another, doing it all himself. Nor is the Service Product Officer an "expeditor" for the CO/ED.

It is also very important that the Service Product Officer advise seniors that he is going into their areas so as not to create a Danger condition and wind up having to run the entire org. He also does this by getting the seniors to handle their juniors so a product is gotten. He does not walk in and cross-order the seniors of areas but works with them to see that products are produced.

The Service Product Officer is one who comes up with BIG IDEAS on getting public flooded into the org and being serviced swiftly. He is the one who thinks along the line of PRODUCTS, PRODUCTS, PRODUCTS. By spanning the divisions, he coordinates the product wanted and ensures each division is aware of its part in getting this product and that their actions are uniform. Where the Service Product Officer spots diversity, or lack of uniformity, he must alert his org officer or HCO. By doing the actions of coordination for a product and product demand, the product officer creates a team and more importantly sets the pace of the org's production and morale.

ORG LINES AND THE SERVICE PRODUCT OFFICER

There are certain aspects of the organization which the Service Product Officer must be thoroughly trained in to do his job properly.

The Service Product Officer must be fully aware of all the Valuable Final Products (VFPs) of each department and each division of the org. Without this the Service Product Officer can create havoc, as he would be ordering Division 6 to recruit or the Reges to supervise. By not knowing cold the org VFPs, the Service Product Officer would certainly jam the flows throughout the org board.

A serious fault in any executive is not knowing the functions of terminals and the relation of one terminal to another. A key function of any executive is that of routing. An executive that misroutes communications and particles will tie his org in knots and wonder why no products are coming out. Therefore, a Service Product Officer must know cold every post function in the org and what particles belong on what lines.

He has got to know where a product comes from and where it goes in order to see it through the lines. A product officer's job is to name, want and get a product. However, he must first know where that product is to come from and where it is to go. This is an incredibly fundamental point.

In order for org lines to flow, routing forms (RFs) must be used. A routing form is a full step-by-step road map on which a particle travels. Every point a particle (which could be a student, a pc, mail, etc.) must go through to wind up at its destination must be listed on the routing form.

The Service Product Officer's Organizing Officer must ensure routing forms exist and are in use for each and every line in an org he deals in. Both he and the Service Product Officer must know these forms cold and be able to instantly spot when a line is being abused or ignored so as to slam in the correct routing.

A Service Product Officer must fully clay demo all the lines of an organization for each and every product. This must include each particle from entrance to the org and through all lines on which that particle would flow until it leaves the org. Lines are the most fundamental point of administration. To not have a full grasp of these lines would be detrimental to any product officer.

SERVICE PRODUCT OFFICER SEQUENCE OF ACTIONS

It is very easy for the Service Product Officer to become wrapped up in one area while neglecting the others; however, this must not be done as, while products might be getting through in one area, they may well be seriously bogging in others.

The Service Product Officer is concerned with promotion, sales, call-in, delivery and re-sign. He begins his product officering in promotion and gets products out there or started and moves on to sales and gets them on to getting their products and so on through call-in and delivery and re-sign. He then returns to the beginning, promotion, and follows up on what he started there and gets even more production out. This is basically how the Service Product Officer moves through the org.

Daily, the Service Product Officer must plan and battle plan out his day. He must list those products he intends to achieve in each one of his areas and then get them.

The Service Product Officer is not an "information courier" or "data gatherer." He is ahead of the game and *knows* the data. He must know what public haven't been regged in the org yet, he must know who hasn't been taken into session that day, or who has been stuck in Ethics for three days, and ensure these things get handled. Therefore he must be quicker and faster than anyone else in the org and run run run.

PROMOTION

Promotion is the first action of the SERVICE PRODUCT OFFICER. He must ensure the many promotional pieces and actions are getting done. Some of these are:

1. Selling of books.
2. Staff selling books.

3. Books placed in public bookstores.
4. Selling of books to FSMs, missions, distributors, retailers and salesmen.
5. Books sold on each public contact.
6. Books advertised in mags, ads, posters, fliers, etc.
7. ASR packs.
8. Info packs.
9. Div 6 handouts for lectures and free testing.
10. Posters on major services in Div 6.
11. Promo to field auditors, FSMs, Gung-ho Groups, Dianetic study groups.
12. Org mags.
13. Flag shooting boards.
14. Promo for future events and tours.
15. *The Auditor* (for SHs).
16. *Clear News*.
17. *Advance!* mag (for AOs).
18. *Source* mag (FSO).
19. I Want to Go Clear Club promo (AOs).
20. SHSBC/NED/internships/NOTs/grades, etc., specified in promo.
21. Promo at points of public inquiry.
22. Free testing ads.
23. Fliers inviting people to buy Scientology books.
24. More Info Cards used in books.
25. Ads in newspapers.
26. Questionnaires to detect people's plans for training and processing.
27. Enough letters to public so they come in.
28. All promotional actions per HCO PL 20 Nov. 65RB I, THE PROMOTIONAL ACTIONS OF AN ORGANIZATION.
29. Book seminars, public campaigns and lectures.
30. Public Reception display (books, posters, handouts, etc.).

31. Tours and events, Sunday service.

32. Free testing line.

33. Handling of Gung-ho Groups, keeping FSMs well supplied and supervision of Dianetic study groups and FSMs.

34. Test Centers outside the org as an extension.

35. Radio and TV advertisements.

36. Dept 17 services.

37. Reception greeting, handling, routing, chasing up people for appointments and handling incoming calls with ARC and efficiency.

38. Formation of Dianetic Counseling Groups.

39. Weekly tape and film plays.

40. Promotes the org and standard tech to Auditors Association.

41. Contacts and sees any sign of ARC broken field and alerts Chaplain to clean up the field.

The first thing a Service Product Officer would want to do is get out a large volume of promo to at least get some activity occurring. This would entail Dissem getting any promo laying around the org dug up and sent out to students and pcs. They would get it out in letters and mailings, they would get it handed out to students and pcs, they would pick up the half-completed promo piece, have it fixed up and sent out. They would have promo placed in Reception, in any public inquiry, etc. In other words, the Service Product Officer ensures that the org fully utilizes what promo they do have. He would also have specific promo pieces done to enlighten the field on what services the org has. Where any of this bogged he would push — debug — drive — name it — want it — and get it.

The Service Product Officer, in trying to get in any promotional items, must review what resources he has. For example, is there a Dir Clearing, is there a Receptionist, etc.? He must concentrate on getting those terminals that already exist busy on promotional actions that will create the largest volume of inflow, while his organizing officer works on getting more immediate resources to increase the volume even further. It would be senseless to have the Dir Clearing running around trying to form up groups in an inactive field, single-handing, when he has FSMs that need to be gotten on to selecting and driving in new public. The Service Product Officer is concerned with priorities of promotional actions, so must be totally aware of all the promotional items and actions that an org can produce.

Actions such as “improved org appearance,” “high ARC handling,” and “correct and efficient routing of public” can be put in instantly. If he has two people in all of Dissem he still can and must get the particles flowing and products coming off the line.

SALES

The sales lines consist of enlightening the public, having lines to sign people up, getting public into the org and signed up for service.

The following gives you an idea of some of the sales actions and lines in an org:

1. Body Reg phones and schedules public to come in for interview.
2. Use of CF to produce business.
3. Reges who accept advance registrations.
4. D of T procurement of students.
5. D of P procurement of pcs.
6. Receptionist sells to public coming in.
7. SHs in communication with the Class IV org Tech Secs and Registrars and targeting them for public completing and routing on to the higher org.
8. AO's and SH's case consultant actions.
9. AO/SH events to Class IV org Academies to encourage upper-level auditor training.
10. Use of FSMs, Auditors Associations, personal contact, etc., to get public into the org and on to their next service.
11. Fast lines so public are not left waiting to see the Reg.

The lines of routing a public person to the Reg, or from the Reg to a service, must be tight so public aren't lost and the Reg is continuously kept busy with the public. Therefore, the Service Product Officer must police these lines and where he notices any lack of uniformity he gets his org officer onto it. Nonuniform or slow routing interferes with the product, so the Service Product Officer gets it speeded up now by push — debug — drive — name it — want it — and get it.

The first actions of the Service Product Officer in the sales area are to get all "in-the-org" public routed to the Reg on breaks or after course end to be further signed up for additional service. He can also have Dissem drilling done with Reges so as to increase sales in the org. His operating procedure is products, products, products, now, now, now. His org officer or HCO and Qual can worry about organize, organize, organize.

CALL-IN

Call-in is the action of getting fully paids into the org on to their next service. This also includes getting partially paids fully paid and on to their next service. These functions are of great concern to the SERVICE PRODUCT OFFICER as undelivered services to the public can mess up a field and increase the chance of refunds. The Service Product Officer should see to it that the Call-in Units are given stiff targets and that their production is not monitored by low auditor hours or low-producing training

areas. The execution of needed programs to get Call-in Units fully operational is under the Service Product Officer per HCO PL 9 Aug. 79 I, CALL–IN: THE KEY TO DELIVERY AND FUTURE INCOME. This same policy also lists out the functions of the Call-in Units. Call-in falls between sales and delivery, as it deals with those either fully or partially paid and needing only to finish payment and be called in and gotten on to service.

DELIVERY

The Service Product Officer must ensure that the service lines of the org are fast and 100 percent standard, that pcs and students do complete quickly and don't get lost off the lines.

The Service Product Officer is to have an alert line with the public set up whereby if a student or pc's study or auditing is slowed, or if the public person is dissatisfied in any way, he can alert the Service Product Officer so it can be handled.

Some of the actions and lines to be product officered by the Service Product Officer are as follows:

1. Tech Services arranges housing, has the pc met when he is arriving and generally operates as the pc's host while in the org.

2. The many lines such as pc to Ethics, pc to Examiner, student to Ethics, student to Qual, C/S Series 25 line and pc to D of P line must be drilled so they are flawless and handled with ARC.

3. The most senior policy applied to this area is HCO PL 21 Nov. 68 I, SENIOR POLICY, "WE ALWAYS DELIVER WHAT WE PROMISE."

4. There must be an adequate amount of auditors, Tech Pages and FESers, Ds of P, Supervisors, Course Admins, etc.

5. The auditing line must be fast so no pcs wait to be serviced.

6. Use of all hands tech terminals in the org auditing when required to handle backlogged service.

7. Getting students through their courses and on to their internship at which point they can audit in the HGC.

8. Proper scheduling so every pc gets in 12½ hours a week minimum.

9. Recovering blown auditors, getting them fixed up and auditing.

The Service Product Officer ensures tech lines are fast. For instance, a pc's folder not getting C/Sed for days, or idle auditors and Ds of P "waiting" for pcs when they can be made to procure pcs, must be spotted and handled by the Service Product Officer.

The Service Product Officer must be kept briefed on what pcs and students arrive and how they are going to be handled. He must get around to these areas (Training and HGC) to ensure that there are no slows with public or anything that would get in the way of public receiving top-quality service.

Service to the public is the reason the org is there and service must be kept fast and 100 percent standard and plentiful. This is a primary duty of the Service Product Officer; he is there to ensure this occurs.

It is losses on service that keep public away, org income down and staff pay low.

RE–SIGN–UP

The re-sign-up line is also very key to an organization's prosperity. It brings further income, and proves conclusively that the last service received by the public person was of high quality. This is why the Service Product Officer must be very alert to the amount of re-signs. Some of the things that should be watched for are:

1. That the Reg is supplied with an upstat cert for his last completed service to present to the student or pc.

2. That the Reg knows fully how to handle the public person that won't re-sign (by sending them to Qual).

3. The Reg must be provided with tech estimates, Grade Chart information, etc., so he is aware ahead of time of what the student or pc's next action is.

