There are many trends promotion and ad copy can take. One of them is dignified, hard-hitting and dramatic. Another is warm, human and truthful. Another, the kind we don't need, is pointless or banal. It specializes in words like "exciting" and "don't miss" which are clichés (worn-out, overworked, hackneyed phrases) and would attract no attention and get you no customers.

The approach to promo and copywriting, whatever the mood or trend it takes, should be fresh and truthful. Insincere, overdone or stereotyped advertising will never sell or bring anybody into anything.

It is possible to do promotion and write copy that is alive and interesting, that attracts and is in good taste.

PRIMARY MISSION

The primary mission of any piece of promo is to create want and sell the item. When one goes to the trouble and expense of putting an ad together, it has to accomplish its purpose. If you're getting up an ad for a book, the purpose is to create a want for the book and sell the book. If you're getting up an ad on a service, the purpose is to create want for the service and sell the service.

The question one asks himself is: "What ad would accomplish this purpose?" and "How am I going to convince this audience that they ought to . . .?"

You dig into your surveys and you find what people want and expect of the item. You yourself must have reality on the product and the worth of the product, and you must also have a reality on your audience if you're going to reach that audience and communicate to them in your copy.

This comes under the heading of "homework."

HOMEWORK

By "homework" is meant all the necessary preliminary or preparatory work done, all the relevant facts dug up, all the data needed that will enable one to get a product out.

In copywriting it would mean getting fully familiar with the product or service one was promoting, knowing all about it. How is it produced? What does it do? Why is it valuable? What results can one expect from it?

Wherever possible the copywriter would have personal experience with the product or service himself to be able to promote and sell it honestly. He would make it his business to find out about the experience of others with it, delve into results produced, success stories, wins, achievements. He'd *know* the product or service and he'd be able to turn out copy that shone with reality and conviction.

And he would make it his business to know his audience. Who is the product for? Who is this public? Has this particular public been surveyed? Were the survey questions correct? What does the survey show this public wants? What do they expect from such an item? What "buttons" has this survey turned up?

When the homework has been correctly done, you know the product and you know your public and you can produce a piece of promo that will bring the two together.

You use your knowledge of the product, you use the survey buttons, you use audience viewpoint and you use positioning to attract and interest and get the message across.

COPY AND POSITIONING

There has been some think in the past that when positioning is done it is then put at the beginning of the promo piece and after that one pays no attention to it. This is a misuse of positioning. It can ruin the impact of your ad; it can disperse the reader.

Everything streams out from the positioning. If one has positioned something against an airplane, then the rest of the copy would be in terms of flight. It would be inherent in the way one used his words. A new item, a can opener, would take off from the drawer and dive effectively at a can. It would also give your hand a smooth ride. This is known as frame of reference. The vocabulary one uses is all inside a frame of reference. Positioning gives you a frame of reference. So you write your copy out of that frame of reference and you plan your promo piece around that frame of reference, and you keep it consistent.

Impact depends mainly upon consistency and staying on the same subject without departure from the frame of reference.

A good copywriter will make the most of positioning to enhance his copy and make it all of a piece with the whole of the ad.

ASSUMING AUDIENCE VIEWPOINT

A common fault in writing ad copy or other material, both in marketing and other areas, is an inability to assume the viewpoint of the reader and get the idea of what impression the reader may have when he reads the ad. An ad must be written from the viewpoint of the public that is going to read it.

The actual trick of writing that wins is to be able to put oneself in the valence of the person who will read it. What kind of public is that? Who is this person? Get a reality on your reader, and then, just like an actor, you assume that beingness and read your copy back. An experienced actor can flip into a beingness in about 125th of a second and flip out of it again. So just slide into such a beingness and read your copy, and you will see what I'm talking about.

It is a skill in writing to be able to read one's copy newly as though one has never heard of it before, from the beingness of the reader. It is something one should acquire.

MAINTAINING VIEWPOINT

If the writer doesn't have a firm viewpoint from the beginning and hold that viewpoint throughout the copy, his ad will lack impact. Further, it will disperse his audience. If he switches viewpoints within the ad, if he writes from the viewpoint of the producer one moment and moves in from the viewpoint of the consumer in the next paragraph, his copy is going to be confusing and he'll lose the reader.

One can't have two different approaches to the same subject in one piece of literature.

Similarly, if he has no audience viewpoint or has difficulty assuming the viewpoint of a reader, his ad will fall that much short of really communicating.

WHAT THE PUBLIC ASKS OF AN AD

In an ad or flier, you don't try to enforce understanding on the reader. That violates come-on. And it's not even what the public wants. An ad does not have to teach anything, it merely has to create want. And when the want is created, you must, must, must tell the reader where he can get it. You never leave a mystery as to where someone can get the product or the service.

Ad copy can defeat its own purpose (to create want and *sell something*) if it doesn't include the seven points of an ad as listed in HCO PL 10 Feb. 65, AD AND BOOK POLICIES.

That list contains the questions a public person actually asks himself or asks of an ad or a flier. What is this service? How valuable is it? What does it do? How easy would it be for me to do it? How much does it cost? How do I get it? Where?

A good copywriter carries the reader, his interest increasing, right on through the final question. Where this is missing you have a writer who doesn't have the audience viewpoint. He may even create a want but then leaves his audience dangling. Where it is handled and handled well by a good copywriter, you have an ad that sells.

HARD SELL

It is necessary in writing an ad or a flier to assume that the person is going to sign up right now. You tell him that he is going to sign up right now and he is going to take it right now. That is the inference. One does not describe something, one commands something. You will find that a lot of people are in a more or less hypnotic daze in

their aberrated state, and they respond to direct commands in literature and ads. If one does not understand this, and if he doesn't *know* that Dianetics and Scientology are the most valuable service on the planet, he will not be able to understand hard sell or be able to write good copy.

So realize that you're not offering cars or life insurance or jewelry or stocks or bonds or houses or any of the transitory and impermanent things which are based on things not surviving or on things that are in fact being destroyed. You're offering a service that's going to rehabilitate the thetan and that is *lasting*.

Hard sell means insistence that people buy. It means caring about the person and not being reasonable about stops or barriers but caring enough to get him through the stops or barriers to get the service that's going to rehabilitate him.

That is the sole reason for our use of surveys and promotion and marketing in the first place.

When that one fact becomes real, it all falls into place and it should be a short step then for a copywriter to produce an ad that attracts, interests, creates want and *sells* Scientology products and services.

ADS AND COPYWRITING

Refs:
Marketing Series PLs
PR Series PLs

Ad copy has got to carry a message. It is a communication.

Some photographers never find out that a photograph is a communication. Some artists never find out that art is a communication. And that is also true of some copywriters.

SPLIT–SECOND TIMING

An ad is not textual information. It is a communication. But it has to be a very fast communication because people won't look at it very long. It has to be able to deliver its message in about a quarter of a second. That's how long it takes somebody to go through the reflex of throwing the piece away.

You could actually go around with a stopwatch and time how long it takes for a person to see if he is going to throw something away or not. It is that span of time that you have in order to absorb the message.

The actual test of a piece of ad copy is: WILL IT REGISTER IN THE INSTANT IT TAKES THE INDIVIDUAL TO PICK IT UP AND DECIDE HE IS GOING TO THROW IT AWAY?

If it communicates in that split instant of time he won't throw it away. That is the test of an ad or a flier.

At each point a person would throw a promo piece away, he must be stopped. You have to figure out the cycle by which he would throw something away and then you can write the ad copy. You have to figure out the points of stop when a person is going to discard this thing and catch him on each one of them.

ADS AND THE COMM CYCLE: DIRECTING THE PUBLIC

You must recognize that the public has to be able to send for something or be able to communicate easily or they don't buy the item. You have to direct the public. An ad or flier must have something for them to do. It must give them somewhere to go, or someone to write to, or someone to call or contact. You first direct them. Then make it easy for them to respond. That's part of the comm cycle.

LOOKING AT MADISON AVENUE

The beautiful artwork and gorgeous stuff you see in magazines is Madison Avenue's effort to keep people from throwing the piece away because it is aesthetic. But it doesn't communicate.

I've looked through a few magazines trying in vain to find out what to order and where to order it from. I had the wildest time and finally found in one magazine they had enclosed a card. But it wasn't actually a card, it was a piece of a card that had to be cut off another card. It wasn't recognizable as a card so I didn't recognize it as something you could use to send away for something. It just didn't register as a card, so there was no simple way to send away for the item.

Here's an example of an ad that doesn't communicate. It's an isolated object, beautifully photographed, sitting out in the middle of space. Then underneath it all they say they've just won an award for something or other. But what's the ad about? It doesn't say. The message isn't there. It doesn't communicate.

Here's another: It's actually supposed to be a cigarette ad but it shows somebody getting dragged on a sled through the snow. It's obvious what they're selling — they're selling snow!

Most of the ads in the better magazines aren't ads at all, they're just assertions about a product. You will find that hardly any of them are ads that bring about exchange.

If this is the best of Madison Avenue, they don't know the basics of advertising.

If our promo people are looking at or studying that kind of ad all the time they won't be able to write good ads themselves. Because these aren't good ads. They don't communicate.

SURVEYS AND COMMUNICATION

In magazines you have something on the order of half a million dollars' worth of advertising or more. It has pretty poor impact.

It is very outpointy for grown men to be spending this much trying to trickily capture somebody's attention. They get so involved in the trickery of it that they don't communicate what they want, which is: "We want you to buy this product."

Advertising must represent something that people want which they are willing to exchange something for. The ad has to tell them what it is.

If you have a surveyed message, it has got to offer something. Advertising people, with all their flossiness, all of the color and everything else, aren't *communicating*.

Some ads use mainly only a symbol or a hallmark and attempt to make that into a communication. But you can't take a symbol or a hallmark and make it into a communication. They are just decorations. That doesn't make an ad.

You have got to get the communication that matches the survey. But promo people have found a new way of avoiding a survey. They just put it all down in the text, so the communication doesn't match the survey.

I realize that in school they teach you that you must be original. But communication is duplication. You do a survey, the public feeds you a button, so you just feed it back to the public. That's duplication. And it works. Don't make the mistake, in writing ads or copy or promotion, of thinking that you have to do something else besides feed the surveyed button back to the public.

CONCLUSION

Actually, in advertising you haven't got any competition at all.

So why is it that some promo people don't write good ads? Because the ads they see all the time aren't good ads. That's the Why!

The handling is to write good ads!

With the survey and promotion tech we have, and the tech we have on communication, there's absolutely no excuse whatsoever not to produce a good ad — one that communicates!

HCO POLICY LETTER OF 18 OCTOBER 1979R
REVISED 14 SEPTEMBER 1988

REMIMEO

MARKETING SERIES 14
VIEWPOINT

Before successfully doing or okaying copy or materials for marketing purposes, one must learn the skill of assuming the viewpoint of the eventual reader or public who will be expected to react to it.

The essence of marketing is to create want and sell services or products. The only reason one writes copy or prints fliers or handouts, handbills or posters is just that.

Any pictorial or written material is done or written for the sole purpose of being viewed by the eventual consuming public.

To execute or authorize material which does not bring about the basic purpose of marketing is of course extravagant. It may even be destructive. It costs money to print and distribute material. So material which does not bring about the purpose of marketing in the public for which it is intended is a waste of money and time.

Further than that, unless one learns to assume the viewpoint of the eventual viewer of the copy, one can make quite destructive mistakes which, in addition to losses and waste in printing, actually destroy income for the organization by preventing people from wanting or trying to acquire the products or services.

One must learn to shift from the viewpoint of a copywriter or layout person to the beingness of the eventual viewer. In this way, one can estimate, quite accurately, the impression that will be made by the pictures and copy when they are released to that public.

A thetan is quite capable of momentarily shifting his identity to another identity and getting an idea of the impressions or ideas that will occur to the identity shifted to. This skill is easily acquired. In a simpler sense, let us say one is writing a letter to Aunt Mamie. One can go on and on and write the letter from the viewpoint of self, which in this case, let us say, is Joe. And the letter can be sent off and totally bomb out because Joe had not the least concept of how Aunt Mamie would view his letter to her. He may be later dismayed to find out that Aunt Mamie now believes that he has taken to drink. Actually, all he put in the letter was that he had attended a lot of parties lately. Now, you could say that he would have to have an intimate idea of the character of Aunt Mamie before he could assume her viewpoint. But the truth of the matter is, Aunt Mamie is just a garden-variety, unmarried, middle-aged person who is quite critical of the gay side of life. It isn't vital to know much about the character of Aunt Mamie in order to assume her viewpoint, but it helps. Joe is not writing this letter with the tools

of surveys but he knows from family discussions that Aunt Mamie is a fairly strait-laced person. What he failed to do is read his letter back from the viewpoint of Aunt Mamie. Had he done this, he would have seen that his glowing descriptions of parties he was going to lately and having a good time at would have registered an entirely incorrect impression that he had entered upon a career of debauchery.

So what impressions do people get when they read copy or see posters or are exposed to ads? They get the impressions from their own viewpoint, of course. These people, by and large, do not exercise the tech of assuming the viewpoint of the copywriter. That is not part of the requisite of watching TV or looking at billboards. It is the responsibility of the person conceiving, planning or executing or approving such copy or pictures to assume the audience viewpoint.

In this, one is helped by surveys. One has some idea of what his audience likes or doesn't like. The survey will permit him to get into agreement more quickly so as to get his message across. But a survey is not a substitute for assuming the audience viewpoint.

One can take a glowing, marvelous, beautiful, carefully executed piece of copy, design a marvelous, glowing, beautiful flier and then leave in it something which would be viewed totally incorrectly from the audience viewpoint. When the flier is issued, if it is not planned and done with the audience viewpoint in mind, don't be surprised if there is a sudden crash of stats when it's issued. The audience might get an entirely wrong impression out of it.

Let us give a case in point. Flag acquired new quarters as an addition to their already extensive quarters. Somebody wrote a poster and sent it through for approval and it came all the way along the line without anyone noticing that, when viewed from the audience viewpoint, it definitely stated that Flag had moved. This would have caused considerable consternation. But Flag hadn't moved. The message was that they were getting so much business that they had had to acquire new property quite in addition to their existing property and that they now were running an annex. And people also would have wondered, "Is this 15 miles away from the service center?" and had to be told that it wasn't. But the person who ordered it, planned it, those who okayed and authorized it, all missed the point that that poster all by itself could have cost Flag a half a million dollars or more in lost business and could have started a black PR campaign of "See? They got chased out." And all of this because nobody anywhere along the line assumed the viewpoint of the audience and looked at the poster with a brand-new, fresh eye to see what it actually was saying. Now, it didn't say anything destructive. It simply announced a new resort hotel, but it omitted to say that Flag was still there. It also omitted, in boldface, where it was located. This new resort hotel might have been conceived to have been in North Africa.

Another example could be copy which said that the Pro TR Course was now being offered to Class IV Auditors, which would mean that you would have had to have done the Class IV Course in order to do the Pro TR Course.

One has to be aware of what impression the consuming public is going to get from any ad copy, picture, offering of any kind whatsoever.

There is more to it than just assuming the viewpoint. One has to assume the viewpoint as though he knows nothing whatsoever about the copy. One has to

unknow everything he knows about the copy and assume the viewpoint without knowing anything about the copy and then look at it. It is, as I say, a skill. This skill is possessed by any writer worthy of the name. Actually, a trained writer can read one of his own stories from the viewpoint of a future reader without knowing anything that is going to be said in the next two words. Then he can get an estimate of exactly what the reader will think or see. Not only that, a well-trained writer can rewrite the whole thing and then turn around and not know what it was in the first place and what it was in the rewritten state and read it all over again, totally from the viewpoint of a future audience as though he knew nothing about it. An excellent composer can also listen to his own compositions as though he knew nothing about them and from the viewpoint of the eventual listening audience.

There is another aspect of this which is of interest. A lot of people who wish they could write stories or music or ad copy or do some creative work of this character are so solidly audience that they can never assume the viewpoint of the originating professional. In other words, they're too much audience in the first place to assume the creative role. This shows up when you ask such a person what about a piece of music. He answers you with an idiot answer from a professional viewpoint, "I like it." To a professional, that is an idiot answer. An audience is no more articulate about art forms or its technique than, "I like it. I don't like it." Really educated.

So for some who are trying to write marketing pieces or design or present or authorize them, one is already in an audience viewpoint and has never assumed the professional viewpoint in planning, writing or executing or approving. This shows up particularly on an approval line where the person on the approval line cannot say what is wrong with the piece or what has to be corrected about it but only can say, "I didn't like it." This is not very helpful.

So there are probably three stages one has to go through. One is to uneducate oneself as an audience, then take the viewpoint of a professional and do his job, and then reassume the viewpoint of an audience to see what they will think about it or like or not like about it. And then one has to be enough of a technician or creative professional to fix it up so that it will be accepted or liked.

What we're examining here is simply the facility to shift from one viewpoint to another. It is also the facility to see something newly.

Unless this is mastered, people on marketing and promotional lines can actually now and then cause a catastrophe.

There are two ways a catastrophe can be caused in marketing. The first is to not write anything at all and leave something unmarketed and unpromoted. The second is to market it or promote it in such a way that the marketing is destructive of the offering.

Both of these are a matter of failure to assume a viewpoint. The person who isn't writing up or marketing anything at all has not assumed the viewpoint of a professional. A professional marketing or copy or advertising man who would sit around without marketing anything would be so ashamed of himself he probably couldn't even look at himself in a mirror. He would cringe. He would think of himself as an incompetent boob. Because he wasn't producing anything, his morale would be in the basement. He

would have nothing to be proud of. If he assumed the viewpoint of a professional and found he wasn't doing anything, he'd get busy. He'd learn the tools of his trade and start batting it out.

The second viewpoint, that of the eventual public for whom the piece is intended, has to be assumable at every step. Only then can one achieve marketing items that actually do create want in that exact public for which they are intended and sell products and services.

One can practice this. Just walk around for an hour or two being Joe the ad copywriter and think what he would think and do what he would do. And then open some magazines or walk through some stores and, for a couple of hours, just be a middle-class public and think all the things about everything that is seen that that public would think and see. And then go through the same operation as a downstat bum and think and see all the things that a downstat bum would see. And then go around as Mr. Gotbucks and see all these things or even new and different things as Mr. Gotbucks would see them.

One can keep up such actions until one actually can do it in the flash of a second. It's actually quite fun. It gives one a brand-new world. In fact, one can have a lot of new worlds — one for every public he assumes the viewpoint of. You would be utterly amazed. The ability to do this is quite valuable. In fact, it is the difference between success and failure in marketing.

SURVEY BUTTONS ARE NOT THE MESSAGE

Refs:

HCO PL	2 Sept. 79	Marketing Series 4 SURVEYS ARE THE KEY TO STATS
HCO PL	7 Aug. 72R Rev. 9.8.72	PR Series 17 PR AND CAUSATION

Book: *Scientology: The Fundamentals of Thought,* Chapter Five: "The ARC Triangle"

The difference between survey buttons and the message in a promo piece must be crystal clear to those working in promotion and marketing.

The first thing to understand is that they are NOT the same thing.

The *message* is the communication, the thought, the significance you want to get across to an audience or public.

A *button* is what is used to get the public's agreement to hear the message.

Too often promo and marketing people seem to get all tied up with the use of buttons and thus they never put any message in the promo piece. But the message is the whole reason for the promo piece in the first place!

Surveys can appear to not work very well when survey buttons and only survey buttons are used, as the result is messageless promo.

A survey is done so that you elicit response and agreement. But you get response because you've elicited agreement. You elicit agreement by using the right button. The button is the R-factor. It's how you establish a reality with an audience.

To do a proper survey and to then use its results effectively requires an understanding of the purpose of surveys, and of ARC and the ARC triangle. It requires an understanding of what reality is.

One uses the ARC triangle in conducting a survey initially and, following that, one applies the ARC triangle in putting the survey results to use.

It goes like this: One *communicates* to an audience (via a survey) with *affinity* to find out what the *reality* of that audience is. Reality is agreement as to what is. The reason you do a survey is to find out what that audience will agree with.

One then approaches the public with that *reality* in a promo piece to get the public's agreement to hear the message, the *communication,* in the promo. And thus one raises the public's *affinity* for the item one is promoting.

That is the simplicity of it. But it will only be simple to the person who understands the ARC triangle. It is basic Scientology data we are using here. By improving one corner of the ARC triangle one improves the other two corners. The most important of these three related points, ARC, is communication. But without reality or some agreement, communication will not reach and affinity will be absent.

Thus surveys are done to get agreement. Dispel the idea that surveys are done for any other purpose. They're done to establish agreement with an audience.

In a survey, you question people to get their opinion on something — an idea, a product, an aspect of life, or any other subject. A *button* is the primary datum you get from this action. It is the answer given the most number of times to your survey question.

You ask ten or ten hundred people what they would most want or expect of an automobile tire and seven or seven hundred of them tell you "durability." That's the button. That's the reality, the point of agreement on automobile tires among that public. So you use that button with that public and you've established reality, you've got agreement and they will then listen to what you have to say about automobile tires.

Buttons have their use but we are not so much interested in them as we are in MESSAGE. The message is the real essence of any promo piece. Buttons are just the grease to use to get your message through.

It would be a good idea for anyone with any confusion on these points to work them out in clay. One should be able to make a clear distinction between these two terms, button and message, and to view them in the correct relationship.

Once that distinction is made, it will be the end of messageless promo.

In its place we'll have promo that uses a button to strike just the right note of agreement and establish a reality with the audience and then, without fail, communicates, really DELIVERS THE MESSAGE, to what is now a receptive audience.

That's the secret of promo that gets response.

The first thing about it to understand is that SURVEY BUTTONS ARE NOT THE MESSAGE.

PROPORTIONATE MARKETING

In marketing one must always push *harder* toward the largest bulk of future business. It is peculiar to Scientology marketing that you have to push hardest at the lowest levels to make the upper levels come off.

This gives you a sort of scale that tells you the target proportion of finance and effort to allocate in marketing.

For Scientology and types of orgs, it goes like this:

Heaviest: Raw public not yet into Scientology.

Next heaviest: First services they will take.

Next heaviest: Into HGCs and Academies.

Next heaviest: To SHs.

Next heaviest: To AOs.

Next heaviest: On to Flag.

You can also draw a scale of this for individual business or orgs of any class.

It can be done simply by how much money and personnel and pieces are to be devoted to each point of the scale.

Failure to do this gives one faltering stats as the flow is not being proportionally marketed. Done correctly one gets a very heavy and quite even flow up the Grade Chart. Doing it unevenly one gets booms, depressions and instances of cannibalizing.

HOW TO DO SURVEYS

Refs:

HCO PL	2 June 71R Rev. 28.7.83	PR Series 10 BREAKTHROUGH, PR AND PRODUCTION, TONE SCALE SURVEYS
HCO PL	15 Dec. 2000	PR Series 13 GOODWILL PROMOTION
HCO PL	7 Jan. 72R II Rev. 10.9.88	PR Series 15 Marketing Series 21 CREATING SURVEY QUESTIONS

This hat write-up by a Public Relations Officer, written at LRH's request, contains valuable data on how to do surveys.

SURVEY means "a careful examination of something as a whole and in detail."

The word "survey" as used in public relations and marketing terminology means to carefully examine public opinion with regard to an idea, a product, an aspect of life, or any other subject. By examining in detail (person to person surveying) one can arrive at a whole view of public opinion on a subject by tabulating highest percentage of popular response.

The purpose of this hat write-up is to describe the two most important aspects of surveying so that 100 percent successful results can be obtained every time. Though there are many different *types* of surveys, the method used is the same. The two components of surveying are:

1. The mechanics of doing the survey itself,

2. The beingness of the surveyor.

THE MECHANICS

The actions involved in doing a survey are simple and few. The first thing you do is establish the questions you are going to ask the public to find out what is wanted and needed, popular or unpopular or whatever. Creating the survey questions is a technology in itself and is laid out in the Marketing Series HCO PLs covering the different types of surveys which can be done.

After the questions are established they are mimeoed on survey forms or typed on a piece of plain paper for the surveyor to refer to. If one were doing a survey in a city where large numbers of people were interviewed, the survey forms might be most practical. However, all that is needed for most surveys is a clipboard with plenty of plain paper and several ballpoint pens. The survey question page is then placed on top of the pad of paper and flipped back while taking notes of the interview.

The only materials needed for a survey are several ballpoint pens (so running out of ink in the middle of the survey doesn't cause interruption), plenty of paper and a clipboard.

To begin a survey, you simply walk up to a person and in a friendly manner introduce yourself (if a stranger) and ask to survey them. If additional R-factor is requested, it is given and then the survey is begun.

Ask the person the first question, flip back the question page and take down the answer. Be sure to number the answers corresponding to the question number being asked. You needn't write down every word as the person speaks to you but get the most important points. You will find, after practice surveying, you can write almost everything down.

Also remember to note down the person's tone level reaction to each question.

After the person has answered the first question, thank him or her with good TRs to acknowledge that comm cycle and go to the next question. All you have to do is BE THERE, be INTERESTED in what the person is saying, and take down his answers.

At the end of the survey thank the person very much. The person will most likely be thanking you at this point as people LOVE to be asked their opinion of things, and having another terminal grant beingness to this and listen attentively is a rare and valuable experience to many.

Then go to the next person and repeat the same procedure. This is all there is to the mechanical action of surveying.

TABULATION OF THE SURVEY

The final tabulation of a survey is very simple. The following data was written and compiled while conducting an ethnic survey.

1. Count all the surveys.

2. Establish various categories of answers for each question by listing answers briefly as you go through the surveys.

3. Soon you will be able to merely mark a slant by each category, the slant meaning one more answer of a similar nature.

4. Then you total the answers given for a particular category of answer. Let's say you had 1,500 answers of a similar nature to one question and your total number of surveys is 2,500. This means 60 percent gave that similar type of answer (1,500/2,500).

5. You then list each question and under that question list the categories of answers and the percentage from the highest to the lowest.

6. The only mistake you can make is not to realize the similarity of answers and so have a great diversity of categories.

BEINGNESS OF THE SURVEYOR

Just as an auditor has to have his TRs in, has to abide by the Auditor's Code and BE there as a terminal for the pc to communicate to, so must a surveyor.

Outward appearance of the surveyor must be clean, tidy and the dress ethnically acceptable for whichever public is being surveyed.

A successful surveyor *must* have a high affinity for other beings—friends or complete strangers. A friendly NATURAL approach to people is required. A sincere smile and good TRs is the door opener. And CONFRONT. You have to reach out to complete strangers and get them interested in themselves enough to let you know what their reality is so you can help them.

This is completely natural to any trained Scientologist anyway. A Scientologist knows the formula of communication, knows to grant beingness to another, and that ARC = Understanding. With these factors and the basic TRs in, the person being interviewed will feel relaxed about communicating his ideas and realities.

This is *all* there is to surveying, and you will be amazed with the results attained!

PITFALLS

Listed below are some DON'TS just to make sure possible pitfalls are known about and avoided.

1. Don't dress in an unclean or unethnic way. That would automatically make you unwelcome.

2. Don't be short of materials and have to fumble for a pen or survey form. The person might walk off from you in the meantime if you're doing a survey on the street.

3. Don't be backward or shy. This would make you look unconfident of your own product or purpose for being there.

4. Don't overwhelm with forceful, overzealous approach or comm.

5. Don't be overserious, or on the other hand giddy. Anything phony is absolutely detrimental.

6. Don't do socially unacceptable practices like chewing gum loudly, biting your fingernails or any one of dozens of other little annoyances.

7. Don't be in too much of a hurry. The person must feel you CARE about what he feels and thinks.

8. Don't be propitiative or the other extreme, condescending. Be YOURSELF, in valence and confident.

9. Don't cut a person's comm or be gruff in any way.

10. Don't act supersweet either. Be *friendly* and BUSINESSLIKE.

As a matter of interest, there is a certain PR textbook which describes a method of surveying called "depth interview." It is said that this method takes highly trained interviewers and skilled analysts.

Now these fellows think a successful surveyor needs *years* of training of some kind or another.

But because you have the technology to UNDERSTAND the basics of the mind, yourself and other people, you accomplish what seems *miraculous* by any other standards.

The miracles of survey results are easily obtainable and *valuable*. But don't be surprised if other people still think you're a genius.

HCO PL	2 June 71R Rev. 28.7.83	PR Series 10 BREAKTHROUGH, PR AND PRODUCTION, TONE SCALE SURVEYS
HCO PL	5 Dec. 71R Rev. 10.9.88	PR Series 12 Marketing Series 20 HOW TO DO SURVEYS
Tape:	7101C18 FEBC Tape 2	"PR Becomes a Subject"

The following policy letter was written by an experienced surveyor. It is a brilliant issue which puts PR survey tech right on the line, and is full of examples of actual surveys both for production internal and sales external.

The purpose of this policy letter is to fully document *how* survey questions to evoke human emotion and reaction are derived. Included are examples of actual surveys done, showing the SITUATION, the SURVEY QUESTIONS, the SURVEY RESULTS and resulting PR program to handle. A good many of the surveys were done within the org to find human emotion and reaction barriers to production amongst staff members. The examples are given in chronological order so that one may see how the survey and PR technology was evolved by Ron during the years of 1970 and 1971.

SURVEY EXAMPLE 1

SITUATION:

Due to various causes, morale is not what it should be aboard.

The full intention of Command is to have things running smoothly and safely for all hands.

Major Target:

To interview each individual crew member and obtain his honest state of opinion regarding his post and issues.

Vital Targets:

1. Not to interrupt the work of or worsen the situation.
2. To improve matters by survey.
3. To obtain data so that a new sensible reality can be established by PR programs.

Primary Targets:

1. Provide yourself with paper, clipboard and ballpoints.
2. Work at this at optimum periods.

Operating Targets:

1. To approach persons individually. Draw them out of groups.
2. Just listen and prompt and question. Don't interrupt or interject. Don't comment on what they say to them.
3. Make useful, not necessarily voluminous, notes.
4. Cover each question.
5. Excerpt results.
6. Design programs to handle what is found.

QUESTIONS AND RESULTS:

Survey R-factor — The Commodore wants your opinion on certain matters to help handle them.

1. What do you feel command intention really is?

   33% Clear the planet.

   31% Something planned from Source or high org executive to be carried out by staff members.

   16% Everyone doing his job and getting the show on the road.

   7% Well-trained crew in tech, policy and seamanship.

   5% Provide safe environment so LRH can get on with his research.

   5% Successful management of outer orgs.

   3% Miscellaneous.

2. What do you feel you should know more about to get your job done?

   30% Tech, policy and seamanship.

   22% OEC policy.

   20% Specifics relating to hat.

   14% Nothing in particular.

   9% More briefing re schedules and Flag Org actions with outer orgs.

   5% Scientology tech.

3. What do you really need to get your job done?

   32% Nothing in particular.

   20% More training.

   17% Specifics pertaining to hats.

   13% More time (without arbitraries and distractions).

   8% More personnel.

   7% To be left alone to get on with it.

   3% More briefing of ship schedules for planning work cycles.

4. What would you like to see us doing?

   31% Expanding Scientology around the planet.

   21% Group cooperation and coordination.

   16% Crew getting trained and OT.

   14% What we are doing.

   13% Moving more and to different ports.

   3% Getting stats up in outer orgs.

   2% Miscellaneous.

5. What changes should occur?

   30% What we are doing is good.

   24% More expansion in the field for more flow of recruits to Flag.

   20% More trained personnel in tech and policy.

   13% More briefing of the crew on Flag Org operations.

   7% Specifics relating to post.

   4% No opinion.

   2% Miscellaneous.

The following is an item from the Flag Orders of the Day with regard to the tabulated survey, written by LRH:

24 April 1970

"SURVEY

"The survey of the ship's company purposes and opinions has been completed and all hands are thanked for their contribution to it.

"Results will be issued in due course.

"There is an astonishing similarity in the answers which demonstrates we are all of similar opinion on vital questions.

"It discloses there is far less dissidence in the company than might have been supposed.

"We are a true group.

"The survey will be of great use in future planning.

LRH, COMMODORE"

SURVEY EXAMPLE 2

SITUATION:

"INJURY SURVEY

"Please interview the 5 people recently injured to discover:

"What's going on?

"I've never had any injured people like this.

"All in this port.

"See if you can 2-way comm it and get some common denominator.

Love,
Ron"

RESULTS:

The common denominator found followed this pattern:

1. EXTERIOR at time of injury.
2. Attention OFF the body.
3. Physical contest being engaged in.
4. NO PAIN involved (though 2 needed stitches!).
5. NO MISEMOTION at having injury, mild interest only.
6. A feeling of POWERFULNESS prior to injury.

Following is an item entered in the next day's Orders of the Day by LRH:

4 June 1970

"INJURIES

"Those recently injured were not PTS. Survey showed they were exterior and feeling powerful and didn't watch where they were sending the body.

LRH, COMMODORE"

SURVEY EXAMPLE 3

SITUATION:

A cross-section survey is needed on *what we are thought to be aiming for*.

QUESTIONS AND RESULTS:

1. What is your conception of what we are doing currently?

   Getting the ship's company trained up in specialist seamanship and then admin functions.

   Getting Scientology tech fully back in use and orgs running smoothly.

2. What is your idea of the ideal we are working towards?

   Immediately — smooth running Sea Org and Scientology networks.

   Ultimately — a clear and sane planet.

3. What is being done to achieve it?

   Strengthening ourselves internally while keeping our external lines operating.

4. Do you feel we are making it?

   Yes!

5. Does anything need to be changed so we can make it faster?

   More training.

   More processing.

   Any counter-intention removed.

   More promotion.

   Faster and wider acceptance of Scientology.

6. When do you think we will make it?

Current ship programs	2–6 months.
Scientology org programs	1–2 years.
Planetary Scientology influence	2–5 years.
Real planetary control	10–20 years.

An LRH Orders of the Day item of the next day comments on the survey results:

24 June 1970

"SURVEY

"The cross-section survey just done regarding what we are doing showed 'very good results, and the answers were quite consistent.'

"We sure have group agreement on what we are doing!

"There were very good indicators on this survey. There was an overall feeling of confidence among all those surveyed (a 28-person cross section of the ship).

"There was confidence that we are progressing on a steady and positive uptrend and that the next few years will show monumental victories in our favor.

LRH, COMMODORE"

BREAKTHROUGH

During the month of January 1971 LRH made a major advance in the subject of PR and surveying. That is — PR surveying in combination with the Tone Scale tech. He discovered the basic laws of PR as contained in HCO PL 2 June 71R, PR Series 10, BREAKTHROUGH, PR AND PRODUCTION, TONE SCALE SURVEYS and LRH Tape 7101C18, FEBC Tape 2, "PR Becomes a Subject."

Thus, ONE SURVEYS TO FIND THE REALITY OF A PERSON *ABOUT* SOMETHING.

The person's tone level about this subject is noted. This tone level establishes the affinity, or lack of, the person has about the subject. Emotion is A (affinity). A is the Tone Scale. (NOTE: The person's tone level *toward* the surveyor and *about* the subject may be two entirely different tone bands so don't get them confused. The person may be in Enthusiasm toward the surveyor but Antagonism about the subject being surveyed. It is the latter tone level which is of value. People don't just have a tone. They have a tone *toward* something.)

You survey to determine the R (reality) of each person so as to raise the A about the subject through the PR campaign.

You're looking for agreement. This is the key to SALESMANSHIP. To get agreement you come down to the point where the guy will agree with you. You determine the R (reality) they agreed with. Translate this into A (affinity tone). R is monitored by A. You then raise the R one half to one tone band and this establishes the C (comm) level.

The following item by LRH in the Orders of the Day of 25 January 1971 summarizes this:

"PR

"Some more PR data has been developed. The same public varies by continent.

"One tests the tone with R questions, reads the A off the Tone Scale, develops the program at the A half a tone above and uses the R of that tone. R to A, up half, A of that to new R desired. Gives one the program that *communicates,* raises tone.

"A survey of a tone must be a tone *about* something.

"See *Science of Survival*'s Chart of Human Emotion. Read the book. The new and future bible of PR, followed by *8-8008* for the graduate PR expert! Finally came into its own!

LRH, COMMODORE"

On 18 January 1971 Ron made a tape entitled "PR Becomes a Subject," which outlines the basic laws of PR and describes how PR survey questions are derived. An excerpt follows:

"PUBLIC RELATIONS IS FOR THE HANDLING AND CONTROL OF HUMAN EMOTION AND REACTION.

"IT'S A THIRD DYNAMIC TECHNOLOGY.

"How do you get these questions? That's very simple. There's nothing much to this question.

"Three questions. One is the equivalent of BE, one is the equivalent of DO, one is the equivalent of HAVE. BE, DO, HAVE — three questions.

"Above and below it, why, you could have a couple of null questions. You're trying to find out if somebody on the assembly line likes automobiles. He's building them; does he like them? Well, that's an easy one because it's already a human emotion. 'Do you LIKE automobiles?'

"Well, let's find out if he's going to *work* on the assembly line. Let's make it a little bit tougher. Now, we're going to find out 'Are you going to work on the assembly line?'

"All right, we go around and ask, 'Are you going to work on the assembly line?' The guy says 'no' and the next guy says 'yes' and so forth. You're noplace.