4. Tech terminals are fully briefed and the line is in that every completion gets routed to the Reg. This must be drilled.

The public person should be serviced in your org until he/she requires upper-level service that your org cannot deliver, at which point they should be directed to the next higher org.

PITFALLS

The Service Product Officer can lose his effectiveness if he takes any "hey you" orders or gets stuck in at various points. He is not an expeditor. He is not an information and full-time coordinator terminal. He is an executive, a *product* officer, and he is there to ensure the entire machine runs.

He must be well versed on actions occurring in the org. He must also pay strict attention to completing actions he has started and to carrying a handling through to a done. Otherwise he can wrap himself around a pole with incomplete cycles which will ball up the line and prevent the service lines from flowing flawlessly.

Where the Service Product Officer post bogs it is undoubtedly due to a lack of an organizing officer, as with the speed in which a Service Product Officer demands products, he requires a fast-moving org officer. So it is essential this post be provided with an org officer as soon as possible.

Those personnel in the org who are responsible for organization, any Esto personnel, etc., are the people who put the units in the org there. It is not the duty of a Service Product Officer to man and hat the org. Therefore, it is a lot of sweat off the Service Product Officer's brow to have a fully functioning Esto team backing up his actions in getting the flow of products out of the organization.

SUMMARY

The Service Product Officer ensures all the actions of getting public into, through and out of the org are *accomplished* with high quality results.

It is extremely important that this post be manned in each and every org. It doesn't just make the difference between a poor, empty org and a good org. This post makes the difference between a good org and a booming org.

HCO POLICY LETTER OF 11 JUNE 1972

REMIMEO

ADMIN KNOW-HOW SERIES 38-1
ORG SERIES 39-1
ESTABLISHMENT OFFICER SERIES 37-1

PRODUCT OFFICERS

(Originally written by LRH for the *Apollo* OODs of 11 June 72.
Issued as an HCO PL on 21 Sept. 80.)

Worked last evening getting Tech to start shooting them through to completions.

The PL on Selling and Delivering Auditing (HCO PL 28 Sept. 71) tells why you have to audit a pc all at once, whole program. Dribbling it out means repairs due to life upsets before the guy made it.

So crowd it on and get a pc *through*. Then we'll have some products for our coins.

A product officer has to name, want and get his products.

This means one says, "You there. Joe Blow. Want him completed. All right get it DONE." Product by product. There is no general "Audit these pcs." "Get up the hours." Hell, you never get a product that way.

"You there, George Thunderbird. I want you through your Primary and onto and through course and classified. Get going, man, get going. Oh, you were told to weedle the toofle before you woofled by Dorance Doppler. Org Officer? Get that name — to Flag MAA, get the cross orders the hell off my lines. Now you George Thunderbird, I want you through your Primary and onto and through course by 1 July. You got it? You got it now! Good. Well, get with it. Get going!" Note on clipboard: Org Off to get cross order by Dorance Doppler invest and report. "There's your slip." Note on progress board. Geo Thunderbird HSDA 1 July. "Now you Tobler Tomias, what's the tale; how are you going? . . . Well, standing there smoking and looking at the scenery isn't going to do anything. If your girl doesn't like you anymore the thing to do is drown your sorrows in the Primary Rundown. . . . Okay, you are to be an Expanded Dianetics. All right, that's fine. I want you completed by 16 July. . . . I don't care if that's a 16-hour day. Let's see, Primary Rundown by _____ and Class IV Acad by _____ and _____. Yes, that's 16 July AT NOON. Man, to hell with your PTPs. Get going, man." And on the progress board. And from the board — "And here's Bill Coal. He should be off the Primary today, where is he? All right Bill — ah, you made it that far. Now you're on schedule. That's great. HSDA. Get with it, man. You completed Primary 20 minutes ago and aren't on the next course. Super! What the _____."

That's the way it goes for a Tech Prod Off. "We are finishing Agnes, Torp and Goshwiler today. Today. Yes today. Certified and off lines. Got it, D of T? Well, do it!"

Push, debug, drive. Name it, want it, get it.

That's the *only* way you ever get a product.

Sad but true.

They don't ever happen by themselves.

And all the public relations chatter in the world is not a product. I know this product officer beat.

It's a piece of cake.

But it has to be DONE.

As it takes time to appoint and train a Service Product Officer, until this is done a Service Call-in Committee is created.

This committee is placed in Dept 19, Office of the CO/ED. Its purpose is to ensure the Call-in Units for both fully and partially paids are functional and the org is servicing the public in volume.

This committee is directly responsible for getting the programs listed out in HCO PL 9 Aug. 79 I, CALL–IN: THE KEY TO DELIVERY AND FUTURE INCOME, fully and completely done. It also carries out the functions of the Service Product Officer as fully outlined in HCO PL 9 Aug. 79 II, SERVICE PRODUCT OFFICER, until such

time as one is appointed, trained and apprenticed and ready to assume post at which point the Service Call-in Committee would still remain in operation under the Service Product Officer's chairmanship.

The ED/CO of an org is first and foremost responsible for these duties until such time as he forms and gets this committee operational.

This committee is to be chaired by the HCO Executive Secretary (HES) and the Org Executive Secretary (OES) is deputy chairman. The Treasury Sec is a member of this committee as it is Treasury that is most intimately interested in getting rid of advance payments received (APRs). Public who have either partially or fully paid and have not yet come into the org for their service are a backlog and could potentially break the org in refunds.

The committee is to consist of:

CHAIRMAN: HES

DEPUTY CHAIRMAN: OES

MEMBERS: Advanced Scheduling Registrar

Treasury Secretary

Director of Processing

Director of Training

(NOTE: At such time as a Service Product Officer is posted and operating he would take over chairmanship of this committee with the HES and OES becoming members.)

COMMITTEE RESPONSIBILITIES

This committee's foremost responsibility is to see to the execution of the issues referenced on page one, particularly HCO PL 9 Aug. 79 I, CALL–IN: THE KEY TO DELIVERY AND FUTURE INCOME and HCO PL 9 Aug. 79 II, SERVICE PRODUCT OFFICER.

This committee is responsible for ensuring and product officering all promotion, sales, call-in, delivery and re-sign actions occurring in the org so they are produced in ever-increasing quantity and quality. This basically consists of:

1. Promotion to new and old public so Scientology services are well known and public are driven to the org in droves.

2. The action of selling Scientology services to all new and old public either currently in the org, new to the org or returning to the org.

3. Call-in of all partial and fully paid public so they do come into the org for services.

4. Fast, high quality services delivered to the public.

5. The re-signing of all in-the-org public on completion of a service.

This committee is responsible for seeing that the above actions do occur, through product officering and debugging they ensure the products are flowing off the line. Each member of the committee has a personal responsibility to see that this occurs.

COMMITTEE DUTIES

The committee meets daily off production hours and battle plans out all actions needed to get products flowing in each area of promotion, sales, call-in, delivery and re-sign. The specific products are fully listed out in HCO PL 9 Aug. 79 II, SERVICE PRODUCT OFFICER. They ensure the products they are going to get are known and the "figure out how to do" has been done and is coordinated. When this is done each committee member knows what his or her part is in getting out the products. For instance, the Director of Training knows he will have a student graduating shortly, and that this student will need to go on the re-sign line. Therefore the D of T informs the HES at the meeting who takes notes and ensures the Dissemination Division correctly handles the re-sign, or the HES may need to get a Tech Estimate from the C/Ses for a registration cycle. The Director of Processing is then alerted to this at the committee, so the cycle will flow smoothly and quickly.

Each member of this committee is assigned appropriate targets on the committee's battle plan to get done that day.

EXAMPLE: The HES would see to it that the promotional actions are being done. He would expedite those "few students left in Ethics" and get them back onto their course and serviced using debug tech (covered in LRH ED 302) as necessary. Using his Dissem Sec he would get the ASR Call-in Unit producing products, people fully paid and in, targeting the unit for maximum production and debugging as necessary.

EXAMPLE: The OES finds every student and pc fallen off lines and gets them either back on course or in session. Using his Tech Sec and Director of Tech Services (DTS) the OES product officers the Fully Paid Call-in Unit, targeting them and getting the public in now.

The Treasury Secretary would ensure both Call-in Units are well supplied with complete lists of who is fully or partially paid per HCO PL 9 Aug. 79 I, CALL–IN: THE KEY TO DELIVERY AND FUTURE INCOME.

The Director of Training and the Director of Processing provide excellent service to pcs and students and get them through their courses or case actions.

This is a fast-pace activity and the committee deals in real products and real beings. Their effectiveness determines the viability of the org.

The committee is to ensure both Call-in Units have adequate personnel and where there is not, all hands of idle auditors and part-time use of Letter Reges and other Dissem Div personnel is immediately put into use so as to cover the functions of call-in.

The committee is also to set up an alert line so that if a student or pc is not getting serviced or is getting slow service, he can write to the committee to get it handled. This line must be made well known to the public. The committee is to have an

emergency meeting whenever they receive such an alert. They are to get the situation brought up by the public person handled fast, within 24 hours. This alert line will uphold the reputation of the org.

The committee is to guard against call-in actions being monitored by low auditing hours. Call-in Units must call in. HGCs (Hubbard Guidance Centers) and Academies must deliver. Where either of these are not occurring, it is up to the Service Call-in Committee to remedy it.

An important duty of this committee is to immediately appoint a Service Product Officer and to see to it he is trained and apprenticed. Once the Service Product Officer is on post, if it is found that he is having to handle organizational matters and thus bogging, the committee must then provide him with an org officer.

COMMITTEE STATS

The stats for this committee are: (1) Number of pcs and students completed and re-signed onto their next service. (This includes those actually routed on to the next upper org services and who do re-sign.) (2) Number of public in and started onto a service.

SUMMARY

Without someone overseeing and directly product officering the flow lines into, through and out of the org, public get lost off the lines and the org contracts. It is of the utmost importance that this committee act and get the products flying off the line.

So, when you're standing in the Academy or HGC of your org and it is deserted without a student or pc in sight ask yourself, "Why didn't I form a Service Call-in Committee like Ron said?" Form one and win.

COORDINATION COMMITTEES AND MANAGEMENT COMMITTEES, DIFFERENCES IN PURPOSE AND FUNCTION

If effective, coordinated management is to occur there are two basics which must be understood at the outset.

The first of these is what a management body is and what it does.

The second is what a coordination council or committee is and what it does.

Someone has to see that the work gets done. That's management. Management organizes and runs things. Each network or sector of management has its own senior. The senior is responsible for the governing, the planning, the activities, the statistics and the expansion of his own sector of the overall organization. And each of these seniors is a member of the management committee. The handling of situations, the origination of needed or missing policy, the initiation of management actions to be taken and orders to be issued — all of this is done by the individual members of the management committee.

But such management units can be hit from various quarters unless they have a hard core of united resistance in the form of agreed-upon procedures and policy, and unless there is some coordinating body existing which has the authority to clear their strategy and their tactics.

Thus, there is a need for a coordinating committee which clears the actions and orders of management to ensure that these *are* coordinated so as not to work against the interests of any one network or sector.

That would be what a coordinating committee would do and what it would consist of. The coordinating committee would be made up of the members of the management units or their deputies — such members then acting only in a *coordinating* capacity.

The membership of a management executive on a coordinating committee gives him the chance to clear what he is doing with the other sectors who are also represented on the coordinating committee, to demand cooperation and action from them and to call to their attention points in their activities which make his post difficult for him, and to prevent them from setting policies that influence his sector but are not cleared by him.

A coordinating committee, then, is composed of the seniors who do this for their sectors, or by representatives of those seniors.

A coordinating committee exists to clear orders and certify that they are not contrary to or harmful to the activities of other committee members.

Indiscriminate policies have been issued from time to time by various units and activities which, if they do not take other units and their functions into consideration, create points of confusion. Unless some council or committee exists which has the authority to clear such policies and actions, the confusion will continue. In other words, without a coordinating committee, policies get issued which are contrary to the best interests of the overall organization.

What a coordinating committee *isn't* is some kind of group that gets together and discusses how they would solve things. That's not how a coordinating committee operates.

What a coordinating committee *is*, is a committee that clears solutions and policies originated by different autonomous units within the overall organization, so that these solutions and policies are coordinated with the functions of other units and are known to all. Such a committee also exists so that modifications can be requested by management individuals where a policy or an activity affects his sector.

Thus a coordinating committee is quite different from a management committee which organizes and runs things.

Though the membership on such committees may be composed of the same individuals or their deputies (and should be, as management must be represented in coordination), it is the capacities in which they act in these two different bodies which is different.

When one is acting as a management executive he manages. When he sits on a coordinating committee he ensures that all the management functions are *coordinated* for the good of the overall organization.

HOMEWORK

For a coordinating committee to be able to function swiftly and efficiently, as it must do, certain rules and regulations must be set up. Otherwise, such a committee will find itself spending (wasting) long hours mulling over and trying to sort out incomplete or confusing cycles and, actually, slipping down into management functions (and not even effective management functions, at that).

A coordinating committee must have some executive perpetually in charge of it. This executive must be in communication with the liaison officer or the seniors of all networks. These networks must demand that certain subjects be taken up or the coordinating committee executive must himself be familiar enough with the scene to see that certain things have to be taken up and coordinated. From this data, this executive compiles an agenda with times and dates saying what is going to be taken up when. The agenda is issued in time for other units to gather their specialized information on these subjects and the problems connected with them so as to help resolve them.

The committee should be run on exact and specific rules as laid down by the executive.

Such rules would need to provide that each committee member arrived with his homework done. That would include homework done without the person having gone past misunderstoods. It would include homework done that takes into consideration, within reason, some knowledge of the purpose and functions of the other units which his plans might affect.

So a good, workable solution for a coordinating committee to operate on is to have a committee "pot" to accumulate fines for anyone violating the rules.

With any violation, the offending member puts a specified fine in the pot, then and there. When the pot gets full, the committee has a party.

The rules would be:

1. Arriving with homework for any proposed policy, order or action *done*.
2. Such homework done on a certain knowledge of the area being addressed.
3. Such homework done with a real understanding of the terms and functions involved — and *not* having been done over misunderstoods.
4. Such homework done with a reasonable working knowledge of the other areas and units which may be affected.
5. And, if an objection is raised to another's proposal without coming up with a solution to it, it's also a violation of the rules.

A person then arriving with incomplete or no homework, or found to have an MU, or who is found not to know very much about it, must deposit a specified sum of money in the pot — then and there. Or, if it's found afterwards that he's had a misunderstood on the activity, he contributes his money to the pot at that time.

For objecting to something but not bringing up a solution to it costs double the fine.

If coordinating committees set up firm rules based on the above, set their fines for the various infractions and *stick* to them, they'll get a lot of effective coordinating done.

And if they understand the difference between management committees and coordinating committees and operate solely and only on that clear understanding, they'll be successful.

That is what it takes to bring about effective, coordinated management.

MANAGEMENT COORDINATION

COORDINATION is the essence of management.

The word "management" implies there is something and some someones to manage.

A business or company or organization implies others are present and are engaged in a similar activity. It is a *team*.

Any organization, no matter how complex, is bound together by common purposes.

If the different parts of such an organization are not *coordinated,* they begin to cross each other's lines and tangle.

With such a tangle, one gets no forward progress.

The energy of the overall organization is absorbed by cross orders, cross actions and the general purpose of the activity makes little if any forward progress. This can be called "internal noise." The staff can be numerous, appear busy, even frantic, yet no production is really accomplished.

What is missing is COORDINATION. The efforts of each part of the organization are not being directed and meshed into flows which would achieve the common purpose.

THAT is what a manager is for.

The manager and his immediate assistants have to *know* where they are going and have to make certain each part of the organization knows and that the efforts of each individual segment of the organization are devoted to forwarding the same general purpose.

Without that coordination action, the different elements of the organization go into a tangle that results not in the forwarding of the general purpose but into confusion and frayed temper and nerves.

The elements of coordination are *planning, knowledge, information, agreement* and *production*.

Good coordination of team effort results in high ARC. This is called "team spirit, morale, esprit, etc." But what it is in fact is agreement and understanding within the team so they can each forward the general purpose of the group. Confidence in the

group by each individual part of it is built with the above factors. Out of that one can achieve meaningful and worthwhile production.

Without it one gets various versions of catastrophe. The "hey you" organization, the one-star team with everyone else on the sidelines inactive or confused — there are many aspects of a lack of coordination.

Coordination is why we have Executive Councils, Advisory Councils, staff meetings, mini programs for departments and all the rest of it. It is even why we have an org board.

Any manager, at whatever level, will most certainly fail if he does not brief his troops, get their viewpoints, establish agreement and program the general ongoing activity and see that the program is executed.

A manager at any level has to use the tools of coordination. Otherwise his organization's product will just be noise.

Oh, it is true that groups do not develop new ideas, that boards cannot plan. This is beside the point. This does not mean they do not serve a vital purpose. A manager uses them to coordinate! If he omits this, he has lost his most valuable tool, the form of the organization and he cannot possibly achieve any lasting results.

An org that doesn't hold Executive Council, Advisory Council and staff meetings on a regular basis and does not use them to brief and iron out disagreements and get cooperation is lost. It will have down statistics very surely. For no one will know what the blazes is going on, so how can they get their own job done? An answer is to splinter off and go one's own way as best he can. And that fragments a group and it ceases to be an organization but is just a lot of individual efforts.

The failure in such a case is simply a failure to coordinate!

Oh yes, management is there to plan. Good. If it is planning that will forward the general purpose of the organization, if the various units of the organization are briefed and the plan is adjusted to handle their disagreements and if the plan is real and understood by one and all and if they then cooperate and produce along these lines, you have forward progress.

In our case all we're doing is selling and delivering a product. If we do that we have a planet. Otherwise we don't.

Whether we do it in a few years or a few millennia is determined by management. Does it *coordinate* or not?

ADMIN KNOW-HOW SERIES 42
TARGET SERIES 9
COMPUTER SERIES 3

TARGETS AND PRODUCTION

There is a direct coordination between the clarity and doability of the targets of a program and any increase in stats.

If one can write good, simple, doable programs on matters important to get done, they can get done. If the program is cloudy or the targets too general, little comes of it. It does not show up in stats and can even clutter up lines and impede production.

So it is *very* important to an exec and to staffs that the exec be able to write clean, concise programs and staffs to recognize when they are not and plead for correction.

Strategic planning gets bugged most often because middle management does not put it in target form or if they do, put it in such cloudy or general targets it cannot be done and does not achieve the desired result.

Faults in this can cost — factually — millions in unmade income or actual losses and overwork.

But now today *another* factor is entering the scene. The world has gone *computer*.

Computers can keep track of things and operate to catch things which, undone, wreck things.

In a very short while, at this writing, computers will exist at management echelons to keep track of stats, demand programs and keep track of their effectiveness. The computer will be able to detect very early noncompliance both in writing and getting done programs.

Life will be much smoother as debugs will be demanded more quickly and bad targets or line jams or staff overloads will be detected sooner and remedied, resulting in more income, more service and more pay.

But all this will depend on three things:

1. The existence and soundness of the strategic planning and evaluation. (This has never much been in doubt.)

2. The clarity with which planning can be programed. (This is currently not good at all.)

3. The execution of targets called for at various echelons and staff level. (This depends, to a large measure, on 2 above.)

To a computer, which cannot really think, a target is a target. If not done in the expected time, it will squawk. If still not done, it will demand a debug.

The debug will find (a) the organization ordered did not give it to a correct or the right staff member to do, (b) had no one there to do it or (c) the target was simply neglected at staff level or (d) the target was undoable in its existing form. The right one will be found, action will be taken and the overall scene will advance once more.

So it is *very* important, whether one is writing major, minor or mini programs, that they be written absolutely on-policy from here on out.

This starts now, not waiting for computers, as it is valid in its own right and Programs Ops are on the line. With computers there will still be Programs Ops to run them but the precision and speed will increase amazingly.

The organizations in the world are getting bigger. They have to be more efficient to also pay well. And this all comes down to the 1, 2, 3 above.

It is a miserable thing to be hit with a lot of confused, undoable orders. And dangerous to one at staff level for one can be charged with noncompliance when there was really nothing precise to comply with!

So the ability to coordinate programs and write excellent target-policy targets is vital to the ability of all to work.

And when computers get on the job, electronic sparks will be flying all over the place if target policy is not adhered to carefully and precisely.

So this policy is vital, computers or no computers.

OPERATING TARGETS MUST HEREAFTER BE WRITTEN IN SUCH A WAY THAT THEY ARE FINITE AND NOT A GENERALITY SO THEY ARE PRECISELY DOABLE. Targets like “Keep stats rising” or “Be nice to Joe” are not doable targets from a computer’s viewpoint or anybody else’s.

But, computers aside, the one that does the target is NOT a computer and with target clarity can do it far more easily.

Hear me, the 1, 2, 3 above are the make-break point of expand or not expand.

So heed it.

ADMIN KNOW-HOW SERIES 43
TARGET SERIES 10

BATTLE PLANS

A "battle plan" is defined as:

A list of targets for the coming day or week which forward the strategic planning and handle the immediate actions and outnesses which impede it.

Some people write "battle plans" as just a series of actions which they hope to get done in the coming day or week. This is fine and better than nothing and does give some orientation to one's actions. In fact someone who does not do this is quite likely to get far less done and be considerably more harassed and "busy" than one who does. An orderly planning of what one intends to do in the coming day or week and then getting it done is an excellent way to achieve production. But this is using "battle planning" in an irreducible-minimum form as a tool.

Let us take up definitions. Why is this called a "battle plan" in the first place? It seems a very harsh military term to apply to the workaday world of admin. I did not select this term, it sort of grew up by itself amongst Sea Org executives. But it is a very apt term.

A war is something that happens over a long period of time. The fate of everything depends on it. A battle is something which occurs in a short unit of time. One can lose several battles and still win a war. Thus one in essence is talking about short periods of time when one is talking about a battle plan.

This goes further. When one is talking about a war, one is talking about a series of events which will take place over a long period of time. No general, or captain for that matter, ever won a war unless he did some strategic planning. This would concern an overall conduct of a war or a sector of it. This is the big upper-level idea sector. It is posed in high generalities, has definite purposes and applies at the top of the Admin Scale. (Ref: HCO PL 6 Dec. 70, Personnel Series 13, Org Series 18, THIRD DYNAMIC DE–ABERRATION)

Below strategic planning one has tactical. In order to carry out a strategic plan one must have the plan of movement and actions necessary to carry it out. Tactical planning normally occurs down the org board in an army and is normally used to implement strategic planning. Tactical planning can go down to a point as low as "Private Joe is to keep his machine gun pointed on clump of trees 10 and fire if anything moves in it."

"Middle management" — the heads of regiments right on down to the corporals are covered by this term — is concerned with the implementation of strategic planning.

The upper planning body turns out a strategic plan. Middle management turns this strategic plan into tactical orders. They do this on a long-term basis and a short-term basis. When you get on down to the short-term basis you have battle plans.