"So therefore, you take the questions you want to know on the subject of BE, DO, HAVE, and you encode them into human emotion using the ARC triangle. We don't care whether you put A or R or C after each question. You're going to translate the basic question that you know into human emotion in order to obtain involvement. And you immediately have involvement. So, you get the true answer, don't you?

"But the target of your subject is of course the control of human emotion and reaction. So if that is the case then you would have to have involvement in human emotion and reaction.

"So, how do you put this question together? Let's go right back to battery now. This subject is the control of human emotion and reaction, so therefore the questions of your survey have to be what you want to know transported over into a human emotion and reaction.

"BE: 'Do automobiles exist?' translated once across for an A is 'Do you like automobiles?' Now, you will get then an emotional response which can be plotted.

"Now, why all this? Now you see, I am teaching you this backwards. I'm moving back. Now the penny drops:

"THE PRIMARY BARRIER TO PRODUCTION IS HUMAN EMOTION AND REACTION.

"That's the primary barrier to production. And all at once we know where PR lives. There's its use. Not in getting somebody to 'become a man of extinction by drinking Seagram's whiskey' to aid and assist advertising, which would be a minor use, but actually to sound out the public to which the campaign is addressed so as to handle the human emotion and reaction.

"Now I'll trace it back through the basic laws that we're involved with, then.

"THE PRIMARY BARRIER TO PRODUCTION IS HUMAN EMOTION AND REACTION.

"PUBLIC RELATIONS IS THE TECHNOLOGY OF HANDLING AND CONTROLLING HUMAN EMOTIONS AND REACTION.

"So you have to find out what is the human emotion and reaction, so you get an encoding of the three questions: one BE, one DO, one HAVE; you translate those over into an emotional question by adding the ARC triangle; you plot that; now you get your human emotions in response to these questions; you add them up; you put your program together against the Tone Scale, one half to one band above. You will have a pretty uniformly successful method of reach.

"So, when all seems too grim and you can't seem to get your point across and you can't seem to get your product and it just won't organize that way, then you do have a tool. And that tool is called PR.

"And it has its own technology and we have made a breakthrough in this subject."

EXAMPLE

As an example of this, let's pretend we want to survey HCO. The ED of the org has an idea not a person in HCO is hatted, though a major product of HCO is personnel hatted. In this HCO there may be some counteropinion re getting hats on. The implementation of policy of management is the first line of PR.

We're trying to obtain data to popularize and remove barriers from hatting. It may very well be hatting is the least popular function of HCO.

Developing the Survey Questions:

1. You make a statement of a possible situation. (E.g., it may be hatting is the least popular function of HCO.)

2. You then think up several BLUNT, head-on type questions:

   BE: What is your hat?
   DO: What do you actually do?
   HAVE: What is your product?

3. You then convert those questions so you get a HUMAN ELEMENT. In that way you get an involvement. A PR survey question must *always* contain a "human" or "being" involvement.

   BE: Are you interested in your hat?
   DO: Do your duties align with your own purpose?
   HAVE: Do you consider your product contributes to the group?

A further question encoded could be:

DIRECT: Are you being trained in your hat?

to

ENCODED: Do you find the training you are getting on your hat interesting?

The purpose of this survey would be to obtain data to popularize and remove the barriers from hatting.

RE: PRODUCTION

Validation of accomplishment is garden-variety PR.

One rule about a product officer is he has to *want* the product before he gets it. This is human emotion and reaction.

Thus there is the:

1. ADMIN approach, which the org or product officer uses which is a straight question. (E.g., "What is your hat?")

2. HUMAN (or PR) approach, which is used by the PR man to find basic desires and OPINION. (E.g., "Are you interested in your hat?")

YOU HIT AT THE HEART OF THE "RESISTANCE TO" WHEN YOU GET INTO THE HUMAN INVOLVEMENT.

The key PR datum is of course THE GREATEST BARRIER TO PRODUCTION EFFICIENCY IS HUMAN REACTION.

and

A LOW PRODUCTION AREA IS OUT–MORALE BECAUSE IT IS LOW PRODUCTION.

IF YOU CAN NURSE IT UP TO PRODUCTION, YOU HAVE MORALE.

SURVEY EXAMPLE 4

SITUATION:

A survey needs to be done in Department A to find out who or what keeps the area upset.

DIRECT QUESTIONS

BE: Do you want your job?
DO: Are you doing your job?
HAVE: What is wrong in Dept A area?

ENCODED QUESTIONS

BE: Do you enjoy your post?
DO: Are you having any difficulties on your post?
HAVE: What changes are needed, if any, in the Dept A setup?

RESULTS:

Ten staff out of 17 had good indicators, were willing, having wins and creating their posts.

The other 7 were to varying degrees conservative about their posts, having minor difficulties and upsets.

It was found that unstabilization was coming from external sources to the division, i.e., HCO (1) allowing frequent personnel changes and (2) not ensuring the area was hatted.

HANDLING:

These two factors were gotten in on HCO from an exec level and the Department A area stabilized remarkably.

SURVEY EXAMPLE 5

SITUATION:

An urgent order was given to the Tech Div in an org. It was not done and the situation went unhandled, causing severe overload to staff in the area.

We are looking for an attitude of defiance and one or more attitudes of helpless child.

DIRECT QUESTIONS

1. What hat are you wearing actually, if any?

2. Why didn't you handle your post in this emergency?

3. Are you unwilling to have fast tech lines and stats?

ENCODED QUESTIONS

Affinity Tone	1. Did you like the hat you were assigned?
Affinity Tone	2. What did you feel about the situation?
Affinity Tone	2A. What was unpleasant about it?
Communication Tone	3. How do the present tech lines compare with the early ones we had?

RESULTS:

Various terminals in the area were found to be antagonistic and some apathetic. Others were found to have realized their failure to handle the situation and had taken steps to prevent reoccurrence.

By isolating these factors it was then possible, by keeping a close eye on the area for the next few days, to observe further instances of noncompliance and resistance to handling the area. Additional actions were taken as necessary to hat and to handle confusions and noncompliance.

SURVEY EXAMPLE 6

SITUATION:

HCO needs further data for posting personnel optimumly in two divisions.

QUESTIONS

1. When you need to know how to do something whom do you ask?
2. Who gets the most done?
3. In the div whom do you feel the most secure about?

RESULTS:

The most upstat of the two divisions answered the questions as follows:

Majority Tone 4.0

1. When you need to know how to do something whom do you ask?

   My immediate senior.

   A reference book.

   Figure it out myself.

2. Who gets the most done?

   We all do!

   Our division.

   The same for all of us.

3. In the div whom do you feel the most secure about?

   Our div head!

   All the guys in our division.

   Myself and the rest in our division.

The less upstat, less productive, low morale division answered accordingly:

Majority Tone 2.0

1. When you need to know how to do something whom do you ask?

   Try to find out for myself then ask the div head.

   Look in a book.

2. Who gets the most done?

   Two of the most junior staff in the division named.

3. In the div whom do you feel the most secure about?

   The div head, then the two junior staff members as named in answer 2 (the department heads not mentioned).

This survey confirmed the success of the productive division as having stable leadership from the division head and staff who were enthusiastic about their jobs, had high morale and were continually training on their posts. The division as a unit worked with tremendous team spirit. The downtone, poor production division had an unhappy senior with downtone unstable department heads. There was no team spirit in this division and little if any post training actions. The most stable terminals in this division were two junior staff members who had enthusiasm for doing their posts and who trained in their study time to increase their abilities.

HANDLING:

HCO then knew (regarding the unproductive division) who to look to for future executive material, and who would then bring this division to a high operating standard. And HCO knew what area to concentrate on most heavily with hatting.

Needless to say, nothing was changed in the productive division. As its production increased even higher, it was allotted additional personnel.

SURVEY EXAMPLE 7

SITUATION:

Some staff members' appearance not up to an acceptable standard. Information needed — the majority tone level on the subject of appearance so that a PR program can be formulated and launched at an appropriate tone level to reach the reality of offenders.

ENCODED QUESTIONS

BE: Do you feel good about having a professional-looking appearance?

DO: How would you like to dress for your job?

HAVE: What would be the advantages of the group being sharply uniformed?

RESULTS:

It was found that staff were strongly interested (3.5) in having good appearance. The main outpoint was lack of uniforms available.

So an enthusiastic campaign to coordinate uniforming of the crew was the answer.

SURVEY EXAMPLE 8

SITUATION:

Personal and org premises not as clean as they should be. Attitude and tone level toward cleanliness required so a suitable PR program to upgrade standards can be carried out.

ENCODED QUESTIONS

BE: Do you enjoy being very clean?

DO: Do you find it more difficult to maintain personal cleanliness on a ship than where you have lived ashore?

HAVE: Is the standard of others' cleanliness, personal and living space, acceptable to you?

RESULTS:

A cross-section survey was done and the majority tone level with regard to cleanliness was 2.0–2.5 (Antagonism to Boredom).

Of those interviewed, various justifications were given by those who didn't keep clean, and these people even admitted they were justifications. Some even admitted to pure laziness.

Among those surveyed who *do* keep clean, there was the desire to be clean.

Several "uncleans" invited stricter discipline to keep the standards up.

Therefore what was wanted and needed was more 8-C. The PR program thus derived was firmer HCO enforcement of hygiene and cleanliness. This was a successful campaign with good results.

SURVEY EXAMPLE 9

SITUATION:

Wherewithal — staff members not adequately aware of their responsibility for org viability and income.

Reality and tone level toward this subject need to be established so further action can be taken to educate staff on the subject of org viability.

ENCODED QUESTIONS

BE: How do you feel about the group making its own way?

DO: What can be done to ensure the group has lots of money to work with?

HAVE: When do you think you'll be receiving full bonus awards?

RESULTS:

The average tone level of those surveyed was 3.5 (Strong Interest). There was a high degree of reality and agreement that the group make its own way.

To support this agreement, the recommendations of a recent B of I on the subject of finance were endorsed. This was to place a 6' x 10' graph in HCO reception showing weekly org income. This enabled all staff to see org viability and to feel more at cause over wherewithal by producing on their own posts.

SURVEY EXAMPLE 10

SITUATION:

Ethics — a general attitude and tone level with regard to the subject of ethics desired.

ENCODED QUESTIONS

BE: How do you feel about ethics?

DO: How do *you* use ethics?

HAVE: What is the advantage of working within a group which has an ethics system?

RESULTS:

Majority tone level on the subject of ethics was found to be in the 2.0 (Antagonistic) range. The human emotion and reaction was found to be toward Courts of Ethics being printed in the Orders of the Day. Reading these notices first thing in the morning in the Orders of the Day was driving many of the crew into tone levels of Resentment, Anger and Fear. In addition, the notices themselves were written a tone *below* the average tone of the group re ethics, which was causing a doubly reverse effect.

Therefore, as a PR measure, the Ethics Officer was informed of this and instructed to print Courts of Ethics on HCO Conditions Orders, not in the Orders of the Day. The Ethics Officer was also briefed on the Tone Scale. From then on Ethics Orders were written up in a conservative manner simply stating the facts with no additional HE&R included.

This was a very successful measure and group morale rose on the whole at least one tone level higher than before on the subject of ethics.

SURVEY EXAMPLE 11

SITUATION:

Execs are needed. Those presently on post are not all capable.

The PR survey questions must detect —

BE: Other *Status*—Status as defense. *Been* something else? IS something else?

DO: Other *Involvement*—Involvement in other things or things that don't matter or involvement in contrary actions to a post. Problems would come up.

HAVE: Scene — omitted or false — what does he know about it, how real are his data? *Representation.*

Execs fall into two categories:

A. Those who will assume the status or forward the doingness or enhance the scene toward ideal.

B. Those who defend status, have other involvement and have an omitted or falsified scene.

Category A build things into a smooth prosperous org.

Category B wind up with an omitted or perverted org.

Sample Survey Questions:

1. What would be the most ideal post to have if you had total choice? Or what type of life best suits you?

NAVIGATE
FIRST PAGE
SEARCH
FIND
AGAIN
EXIT
CONTENTS
ORG BOARDS
INDEX

2. What problems or situations would you find easy to handle? Or, what should you be working on? Or, what are you working on?

3. How are things really in your area? Or, what is the org really doing these days?

QUESTIONS USED

STATUS	1. Is there a post you would like to hold sometime in the future for which you feel ideally suited?
INVOLVEMENT	2. Are you having any problems getting done what you are working on now?
REPRESENTATION	3. How is your org presently doing on an overall basis?

RESULTS:

The results of this particular survey showed the tone level of the org execs to be Grief. In addition, at least half the execs surveyed volunteered that they really didn't want to be an exec at all, but would prefer to be in a worker position.

The WHY of the org's down statistics was neglect of implementing LRH policy, EDs and projects in the org on the part of the execs.

Short-range and immediate handling was to post an LRH Comm in the org who forced in compliance to LRH orders and policy. Long-range handling was to move into exec positions junior staff members who were ambitious to hold an exec post competently, and to move off the unwilling execs into junior areas where they could produce well until ready to again resume a more senior position.

SURVEY EXAMPLE 12

SITUATION:

LRH wrote a test statement of the meaning of Scientology.

A survey was done of Scientologists locally to establish popularity of the statement and check for agreements or disagreements.

QUESTION

A direct question was used. "Please read this statement and tell me what you like or dislike about it."

RESULTS:

For the survey, each sentence of the statement was numbered. On the tabulation, the percentage of endorsements of that sentence or suggestions for its improvement were written beside the number of the corresponding sentence.

Several of the words and phrases in the statement were thus changed or rearranged slightly to make the statement totally acceptable. The amended version was then resurveyed and the results confirmed complete endorsement.

SURVEY EXAMPLE 13

SITUATION:

Population survey. The purpose of this survey—to find out the reality and majority tone level of an entire city so that the org could promote and deliver to this reality.

4,800 people in Boston were surveyed in a few days by several org staff members.

QUESTIONS AND RESULTS:

1. What are you trying to achieve in life?

Happiness	32%
Good jobs—careers	10%

2. What worries people most?

Money	24.4%
Other people	15.1%

3. If these things were resolved what would happen?

People would be a lot happier	19%
Better world to live in	15.2%

   Tone Level = PAIN, ANTAGONISM

The following telex was sent to the org by LRH in response to the survey results:

> "9 Dec. 71 Relay C/O USLO Relay C/O Boston ELATED BY SURVEY. FURTHER DATA NEEDED BUT BEAUTIFUL FOR PCs STUDENTS. LOVE = RON"

THE TONE LEVEL OF ALL THE PROMO WRITING AND PRESENTATION WOULD BE CONSERVATISM = 1 TONE ABOVE ANTAGONISM (the level found by survey).

The Boston Org survey is interesting as it shows a cross-sectional reality level of an entire city. Survey results (reality and tone) would vary in different cities, countries and continents. So each org in surveying its own area would create its promo slanted to a slightly different reality, and the Scientology services offered would correspond to what is most wanted and needed by the public.

SPOTTING TONE

After one has mastered the technique of creating survey questions, the only remaining expertise necessary is accurately spotting tone levels.

The PR man's bible is of course *Science of Survival* and the Hubbard Chart of Human Evaluation and the book *Scientology 8-8008*. These materials must be read and thoroughly understood. Additional references which contain invaluable information for surveyors are HCOB 25 Sept. 71RB, TONE SCALE IN FULL; HCOB 26 Oct. 70 II, OBNOSIS AND THE TONE SCALE; LRH Tape 5505C14, "The Tone Scale"; LRH Tape 5212C05, PDC Lecture 17, "The Tone Scale: Moving the Pc Up the Scale" and Technical Training Films EM 2 and EM 2A, *The Tone Scale* and *The Tone Scale Drill Film*. The way to drill yourself on observing and quickly spotting tones is to do the drills called for in Technical Training Film EM 2, *The Tone Scale* and HCOB 26 Oct. 70 II, OBNOSIS AND THE TONE SCALE.

CONCLUSION

As you can see, the technology of PR surveys and the Tone Scale in handling and controlling human emotion and reaction is an incredibly powerful tool.

By putting this technology to use on a personal basis you can literally be in control of your environment on at *least* the first three dynamics. And Scientologists (particularly Scientology staff members) have a monopoly on the entire subject. If there was ever a way to "win friends and influence people," this is it. We as Scientologists are continually jolted by the primitive nature of the general populace around us. So by establishing the local reality and tone we can at least present ourselves and our product in such a way as to be accepted, and then we can bring people up the scale from there.

Gone are the days of hit-and-miss promo, and by-guess-or-by-god public events. We now have the know-how to hit the exact target every time. We now have, thanks to Ron, another beautiful tool for UNDERSTANDING.

		CREATING SURVEY QUESTIONS

There are a few points which anyone doing survey tabulations or using the tabulated results should be aware of:

1. *Percentages*

If the highest percentage button on a survey were 24 percent, that would mean only about a quarter of the people would have any appeal and that cuts your potential market by 75 percent, just by survey. So there is something wrong with the survey. It could be that you were not asking the right questions.

2. *Tone Levels*

Recently, I noted with horror that the tone level reactions of the raw public surveyed show conclusively that the raw public would not even be faintly interested in buying the product offered. You can't sell something to a public that is disinterested, antagonistic and bored. Therefore, there must have been something wildly out with the survey tech or its application in that survey.

3. *Survey Buttons*

Surveys tend to hold good in various parts of the world. For instance, it would be particularly important to find out whether or not buttons found in the United States hold good in England or Europe.

The same public varies by continent. You don't know what the people want and it is probably district by district and area by area. Probably Boston will be happiness and a career and Los Angeles is probably, to increase my artistic temperament. I don't know what it would be — lie in the sun — something. But it is what people consider valuable.

4. *Surveying Too Few People*

One can operate totally, utterly and completely without valid surveys. The surveys done could be too narrow in subject, surveyed on too few people. Nobody would be able to answer the question what people like and what they detest and without this you couldn't sell firewood to Eskimos. One needn't look any further on why the promo isn't pulling in people in mobs.

5. *Out-of-Date Surveys*

The society's thoughts and considerations can change drastically in just one year. If one operates on two-year-old surveys, they could very well be out-of-date.

ETHNIC SURVEYS

(Taken from LRH tape 6910C21, "It's a PRO World.")

Refs:

HCO PL	5 Feb. 69 II	PRO ACTIONS
HCO PL	12 Nov. 69	APPEARANCE AND PRO
HCO PL	11 Dec. 69R I Rev. 16.9.88	APPEARANCES IN PUBLIC DIVS

You are always at risk operating in an area where you do not know the ethnic values. They don't even have a word for this in English which means exactly that.

It's the mores and customs. It's what do people believe. It's what is right and what is wrong. It is the solution of good conduct.

Ethnics — what is:

Wonderful

Good

Bad

Awful

Infinitely valuable

Valuable

Worthwhile

Unacceptable

Not wanted

Hateful

In an area, you have to figure out what they are beating the drum for. This is known as ethnics.

ETHNICS AND CONTROL

Actually, some of this type of work was done for American troops before World War II. They weren't supposed to do this and weren't supposed to do that, in order to

better their relationships with the native population. But that work was simply based on careless, factual or nonfactual surveys.

If you are going to control or govern or have influence upon an area, you have to make ethnic surveys. You have to find out what is most liked and what is next most liked and what is considered bad and what is considered totally evil. When you've got the lists of those things you know the control buttons of the society. Those are the buttons of control. They aren't just a "study."

I get so tired of reading about a psychiatrist stating, "We're studying the . . ." "And we're going to have . . ." "We had a conference the other day and Professor Blotz advanced his new principle that uh — if people were daffy they were quite crazy. And uh — we discussed this for some hours and 'Are newborn babies happy?'" And they don't even get a midwife in to ask her. That isn't how you do ethnic surveys.

You do an ethnic survey by going out and asking questions and by looking into books and backgrounds of religions. It takes a little while to get ethnic surveys, but you're at risk if you're operating in an area in which you do not know the ethnics of that area.

For example, what is "good conduct"? If you look over today who the heroes of stories are that are being written in the United States and England, you would be absolutely flabbergasted because they obviously are representing the level of good conduct. What is good conduct? What is being good? If you think you can answer this, that is your first mistake. What is good conduct today has very little to do with good conduct yesterday.

But an ethnic survey will resolve it, whereby you go out on a broad-scale basis and you sample enough of the population and you will find out what the new ethnic is and what their basic ethnics really are. Then after you have put together a code of performance for action, or the mock-up, you get *this* critically looked at and then you have it taped. That is putting in your "R."

You would do an ethnic survey, base a program mock-up on the ethnic survey, and then you would get that evaluated as a new survey and put it into operation. It does not necessarily take forever.

MAJORITY OPINION

In doing an ethnic survey you are only interested in the majority. You are studying the human beings in the mass, not their personal prejudices. You can't just listen to *one* newspaper reporter and *one* prejudiced politician — it's too small a sampling. Ethnic samplings have got to be very broadly done.

For example, an ethnic survey was done in South Africa years ago. Something on the order of 49 percent of the people in South Africa were not all worried about the things you would think they were interested in. The most popular characteristic in South Africa was friendliness! The surveyors were looking for something dramatic!

What was most liked in South Africa was friendliness and what was the least liked was narrow-mindedness — that was detested. These were the high, sweeping

majorities. There were no other majorities. There were little things like 11 percent, 2 percent, 1 percent but they were nothing.

It was friendliness versus narrow-mindedness. It didn't even make a dichotomy. All you would have had to say, "Those who are against us in South Africa are narrow-minded because we are the friendliest people in the country!" Immediately the South Africans would have been for you.

That is what is meant by an ethnic survey.

TRUTH VERSUS LIES

Using this tech properly, you can put yourself in so strong locally with all the powers that be that if someone exterior tries to do something to you it just causes one awful stink. Because you are putting truth up against a bunch of lies, and in the final analysis truth always wins.

CONCLUSION

If an organization or group backs up what it does 100 percent with good, sound ethnic surveys, if you plan your program, mock-up or actions based on these surveys, reanalyzed them after they were planned and followed them, you would take the world!

		POSITIONING, PHILOSOPHIC THEORY
HCO PL	12 Sept. 88R	PR Series 32
	Rev. 30.10.2000	POSITIONING IN PR

There is a new twist advertising PR has taken in the '70s. Old ad tech is worn out. So in the '70s they have a new tech called *positioning*.

This means putting a subject (like shaving cream) into a relative position with other products. People only remember, they say, by relating one thing to another.

A *position* is where you *put* a product in somebody's life or mind and in relation to other products.

The little booklet on this is provided below — "The Positioning Era," written by Jack Trout and Al Ries, published by Ries Cappiello Colwell, Inc. in 1972.

It is a vital tool.

The mind is the battleground.

[*Editor's Note:* A glossary has been included as an attachment to this issue to provide definitions for specialized terms used in the text which might otherwise be difficult to find.]

THE POSITIONING ERA
PART 1: THE GATHERING STORM

Today it has become obvious that advertising is entering a new era. An era where creativity is no longer the key to success.

The fun and games of the '60s have given way to the harsh realities of the '70s. Today's marketplace is no longer responsive to the kind of advertising that worked in the past. There are just too many products, too many companies, too much marketing "noise."

To succeed in our over-communicated society, a company must create a "position" in the prospect's mind. A position that takes into consideration not only its own strength and weaknesses, but those of its competitors as well.

Advertising is entering an era where strategy is king.

A TALE OF TWO ADVERTISEMENTS

If you had to pick an official date to mark the end of the last advertising era and the start of the next, your choice would have to be Wednesday, April 7, 1971.

In the *New York Times* that day was a full-page advertisement that seemed to generate very little excitement in the advertising community.

But then, an abrupt change in the direction of an industry isn't always accompanied by the blowing of bugles. You sometimes need the vantage point of history to realize what has happened.

The ad that appeared that spring morning in 1971 was written by David Ogilvy. And it's no coincidence that the architect of one era called the tune for the next.

In the ad, the articulate Mr. Ogilvy outlined his 38 points for creating "advertising that sells."

In first place on his list was a point Mr. Ogilvy called "the most important decision." Then he went on to say, "the results of your campaign depend less on how we write your advertising than on how your product is positioned."

Blow the bugles, the positioning era has begun.

Five days later, in the *New York Times* and in *Advertising Age,* another ad appeared that confirmed the fact that the advertising industry was indeed changing direction. Placed by Rosenfeld, Sirowitz & Lawson, the ad listed the agency's four guiding principles.

In first place was, you guessed it. According to Ron Rosenfeld, Len Sirowitz and Tom Lawson, "Accurate positioning is the most important step in effective selling."

Suddenly the word and the concept was in everybody's ads and on everybody's lips. Hardly an issue of *Advertising Age* passes without some reference to "positioning."

A TALE OF TWO ARTICLES

In spite of Madison Avenue's current love affair with positioning, the concept had a more humble beginning.

Back in 1969, Jack Trout wrote an article for *Industrial Marketing* entitled, "Positioning is a game people play in today's me-too marketplace."

The article pulled no punches. It named names and made predictions. All based on the "rules" of a game called positioning.

One prediction, in particular, turned out to be strikingly accurate. As far as RCA and computers were concerned, "a company has no hope to make progress head-on against the position that IBM has established."

The operative word, of course, is "head-on." And while it's possible to compete successfully with a market leader (the article suggested several approaches) the rules of positioning say it can't be done "head-on."

June 1969 article outlined new concept.

Three years ago this raised a few eyebrows. Who were we to say that powerful, multi-billion dollar companies couldn't find happiness in the computer business if they so desired?

Desire, alas, was not enough. Not only RCA but also G.E. bit the IBM dust.

With two major computer manufacturers folding one right after another, the urge to say "I told you so" was irresistible.

In November of 1969, "Positioning revisited: Why didn't G.E. and RCA listen?" appeared in *Industrial Marketing*.

AN OVER–COMMUNICATED SOCIETY

As G.E. and RCA found out, advertising doesn't work anymore. At least, not like it used to. One reason may be the noise level in the communications jungle.

The per-capita consumption of advertising in the United States is approaching $100 a year. And while no one doubts the advertiser's financial ability to dish it out, there's some question about the consumer's mental ability to take it all in.

Each day, thousands of messages compete for a share of the prospect's mind. And, make no mistake about it, the mind is the battleground. Between six inches of gray matter is where the advertising war takes place. And the battle is rough, with no holds barred and no quarter given.

The mind rejects many of today's ads.

The new ballgame can prove unsettling to companies that grew up in an era where any regular advertising was likely to bring success. This is why you see a mature, sophisticated company like Bristol-Myers run through millions of dollars trying to launch me-too products against strongly dug-in competition. (If you haven't noticed, Fact, Vote and Resolve are no longer with us.)

To understand why some companies have trouble playing in today's positioning game, it might be helpful to take a quick look at recent communications history.

THE PRODUCT ERA

Back in the fifties, advertising was in the "product" era. In a lot of ways, these were the good old days where the "better mousetrap" and some money to promote it were all you needed.

It was a time when advertising people focused their attention on product features and customer benefits. They looked for, as Rosser Reeves called it, the "Unique Selling Proposition."

But in the late fifties technology started to rear its ugly head. It became more and more difficult to establish that "USP."

The end of the product era came with an avalanche of "me-too" products that descended on the market.

Your "better mousetrap" was quickly followed by two more just like it. Both claiming to be better than the first one.

In the Fifties, hard-sell ads predominated.

The competition was fierce and not always totally honest. It got so bad that one product manager was overheard to say, "Wouldn't you know it. Last year we had nothing to say, so we put 'new and improved' on the package. This year the research people came up with a real improvement, and we don't know what to say."

THE IMAGE ERA

The next phase was the image era. In the '60s, successful companies found their reputation or "image" was more important in selling a product than any specific product feature.

The architect of the image era was David Ogilvy. As he said in his famous speech on the subject, "Every advertisement is a long-term investment in the image of a brand." And he proved the validity of his ideas with programs for Hathaway shirts, Rolls-Royce, Schweppes and others.

But just as the "me-too" products killed the product era, the "me-too" companies killed the image era. As every company tried to establish a reputation for itself, the noise level became so high that relatively few companies succeeded. And most of the ones that made it did it primarily with spectacular technical achievements, not spectacular advertising.

But while it lasted, the exciting, go-go years of the middle '60s were like a marketing orgy.

In the Sixties, creativity came into vogue.

At the party, it was "everyone into the pool." Little thought was given to failure. With the magic of money and enough bright people, a company felt that any marketing program would succeed.

The wreckage is still washing up on the beach. Du Pont's Corfam, Gablinger's beer, Handy Andy all-purpose cleaner, *Look* magazine.

The world will never be the same again and neither will the advertising business. For today we are entering an era that recognizes both the importance of the product and the importance of the company image, but more than anything else stresses the need to create a "position" in the prospect's mind.

THE POSITIONING ERA

The great copywriters of yesterday, who have gone to that big agency in the sky, would die all over again if they saw some of the campaigns currently running (successful campaigns, we might add).

Take beer advertising. In the past, a beer copywriter looked closely at the product to find his copy platform. And he found "real-draft" Piels, and "cold-brewed" Ballantine. Back a little farther he discovered the "land of the sky blue waters" and "just a kiss of the hops."

In the positioning era, however, effective beer advertising is taking a different tack. "First class is Michelob" positioned the brand as the first American-made premium beer. "The one beer to have when you're having more than one" positioned Schaefer as the brand for the heavy beer drinker. But there's an imported beer whose positioning strategy is so crystal clear that those old-time beer copywriters probably wouldn't even accept it as advertising.

"You've tasted the German beer that's the most popular in America. Now taste the German beer that's the most popular in Germany." This is how Beck's beer is effectively positioning itself against Lowenbrau.

Then there's Seven-Up's "Un-Cola" campaign.

And *Sports Illustrated*'s "Third Newsweekly" program.

All of these positioning campaigns have a number of things in common. They don't emphasize product features, customer benefits or the company's image.

Yet, they are all highly successful.

NEW MEANING FOR AN OLD WORD

Like any new concept, positioning isn't new. At least not in the literal sense. What is new is the broader meaning now being given to the word.

Yesterday, positioning was used in a narrow sense to mean what the advertiser did to his product. Today, positioning is used in a broader sense to mean what the advertising does for the product in the prospect's mind. In other words, a successful advertiser today uses advertising to position his product, not to communicate its advantages or features.

Positioning has its roots in the packaged goods field where the concept was called "product positioning." It literally meant the product's form, package size and price as compared to competition.

Procter & Gamble carried the idea one step forward by developing a master copy platform that related each of their competing brands. For example: Tide makes clothes "white." Cheer makes them "whiter than white." And Bold makes them "bright."

Although the advertising for each Procter & Gamble brand might vary from year to year, it never departed from its pre-assigned role or "position" in the master plan.

The big breakthrough came when people started thinking of positioning not as something the client does before the advertising is prepared, but as the very objective of the advertising itself. External, rather than internal positioning.

A classic example of looking through the wrong end of the telescope was Ford's introduction of the Edsel. In the ensuing laughter that followed, most people missed the point.

In essence, the Ford people got switched around. The Edsel was a beautiful case of internal positioning to fill a hole between Ford and Mercury on the one hand, and Lincoln on the other. Good strategy inside the building. Bad strategy outside where there was simply no position for this car in a category already cluttered with heavily-chromed, medium-priced cars.

If the Edsel had been tagged a "high performance" car and presented in a sleek two-door, bucket-seat form and given a name to match, no one would have laughed. It could have occupied a position that no one else owned and the ending of the story might have been different.

THE MIND: A MEMORY BANK

To better understand what an advertiser is up against, it may be helpful to take a closer look at the objective of all advertising programs — the human mind.

Like a memory bank, the mind has a slot or "position" for each bit of information it has chosen to retain. In operation, the mind is a lot like a computer.

But there is one important difference. A computer has to accept what is put into it. The mind does not. In fact, it's quite the opposite.

The mind, as a defense mechanism against the volume of today's communications, screens and rejects much of the information offered it. In general, the mind accepts only that new information which matches its prior knowledge or experience. It filters out everything else.

For example, when a viewer sees a television commercial that says, "NCR means computers," he doesn't accept it. IBM means computers. NCR means National Cash Register.

The computer "position" in the minds of most people is filled by a company called the International Business Machines Corp. For a competitive computer manufacturer

to obtain a favorable position in the prospect's mind, he must somehow relate his company to IBM's position.

Yet, too many companies embark on marketing and advertising programs as if the competitor's position did not exist. They advertise their products in a vacuum and are disappointed when their messages fail to get through.

THE MIND: AN INADEQUATE CONTAINER

The mind, as a container for ideas, is totally unsuited to the job at hand.

There are more than 500,000 trademarks registered with the U.S. Patent Office. In addition, untold thousands of unregistered trademarks are in use throughout the country.

During the course of a single year, the average mind is exposed to more than half a million advertising messages.

The target of all this communications ammunition has a reading vocabulary of no more than 25,000 to 50,000 words, and a speaking vocabulary of one-fifth as much.

Another limitation: The average human mind, according to Harvard psychologist George A. Miller, cannot deal with more than seven units at a time.

Ask someone to name all the brands he or she remembers in a given product category. Rarely will anyone name more than seven. And that's for a high-interest category. For low-interest products, the average consumer can usually name no more than one or two brands.

Yet in category after category, the number of individual brands multiply like rabbits. In 1964, there were seven soft drinks advertised on network television. Today there are 22.

To cope with complexity, people have learned to reduce everything to its utmost simplicity.

When asked to describe an offspring's intellectual progress, a person doesn't usually quote vocabulary statistics, reading comprehension, mathematical ability, etc. "He's in seventh grade" is a typical reply.

This "ranking" of people, objects and brands is not only a convenient method of organizing things, but also an absolute necessity if a person is to keep from being overwhelmed by the complexities of life.

THE PRODUCT LADDER

To cope with advertising's complexity, people have learned to rank products and brands in the mind. Perhaps this can best be visualized by imagining a series of ladders in the mind. On each step is a brand name. And each different ladder represents a different product category.

Some ladders have many steps. (Seven is many.) Others have few, if any.

For an advertiser to increase his brand preference, he must move up the ladder. This can be difficult if the brands above have a strong foothold and no leverage or positioning strategy is applied.

For an advertiser to introduce a new product category, he must carry in a new ladder. This, too, is difficult, especially if the new category is not positioned against an old one. The mind has no room for the new and different unless it's related to the old.

That's why if you have a truly new product, it's often better to tell the prospect what the product is *not,* rather than what it is.

To move up you must dislodge someone else.

The first automobile, for example, was called a "horseless" carriage, a name which allowed the public to position the concept against the existing mode of transportation.

Words like "off-track" betting, "lead-free" gasoline and "tubeless" tire are all examples of how new concepts can best be positioned against the old.

CREATIVITY IS NO LONGER ENOUGH

In the positioning era, "strategy" is king. It made little difference how clever the ads of RCA, General Electric and Bristol-Myers were. Or how well the layout, copy and typography were executed. Their strategy of attacking the leaders head-on was wrong.

In this context, it's illuminating to take a look at some recent examples of rampant creativity. The Lone Ranger and REA Express, Joe Namath and Ovaltine, Ann Miller and Great American soups. Even though these programs are highly creative, their chances for success are limited because each of them lacks a strong positioning idea.

STORM CLOUDS ON THE HORIZON

The weather forecast for the old, traditional ways of advertising is gloomy at best. And nowhere was this more clearly demonstrated than in the recent Atlanta study conducted by Daniel Starch & Staff.

According to Starch, about 25% of those noting a television commercial attributed it to the competition. With virtually no exceptions, high scoring commercials were the brand leaders in their category.

The also-rans didn't fare nearly as well. A David Janssen Excedrin commercial was associated with Anacin twice as often as Excedrin. A Pristeen commercial helped F.D.S., the brand leader, more than it did Pristeen.

This shattering turn of events is certainly "positioning" at work in our over-communicated society. It appears that unless an advertisement is based on a unique idea or position, the message is often put in the mental slot reserved for the leader in the product category.

THE POSITIONING ERA
PART 2: CHAOS IN THE MARKETPLACE

As far as advertising is concerned, the good old days are gone forever.

As the president of a large consumer products company said recently, "Count on your fingers the number of successful new national brands introduced in the last two years. You won't get to your pinky."

Not that a lot of companies haven't tried. Every supermarket is filled with shelf after shelf of "half successful" brands. The manufacturers of these me-too products cling to the hope that they can develop a brilliant advertising campaign which will lift their offspring into the winner's circle.

Meanwhile, they hang in there with coupons, deals, point of purchase displays. But profits are hard to come by and that "brilliant" advertising campaign, even if it comes, doesn't ever seem to turn the brand around.

No wonder management people turn skeptical when the subject of advertising comes up. And instead of looking for new ways to put the power of advertising to work, management invents schemes for reducing the cost of what they are currently doing. Witness the rise of the house agency, the media buying service, the barter deal.

ADS DON'T WORK LIKE THEY USED TO

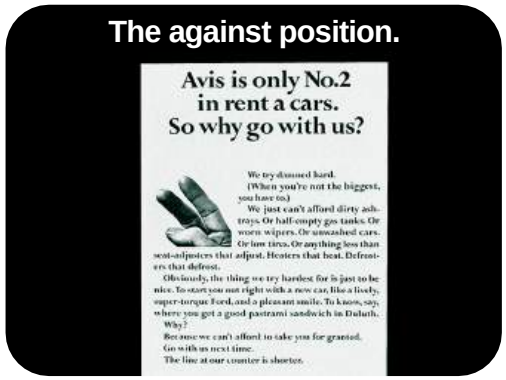
The chaos in the marketplace is a reflection of the fact that advertising just doesn't work like it used to. But old traditional ways of doing things die hard. "There's no reason that advertising can't do the job," say the defenders of the status quo, "as long as the product is good, the plan is sound and the commercials are creative."