A battle plan therefore means turning strategic planning into exact doable targets which are then executed in terms of motion and action for the immediate period being worked on. Thus one gets a situation whereby a good strategic plan, turned into good tactical targets and then executed, results in forward progress. Enough of these sequences carried out successfully gives one the war.

This should give you a grip on what a battle plan really is. It is the list of targets to be executed in the immediate short-term future that will implement and bring into reality some portion of the strategic plan.

One can see then that management is at its best when there is a strategic plan and when it is known at least down to the level of tactical planners. And tactical planners are simply those people putting strategic plans into targets which are then known to and executed from middle management on down. This is very successful management when it is done.

Of course the worthwhileness of any evolution depends on the soundness of the strategic plan.

But the strategic plan is dependent upon programs and projects being written in target form and which are doable within the resources available.

What we speak of as "compliance" is really a done target. The person doing the target might not be aware of the overall strategic plan or how it fits into it, but I assure you that it is very poor management indeed whose targets do not *all* implement to one degree or another the overall strategic plan.

When we speak of coordination (Ref: HCO PL 1 July 82, Admin Know-How Series 41, MANAGEMENT COORDINATION), we are really talking about conceiving or overseeing a strategic plan into the tactical version and at the lower echelon coordinating the actions of those who will do the actual things necessary to carry it out so that they all align in one direction.

All this comes under the heading of *alignment*. As an example, if you put a number of people in a large hall facing in various directions and then suddenly yelled at them

to start running, they would, of course, collide with one another and you would have a complete confusion. This is the picture one gets when strategic planning is not turned into smooth tactical planning and is not executed within that framework. These people running in this hall could get very busy, even frantic, and one could say that they were on the job and producing but that would certainly be a very large lie. Their actions are not coordinated. Now if we were to take these same people in the same hall and have them do something useful such as clean up the hall, we are dealing with specific actions of specific individuals having to do with brooms and mops — who gets them, who empties the trash and so forth. The strategic plan of "Get the hall ready for the convention" is turned into a tactical plan which says exactly who does what and where. That would be the tactical plan. The result would be a clean hall ready for the convention.

But "Clean up the hall for the convention" by simple inspection can be seen to be what would be only a small portion of an overall strategic plan. In other words the strategic plan itself has to be broken down into smaller sectors.

One can see then that a battle plan could exist for the ED or CO of an org which would have a number of elements in it which in their turn were turned over to subexecutives who would write battle plans for their own sectors which would be far more specific. Thus we have a gradient scale of the grand overall plan broken down into segments and these segments broken down even further.

The test of all of this is whether or not it results in worthwhile accomplishments which forward the general overall strategic plan.

If you understand all the above (it would be a good thing to do it in clay) you will have mastered the elements of coordination.

Feasibility enters into such planning. This depends upon the resources available. Thus a certain number of targets and battle plans, to an organization which is expanding or attempting big projects, must include organizational planning and targets and battle plans so that the organization stays together as it expands.

One writes a battle plan, not on the basis of "What am I going to do tomorrow?" or "What am I going to do next week?" (which is fine in its own way and better than nothing), but on the overall question, "What exact actions do I have to do to carry out this strategic plan to achieve the exact results necessary for this stage of the strategic plan within the limits of available resources?" Then one would have the battle plan for the next day or the next week.

There is one thing to beware of in doing battle plans. One can write a great many targets which have little or nothing to do with the strategic plan and which keep people terribly busy and which accomplish no part of the overall strategic plan. Thus a battle plan can become a liability since it is not pushing any overall strategic plan and is not accomplishing any tactical objective.

So what is a "battle plan"? It is the doable targets in written form which accomplish a desirable part of an overall strategic plan.

When one is talking about "mini programs" in an org, one is actually talking about small battle plans at the lowest tactical levels. These must be based upon a middle-management tactical plan and this in turn must be based on a strategic plan.

The understanding and competent use of targeting in battle plans is vital to the overall accomplishment that raises production, income, delivery or anything else that is a desirable end.

It is a test of an executive whether or not he can competently battle plan and then get his battle plan executed.

HCO PL	27 July 82R Rev. 20.9.82	Finance Series 25 DEPUTY FBOs FOR MARKETING OF ORG RESOURCES FOR EXCHANGE (D/FBO FOR MORE)
HCO PL	3 Sept. 82	Finance Series 27 DEPUTY FBO FOR MARKETING OF ORG RESOURCES FOR EXCHANGE (D/FBO FOR MORE) PURPOSE

(NOTE: The pilot for this post has been long and successful: it is the FCCI PO [Flag Case, Course, Internship Product Officer] whose duties were covered by the famous Bulldozer EDs issued on Flag. However, the FCCI PO also covers the post of what is now called D/FBO for MORE [D/FBO for Marketing of Org Resources for Exchange]. Without this post effectively manned, the FSO — Flag Service Org — collapses and any sag in its stats is instantly traced to the nonfunctioning of the FCCI PO post. The post once functioned well in the Office of the Staff Captain and has functioned less well in the Office of the CO FSO. Therefore, the D/CO [or D/ED] for Delivery and Exchange post is put in close liaison with the strong and powerful International Finance Office Network, while remaining under the authority of the CO or ED of the org.)

The Service Product Officer in any org should have D/CO or D/ED status.

His key function is to see that the org operates at the highest level of exchange. (Ref: HCO PL 10 Sept. 82, Finance Series 28, EXCHANGE, ORG INCOME AND STAFF PAY)

Therefore, his post is now retitled D/CO (or D/ED) for Delivery and Exchange and he is located in the Office of the CO/ED, Department 19, of all Class IV and Sea Org orgs.

He is the bridge between the D/FBO for MORE and the FBO.

This creates a flow:

You have the D/FBO whipping up business by seeing that the public is made aware of the org's products and services, and driving more business down on the org than it can waste.

The D/CO (or D/ED) for Delivery and Exchange makes sure this public gets SIGNED UP and SERVICED. He is a product officer who names, wants and gets promotion, sales, call-in, delivery itself and re-sign occurring.

The FBO, then, sees to the org's solvency by ensuring income is greater than outgo, that production is properly financed, that staff are well paid for their production and that Flag is recompensed for good management of the org. And all of this makes it possible for the org to then expand and deliver in greater volume.

The flow goes from public (D/FBO) to ⟶ the whole sign-up and service line (D/CO or D/ED for Delivery and Exchange) to ⟶ solvency and volume (FBO).

It is this incredibly workable lineup that takes an org stably up the conditions of exchange. (Ref: HCO PL 10 Sept. 82, Finance Series 28, EXCHANGE, ORG INCOME AND STAFF PAY)

But the line breaks down where there is no D/CO or D/ED for Delivery and Exchange posted. And where it breaks down most specifically and ruinously is in the area of CALL–IN.

If one wants call-in to occur and the org's exchange with its public kept in, the only way to do it and also expand the org is to get a D/CO or D/ED for Delivery and Exchange on post and functioning.

Public interest may be kindled, public reach may be occurring, public may be paying partially or in full for goods or services, but if goods and services aren't being delivered in full the flow is broken and the org is in a condition of only partial exchange. Delivery in full means calling in the person so the service CAN be delivered. In this way the org maintains "fair exchange" with each and every public on its lines.

So the answer for any org that is sitting in a condition of only partial exchange, or an org that is ANYWHERE below the fourth condition of exchange — exchange in abundance — is to immediately, at once and yesterday, and without ripping off some vital post, post a D/CO or D/ED for Delivery and Exchange.

The first and primary function of the D/CO (or D/ED) for Delivery and Exchange is CALL–IN and this means he personally gets call-in done all by his little lonesome. With his own hands and voice he himself begins to call in fully and partially paids. Call-in is his first duty and when he's got that going he posts a Call-in Officer to take over the hat which he has already begun and he then expands onto the other functions of his D/CO or D/ED for Delivery and Exchange post, as covered in HCO PL 9 Aug. 79R II,

SERVICE PRODUCT OFFICER. But he FIRST and PERSONALLY and BY HIMSELF gets call-in going and exchange occurring at once.

What is involved here is the administrative principle that in order to get something done that is an expanding function you give it to somebody and tell him to expand it.

A CO or ED, whose responsibility it is to see that the main functions of the org are getting done, also wears the planning and coordination hat for the whole of the org's activity. If he's going to get the show on the road he needs to delegate some of this responsibility. He needs a deputy — the Deputy CO (or D/ED) for Delivery and Exchange — and that deputy needs the authority and the clout to see that, through promotion, sales, call-in, delivery and re-sign, the main products of the org do get produced.

Getting this post filled competently enables the ED to fully wear his planning and coordination hat and makes it possible for the flow from D/FBO to D/CO (or D/ED) for Delivery and Exchange to FBO to occur.

As some orgs in recent times have experienced both external and internal suppression on the subject of calling people in and servicing them, the D/CO (or D/ED) for Delivery and Exchange is given the additional powers of immediate communication to the International Finance Office and the Inspector General Network without vias to report and get help to remedy internal and external situations in orgs which suppressively inhibit call-in, delivery or expansion whether by inattention, refusals to post vital posts, failures or refusals to contact or call in interested persons, theft of org prospects or business or outright rip-offs to the end of ensuring successful execution of his duties and the expansion of the org. A form for such a report will be provided but absence of a form or a supply of such forms must not inhibit such reports.

This IS the winning combination by which an org moves up to "fair exchange" with all of its public and from there up to the highest level of exchange.

And it is the highest level of exchange toward which the whole activity of the D/CO or D/ED for Delivery and Exchange is geared — exchange in abundance!

THE TOOLS OF MANAGEMENT

Refs:

HCO PL	11 Apr. 70 I	THIRD DYNAMIC TECH
HCO PL	28 July 72	Exec Series 16 Org Series 32 Esto Series 26 ESTABLISHING, HOLDING THE FORM OF THE ORG
HCO PL	1 July 82	AKH Series 41 MANAGEMENT COORDINATION

There is a simplicity to managing effectively. It begins with the basics of management.

Although it may appear so to some, successful management is not a highly complicated, esoteric activity. But, just as an auditor or a C/S must know and be able to use the exact tools of first dynamic tech in handling cases in order to achieve exact and standard results on a one-for-one basis, so must an executive or manager know and be able to use the exact tools of third dynamic tech in handling groups to achieve successful and exact results in every instance.

Within the wealth of data on third dynamic tech contained in HCO Policy Letters, the OEC Volumes and recorded LRH lectures and books on the subject, there are certain definite, specific *tools* a manager uses. These are the tools of management.

The difference between brilliant management and mediocre or no management, at any level, lies in:

1. Knowing what the *tools* of management are, and

2. Knowing how to use them.

Many people are not aware that, like a carpenter or any other workman, a manager uses specific and exact *tools*. Thus, we see people here and there who are doing the equivalent of using the handle of a chisel to drive nails into wet concrete.

It is a common fault with inexpert workmen to find them using their tools wrongly or not using them at all. They make a breakthrough when they discover what the specific tools are for.

One can see this in people who can't mix sound or can't become mixing engineers. They sit with all these knobs in front of them, reach out and grab this knob or that one, hoping hopefully something will happen to the sound. Yet every component they have in front of them is an exact tool to do an exact thing with sound!

There are a lot of comparisons one could make, but the point is that people in management positions have precise *tools* available to them in Dianetics and Scientology which happen to be far better tools than have ever been available on the planet.

One can have very good people on management posts who still can drown if they don't know and put to use the management tools.

But without these being specified as exact tools, one might not see the simplicity of it.

MANAGEMENT ECHELONS

Operating as it does into an expanding scene, Scientology has grown into the need for and use of various echelons of management.

In orgs, for some time we have had division heads and above them we have the Executive Council, headed by the CO or ED of the org.