But they overlook one big, loud reason. The marketplace itself. The noise level today is far too high.

To cope with this assault on his or her mind, the average consumer has run out of brain power and mental ability. And with a rising standard of living the average consumer is less and less interested in making the "best" choice. For many of today's more affluent customers, a "satisfactory" brand is good enough.

Advertising prepared in the old, traditional ways has no hope of being successful in today's chaotic marketplace.

In the past, advertising was prepared in isolation. That is, you studied the product and its features and then you prepared advertising which communicated to your customers and prospects the benefits of those features.



It didn't make much difference whether the competition offered those features or not. In the traditional approach, you ignored competition and made every claim seem like a preemptive claim. Mentioning a competitive product, for example, was considered not only bad taste, but poor strategy as well.

In the positioning era, however, the rules are reversed. To establish a position, you must often not only name competitive names, but also ignore most of the old advertising rules as well.

In category after category, the prospect already knows the benefits of using the product. To climb on his product ladder, you must relate your brand to the brands already there.

THE AGAINST POSITION

In today's marketplace, the competitor's image is just as important as your own. Sometimes more important. An early success in the positioning era was the famous Avis campaign.

Avis exploited the love for the underdog.

The Avis campaign will go down in marketing history as a classic example of establishing the "against" position. In the case of Avis, this was a position against the leader.

"Avis is only No. 2 in rent-a-cars, so why go with us? We try harder."

For 13 straight years, Avis lost money. Then they admitted they were No. 2 and have made money every year since. Avis was able to make substantial gains because they recognized the position of Hertz and didn't try to attack them head-on.

THE UGLY POSITION

A company can sometimes be successful by accepting a position that no one else wants. For example, virtually all automobile manufacturers want the public to think they make cars that are good looking. As a result, Volkswagen was able to establish a unique position for themselves. By default.

The strength of this position, of course, is that it communicates the idea of reliability in a powerful way. "The 1970 VW will stay ugly longer" was a powerful statement because it is psychologically sound. When an advertiser admits a negative, the reader is inclined to give them the positive.

Volkswagen accepted an un-wanted position.

A similar principle is involved in Smucker's jams and jellies. "With a name like Smucker's," says the advertising, "you know it's got to be good."

THE BATTLE OF THE COLAS

The advantage of owning a position can be seen most clearly in the soft drink field. Three major cola brands compete in what is really not a contest. For every ten bottles of Coke, only four bottles of Pepsi and one bottle of Royal Crown are consumed.

While there may be room in the market for a No. 2 cola, the position of Royal Crown is weak. In 1970, for example, Coca-Cola's sales increase over the previous year (168,000,000 cases) was more than Royal Crown's entire volume.

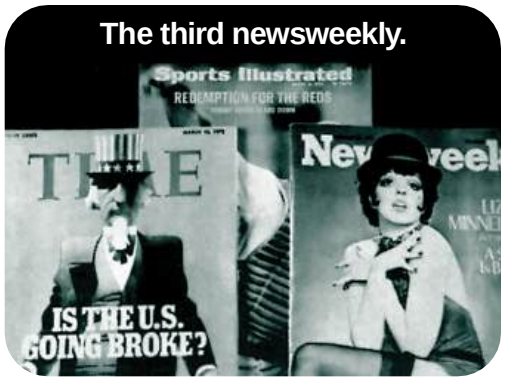
Obviously, Coke has a strong grip on the cola position. And there's not much room left for the other brands. But, strange as it might seem, there might be a spot for a reverse kind of product. One of the most interesting positioning ideas is the one currently being used by Seven-Up. It's the "Un-Cola" and it seems silly until you take a closer look.

"Wet and Wild" was a good campaign in the image era. But the "Un-Cola" is a great program in the positioning era. Sales jumped something like 10% the first year the product was positioned against the cola field. And the increases have continued.

Seven-Up became a cola alternative.

The brilliance of this idea can only be appreciated when you comprehend the intense share of mind enjoyed by the cola category. Two out of three soft drinks consumed in the U.S. are cola drinks.

By linking the product to what's already in the mind of the prospect, the Un-Cola position establishes Seven-Up as an alternative to a cola drink.



THE THIRD NEWSWEEKLY POSITION

A somewhat similar positioning program is working in the media field. This is the "third newsweekly" concept being used by *Sports Illustrated* to get into the mind of the media buyer.

It obviously is an immensely successful program. But what may not be so obvious is why it works. The "third newsweekly" certainly doesn't describe *Sports Illustrated.* (As the Un-Cola doesn't describe Seven-Up.)

What it does do, however, is to relate the magazine to a media category that is uppermost in the prospect's mind (as the Un-Cola relates to the soft drink category that is uppermost in the mind).

Both the Seven-Up and the *Sports Illustrated* programs are dramatic reminders that positioning is not something you do with the product. Positioning is something you do with the mind. That is, you position the product in the mind of the prospect.

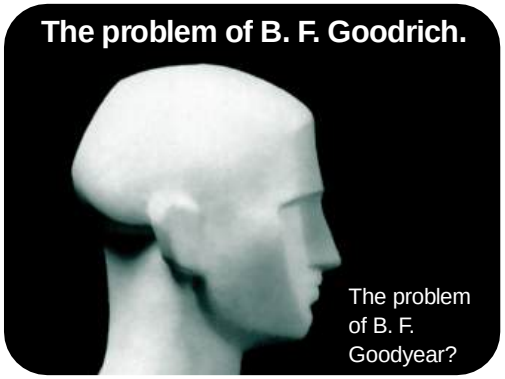
Sports Illustrated moved into a new league.

In order to position your own brand, it's sometimes necessary to reposition the competitor.

REPOSITIONING THE COMPETITOR

In the case of Beck's beer, the repositioning is done at the expense of Lowenbrau: "You've tasted the German beer that's the most popular in America. Now taste the German beer that's the most popular in Germany."

This strategy works because the prospect had assumed something about Lowenbrau that wasn't true.



The current program for Raphael aperitif wine also illustrates this point. The ads show a bottle of "made in France" Raphael and a bottle of "made in U.S.A." Dubonnet.

"For $1.00 a bottle less," says the headline, "you can enjoy the imported one." The shock, of course, is to find Dubonnet is a U.S. product.

THE PROBLEM OF B. F. GOODRICH

In the positioning era, the name of a company or product is becoming more and more important. The name is the hook that allows the mind to hang the brand on its product ladder. Given a poor name, even the best brand in the world won't be able to hang on.

What does a company do when its name (Goodrich) is similar to the name of a much larger company in the same field (Goodyear)?

B. F. Goodrich is stuck with a confusing name.

Goodrich has problems. They could reinvent the wheel and Goodyear would get most of the credit.

If you watched the Super Bowl last January, you saw both Goodrich and Goodyear advertise their "American-made radial-ply tires." But which company do you think got their money's worth at $200,000 a pop?

We haven't seen the research, but our bet would be on Goodyear, the company that owns the tire position.

THE PLIGHT OF AIRLINE X

Take the airline industry. The big four domestic carriers are United, American, TWA and an airline we'll call Airline X.

Like all airlines, Airline X has had its ups and downs. Unfortunately, there have been more downs than ups. But unlike some of its more complacent competitors, Airline X has tried. A number of years ago, it brought in big league marketing people and pushed in the throttle.

Airline X was among the first to "paint the planes," "improve the food" and "dress up the stewardesses" in an effort to improve its reputation.

And Airline X hasn't been bashful when it comes to spending money. Year after year, it has one of the biggest advertising budgets in the industry. Even though it advertises itself as "the second largest passenger carrier of all the airlines in the free world," you may not have guessed that Airline X is Eastern.

One of these has a bad name.

For all that money, what do you think of Eastern? Where do you think they fly? Up and down the East Coast, to Boston, Washington, Miami, right? Well, Eastern also goes to St. Louis, New Orleans, Atlanta, Los Angeles, Acapulco. But Eastern has a regional name and their competitors have broader names which tell the prospect they fly everywhere.

Look at the problem from just one of Eastern's cities, Indianapolis. From Indianapolis, Eastern flies *north* to Chicago, Milwaukee and Minneapolis. And *south* to Birmingham and Mobile. They just don't happen to fly *east*.

And then there is the lush San Juan run which Eastern has been serving for more than 25 years. Eastern used to get the lion's share of this market. Then early last year American Airlines took over Trans Caribbean. So today, who is number one to the San Juan sun? Why American, of course.

No matter how hard you try, you can't hang "The Wings of Man" on a regional name. When the prospect is given a choice, he or she is going to prefer the national airline, not the regional one.

THE NO–NAME TRAP

But even bad names like Eastern and Goodrich are better than no name at all.

Many companies have lost their identities.

In *Fortune*'s list of 500 largest industrials, there are now 16 corporate nonentities. That is, 16 major American companies have legally changed their names to meaningless initials.

How many of these companies can you recognize: ACF, AMF, AMP, ATO, CPC, ESB, FMC, GAF, NVF, NL, PPG, RCA, SCM, TRW, USM and VF?

These are not tiny companies either. The smallest of them, AMP, has more than 10,000 employees and sales of over $225,000,000 a year.

What companies like ACF, AMF, AMP and the others fail to realize is that their initials have to stand for something. A prospect must know your name first before he or she can remember your initials.

G.E. stands for General Electric. IBM stands for International Business Machines. And everyone knows it. But how many people knew that ACF stood for American Car & Foundry?

Furthermore, now that ACF has legally changed its name to initials, there's presumably no way to even expose the prospect to the original name.

An exception seems to be RCA. After all, everyone knows that RCA stands for, or rather used to stand for, Radio Corp. of America.

That may be true today. But what about tomorrow? What will people think 20 years from now when they see those strange initials? Roman Catholic Archdiocese?

Fortune 500 companies.

ACF Industries Inc.	NVF Company
AMF Incorporated	NL Industries, Inc.
AMP Incorporated	PPG Industries, Inc.
A-T-O Inc.	RCA Corporation
CPC International Inc.	SCM Corporation
ESB Incorporated	TRW Inc.
FMC Corporation	USM Corporation
GAF Corporation	VF Corporation

There are now 16 major corporate nonentities.

And take Corn Products Co. Presumably it changed its name to CPC International because it makes products out of lots of things besides corn, but you can't remember "CPC" without bringing Corn Products Co. to mind. The tragedy is, CPC made the change to "escape" the past. Yet the exact opposite occurred.

THE LINE–EXTENSION TRAP

Names are tricky. Consider the Protein 21/29 shampoo, hair spray, conditioner, concentrate mess.

Back in 1970, the Mennen Co. introduced a combination shampoo conditioner called "Protein 21." By moving rapidly with a $6,000,000 introductory campaign (followed by a $9,000,000 program the next year), Mennen rapidly carved out a 13% share of the $300,000,000 shampoo market.

Then Mennen hit the line extension lure. In rapid succession, the company introduced Protein 21 hair spray, Protein 29 hair spray (for men), Protein 21

conditioner (in two formulas), Protein 21 concentrate. To add to the confusion, the original Protein 21 was available in three different formulas (for dry, oily and regular hair).

Can you imagine how confused the prospect must be trying to figure out what to put on his or her head? No wonder Protein 21's share of the shampoo market has fallen from 13% to 11%. And the decline is bound to continue.

Each new product hung on the Protein 21 name undermines the position of the original shampoo.

THE WELL–KNOWN–NAME TRAP

Related to the line extension, but not exactly the same, is another common error of judgment called the "well-known-name" trap.

Both General Electric and RCA thought they could take their strong positions against IBM in computers. But just because a company is well-known in one field doesn't mean it can transfer that recognition to another.

In other words, your brand can be on top of one ladder and nowhere on another. And the further apart the products are conceptually, the greater the difficulty of making the jump.

In the past when there were fewer companies and fewer products, a well-known name was a much greater asset than it is today. Because of the noise level, a "well-known" company has tremendous difficulty trying to establish a position in a different field than the one in which it built its reputation.

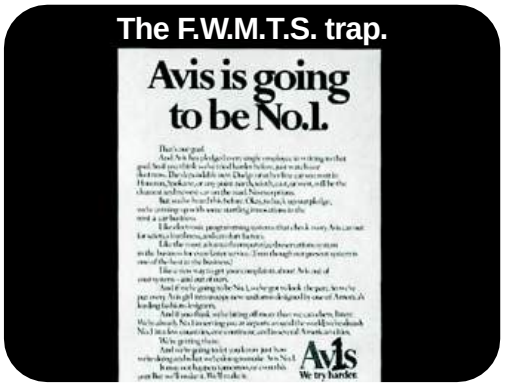
THE EVERYBODY TRAP

A human emotion called "greed" often leads an advertiser into another error. American Motors' introduction of the Hornet is one of the best examples of the "everybody" trap.

You might remember the ads, "The little rich car, American Motors Hornet: $1,994 to $3,589."

A product that tries to appeal to everyone winds up appealing to no one. People who want to spend $3,500 for a car don't buy the Hornet because they don't want their friends to think they're driving a $1,900 car. People who want to spend $1,900 for a car don't buy the Hornet because they don't want a car with $1,600 worth of accessories taken off of it.

THE F.W.M.T.S. TRAP



If the current Avis advertising is any indication, the company has "forgotten what made them successful."

The original campaign not only related No. 2 Avis to No. 1 Hertz, but also exploited the love that people have for the underdog. The new campaign (Avis is going to be No. 1) not only is conventional "brag and boast" advertising, but also dares the prospect to make the prediction not come true.

Our prediction: Avis ain't going to be No. 1. Further prediction: Avis will lose ground to Hertz and National.

Another company that seems to have fallen into the trap is Volkswagen.

"Think small" was perhaps the most famous advertisement of the '60s. Yet last year VW ran an ad that said, "Volkswagen introduces a new kind of Volkswagen. Big."

Avis has "forgot what made them successful."

O.K., Volkswagen, should we think small or should we think big?

Confusion is the enemy of successful positioning. Prediction: Rapid erosion of the Beetle's position in the U.S. market.

THE FREE–RIDE TRAP

Another similar marketing pitfall recently befell, of all companies, Miles Laboratories.

You can see how it happens. A bunch of the boys are sitting around a conference table trying to name a new cold remedy.

"I have it," says Harry. "Let's call it Alka-Seltzer Plus. That way we can take advantage of the $20,000,000 we're already spending to promote the Alka-Seltzer name."

"Good thinking, Harry," and another money-saving idea is instantly accepted.

But lo and behold, instead of eating into the Dristan and Contac market, the new product turns around and eats into the Alka-Seltzer market.

And you know Miles must be worried. In every TV commercial, the "Alka-Seltzer" gets smaller and smaller and the "Plus" gets bigger and bigger.

Plus took business away from Alka-Seltzer.

THE POSITIONING ERA
PART 3: SURVIVAL IN THE SEVENTIES

The world seems to be turning faster.

Years ago, a successful product might live 50 years or more before fading away. Today, a product's life cycle is much shorter. Sometimes it can be measured in months instead of years.

New products, new services, new markets, even new media are constantly being born. They grow up into adulthood and then slide into oblivion. And a new cycle starts again.

Yesterday, beer and hard liquor were campus favorites. Today it's wine.

Yesterday, the well-groomed man had his hair cut every week. Today, it's every month or two.

Yesterday, the way to reach the masses was the mass magazines. Today, it's network TV. Tomorrow, it could be cable.

The only permanent thing in life today is change. And the successful companies of tomorrow will be those companies that have learned to cope with it.

THE PRESSURE TO CHANGE

The acceleration of "change" creates enormous pressures on companies to think in terms of tactics rather than strategy. As one respected advertising man commented, "The day seems to be past when long-range strategy can be a winning technique."

But is change the way to keep pace with change? The exact opposite appears to be true.

The landscape is littered with the debris of projects that companies rushed into in attempting to "keep pace." Singer trying to move into the boom in home appliances. RCA moving into the boom in computers. General Foods moving into the boom in

fast-food outlets. Not to mention the hundreds of companies that threw away their corporate identities to chase the passing fad to initials.

While the programs of those who kept at what they did best and held their ground have been immensely successful. Maytag selling their reliable appliances. Walt Disney selling his world of fantasy and fun. Avon calling.

And take margarine. Thirty years ago the first successful margarine brands positioned themselves against butter. "Tastes like the high-priced spread," said a typical ad.

And what works today? Why the same strategy. "It isn't nice to fool Mother Nature," says the Chiffon commercial, and sales go up 25%. Chiffon is once again the best selling brand of soft margarine.

IMPORTANCE OF LONG–RANGE THINKING

Change is a wave on the ocean of time. Short-term, the waves cause agitation and confusion, but long-term the underlying currents are much more significant.

To cope with change, it's important to take a long-range point of view. To determine your basic business. Positioning is a concept that is cumulative. Something that takes advantage of advertising's long-range nature.

In the '70s, a company must think even more strategically than it did before. Changing the direction of a large company is like trying to turn an aircraft carrier. It takes a mile before anything happens. And if it was a wrong turn, getting back on course takes even longer.

To play the game successfully, you must make decisions on what your company will be doing not next month or next year, but in five years, ten years. In other words, instead of turning the wheel to meet each fresh wave, a company must point itself in the right direction.

You must have vision. There's no sense building a position based on a technology that's too narrow. Or a product that's becoming obsolete. Remember the famous *Harvard Business Review* article entitled "Marketing Myopia"? It still applies.

If a company has positioned itself in the right direction, it will be able to ride the currents of change, ready to take advantage of those opportunities that are right for it. But when an opportunity arrives, a company must move quickly.

IMPORTANCE OF TIMING

Because of the enormous advantages that accrue to being the leader, most companies are not interested in learning how to *compete* with the leader. They want to be the leader. They want to be Hertz rather than Avis. *Time* rather than *Newsweek*. General Electric rather than Westinghouse.

Historically, however, product leadership is usually the result of an accident, rather than a preconceived plan.

The xerography process, for example, was offered to 32 different companies (including IBM and Kodak) before it wound up at the old Haloid Co. Renamed Haloid

Xerox and then finally Xerox, the company has since dominated the copier market. Xerox now owns the copier position.

Were IBM and Kodak stupid to turn down xerography? Of course not. These companies reject thousands of ideas every year.

Perhaps a better description of the situation at the time was that Haloid, a small manufacturer of photographic supplies, was desperate, and the others weren't. As a result, it took a chance that more prudent companies couldn't be expected to take.

A WILLINGNESS TO POUR IT ON

When you trace the history of how leadership positions were established, from Hershey in chocolate to Hertz in rent-a-cars, the common thread is not marketing skill or even product innovation. The common thread is seizing the initiative before the competitor has a chance to get established. In someone's old-time military terms, the marketing leader "got there firstest with the mostest." The leader usually poured in the marketing money while the situation was still fluid.

IBM, for example, didn't invent the computer. Sperry Rand did. But IBM owns the computer position because they built their computer fortress before competition arrived.

And the position that Hershey established in chocolate was so strong they didn't need to advertise at all, a luxury that competitors like Nestle couldn't afford.

You can see that establishing a leadership position depends not only on luck and timing, but also upon a willingness to "pour it on" when others stand back and wait.

A FATAL MISTAKE

Yet all too often, the product leader makes the fatal mistake of attributing its success to marketing skill. As a result, it thinks it can transfer that skill to other products and other marketing situations.

Witness, for example, the sorry record of Xerox in computers. In May of 1969, Xerox exchanged nearly 10,000,000 shares of stock (worth nearly a billion dollars) for Scientific Data Systems, Inc. Since the acquisition, the company (renamed Xerox Data Systems) has *lost* millions of dollars, and without Xerox's support would have probably gone bankrupt.

And the mecca of marketing knowledge, International Business Machines Corp., hasn't done much better. So far, the IBM plain-paper copier hasn't made much of a dent in Xerox's business. Touché.

The rules of positioning hold for all types of products. In the packaged goods area, for example, Bristol-Myers tried to take on Crest toothpaste with Fact (killed after $5,000,000 was spent on promotion). Then they tried to go after Alka-Seltzer with Resolve (killed after $11,000,000 was spent). And according to a headline in the Feb. 7 issue of *Advertising Age,* "Bristol-Myers will test Dissolve aspirin in an attempt to unseat Bayer."

The suicidal bent of companies that go head-on against established competition is hard to understand. They know the score, yet they forge ahead anyway. In the marketing war, a "charge of the light brigade" happens every day. With the same predictable result.

NUMBER ONE STRATEGY

Successful marketing strategy usually consists of keeping your eyes open to possibilities and then striking before the product ladder is firmly fixed.

As a matter of fact, the marketing leader is usually the one who moves the ladder into the mind with his or her brand nailed to the one and only rung. Once there, what can a company do to keep its top-dog position?

There are two basic strategies that should be used hand in hand. They seem contradictory, but aren't. One is to ignore competition, and the other is to cover all bets.

As long as a company owns the position, there's no point in running ads that scream, "We're No. 1." Much better is to enhance the product category in the prospect's mind. Notice the current IBM campaign that ignores competition and sells the value of computers. All computers, not just the company's types.

Although the leader's advertising should ignore the competition, the leader shouldn't. The second rule is to cover all bets.

This means a leader should swallow his or her pride and adopt every new product development as soon as it shows signs of promise. Too often, however, the leader pooh-poohs the development, and doesn't wake up until it's too late.

NUMBER TWO STRATEGY

Most companies are in the No. 2, 3, 4 or even worse category. What then?

Hope springs eternal in the human breast. Nine times out of ten, the also-ran sets out to attack the leader, à la RCA's assault on IBM. Result: Disaster.

Simply stated, the first rule of positioning is this: You can't compete head-on against a company that has a strong, established position. You can go around, under or over, but never head-to-head.

The leader owns the high ground. The No. 1 position in the prospect's mind. The top rung of the product ladder.

The classic example of No. 2 strategy is Avis. But many marketing people misread the Avis story. They assume the company was successful because it tried harder.

Not at all. Avis was successful because it related itself to the position of Hertz. Avis preempted the No. 2 position. (If trying harder were the secret of success, Harold Stassen would be president.)

Most marketplaces have room for a strong No. 2 company provided they position themselves clearly as an alternative to the leader. In the computer field, for example, Honeywell has used this strategy successfully.

"The other computer company vs. Mr. Big," says a typical Honeywell ad. Honeywell is doing what none of the other computer companies seems to be willing to do. Admit that IBM is, in fact, the leader in the computer business. Maybe that's why Honeywell and Mr. Big are the only large companies reported to be making money on computers.

SOME "STRONG" POSITIONS AREN'T

Yet there are positions that can be taken. These are positions that look strong, but in reality are weak.

Take the position of Scott in paper products. Scott has about 40% of the $1.2 billion market for towels, napkins, toilet tissues and other consumer paper products. But Scott, like Mennen with Protein 21, fell into the line-extension trap.

ScotTowels, ScotTissue, Scotties, Scottkins, even BabyScott. All of these names undermined the Scott foundation. The more products hung on the Scott name, the less meaning the name had to the average consumer.

When Procter & Gamble attacked with Mr. Whipple and his tissue-squeezers, it was no contest. Charmin is now the No. 1 brand in the toilet-tissue market.

In Scott's case, a large "share of market" didn't mean they owned the position. More important is a large "share of mind." The housewife could write "Charmin, Kleenex, Bounty and Pampers" on her shopping list and know exactly what products she was going to get. "Scott" on a shopping list has no meaning. The actual brand names aren't much help either. Which brand, for example, is engineered for the nose, Scotties or ScotTissue?

In positioning terms, the name "Scott" exists in limbo. It isn't firmly ensconced on any product ladder.

IMPORTANCE OF OBJECTIVITY

To be successful in the positioning era, advertising and marketing people must be brutally frank. They must try to eliminate all ego from the decision making process. It only clouds the issue.

One of the most critical aspects of "positioning" is being able to evaluate objectively products and how they are viewed by customers and prospects.

Successful companies get their information from the marketplace. That's the place where the program has to succeed, not in the product manager's office.

IMPORTANCE OF WORLDWIDE THINKING

A company that keeps its eye on Tom, Dick and Harry is going to miss Pierre, Hans and Yoshio.

Marketing is rapidly becoming a worldwide ballgame. A company that owns a position in one country now finds that it can use that position to wedge its way in to another.

IBM has 62% of the German computer market. Is this fact surprising? It shouldn't be. IBM earns more than 50% of its profits outside the U.S.

As companies start to operate on a worldwide basis, they often discover they have a name problem.

A typical example is U.S. Rubber, a worldwide company that marketed many products not made of rubber. Changing the name to Uniroyal created a new corporate identity that could be used worldwide.

THE ROLE OF CREATIVITY

In the '70s, creativity will have to take a back seat to strategy.

Advertising Age itself reflects this fact. Today you find fewer stories about individual campaigns and more stories about what's happening in an entire industry. Creativity alone isn't a worthwhile objective in an era where a company can spend millions of dollars on great advertising and still fail miserably in the marketplace.

Consider what Harry McMahan calls the "Curse of Clio." In the past, the American Festival has made special awards to "Hall of Fame Classics." Of the 41 agencies that won these Clio awards, 31 have lost some or all of these particular accounts.

But the cult of creativity dies hard. One agency president said recently, "Oh, we do positioning all the time. But after we develop the position, we turn it over to the creative department." And too often, of course, the creativity does nothing but obscure the positioning.

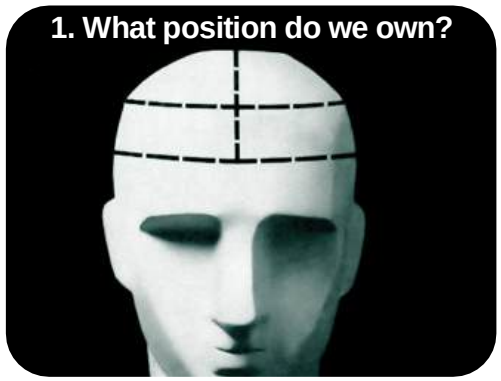
SOME QUESTIONS TO ASK YOURSELF

If these examples have moved you to want to apply positioning thinking to your own company's situation, here are some questions to ask yourself:

1. What position, if any, do we already own in the prospect s mind?

Get the answer to this question from the marketplace, not the marketing manager. If this requires a few dollars for research, so be it. Spend the money. It's better to know exactly what you're up against now than to discover it later when nothing can be done about it.

2. What position do we want to own?



Here is where you bring out your crystal ball and try to figure out the best position to own from a long-term point of view.

3. What companies must be outgunned if we are to establish that position?

If your proposed position calls for a head-to-head approach against a marketing leader, forget it. It's better to go around an obstacle rather than over it. Back up. Try to select a position that no one else has a firm grip on.

4. Do we have enough marketing money to occupy and hold the position?

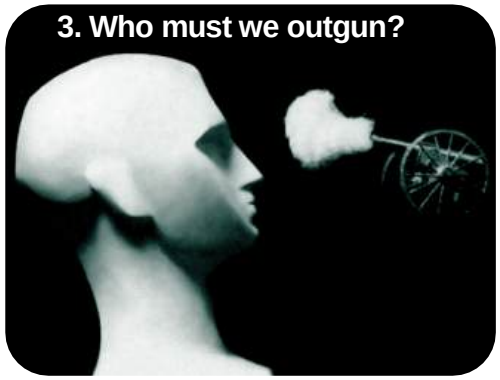
A big obstacle to successful positioning is attempting to achieve the impossible. It takes money to build a share of mind. It takes money to establish a position. It takes money to hold a position once you've established it.

The marketplace is where to find the answer.

Select a position that won't become obsolete.

The noise level today is fierce. There are just too many "me-too" products and too many "me-too" companies vying for the mind of the prospect. Getting noticed is getting tougher.

5. Do we have the guts to stick with one consistent positioning concept?



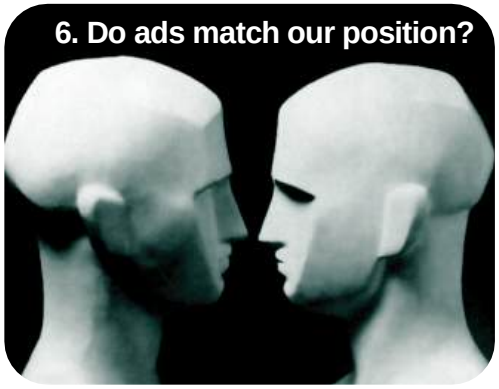
With the noise level out there, a company has to be bold enough and consistent enough to cut through.

The first step in a positioning program normally entails running fewer programs, but stronger ones. This sounds simple, but actually runs counter to what usually happens as corporations get larger. They normally run more programs, but weaker ones. It's this fragmentation that can make many large advertising budgets just about invisible in today's media storm.

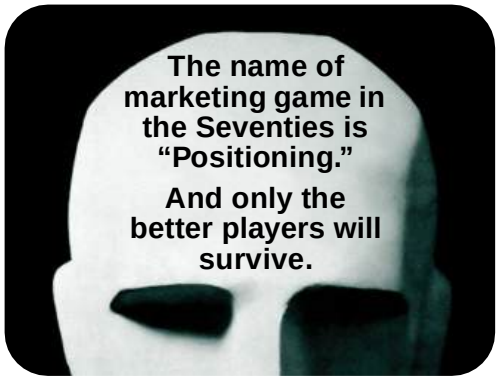
6. Does our creative approach match our positioning strategy?

Creative people often resist positioning thinking because they believe it restricts their creativity. And it does. But creativity isn't the objective in the '70s. Even "communications" isn't the objective.

The name of the marketing game in the '70s is "positioning." And only the better players will survive.



Avoid a confrontation with marketing leaders.



Expect internal pressures for change.

Spend enough to accomplish the objective.

Creativity can often get in the way.

Motto for survival in the decade ahead.

GLOSSARY OF TERMS

ACF: abbreviation for American Car & Foundry.

Advertising Age: a leading American weekly trade magazine covering major advertising news, developments and trends. It also features articles on surveys and award-winning campaigns.

Alka-Seltzer: a brand name for a well-known pain reliever in tablet form used to treat headaches, heartburn and stomach troubles, such as those caused by eating or drinking too much. It contains the drug aspirin and when added to water makes a fizzy drink. Alka-Seltzer was launched in the early 1930s and by 1934 its sales were 2.1 million, attributable to innovative advertising. By 1981, 100 billion tablets of Alka-Seltzer had been produced.

Alka-Seltzer Plus: an extra-strength version of Alka-Seltzer, introduced in the late 1960s. It did not create growth in sales until it was reformulated as Alka-Seltzer Plus Cold Medicine in 1976. By 1990 Alka-Seltzer Plus became the country's leading cold remedy by unit sales and overtook Alka-Seltzer Original in dollar sales. It was positioned as the brand for "major league" colds and commercials featured a Green Bay Packer football crowd calling it, "Fast, effective relief for tough winter colds." The tag line was later modified to "Tough medicine for tough winter colds."

American Airlines: a well-known international passenger and freight airline company formed in 1934. American Airlines began the first scheduled airfreight service within the United States in 1944, provided the first nonstop transcontinental jet service in 1959 and by 1961, was the world's first airline to carry 100 million passengers. In 1971, American carried out a successful merger with another airline company, Trans Caribbean. From the merger American gained entrance to many Caribbean markets such as San Juan, Puerto Rico; Curaçao; Aruba and others.

American Car & Foundry: a large American company and one of the oldest railroad car builders in the United States. Formed in 1899 from the merger of thirteen railroad equipment manufacturers, the company made railroad cars for the US as well as subway cars for use in London's underground system. From the early to midtwentieth century, the company also produced products for use by the military, including ammunition, tanks and naval ships. In 1922 it expanded into the automotive field, producing buses and bus engines until 1959. In the mid-1950s the company's products had become so varied that it changed its name to ACF Industries, Incorporated.

American Festival: reference to the American TV Festival awards, an annual competition begun in 1960 and held by the advertising industry to award outstanding achievement in radio and television advertising as well as in print advertising. Awards are made to writers, editors, producers, cinematographers, talent and other participants of the winning commercials, print advertisements, etc. The winners receive a gold statuette known as the Clio award. Clio is the Greek muse of history (a muse is one of nine sister goddesses regarded in Greek mythology as inspirers of learning and the arts, especially poetry and music) and is associated with fame and glory.

American Motors: reference to American Motors Corporation, an automobile company established in 1954 from the merger of two relatively small car manufacturers, Hudson Motor Car Company and Nash-Kelvinator Corporation. After its formation, the company consolidated their manufacturing facilities. They also ended production on unpopular models and introduced a "completely new" line of cars (called Ramblers) at the end of 1956. It wasn't until 1958, however, that the company became profitable in sales. In the following years, American Motors grew and the Rambler line became popular. In 1970 they introduced the Hornet, a compact car for the low-priced market. The company produced few new models toward the end of the 1970s, and short of cash, it was purchased in the late 1980s by the Chrysler Corporation, a rival automobile manufacturer. *See also* **Hornet.**

AMF: reference to the AMF Company, an American company incorporated in 1900 for manufacturing machinery for the tobacco industry, originally known as the American Machine and Foundry Company. By the mid-1900s the company had expanded its operations and was producing items for use in sports and leisure and by 1971, having moved out of the foundry business, changed its name to the AMF Company. It came to specialize solely in bowling equipment and by the year 2000 it had become an international manufacturer and marketer of bowling equipment in addition to owning and operating 528 bowling centers throughout the world.

AMP: reference to AMP Inc., an American manufacturing company founded in 1941 as Aircraft-Marine Products, Inc. When first established, the company specialized in the production of electrical connections for aircraft and boat manufacturers. In 1956 the company changed its name to AMP Inc., and by this time had expanded its product line to include a variety of different electrical and electronic components. By the 1990s it had become a world leader in production of electrical and electronic connection devices serving a variety of industries, including aerospace, automotive, computer networking, power utilities and telecommunications.

Anacin: a trademark for an over-the-counter drug in tablet form, containing aspirin, advertised to relieve pain (especially headaches).

ATO: the former name of Figgie International, Inc., an American manufacturer of such products as fire protection and safety equipment, machinery, and sports equipment. The company was incorporated in 1963 as the Automatic Sprinkler Corporation of America by management consultant Harry Figgie, Jr. Subsequently, with many acquisitions (fifty-three in all) the company became a large and diversified corporation. In 1969, its name was changed to ATO, Inc., to coincide with the company's designation on the New York Stock Exchange. (Stock exchanges use symbols in place of the full names of companies to make it quicker and easier to trade the companies' stocks. However, due to the fact that there are so many companies and symbols, the stock exchange letters don't always perfectly coincide with the company name. For instance the company AT&T is "T" on the stock exchange.) This name change was also intended to remove the impression that the company only produced one product, automatic sprinklers. The company later changed its name to Figgie International, Inc.

Avis: a United States-based automobile rental service that started in 1946 by Warren Avis. The first Avis rent-a-car office, named Avis Airline Rent-a-Car system, was opened at an airport near Detroit, Michigan in 1946. One of Avis' key competitors was the number one automobile rental service named Hertz. To compete against Hertz, Avis

started a marketing campaign, positioning themselves second to Hertz, as "Avis is only No. 2 in rent-a-cars, so why go with us? We try harder." This successful advertising campaign brought Avis fame and they expanded from a national company to one with branch offices around the world.

Avon calling: reference to the familiar greeting of an Avon lady (a saleswoman) from Avon Products, Inc., an American company which manufactures cosmetics, toiletries and fragrances. Established in the late 1800s, Avon became one of the world's largest door-to-door sales activities, through a network of professional neighborhood saleswomen. Referred to as the "Avon ladies," they were well known for their slogan "Avon calling!" announced after ringing the customer's doorbell. Avon's major television advertising campaign used an unforgettable ding-dong chime (approximating the typical doorbell of a home) along with the "Avon calling" slogan ("Ding-dong, Avon calling").

BabyScott: a brand name for a disposable baby's diaper introduced by the Scott Paper Company in the late 1960s. The diaper, which included a flushable diaper pad in a reusable plastic panty, never obtained success and was discontinued in 1971.

Ballantine: a trademark for a brand of beer produced by the Falstaff Brewing Corporation in America. Ballantine's beer and ale were the subject of an advertising campaign which helped to popularize it as a leading brand in America. Slogans such as "cold-brewed," "America's largest-selling ale" and "the perfect glass" were used to popularize the product.

barter deal: reference to an advertiser making arrangements to trade something (such as a product or service) for advertising time, as opposed to paying for it with money. For example, a local car dealer could give a new car to a radio station in exchange for free advertising. The radio station could then use this car for its employees or as a contest prize, etc., without having to buy it.

Bayer: the name of a well-known brand of aspirin made and promoted by the Sterling Drug Company. Advertisements of Bayer (such as, "pure aspirin, not part aspirin," "nine out of ten doctors recommend Bayer") made it one of the best-known aspirins in the twentieth century.

Beck s beer: a German beer produced by Brauerei (Brewery) Beck & Co., a brewery founded in the late 1800s in Bremen, a city in the upper northwest corner of Germany. Beck's beer became quite popular in Germany and was soon being exported to other countries, such as America, where it became a best-selling imported brand.