Above the level of service orgs we have middle management and still above that we have the Senior Executive Strata of management. And each of these echelons must know the tools of management and how to use them.

The OEC (Org Executive Course) and the FEBC (Flag Executive Briefing Course) have long been established as the essential courses for training executives at service org level and above.

These courses, and the OEC and Management Series Volumes upon which they are based, teach the form of the org and how to use the parts and posts and functions that go to make up the whole. They give us executives who know how to correctly utilize staff and their assigned posts and duties. We call it "knowing how to play the piano" — it's a matter of knowing what key to hit when and which keys to use in combination to produce a desired result. (Ref: HCO PL 28 July 72, ESTABLISHING, HOLDING THE FORM OF THE ORG) In other words, it's a matter of knowing and using one's tools. The OEC and FEBC courses teach this data and much, much more.

While at this writing there are numerous OEC and FEBC grads and more in the making, thousands more will be needed to handle the current rate of expansion.

Meanwhile an executive at any level and whatever his training needs to know and use his management tools NOW if he is to function at all.

A div head must "know how to play the piano" within his division.

The posts of CO or ED, Chief Officer, Supercargo, Org Exec Sec and HCO Exec Sec require executives who are capable of "playing the piano" across the divisions of the entire org and using hats and posts and functions correctly in order to achieve immediate production from the org as a whole.

At middle management one is handling not one function nor only one org but many orgs and their functions, which requires "knowing how to play the piano" at that level.

And at the Senior Executive Strata of management, we get into the vital need for "knowing how to play the piano" across a much wider sphere, using the full scope of management tools and using them with high skill. One might be using the same tools as lower stratas of management but a higher level of expertise is required as one's planning, decisions and actions are influencing far, far broader areas.

What has brought this about is the rapid expansion of Scientology into wider zones of responsibility and therefore increased responsibility with a resultant increase in traffic. This naturally has to be handled by increasing efficiency. What it has done, in effect, is push some up from lower-level management status to upper-level management status, necessarily. Without realizing it, some executives have been climbing a status stairs in terms of influence and zones of control. And they can go only so high without being terribly precise in their use of tools. After that, without this acquired precision, they drown.

The obvious answer to all of this is an executive training program which instant-hats executives on the fundamental tools of management and provides Management Status checksheets through which an executive or manager raises his status by *becoming more and more expert with these and an even wider range of tools*. And such a program has now been developed!

MANAGEMENT STATUS CHECKSHEETS

The new executive training program consists of three status levels.

These levels are to be covered in a series of Management Status checksheets.

The Management Status One checksheet has a prerequisite of Staff Status II. It *instant-hats* an exec on the basic tools of management, such as:

The Admin Scale, target policy, strategic plans, programs, specific lines and org terminals, org boards, despatches and telexes, statistics and graphs, conditions, hats and hatting, files, personnel folders, ethics folders, etc. Each one is a specific tool.

The Management Status Two checksheet (with an OEC prerequisite) consists of a profound review of the basic management tools and study of the upper-level tools of management, which include:

Surveys, PR, pilots, review of past performance, general economics, finance systems, cost accounting, control through networks, admin indicators, morale, legal, goodwill, exchange, missions (Action missions), economical management and managing by dynamics.

The Management Status Three checksheet (with FEBC prerequisite) would be a more profound review of the basic *and* upper-level management tools, in addition to training on the twelve ingredients of expansion upon which the Senior Executive Strata operates.

Even an OEC or FEBC grad would do the Management Status checksheets as, when he comes out of an OEC or FEBC, all in the clouds, the Management Status checksheet is needed to bring him back down to earth and tell him he's dealing with tools which are very finite tools.

What is being communicated to executives by these checksheets is that they have tools, what the tools are exactly, and that they must use them.

EXECUTIVE STATUS LEVELS

There are specific requirements to be met by a manager to attain each of the three Executive Status levels.

Working up through these status levels, a manager not only becomes more proficient in handling an org, any org, but becomes fully certified to operate at middle or senior echelons of management.

The Executive Status levels are:

1. EXECUTIVE STATUS ONE: At this level, the person is simply thrown on post, the basic management tools are put into his hands via a brief, rat-a-tat-tat Management Status One checksheet and he gets on with it.

2. EXECUTIVE STATUS TWO: For one to be certified at this level, one must have completed the OEC, done the Management Status Two checksheet and have an adequate production record.

3. EXECUTIVE STATUS THREE: For one to be certified at this level, he must have completed the FEBC, done the Management Status Three checksheet and have a proven production record.

When the steps for Executive Status certification are complete, the exec must present adequate evidence of such to the Qualifications Division. After verification of the evidence, he is awarded the appropriate Executive Status certificate.

By use of these Executive Status levels, executives at management levels could see what executives they had (or not had). The designation "ES I" (Executive Status I) would tell them at once what they were dealing with, etc. Also, from the viewpoint of the individual, he would know where he had to go to get an upper-level rating.

Once these Management Status checksheets are issued, middle and central management personnel should not draw full pay or be bonus eligible until they have completed the Management Status One checksheet, as they will not be operating effectively until they have done this.

EXECUTIVE STATUSES AND STAFF STATUSES

The Exec Status levels do not replace Staff Status training. All staff and execs are programed and move up the Staff Statuses so as to have a better idea of the org as an org; these levels are also indicative of the training and experience of a staff member and show his promotion eligibility.

An executive should attain Executive Status One by completing the Management Status One checksheet as soon as possible upon assuming post, so he has the management tools available for his immediate application.

Once an exec attains Staff Status VI (Org Exec Course graduate), he can attain Executive Status Two by fulfillment of the requirements listed above. An FEBC graduate achieves Executive Status Three in a similar fashion.

SUMMARY

With the release of the new Management Status checksheets, precise and gradient training levels for all echelons of management will exist comparable to the precise and gradient training levels required for all echelons of technical delivery.

Quite an unbeatable combination!

One winds up with managers fully familiar with their exact tools, having the one-two-three of management tech at their fingertips, and "knowing how to play the piano" effectively across an org, a continent, a planet!

So the answer to current expansion is an action which is geared to bring about even further expansion. And that is the only way to go!

It begins with the basic tools of management.

HCO PL	9 Jan. 83 III	AKH Series 47 CHECKLIST FOR A STRATEGIC PLAN

What is strategic planning?

Although it has already been described at some length in HCO PL 22 Aug. 82, BATTLE PLANS, strategic planning is of such vital importance in the scheme of things that it merits more emphasis and in-depth study by those responsible for it. So let us examine strategic planning further, both as to its definition and use as well as its relationship to other aspects of management.

STRATEGIC PLANNING— WHAT IT IS

The term "STRATEGY" is derived from the Greek words:

strategos, which means "general,"

stratos, which means "army,"

agein, meaning "to lead."

STRATEGY, therefore, by dictionary definition, refers to a plan for the overall conduct of a war or sector of it.

By extrapolation, it has also come to mean a plan for the skillful overall conduct of a large field of operations, or a sector of such operations, toward the achievement of a specific goal or result.

This is planning that is done at upper-echelon level, as, if it is to be effective, it must be done from an overview of the broad existing situation.

It is a statement of the intended plans for accomplishing a broad objective and inherent in its definition is the idea of clever use of resources or maneuvers for outwitting the enemy or overcoming existing obstacles to win the objective.

It is the central strategy worked out at the top which, like an umbrella, covers the activities of the echelons below it.

That tells us what strategic planning is.

WHAT IT DOES

What strategic planning does is provide direction for the activities of all the lower echelons. All the tactical plans and programs and projects to be carried out at lower echelons in order to accomplish the objective stream down from the strategic plan at the top. It is the overall plan against which all of these are coordinated.

This gives a clear look at why strategic planning is so vitally important and why it must be done by the upper-level planning body if management is to be effective and succeed.

What happens if strategic planning is missing? Well, what happens in the conduct of a war if no strategic planning is done?

Key troops can be left unflanked and unsupported in key areas while other troops fight aimless battles at some minor outpost. Supplies and ammunition could be deployed to the wrong area or not forwarded at all. Conflict of orders, jammed lines and maneuvers, wasted resources and lost battles all result. With the lack of a plan, coordination is missing and it's a scene of confusion and dispersal. In short, disaster.

What a difference between this and a strong, coordinated, positive thrust toward attaining the objective!

Transposing all of this over into our own activity gives an even clearer look at why strategic planning must be done at the upper levels of management. The key word here is "done." It cannot be neglected or dropped out. It cannot be *assumed* to be done. Strategic planning must be done and stated and made known at least to the next lower levels of management so coordination and correct targeting can take place.

PURPOSE AND STRATEGIC PLANNING

A strategic plan begins with the observation of a situation to be handled or a goal to be met.

It always carries with it a statement of the definite purpose or purposes to be achieved.

Once the purpose has been established, it is possible to derive from it various strategic plannings.

Strategic planning is actually a very postgraduate form of "bright idea." (Ref: HCO PL 17 Feb. 72, Data Series 23, PROPER FORMAT AND CORRECT ACTION)

In fact, STRATEGY CAN BE SAID TO BE HOW ONE IS GOING TO ACTUALLY EFFECTIVELY AND SWIFTLY GET A PURPOSE MANIFESTED AND ROLLING IN THE REAL PHYSICAL UNIVERSE AT SPEED AND WITH NO FLUBS.

Some strategic plannings are the result, really, of thumbnail evaluations done on the broad overall scene.

Any strategic plan can encompass a number of major actions required from one or more different sectors in order to achieve the purpose. These are expressed in highly general terms as they are a statement of the initial overall planning that has been done. From them one can then derive tactical plannings. But all of these things have to fit together.

EXAMPLE:

Situation: The ABC Paper Company, though continuing to produce its formerly successful line of paper products, is also continuing to concentrate solely on its regular, already-established clientele while neglecting a number of its potential publics. The company is rapidly going broke and losing its execs to companies where there is "more opportunity for expansion."

Purpose: Put a full-blown paper company there which reaches all of its potential public for volume sales of existing and new products, while it also continues to sell and service its regular clientele in volume, and thus restore the company's solvency and build its repute as a lucrative, progressive concern with opportunities for expansion.

Strategic Plan: The strategic planning, based on the situation and established purpose, might go something like this:

1. The most immediate and vital action needed to arrest the losses is to (without interrupting any ongoing business or unmocking any other unit) set up and get functioning a new sales unit (alongside the existing one) which will have as its first priority the development of immediate new clients for the current line of products from among (a) retail paper outlets, (b) wholesale paper outlets, and (c) direct mail order. Clean, experienced salesmen will need to be procured to head up each of these sections, and other professional salesmen will need to be located in volume. These can be hired at very low retainer and make the bulk of their money on commissions. This operation can then be expanded over broader areas using district managers, salesmen who start other salesmen and even door-to-door salesmen. As a part of this plan, commission systems, package sales kits and promotion and advertising will need to be worked out. Getting this going on an immediate basis will boost sales and offset losses and very shortly expand the company into the field of stellar profits.

2. While the immediate holding action is going in, current sales and servicing of clients must be maintained. At the same time, sales and production records of

existing staff will need to be reviewed as well as a thorough accounting done of company books to find where the losses are coming from. Any deadwood will need to be weeded out and those who do produce retained. Should any embezzlement or financial irregularity be found this will need to be handled with appropriate legal action. In other words, the current operation is to be fully reviewed, cleaned up and its production not only maintained but stepped up all possible, with production targets set and met.

3. A program is to be worked out whereby surveys are done of all publics to find out what new paper products the publics want or will buy. Based on these survey results, a whole new line of paper products (additional to the old established line) can then be developed, produced, promoted and sold broadly. The program for establishing the new line of goods will need to cover financing, the org boarding of the new production unit (including clean executives, competent designers, any needed additional workmen) as well as any additional machinery or equipment required. It will also need to cover broad PR, promotion and sales campaigns that push the new products as well as the old for volume sales of both. Inherent in this planning would be a campaign to enhance the company's image as pioneers in the field of new paper products with opportunities for expansion-minded executives.