Beetle: another name for a German automobile built by Volkswagen. It was dubbed the Beetle due to its short, rounded shape. First produced in the 1940s, it became one of the most popular cars ever built. (*Volkswagen* means the people's car, from *volk,* "people" and *wagen,* "auto.") It was characterized by a compact round design, used very little gas and earned a reputation for economy and reliability. It became the best-selling imported car in America and eventually sold millions and was still being made at the end of the twentieth century.

B. F. Goodrich: reference to the B. F. Goodrich Company, a major US manufacturer of plastics, chemicals, adhesives, roofing products, various aircraft parts (including instruments, wheels and brakes), as well as other products. Goodrich's full name was Benjamin Franklin (B. F.) Goodrich. The company became known for many technological "firsts," including the first automobile tires in the US, the first cotton-covered rubber fire hose, the first commercial tubeless tire, the first to make radial tires in the United States, the first spacesuits for US astronauts, and the development

of synthetic rubber. In the late 1980s the Goodrich Company sold its tire interests to another tire manufacturer (which continued to use the Goodrich name on its tires) and concentrated on chemical and plastic production.

Big Agency in the Sky: a humorous reference to a type of paradise or heaven suitable for those who have passed away and, in this case, those associated with an advertising agency.

Bold: a trademark for a laundry detergent, produced by Procter & Gamble (a major American manufacturer of cleansers, soaps and other various household products). Bold was introduced in 1965 to compete with their earlier brands Tide and Cheer. With Tide advertised as the brand that "makes clothes white," Cheer as making clothes "whiter than white," Bold was promoted as the brand that made clothes "bright." It replaced Cheer as America's number two brand directly behind Tide.

Bounty: a trademark for a brand of paper towel first introduced in the United States in the 1960s by Procter & Gamble (a major American manufacturer of cleansers, soaps and other various household products) when they extended their line of products to include paper goods. Procter & Gamble's national advertising campaign and slogans, such as "the quicker picker upper" made Bounty into a leading brand name.

Bristol-Myers Company: an American company that manufactures and sells drugs, medicines and healthcare products. Established in 1898, the company expanded to become one of the largest pharmaceutical enterprises in the world. During the late 1960s, the company introduced a string of new products such as Resolve pain reliever and Fact toothpaste that were similar to other products currently on the market. Despite spending millions of dollars on promotion, these products were unsuccessful against the already established competition.

Charmin: a brand of bathroom tissue originally manufactured in the United States in 1892 by the Charmin Paper Company, later purchased by Procter & Gamble (a major American manufacturer of cleansers, soaps and other various household products). In the early 1960s Procter & Gamble developed a technique that enabled them to make a one-layer tissue comparable in strength and softness to other brands using two sheets and applied this to Charmin. From 1964 to 1985 advertising for the brand revolved around the fictional character, Mr. Whipple, a worried grocery clerk who admonished people who were squeezing the tissue because it was so soft, yet could not resist doing so himself. The line "Please don't squeeze the Charmin" became part of advertising history and Charmin became America's leading brand of bathroom tissue. Mr. Whipple returned in the 1990s as part of an anniversary promotion of the Charmin brand.

Cheer: a trademark for a laundry detergent, produced by Procter & Gamble (a major American manufacturer of cleansers, soaps and other various household products). Cheer was introduced in 1950 to compete with their earlier brand Tide, which had become America's leading laundry soap. With Tide advertised as the brand that "makes clothes white," Cheer was promoted as making clothes "whiter than white." It became America's number two brand directly behind Tide.

Chiffon: a brand of soft margarine made by Anderson, Clayton & Company. It has been a number one selling brand of soft margarine and was well known for its advertising slogan, "It's not nice to fool Mother Nature!" The slogan alludes to the fact that one cannot tell the difference between Chiffon margarine and real butter.

Clio: *see* **American Festival.**

Coke: a trademark for a cola-flavored soft drink made by the Coca-Cola Company.

cold-brewed: brewed using a yeast which ferments at cold temperatures. In brewing beer one uses yeast as a fermenting agent to break down sugar to create alcohol. There are many methods used to carry out this process, one of which works at colder temperatures. Generally carried out at temperatures above 50–55 degrees Fahrenheit (10–12.7 degrees Celsius), the cool ferment is often followed by a long and colder aging period at temperatures as low as 32 degrees Fahrenheit (0 degrees Celsius). This method originated with the Germans, as during the spring and summer months, they would store their beers in ice-cold caves in the Alps. This resulted in lager beer (from the German word *lagern,* "to store") that is smoother and drier than ale beer which is more assertive tasting and brewed at warmer temperatures.

Contac: a trademark for an over-the-counter drug used as a multisymptom cold-relief medicine and in the treatment of hay fever. First introduced in the United States in 1960, the drug later became one of the world's best-selling cold remedies. In the 1980s, Contac Severe Cold Formula was introduced.

Corfam: a trademark for a synthetic material developed in the 1960s and used in the manufacture of shoes, belts, handbags, etc. Produced by E. I. du Pont de Nemours & Company (a large American manufacturer of chemical, plastic and synthetic products), Corfam was similar to leather but had many advantages. It was lighter, more flexible, required no polishing and "breathed" easily, meaning moisture and air could travel through it. However it did not stretch or conform to the foot as leather did. Its manufacturing expenses also increased beyond expectancy and production ceased in 1971.

Corn Products Company: the former name of CPC International, Inc., a major American food manufacturer. Originally established as a corn refining operation in the early 1900s, the company expanded its size and product variety, producing such things as mayonnaise, bread spreads, cheese, bakery products, pasta, syrups and desserts. In the 1960s, its name was changed to CPC International, Inc., to de-emphasize their corn refining operations.

cover all bets: to provide for all eventualities or possibilities. The term comes from the world of gambling where covering all bets means to bet in such a way as to minimize losses. Example: Betting on three horses instead of just one, knowing that if the one horse loses one has a good chance of the other two winning, thus covering all bets.

CPC: abbreviation for Corn Products Company.

Crest: a trademark for a brand of toothpaste made by the Procter & Gamble Company (a major American manufacturer of cleansers, soaps and other various household products). Introduced in 1955, Crest became a leader in the toothpaste market. It was positioned as a scientific breakthrough as years of meticulous research experiments proved the toothpaste reduced tooth decay. In 1960, Procter & Gamble won the endorsement of the American Dental Association (ADA) for Crest toothpaste and used this heavily in their advertising. Other brands then attempted to get ADA acceptance, and though some did, their tests were inconclusive and they were not allowed to advertise the endorsement. Crest subsequently became the largest selling brand of toothpaste in the United States.

Daniel Starch & Staff: a marketing research company established in the mid-1920s by Daniel Starch (1883–1979), a pioneer in marketing research and popular author on

the subject. The company conducted research studies on commercials, consumer and business publications and newspapers, etc., and published the findings in what was called a "Starch Report." The report gave results on advertising effectiveness and readership; for example, on an advertisement in a publication, it reported the percentage of readers who viewed the ad, the percentage of readers that read half or more of the ad, the percentage of readers that associated the ad with the advertiser, etc. In the late twentieth century, after several mergers, the company became Roper Starch Worldwide, Inc., and continued in the marketing research field.

Disney, Walt: Walter Elias Disney (1901–1966), American cartoon artist and one of the most famous motion-picture producers in history. Born in Chicago, he began producing animated motion pictures in Hollywood including the first animated cartoon with sound, *Steamboat Willy,* which introduced a talking Mickey Mouse. Walt Disney was one of the major producers for motion-picture theaters and television. He created such fantasy films as: *Snow White and the Seven Dwarfs* (1937), *Pinocchio* (1940), *Fantasia* (1940), *Dumbo* (1941), *Bambi* (1942), *Cinderella* (1950), *Alice in Wonderland* (1951), *Peter Pan* (1953), *Lady and the Tramp* (1955), *Sleeping Beauty* (1959), *101 Dalmatians* (1961) and many others. Disney also produced children's books as well as comic strips featuring such characters as Donald Duck and Pluto the dog. In 1955 Walt Disney Productions Company opened a huge amusement park, called Disneyland in Anaheim, California featuring imaginative rides and scenery and historical reconstructions. Disney received 26 Academy Awards for his creations.

Dissolve: an aspirin developed in 1972 by Bristol-Myers Company which manufactures and sells drugs, medicines and healthcare products. The aspirin was designed to be dissolved in liquid before being consumed and aimed at those who had difficulty swallowing pills. Dissolve attempted to unseat Bayer by stressing the soluble qualities of Dissolve such as, "Now, a better way to take your aspirin." However, the product was not successful and was taken off the market.

Dristan: a trademark for an over-the-counter drug used as a multisymptom cold-relief medicine. First introduced in the United States in 1957, the product became one of the top selling over-the-counter brands.

Dubonnet: a trademark of a brand of wine which is either red or white, and sweet, used chiefly as an aperitif. (An aperitif is an alcoholic drink taken before a meal and designed to stimulate the appetite.)

du Pont: E. I. du Pont de Nemours & Company, a large American manufacturer of chemical, plastic and synthetic products, having plants and subsidiaries around the world. Founded in 1802 by French-born American industrialist Éleuthère Irénée du Pont (1771–1834), and managed by the du Pont family well into the twentieth century, the company was originally established to produce gunpowder. Over the years the company expanded into such diverse products as dyes, paints, acids, rubbers and plastics, photographic film and agricultural chemicals. It also invented nylon, developed rayon and other synthetic fibers.

Eastern Air Lines: a well-known international airmail and passenger airline company. Formed in 1927 and originally named Pitcairn Aviation, Inc., its name was later changed to Eastern Air Transport and, in the 1930s, it controlled the lucrative route from the heavily populated northeastern region of the US to Florida. Reaching its height after World War II, Eastern's competitive position deteriorated as new airlines began flying the same routes and a series of strikes weakened the company. By the

early 1990s and heavily in debt, what had once been the most profitable air carrier, sold off what assets it did have and ceased to exist.

Edsel: a line of cars produced between 1957 and 1959 by the Ford Motor Company, an American automobile company founded in 1903. Named after Edsel Ford (1893–1943), son of the company's founder, Henry Ford (1863–1947), the initial Edsel line featured eighteen different models. The cars, which were in the upper-medium price range, were large, had modern features and a unique design and style. Despite heavy promotion before and after its release, the car was a failure on the market, producing very few sales. The unsuccessful Edsel line was discontinued in 1959 and cost the company hundreds of millions of dollars in losses.

ESB: reference to the ESB Ray-O-Vac Corporation, an American manufacturer of large storage batteries (rechargeable batteries, such as those used in automobiles, golf carts, submarines, etc.). This company was established in 1888 as The Electric Storage Battery Company. It expanded into the twentieth century and in the 1930s became the world's largest maker of storage batteries. It later changed its name to the ESB Ray-O-Vac Corporation and in the 1970s was taken over by another company.

everyone into the pool: reference to the action at a party where someone exclaims, "everyone into the pool," and all partygoers (sometimes with abandon) dive into the swimming pool. Used figuratively to mean everyone "jumping in" and doing the same action as others.

Excedrin: a trademark for an over-the-counter drug containing aspirin advertised to relieve headaches. First introduced in 1960, Excedrin received several advertising campaigns including those of 1968 and 1969, starring American television actor David Janssen, who in the popular TV series, *The Fugitive* (1963–1967), played a doctor wrongly convicted of murdering his wife.

Fact: a brand of toothpaste formerly made by the American Bristol-Myers Company. Introduced in the late 1960s, Fact was heavily promoted as the toothpaste that "works harder to prevent cavities" and carried the seal of the American Dental Association. Although millions were spent to advertise the product, it was unsuccessful in the market against such brands as Crest toothpaste and was finally taken off.

F.D.S.: a trademark and abbreviation for Feminine Deodorant Spray, a feminine hygiene spray deodorant introduced in the late 1960s by the American Alberto-Culver Company (a worldwide manufacturer of personal care and food products). The F.D.S. line of feminine hygiene sprays became a leading brand in the field.

FMC: reference to the FMC Corporation, an American manufacturer of a variety of products, including industrial and specialty chemicals, machinery and equipment, food and drug additives and pesticides. Established in the late 1920s, the company originally made simple food production equipment and was called the Food Machinery Corporation. The company broadened its business in the 1930s and 1940s by procuring a pump manufacturing company and two chemical companies. With these new operations, it changed its name to the Food Machinery and Chemical Corporation, and in 1961 shortened this to the FMC Corporation. The company continued to expand its operations; however, in the early 1970s it eliminated twenty product lines that had proved unprofitable.

Ford: reference to the Ford Motor Company, an American automobile company founded in 1903 by automobile manufacturer Henry Ford (1863–1947). The company assembled

its first automobile in 1903 and in 1908 introduced the inexpensive assembly line built "Model T" Ford. The car was instantly successful and by 1914 more than 500,000 Model Ts were in use around the world. In the 1920s, Ford acquired the automobile manufacturer Lincoln Motor Company and began producing luxury automobiles under the Lincoln name. Ford also soon introduced a medium-priced automobile, the Mercury, to fill the hole between the Ford and Lincoln models. In the 1950s, the Ford company sought to fill another gap in their lineup by introducing the "Edsel" (named in honor of Henry Ford's only son). The new car was aimed at the upper-level of the medium price class and was intended to compete with other brands in this range. However, it was released during a countrywide recession and despite heavy promotion before and after its release, the car failed on the market and was discontinued in 1959, costing the company hundreds of millions in losses. *See also* **Edsel**.

Fortune: an American business/finance magazine. Originally the magazine was aimed at the upper managerial level of society and was published monthly. It was expensively priced at $1.00 when first introduced during the Depression era (a period of economic crisis and lowered business activity occurring in the United States from 1929 through most of the 1930s). With a large format of 11¼" by 14" and two pounds of quality paper, it had to be gathered and sewn by hand. *Fortune* is now published every two weeks and offers long articles on a variety of subjects including companies, banks, statistics, markets, personal finance, etc. In 1955 the magazine featured a list of the 500 largest corporations in the United States which has become known as "the Fortune 500."

F.W.M.T.S.: abbreviation of "forgotten what made them successful."

Gablinger s beer: a diet beer introduced in 1967 by Rheingold Breweries, Inc., of New York, USA. Gablinger's beer was the first reduced-calorie beer (called light beer) and was named after the Swiss doctor who had created it. Marketed as a diet aid, its commercials featured overweight people and had the basic message of losing weight by drinking Gablinger's. The beer however did not sell well and was discontinued shortly after its introduction.

GAF: reference to the GAF Corporation, an American company that manufactures building materials. GAF was established in 1929 as American I.G. Chemical Corp and produced a variety of different products, including solvents, lacquers, pharmaceuticals, photographic products, synthetic silk and other fabrics and an array of chemicals. (*I.G.* is an abbreviation for the German word *Interessengemeinschaft* meaning a group of several independent companies who get together in order to care for or forward a common interest.) In 1939 it merged with another company, General Aniline Works, and changed its name to General Aniline & Film Corp (aniline is a substance used to make plastics, dyes, drugs, explosives, and photographic and rubber chemicals). By 1968 it had adopted the name GAF and was producing a wide range of items including roofing materials and other related products. By the end of the 1990s, however, it had moved solely into the building field and had become the largest manufacturer of residential and commercial roofing products in the US.

G.E.: abbreviation for General Electric.

General Electric: one of the largest companies in the world, it manufactures light bulbs, home appliances, equipment for hospitals, factories, power plants and steel mills. The company began in 1892 and by the turn of the century was producing everything for the electrification of the United States: generators, electric motors, electric light bulbs

and electric locomotives. The company expanded throughout the twentieth century and is responsible for thousands of new products, has over 50,000 patents and employs over 400,000 personnel.

General Foods: one of the leading processors of packaged grocery products in the world. Originally established in the 1920s, the company was incorporated as the Postum Cereal Company. However, in 1929, after assimilating a number of smaller companies, the company changed its name to General Foods. In 1968 the company also entered the fast-food market by purchasing Burger Chef, a successful chain of restaurants. But within three years the Burger Chef chain had collapsed. With more than 56,000 employees working in more than 100 locations in the United States and some 20 other countries, General Foods became a leader in its field. It is well known for such trade names as Maxwell House Coffee, Jell-O, Birds Eye frozen foods, Kool-Aid, Post cereals, Sanka, etc.

Goodrich: same as B. F. Goodrich.

Goodyear: reference to the Goodyear Tire and Rubber Company, a major US manufacturer of tires for cars, trucks, buses, aircraft, etc. Founded in 1898 as a rubber company, it was named in honor of Charles Goodyear (1800–1860), an American inventor who, by spilling a mixture of rubber and sulfur onto a hot stove, discovered a process for making rubber strong, elastic and resistant to both heat and cold. The Goodyear Company's business was mostly devoted to producing tires for passenger vehicles and through its marketing, such as the Goodyear blimp, became the leader in the US tire market for many decades.

Great American soups: a brand name for a line of soups produced by Heinz (a major United States manufacturer of processed foods). In the early 1970s the soup was promoted in an award-winning commercial, in which American dancer Ann Miller (1923–) promises her husband something a little different for dinner. She magically transforms her kitchen into an elaborate stage and, accompanied by a twenty-four piece orchestra, dozens of sequined chorus girls and a backdrop of moving water in the tradition of a 1937 grand Hollywood musical, she dances and sings atop an eight-foot high Great American soup can. The extravaganza took four weeks to shoot and cost over $150,000 to produce.

Haloid Company: the former name of Haloid Xerox.

Haloid Xerox: an American company that produced xerographic photocopy machines and related products. Originally known as the Haloid Company, it was established in 1906 as a photography-paper business. In 1949, the company entered the field of xerography and produced machines that would make xerographic copies. The machines were successful and in 1958 the company was renamed Haloid Xerox to reflect the belief that its future lay in xerography. The name was changed again in the early 1960s to the Xerox Corporation and it soon ranked amongst the one hundred largest corporations in the United States.

Handy Andy: a liquid detergent for general household cleaning, produced by the American corporation, Lever Brothers Company. Introduced in the late 1950s, it was promoted as best for household cleaning and was in competition with such other brands as "Mr. Clean" and "New Ajax all-purpose cleaner." It did not sell well in the U.S. market, was discontinued and became available only in some non-U.S. countries such as Australia, South Africa, etc.

Harvard (University): the oldest university in the United States, located in Cambridge, Massachusetts. Established in 1636, Harvard grew to be one of the most prestigious universities in America. It became a major center for research and education, offering a wide variety of subjects, including law, medicine, business, government, religion, arts and sciences. It also housed a library that expanded into being one of the largest and most comprehensive university libraries in the world.

Harvard Business Review: a bimonthly business publication, by the Harvard Business School, for professional managers. A program in executive education, *Harvard Business Review* states their intention as follows: "The aims of HBR are to develop a keener, more responsible sense of leadership among policymaking businessmen, both in the United States and abroad; to increase businessmen's understanding of the concepts and methods of professional management; and to keep them abreast of new ideas and approaches to the art of management. Thus HBR seeks to educate business leaders; it is an educational arm of the Harvard Business School."

Hathaway shirts: shirts produced by the C. F. Hathaway Company of Maine, USA, created in 1837. Hathaway shirts have been known for their traditional, classic style for over 155 years. The shirts were made known to many through the famous "The man in the Hathaway shirt" ads. Originally the ad featured a distinguished looking gentleman in a Hathaway shirt wearing a black patch over one eye. This was accompanied by the headline: "The Man in the Hathaway Shirt." Following the great success of this ad (sales tripled), variations of the ad were run, representing various notable and popular men from the business, entertainment, sports and political arenas, wearing a Hathaway shirt.

Hershey: Milton Hershey (1857–1945), American businessman who in 1903 founded the Hershey chocolate factory. So popular was his chocolate that the company rapidly expanded despite Hershey's refusal to advertise. (The company began advertising after World War II.) In addition to his company, the town of Hershey, Pennsylvania grew up under Milton Hershey's direction. His personal fortune increased enormously as the Hershey Chocolate Company developed rapidly into the world's largest manufacturer of chocolate products.

Hertz: a United States automobile rental service that started in 1923, named after John Hertz, an early owner. The company expanded not only in its US based offices, but established branch offices in many parts of the world, becoming an international organization and number one in car rental services. It offers various current model cars on a short-term rental basis — daily, weekly or monthly in downtown and suburban business areas as well as at airports and resort locales.

Honeywell: reference to Honeywell, Inc., a major American corporation which produces a variety of electronic equipment, including computers, thermostats, systems for automated industries, and guidance systems for planes and missiles. Honeywell entered the computer business in the mid-1950s and in 1970 greatly expanded its computer production by buying General Electric's computer operation. It competed against the leading computer company, IBM, by positioning Honeywell as the logical alternative. The company promoted itself as "The Other Computer Company" and IBM as "Mr. Big." In 1991 Honeywell went out of the computer business and used its digital computer technology in its traditional field of activity of automated controls.

Hornet: a low-priced, compact automobile introduced by American Motors Corporation in the 1970s. The car was an attempt by AMC to meld the frugal image of its former

car the Rambler with an image of luxury into a new type of compact car. The lowest-priced models of the Hornet came with only the basics, such as rubber floor mats (instead of carpeting) and vinyl bench seats. However, the Hornet had a long and varied list of options that could be purchased, including such things as power steering, reclining seats and an electric clock. Advertisements emphasized the varied options of the Hornet, and it was promoted as "the little rich car." The range of options was rare for the time, at least in the low-priced field, and a customer could tailor the car to his or her own taste.

house agency: an advertising agency that operates in-house, meaning owned or controlled by the advertiser and for its own use. It is established primarily to save money for the company and give it full control over its advertising which would not be the case with the hiring of an outside firm which hires itself out to many different clients. A house agency's functions include the creation, planning and production of ads and commercials, as well as research services and media selection and purchase.

IBM: abbreviation for International Business Machines.

Industrial Marketing: an American trade magazine on business marketing founded in 1916 and later renamed *Advertising Age's Business Marketing*. Toward the end of the twentieth century it had a circulation of close to 50,000 and covered such topics as marketing news, strategies and tactics, various problems encountered in advertising, public relations and new promotional ideas.

International Business Machines: one of the world's largest companies and in the 1970s was a leader in the manufacturing of such items as computers, typewriters, dictating equipment, electronic cash registers and photocopying machines.

Janssen, David: (1939–1980) American leading man of the 1960s and 1970s. He appeared in numerous television series such as *Richard Diamond, Private Detective* (1957–1960) and the popular TV series, *The Fugitive* (1963–1967), in which he played a doctor wrongly convicted of murdering his wife. In 1968 and 1969, Janssen did several advertisements to promote the drug Excedrin, comparing its effectiveness against aspirin.

kiss of the hops: reference to a phrase used in an advertising campaign for Schlitz beer, produced by the Schlitz Brewing Company of Milwaukee, Wisconsin. The beer was one of the top-ranking beers throughout the mid-1900s and was promoted with the phrase "Brewed with just a kiss of the hops. None of the harsh bitterness." The phrase *kiss of the hops* appeared in a Schlitz advertising jingle, "Let's get together with a glass of Schlitz, a friendly glass of Schlitz. Brewed with pride and just a kiss of the hops . . ." (A *kiss* is a slight touch of something and *hop* is the name of several species of vine, one of which is grown for its papery, yellowish-green flowers used in brewing beer and which gives it its distinctive bitter taste.)

Kleenex: a brand name for a soft, disposable tissue paper, used as a handkerchief, etc. Introduced in 1924, it was first promoted as a "cold cream towel" to remove cosmetics, but consumers used it as a disposable handkerchief. In the 1930s, when its manufacturer, Kimberly-Clark, advertised it as that, sales doubled.

Kodak: reference to the Eastman Kodak Company, a major American manufacturer of photographic equipment and supplies. The company was founded in the late 1800s by American inventor and businessman, George Eastman (1854–1932). (The name Kodak was Eastman's invention based on experimenting with words that began and ended with

his favorite letter "K.") The company became an innovator in the field of photography; for example, in 1888 it introduced the first portable camera which included a roll of film that would take 100 pictures. After purchasing the camera and taking the pictures, a person could send the camera to the company where the film was developed and the camera sent back fully loaded for another 100 shots. The company continued to introduce new products, including cameras, developing equipment and various films, and expanded throughout the twentieth century to become a successful multinational corporation.

land of the sky blue waters: reference to the phrase used in an advertising campaign for Hamm's beer. Brewed "in the land of sky blue waters" (a reference to the Great Lakes of the US) was promoted by the Hamm's bear, a character whose slapstick antics with his woodland friends were enjoyed for years by Midwest TV audiences. In 1978 he made his first national appearance and in total was featured in more than one hundred commercials that began with the beating of tom-tom drums and the Hamm's jingle: "From the Land of Sky Blue Water/Land of lake and pine."

lead-free gasoline: gasoline that contains no tetraethyl lead, a colorless, oily, water-insoluble, poisonous liquid used in gasoline as an antiknock agent. (An *antiknock agent* is a substance added in fuel to prevent the air-fuel mixture in an engine from burning too quickly or uncontrollably.) Tetraethyl lead proved to be a successful antiknock agent. However, since its discovery, lead from gasoline was found to be harmful to the environment, and as a result of increased public concern in the early 1970s low-lead gasolines were introduced. In 1975 American automobile manufacturers introduced special devices to reduce pollutants in automobile exhaust. These devices required unleaded gasoline to operate. By the early 1990s gasoline manufacturers eliminated lead in most gasoline consumed within the US, with European countries following later.

Lincoln: a line of luxury cars produced by the Ford Motor Company, an American automobile company founded in 1903. In the 1920s, Ford acquired the automobile manufacturer Lincoln Motor Company and began producing luxury automobiles under the Lincoln name. Intended for the higher-priced market, Lincoln manufactured automobiles that were large and luxury-equipped. Many different styles were produced and the Lincoln line of automobiles were still being produced into the twenty-first century.

Lone Ranger: the name of a fictional cowboy hero of American radio, television, films, books and comics. The character wore a white hat and a now famous black eye mask to conceal his true identity and rode a white horse named Silver. The Lone Ranger, who was accompanied by his faithful Indian companion, Tonto, used silver bullets to establish law and order in the Old West. Originally a radio show which ran for 2,956 broadcasts, the Lone Ranger moved into television in the late 1940s and eventually onto the motion-picture screen. The Lone Ranger's popularity was such that the character was also utilized in advertising campaigns. For example, REA Express, Inc., (a US ground and air express service) used the Lone Ranger theme in their promotion, with such slogans as "REA Express Rides Again," and in one instance showing an employee sticking his head out of an airplane cockpit window wearing a cowboy hat.

***Look* (magazine):** a biweekly American picture magazine, introduced in 1937 by American publisher Gardner Cowles (1903–1985) to compete with *Life* magazine. *Look* was printed on cheap, pulp paper and was originally a monthly magazine covering personalities, animals, food, fashions, photo mysteries. As its circulation expanded, the

magazine switched to a biweekly and by the early 1950s was featuring articles on national and world affairs, health, science, fashion, beauty, sports, entertainment, food and home living. At its peak, its circulation reached nearly eight million. The magazine remained in print until 1971 when it ceased publication. It experienced a brief revival in 1979 but was again taken off the market as a failure.

Lowenbrau: a German beer produced by Lowenbrau, a brewery in Munich, Germany. Lowenbrau began exporting its beer in the late 1800s and expanded its distribution to more than one hundred countries worldwide. It also became the largest-selling German beer in the United States. In the 1970s, however, import of the high quality beer from Germany was phased out and an American company (Miller Brewing Company) was licensed to produce "Lowenbrau" in the US.

Mar keting Myopia : an article written in 1960 by Theodore Levitt, who at the time was a lecturer in business administration at the Harvard Business School, and published in the *Harvard Business Review*. The article's main theme was how a company could ensure its continued growth. Levitt stated that where growth is threatened, slowed or stopped, it is not because the market is saturated but because of a failure of top management being too shortsighted (myopia) as regards one product or industry. As an example, he pointed out the once powerful and wealthy railroads did not stop growing and shrink because the need for passenger and freight transportation declined. It was because the railroads assumed they were in only the railroad business and not the transportation business. Thus, they defined their industry wrongly (too narrowly) and not broadly enough to fill the changing needs of their customers. The article expressed the view that companies and industries should be customer oriented and not assume one particular product, which may become obsolete, will always be there and sell well. The article was very successful and was often quoted and the *Harvard Business Review* had sold over 265,000 reprints of it by 1975.

Maytag: a home appliance (washing machines, clothes dryers, etc.) company founded in the United States in 1909 by Frederick Louis Maytag (1857–1937) who, at the time, headed a farm equipment company. In 1907 Maytag developed a hand-driven washing machine and in 1911 a motor-driven version which revolutionized the industry. Maytag became the largest producer of washing machines.

McMahan, Harry: American television consultant and columnist. McMahan established his own commercial film production company and worked with some fifty agencies and more than 200 national, regional and local advertising accounts, pioneering new writing and production techniques. He later established his own offices as a television commercial consultant and drew attention to the commercials that were winning Clio awards (awards presented annually by the advertising industry for achievement in radio and television commercials) for creativity. Out of numerous television classics that won awards in previous years, a large percentage of the agencies had either lost the account or gone out of business, thus pointing out that creativity is not as important as the ability of the advertisement to sell.

media buying service: an agency that specializes in purchasing time or space in advertising and communications media (for example, spots on radio and television or print space in magazines and newspapers), so as to best utilize the advertiser's money and to obtain results with his advertising. For example, should an ad be shown late at night for a special audience or should it be aired during the early evening to hit a broader public, and costing more.

Mennen Co.: an American company founded in 1878 by German pharmacist, Gerhard Mennen. Mennen offered personal care products bearing his name and image as a personal endorsement of their quality. The company introduced the first shaker talcum powder and the first stick deodorant along with a wide variety of other items including shampoos, shaving preparations, skin care products and cosmetics. In 1971 it launched a line of products starting with Protein 21 shampoo. Supported by a $6 million multimedia introductory campaign, the shampoo achieved unprecedented initial market share and strong performance in various markets around the world. However, sales suffered when the product did not meet consumer expectations. Protein 21 shampoo was followed by a line of products including: variations of Protein 21; Protein 21 conditioner and Protein 29 hair spray (for men). The company was later purchased for $670 million by Colgate-Palmolive (a global consumer products company).

Mercury: a line of American cars produced by the Ford Motor Company, an American automobile company founded in 1903. Introduced in the late 1930s, the Mercury (of which there were four initial models), was in the medium price range of the Ford lineup, falling in between the luxury Lincoln and the low price Ford. Upon release, the car became an instant success and more than 70,000 were sold in the first year. The Mercury line continued to be a successful line for many years.

me-too: characterized by the copying, duplicating or imitating of products, policies or methods of a competitor, peer, etc.

Michelob: a trademark of a popular brand of beer introduced in 1876 by United States beer manufacturer, Anheuser-Busch, the world's largest brewer. Michelob was first conceived and produced when the founder of Anheuser-Busch called together his staff and assigned them to brew the finest beer in the world. Up until 1962 the beer was not available in bottles nor cans but only on draft, maintaining its original exclusivity. In the late 60s and early 70s, advertising campaigns positioned Michelob as the first American-made premium beer with slogans such as, "In Beer, Going First Class Is Michelob."

Miles Laboratories: a major American manufacturer of pharmaceutical products. Originally called Dr. Miles' Medical Company, it was founded in 1885 in Indiana, USA, by a doctor named Franklin Miles (1845–1929). In a short time, the company produced a whole line of medical products. In 1922, the name changed to Miles Laboratories and in 1931, after years of experimentation, the company introduced Alka-Seltzer (a pain reliever in tablet form). The drug was heavily advertised and came to be the company's biggest single product. In the 1960s, Miles introduced Alka-Seltzer Plus, an extra-strength version of Alka-Seltzer. Reformulated as Alka-Seltzer Plus Cold Medicine in the mid-1970s, the product eventually overtook its forerunner in sales. In 1977 Miles was taken over by the German chemical and pharmaceutical company Bayer A.G. (A.G. is the abbreviation for *Aktiengesellschaft,* a German word meaning "company.")

Miller, Ann: (1923–) long-legged, American dancer who made her film debut dancing in the 1937 movie *New Faces*. In addition to her motion-picture roles she appeared on Broadway, in nightclubs and on television. In the early 1970s, she danced and sang atop a giant Great American soup can in an elaborate television commercial accompanied by a twenty-four piece orchestra, dozens of chorus girls and a backdrop of moving water in the tradition of a 1937 grand Hollywood musical.

Mobile: a seaport in southwest Alabama in the United States.

Mr. Whipple: *see* **Charmin.**

Namath, Joe: (1943–) one of America's most famous and colorful professional football players. He began his career in 1965 with the New York Jets and led them to an historic victory over the heavily favored Baltimore Colts in Super Bowl III in 1969. He retired in 1978 but went on to become a sports commentator, and appeared in television commercials for various products such as Ovaltine. In 1985 he was voted into the Professional Football Hall of Fame.

National: reference to National Car Rental System, Inc., a United States automobile rental service established in 1947 by twenty-four independent car rental operators who wanted to broaden their market influence by working together. The company expanded internationally to become one of the foremost in the world.

National Cash Register: a company formed in the late 1800s that originally produced one product — cash registers. In the 1950s NCR moved into the computer field and by the late '60s was known as one of the seven dwarfs to huge computer giant, IBM (along with 6 other companies). However, NCR continued to make computers into the 1990s and by the end of the twentieth century, NCR Corporation, as it came to be known, developed and marketed a wide range of computer systems, office automation products, telecommunication services, data warehousing, software and business forms and supplies. Fully 40 percent of all checks issued around the globe were cleared with NCR equipment.

NCR: abbreviation for National Cash Register.

Nestlé: a large multinational food company, founded in Switzerland in the 1800s. Well known for its chocolate products, it has over four hundred manufacturing facilities in five continents. Nestlé produces a wide variety of products besides chocolate including baby foods, cheeses, condensed milk and instant coffees. It also manufactures pharmaceutical products (drugs and medicines) and cosmetics, as well as running restaurants and hotels.

Newsweek: a weekly newsmagazine in the United States started by a former employee of *Time* magazine. The format consists of short articles giving opinions on various subjects such as international affairs, sports, books, movies, science, etc.

New York Times, The: a morning daily newspaper published in New York City. Internationally known, *The New York Times* was established in 1851 as a penny paper and by the early 1990s had a daily circulation of 1.1 million readers and 1.7 million each Sunday. It is known for its editorials and its large Sunday edition which includes the *New York Times* magazine.

NL: reference to NL Industries, Inc., founded in 1891 in Houston, Texas, USA, as National Lead Company. One of America's largest manufacturers of pigments used to brighten paints, plastics, paper, etc., it was originally established as a lead mining company. It expanded to produce a diverse range of products, including chemicals, aluminum products for aircraft, as well as products which control the flow of paints, inks and greases. As its lead operations decreased and the company moved into other fields, it changed its name in 1971 to NL Industries.

noise (level): *noise* is a technical term used in the field of public relations to describe the medley of messages hitting a member of a public besides one's own message.

NVF: reference to the NVF Company, an American manufacturer of a variety of products, including plastic wares, brass and copper items and stainless steel goods. The

company was founded in 1904 as the National Vulcanized Fibre Company. (*Vulcanize* means to treat rubber with sulfur and intense heat so as to make it more elastic, durable and adaptable toward various purposes.) The company changed its name to the NVF Company in 1965 and in addition to its vulcanized rubber production, also made plastic housewares and containers, wood cabinets, tissue paper products, aluminum windows and doors, stainless steel pipe and tubing, and steel strapping.

off-track betting: occurring away from the racetrack. Off-track betting takes place in remote establishments so that participants can wager without the need to travel to the racetrack.

Ogilvy, David: (1911–1999) British advertising executive and founder of the Ogilvy & Mather advertising agency. Known for his emphasis on creative copy and campaign themes, Ogilvy marketed items so as to create product identity with the consumers. For example, he advertised shirts from the C. F. Hathaway Company of Maine, USA, by featuring a distinguished looking gentleman in a Hathaway shirt wearing a black patch over one eye. This was accompanied by the headline: "The Man in the Hathaway Shirt." The advertisements utilizing this character were successful and eventually the "man with the eye patch" alone identified the product. Other products marketed by Ogilvy included Schweppes tonic water and Rolls-Royce automobiles including the famous statement, "at sixty miles an hour the loudest noise in this new Rolls-Royce comes from the electric clock." He also published several best-selling books and delivered widely publicized speeches on advertising. He also predicted the coming of the positioning era in advertising when he stated, "The results of your campaign depend less on how we write your advertising than on how your product is positioned."

Ovaltine: a brand name of a powder composed chiefly of malt extract, milk and eggs, or a drink made from this. Originally a drink marketed by a Swiss doctor and then introduced into the United States in the early 1900s. It was promoted as "The Swiss food drink, now made in the USA" and the drink that "Builds body, brain and nerves." Ovaltine also appeared in television commercials of the 1970s, one of which starred famous American professional football player, Joe Namath.

Pampers: a trademark for disposable diapers. Produced by Procter & Gamble, a major manufacturer of cleansers, soaps and other household products, Pampers appeared on the market in 1966, and was the first disposable diaper.