Such a strategic plan not only corrects a bad situation but turns it around into a highly profitable and expanding scene for the future of the whole company.

What one is trying to accomplish is digging the scene out of the soup and expanding it into a terrific level of viability.

From this strategic plan, tactical planning would be done, taking the broad strategic targets and breaking them down into precise and exactly targeted doingnesses which get the strategic planning executed.

One would have many people working on this and it would be essential that they all had the purpose straight and that there be no conflicting internal spots in the overall campaign. Somebody reading over such plans might not see the importance of it unless they understood the situation and had a general overall riding purpose from which they could refine their tactical planning.

It is quite common in tactical execution of a strategic planning to find it necessary to modify some tactical targets or add new ones or even drop out some as found to be unnecessary.

The tactical management of a strategic planning is a bit of an art in itself so this is allowed for.

Given a good purpose, then, against which things can be coordinated, the strategic action necessary to accomplish it can then be worked out and the tactical plans to bring the strategic plans into existence can follow.

This way a group can flourish and prosper. When all strengths and forces are aligned to a single thrust a tremendous amount of power can be developed.

So one gets the purpose stated and from that works out what strategy will be used to accomplish the purpose and this then bridges the purpose into a tactical feasibility.

When the strategic plan, with its purpose, has been put forward, it is picked up by the next lower level of command and turned into tactical planning.

STRATEGIC VERSUS TACTICAL PLANNING

Strategy differs from tactics.

This is a point which must be clearly understood by the various echelons of management.

There is a very, very great difference between a strategic plan and a tactical plan.

While tactical planning is used to win an engagement, strategic planning is used to win the full campaign.

While the strategic plan is the large-scale, long-range plan to ensure victory, a tactical plan tells exactly who to move what to where and exactly what to do at that point.

The tactical plan must integrate into the strategic plan and accomplish the strategic plan. And it must do this with precise, doable targets.

And that, in essence, is management.

BRIDGING BETWEEN PURPOSE AND TACTICAL

One error that is commonly made by untrained personnel is to jump from purpose to tactical planning, omitting the strategic plan. And this won't work. The reason it won't work is that unless one's targeted tactical plan is aligned to a strategic plan it will go off the rails.

The point to be understood here is that strategic planning *creates* tactical planning. One won't get one's purpose achieved unless there is a strategy worked out and used by which to achieve it. And, based on that strategy, one works out the tactical moves to be made to implement the strategy. But jumping from purpose to tactical, ignoring the strategy, one will miss.

So, between purpose and tactical there is *always* the step of strategic planning. We could say that by a strategic plan is meant some means to get the purpose itself to function.

It is actually a plan that has to do with cleverness.

One might be well aware of the purpose and might come up with a number of tactical targets having to do with it. And possibly the targets will work, in themselves. But the purpose is to get a situation handled and, lacking a strategic means to do this, one might still find himself facing the same problem.

Putting the actual bridge there between purpose and tactical, which bridge is the strategic side of it, the purpose will have some chance of succeeding.

Strategic planning is one of the vital tools of management.

Getting a truly strategic plan worked out can necessitate calling all the other tools of management into play.

One needs to know org boards, lines and terminals, programing and target policy, to name just a few of these tools. One has to have a familiarity with personnel policy, statistics, graphs, conditions and the use of ethics. A knowledge of finance policy is often required. Knowing and utilizing the various networks can enter into it. And certain situations will very clearly indicate the need for surveys or the use of PR tech which, cleverly used, can not only correct a sour scene but can actually turn it around to one's advantage.

These are all resources. Anyone doing strategic planning has got to be able to use them and to be able to use them *strategically*, as that is what this planning is all about.

The management terminal who does have these tools under his belt and who clearly understands the sequence of purpose followed by strategic planning which can then be turned into tactical planning will be a stellar manager indeed!

CHECKLIST FOR A STRATEGIC PLAN

Refs:

HCO PL	5 Jan. 83	AKH Series 46 STRATEGIC PLANNING
HCO PL	22 Aug. 82	AKH Series 43 Target Series 10 BATTLE PLANS
HCO PL	1 July 82	AKH Series 41 MANAGEMENT COORDINATION
HCO PL	18 Aug. 82 I	AKH Series 42 Target Series 9 Computer Series 3 TARGETS AND PRODUCTION
HCO PL	29 Dec. 82 II	AKH Series 45 Exec Series 24 Org Series 45 Esto Series 45 THE TOOLS OF MANAGEMENT

Those writing strategic plans as well as those passing them have the responsibility for ensuring:

1. That strategic plans are correct and will handle what they are designed to handle.

2. That strategic planning *is done* to handle existing situations.

3. That no situation or goal requiring strategic planning is left uncovered by an overall plan for its handling.

Additionally, those writing strategic plans have the responsibility for getting themselves trained to proficiency in the use of this vital management tool.

And those passing on strategic plans have the added responsibility of correctly critiquing submitted plans, with no caprice or opinion entered into the line. With standard, in-tech criticism given, those in planning positions can be brought up to

greater proficiency in their planning through cramming, additional training and, as needed, ethics.

The following checklist is therefore offered as a guide for those writing strategic plans and those whose job it is to approve such plans and authorize them for issue.

CHECKLIST FOR A STRATEGIC PLAN

1. a. Has the strategic plan been preceded by correct observation of the situation to be handled?

   b. Is it a valid situation?

   c. Has all the applicable data been examined?

   (These points would show up in verification of the information section of the plan.)

2. Is there a clear and comprehensive statement of the situation the plan is designed to handle?

3. Is there a clear statement of the purpose to be achieved?

4. Is the purpose, as stated, based on and consistent with the situation?

5. Is the purpose broad enough and stated in sufficiently broad terms so that, when achieved, it will not only handle the situation but result in increased viability?

6. Is the strategic plan itself aligned to and consistent with the purpose?

7. Is the plan clearly expressed and understandable?

8. Does the plan include a strategy that will actually and effectively implement the purpose and swiftly get it rolling in the physical universe?

9. Is the proposed strategy actually clever and bright enough to achieve the purpose?

10. Is the plan broad enough to fully accomplish the purpose?

11. Is it doable?

12. Does it cover, in broad general terms as required in a strategic plan, the major actions and areas which need to be programed in order to accomplish the purpose?

13. Where it uses any of the other tools of management, does it use these correctly?

14. Does it take existing resources or lack of them into consideration?

15. Does it include strategic use of lines, terminals or networks where the need for this is obvious?

16. Does it include the use of surveys and/or PR handling where these are obviously indicated by the situation?

17. Does it tend to collapse purpose and tactical planning and omit the needed strategy? (If so, it needs correction.)

18. Does the strategic plan effectively bridge between purpose and tactical so that it can be used for coordination in tactical planning and serve as an orientation point for precisely targeted actions?

The above checklist is not in any way intended to be used by planning or approval terminals as a substitute for study of the references and full data on strategic planning.

While other factors than those listed might need to be taken into consideration, the checklist provides the main points upon which any strategic plan would be judged.

And it is probably safe to say that any plan which had all of the above positive points in would be worthy of the title "strategic" and highly effective when executed.

		MANAGEMENT TOOLS BREAKTHROUGH

The following is a list of the materials which, out of the many tools of management, comprise the BASIC MANAGEMENT TOOLS.

1. *ADMIN SCALE:* A scale for use which gives a sequence (and relative seniority) of subjects relating to organization. The scale, from the top down, includes: Goals, Purposes, Policy, Plans, Programs, Projects, Orders, Ideal Scenes, Statistics, Valuable Final Products. The scale is worked up and down until it is (each item) in full agreement with the remaining items. In short, for success, all these items in the scale must agree with all other items in the scale on the same subject.

2. *TARGET POLICY:* A series of policy letters which describe each type of target and how they are to be used by staff, executives and management personnel to get something *done.*

3. *STRATEGIC PLANS:* A STRATEGIC PLAN is a statement of the intended plans for accomplishing a broad objective and inherent in its definition is the idea of clever use of resources or maneuvers for outwitting the enemy or overcoming existing obstacles to win the objective. It is the central strategy worked out at the top which, like an umbrella, covers the activities of the echelons below it.

4. *PROGRAMS:* A PROGRAM is a series of steps in sequence to carry out a plan. Programs are made up of all types of targets coordinated and executed on time.

5. *PROJECTS:* A PROJECT is a series of guiding steps written in sequence to carry out one step of a program, which, if followed, will result in a full and successful accomplishment of the program target.

6. *ORDERS:* An ORDER is the direction or command issued by an authorized person to a person or group within the sphere of the authorized person's authority. It is the verbal or written direction from a lower or designated authority to carry out a program step or apply the general policy. Some program steps are so simple that they are themselves an order or an order can simply be a roughly written project. By implication an order goes from a senior to juniors.

   All orders of whatever kind by telex, despatch or mission orders must be coordinated with current written command intention. You can destroy an org by issuing orders to it uncleared and uncoordinated. Coordinate your orders! Clear your orders!

7. *COMPLIANCE REPORTS:* A COMPLIANCE REPORT is a report to the originator of an order that the order has been done and is a completed cycle. It is not a cycle begun, it is not a cycle in progress, it is a cycle completed and reported back to the originator as done.

   When an executive or manager accepts "done" as the single statement and calls it a compliance, noncompliance can occur unseen. Therefore, one must (1) require explicit compliance to every order and (2) receive the evidence of the compliance pinned to the compliance report. Such evidence might be in the form of copies of the actual material required by the order and procured, or photographs of it, ticket stubs, receipts, a signed note stating the time and place some action was carried out, etc. Evidence is data that records a "done" so somebody else can know it is done.

   It is up to LRH Comms, Flag Reps or execs to verify reports of dones or get dones done. True compliances to evaluated programs are vital.

8. *TERMINALS:* A TERMINAL is something that has mass and meaning which originates, receives, relays and changes particles on a flow line. A post or terminal is an assigned area of responsibility and action which is supervised in part by an executive.

   A fixed-terminal post stays in one spot, handles specific duties and receives communications, handles them and sends them on their way.

   A line post has to do with organizational lines, seeing that the lines run smoothly, ironing out any ridges in the lines, keeping particles flowing smoothly from one post to another post. A line post is concerned with the flow of lines, not necessarily with the fixed-terminal posts at the end of the lines.

9. *LINES:* A LINE is a route along which a particle travels between one terminal and the next in an organization; a fixed pattern of terminals who originate and receive or receive and relay orders, information or other particles.

A COMMAND LINE is a line on which authority flows. It is vertical. A command line is used upward for unusual permission or authorizations or information or important actions or compliances. Downward it is used for orders.

A COMMUNICATION LINE is the line on which particles flow; any sequence through which a message of any character may go. It is horizontal.

The most important things in an organization are its lines and terminals. Without these in, in an exact known pattern, the organization cannot function at all. The lines will flow if they are all in and people wear their hats.

10. *ORG BOARDS:* An ORG BOARD (ORGANIZING BOARD) is a board which displays the functions, duties, sequences of action and authorities of an organization. The org board shows the pattern of organizing to obtain a product. It is the pattern of the terminals and their flows. We see these terminals as "posts" or positions. Each of these is a hat. There is a flow along these hats. The result of the whole org board is a product. The product of each hat on the board adds up to the total product.