Pepsi-Cola: a trademark for a popular American soft drink made by PepsiCo, Inc., one of the largest soft drink companies in the world. Pepsi-Cola was created and named by American pharmacist Caleb Bradham in 1898 and by 1909 was being bottled in twenty-four American states. The soft drink's popularity grew and Pepsi-Cola became second in sales to its constant rival, Coca-Cola (Coke), the leading worldwide cola drink.

Piels: a beer brewed by the Piel Brothers Brewing Company of New York, USA. Established in the late 1800s, the company expanded into the twentieth century and its beer was sold in New York and the surrounding areas. One of the slogans used to promote Piels was: "You can't beat the taste of Piels Real Draft." (*Draft* means drawn from or available to be drawn from a cask.)

Pierre, Hans and Yoshio: a phrase used to indicate the ordinary person, people in general or everyone in other countries than the United States. *Pierre* is a very typical French name, *Hans* is a traditional German name and *Yoshio* is a common Japanese name. Pierre, Hans and Yoshio is a variation of the American term, Tom, Dick and Harry which means the ordinary person; people generally; everyone.

point of purchase: the place at which a customer encounters a retail item that he may buy.

PPG: reference to PPG Industries, Inc., an American company founded in 1883 in Pennsylvania, as the Pittsburgh Plate Glass Company. The company was originally established as a manufacturer of plate glass (thick glass made into flat plates and used for windows, mirrors, etc.). It expanded its operations and became a global producer of fiberglass, fabricated glass products, and at the end of the 1900s was the world's largest producer of automotive and industrial coatings. In 1968 in recognition of its growth and diversification it changed its name to PPG Industries, Inc.

Pristeen: a trademark for a feminine hygiene spray deodorant introduced in the 1960s by the American Warner-Lambert Pharmaceutical Company. At the end of the twentieth century, Warner-Lambert was the fastest growing major research-based pharmaceutical company and merged with another industry giant, Pfizer, creating the largest pharmaceutical company in the world in sales.

Procter & Gamble: a major American manufacturer of cleansers, soaps and other various household products. The company was formed in 1837 when soap maker James Gamble (1803–1891) and candle maker William Procter (1801–1884) merged businesses. Among its early products were Ivory Soap in 1879, Crisco shortening (1911), and Tide, the first synthetic laundry detergent (1946). It steadily expanded and came to produce a variety of products, including such well-known detergents as not only Tide, but Bold and Cheer, as well as toothpastes, shampoos, deodorants and paper products. It also introduced the first "soap opera" (the Puddle Family) so called because of the sponsor. Procter & Gamble was also noted for its many advertising campaigns, such as its slogan "99 and 44/100% pure" used to promote Ivory Soap. Procter & Gamble has also successfully named each of its products with its own name, rather than the generic name of the company (their laundry detergent is named "Tide," not "Procter & Gamble laundry detergent").

Protein 21: *see* **Mennen Co.**

Protein 21 Concentrate: a version of Protein 21 shampoo that had less liquid and thus less bulk than Protein 21. *See also* **Mennen Co.**

Protein 21 Conditioner: *see* **Mennen Co.**

Protein 29: *see* **Mennen Co.**

radial-ply: a tire used on motor vehicles. The term "radial-ply" refers to the way the tire is constructed. The main body of a tire is made up of layers of fabric permeated with rubber, one upon the other. These layers are called plies and are inside the tire and not visible. Each one of the layers of fabric has cords or threads running through it. Radial-ply tires have these cords or threads running straight across the tire. (If one walked up to the front of a car and drew a white chalk line right across the front of a tire, that would be the direction the cords ran in a radial-ply tire.) Earlier designs had the cords and threads at other angles rather than straight across the tire. Radial-ply tires were a breakthrough as they provided a smoother ride than other tires and gripped the road better on turns.

Raphael: a trademark for a well-known French aperitif. An aperitif is an alcoholic drink taken before a meal and designed to stimulate the appetite. It has more alcohol than wine and is generally sweeter. Raphael is no longer imported into the United States but is sold in other countries.

RCA: Radio Corporation of America, a large, diversified corporation dealing mainly in electronics and communications. RCA is mainly known to the public for its home entertainment equipment such as radios, stereo equipment, television sets and video equipment. In the 1960s it entered the computer industry but in 1971 withdrew from it after financial losses totaling nearly 250 million dollars.

REA Express, Inc.: formerly, the largest ground and air express service in the United States, transporting packages, money and merchandise. Known as the Railway Express Agency, Inc., in the early part of the twentieth century, the company mainly employed trains for its deliveries. It expanded to include widespread air shipping services and a large fleet of delivery trucks. In 1970 the company changed its name to REA Express, Inc., and launched a marketing campaign that utilized the fictional character, the Lone Ranger, in its commercials, newspapers and magazine advertisements. In one example, the firm's speedy deliveryman suddenly leaps into an office with a package, puts a silver bullet down on the desk and abruptly leaves the startled customers with a "Hi-yo REA! Away!" (mimicking the Lone Ranger's "Hi-ho Silver! Away!"). *See also* **Lone Ranger.**

Reeves, Rosser: (1910–1984) an American advertising executive and chairman of the board for Ted Bates & Company which, under his administration, became one of the world's top five advertising agencies. He was once called the "messiah of the hard sell" for his advertising campaigns for such brand-name products as Wonder Bread, Colgate toothpaste, M&M candies and Anacin. Reeves was also a popular author and in his book, *Reality in Advertising* (1961), he introduced the concept of the unique selling proposition (USP), which he defined in three parts: (a) Each advertisement must make a proposition to the consumer; specifically, it must say to each reader "Buy this product, and you will get this specific benefit." (b) The proposition must be one that the competition either cannot, or does not, offer. It must be unique — either a uniqueness of the brand or a claim not otherwise made in that particular field of advertising. (c) The proposition must be strong enough to move millions (i.e., pull over new customers to your product). He said that most advertising in that day was "the tired art of puffery" with no real message.

Resolve: a brand of pain relief tablets formerly made by the American Bristol-Myers Company. Introduced in the late 1960s, Resolve was dissolved in water to make a fizzy drink and was heavily promoted with the line "In your stomach you know it's right." Although millions were spent to advertise the product, it was unsuccessful against such similar products as the pain reliever Alka-Seltzer and was eventually taken off the market.

Rolls-Royce: reference to Rolls-Royce Limited (a British manufacturer of luxury automobiles), and to the cars they produce. British aviator, motorist and automobile manufacturer Charles Rolls (1877–1910) and British industrialist Henry Royce (1863–1933) founded the company in 1903, and quickly earned a lasting reputation as the leading producers of the highest quality automobiles and high quality airplane engines. Their big, exclusive and expensive cars (about five to ten times as much as the average automobile) were successfully marketed and advertised through a campaign by British advertising executive David Ogilvy. The famous Rolls-Royce badge with two interlocking letter Rs acquired significance as an immediately recognized symbol of quality, evoking ideas of precision, integrity and attention to fine detail. The term *Rolls-Royce* is often used figuratively to refer to anything considered to be of the highest quality.

Rosenfeld, Sirowitz and Lawson: an advertising agency formed in 1970 which in contrast to other agencies at the time, consisted of a small creative team of copywriters, art directors and marketing specialists who worked closely with each client. The agency stressed creativity in their advertising to make the client stand out from the competition and said that accurate positioning is the most important step in effective selling.

Royal Crown: reference to Royal Crown Cola, an American soft drink produced by the Royal Crown Cola Company. Introduced in the 1930s, RC Cola (as it came to be known) competed against the major brands Coca-Cola (Coke) and Pepsi-Cola and through the twentieth century remained a number 3 seller in comparison to them. During the 1940s an advertising campaign was launched nationwide to show that Royal Crown Cola was the unquestioned winner in independent, certified taste tests. Thus the slogan "Best By Taste Test" came into being. During this same period the company began wide use of national newspaper advertising. In the early '60s Royal Crown successfully introduced the diet cola, Diet Rite, which expanded their product line. During the 1970s and '80s Royal Crown expanded into other fields such as home décor and fruit juices but has remained primarily a soft drink company.

Schaefer: a beer brewed by the Schaefer, F. & M., Brewing Company of New York, USA. The "F. & M." stands for Frederick and Maximilian, the brothers who immigrated to the United States in the late 1830s and founded Schaefer in 1842. They began making a lager beer, which, although popular in Germany, was unheard of in the United States. Their company expanded throughout the nineteenth and into the late twentieth century with the beer being promoted as "Schaefer is the one beer to have when you're having more than one." In 1981 Schaefer Brewing Company was purchased by another brewery; however, Schaefer beer was still being sold under its own name at the end of the twentieth century.

Schweppes: a trademark for a carbonated mineral water first introduced in 1783 in London, England, by Jacob Schweppe, a German-born Swiss jeweler and amateur scientist who invented a special carbonation process. The drink was popular throughout the 1800s, and in the mid-1900s was introduced in the United States by Commander Edward Whitehead, chairman of Schweppes, USA. Commander Whitehead was a colorful, somewhat eccentric character, and was made the model and symbol for Schweppes in America. The drink became popular and the American public came to identify Whitehead so closely with Schweppes that he was thought to have invented it.

Scientific Data Systems: an American computer company, first established in 1962. The company supplied equipment to military contractors and to people in the service fields. After the first and second year of business they were successful and making a profit. In 1969 the company was purchased by the Xerox Corporation for about one billion in stock and renamed Xerox Data Systems. However, in the mid-1970s, after a general slump in the computer market, they went out of business.

SCM: reference to the SCM Corporation, a large American manufacturer of a variety of products, including typewriters, chemicals and food. The company was originally formed in 1903 as the L. C. Smith & Bros. Typewriter Company in Syracuse, New York, USA. In the mid-1920s, it merged with the Corona Typewriter Company and became Smith-Corona, Inc., producing both office and portable typewriters. It pioneered several innovations, including the first portable electric typewriter, and went into the calculator business in 1958 when it merged with a company known as Marchant Calculators, Inc.

It changed its name to Smith-Corona Marchant, Inc., and in the early 1960s changed again to the SCM Corporation.

Scott: reference to the Scott Paper Company, a major American consumer products company that sells a wide array of home and commercial paper products including paper towels, paper napkins, facial and toilet tissues, baby wipes, etc. The company was founded in 1879 and originally produced "coarse" paper goods, such as paper bags and wrapping paper. With the advent of home plumbing in the late 1800s, the Scott Paper Company began producing toilet tissue. Expansion continued and in 1907 the paper towel was introduced. The company established itself as the largest tissue manufacturer in the world and at its peak controlled about 50 percent of the home tissue market. Through the mid-twentieth century the company came out with more and more paper products, many of them containing the Scott brand name, such as Scottkins (napkins), ScotTowels (paper towels), etc. However, with more and more competitors entering the field, Scott's share of the home tissue market dropped to 25 percent. The company diversified and purchased numerous other entities to add to its operations and in the mid-1990s it merged with another paper products company, the Kimberly-Clark Corporation.

Scotties: a brand name for a facial tissue produced by the Scott Paper Company.

ScotTissue: a brand name for a bathroom tissue (toilet paper) produced by the Scott Paper Company.

Scottkins: a brand name for a napkin produced by the Scott Paper Company.

ScotTowels: a brand name for a paper towel produced by the Scott Paper Company. (A paper towel is an absorbent paper used for wiping and drying something, such as wet hands, spills, windows, etc.) ScotTowels was first introduced on the market in 1931 and was the world's first paper towel on a roll.

Seven-Up (7-UP): a brand name for a popular American soft drink with a lemon-lime flavor in a carbonated base. Introduced in the late 1920s, 7-UP has been positioned many different ways throughout its time on the market. For example, it was promoted with a "Wet and Wild" campaign and most successfully as the "Un-Cola," competing against one of America's leading soft drinks, Coca-Cola, and other cola companies. The origin of its name is unknown, but is thought to refer to the drink being a blend of seven flavors. It has endured in the top ten soft drinks for over fifty years.

Singer: reference to the Singer Company, a major American corporation which grew out of a sewing machine business established in the mid-1800s. The company was originally run by the inventor of the first practical sewing machine for domestic use, Isaac Singer (1811–1875). It soon expanded to be the largest sewing machine maker in the world. In the 1960s, Singer embarked on a strategy to diversify, buying twenty-two different manufacturing firms with products ranging from household appliances to defense systems. This proved unsuccessful, however, and the company soon began eliminating many of its new operations. It also eventually abandoned the sewing machine business, once its most remunerative operation, and continued in the electronics and defense systems fields.

Smucker s: reference to the J. M. Smucker Company, a leading American producer and marketer of jams, jellies and preserves. The company was founded in 1897 by farmer and businessman Jerome Monroe Smucker (1858–1948) and expanded rapidly in the twentieth century. First producing products such as butter and apple butter, the

family run company developed a large line of different jellies and preserves. Company sales continued to grow and in the 1960s their advertising agency formulated the slogan "With a name like Smucker's, it has to be *good.*" Although family members did not initially like the thought of making fun of their own name, the campaign proved highly successful. Smucker's sales doubled within a few years and the slogan continued to be used for many decades.

Sperry Rand: reference to the Sperry Rand Corporation, an American computer company formed in the 1950s from the merger of two manufacturers, the Sperry Corporation and Remington Rand. Sperry was a producer of aircraft instruments and Remington Rand made business equipment and typewriters. Remington also owned the Eckert-Mauchly Corporation, a company founded by the developers of the first electronic computer. The newly formed Sperry Rand expanded and soon became one of the computer industry's leading companies. Later the company was renamed "Unisys" from United Information Systems and was still operating in the late twentieth century.

Sports Illustrated: a weekly sports magazine launched in 1954 by American editor and publisher Henry Luce. Its circulation grew rapidly from the start, reaching 575,000 in its first year, 1,000,000 by 1962 and more than 3,000,000 by the 1990s. Written in a nonnewspaper style, the magazine features sports information and entertainment articles using both text and pictures. For a period of time the magazine positioned itself as the "Third Newsweekly" behind two major newsmagazines, *Time* and *Newsweek.*

Starch: *see* **Daniel Starch & Staff.**

Stassen, Harold Edward: (1907–) American politician, and a persistent but unsuccessful candidate for president of the United States. He was governor of Minnesota from 1938 to 1942 and subsequently ran in seven Republican presidential elections, but lost — 1948, 1952, 1964, 1968, 1972, 1976 and 1980.

Super Bowl: the annual championship football game in the United States between the team with the best record in the National Football Conference and the team with the best record in the American Football Conference, the two conferences which make up the National Football League.

Third Newsweekly : an advertising campaign done for *Sports Illustrated* magazine which positioned it with *Time* and *Newsweek* magazines, the two leading weekly newsmagazines.

Tide: a brand name for laundry detergent produced by the US firm Procter & Gamble (a major manufacturer of cleansers, soaps and other household products). Tide was the first synthetic laundry detergent and was introduced in 1946 after twenty years of research to find a detergent that would pull oil and grease out of clothes and dissolve dirt in the wash water. (Soap before that did not work in hard water where high mineral levels were present and it left rings of dirt in the washtub.) The rapidly expanding sales of Tide paralleled the sale of automatic washing machines during the '50s. Promoted as the brand that "makes clothes white" and as "getting clothes cleaner than any soap!" it revolutionized America's laundry habits and became America's leading laundry detergent.

Time: a weekly newsmagazine in the United States, whose format consists of dozens of short articles giving opinions on various subjects, arranged under departments such as international affairs, business, education, science, medicine, law, religion, sports, books, movies, etc.

Tom, Dick and Harry: *see* **Pierre, Hans and Yoshio.**

Trans Caribbean: reference to Trans Caribbean Airways, an airline established in 1945, providing air transport from New York, USA, to San Juan, Puerto Rico. The airline soon offered flights to other areas of the Caribbean; however, it encountered increased competition with other airlines and went into debt. In 1971, Trans Caribbean merged with American Airlines.

TRW: reference to TRW, Inc., a large American automotive parts manufacturer and a producer of satellites, missiles and computers. The company was founded in 1958 as Thompson-Ramo-Woolridge, from a merger of Thompson Products (an automotive parts manufacturer) and Ramo-Woolridge (an electronic systems company). The company soon changed its name to TRW, Inc. and grew to become a leading producer in the automotive parts market (such as making air bags) as well as a creator of high-tech equipment for spacecraft (notably building a scientific research laboratory for a US space probe to Mars). In the latter half of the twentieth century it also moved into the credit reporting business, providing the credit status of various companies upon request.

tubeless tire: a tire filled with air which does not contain a rubber inner tube. Originally all automobile tires had rubber inner tubes which inflated inside the tire. However, in the late 1940s the tubeless tire was introduced and by the late twentieth century all cars had tubeless tires. Their advantages over the tubed variety were less friction (the tube inside the tire rubbed against it), less blowouts (the tube could be pinched such as when hitting a curb) and lighter weight.

TWA: abbreviation for Trans World Airlines, Inc., a major American passenger-airline company. Founded in 1930, TWA was the first airline to offer scheduled flights from coast to coast in the USA. In 1945 it initiated its first overseas flights, taking passengers from Washington, DC, to Paris, France. Over the next several years TWA broadened its overseas routes and grew to be one of the ten largest air carriers in the world.

Un-Cola: a term coined to market a popular American soft drink, Seven-Up (7-UP). Competing against one of America's leading soft drinks, Coca-Cola (Coke), and other cola companies, 7-UP gained a stable place in the soft drink market as the "Un-Cola." This term was used in many different advertisements and emphasized the brand's characteristics that were opposite to those of cola drinks.

unique selling proposition: a term created by American advertising executive Rosser Reeves in his book *Reality in Advertising* (1961). The term is defined in three parts: (a) Each advertisement must make a proposition to the consumer; specifically, it must say to each reader "Buy this product, and you will get this specific benefit." (b) The proposition must be one that the competition either cannot, or does not, offer. It must be unique — either a uniqueness of the brand or a claim not otherwise made in that particular field of advertising. (c) The proposition must be strong enough to move millions (i.e., pull over new customers to the product).

United Airlines: an American international airline serving all of North America, Asia, Latin America and other areas of the world such as Europe and the Caribbean. It was founded in the late 1920s and by 1961 it had become the largest air carrier (in regard to number of passengers) in the Western world.

USM: reference to the USM Corporation, an American manufacturer of shoemaking equipment and other industrial machines. Founded in 1899 as the United Shoe Machinery Company, by the mid-1900s it had developed and marketed nearly 800

new and improved shoe machines and patented more than 9,000 inventions. In the 1960s, the company expanded its operations and established new divisions to produce such things as paper products, wire brushes, precision metal parts and tools. No longer specializing in shoe machines, it shortened its name to the USM Corporation in 1968. However, in the following years the additional divisions began to fail and in 1976 USM was bought by another American company.

USP: abbreviation for unique selling proposition.

U.S. Rubber: an American company founded in 1892 as a consolidation of footwear manufacturers. In 1905 United States (U.S.) Rubber acquired the Rubber Goods Manufacturing Company and moved into tire production. It first produced bicycle tires and then switched to automobile tires, selling to both the automaker and to the automobile owner directly. Later, in addition to its rubber products the company produced chemicals, textiles, vinyl fabrics and other plastic products and came to rank among the top fifty largest manufacturing corporations in the US. In the 1960s, U.S. Rubber continued to be the leading manufacturer of rubber footwear and rubber-soled footwear, made more bicycle tires than any other company in the United States, and made more fire hoses, golf balls and bathing caps than any other manufacturer in the world. In 1966, as the term *rubber* was no longer descriptive of the company's product diversification or manufacturing capabilities, it changed its name to Uniroyal, a combination of Uni (from United States Rubber) and Royal (a term long used as a brand name of tires and a host of other goods made by the company).

VF: reference to the VF (Vanity Fair) Corporation, a large clothing manufacturer. Established in 1899 as Reading Glove and Mitten Manufacturing Co. in Reading, Pennsylvania, USA, it originally sold knitted and silk gloves. In 1914 the company expanded into the manufacture of silk undergarments for women and produced a line of lingerie under the name "Vanity Fair." The brand name became quite well known and the company soon changed its name to Vanity Fair Silk Mills. Discontinuing its glove production shortly thereafter, the company specialized in lingerie well into the late 1960s. It then diversified into other clothing products and to reflect this expansion into new areas, the name was changed to the VF Corporation. In 1986 VF became the world's largest apparel manufacturer and domestic jean supplier and by 1995 its sales were 5 billion dollars annually.

Volkswagen: the name of a German automobile company as well as the name of one of their cars, also known as the "Beetle" or "Bug." Later the name Volkswagen was also used to refer to other automobiles produced by the company. The car was designed in the 1930s by Ferdinand Porsche who wanted a compact, durable car that most people could afford. The Volkswagen company was established in 1937 by the German government, but later was owned by private citizens. The car was first built in the late 1940s and steadily increased its sales from 6,000 cars in 1947 to 1.6 million in 1968. In 1949, two VW Beetles were sold in the United States, but by 1953, 2,000 were sold. In 1959, when 150,000 were sold, VW of America decided to engage in advertising as American automakers intended to compete with smaller, more economical, but increasingly popular imported cars, such as the VW Bug. The now famous VW ad campaign in the 1960s, cleverly stressed apparent weak points of the car: "Ugly is only skin deep," "After a few years, it starts to look beautiful" and "Think small" all of which positioned the VW against the huge, powerful and beautiful American cars of the day. After the 1968 peak, sales declined throughout the '70s and eventually

production of the VW Beetle in Germany ceased. However due to its popularity it continued to be produced in Mexico and then later again in Germany when an updated version was announced at the end of the twentieth century.

Vote: a brand of toothpaste whitener formerly made by the American Bristol-Myers Company. Introduced in the late 1960s, Vote was heavily promoted as "the adult tooth whitener in the plastic tube." Although millions were spent to advertise the product, it was unsuccessful in the market and was finally taken off.

VW: abbreviation for Volkswagen.

Westinghouse: reference to Westinghouse Electric Corporation, founded in the United States in 1886 by American engineer George Westinghouse (1846–1914), most famous for his invention of air brakes. In addition to becoming well known for its home appliances and light bulbs, the company was the leading manufacturer of nuclear power reactors (apparatus that produce nuclear energy for generating heat, etc.) and a major producer of turbine generators for conventional power plants. By the late twentieth century, Westinghouse also operated nine radio stations and five television stations.

Wings of Man, The : an advertising motto created by Eastern Air Lines in the late 1960s. *See also* **Eastern Air Lines.**

Xerox: reference to the Xerox Corporation, an American manufacturer of photocopy machines, printers, fax machines, etc. Formerly known as the Haloid Company and Haloid Xerox, it became the Xerox Corporation in 1961. The company grew during the 1960s and soon ranked amongst the one hundred largest corporations in the United States, with copiers being its chief source of revenue. In 1969, the Xerox Corporation purchased the American computer company Scientific Data Systems and renamed it Xerox Data Systems. However, in the mid-1970s, after a general slump in the computer market, Xerox Data Systems went out of business. The Xerox Corporation, however, continued to be a major producer in the copier business, and expanded into full color copiers, scanners and other similar products.

POSITIONING SURVEY TIPS

(Taken from LRH marketing and survey critiques.)

(Cancels and replaces HCO PL 14 Sept. 88, POSITIONING SURVEYS.)

Refs:

HCO PL	30 Jan. 79	PR Series 28
	Restored 28.7.83	Marketing Series 5
		POSITIONING, PHILOSOPHIC THEORY
HCO PL	13 Sept. 88R	Marketing Series 24
	Rev. 21.11.2000	THE POSITIONING ERA
Tape:	5211C10	"Logics 1–7"

A *position* is where you *put* a product in somebody's life or mind and in relation to other products.

Positioning surveys are very, very simple. But one must know the tech of how to do them as contained in HCO PL 30 Jan. 79, POSITIONING, PHILOSOPHIC THEORY and HCO PL 13 Sept. 88R, THE POSITIONING ERA.

A survey is done (per point number 3 of HCO PL 30 Jan. 79, POSITIONING, PHILOSOPHIC THEORY) in order to get a concept one can use for positioning. If one just took this off the top of his head it might miss the boat. One does the appropriate survey to find out a button from which to depart. Only in that way would one wind up with a positioning that would talk.

SURVEY QUESTIONS

You use your button to do a positioning survey and find the *thing* or *object* that represents it in people's minds. The survey questions must reflect the original button directly.

Marketing has sometimes tried to "position" against a concept which is a no-no. Positioning is done against specific THINGS, not ideas.

In one positioning survey for a book, the initial surveys done on raw public had 29 percent saying, "It's an original work." But then the surveyor perverted the survey question into, "What impresses people most about a scientific discovery made for the first time?" This didn't work. The question should have been, "What comes to mind when I ask you to name a great original work?"

On a survey result of "smiles/happy face," the question, "What is something that shows a positive attitude?" was wrong. The question should have been, "What has the most positive attitude that you can think of?" That would give some sort of an object or an activity.

There can be numerous examples of this.

If "drive" turned up as the surveyed button, you could ask, "What symbolizes 'drive'?"

The positioning question for the surveyed button "peace of mind," would be, "What symbolizes 'peace of mind'?"

For the surveyed buttons, "total standardness" and "totally standard actions," the operating questions would be, "What object flashes into your mind when I say 'total standardness'?" and question two would be, "What activity flashes into your mind when I say 'totally standard actions'?"

Actually, a button could be any of numerous concepts: "a great discovery," "a powerful force," "happiness," "self-respect," "self-confidence," "a great writer," "someone who knows himself," etc. For any one of these the positioning question could be: "What object or activity do you think of instantly when I say the words (surveyed button)?"

POSITIONING AND CLASSIFICATION

In doing positioning surveys you have to make sure the survey questions keep to the same class of thing you are trying to market.

In one promo piece concerning a rundown, a thetan was compared to a mountain. It created an impression that a thetan is MEST and that he would have become a massy mess of mass with the rundown. The positioning violated the fitness of things.

The object of marketing is to create want. Nobody wants to be a mountain. The surveyor did not follow HCO PL 30 Jan. 79, POSITIONING, PHILOSOPHIC THEORY. He asked an alter-ised question on the positioning survey so the public didn't know what they were being surveyed for.

The button was "Become very stable as a thetan" and the question, "What object represents stability to you?" was not a good question to get the answer. A thetan is not an object. When you are surveying an action, such as a rundown, you have to ask a question in the same context or class of things you are surveying for. "What thing has man always counted on in past ages to become stable?" might give something in the same class of thought or classification of things you are surveying for.

These principles also apply to marketing other items. I remember one example where I was sent copy for a book flier. The copy was not acceptable because it inferred that people should go to the library instead of buy the book. This again comes under the heading of classification of materials and objects and things. "Library" in popular understanding belongs in the category of things you don't buy. The positioning was in the wrong class — people don't buy books in the library.

Keep your comparisons and positioning in the same classification. When you're surveying shaving cream to get a positioning, you don't ask about horses. Everything has its own class of associations.

ASSOCIATION

There is another piece of marketing tech where one tries to put together an association that the person would like to be associated with.

In other words, if they want some man to buy beer, they position beer, groupwise, with macho-types or interesting adventure-types that the public they want would want to think of being associated with.

Some marketing requires the employment of this mechanism. One would have to find out what type of person people think they would like to be associated with, by survey, and then show them that by obtaining the item or service one wants them to, they become associated with that type of person.

SUMMARY

Using the tech of positioning, you can attain fast communication about the unfamiliar and can formulate "instant opinion."

By doing correct positioning surveys you can come up with a positioning that will talk.

NAMING SERVICES AND PRODUCTS

In marketing and PR tech, a name has to be easily remembered, easily communicated, must stick in the mind and must describe what it represents.

NAMES MUST BE DESCRIPTIVE

Any names which have been surveyed must be descriptive, not some sort of a generality. It should be very specific so there is no confusion on it.

A course with a general name like "Life Survival" could give people the impression that it was a course in karate or some practice of self-defense. Such a name would get no word of mouth, really, because it doesn't describe what the course is or even infer what is on it.

On the other hand, "The Purification Rundown" is a name which describes exactly what happens on that service. People can grasp it.

An essential part of marketing is getting something that will go by word of mouth. Choosing names consists of finding something by survey which is aptly descriptive.

In naming something, one has to ask himself the question, "What does it do?" Extensive research should be done as to what the service or product actually is.

One way to get data is to collect all the success stories available for a service and comb through them for what people *said* they attained by doing that service. This will give you, possibly, a new course name, a new positioning. Then one could test it on the public and one would have it.

You can also talk to people who have used a product to find out what it did for them. If it's a course, go through the course materials bulletin by bulletin. What does it do?

A formula for naming a service would be:

1. Write down all the things that service does.

2. Then get a word that describes the whole lot.

Then you will have reality. You might find that almost any name you think up for it is totally banal, but there is some word which may describe the lot; therefore, that title will communicate.

You can go off on this trying to find punchy names for something rather than descriptive names which identify what that service or product actually does.

For example on a course name, a survey can be done to determine what reaction two or three different names would make on an audience. One would do such a survey by simply asking them what this course might consist of. That would give one a final test answer. The name should be popular. Marketing is supposed to engage in some sort of exchange.

WORD OF MOUTH

In addition to being descriptive, a name has to be something that is very easy to use and very easy to remember.

The requisite of a name or title is that it has to have word of mouth. People have to be able to remember it and speak of it. Otherwise sales word of mouth can be blocked.

ACRONYMS

A name of more than one or two words where the first letters of the words can group together, must be a stable word (acronym).

Supposing somebody in the government named an agency "Security Labs Observation Bureau." You immediately get SLOB. If you named it Security Labs Observation *Agency,* you again would have a bad acronym because SLOA would be pronounced "slow."

An actual example of this is a government agency that handles mortgages called the Government National Mortgage Association. Its first initials add up to GNMA, and so the whole stock market refers to any one of the securities they issue as a "Ginnie Mae."

So this can be tricky and you have to be careful of the way the letters add up (acronym).

SUMMARY

The essence of marketing is to generate popularity — that is all part of "create want." You don't just create want, you make it wildly popular to want it.

SURVEYING FOR DEPARTMENT 17 SERVICES

Refs:

HCO PL	11 Dec. 79 I	DEPARTMENT 17 COURSE CHECKSHEETS
HCO PL	2 June 71	PR Series 10 BREAKTHROUGH, PR AND PRODUCTION, TONE SCALE SURVEYS
HCO PL	2 Sept. 79	Marketing Series 4 SURVEYS ARE THE KEY TO STATS
HCO PL	1 Dec. 79 II	Marketing Series 15 SURVEY BUTTONS ARE NOT THE MESSAGE
HCO PL	23 Oct. 65	DISSEMINATION DRILL

In order to put together a proper Dept 17 service you must know what the public's needs and wants are.

Your main tool to use to obtain this data is surveying. You will have to survey to get the buttons which will indicate the ruin.

A ruin is the source of an individual's downfall. It will be something or someone that is causing the person to be effect in a certain area of his existence or in general. Whatever is ruining an individual's life is what he will be striving to handle and to be cause over. All he needs to get him on the road to being causative over his ruin is the recognition that the technology of Dianetics and Scientology will enable him to do so.

You will be utilizing the results of these surveys for the names and EPs of the Dept 17 courses that you are going to supply that public with.

WHY SURVEY

YOU CANNOT GO ON THE ASSUMPTION THAT YOU KNOW WHAT THE PUBLIC NEEDS AND WANTS.

You must get out and find out from the public themselves what their ruins are and what they feel they want to handle. They are the ones who know and they are the ones you find out from. It is very simple.

By surveying for these ruins, you are guaranteed success as you won't be caught short with an unavailability of services for your new and raw public.

Through surveys you will put yourself in the position of "knowing ahead of time" what the public are going to be demanding and having it all ready for them when they come knocking on your door and what you will have is correctly named courses with EPs that will satisfy the public's needs.

WHO TO SURVEY

Raw public, new public, Div 6 personnel and FSMs are your main resources. The raw public will tell you what ruins they have and are trying to remedy, as it will be sitting there ripe for the picking. The new public in the orgs and missions will be able to tell you because they will be I/P on handling a ruin and the Div 6 personnel and FSMs will be able to tell you because they deal in locating people's ruins every day.

WHAT TO SURVEY

What you're looking for is the thing that is ruining a person's life: the thing that if he could get handled, he would want handled; the area of his life that he is effect of instead of cause over; the major complaint he's got about his life; the one dynamic that is pulling down all the rest of his dynamics. You get the idea?

You want to find out what service, if available, will bring an individual into Scientology. It's a matter of locating the correct *buttons* that will elicit *agreement* and *response.* If you have the correct name for a Dept 17 course then the public will be in agreement with the fact that that is a ruin and then they will respond by signing up for the service.

HOW TO SURVEY

The tech of how to survey is covered in the HCO PLs that are referenced at the beginning of this PL.

Some examples of how you would apply this survey tech to finding ruins are:

EXAMPLE 1: (raw public).	BE:	If you could be anything, what would you want to be?
	DO:	If you could do anything, what would you like to do?
	HAVE:	If you could have anything, what would you like to have?
		What would have to happen for you to *(be, do, have)* that?
EXAMPLE 2: (raw public)		(If you want to know) What in your life do you really want handled?
		(You would ask) What concern do you have in your life which you'd like to remedy?

EXAMPLE 3: (raw public)	(If you want to know) What is ruining your life? (You would ask) What in your life really needs change the most?
EXAMPLE 4: (new public)	What did you come into Scientology to get handled?
EXAMPLE 5: (Div 6 personnel and FSMs)	What are the most common ruins that you have encountered in your dealings with raw and new public?
EXAMPLE 6: (Div 6 personnel and FSMs)	What things get in the way of people's reach for Scientology?

In example no. 1, you find out that an individual would like to be a successful businessman and what he'd like to do is travel all around the world and he'd like to have a new car and house. Well, it's quite obvious that in order for him to have the money to travel and buy the new car and house, he would have to be a success as a businessman so you ask him "What would have to happen for you to be a successful businessman?" He'd tell you something like "Well, gee, I'd have to know how to succeed in the business world" or "I'd have to be able to handle my finances." From this data you know that if this person knew that he could go into the local Scientology organization and take the "How to Succeed in the Business World" course or the "Financial Handling" course, he would be very easily gotten into the org for such a service.

This will follow for each of the above examples. You get what the ruin is and in getting the ruin it will be evident what the course should be called and what the EP should be.

You will use different survey questions for the different public you are surveying but the results are tabulated in the same way, per standard survey tech, and you will have your buttons.

You must remember that the public is not trained in self-examination or introspection and when surveying and using the surveys you also have to use your judgment on what's really bothering them as, if they really knew it, it might blow. For example your answers to no. 6 above may well be phrased as "no money" but will seldom be phrased as "an inability to make money" or "feeling all people who have money are really criminals" or simply saying that as a coverup for the real reason. This is true of any questions, answers and surveys, therefore the eval of them and their use require a knowledge of the mind which you have and the public doesn't.

To sum it up, you're looking for the button that can be used as the name of a course which will get the public's agreement and then his agreement that he is willing to inflow comm on the subject, which is the course data. Once you put the person through the course data then the reality will be there and you've achieved your

purpose of Dept 17, as this reality will be the recognition that Scientology and Dianetics work.

Get out and survey for these Dept 17 services and don't discontinue these surveys. It's not a finite action because the society is continuously changing and although the basic bank of each individual remains the same and the Grade Chart is what will bring about a cleared planet, the immediate ruins of individuals will change as the times change and you have to continue to keep informed of these ruins. The Dept 17 services must continue to expand to meet all public needs and wants.

INSTANT IMPRESSION AND TEST SURVEYS

(Cancels and replaces HCO PL 16 Sept. 88, INSTANT IMPRESSION.)

Refs:

HCO PL	27 Sept. 79	Marketing Series 13 ADS AND COPYWRITING
HCOB	10 Mar. 84 I	Art Series 16 MESSAGE
HCOB	26 Feb. 84 II	Art Series 15 ART AND INTEGRATION

INSTANT IMPRESSION

The purpose of marketing is to create want and sell the items. That is in the very definition of marketing. To market means to sell products.

In marketing one must himself want the product to be sold and survey it on the public that might buy it, and get a bright idea that punchily persuades those people that they need the item and should buy it.

In marketing, one is only allowed a brief instant of his audience's time. They are being hit with noise continually from all sides. They will only give a brief instant to your marketing display or ad or poster. Therefore, it must make the most of that brief instant. Furthermore, it must compel people to look at it and the message must be something they absorb in a fraction of a second.

You must learn the trick of seeing what impression you get from a picture at a glance. The public is just going to give anything one glance, if that. If in the time period of that glance they see something, and a communication gets across, then you have made it.

This is primary in marketing and packaging and designing.

IMPRESSION TEST SURVEYS

One can do an impression test survey to see what instant impression a design gives.

To do an impression test, take your design without the written text, and show it to people asking what impression they get from it. You do not hold the design up in front of the person a long time. You flash it fast.

In this way, you can see if the design actually talks.

SUMMARY

Factually, you don't get very much time for an audience to absorb a message. A message must be such that it is absorbed at a glance and which makes a definite impact and impression.

The first impression the public gets out of a promotion piece is the impression that stays.

		SURVEYING FOR DEPARTMENT 17 SERVICES
HCO PL	5 Feb. 69 II	PRO ACTIONS
HCO PL	16 Dec. 71	PR Series 14
		PRO AREA CONTROL

The Survey Network is based in Flag management and runs all the way down to org level.