11. *HATS:* HAT is a term to describe the write-ups, checksheets and packs that outline the purposes, know-how and duties of a post. It exists in folders and packs and is trained in on the person on the post to a point of full application of the data therein. A HAT designates what terminal in the organization is represented and what the terminal handles and what flows the terminal directs. HATTING is the action of training the person on the checksheet and pack of materials for his post.

12. *TELEXES:* A TELEX is a message sent and received by means of telex machines at specific stations hooked up with one another. This is a fast method of communication, similar to a telegram or cable.

    Use telexes as though you were sending telegrams. Positiveness and speed are the primary factors. Cost enters as a third. Security enters as a fourth consideration. All have importance but in that order.

    Telexes must be of such clarity that any other person in the org can read and understand them. You must take responsibility for both ends of a communication line. Write your communication (telex) so that it invites compliance or answer without further query or dev-t. Entheta in telexes on a long-distance comm line is forbidden.

    Don't use telexes when despatches will do. Nonurgent communications on telex lines jam them. Do NOT put logistics (supply) on a telex line. Telex lines should only be used for communications concerning operations.

13. *DESPATCHES:* A DESPATCH is a written message, particularly an official communication. When writing a despatch, address it to the POST — not the person. Date your despatch. Route to the hat only, give its department, section and org. Put any vias at the top of the despatch. Indicate with an arrow the first destination. Sign it with your name but also the hat you're wearing when you write it.

As with telexes, despatches must be written so clearly that any other person in the org can read and understand them, with the originator taking responsibility for both ends of the communication line. And, as with telexes, entheta in despatches on a long-distance comm line is forbidden.

14. *STATISTICS:* A STATISTIC is a number or amount *compared* to an earlier number or amount of the same thing. STATISTICS refer to the quantity of work done or the value of it in money. Statistics are the only sound measure of any production or any job or any activity. These tell of production. They measure what is done. Thus, one can manage by statistics. When one is managing by statistics they must be studied and judged alongside the other related statistics.

15. *GRAPHS:* A GRAPH is a line or diagram showing how one quantity depends on, compares with or changes another. It is any pictorial device used to display numerical relationships.

16. *CONDITIONS:* A CONDITION is an operating state. Organizationally, it's an operating state and oddly enough, in the MEST universe, there are several formulas connected with these operating states. The table of conditions, from the bottom up, includes: Confusion, Treason, Enemy, Doubt, Liability, Non-Existence, Danger, Emergency, Normal, Affluence and Power or Power Change. There is a law that holds true in this universe whereby if one does not correctly designate the condition he is in and apply its formula to his activities or if he assigns and applies the wrong condition, then the following happens: He will inevitably drop one condition below the condition he is *actually* in. One has to *do* the steps of a condition formula in order to improve one's condition.

17. *PERSONNEL FOLDERS:* A PERSONNEL FOLDER is kept in HCO for each person employed by the org. The folder is to contain all pertinent personnel data about the person: name, age, nationality, date employment started, address (if other than the org), next of kin, social security number, test scores, previous education, skills, previous employment, case level, training level, name of post, former posts held and dates held, production record on post(s), date employment ceased, copies of all tests, and any other pertinent data.

    Copies of contracts, agreements or legal papers connected with the person are filed in the personnel folder. The originals of such papers are kept in the val doc files.

    A personnel folder is used for purposes of promotion and any needful reorganization and so should contain anything that throws light on the efficiency, inefficiency or character of personnel.

    Personnel folders are filed by division and department in HCO, with the personnel in separate folders filed alphabetically in their department. There should be two sections in the personnel files: (1) present employees and (2) past employees.

18. *ETHICS FOLDERS:* An ETHICS FOLDER is kept in HCO for each individual staff member. It is a folder which should include his complete ethics record, ethics chits, Knowledge Reports, commendations and copies, as well, of any

justice actions taken on the person, such as Courts of Ethics or Comm Evs, with their results.

Filing is the real trick of Ethics work. The files do 90 percent of the work. Ethics reports patiently filed in folders, one for each staff member, eventually makes one file fat. When one file gets fat, call up a Court of Ethics on the person and his area gets smooth.

19. *FILES:* A FILE by definition is an orderly and complete deposit of data which is available for immediate use. As FILES are the vital operational line it is of the GREATEST IMPORTANCE that ALL FILING IS ACCURATE. A misfiled particle can be lost forever. A missing item can throw out a whole evaluation or a sale. It is of vital interest both in ease of work and financially that all files are straight.

20. *DATA SERIES:* The tool to discover causes. The administrative technology described in these policy letters is applied to find what is logical by ferreting out what is illogical, using this to reveal the greatest outness which, when remedied, will resolve the scene.

There is considerably more data on each of these tools contained in the policy letters in the OEC Volumes and Management Series Volumes, *none* of it complicated or difficult to grasp.

The purpose of this policy letter is simply to advise the exec that these *are* his tools — his most fundamental and basic management tools. And that they are for USE and it is VITAL that he USE them.

Why? Because use of these simple, basic tools means the difference between a failing org and a flourishing one.

And we want organizations to flourish!

		BASIC MANAGEMENT TOOLS

THE FIRST THING AN EXECUTIVE OR MANAGER AT ANY LEVEL NEEDS TO KNOW IS THAT HE HAS *TOOLS* WITH WHICH TO MANAGE.

This applies to top levels of management, to middle management echelons and in every org from the CO or ED down through the Exec Council and every head of a division or department.

BREAKTHROUGH

This datum is the result of a recent, eye-opening breakthrough.

The breakthrough was not a matter of discovering or developing or improving the materials which make up the tools of management. Org boards, the Admin Scale, target policy, planning and programing, statistics, graphs and conditions (to name a few of these tools) have been a part of our technology, well defined, available for use and used for quite some years now.

THE BREAKTHROUGH WAS IN DISCOVERING THAT A GREAT MANY EXECUTIVES DID NOT LOOK UPON THESE AS *TOOLS*.

CONTENTS
ORG BOARDS
INDEX

But unless one does recognize them as tools, unless one actually puts them in the *category of tools,* like rakes and shovels and wheelbarrows, he is apt to think of them as opinions or theories or something of the sort. He won't recognize that he does have actual *tools* with which to manage. And, not realizing this, he won't USE them in managing.

Such a scene could be compared to somebody building a house who didn't even know he was trying to build a house and, should this be pointed out to him, he would look at hammers and saws as if they were total strangers. He wouldn't wind up with a house.

Any activity has its tools. And if one is going to engage in an activity, he had better know what its tools are and that they are for use.

BASIC MANAGEMENT TOOLS

We are rich in management tools but the most fundamental of them, required for use at any executive level from the highest to the lowest, are these:

ADMIN SCALE

TARGET POLICY

STRATEGIC PLANS

PROGRAMS

PROJECTS

ORDERS

COMPLIANCE REPORTS

ORG TERMINALS

SPECIFIC LINES

ORG BOARDS

HATS AND HATTING

TELEXES

DESPATCHES

STATISTICS AND GRAPHS

CONDITIONS

PERSONNEL FOLDERS

ETHICS FOLDERS

FILES

DATA SERIES

Each of these fundamental tools is defined and covered briefly in HCO PL 31 July 83 I, BASIC MANAGEMENT TOOLS.

NAVIGATE

CONTENTS
ORG BOARDS
INDEX

None of these are complicated. They are actually SIMPLE but VITALLY, VITALLY IMPORTANT.

One gets some terminals, gets them some lines, gets the channels of command and echelon worked out, gets in strategic planning and with that one can achieve some coordination.

But it is necessary to be able to conceive of purpose (which, in target policy, becomes objectives). And it is necessary to be able to write targets that will accomplish that objective or that purpose. To get the targets done one needs lines and terminals there. And to have lines and terminals, of course, one has to have an org board.

SIMPLE. But VITALLY IMPORTANT.

In laying out these tools we are laying out the fundamentals of organization as that, most definitely, is what these tools are. And these tools will give one an organization. Without them, you don't have an organization, you have a mob. And if one cannot figure out purpose or objectives or write targets and telexes and get hatting done and hats worn they'll just keep on being a mob. But correct use of just this basic list of management tools can turn a mob into a producing organization!

EXEC STATUS ONE CHECKSHEET

A fast, instant-hat type of checksheet called Exec Status One is being provided to swiftly train execs and managers at all levels on these tools.

This is not a substitute for an OEC or FEBC. But it is vital that an exec starts using these tools right now, instantly and at once yesterday, if he considers himself an executive or is in a position of handling an organization of any type, size or kind. Because if he doesn't use these tools, he's going to lay an egg.

ETHICS

Once the exec has passed this first checksheet, Exec Status One, it's an ethics offense to fail to use these tools properly. One would handle a first or second offense with cramming, but after that it's a Court of Ethics and, in the case of a person having trained on these tools continuing to misapply or not apply these tools, it becomes a matter for a Comm Ev.

SUMMARY

1. First, an executive or manager must know that actual TOOLS EXIST for his use in managing.
2. Second, he needs to know WHAT his tools are.
3. Third, he must realize that these tools are SIMPLE but VITALLY, VITALLY IMPORTANT, that they are for USE and he must *USE THEM*.

KEEPING ADMIN WORKING

Refs:

HCO PL	7 Feb. 65	KSW Series 1 KEEPING SCIENTOLOGY WORKING
HCO PL	24 Sept. 70RA Rev. 3.7.77	ISSUES — TYPES OF

In 1965 I wrote the policy letter KEEPING SCIENTOLOGY WORKING. It appears as the first item of nearly every Dianetics and Scientology course checksheet. And with good reason. Unswerving and relentless application of that one issue by every Scientologist is our only certain means of keeping the technology pure and the future hope of mankind alive.

It may not be generally understood, however, that the principles given in that policy letter do not apply only to what is commonly referred to as "tech" — the first dynamic technology given in HCO Bulletins. You see, when "tech" goes out, the pc suffers. When "admin" goes out, the org declines.

Therefore, to keep Scientology working, *all* of Scientology, one must insist on standard tech *and* admin. The principles of unvarying adherence to precise technology, constant alertness to tech alter-is and insistence that every Scientologist abide by these rules apply *just* as severely to the third dynamic technology of standard administration — POLICY.

POLICY

POLICY embraces the basic duties of a staff member, the precision technology of management in all its aspects and at every echelon, and standard ethics and justice procedures. Policy is found in HCO PLs, Flag Orders, Central Bureaux Orders, LRH EDs, taped lectures and other duly authorized and on-source administrative issues.

Just as with our technology of handling the individual, our policies for the establishment and expansion of effective organizations are based on fundamental laws of life derived through exhaustive research and experience. Every policy we have has been put to the acid test — "Does it work?" — and passed. Neither tech nor policy admit interpretation, alteration or "new ideas" generated by the bank. Bright, constructive application of exact principles, yes. Embellishment and know-best, never.

To you, the individual executive or staff member, "Keeping Admin Working" means making sure that you have all the policy relating to your post and to your hat as a staff member. It means insisting that your org's Qual Division maintains a complete library of policy for use by staff and that it is not unmocked or hidden away or rendered unusable. It means knowing the policies of one's job, through standard hatting and training. It means insisting that standard staff courses exist complete with WHAT IS A COURSE? policy in down to the last comma, whose graduates go livid at the idea of anyone alter-ising standard policy. It means demanding that Qual provides a tough, standard Cramming Section that detects deviation from policy at the first pause of a stat and handles the hell out of it right now — including finding out how the scene was allowed to go awry in the first place and correcting THAT, too. It means total dedication on the part of every last Scientologist to putting in standard admin, straight by the book. It means holding an utterly unreasonable line on KEEPING standard admin IN.