The head of the Survey Network, in Dissem Flag, is responsible for any and all surveys done for Scientology organizations and activities internationally. A Survey Network Chief must be appointed at Flag and in each Continental Liaison Office. The Department of Promotion and Marketing in orgs is responsible for doing marketing surveys and is part of the Survey Network. Surveyors must be posted in each org.

These posts are vital to the expansion of Scientology and must not be neglected.

SURVEY NETWORK DUTIES

Surveys of all types are done from and by the Survey Network. Through Survey Network personnel in each Continental Liaison Office and surveyors in orgs, surveys can be done planetwide.

In addition to getting surveys done, Survey Network duties include: (a) getting surveys tabulated, (b) getting the results published with dates and distributed promptly for use and (c) keeping complete files of all surveys.

MASTER FILES

The Survey Network keeps master files of *all* surveys that have been done, including any done by surveyors in other units and local surveys done by orgs. Having good and complete files is vital to the effective use of survey results. If the Survey Network files do not contain *every* survey, they are incomplete.

PUBLIC DIVISION SURVEYS

Public Divs are also responsible for doing surveys. Reference: HCO PL 15 Dec. 79, Marketing Series 26-1, SURVEYING FOR DEPARTMENT 17 SERVICES; HCO PL 5 Feb. 69 II, PRO ACTIONS and HCO PL 16 Dec. 71, PR Series 14, PRO AREA CONTROL.

LOCAL SURVEYS

Orgs can and *should* originate their own local surveys and get the results USED in their own areas. Copies of all local surveys must also be sent to the Survey Network to be included in their master survey files.

With the Survey Network established, producing and their lines in, we can get full, accurate and useful surveys for all sectors of Scientology.

REPETITION OF MESSAGE

(Originally issued 9 July 79 as an LRH ED.)

One of the essences of PR and promotion is that you have to pound the same message home time and time again.

All issuances (fliers, magazines, posters, etc.) on a certain subject should all go in the same direction and bear a similar message. One is attempting to simply pound home a message. If the message is not smooth, it won't pound home.

FLIERS, DEFINITION AND USE

Ref: HCO PL 10 Feb. 65 AD AND BOOK POLICIES

A flier is a printed advertisement intended for broad distribution. It is a piece of paper printed on both sides that can be folded so that it can fit into a standard letter-size envelope.

A flier doesn't have to teach anything, it merely has to create want. Fliers are full of punchy short lines that deliver exactly what you mean. It is an exclamation point in advertising — it isn't a discussion.

A flier offers a product, describes it, says how to get it, pictures it and hard sells it.

They are used for stuffing in letters and putting into books or merchandise shipped.

The Letter Reg and the Publications Shipping Unit are users of fliers. The Letter Reg puts them in letters to describe the particular service she is offering.

The Shipping Unit has them for books and merchandise and stuffs them into things they are shipping.

Every product an org can deliver rates a flier: the services sold by the Letter Reg and the items sold in the bookstore, each rate their own flier.

Stacks of them are made available in cases in reception. They are not handed out on streets.

Lack of fliers or not even knowing what they are can jam your sales line.

Producing a flier that is very flossy can run into a high expense. The more costly you make a flier, the less circulation it's going to get. You also have to remember that the weight of a flier influences the postage stamp bill of an org greatly.

The motifs dreamed up for fliers can be repeated in book ads, in magazines, or in fliers issued by other people more or less on the same subject. So when one does a flier one keeps repeating its positioning in magazines and carries that positioning on in other ways in other fliers and posters.

The reason one produces fliers or any other promotional piece is to accomplish the purpose of marketing, which is to create want and sell services or products. So produce fliers in strict accordance with the Marketing Series PLs, get them broadly distributed and effectively create want and boost your sales.

MARKETING SERIES 31

MARKETING POSTERS

When one goes to the expense of printing and disseminating a piece of promotion, one wants to make sure that that promotion will be effective. Posters cost quite a bit of money and thus they have to be made very effective.

The purpose of doing posters is to create want and sell the item.

The essence of what a poster is all about is that it must create a subliminal desire on the part of the viewer. A propaganda poster, of course, includes creating aversions and is directed toward changing ideas. But a marketing poster is basically something which simply creates want. "Want" means want for the exact product which the poster is about.

Modernly the poster has fallen into bad times as they seldom talk or seldom carry out the mission of a poster. A poster has a sort of a mission. You put it up and it impacts people with your message. It has to be very bold, very commanding.

MESSAGE

The advertising world throws a confusion into the scene as one could easily get an advertisement mixed up with a poster. They're quite different. Ads simply try to sell a product, whereas a poster carries a message which extends even into social spheres. You should study this out and you will see the difference if you look at a few posters.

Earlier posters which were released as ads also, oddly enough, carried a social message.

Madison Avenue has encroached heavily on the world of posters but they have never made it. Posters have been the forefront in the establishment of new cultures, new ideologies, sweeping changes in the world. Even the nineteenth century ad posters were doing this. Madison Avenue and its ads have simply sagged back into slop. They are being the effect of a culture, not the advance troops of it.

A poster has to have a *message* that identifies, associates and sells. The person designing it needs some acquaintance with what is being sold and its value.

SUBLIMINAL APPEAL

People put up posters because they're pretty. They satisfy some aesthetic desire on their part. A poster must be such that people *want* to put it up just for itself. (Ref: HCOB 29 July 73, Art Series 2, ART, MORE ABOUT)

A poster and its role is covered in a book called, *The Poster in History*, by Max Gallo, published by American Heritage Publishing Company, Inc., New York. As covered on pages 9 and 10 of that book, when doing posters, one must reach some subliminal urge in the viewer.

The way to start a poster is to find subliminal appeal whether it has anything to do with the subject matter of a poster or not.

You figure out what your audience subconsciously wants to do or what motivates a want in them and it is on this which you build your design and subject matter. Madison Avenue, being coached by Freud, takes the easy way out by putting pretty girls on posters but there are a thousand, thousand other things that will motivate a want in an audience.

Posters also *position* and give a comparison of the object being advertised to something else to show where it fits in the scheme of things. So you can pick out a subject to market, work out a subliminal message, work out a positioning and then work out the design.

A poster can also concern itself with things people don't want as its subliminal message.

You have to make up your mind what public you are going to reach and then you would have to use surveys and buttons relating to that public in order to get enough agreement to make them look at it. In addition to that, you would have to have a bright idea which aroused some subliminal urge of some sort.

You have to think of something that people would like or which they would subliminally want as related to the product you are doing a poster on. That is a matter of survey. With the survey done you would get a subliminal. With this subliminal, one would then get an idea of what to paint. Not knowing what people would like, you have no guarantee that your flier or poster would create any want at all. It might be pretty, it might be well composed, but it might not create any want at all.

But, you can get so involved in surveys and surveying, particularly when it is done without any knowledge of the item by the person writing the surveys, that you can go entirely adrift and go sinking into the tech of surveys without ever getting into communication.

PICTURE

A picture is not necessarily a poster. A poster has an impact, single-glance message. People have to recognize the message and get the message by a glance at the picture.

A picture usually arouses some subliminal want and compares the product to it.

You should not have to read the captions of a poster to know what it's all about. A poster has to be able to stand alone as a picture. That is the basic definition of a poster. That is the basic definition of a picture.

One never says what is happening in the picture as part of a text for a poster. The picture usually talks itself. If it needs a lot of text, it isn't a good poster.

If a picture is saying one thing and you put a caption on it that says not quite that thing, or doesn't fit with the picture, the poster becomes ineffective.

A totally effective poster stands all by itself without needing any words.

Composition exists inextricably linked to a message in all paintings. If one tries to follow the basic trite conventions, one is not enhancing any message. Composition cannot stand independent of a message. The ideal poster is something which you just paint without any captions or illustrations and people will see it and interpret it at once. That is the ideal poster.

A PICTURE MUST HAVE A MESSAGE ALL BY ITSELF WITHOUT CAPTION.

COMPOSITION IS INEXTRICABLY LINKED TO A MESSAGE.

If you know these two things cold, you can turn out posters.

BASICS

Basics and technical art are vital to pulling off a successful marketing poster. But the only reason they exist is so that one can contribute an idea and execute it in a commanding fashion. These things like composition are there simply to enhance the power of the message. Art is the quality of communication. The reason art exists, actually, is to relay messages of one sort or another. These messages can be feelings, sensations, desires, repugnance and practically anything that anybody is capable of thinking of. The idea is dominant. The technique exists to forward the idea and give it punch and power.

You only have an instant of your public's attention and the first impression they get out of it is the impression that stays. Nobody is going to stand in front of a poster and study it.

If you grasp these things you can turn out some great posters that will result in a demand for the product.

FALSE DATA IN MARKETING

(LRH Marketing Analysis of 13 Sept. 79,
issued as an HCO PL 16 Dec. 2000.)

Refs:

HCO PL	7 Aug. 79	Esto Series 36 Product Debug Series 8 FALSE DATA STRIPPING
HCO PL	1 Sept. 79	Marketing Series 2 MARKETING, PROMOTION AND DISSEMINATION DEFINED

We have had success hatting personnel by stripping off false data on the subject they are unable to be hatted on or where they are unable to produce.

The field of marketing is certainly shot through with false data of the most false nature you ever heard of. Advertising, newspapers, TV and other media and even wog texts subject a person to false data. And the big Why I found in our marketing people rather uniformly is *false data*.

MARKETING TEXTS

I recently reviewed a basic marketing textbook used in colleges. This textbook has bogged large numbers of its readers and is responsible for much noncomprehension of the subject. Seeking to trace why this was so, I found in the very first paragraphs that it refused to define the word "marketing" and even said that it was anything you could make of it. The effect on the student was to not make anything of it! He would hang up in the first paragraphs of the book and fail to assimilate what is factually a very interesting and useful subject.

The authors of the textbook, who are college professors, had Mis-Us on "marketing" and "mathematics." They were really Crashing Mis-Us. And not only that, but they even

had their textbook checked very widely by other college professors and leaders in the subject and none of them had spotted that there was anything wrong with the textbook. So they must have the same Mis-Us.

SUMMARY

The whole idea of marketing is wog tech. We have refined it and added breakthroughs in survey tech. Where it can't be applied or marketing personnel can't be hatted, executives and Cramming Officers must be alert to and handle false data.

MARKETING SERIES 32-1

NOTES ON A MARKETING TEXT

(Written 5 July 79 from a study of the book, *Marketing, Theory and Application*, by Walter B. Wentz and Gerald I. Eyrich. Published by Harcourt, Brace & World, Inc. ISBN #0155551108.)

There are several definitions given for marketing. On page 1, we have marketing defined as:

> "Marketing is the process in a society by which the demand structure for economic goods and services is anticipated or enlarged and satisfied through the conception, promotion, exchange, and physical distribution of such goods and services."

On page 2, we have:

> "Marketing can be reduced to more specific and manageable dimensions by examining each of its five basic components: (1) pricing, (2) product determination and mix, (3) distribution, (4) promotion (advertising and personal selling), and (5) marketing research. These are convenient units of study, as well as the basic instruments of the practicing marketer. They also serve to define the general field more precisely."

The dictionary definition of economics is: "The science that deals with the production, distribution and consumption of commodities."

Text states:

> "*Economics* might well be defined as the study of resource allocation — the assignment of land, capital, labor, and technology to the production and distribution of goods and services."

I note that there is a confusion then between the definitions they give marketing and the definition which is given to economics.

The authors probably wish to define both marketing and economics in a sort of an overlap:

> "Economics is to marketing as physics is to engineering or as biology is to the practice of medicine. If one fails to grasp the economics underlying a particular market phenomenon, one has simply learned of a symptom without understanding the cause. . . ."
>
> "*Microeconomics*—that branch of economics dealing with the context and operation of individual enterprise — provides the basis for rational decision-making within the firm."

Actually on page 2, before these definitions there is a better operation of marketing and economics. The top paragraph of page 2:

> "Marketing is the interface between supply and demand. Economists consider it part of the production function and include it in computing a firm's costs. Marketing also influences demand — and hence revenue — by manipulating consumer taste. Whereas in an authoritarian or other controlled economy goods and services are allocated by government edict, in a free or mixed economy it is the *market system* that serves as the mechanism for the distribution of resources. In a free economy the questions of what will be produced, how much will be produced, and for whom it will be produced are ultimately decided in the marketplace. Thus marketing is as significant to anyone concerned with either economics or social welfare as it is to the businessman."

From this it will be seen that the authors, who refused on the first page to define marketing, have themselves a relatively foggy concept of where it fits into the scheme of things. Marketing is simply the techniques by which one creates want, enables it to be satisfied, or satisfies it, and collects recompense for it. This is my definition. Marketing can be very contrary to economics and can be successful in the face of what would appear to be ordinary good sense. Subjects of marketing and economics are not necessarily interdependent one upon the other. Marketing can prosper in the face of apparent bad economics and good economics can come to nothing in the absence of marketing.

Economics is basically a series of laws relating to exchange, goods and in general, supply and demand, and can take into account resources or lack of them. In actual practice economics is quite firm and precise and predictable. Marketing on the other hand enters a flair and imagination and while it will eventually be found sound or unsound — economic consequences — it can however exist independent of economic laws. Thus the two subjects are not necessarily compatible. However, marketing does influence economics, and markedly and broadly. An economy can exist almost totally in the absence of marketing as it does in Russia today.

> "Economics is to marketing as physics is to engineering or as biology is to the practice of medicine. If one fails to grasp the economics underlying a particular market phenomenon, one has simply learned of a symptom without understanding the cause. This is poor learning, as it will leave one bewildered when a new event fails to conform to a textbook case or to resemble a previous experience. Worse yet, it provides no sound basis for innovation. Successful marketing is not achieved by following simple rules or blindly applying past experience to new situations. The marketer must understand the 'why' of things, and the 'why' of much that happens in the marketplace is found in economic theory."

Where this makes the most sense is where they say the allocation of resources. Management is largely concerned with the allocation of resources. This is firmly in the field of economics.

It is notable that the word "marketer" is not in the dictionary and "marketing" while in the dictionary is not given in the sense it is used in this textbook. Therefore, one is dealing with a coined new word which has been given a variable definition. However, the word comes from Latin *mercatus* or *mercari,* which means simply to trade. This is probably a better definition than that attempted by the authors. One might call it "the factors involved in manipulating trade."

SUMMARY

The trouble with that text is they have failed to define the term and look up its derivation and have Mis-Us. They have devoted the first couple of chapters into convincing the student that there is no such subject, but that it is very complicated and depends on various other subjects.

So this book falls under the heading of simply bad study tech and the guys writing marketing are not marketing the subject of marketing.

NOTES ON A MARKETING TEXT

Marketing is the activity of creating want which can be supplied and it enters into economics the moment that one acquires exchange for it. This is where it subdivides between marketing and economics. One has to market, so as to obtain an exchange, when one markets commercially. Therefore, any tech or activity which can create want to the degree of obtaining an exchange for it, for any service or commodity, is marketing.

The second you start supplying goods, you're into the field of business management, accounting and all the activities of industry.

MARKETING PERSONNEL QUALIFICATIONS

(Originally issued on 20 Feb. 82 as an LRH ED.)

Personnel has had no criterion for recruiting or choosing someone for Marketing.

QUALIFICATIONS

Potential trouble sources must *never* be on the line. It is fatal.

Also, NO failed cases.

Also, they must have a decent IQ, aptitude, OCA graph and be literate.

A person in Marketing has to WANT to market.

HISTORY

Almost uniformly, wrong types have been put in Marketing, causing it to fail.

Marketing types usually chosen by Personnel were printers or painters or letterers or were once in advertising or were reporters who were used to silly fakes they didn't have to believe in. And they flopped. Also arty types have been chosen and they went airy-fairy.

SUMMARY

If I were choosing people for Marketing it would be from real gung-ho people who had delivered or experienced some miracles.

HCO PL	5 Feb. 69 II	PRO ACTIONS
HCO PL	12 Sept. 82	PR Series 38 PR FUNCTIONS

The flavor and flair of showmanship and pizzazz can be lacking in PR and marketing.

Showbiz, the book biz, the record biz is full of spangles and glitter and the trumpet call. Hyperbole is the order of the day.

Today's advertising world is overloaded with many messages (just turn on the TV) and it takes abnormally brilliant marketing and glitter to get a message through and impinge on the public.

Showmanship in presentation and marketing imbues things with life — it makes them stand out and be noticed.

In PR and marketing today one cannot hide the wares and still succeed.

WORD OF MOUTH

(Originally issued 10 Oct. 82 as an LRH ED.)

The keynote in any promotion is word of mouth.

You can talk all you want about paid ads and radio ads and every other kind of ad but sooner or later a property gets into word of mouth or it doesn't. In other words people start telling each other about it.

That happens to be the senior publicity on any item. Something people do not talk about can be advertised and publicized until you are black in the face and it won't sell.

ART

For some fifteen years I have been studying, amongst other branches of philosophy, the subject of ART.

The reason for this is: Art is the least codified of human endeavors and the most misunderstood. *What is Art?* is one of the least answered of human questions.

Art abounds with authorities. It was chosen because "that field containing the most authorities contains the least codified knowledge." The obvious invitation is to answer the question and codify the subject. This has now been done.

The subject was originally brought up in a conversation with Donald H. Rogers at 42 Aberdeen Road, Elizabeth, New Jersey, in 1950.

As this zone of human activity seemed to stand outside the field of Dianetics and Scientology, I thereafter worked with it on a casual basis.

Having published 15,000,000 words between 1929 and 1941, I was not unacquainted with the arts. Since 1950 I have worked with other arts than that of literature in order to make an advance on the general subject of ART.

I have made a breakthrough at last in this matter. And I find it is applicable to what we are doing and therefore also has practical value.

To make it a matter of record rather than a filed sheaf of notes, I am publishing these findings as an HCOB. I also feel they will be of some assistance in forwarding Scientology.

As in the case of all "pure research" (by which is meant study without thought of possible application) there is a sudden payoff in these answers, including the better dissemination of Scientology and the rehabilitation of the artist.

My incidental studies in the fields of photography and music materially assisted these discoveries.

Approaching the state of Clear has also assisted in comprehending this rather vast subject of ART. It is adventurous to state one has *solved* such a sweeping subject but here at least are the fundamentals and basics.

The following are rough notes but are in fact the basis of that branch of activity we call ART.

THE FUNDAMENTALS OF ART

Basic Definition

ART is a word which summarizes THE QUALITY OF COMMUNICATION.

It therefore follows the laws of communication.

Too much originality throws the audience into unfamiliarity and therefore disagreement, as communication contains duplication and "originality" is the foe of duplication.

TECHNIQUE should not rise above the level of workability for the purpose of communication.

PERFECTION cannot be attained at the expense of communication.

Seeking *perfection* is a wrong target in art. One should primarily seek communication with it and *then* perfect it as far as reasonable. One attempts *communication* within the framework of applicable skill. If perfection greater than that which can be attained for communication is sought, one will not communicate.

Example: A camera that shoots perfectly but is not mobile enough to get pictures. One must settle for the highest level of technical perfection obtainable *below* the ability to obtain the picture.

The order of importance in art is:

1. The resultant communication

2. The technical rendition.

Two is always subordinate to 1. Two may be as high as possible but never so high as to injure 1.

The communication is the primary target. The technical quality of it is the secondary consideration. A person pushes 2 as high as possible within the reality of 1.

A being can take a lot of trouble with 2 to achieve 1 but there is a point where attempting 2 prevents 1.

If the ardures of 2 prevent 1, then modify 2, don't modify 1.

Perfection is defined as the quality obtainable which still permits the delivery of the communication.

Too much time on 2 of course prevents 1.

It is usually necessary to lower a standard from absolute perfection to achieve communication. The test of the artist is how little it is lowered not how high it is pushed.

A professional in the arts is one who obtains communication with the art form at the minimum sacrifice of technical quality. There is always some sacrifice of quality to communicate at all.

The reduction of mass or time or impedimenta or facilities toward the ability to render a result is the exact measurement of how much technical perfection can be attempted. The rule is if one is being too perfectionistic to actually achieve a communication, reduce the mass, time, impedimenta or facilities sufficiently low to accomplish the communication but maintain the technique and perfection as high as is reconcilable with the result to be achieved and within one's power to act.

No communication is no art. To not do the communication for lack of technical perfection is the primary error. It is also an error not to push up the technical aspects of the result as high as possible.

One measures the degree of perfection to be achieved by the degree of communication that will be accomplished.

This is seen even in a workman and tools. The workman who cannot accomplish anything but must have tools is an *artistic* failure.

"Art for art's sake" is a complete paradox as a remark. "Art for the sake of communication" and "Attempted perfection without communicating" are the plus and minus of it all.

One can of course communicate to oneself, if one wishes to be both cause and effect.

One studies art only if one wishes to communicate and the search for artistic perfection is the result of past failures to communicate.

Self-improvement is based entirely on earlier lack of communicating.

Living itself can be an art.

The search for freedom is either the retreat from past failures to communicate or the effort to attain new communication. To that degree then the search for freedom is a sick or well impulse.

Searching for and discovering one's past failures to communicate an art form or idea about it will therefore inevitably rehabilitate the artist.

However, due to the nature of the reactive mind, full rehabilitation is achieved only through releasing and clearing.

How much art is enough art? The amount necessary to produce an approximation of the desired effect on its receiver or beholder, within the reality of the possibility of doing so.

NAVIGATE
FIRST PAGE

AGAIN
EXIT
CONTENTS
ORG BOARDS
INDEX

A concept of the beholder and some understanding of his or her acceptance level is necessary to the formulation of a successful art form or presentation. This includes an approximation of what is familiar to him and is associated with the desired effect.

All art depends for its success upon the former experience and associations of the beholder. There is no pure general form since it must assume a sweeping generality of former experiences in the beholder.

Artists all, to a greater or lesser degree, need comprehension of the minds and viewpoints of others in order to have their work accepted, since the acceptability of a communication depends upon the mental composition of the receiver. Scientology then is a must for any artist if he would succeed without heartbreak.

In any art form or activity one must conceive of the beholder (if only himself). To fail to do so is to invite disappointment and eventual dissatisfaction with one's own creations.

An artist who disagrees thoroughly with the "taste" of his potential audience cannot of course communicate with that audience easily. His disagreement is actually not based on the audience but on former inabilities to communicate with such audiences or rejections by a vaguely similar audience.

The lack of desire to communicate with an art form may stem from an entirely different inability than the one supposed to exist.

Professionals often get into such disputes on *how* to present the art form that the entirety becomes a technology, not an art and, lacking progress and newness of acceptance, dies. This is probably the genus of all decline or vanishment of art forms. The idea of contemporary communication is lost. All old forms become beset by technical musts and must-nots and so cease to communicate. The art is the form that communicates not the technology of how, the last contributing to the ease of creating the effect and preservation of the steps used in doing it. A form's reach, blunted, becomes involved with the perfection alone, and ceases to be an art form in its proper definition.

A communication can be blunted by suppressing its art form: Example, bad tape reproduction, scratched film, releasing bits not authorized. This then is the primary suppression.

On the other hand, failing continuously to permit a nondestructive communication on the grounds of its lack of art is also suppressive.

Between these two extremes there is communication and the task is to attain the highest art form possible that can be maintained in the act of communicating. To do otherwise is inartistic and objectionable.

These, therefore, are the fundamentals of ART.

ART, MORE ABOUT

Ref: HCOB 30 Aug. AD 15 Art Series 1
ART

How good does a professional work of art have to be? This would include painting, music, photography, poetry, any of the arts whether fine or otherwise. It would also include presenting oneself as an art form as well as one's products.

Yes, how GOOD does such a work of art have to be?

Ah, you say, but that is an imponderable, a thing that can't be answered. Verily, you say, you have just asked a question for which there are no answers except the sneers and applause of critics. Indeed, this is why we have art critics! For who can tell how good good is. Who knows?

I have a surprise for you. There IS an answer.

As you know, I searched for many years, as a sort of minor counterpoint to what I was hardwork doing, to dredge up some of the materials which might constitute the basis of art. Art was the most uncodified and most opinionated subject on the planet — after men's ideas about women and women's ideas about men and man's ideas of man. Art was anyone's guess. Masterpieces have gone unapplauded, positive freaks have gained raves.

So how good does a work of art have to be to be good?

The painter will point out all the tiny technical details known only to painters, the musician will put a score through the alto horn and explain about valve clicks and lip, the poet will talk about meter types, the actor will explain how the position and wave of one hand per the instructions of one school can transform a clod into an actor. And so it goes, art by art, bit by bit.

But all these people will be discussing the special intricacies and holy mysteries of technique, the tiny things only the initiate of that art would recognize. They are talking about technique. They are not really answering how *good* a work of art has to be.

Works of art are viewed by people. They are heard by people. They are felt by people. They are not just the fodder of a close-knit group of initiates. They are the soul food of all people.

One is at liberty of course to challenge that wide purpose of art. Some professors who don't want rivals tell their students "Art is for self-satisfaction" "It is a hobby." In other words, don't display or exhibit, kid, or you'll be competition! The world today is full of that figure-figure. But as none of this self-satisfaction art meets a definition of art wider than self for the sake of self, the professional is not interested in it.

In any artistic production, what does one have as an audience? People. Not, heaven forbid, critics. But people. Not experts in that line of art. But people.

That old Chinese poet who, after he wrote a poem, went down out of his traditional garret and read it to the flower-selling old lady on the corner had the right idea. If she understood it and thought it was great, he published. If she didn't he put it in the bamboo trash can. Not remarkably, his poems have come down the centuries awesomely praised.

Well, one could answer this now by just saying that art should communicate to people high and low. But that really doesn't get the sweating professional anywhere as a guide in actually putting together a piece of work and it doesn't give him a yardstick whereby he can say "That is that!" "I've done it." And go out with confidence that he has.

What is technique? What is its value? Where does it fit? What is perfectionism? Where does one stop scraping off the paint and erasing notes and say "That is that"?

For there is a point. Some artists don't ever find it. The Impressionists practically spun in as a group trying to develop a new way of viewing and communicating it. They made it — or some of them did like Monet. But many of them never knew where to stop and they didn't make it. They couldn't answer the question "How good does a piece of artwork have to be to be good?"

In this time of century, there are many communication lines for works of art. Because a few works of art can be shown so easily to so many there may even be fewer artists. The competition is very keen and even dagger sharp. To be good one has to be very good. But in what way and how?

Well, when I used to buy breakfasts for Greenwich Village artists (which they ate hungrily, only stopping between bites to deplore my commercialism and bastardizing my talents for the gold that bought their breakfasts) I used to ask this question and needless to say I received an appalling variety of responses. They avalanched me with technique or lack of it, they vaguely dwelt on inherent talent, they rushed me around to galleries to show me Picasso or to a board fence covered with abstracts. But none of them told me how good a song had to be to be a song.

So I wondered about this. And a clue came when the late Hubert Mathieu, a dear friend, stamped with youth on the Left Bank of the Seine and painting dowagers at the Beaux Arts in middle age, said to me "To do any of these modern, abstract, cubist things, you have to first be able to paint!" And he enlarged the theme while I plied him in the midnight hush of Manhattan with iced sherry and he finished up the First Lady of Nantucket's somewhat swollen ball gown. Matty could PAINT. Finally he dashed me off an abstract to show me how somebody who couldn't paint would do it and how it *could* be done.

I got his point. To really make one of these too too modern things come off, you first had to be able to paint. So I said well, hell, there's Gertrude Stein and Thomas Mann and ink splatterers like those. Let's see if it really is an art form. So I sharpened up my electric typewriter and dashed off the last chapters of a novel in way far-out acid prose and put THE END at the bottom and shipped it off to an editor who promptly pushed several large loaves down the telephone wire and had me to lunch and unlike his normal blasé self said, "I really got a big bang (this was decades ago, other years, other slang) out of the way that story wound up! You really put it over the plate." And it sent his circulation rating up. And this was very odd because you see the first chapters were straight since they'd been written before Matty got thirsty for sherry and called me to come over and the last chapters were an impressionistic stream of consciousness that Mann himself would have called "an advanced rather adventurous over-Finneganized departure from the ultra school."

So just to see how far this sort of thing could go, for a short while I shifted around amongst various prose periods just to see what was going on. That they sold didn't prove too much because I never had any trouble with that. But that they were understood at all was surprising to me for their prose types (ranging from Shakespeare to *Beowulf*) were at wild variance with anything currently being published.

So I showed them to Matty the next time he had a ball gown to do or three chins to paint out and was thirsty. And he looked them over and he said, "Well, you proved my point. There's no mystery to it. Basically you're a trained writer! It shows through."

And now we are getting somewhere, not just with me and my adventures and long-dead yesterdays.

As time rolled on, this is what I began to see: The fellow technician in an art hears and sees the small technical points. The artist himself is engrossed in the exact application of certain exact actions which produce, when done, his canvas, his score, his novel, his performance.

The successful artist does these small things so well that he also then has attention and skill left to get out his message, he is not still fiddling about with the cerulean blue and the semiquaver. He has these zeroed in. He can repeat them and repeat them as technical actions. No ulcers. Strictly routine.

And here we have three surrealist paintings. And they each have their own message. And the public wanders by and they only look with awe on one. And why is this one different than the other two? Is it a different message? No. Is it more popular? That's too vague.

If you look at or listen to any work of art, there is only one thing the casual audience responds to en masse, and if this has it then you too will see it as a work of art. If it doesn't have it, you won't.

So what is *it*?

TECHNICAL EXPERTISE ITSELF ADEQUATE TO PRODUCE AN EMOTIONAL IMPACT.

And that is how good a work of art has to be to be good.

If you look this over from various sides, you will see that the general spectator is generally unaware of technique. That is the zone of art's creators.

Were you to watch a crowd watching a magician, you would find one common denominator eliciting uniform response. If he is a good magician he is a smooth showman. He isn't showing them how he does his tricks. He is showing them a flawless flowing performance. This alone is providing the carrier wave that takes the substance of his actions to his audience. Though a far cry from fine art, perhaps, yet there is art in the way he does things. If he is good, the audience is seeing first of all, before anything else, the TECHNICAL EXPERTISE of his performance. They are also watching him do things they know they can't do. And they are watching the outcome of his presentations. He is a good magician if he gives a technically flawless performance just in terms of scenes and motions which provide the channel for what he is presenting.

Not to compare Bach with a magician (though you could), all great pieces of art have this one factor in common. First of all, before one looks at the faces on the canvas or hears the meaning of the song, there is the TECHNICAL EXPERTISE there adequate to produce an emotional impact. Before one adds message or meaning, there is this TECHNICAL EXPERTISE.

TECHNICAL EXPERTISE is composed of all the little and large bits of technique known to the skilled painter, musician, actor, any artist. He adds these things together in his basic presentation. He knows what he is doing. And how to do it. And then to this he adds his message.

All old masters were in there nailing canvas on frames as apprentices or grinding up the lapis lazuli or cleaning paintbrushes before they arrived at the Metropolitan.

But how many paintbrushes do you have to clean? Enough to know that clean paintbrushes make clean color. How many clarinet reeds do you have to replace? Enough to know which types will hit high C.

Back of every artist there is technique. You see them groping, finding, discarding, fooling about. What are they hunting for? A new blue? No, just a constant of blue that is an adequate quality.

And you see somebody who can really paint still stumbling about looking for technique — a total overrun.

Someplace one says, "That's the TECHNICAL CHARACTER adequate to produce an emotional impact." And that's it. Now he CAN. So he devotes himself to messages.

If you get this tangled up or backwards, the art does not have a good chance of being good. If one bats out messages without a TECHNICALLY EXPERT carrier wave of art, the first standard of the many spectators seems to be violated.

The nice trick is to be a technician and retain one's fire. Then one can whip out the masterpieces like chain lightning. And all the great artists seem to have managed that. And when they forked off onto a new trail they mastered the technique and *then* erupted with great works.

It is a remarkable thing about expertise. Do you know that some artists get by on "technical expertise adequate to produce an emotional impact" alone with no messages? They might not suspect that. But it is true.

So the "expertise adequate" is important enough to be itself art. It is never great art. But it produces an emotional impact just from quality alone.

And how masterly an expertise? Not very masterly. Merely adequate. How adequate is adequate? Well, people have been known to criticize a story because there were typographical errors in the typing. And stories by the nonadept often go pages before anyone appears or anything happens. And scores have been known to be considered dull simply because they were inexpertly chorded or clashed. And a handsome actor has been known not to have made it because he never knew what to do with his arms, for all his fiery thunderings of the Bard's words.

Any art demands a certain expertise. When this is basically sound, magic! Almost anyone will look at it and say Ah! For quality alone has an emotional impact. That it is cubist or dissonant or blank verse has very little bearing on it; the type of the art form is no limitation to audience attention generally when it has, underlying it and expressed in it, the expertise adequate to produce an emotional impact.

The message is what the audience thinks it sees or hears. The significance of the play, the towering clouds of sound in the symphony, the scatter-batter of the current pop group, are what the audience thinks it is perceiving and what they will describe, usually, or which they think they admire. If it comes to them with a basic expertise itself able to produce an emotional impact they will think it is great. And it will be great.

The artist is thought of as enthroned in some special heaven where all is clean and there is no sweat, eyes half closed in the thrall of inspiration. Well maybe he is sometimes. But every one I've seen had ink in his hair or a towel handy to mop his brow or a throat spray in his hand to ease the voice strain of having said his lines twenty-two times to the wall or the cat. I mean the great ones. The others were loafing and hoping and talking about the producer or the unfair art gallery proprietor.

The great ones always worked to achieve the technical quality necessary. When they had it they knew they had it. How did they know? Because it was technically correct.

Living itself is an art form. One puts up a mock-up. It doesn't happen by accident. One has to know how to wash his nylon shirts and girls have to know what mascara runs and that too many candy bars spoil the silhouette, quite in addition to the pancreas.

Some people are themselves a work of art because they have mastered the small practical techniques of living that give them a quality adequate to produce an emotional impact even before anyone knows their name or what they do.

Even a beard and baggy pants require a certain art if they are to be the expertise adequate to produce an emotional impact.

And some products produce a bad *mis*emotional impact without fully being viewed. And by this reverse logic, of which you can think of many examples such as a

dirty room, you can then see that there might be an opposite expertise, all by itself, adequate to produce a strong but *desirable* emotional impact.

That is how good a work of art has to be. Once one is capable of executing that technical expertise for that art form he can pour on the message. Unless the professional form is there first, the message will not transmit.

A lot of artists are overstraining to obtain a quality far above that necessary to produce an emotional impact. And many more are trying to machine-gun messages at the world without any expertise at all to form the vital carrier wave.

So how good does a piece of art have to be?

ART SERIES 3

STAGE MANNERS

An actor, performer or musician should have a good command of what is called "stage manners."

While it is not possible here to give a full text on the subject, these basics should suffice.

1. The performer purpose is basically communication.

   a. To communicate one must have R (Reality) — which is to say one must be visible.

   b. To communicate one must have R that there is an audience there to be communicated to.

   c. A degree of affinity with or for the audience must be physically expressed. (One cannot treat an audience with contempt, for instance.) (A perpetual smile is not a must, a respectful look, a friendly look does as well.)

If you look over the above ABCs you will see that the general basic of stage manners is the ARC triangle. From this almost anything else can be derived.

However, there are some traditional rules.

I. You *accept* applause. This is the contribution of the audience. You do not cut it off. You acknowledge it with bows or other physical actions. But you *accept* it. You don't dodge it.

II. You never turn your back on the audience. (An exception is an actor in play stage situations.) You turn in such a way as to turn facing the audience. You do not turn the other way around and so give them your back.

III. Never express embarrassment or stage fright even when you feel it. Force yourself into a physical appearance and expression of poise.

IV. If you goof, ride right over it. Do not break off, call attention to it or look helpless or foolish. Just ride right over it and go on.

V. If you do not know what to do with your hands or feet, don't do anything with them. Avoid twisting your feet or legs or hands or arms around. Don't fiddle with things. Be positive in motion.

VI. During breaks or silent periods remember you are still on stage and stage manners still apply.

VII. Always appear to be in control of the place and the audience.

VIII. Never let your poise be shattered by a sudden surprise. Ride over it and handle.

IX. A performer DOMINATES an audience

a. by his comm,

b. by his art,

c. by his technical perfection,

d. by his stage manners.

None of this means that one cannot clown, joke, act superior or even seem austere. These are the arts of presence. But even in doing these, stage manners are observed.

If as a small child one was always cautioned about his manners and resented it one should get a clear idea of what manners are:

In a culture manners are the lubrication that ease the frictions of social contacts.

On the stage, stage manners are the means of smoothing the problems of interchange between audience and performer.

The hallmark of the professional performer, next to his art and expertise, are flawless stage manners.

Stand before a full-length mirror. (Or use videotape.) Assume the postures of your act. Accept applause gracefully. Bow gracefully. Smile pleasantly. Laugh. Be dignified. Demonstrate poise. Assume the posture needed for a nonapplauding audience. Ride out boos. Demand more applause. Do the postures to end your performance after applause. Accept a standing ovation. Deplore not being able to give an encore. Appear at the start for a first part of a performance. Assume the postures and poise needed on stage during a one-minute break between numbers. Accept a plaque. Accept flowers. Ride over a bad goof. Be respectful to the audience. Kid the audience out of it. Do each one of the IX rules. AND ALL WITHOUT SAYING A WORD. Do it with physical motions or lack of them.

When you can do all these things and look right to yourself and feel easy about them you will have and be confident of your stage manners.

ART SERIES 4

RHYTHM

RHYTHM: Any kind of movement characterized by the regular recurrence of strong and weak elements. *Rhythm* denotes the regular patterned flow, the ebb and rise of sounds and movement in speech, music, writing, dance and in other physical activities. *Meter* basically means *measure* and applies to a system or pattern of measured recurrence of length, beat or numbers in poetry or music.

TYPES OF MUSIC RHYTHM

There are SIX distinct types of rhythm in music. These are:

REGULAR: Meaning the evenly accented (stressed) beat.

SYNCOPATED: The placing of upbeats along with downbeats at regular or irregular intervals.

STOPPED: In a stopped rhythm there are regular distinct halts to the flow of melody, but all the beats are there, they are simply regularly halted for an interval. (The term comes from choreography as in tap dancing where the dancer taps fill the stops.)

ACCENTED: Where one or more beats in a measure received a stronger stress (beat) or accent. Accent in a rhythm can be done by volume, duration, pitch or tone quality (timbre).

OMITTED BEAT: The regular omission of one or more beats in measures. Time may have to be counted over two or more measures in order to regularly omit. (Soul, Motown.)

ADDED BEAT: Additional strong or, generally, weak beats are added to the rhythm in a consistent or inconsistent manner. (Bongos, congas, etc.)

USAGE

Any and all rhythms are made up of the six basics above. One, two or more can be employed in complex patterns.

REPETITION

Rhythm is rhythm because of repetition (recurrence).

RAPPORT

RAPPORT: Relationship, especially, one of mutual trust or affinity.

An audience in rapport is different than an audience of spectators.

An audience in rapport PARTICIPATES in small or large ways with the performer or the artist or work of art, often by vocal or body motion.

Such participation is achieved by:

1. Reliance on the even recurrence of the rhythm.
2. Ability to predict it will recur.
3. Formation of agreement by such reliable prediction.
4. Permitting the audience to fill gaps or significances. Regular omission of a beat or step or full explanation causes the audience to fill it for themselves and brings about physical or mental participation.

RHYTHM

All life is a repeating pulse and ebb and surge of motion.

Life becomes difficult when rhythmic prediction cannot occur. Anxiety sets in. It is a relief to participate in predictable rhythm in an art form. It is safe and reassuring. If the rhythm is exciting it is also exciting. Therefore participation in predictable rhythm is pleasure and even joy.

IMPINGEMENT

When one changes rhythm within a single work one “makes wrong” because the person has predicted the rhythm but the prediction is not met. Thus he is wrong. If the rhythm recurs, the person is made right.

A new rhythm attracts attention. If it is agreed with and recurs it gets participation.

ART FORMS

The above materials, while written from the viewpoint of music, apply to any art form.

Even prose has a rhythm.

Not all rhythms are pleasant or acceptable.

Many ways exist to utilize these observations on rhythm — i.e., one can begin an unwanted rhythm, using the audience objection to impinge and then turn it into a wanted rhythm.

As life itself is going through time and as time is recurrence, some rhythms are too dull to attain any attention.

Rhythm, used in art forms, must therefore slow or speed or change the expected rhythms of ordinary life in order to command attention.

Rhythm can soothe, lull, excite, arouse to any point of the emotional Tone Scale.

A rhythm one-half to one tone below the usual rhythm in life will depress or degrade an audience.

A rhythm one-half to one tone above the usual rhythm will dominate and interest.

Rhythm and its expression is the basic key to all art forms.

ART SERIES 5

ART AND COMMUNICATION

When a work of painting, music or other form attains two-way communication, it is truly art.

One occasionally hears an artist being criticized on the basis that his work is too "literal" or too "common." But one has rarely if ever heard any definition of "literal" or "common." And there are many artists simply hung up on this, protesting it. Also, some avant-garde schools go completely over the cliff in avoiding anything "literal" or "common" — and indeed go completely out of communication!

The *return* flow from the person viewing a work would be contribution. True art always elicits a contribution from those who view or hear or experience it. By contribution is meant "adding to it."

An illustration is "literal" in that it tells everything there is to know. Let us say the illustration is a picture of a tiger approaching a chained girl. It does not really matter how well the painting is executed, it remains an illustration and it IS literal. But now let us take a small portion out of the scene and enlarge it. Let us take, say, the head of the tiger with its baleful eye and snarl. Suddenly we no longer have an illustration. It is no longer "literal." And the reason lies in the fact that the viewer can fit this expression into his own concepts, ideas or experience: he can supply the why of the snarl, he can compare the head to someone he knows. In short he can CONTRIBUTE to the head.

The skill with which the head is executed determines the degree of response.

Because the viewer can contribute to the picture, it is art.

In music, the hearer can contribute his own emotion or motion. And even if the music is only a single drum, if it elicits a contribution of emotion or motion, it is truly art.

That work which delivers everything and gets little or nothing in return is not art. The "common" or overused melody, the expected shape or form gets little or no contribution from the hearer or viewer. That work which is too unclear or too poorly executed may get no contribution.

Incidental to this, one can ask if a photograph can ever be art, a controversy which has been raging for a century or more. One could say that it is only difficult to decide because one has to establish how much the photographer has contributed to the "reality" or "literalness" in front of his camera, how he has interpreted it, but really the point is whether or not that photograph elicits a contribution from its viewer. If it does, it is art.

Innovation plays a large role in all works which may become art. But even this can be overdone. Originality can be overdone to the point where it is no longer within any possible understanding by those viewing or hearing it. One can be so original one goes entirely outside the most distant perimeter of agreement with his viewers or listeners. Sometimes this is done, one suspects, when one has not spent the labor necessary to execute the work. Various excuses are assigned such an action, the most faulty of which is "self-satisfaction" of the artist. While it is quite all right to commune with oneself, one cannot also then claim that it is art if it communicates with no one else and no other's communication is possible.

The third flow, of people talking to one another about a work, can also be considered a communication and, where it occurs, is a valid contribution, as it makes the work known.

Destructive attitudes about a work can be considered as a refusal to contribute. Works that are shocking or bizarre to a point of eliciting protest may bring to themselves notoriety thereby and may shake things up, but when the refusal to contribute is too widespread, such works tend to disqualify as art.

There is also the matter of divided opinion about a work. Some contribute to it, some refuse to contribute to it. In such cases one must examine who is contributing and who is refusing. One can then say that it is a work of art to those who contribute to it and that it is not to those who refuse to contribute to it.

Criticism is some sort of index of degree of contribution. There are, roughly, two types of criticism: one can be called "invalidative criticism," the other "constructive criticism."

Invalidative criticism is all too prevalent in the arts, for there exist such things as "individual taste," contemporary standards and, unfortunately, even envy or jealousy. Too often, criticism is simply an individual refusal to contribute. One could also state that "those who destructively criticize can't do."

"Constructive criticism" is a term which is often used but seldom defined. But it has use. It could probably be best defined as criticism which "indicates a better way to do," at least in the opinion of the critic. Those who simply find fault and never suggest a practical means of doing it better rather forfeit their right to criticize.

Art is probably the most uncodified and least organized of all fields. It therefore acquires to itself the most "authorities." Usually nothing is required of an "authority" except to say what is right, wrong, good, bad, acceptable or unacceptable. Too often the sole qualification of the authority (as in poor teaching of some subjects) is a memorized list of objects and their creators and dates with some hazy idea of what the

work was. An "authority" could considerably improve his status by using rather precise definitions of his terms. The modern trend of seeking the significance in what the artist meant is of course not likely to advance the arts very much.

Viewing and experiencing art on the basis of what one is contributing to it and what others contribute to it is a workable approach. And it would result in improved art and improved appreciation.

Such a viewpoint, interestingly, also includes some things into the field of art not previously so viewed.

ART SERIES 6

ART IN ITS BASICS

Every separate sector of artistic creations has its own basic rules. Such areas include writing, painting, lighting, camerawork, costumes, sets, marketing, recording, mixing — every contributory sector to a final art offering.

Each one of these areas has basic stable data which govern it. They are contained in the textbooks on these subjects.

These are the rules — the stable data, the senior data of each specialized activity.

We follow the rules because the rules give impact, effect and message. We don't follow the rules because we're told to, we follow the rules to get a product that is effective and brings about what we want brought about.

Anybody who thinks it's just an odd idea that you just follow the rules should get Short Form Product Clearing, because rules have everything to do with the value of the product.

Anybody can turn out amateur junk. Who looks at it? Who would look at it even if they were paid?

The distance between amateured junk and an effective product is accomplished by knowing and following the basic rules and using them expertly. When you add to this dexterous handling of materials and equipment and then add some experience, you have a professional.

When you add a dash of good sense and talent you have a knockout.

Be a professional in whatever you do, the tale is told by the effectiveness of the product on its viewers and intended public.

So whatever your specialty, you have to sort out what the senior data are — the rules — and know them cold, so you don't even have to think about them and can think with them.

Did you ever realize that each one of these specialties has only a dozen or two rules?

A=A=A is the way most people handle data. Some of these A's, however, really have a thousand times the importance of other data. If you know these and sort them out, you have a chance of becoming a professional and if you have sorted them out and can think with them and have manual dexterity with materials and equipment, any professional in that field will recognize you as a professional, but far more important, your specialty will communicate.

If you disregard the above, you'll be out of communication with your specialty, not only specialty but every viewer including kids, whether they know the rules or not.

Be a professional in whatever you do.

ART SERIES 7

FINE ARTS VERSUS ILLUSTRATIONS

The division between fine arts and illustrations is that fine arts permit the viewer to contribute his own interpretations or originations to the scene, whereas illustrations are "too literal" and give him the whole works.

To evoke an emotion in fine arts, the spectator must be invited to contribute part of the meaning.

In a poster, the viewer is most often intended to be clobbered.

In illustration, the viewer is intended to be informed.

A work of fine art can elicit quite different emotional contributions from one member of an audience to the next as he is left free to some degree to contribute meaning and emotion at his choice.

In fine arts, the viewer must supply something to make it complete.

Fine arts evoke some chord in the viewer's nature or past.

REMIMEO

ART SERIES 8

A PROFESSIONAL

Ref: HCOB 4 Mar. 79 Art Series 6
ART IN ITS BASICS

A professional is somebody that can produce a high-quality product. A professional is not an audience, and when he views things, he looks for what's good in them and neglects the poor, low-grade things. The reason he does this is so he has an ideal scene. Without an ideal scene, he just operates off technical data and produces, artwise, a low-quality product and isn't a professional. Without an ideal scene, he can never get a preconception of the shot.

In viewing things that approach an ideal scene, the true professional works out how they did it and when presented with similar tasks of production, can bring off things which approach an ideal scene in his own work.

Another thing that separates a member of the audience from a professional is that the professional only thinks in terms of getting out an actual product. It never enters his head that he's just there for the ride or that being an "expert" is enough. A member of the audience has no faintest concept or idea of getting out a product.

A professional knows the rules of the game as a matter of course so that he can achieve, in the upper strata above that, a high quality of art.

When a person simply looks at everything as to whether he "likes them" or "not likes them," he's just an audience and he's on the wrong side of the footlights.

This applies to a writer, a director, an actor, a cameraman, a makeup man, a propsman, a wardrobe man, a producer, an artist — any professional.

Without this viewpoint, he never accumulates ideal scenes, so how could he produce anything good? He never has a memory library to compare his own products to.

Be a Professional.

HCO BULLETIN OF 12 JANUARY 1980

REMIMEO

ART SERIES 9

To do a montage, shot or work of art that talks one must:

1. Figure out what your message is.

2. Decide to communicate the message.

3. Put things or arrangements in that contribute to the message.

4. Take out or exclude things or arrangements which don't contribute to it.

It also helps to know what is meant by "message." (Definition: Message — is a unit communication of a significance.)

It also helps to know the definition of "montage" which is — a series of shots with one message.

One should also know the definition of a shot and should understand that a short cut or glimpse of something is just a blip or some frames as opposed to a scene or a "picture" and there is really a missing word for this in the English language.

A scene is a picture with a message in its own right.

A shot is anything and it has no message in its own right and doesn't talk unless connected to other shots or scenes.

One should also know what is a sequence and what is an action sequence.

A sequence is a series of scenes related by location or general subject. In films or a photo story it is comparable to a chapter in a book.

An action sequence is often fast cut to give the appearance of rapid movement and will never be a montage as each picture in it is a scene and therefore has its own message.

Individual shots in a montage have little meaning in themselves individually but when cut together deliver a single message.

By confusing an action sequence and a montage or a montage shot and a scene, one gets very little audience reaction, and after all, that's the name of the game.

Doing things for self-satisfaction is for professors who can't.

All of this comes under the heading of integration. Integration consists of uniting the similar.

If you try to unite the totally dissimilar and unrelated you don't have integration and you don't have art. You have chaos.

The principle of integration applies to all editing and composition in all fields.

The above 1, 2, 3 and 4 is a formula that helps one to achieve clear aesthetic communication of art.

ART SERIES 11

HOW TO VIEW ART

There is a skill needed by anyone engaging in any of the fields of the arts including writing, music, painting, editing of films, mixing — in other words across the boards.

It is the ability or skill, native or acquired, to view any piece of work in a new unit of time each time one views it. One has to be able to sweep aside all past considerations concerning any piece of work which has been changed or is under handling and see it or hear it in a brand-new unit of time as though he had never heard of it before.

By doing this, he actually sees or hears exactly what is in front of him, not his past considerations concerning it.

The skill consists solely of being able to see or hear in a new unit of time as though one had never seen or heard the work before.

Only in this way can one actually grasp exactly what he now has before him. When he does not do this he is viewing or hearing, in part, what he saw or heard before in memory and this gets confused with what it now is.

If one can do this he can wind up with stellar presentations. But all too often, when he doesn't do this, he winds up with hash.

Some painters, for instance, will redo and redo and redo a painting up to an inch thick of paint when, possibly, several of those redos were quite acceptable. But he continued to try to correct the first impressions which were no longer there. By not viewing his painting in a new unit of time as though he had never seen it before he cannot actually get a correct impression of what is in front of him.

Some painters or illustrators have a trick by which to do this. They look at their painting via a mirror. Because it is now backwards they can see it newly.

There is another trick of looking at a painting with a reducing glass (like looking at a view through the wrong end of a telescope) to reduce the painting to the presentation size it will eventually have, let us say, on a printed page. It is quite remarkable that this reduction actually does change the appearance of it markedly. But at the same time a small painting, enlarged, can be absolutely startling enlarged when it did not look good at all small. But this is actually change of format, not viewing in a new instant of time. The additional skill of viewing something in a new instant of time is also vital.

When anyone engaged in any of the arts in any field has not acquired this skill, he never really knows when he has arrived at the point of completion. And he can often get a distorted opinion of a piece of work which does not any longer merit it.

AUDIENCES

There is another skill which is also acquired in the field of seeing or hearing. This is being able to assume the viewpoint of the audience for which the work is intended.

There are certain areas which pretend to teach various arts while actually covertly trying to wreck the future of the student, which stress "self-satisfaction" as the highest possible goal of engaging in any work related to any of the arts. There is, it is true, a considerable self-satisfaction in producing a good piece of work. But to profess that one works in these fields for his own self-satisfaction is to overstress the first dynamic to such a point that the work of the artist or technician then fails miserably. It is actually pure balderdash and a sort of a weak limping apology for not being successful to say that one works for his own self-satisfaction.

This false datum can mix up many artists and technicians who would otherwise be quite successful. For it blocks out the one test which would make him successful: the audience.

It is quite vital that anyone engaged in any of these fields be able to assume the viewpoint of the eventual audience.

One has to be able to see or listen to any product he is engaged in from the audience viewpoint.

He can, of course, and has to, view it from his own viewpoint. But he has to be able to shift around and view or hear it from the audience viewpoint.

There are some tricks involved in this. One of them is to keep an ear open for "lobby comment." After a performance or viewing of any work or cinema or recital or whatever — not necessarily one's own — one mingles with or gets reports on those who have just experienced the presentation. This isn't really vital to do. It is quite feasible actually simply to assume a viewpoint of an audience one has never even seen. One just *does* it.

A mixing engineer often puts this to a further test but this is because what he is busy mixing on his high-priced top-quality equipment is not what the audience is going to hear. So he takes a cheapo Taiwan wrist cassette-player speaker or a 3-inch radio speaker from the local junk store and he listens to the program he has just mixed through it. This tells him what the audience will actually be hearing. But this is mainly a technical matter as it is true that excellent speakers or earphones may handle easily certain distortions in a mix or performance whereas the cheapo speakers shatter on them. When they do, one adjusts the mix without spoiling it so that it will play over a cheap speaker. This is a sort of a mechanical means of assuming the viewpoint of an audience. But the necessity to do this is introduced by equipment factors.

The truth of the matter is even the mixing engineer is *not* mixing to remedy "faults" but is mixing for an optimum quality presentation to an audience. To know when he has it, it is necessary for him to assume the viewpoint of the audience.

In all arts it is necessary to be able to shift viewpoint to the viewpoint of the listener or viewer other than oneself. And this extends out to audiences.

SUMMARY

What really separates the flubbers and amateurs from the professional are these two skills. One has to be able to view or hear anything he is working on at any time in a brand-new unit of time. And one has to be able to see or hear his production from the viewpoint of the eventual audience.

In other words the really excellent professional can be fluid in time, not stuck in the past and can be facile in space location.

There is no reason why one should be stuck on the time track or fixated in just his own location in space.

Actually, just knowing that these skills can exist is often enough the key to acquiring them.

ART SERIES 12

ARTISTIC PRESENTATION

(Reissued 28 Jan. 84 to add to the Art Series.)

For some time in some quarters in Scientology we have had a problem with regard to presentation. Magazines are sometimes badly proofed, books are often shabbily done, tapes are played to the public on Woolworth recorders, etc. In some quarters we do very well, but in many we don't.

I have been looking this over for some time and have just realized what it is all about.

We live in a machine world. The whole yap of TV and newspapers is directed toward reducing effort. The primary goal of the civilization in which we live, it seems, is to reduce all personal effort to zero.

The less effort a being can confront, the more effect of effort he becomes.

If you reduce a man's effort output to zero, you will also collapse his bank on him.

The modern trend of "don't do" accompanies the modern trend of an increased percentage of the insane in the society.

The crazier a person is, the less he accomplishes or does.

So we live in a world which is oriented to drive men mad.

But, more pertinent to us, we suffer from the continuous bait — "do it the *easy* way." "Do it in the way that will demand the least effort."

We see this in manufacturing particularly — the easiest way is the cheapest way is the most profitable way.

So we get into a "do it the easy way."

Well, that may apply to making spoons for profit, but it does *not* apply to presentation.

The whole world of the arts is directly opposed to the philosophy of the businessman or manufacturer.

Art seeks to create an effect. An effect is not always created the *easy* way. Indeed, the better effects are quite difficult to achieve.

One can fall into creating easy effects to such a degree that one fails completely.

For instance, a dozen cakes are in competition at a county fair. The one that wins is not the easiest cake to make. True, the cook that made the winner may have some easy ways to shortcut cake baking. But the winning cook actually takes that extra bit of care to make it all just right.

It isn't magic or luck that makes the professional. It's hard-won know-how *carefully applied.*

A true professional may do things pretty easily from all appearances, but he is actually taking care with each little bit that it is just right.

The winner has it instinctively. The loser rarely even grasps the concept of "do it right."

Artistic presentation always succeeds to the degree that it is done *well.* How *easily* it is done is entirely secondary.

To the world of presentation, of putting up mock-ups, the only guide is take the care necessary to do a good job.

To the world of the businessman, the manufacturer, the primary guide is "how can we do it easily."

These two philosophies clash.

We are taught daily in advertisements, by union leaders, by socialists, that DO IT WITH THE SMALLEST EFFORT is the greatest goal in life. Do the least work for the most pay. Buy the automatic machine that chews up the most clothes in the least time. Use the roofing paper that goes on quickest and keeps out the least rain. Vote for Jinx who will make all the world eat without working. Do nothing yourself. Shove it off on the Mix-Up Accounting Company — or the man at the next desk.

That all this leads to total dependence on gadgets, total enslavement to mounting economic puzzles, even to total enslavement to a Commissar Krushtoad in the next generation is neglected utterly. That less than two centuries ago we lived quite well and built more strongly and were a lot saner without all these ads, tools and commissars is never mentioned.

Man is solving himself to extinction. And all on the slogan "Don't exert yourself."

It's gotten so bad that people are shrugging off all responsibility for the state, for their friends, for anything and everything. "Nothing has anything to do with anybody" is the epitaph that nobody will take the trouble to write on the tombstone of this civilization.

Now, this is no rant against automation or gadgets or self-sterilizing cat petters.

Use all the gadgets you can lay your hands on — if they really do work in your hands and don't absorb all your time in earning their price or repairing their faults.

No, my thought here is only this — keep your action level above your gadget level.

Keep ahead of automation. Keep ahead of do-it-for-you. Don't disenfranchise yourself by giving all your work away — to a machine, to a fellow worker.

If you've got equipment, do one of two things: (a) Use it to increase your production of effects or (b) Get rid of it.

But first and foremost realize that in presenting something, in trying to put up mock-ups, that the best way isn't always the easy way. The best way is *only the more effective way*.

Work out first what effect you are trying to produce. Then when you've got that all taped, *only* then consider the easiest way to do it. And never consider the easier way at all if it is less effective.

Art takes that extra bit, that extra care, that bit more push for it to be effective art.

There is no totally easy way to produce a desirable effect.

And the day you drop some of your ideas of the effect you want to produce is the day you get a little older, a little weaker, a little less sane.

So don't buy the easy way. Buy only the effective way. If some of its points can then be made easy, good. If not, do it the hard way.

And only if you realize this can you escape the gargantuan trap of a society with the mass goal of "Nothing should ever be done by anything but a machine or somebody else."

DEPTH PERSPECTIVE

The subject of depth perspective applies to filmmaking and photography as well as to art and design.

Perspective means the art of conveying the impression of depth and distance; representation of scenes as they appear to the eye by means of correct drawing, shading, etc. (Funk and Wagnalls *Standard Dictionary of the English Language*, International Edition)

The following are the eight types of perspective:

1. Depth by aerial perspective. Distant areas go hazy; near areas go sharp.

2. Depth by color. Warm colors appear to advance while cool hues recede from the observer. All colors appear to have their relative distances according to the background against which they appear.

   Darker and lighter of the same color, even if different shades, is not a point of depth perspective.

3. Depth by linear perspective. There are two other factors which give the illusion of space. One is illumination. By making an object recede and diminish as it goes back, one gets an illusion of space depth.

   The other is perspective by which parallelisms of lines are plotted to withdraw to a common point of infinity "behind" the picture. These lines are always drawn in to converge at this preselected infinity point. This point may be within or outside the frame of view but it is always "behind" the picture within it or to the left, right, above or below it — but always at an infinite distance away from the viewer. Perspective can actually be plotted and drawn in with a ruler from the infinite point forward and it will give the planes, lines and lack of parallelism to rectangles, etc.

4. Depth by light.

5. Depth by light as shadow.

6. Depth by solidity. Solidity of shapes is different than shadow actions. The solidity itself is special. A thing can be drawn to be solid. Then one can add perspective. Shadows are closer to illumination.

7. Depth by focus. Things when quite near are sharp. Things that are far are a bit blurry. Sharp sun gives you sharp detail. In photography, for soft focus, put a little spiral of Vaseline in the middle of the lens.

8. Depth by lateral movement.

This is the first codification of these as distinct types of perspective.

ART SERIES 14

COLOR

Color is one of the basic tools that must be well understood and used in many areas of artistic endeavor: painting, photography, set design for stage or cine, interior design and so on.

COLOR HARMONY

Color harmony is found by the use of a color wheel. Using a cine set as an example, color harmony concerns the key color in the set which is determined by the color that one cannot change — as in an outdoor set where there may be predominantly green grass; or where the lead character must wear a specific color for his costume. It is the biggest amount of color in the scene, or what you are trying to concentrate your people's attention on in the picture. Harmonious colors are based on the key color and this would then be the basic setting for the color wheel for sets and costumes.

The dominant colors must integrate when put together and make the scene look like it belongs together (which is the reason you use a color wheel). Color has to be used to make something look like it belongs together, not so it's "pleasing."

There are four types of color harmonies most usually described in texts on the subject:

1. "Direct" harmony: This is the color directly opposite the key color on the color wheel. This color is also known as the "complementary color" or "complement" to the key color. In the direct harmony one has the equal or lesser amount of color in the scene as complementary.

2. "Related colors": The immediate adjacent areas to the key color are the "related colors." When you go two spaces away from the key color on a color wheel, you are stretching color harmony. Some color harmony texts refer to these adjacent colors to the key color as "analogous harmonies."

3. "Split complementary" or "Splits": This refers to the colors immediately adjacent to the *complement* of the key color. When you go into splits, you actually should apply them only to lesser image sizes and even then sparingly.

4. "Triadic harmony," "Triadics" or "Triads": This refers to the colors two spaces to either side of the key color's complement. When you go into triadics, you are dealing with just spots of color in a picture.

When you use triadics and splits, they have to be in small areas.

The fewer the colors in a scene, the more integrated the scene looks.

One color wheel that has been found useful is the *Grumbacher Color Compass,* published by M. Grumbacher, Inc., 460 West 34th Street, New York, New York 10001. It is available in many artist's supply stores and may also be ordered directly from the publisher.

COLOR DEPTH

There is another aspect of color which must be understood, and that is "color depth." This is the apparency of depth (relative distance from the viewer) characteristic of different colors and depending on the background against which they appear.

Against a white background, colors give the illusion of distance from the viewer in the order:

blue-green (apparently nearest the viewer)
blue
purple
red
yellow
yellow-green (apparently farthest from the viewer)

Against a black background, the apparency of distance changes:

red (nearest)
orange
yellow
green
blue-green
blue
violet (farthest)

Color depth and color harmony must be used in conjunction.

As an example of the use of this tech, I was once submitted a set design for a film which looked a bit unintegrated, as though it didn't really belong together. The main fault was that a blackboard in this particular classroom scene looked like it was closer to the audience than the students, when it was actually farther away — thus robbing the set of depth. I tried to work with the color wheel to find some different color background for the set and discovered at that time that I couldn't get the combination that had been proposed on a color wheel or on the depth perception chart. It turned out that the blackboard would have to be yellow to make the set come off.

As another example, a proposed set design for a Greek temple I was handed had its color depth backwards, collapsing the set and making it look small. The back walls and floors and pillars should have been Greek white marble, and a decorative frieze set in the back wall (because of the white backgrounds in this set) could only have been apple-green.

The costumes would also have to have followed color depth perception — fabrics of almost all hues were available in Greece.

Further data on color depth may be found in the book *The Techniques of Lighting for Television and Motion Pictures,* by Gerald Millerson, and published by Hastings House, 10 East 40th Street, New York, New York 10016.

COLOR ASSOCIATIONS

According to marketing research, there is a whole index of emotional responses to colors. For example, blue is usually associated with knowledge or serenity; yellow is mostly associated with value and red prompts impulse buying. There have been various studies done on these associations, and it is worth the artist's time to become familiar with the subject. The television lighting text mentioned earlier (Millerson) includes a short section on color associations.

As an example of the use of color associations, one would not use a blue, connoting serenity, as a key color for a painting meant to convey terror. The message ends up garbled.

The principles of color depth, color harmony and color associations are invaluable tools for forwarding your message. Learn them well.

ART SERIES 15

ART AND INTEGRATION

Art is the result of INTEGRATION of all its components. One can add that the result invites CONTRIBUTION of and from the beholder.

It isn't very mysterious.

By components we mean all of the parts which go to make up a whole. In a picture or a painting or ad or set design, this would include such things as the actual objects to be shown, color, color harmony and color depth, depth perspective, geometric design and the use of mood lines, and calligraphy or the form of type to be used. There may be other components which would enter into it as well.

The components that go into a work of art depend upon the art form itself. In music, for example, a matter of integration is that the melody has to match the rhythm and the tonality of instrumentation has to match the mood — otherwise you get no integration in music.

Components are chosen only because they INTEGRATE into a whole design. Only then does one have something pleasing. Otherwise everything sticks out like sore thumbs.

Artistic designs are good when they attain a harmony of components. When components clash — except when used to counterpoint or overtly make a clash — it is because they have nothing in common. A Model T Ford in a 1560 A.D. formal garden is a violation of integration. Because it is an outpoint. Cubes, nicely stacked and orderly, do not blend with broken glass.

Things have to be of a kind to integrate into art and the introduction of something contrary can only be used for counterpoint, perhaps to accentuate the integrity of the remainder.

MESSAGE

The purpose of art is to communicate an intended MESSAGE. Message is what you want someone to *think* about things. It is not a description of things. It is that which communicates a significance.

Messages can be feelings, sensations, desires, repugnance — practically anything that anybody is capable of thinking of. The *idea* is dominant. The technique exists to forward the idea and give it punch and power.

Thus, the selection of components that *integrate* is done to forward and assist the message. And with the selection and arrangement of components so that they do integrate, we are into composition.

But message comes before composition.

Composition is not a subject in itself. It is simply a portion of the harder subjects of meaning and message and emotion.

COMPOSITION

The word "composition" is misdefined in most dictionaries in that these definitions usually state it is a thing in itself. But composition cannot exist independently of a message. Therefore, I have arrived at a comprehensive definition of it which would be:

COMPOSITION: ANY OR ALL OF THE ACTIONS NECESSARY TO INTEGRATE AND GIVE MEANING TO A MESSAGE.

And I have gone further in handling it than the many textbooks with their infinity of rules for composition, some of them valid, many of them false and misleading. I have the WHY that one should compose properly and that is: to make a scene or picture *integrate* rather than disperse. That is why one uses color harmony, geometric design, mood lines, center of interest and other such tools.

All one is trying to do is make a scene not violate itself by introducing things that don't naturally seem to belong to it or, by introducing a positive contradiction, to cause shock or impingement.

Composition is simply locating things as they would be expected and, for impingement, locating something that would not be expected or that contradicts, and at the same time controlling direction and interest.

Composition simply consists of putting shapes together which belong together and not introducing or including something that doesn't belong there. This applies to objects (type of), color harmony, color depth, depth perception, etc.

CENTER OF INTEREST

In any scene or design there is a center of interest and it would tie in intimately with the message. If one just doesn't have any message, composition can go awry. The breakthrough here is that composition is inextricable from message. Without message it becomes merely trite composition. Or one can wind up conveying two messages and this is called splitting interest, which is dispersal — not integration. It isn't that one can't have two points of interest but, if so, one combines (or integrates) the two points of interest. If you split interest and don't combine the two points of interest, the result is no message.

OBJECTS

Choice of objects is important to integration. The type or types of objects chosen for a scene must fit together. For example, one may be working with a nautical motif but that would narrow down to a specific period of nautical history or experience. The period of decor would not be mixed. If it should be the clipper ship era — 1802 to 1840 — one would choose objects from that period. Figureheads, for one thing, go with clipper ships — the romantic era of sail. So do captain's chairs. Introduction of the Queen Mary, which is 1930, into the scene would be an outpoint. If it is to be INTEGRATED, it would be clipper ship, 1802 to 1840.

GEOMETRIC DESIGN

On the subject of geometric design, a design takes its geometric form from the dominant object you have to include in your scene.

Geometric design has to do with consistency. This also has to do with integration.

Things which do not have a consistent geometric design — although it can be counterpointed by other geometric design — look like they don't belong there.

As an example of a basic design fault, one could first make the mistake of putting circles on a rectangle and then compound the error with use of rectangular lettering. Different typefaces at different levels, nonparallel, would add to the confusion. The design would lack geometric integration; it would not really integrate with its shapes. The design fault would have to do with nonparallelism of lines.

The artist may know what it is supposed to be all about, but the fact is he is trying to communicate something to an audience. When one has a nonintegrative design — a mixture of circles and spheres and triangles and rectangles and/or different typefaces at different, nonparallel levels, the geometric message is confusing. And the audience result will be confusion.

Classic design is concerned with geometric patterns relating with similar geometric patterns — circles with circles, squares with squares, etc., which can be counterpointed with other geometric shapes. Other basic shapes are triangles, ovals, rectangles, horizontal and vertical lines. Consistency of the shape chosen, repeated in other shapes, is the basis of classic design.

The whole idea of a design is to make something look like it belongs together. That is the reason back of use of geometric designs. It isn't that they are geometric forms. It is to attain the target of consistency and integration. That is why things look smooth and pretty or why they look jarring and ugly. They are either integrated in geometric design or they are messed up in design with mixed geometric designs.

For example, rectangular and octagonal do not go together. Octagons and triangles, however, do go together as the octagon breaks down into triangles. Rectangles, though, don't go along with this and, in fact, don't even counterpoint it. The essence of geometric design is consistency of geometric form.

Mood lines come into play here as a means of communicating the emotion of a scene or design. A mood line of low left to high right, for example, is optimism, and if

that's the mood the message calls for, fine. If not, one had better select and use the lines that are going to convey the desired mood. Knowing and following mood lines is important in integrating the whole of a thing.

On a set, even the people, the actors, are a part of the design and, if not designed in the same geometric plan as the set, will look as if they do not belong there.

In that your sets are triangular or multiples of triangles, then even your costumes should also be triangular or multiples of triangles.

When these are not consistent the parts of the set and the people don't look like they belong together and things look dispersed.

The reason you have set and costume consistency of geometric form is the same reason you have color harmony. It all has to do with integration.

COLOR

To use color effectively and as a means of integration, one must know how to use a color wheel and how to use color harmony against a color depth perception chart. The color harmony and color depth must agree.

The use of color as a means of achieving integration in a piece is covered in detail in HCOB 26 Feb. 84 I, Art Series 14, COLOR.

One can and should experiment with that data to gain a familiarity with the use of color and color depth. With a little experimentation, one can quickly see, for example, how one object can be moved into the distance and others pulled into the foreground using color alone.

It can be helpful when initially working out a design to do plain pencil sketches using integrated geometric forms and experimenting with different colors with these to arrive at something that integrates.

CALLIGRAPHY AND TYPE STYLES

Calligraphy or the style of type or lettering to be used enters into all of this. So, also, do type sizes and arrangements.

Disparity of type sizes used in related areas where one would expect uniformity will strike a discordant note. Print sizes varied all over the place on a page simply add confusion and a lack of integration.

And, from the viewpoint of integration, flowing color patterns or lines have no integration whatsoever with a sharp, modernistic style of typeface. The type doesn't align with the art form, so the two don't integrate. They don't seem to belong together, so they don't seem to be art.

To integrate with flowing color patterns, the calligraphy or lettering would have to fit with lines that give the impression of "in motion" or "flowing" or something similar. Different color patterns or geometric lines would require different types of calligraphy.

In other words, in an ad or other design the calligraphy or type style should align and integrate with the art form used.

And the type style itself should agree with the colors.

One should work toward an integration of geometric message, color depth, text alignment and text.

What is needed is very direct communication in all of those areas.

To arrive at a final design, one that will communicate the message, one has to know that it integrates.

One can *describe* a possible design but that isn't a rough layout. It's just an *idea* for a layout. What is missing is the artist and his rough sketches of full designs. Without these one can't see if it integrates.

Finished art on random components which MIGHT become a design is not the basic step, as who knows how they'll add up in the final product?

One first does a rough layout, or many, based on one or more ideas, and only *then* could one see what it's going to do or be. Only then can one see if they will "work" — i.e., integrate.

Without this one would be just shooting in the dark.

This data is true of ALL design — ads, cine sets, great paintings, cars. And, in its basics, it translates over into the fields of other art forms — music, literature, any other form of art.

The key is INTEGRATION.

Begin with a message.

Attain a harmony of components that will assist the message.

Achieve an integration of all components.

You will then have achieved a quality of communication which invites contribution from the beholder. And that is Art.

MESSAGE

Successful works of art have a message.

It may be implicit or implied, emotional, conceptual or literal, inferred or stated. But a message nonetheless.

This applies to any form of art: paintings, sculpture, poetry, writing, music, architecture, photography, cine, any art form or any form that depends on art, even advertising brochures and window displays.

Art is for the receiver.

If he understands it, he likes it. If it confuses him, he may ignore or detest it.

It is not enough that the creator of the work understands it; those who receive it must.

Many elements and much expertise go into the creating of successful works of art. Dominant amongst them is message for this integrates the whole and brings comprehension and appreciation to those for whom it is intended.

Understanding is the base of affinity, reality and communication.

A message is fundamental to understanding.

ART AND EQUIPMENT

(Originally written by LRH in 1979.
Issued 16 Nov. 89 as part of the Art Series.)

Refs:
HCOB 29 July 73 Art Series 2
ART, MORE ABOUT
Book: *The Problems of Work,* Chapter: "The Secret of Efficiency"

An artist in any field has equipment he uses to get his final product. Whether this is the painter's brush, the photographer's camera or the electronic components used by a mixer, the various aspects of his equipment must be understood well by the artist before he can easily communicate the message he has envisioned.

If one is trying to take a picture but doesn't understand the workings of the camera, he can become so interiorized into the camera that he doesn't put his attention in front of him on the picture he wants to take. A painter can get so interiorized into the working of his brush that he doesn't see what he is putting down on the canvas.