OUT–ADMIN

While our overall record of success is stellar in the extreme, the history of our organizations is dotted here and there with stat crashes brought about by out-admin. These range in scope from the collapse of one staff member's post up to the near collapse of the whole international Scientology network in the 60s when squirrel "execs" at Worldwide were "managing" on their own know-best and over scores of misunderstoods on basic policy. That scene was salvaged by getting the admin squirrels off the lines, their orders cancelled and the simple on-policy usual done: org boards set straight and made known, hat checksheets and packs compiled, studied up and used by all staff, a schedule posted and adhered to, etc. Very simple, really. It just had to be DONE.

The fact is that every organizational failure or decline in our history can be traced to standard admin going OUT. Likewise, every boom or recovery can be traced to policy being put IN. It is a one-for-one.

EXAMPLES

It was once found that a senior exec (long since discovered and removed) was attempting to run a major org from his upper-management post on a day-to-day basis even though it was several echelons below him and despite numerous vividly clear policies forbidding such an activity. But this person "knew best." And he managed (not accidentally) to crash the org's delivery and leave a major mess for other, on-policy execs to come in and bail out on an emergency basis.

This same Mr. Know Best was also found to have worked his way onto the comm lines of some staff doing a vital project to revive a faltering org. He was covertly feeding them his own instructions (which were completely contrary to policy and the approved steps of the project) and getting them to forward his "successful actions" instead of policy. The result was a failed project which had to be redone from scratch. Had those executing the project adhered to policy instead of forwarding someone's know-best and alter-is, their project could have ended in success instead of a crash.

People's failure to recognize what standard policy is can sometimes get in your road. As an example, an executive once went into an org and established a standard, by-the-book (OEC Volume 4) Dept 10 with Dir Tech Services, HGC Admin, Tech Pages, Tech Receptionists, etc. The stats, of course, boomed. But after that, people kept referring to this exec's actions as though they were something new and strange and referred to the project instead of the OEC Volume! From this, one can conclude that you have to put in policy with an ax and call it such and take no nonsense concerning it. For even when people see the fruits of the application of policy materialize, they have to be told again that that was POLICY and IS IN THEIR OEC VOLUMES.

The way to do this is to get in a competent Qual that hats the staff on HCO PLs, from basic staff status checksheets all the way up to FEBC, and crams them when they flub. Unless Qual is strong and functioning and pounds home green-on-white as *the* tried and true way to go about something, the staff are open to some suppressive moving in and leading them off into squirreldom.

We work, in our organizations, in the face of a bank that says that the group is all and the individual nothing. This you know. Know too that that same bank is constructed to make very sure that no one ever succeeds in forming anything resembling an *effective* group with true survival goals or purposes. So we face quite a challenge. But in standard admin policy we have a potent weapon with which to meet this challenge: a codified system of organization which, where it has been applied purely, has resulted in the most powerful and effective organizations this planet and sector have ever known. Required are only the courage, determination and confront to master and use this weapon.

I count on you — the individual Scientologist — to take up the challenge, to put standard Scientology administrative policy to work, and to WIN. You can, you know. And the victory will be not only for you but for Scientology and for all mankind.

ADMIN DEGRADES

Refs:

HCO PL	17 June 70RB I	KSW Series 5
	Rev. 25.10.83	TECHNICAL DEGRADES
HCO PL	7 Feb. 65	KSW Series 1
		KEEPING SCIENTOLOGY WORKING

How does standard "green-on-white" policy get lost? Just as with the "red-on-white" tech of auditing or training, it can potentially be obscured or made to seem unimportant by the actions of an ill-intentioned individual.

Someone considers that the best way to get a new staff member quickly onto post is to shorten his hat checksheet or label key hat materials as "old." The new staff member fails, dragging a whole unit or department down with him in a maelstrom of dev-t.

In a hurry to get something accomplished, someone skimps on the usual, on-policy procedures and routings and soon his improvised (squirreled) "handling," tolerated by others, becomes "the way it's always done around here." And crash goes that area.

Seeking to get his own stats up at any cost (and ignoring the effects of his actions on the org as a whole), an "expert" manages to obscure standard, on-policy lines and routings and implements his own "successful actions," then torpedoes any attempt to get policy in. The result — the org falls far short of what it could be producing if it were operating by the book.

Such actions are suppressive. They are HIGH CRIMES. And they carry the same penalties as the suppression of the technologies of Dianetics and Scientology auditing or training — a condition of TREASON or cancellation of certificates or dismissal and a full investigation of the person's background.

The following actions or omissions are classified as HIGH CRIMES:

1. Abbreviating an official course in standard Scientology administrative policy so as to lose the full theory, administrative procedures and effectiveness of the subject.

2. Adding comments to the Org Exec Course or other administrative checksheets or instructions, policies or directives labeling any material "background" or "not used now" or "old" or "it doesn't need to be followed *exactly*," or any similar action which will result in the student not knowing, using and applying the standard administrative data in which he is being trained.

3. Employing any checksheet for any administrative course not authorized by the Authority, Verification and Correction Unit International (AVC Int) or, in the case of hat checksheets, duly authorized per HCO PL 30 Sept. 70 I, CHECKSHEET FORMAT.

4. Failing to strike from any administrative or hat checksheet any such comments as "historical," "background," "not used," "old," etc., or VERBALLY STATING IT TO STUDENTS.

5. Failing to hat and apprentice a staff member on the full policy and actions of his post.

6. Discouraging or preventing a staff member, administrator or executive from training on the full Org Exec Course and Flag Executive Briefing Course.

7. Failing to insist upon precise and exact application of the Data Series policy letters in investigations and evaluations.

8. Running any organization on squirrel "policy" or third dynamic administrative or management procedures that are contrary to approved policy.

9. Using any squirrel administrative procedure in managing an organization while falsely labeling it Scientology policy.

10. Using Scientology policy but calling it something else or attributing it to some other source.

11. Acting in any way calculated to lose standard Scientology policy to use or impede its use or shorten its materials or its application.

Our policy is the result of years of hard-won experience. It works. It must be applied vigorously, intelligently and to the letter. Our own lives and happiness are at stake. This planet and universe are at stake. To carry off the task we need only keep and use these tools of standard admin.

ADMIN HIGH CRIME

Refs:

HCO PL	8 Mar. 66	KSW Series 13 HIGH CRIME
HCO PL	19 Aug. 79RA Rev. 27.8.84	Word Clearing Series 47 HIGH–CRIME CHECKOUTS AND WORD CLEARING
HCO PL	10 July 86 I	AKH Series 50 KEEPING ADMIN WORKING
HCOB	22 Feb. 72RA Rev. 8.7.74	Word Clearing Series 32 WORD CLEARING METHOD 4

With this issue, checkouts on policy by all administrative personnel become mandatory.

It has long been policy that technical personnel study, word clear, and star-rate check out on any technical materials before they apply those materials on their jobs. Pro auditors and interns at any level study, word clear and check out on the processes they are to run in session. Supervisors and Word Clearers star-rate on the basic materials of study tech and Word Clearing before they are allowed to deliver Scientology courses. And as new materials are issued, the Qual Division sees to it that the tech delivery personnel to whom the materials apply get them checked out IMMEDIATELY. Such checkouts have come to be known as “high-crime checkouts,” from the title of the policy letter which brought them into being: HCO PL 8 Mar. 66, HIGH CRIME. And it is through the use of such checkouts that tech application is safeguarded and kept in step with the latest technical discoveries and advances.

Tech people take great pride in keeping on top of their subjects in this way. Understandably so; for when they do, the results they achieve are consistent and

spectacular. Miracles are the order of the day. The public pour in for service. The organization thrives.

Where tech terminals don't KNOW and USE their materials, results are only anxiously hoped for. The public come in for service reluctantly, when they can be coaxed in at all. The organization dwindles.

HIGH–CRIME CHECKOUTS ON POLICY LETTERS

Just as there is STANDARD TECH, so is there STANDARD ADMIN.

The fact is that any organization can be seen to fail when standard administrative policy is not known and used by its people. And every successful organization will be found to be composed of people who DO know and DO apply the basic principles found in our policy letters.

Therefore the following is classified as a HIGH CRIME:

NEGLECTING, ADVISING AGAINST THE APPLICATION OF, FAILING TO ENFORCE OR TOLERATING THE OMISSION OF STANDARD WORD CLEARING AND STAR–RATE CHECKOUTS ON ALL NEW OR NEWLY REVISED HCO POLICY LETTERS, AS WELL AS THE KEY HCO PLs OF THE BASIC STAFF MEMBER HAT AND THE KEY POLICIES OF THE STAFF MEMBER'S SPECIFIC ASSIGNED POST, BY EVERY STAFF MEMBER. IN THE SEA ORGANIZATION THIS APPLIES TO LRH CBOs AND FLAG ORDERS AS WELL AS HCO POLICY LETTERS.

STAFF MEMBER RESPONSIBILITY

Once an exec or staff member has completed study of his hat by proper checksheet, he should report to the SSO in Qual to be word cleared Method 4 and star-rate checked out on the key policies of his staff member hat as well as those policies specifically relating to his post. And when any new policy is issued relating to his post (or which is an essential part of his hat as a staff member), he must get it word cleared, checked out and into application immediately.

Such checkouts can be done by Qual personnel or by another staff member on a twinned basis. They must be tough standard star-rate checkouts which consult the staff member's understanding and demand that he demonstrate his ability to apply the material.

Staff on technical posts are included under this policy, as they are responsible for their hats as staff members.

QUAL RESPONSIBILITY

The SSO must alert all staff of new or revised LRH policies received, must keep a log of policies checked out by each staff member (just as a log is kept for technical). He must ensure that this is done within a matter of days of receipt of the issue — NOT allowed to drag out so that a backlog accumulates. The SSO is responsible for

determining which policies are to be checked out by which staff, and logging them under the staff member's name in his checkout log. He should coordinate with the HCO Hatting Officer in making such determinations and in getting the checkouts done.

VIOLATIONS

The MAA or Ethics Officer, in investigating any post or area with down statistics must include an inspection of the Qual checkout log entries for the persons in the area being investigated. Where violations of this policy are found, the matter is reported to the HCO Area Secretary. The HCO Area Secretary must at once order a full and searching investigation into any persons who might have instigated it and report the matter with all particulars to the HCO Executive Secretary.

The HCO Exec Sec must then convene a Committee of Evidence with the persons accused as interested parties and must locate amongst them any suppressive or suppressives. When so located, they are duly declared as suppressive by HCO Ethics Order and dismissed.

If any Ethics Officer, Director of Inspections and Reports or HCO Area Secretary cannot obtain cooperation by superiors in carrying out this policy quickly, a report must be handed to the LRH Communicator directly, with a copy sent to the Inspector General Network via Flag.

The LRH Comm must act swiftly and effectively to handle the matter with proper justice action, reporting actions taken and results on LRH Communicator Network lines to LRH Comm International, with a copy to the Inspector General Network.

COMPUTER VERIFICATION

The International Network of Computer Organized Management (INCOMM) will be preparing a computerized system to verify that this policy is in force in every organization, and to call for HCO ethics action where it is found to be out.

With STANDARD ADMIN known and conscientiously in use on every post, the game is ours.

Modifies: HCO PL 9 May 74 PROD–ORG, ESTO AND OLDER SYSTEMS RECONCILED

I've just realized that the Esto and the prod–org system, both of which were successful in their day, have been totally dropped. One executive apparently had a confusion on the two systems and could not reconcile them and so stopped pushing both of them. That is my Why for some org failures.

The prod–org system was enormously successful and has been dropped. The Esto system had limited success and has been dropped. The reason for the failure of the Esto system was earlier isolated — the Supervisors let the Esto trainees fake their way through their study of the subject. They just didn't study the subject and then went around running into walls. This was true even though they were given heavy intensive training on it. They didn't do the training.