The key to this situation is drilling. The artist should drill with all of his equipment until he feels confident with it and doesn't have to put all of his attention on its operation. A good photographer won't take a picture unless he is familiar enough with the camera that he can exteriorize from it. A mixer has to know his equipment well enough that he isn't introverted into it or he won't get anywhere.

Once the artist has fully drilled and gotten competent with his tools, his attention will no longer be introverted into the equipment or what he is trying to do. He can then freely express himself, and he will find that he is getting much improved artistic products.

WHAT YOUR DONATIONS BUY

by L. Ron Hubbard

I wonder if you've ever estimated how much it costs to launch a new subject into the world, keep it pure, keep it going right, make progress and defend it.

For that matter, what do you suppose it costs a church to deliver an hour of processing?

I know that Dianetic and Scientology services should be free and I wish they were.

Personally I have tried to do my part in this.

The donations you make for service do not go to me.

A Sea Org member receives only a small weekly allowance and room and board from his church. We run our churches at a cost that would make an accountant disbelieve it. So not much of your donation goes to them even though they bear a full burden of management of pure services.

Org staff members over the world work for so little that execs occasionally get letters from their landladies demanding churches increase their pay level so staff members can pay their rent.

So not much of your donation goes to them.

Occasionally some church or mission goes on a big kick of high pay. We very soon pull the rug out from under that. So if your donation went that way for a brief period we corrected the outness fast as we frown on money-motivation like a thundercloud.

Some fringe fellows know that if you had a complete monopoly on the only workable mental technology on the planet you could make billions. That's why they're on the "fringe." So we prevent your donation from going in that direction.

Then where *does* your donation go?

Since 1950, so-called "mental health" groups have fought to discredit and decrease the power of Dianetics and Scientology.

For 19 years, using their press control, government stooges and puppets, these psychiatric front groups have conducted a continuous suppressive covert operation against us.

Why? They feared that as our power increased they would lose their easy appropriations and fail in their plans for a 1984 World.

We were not even in their line of country—the insane. Yet such was their fear, they have spent untold sums to bring about our destruction.

We not only know who, why and where with full documentation we also know their sordid intentions for the world. Some of your donations made the work to collect that evidence possible.

Bad press, inquiries, bans, these are the *surface* you see. Those are their fingerprints.

Below that level it's a rough fight and has been for 19 years.

Our press consultants tell us we must never mention it as it "frightens the public."

If a definition of governing is maintaining an orderly peace in which business can be conducted then there sure isn't any real government.

So a portion of your donation is spent on patching up the damage done, keeping going in spite of attacks and nullifying the actions against the West of a very choice lot of bad hats. If we didn't have the documentary evidence I wouldn't dare mention it.

It costs money to bring cases up to US Supreme Court level as we have. The legal defense expenses we have in a dozen countries is not small.

So a portion of your donation goes to keeping the subject available to you and to the world.

We work very hard to keep tech being done well. It is nothing for us to put two people on a fast plane and send them half around the world to straighten up the Case Supervision and auditing in an area so you can have confidence in the service you get.

It is routine to send the highest class people we have to handle "ARC Breaks of Long Duration" in the field or on admin lines or to see they get handled.

Your donation supports a long and complex set of communication lines by which tech and admin can be cared for rapidly.

A portion of your donation just the other day began a survey of a backward country to introduce high speed educational processes to bring their people quickly from the stone age up to present time. The "Peace Corps" was also there on cushy government funds building houses for a big Construction Company at a nice profit. But we, unsupported, began the effective work actually needed there to help the people.

A tiny bit of your donation neated up an area ruined for Americans by the American Navy.

Small parts of your donation heal up a lot of things over the world.

But the biggest part of your donation stays right in your area. It is used to make training and processing and data available to the next fellow first by keeping the church there and second by letting him know about it and third by making as sure as possible that the training and processing he gets is standard and effective.

Your donation keeps the church alive and functioning and the environment safe.

It is not easy to do, hit repeatedly as we are.

Gradually little by little we are taking the pressure off our churches. Gradually surely and certainly the bad hats are losing their own power in the world.

If we had the fantastic sums appropriated to "mental health" (and put largely in their own pockets and used to try to crush anyone else) we would make a lot lot lot more progress. As we wouldn't also have to fight the lies that money buys into press and government.

But we don't have appropriations. They are given only to those who deal in death, it seems.

So little by little, using donations you give us for your service, your training and your processing, we create little by little areas of sanity.

And as these areas spread out, releasing and clearing the community, if we continue to be alert and competent, perhaps those areas will meet one country, one continent to the next and we will have a cleaner, saner world.

Your donation is supporting the greatest hope that man has ever had and the churches and people vital to its survival and increase.

Your donation does what it takes to get the job done.

Thank you.

HUBBARD COMMUNICATIONS OFFICE
SAINT HILL MANOR, EAST GRINSTEAD, SUSSEX

HCO POLICY LETTER OF 18 JANUARY 1965

INTERNATIONAL
BOARD MEMBERS
STHIL EXECUTIVES

FINANCIAL MANAGEMENT

BUILDING FUND ACCOUNT

Effective 1 June 65, no rents, cleaning bills or any other actual expense sum bills may be expended from the Building Fund Account.

Such sums must be paid from the expense sum.

The weekly proportion of income owing to the Building Fund Account must be paid into it weekly and may not be withheld.

SIGNATORIES

The Chairman, Secretary and Treasurer are the signatories for the Building Fund Account.

Only International Board members may sign on the Building Fund Account. There may be no local or national signatories.

PRIMARY PURPOSE OF BUILDING FUND

The purpose of this account is to provide a cushion by which an organization which is becoming insolvent may be salvaged.

The following steps should be taken by the International Board in event of the threatened insolvency of a local org:

a. Remove its Organization or Association Secretary by transfer to lower post or, in flagrant cases, dismissal; and

b. Use the Building Fund Account to prevent the organization's collapse until a new Association/Organization Secretary can be found and the newly appointed Organization/Association Secretary can get things going; or

c. Pay the expense involved in sending a Board representative to the area to investigate its activities but only when these show no signs of being mended locally.

SECONDARY PURPOSE

The secondary purpose of the Building Fund is to *purchase* property, but when this is done, the purchase must be for cash or, if any mortgage is involved, all further payments than the initial payment must be made from the expense sum.

THIRD PURPOSE

Building Fund monies, being under the control of only the International Board, may also be used for other Board purposes without local consultation. These include research projects or experimental dissemination projects in the local area, or research on an international basis.

FOURTH PURPOSE

The repayment of loans made by the International Board to an area may be repaid to the International Board from the Building Fund but only on arrangements originated by the International Board.

FIFTH PURPOSE

Finance of International Board projects may be obtained by the International Board by simple withdrawal of funds from the local Building Fund Accounts without permission or consultation with area or national officers or their accounts units; these however must be informed of the withdrawals.

CURRENCY REGULATIONS

Where the 10 percent of the gross income may not be paid to the international area weekly by reason of local currency regulations, an additional bank account must be set up locally to receive them and the 10 percent must be paid weekly into that account.

This account is to be called the HASI INTERNATIONAL ADMINISTRATIVE ACCOUNT.

Only International Board members may be signatories on the HASI INTERNATIONAL ADMINISTRATIVE ACCOUNT.

Funds so deposited may be handled in any way the International Board chooses and are in no way the property of the local area organization.

THIS POLICY ALSO APPLIES TO MISSION HOLDERS. Any “inability to transfer funds to the international organization by reason of currency restrictions” are handled in the above fashion always.

DEMANDS FOR FUNDS

As in my experience an organization always spends all it makes, financial management on an *international* level consists not of carefully balancing income above

outgo in an effort to save a surplus in an organization but of (a) preventing an org from spending *more* than it makes and (b) setting aside enough money from its income to care for salvage operations and salvage expenses.

Part (a) is done by good financial supervision.

Part (b) is done on an international level without *any* regard whatever for the protests and "financial necessities" of the org in question. An organization, whether Standard Oil or any other, will *always* spend all it makes and try to spend more. The task is on the one hand to keep it from spending more than it makes and on the other to make some of its expenditures recoverable in cash.

Never, on an international basis, be so fatuous as to believe an organization will continue to have the difference between its income and its outgo. It will never have that. It will spend it in some way.

An avalanche of reasons it must not save money, or (same thing) why it must spend it, is routine and is to be expected. "The government will tax it," "We can't get auditing rooms," and a thousand other reasons may be advanced as to why the org must spend all its money.

Truth told, I could run any org we have on only 25 percent of the income I would promote for it and pay high wages. I have done so repeatedly. But I do it by making the org apparently spend all it makes while actually spending the surplus in a recoverable fashion. This is the *only* way I have ever achieved a surplus for an org in actual practice.

Accountants deal in figures. I deal in people. Some championship chess players liken life to chess and yet can't make a go of it in life. In life the pieces think. They have impulses. So chess rules, like accountants' rules, don't apply.

Collective-think is always closer to bank-think than individual reasoning. That's because the bank is the one constant people have in common. And it's crazy. So almost any individual alive can plan better than a *group* will execute and certainly better than a group can plan. Scientology groups are far superior to human groups. But the rule still applies that collective-think is always less sane than the thinking of an individual.

In finance, which is pretty weird to begin with, collective-think is always less wise than individual reason. So a group is quite certain to behave contrary to good sense in financial matters. This factor, far more than accounts balance sheets, must be given attention. A group, poorly supervised as in a government, will usually try to spend more than it makes. Heavy supervision and economy can prevent this. Only the physical removal of money can achieve a surplus.

INCOME POTENTIAL

The income potential of any usual group is established by the demand for income, not by any other important factor.

In financial supervision on an international basis, this is the only factor one works with. While it is *reasonable* to suppose that income will occur for other reasons and

can be achieved in other ways, the actual fact is that only demand by the group produces any income at all.

You can, for use in financial supervision, make the requirement almost anything you like and, so long as a group believes it is spending all it makes and needs more, you will have adequate income.

For practical purposes, no other rules apply.

Scientology orgs have always spent all I would make for them. They have adjusted their "need" to how much could be made. In supervision of their finance it is only necessary to reverse this and they adjust their income to their "needs."

When a surplus is made part of the "need" by disguised outgo a surplus occurs. Only *then* will it occur. It will not happen otherwise.

You can waste 15 percent of an organization's income to obtain a 5 percent surplus and it will be a wise action. If you seek a surplus by trying to save the 15 percent instead in a visible way, you will not only lose the 15 percent but the 5 percent also.

You can only attain a financial cushion in an org by removing it out of reach so that it appears to be spent, then producing it when the org overspends or gets in trouble.

Orgs, like children, are fantastically improvident. And a group, to work, must believe it is spending all it makes.

Money, to begin with, is only an abstract idea. Therefore it is the victim of all manner of thoughts and opinions.

All we want out of an org is for it to stay there and continue. To do that we have to have financial ideas that work. Incredible as it may seem, the above are the only practical financial ideas which have worked and which have produced surpluses and guaranteed org continuation.

Add to these good promotion and excellent technical and you have the reasons we are becoming strong all over the world.

Financial management is not accountancy. It's people. As head of an org if you can think your way around collective-think you can become solvent and even have a surplus. Maybe it *shouldn't* be that way but it is.

LOCAL FINANCE

When local finance is poor, don't ever look at anything or anyone but the Association or Organization Secretary. This being can either think his way around collective-think or he can't. If he can, he's got a solvent org. If he can't, he'll go broke.

An org that runs only on collective-think will go broke.

The only symptoms of approaching insolvency in an org one needs to look for are (a) demands by it for money belonging to the international org or myself, or (b) consistent low income.

In either case, the remedy is to get somebody in charge who doesn't demand monies belonging to the international org or myself and who gets a higher income coming in for the org. An Assoc/Org Sec who can't do this is the effect of the collective-think in his org and is not the org leader or the dominant planner of the org.

At continental or international level one must never seek for the "reason" why international or LRH monies must be used by the org or why income is consistently low. You can get reasoned to death. If these two facts exist, then there's so much else wrong one would go mad tabulating it.

The steps to take are:

1. Remove the Assoc/Org Sec.

2. Put somebody in who *can* handle collective-think.

3. Use any local surplus to carry the org during the upsets of transition.

Experience has taught me that distant efforts to right local extreme wrongs are usually disastrous. You can right small wrongs, show the way and so on. That's only normal leadership. But when an org begins to skid financially or get upset over "its" money being used internationally, you don't fool about. You just act.

The longer you put off acting, the more local people get hurt. Because behind those facts of poor finance are some very ugly other abuses always.

I don't want any orgs in a games condition with the international org. For this is only a symptom of the imminent collapse of the local org anyway. It goes into a games condition only after its overts stretch from A to Z.

You don't see the overts from a distance. You do see financial conditions and demands.

It would be impossible today for a cleanly run, on-policy, up-tech org not to own its area totally in 10 years.

Financial insolvency? What nonsense!

So financial policy is based on good individual ability heading up each org and is not based on either accounting or collective-think. Neither one will build any future for mankind.

The reasons behind the Building Fund Account have been set forth above in full.

Good local leadership always results in good local financial credit and strength. Weak local leadership has always resulted in financial insolvency and trouble. Broad general supervision of orgs uses financial protests and upsets and trouble to detect weak leadership.

Without adequate and sensible leaders, orgs would slump into collective-think in their planning, spend more than was made and cease to exist.

We want orgs to be successful, to stay there and continue. That requires sensible financial provisions and management.

1. An org will try to spend more than it makes.
2. Economy is aimed at preventing it from spending more than it makes.
3. A surplus is achieved only by making it part of what an org spends.
4. An org's expenditures are *not* regulated by what the org needs in order to do business but by what an org thinks it has available for expenditure.
5. Financial management can *not* achieve a financial surplus by economy alone.
6. A surplus to be achieved must be made part of what an org thinks it spends.
7. Income is regulated by what an org thinks it has to have to operate.
8. Income is never regulated in a usual org by desires for a surplus.
9. To achieve a surplus it must be masked as a "necessary expenditure."
10. Economy, to achieve a surplus, does not include saving on expenses. It includes only adding an "expense" that becomes a surplus.
11. To achieve a surplus one must add an expense that can then thereafter convert to a surplus. One can waste up to 50 percent of an org's income to achieve a 10 percent surplus. In some cases this is the only way a surplus can be achieved. Why? See (1) and (2) above.
12. An individual is always more sensible than a group.
13. When an org is losing ground financially it is being "run" by someone who is only the effect of the group and cannot act as an individual in planning or control the group.
14. The only possible *Board* action when an org is not making its way financially is to remove the Association or Organization Secretary. The incumbent is only the effect of the group and is not planning or controlling.
15. The earlier one detects a bad Assoc/Org Sec and replaces him the better it is for the people in that area.
16. The ways to detect a bad Assoc/Org Sec are:

    a. Their games condition by any part of the org with the Board;

    b. Their desires to be financed by the Board or use the Board's or my income to run on;

    c. Generally low income;

    d. Protests against the Board using "their money."

    Under these or any of them will be found an org out of control and messing people up.

Therefore the quicker the Board acts to replace the Assoc/Org Sec the easier the situation will be to handle and the faster the org will recover.

17. *Board* efforts to "straighten up an area" without replacing the local head have *never* been successful in 14 years. If let go too long under incompetent management an org's recovery requires heroic efforts and vast financial expenditure by the international org.

18. Bad local publicity and trouble always follows after no. 16 to the degree that the Board did not act.

19. Financial management as contained in this policy letter, closely followed, will prevent almost all trouble and org upsets, not just in finance but in all other areas.

FINANCE

HOW TO MAINTAIN CREDIT STANDING AND SOLVENCY

(Hat check on Org/Assn Secs and Accts Assistants)

Credit does not entirely deal with money. It has everything to do with confidence and reliability.

When the world saw a recently elected government act foolishly with customs dues, etc., it had no confidence in that government and the currency of that government went to pieces on the world market.

Money is basically a matter of confidence. So is credit.

An Accounts Unit that handles money poorly wrecks the org's credit rating. Insolvency is much less often the source of poor credit than just poor money handling.

Almost all our orgs have good credit. But where they don't it is money *handling*, not the amount of money available that wrecks credit.

An Assn/Org Sec who handles bills in a certain way has good org credit. One who doesn't has bad credit.

To try to assign credit to the amount of money available is *completely* false.

You can have lots of money and horrible credit. You can have little money and excellent credit. So saying "Our income has been poor so our credit is bad" is a lie.

The business world judges Scientology not on its scientific validity but on its financial credit rating. If the org's credit is good then "Scientology is okay." If your credit is bad, "Scientology is a racket," in business general opinion.

Melbourne's financial *credit* went bad before its general repute earned it an inquiry.

Good credit is a primary dissemination line. It breeds confidence. You can't have bad credit and still be thought of as a valid science.

So financial management *must* help general dissemination by maintaining good credit.

A bad credit rating comes from negligence in Accounts, not from the lack of industry of the Registrar.

To begin with, an org has no business spending more than it makes. To do so shows stupidity in management and Accounts, lack of a purchase order system and a general beatnik state of organization.

Make all the money you can. Spend less than that. That's the simple ABC of financial control.

Make sure all the income is accounted for and banked.

Make sure no unauthorized purchases can be made by executives or staff by requiring an authority to purchase or *contract* from the head of the org before any purchase can be made or contract signed. Sure that's slow. Who wants it fast? The slower it is, the less you spend.

You want speed on the income line. The disbursement line is something else.

So never listen to somebody saying "But it takes so long to get a purchase order that I just bought it . . ." Yawn and say, "You bought it without authorization. You can pay for it personally." *Never* let your purchase order system break down. If you do you will soon be spending more than you make. Fact. No exceptions.

A company to most people is something to bleed. They never realize that a company can only spend what it makes and that what it has is made by individuals. So if you have somebody around who is always saying, "The org will pay or should pay," point out that the org is its staff's collective pocketbook and that that pocketbook has a bottom.

SOLVENCY

You sometimes hear around an org a wave of "we're broke" when spending is restrained. This hurts credit. For it's not true. Economy is *not* a sign of being broke. It's a sign of increasing prosperity. Without curtailed and watched spending you *never* have prosperity.

So don't tell everybody, "We can't buy it because we're broke." That's a lazy, dull reason. A better one is, "We can't buy it because we don't need it," and is usually the truth. "We have a PO system because we want to prosper" is the real reason you have one.

Make lots of money. Spend it frugally.

So it gives a tax problem. So what? Your accountants should be capable of avoiding tax problems. Whether you do or don't have money you will always have a tax problem because governments are crazy. The way to solve a tax problem is to have money, not to be broke.

Taxes exist only to destroy businesses. Be impudent. Get rich and to hell with them. Governments are just a reactive bank we have to live with for a while. Learn to handle them. But not by refusing to make money or have it.

But solvency depends on how you handle things, not on how much you have. Micawber, in *David Copperfield,* said that if you had twenty-one shillings and spent a pound, you had happiness. But that if you had nineteen shillings and spent a pound, you had misery! A pound being twenty shillings, that's all there is to solvency.

If you *have* to spend a million dollars, then you better make one million one hundred thousand first. And then make sure you don't spend one million two hundred thousand.

The secret of solvency is:

1. Make a lot of money. The way to do that in Scientology is covered in HCO Policy Letter of 21 Jan. 65, VITAL DATA ON PROMOTION, THE FUNDAMENTALS OF PROMOTION.

2. Spend less than you make. That's covered by having a good PO system and alert financial management.

3. Make it before you have to spend it.

4. Gather bit by bit a cushion of cash to fall back on and don't ever fall back on it.

5. Keep your credit excellent as a second cushion.

6. Refuse to spend reserves. Make more money to meet the emergency instead. (It's usually quicker to make it than to dig it out of old hiding places. Never borrow to pay bills. It's less trouble just to make the money.)

7. Realize that collective thought regarding finance is just bank and that bank is dead against the creation of anything good and all for eating up everything that exists. Thus financial planning and control is an individual job, is often contrary to group demands and succeeds only when the individual handling it can rise superior to the group. A tame-dog financial manager, trailing along behind the group, yessing everything, will always make the group insolvent. The person you put in charge of financial management should be able to say "No!" no matter how popular a silly "Yes" would be. The financial manager is not there to buy his own popularity with org funds.

In the early years of Scientology, my whole answer to org solvency was just to make a lot more money than people could waste. It's a good answer, lacking all others. When I finally attained control of orgs, I was able also to curtail the waste while making lots of money and we've been pretty solvent ever since. The principles I used to achieve and continue this state of solvency are accurately and completely listed in (1) to (7) above.

When you realize FINANCIAL CREDIT is vital in dissemination, you become very interested in what it is. As I said above, this is *confidence*.

Given some degree of solvency, you still do not have a good credit rating. That is achieved by HOW YOU PAY BILLS.

This is the one big point that is vital to know thoroughly in this policy letter.

If an Association or Organization Secretary and the Accounts Assistant does not know exactly this data, the org will have bad credit and financial trouble no matter how much they make.

There is an exact way to pay bills.

This is to pay the bills up to a certain date always. It is called "paying by dateline."

Never "pay a little bit on each bill" to save money or help cover a lean period. That will never help. On the contrary it advertises your lean period and hurts your credit.

Instead, *always,* lean or fat, pay *all* the bills *behind* a certain date and *none* closer to PT than that date.

That's why we have the type of disbursement system we have. So you can do this trick. If your disbursement system and its files are not up to the mark and are sloppy, you will always have bad credit because they can't then do this trick of dateline paying.

Look to the inefficient Accounts Unit and the lack of this bill-paying system if your local credit is poor. Don't go off into income–outgo. Just demand that our general accounts system be followed and that disbursement files are up-to-date.

If you find an Accounts personnel giving financial management the razzmatazz about why it can't have good disbursement files and if this bills-paying schedule is always being violated, assume at once that that personnel is overtly wrecking the org's credit and get him or her away from that post and get somebody in who will follow our system accurately and help pay bills only by dateline.

You can have six months worth of unpaid bills in some areas of the world and *still* have a good credit rating providing you do not have one bill that is *ten* months unpaid.

Never "pay bills" any old way. A financial manager should always refuse to pay bills one at a time on different days or when Accounts submits a check.

Tell Accounts "Give me every bill we owe prior to August (three months ago)." Add these up. Let's say the amount exceeds our cash. Cut it back one month. Order "Write checks for *every* bill up to July 1." (That's four months back.) That we can cover fully with cash. We pay *all* bills *up* to July 1. We demand of Accounts, "Are you very very very very sure that no bills dated prior to July 1 now exist?" If the answer is "None exist," okay. But if we find out next week that one existed for April 1 that wasn't included, we overhaul the unit as destructive of credit.

Businessmen handle their books by bills owed month by month, not by total sums owed. When a check comes in paying his July 1 bill, then it's plain you're paying your bills. If you send a small sum hopefully to "stave them off" they can't dismiss any one statement with it and so get panicky. It looks like you aren't paying your bills.

After you've paid all bills older than 4 months, get busy and make money. In 30 days request of Accounts "all bills up to 15 August." Let's say we find that we have cash to cover. We say, "Pay all bills up to August 15." Now we're only 3½ months behind.

A month hence we pay "All bills up to Oct 1." Now we're only 3 months behind.

If you get some eager beaver into finance who doesn't use or understand how to do this, you can suddenly look up and find that you thought you were doing all right but you're broke. The eager beaver paid randomly anything in the files he or she came across "in order to pay our bills." We aren't interested in bills as bills. We're interested in "all bills earlier than a given date."

You can go pretty smash on an eager-beaver bills-paying spree with no regard to the age of each bill.

Only pay by this system:

PAY EVERYTHING UP TO A DATE ALWAYS and no further.

And get a new Accounts Unit if disbursement files aren't accurately kept so financial management can do this.

EXCEPTIONS

Government tax bills, water bills, occasionally rent or phone are sometimes accompanied by threats of vast action unless the whole bill is paid instantly. Still try to use the above system. But if you can't, pay it and retard other bills accordingly. And thereafter, don't pay that outfit's bill on any other terms than threatened trouble.

If a tradesman, despite the use of the above system, demands further payment or threatens suit, caution him that if he carries on this way you'll deal elsewhere. And carry out the threat. *Never* continue to use a private business firm after they become obnoxious about bills. Trade elsewhere. And say why.

If you're using the above dateline system and a tradesman gets upset, then he is gypping you or he has too little finance to handle your account, so stop trading with him. Always make that an ironbound policy. Be very proud and haughty about bills. *Never* propitiate.

So the points here that are important are:

1. Pay by dateline only and pay *all* up to that dateline. Put the dateline far enough back so you *can* pay all up to that date.

2. Have an Accounts Unit that can do this and change one that flubs it.

And that handles the whole of credit rating.

Simple?

The other day two high-geared chartered accountants were giving me a lot of stuff about how I needed a double-entry system and that the existing system was wrong.

They said, "We can tell you 21 days after the 30th of the month where you stood in that past month using our double-entry system."

I said, "The system we have to have must tell us *four* days after the past week exactly where I stand. We operate in the twentieth century, not the nineteenth."

They said, "But your system is wrong."

I said, "In a double-entry system, you need each bit we have, don't you? Invoice all the money, bank it, reconcile the deposits with the slips and statements, file all the bills, verify them, pay them by check and voucher and keep all records."

They looked at each other and were very quiet. "Yes, that's correct," they said.

I said, "All right, that's our system. Now you can do anything you like with that system from there on, so long as you don't prevent us from knowing where we stand four days after the past week and don't bar out a nonaccountant from discovering what's what in the Accounts Unit. Now go ahead and *on* our system erect any system you like. No government requires anyone to have *books*. They only require *records*. But books, if they help, should also be kept, made up from our records." They agreed.

So if you are getting propaganda about how our system is inadequate as a reason not to operate and have accounts, get somebody in who *can* make it work. For our system is the basis of every other system and if it's in order and *done,* you can have books. If it *isn't* in order, no books can be kept by *any* system.

So we don't care what accountants do with our basic system so long as we still at least have that. On that, *any* type of books can be erected or any balance sheet made.

If you have the basic data you can add it up.

If your Accounts Unit can't add up whatever you need then our system is *not kept up* and *no* system would work in that unit. Where there is Accounts trouble there is:

1. Noncomprehension of our basic system as the basic of any accounts system or

2. Nothing being done.

Get our system in so you know where you are with cash and bills.

Manage by paying all bills up to a specific dateline only.

Advance the dateline as you can cover all with your cash and make lots of money so you can advance it further toward PT. Practice economy so you can advance it even closer.

Continue to do that and you'll always have a good credit rating.

We have a lot of fine Accounts Units. They do a good job. They can handle this if they understand it. It's your job now to get it understood and done.

ACCOUNTS HATS

RESERVED PAYMENT ACCOUNT

All organizations must start, as an additional bank account, a Reserved Payment Account with signatories the same as other routine org accounts.

The Reserved Payment Account, as its name indicates, is money set aside for a certain destination but not yet sent.

PURPOSE OF THE RESERVED PAYMENT ACCOUNT: To prevent a false idea of the financial position of the org from occurring by providing a place where money awaiting disbursement can be placed before it is actually paid out, thus removing it from the general accounts and estimates of financial position of an org.

QUESTIONED BILLS: Any time a bill is in question, it is not paid to the creditor until fully settled. However, dateline paying becomes very disrupted by such sums and the actual financial position of the org becomes difficult to estimate while such sums remain in its regular accounts. When a past bill prior to the dateline is being challenged and corrected, the full amount is deposited in the Reserved Payment Account. To pacify the creditor who may get the idea you are just stalling, also always send him a copy of the Reserved Payment Account transfer voucher, writing “Dear Blitz & Co.: Your bill is being audited for verification or correction. Meanwhile its payment is being held in our Reserved Payment Account. If verified or corrected the amount owing to you will be paid to you from this account.” The transfer voucher is clearly marked “Blitz & Co., Reserved Payment Account transfer for March bill, being checked.” Such vouchers accompany other checks being presented to the signatories of accounts. When the actual sum is verified, *that* amount is then paid the creditor by a check from the Reserved Payment Account. For any money not paid, it is eventually returned to the regular accounts.

At times when the books are being closed for the period just past, any excess money in the Reserved Payment Account is returned to the regular accounts as a transfer or left as a saving for future purchases as directed by financial management.

TAXATION: All taxation monies which are owed governments but are not yet paid are deposited in the Reserved Payment Account and eventually paid to the government as owed. This means that where an org must pay withholding tax, PAYE and other such sums, TWO salary checks are drawn each week, one for the staff, one for the government. The government check is deposited to the Reserved Payment Account. Once a month or as wise, the government is paid off to date with a Reserved Payment Account check or checks amounting to the sum owed. In cases of *org* income tax payments, any sum *estimated* can be placed in the Reserved Payment Account as seems prudent, fitting the conditions of the area.

OUTSTANDING PURCHASE ORDERS: Where, on preparing a Monthly Bills Summary for dateline paying, large POs for which statements are not yet received, incurred prior to the dateline *must* have their amounts deposited in the Reserved Payment Account or a liberal estimate of the amount. Such large POs must not remain undetected and must be part of the dateline payment system. If a large PO exists for August but the creditor has sent no statement and the dateline being paid to is Sept. 1, then the amount of the large PO is deposited in the Reserved Payment Account when the other bills are paid. There it remains until a statement is submitted by the creditor.

SAVINGS: When the org desires to buy something big or expensive, it *should not* use time payments, hire purchase or mortgages. It should start putting money into its Reserved Payment Account and when the full sum is there, buy the item for cash, using the fact to obtain a good big discount. While the Building Fund on building purchases is also intended to help buy buildings outright, there is nothing wrong with also depositing available amounts of the disbursement sum in the Reserved Payment Account to help out.

All monies transferred to the Reserved Payment Account are made the subject of a disbursement voucher which clearly states why and what the payment is being reserved for. Of course, when an amount is paid from the Reserved Payment Account another voucher is written, referring to the first one regarding the original transfer. So it is necessary that when one makes a disbursement voucher for transfer *into* the Reserved Payment Account, a copy of that voucher is spindled or put into a handy single file. Otherwise one won't be able to recall *why* the Reserved Payment Account has money in it and so may let it be used for something else as an apparent overflow — much to everyone's eventual embarrassment when the X bill gets straightened out and wants money to pay it.

The Reserved Payment Account is an easy system. People often handle their own personal money this way — $20 aside for a new jacket, $15 for this week's share of the rent when it falls due. Add to this $12.50 "for the money Bill says I borrowed and he has to find the note for" and put it all in the broken teapot on the top shelf and you've got the purpose and action of the account.

You can object to it on the grounds that "it ties up capital on which we pay interest in another account," etc., but frankly such small interest bits are little to pay for the

security of knowing you can meet your obligations. To juggle with already committed funds is financial brinkmanship.

You see, by just an orderly scheduling of payments (as per dateline paying) and being prudent in setting big amounts owing but not paid aside, an org can move up to present time.

I know no other way of getting an org's finance (or a pc) to present time except by pulling off the things which hold him in the past.

An org is far more aware and far saner if it's in present time. Just like preclears. Hence dateline paying and the Reserved Payment Account.

RESERVE FUND

Every Scientology organization must accumulate a

GENERAL LIABILITY FUND.

The fund is to be built up against claims made against organizations or any Scientologist by the public or governments arising out of the conduct of affairs of the organizations. The fund is also for legal costs, libel and slander costs, defense funds, destruction of repute and restraint of trade, uninsured risks to buildings, lapsed insurance policies, acts of God, war, riot and civil disorder, usurpation of power, restraint of princes, radioactive fallout, atomic destruction, salvage of persons and property, reorganization costs due to departure or demise of Founder.

The fund is accumulated from allocations of 5 percent of the corrected gross income.

A special bank account must be opened to care for this fund called "The General Liability Fund" account to which is added the local name of the organization. The signatories on this account are the board members of the organization.

Money is paid out of this fund only on claims and demands approved by the Board of Directors on subjects or requirements as covered in the description of the fund above.

FINANCE COURSE
CHECKSHEET
PRO COURSE CHECKSHEET

ACCOUNTS AND PRO

It's a PRO world today.

Public Relations Office or Officer is meant by "PRO." It is also slang for "Controlled good relations in the community or area."

When you "PRO" something, you visit, write, handle it so as to enhance and improve your public image.

A terrific amount of PRO effect occurs on ACCOUNTS lines.

Bad or inaccurate statements of debt can ruin your PRO with a customer, pc or student.

Unfair accounts decisions can mess up the PRO of a whole area.

Unpaid bills can ruin your PRO in a whole town.

So there is a lot of PRO connected with accounts actions.

Repairing the damages done by not submitting correct accounts to customers or failing to pay commercial bills or rents or utilities is a PRO action and requires some thought and careful handling so as to restore the org's PRO.

The biggest crime one can commit in this modern society is to be without money. Even in a supersocialism this is a crime.

For an org not to have and make lots of money is stupid. Given a potentially remunerative activity, only thoroughly lousy service and horribly bad handling of promotion or criminal carelessness in accounts can leave an org without money. Doing standard org actions, giving excellent service and adequate promotion brings in plenty of money. The outnesses which prevent income or waste outgo have to be truly glaring and goofy to leave an org without money.

The way to have NO PRO is to have no money at all.

Lack of money or wild outnesses in handling money can practically destroy an org's PRO.

"Credit" as a quality is a sort of god in Western society. If your "credit is bad" that finishes you to one and all. It is a statement far worse than mere "murderer." It must be since psychiatry murders daily but is well thought of in governments.

So you get the extreme value of "good credit."

Dateline paying and other accounts policies prevent bad credit.

But when it has gone bad, it takes making money and brilliant PRO actions to restore a good credit image. AND IT MUST BE RESTORED.

Money as a total motivation for an action is not high-grade motivation. In espionage services the man who works for money only is expected to turn his coat and allegiance and is regarded with contempt.

But money is a basic point of judgment on which higher levels of motivation can be built in a wog world. It *is* PRO to the commercial world which has no real dedications.

So billing debtors and paying creditors have high PRO value to an org.

All this can become a strange cycle. The org mucks up its area, let us say, by bad or indifferent service, promotion then is unreal so the org PRO with customers collapses. These don't buy service. The org runs out of money. Its bills mount up and its commercial community PRO collapses so it has no public credit. There goes the org.

Accounts is the area hit and will go on being hit until it begins to insist on GOOD SERVICE, the repair of all bad service, good real promotion and finds money to spend on PROMOTION. Money will come in. Accounts actions must now PRO the commercial field, get that handled with good PRO accompanied by money on dateline payments and sound arrangements. Further money is spent on more PROMOTION. Former bad service is handled. Credit is reestablished in the area. Any accounts trouble with customers is cleared up. The org is fully there again.

There is no substitute in Accounts PRO for knowing one's finance policy and following it.

Sloppy accounts files, no financial planning, no Purchase Order system, ignorance of finance policy as in the Finance Checksheet can lead an org directly into losing its community PRO regardless of service quality or promotion. So just as Accounts can be mucked up by lack of money coming from bad service or bad promotion, it also happens that Accounts all by itself can wreck an org's community PRO.

Therefore it is VITAL to PRO that an org:

1. Has its Accounts personnel have their Accounts hats on and finance policy being closely followed.

2. That financial planning is real and income remains greater than outgo.

3. That adequate funds are available for promotion and that org funds do not get all soaked up by the HCO ES and OES divisions on filing cabinets and new roofing paper.

4. That the pcs and students (customers) of the org are handled to generate high PRO on their accounts contacts.

5. That the commercial connections of the org in the community, the org's creditors, are smoothly handled to generate high PRO.

6. That any adverse reactions along accounts lines are instantly handled to restore good PRO. These can include a covert operation to one's creditors by some enemy — which is handled by proving the falsity of the accusation. They can include wrong change, failure to refund, reluctant or inaccurate or failed payment to field staff members. These and any other adverse Accounts action MUST be pushed back to good PRO fast.

Lack of money comes from slow or bad service, and a failure to go flat out to remedy it or from no or poor or unreal promotion. Or no money can stem directly from off-policy or messy handling of accounts and org finances.

In the final analysis it's a PRO world and high PRO cannot be effected for an org if there is anything wrong in its accounts lines. Thus, PRO is affected strongly by Accounts and Finance actions.

Our orgs do not go into debt, do not finance themselves by borrowings. Our orgs make their own way. That is why they are still our orgs. And Accounts PRO has a lot to do with it.

FINANCE SERIES 1

FLAG BANKING OFFICERS

The Finance Office has representatives in every bureaux and every Continental Liaison Office and every org, SO and Scn.

It is located on the org board in Department 21.

Its representative is called the FLAG BANKING OFFICER (FBO).

The authority of the FBO stems from his position as an officer of the Church organization he is part of.

When the office is established in an area, the following procedure is followed.

The FBO verifies and collects all income received by the org from the Cashier or Income Dept, Div 3, Treasury Division. This is done daily.

Appropriate receipts are given the Cashier or Director of Income.

The FBO immediately banks this money in the organization's Finance Office account or in his safe, making express and useful records of this action.

When the org or activity has undertaken its financial planning (FP) to the satisfaction of the Treasury Secretary (or Purser) who can verify that the FP covers the necessities of org operation, the FP is transmitted to the FBO. It is again verified.

Accompanying the FP from Ad Council level must be a statement of expected future income and its planning. It is upon this that the FBO bases his authorization.

The FBO on his own discretion then transfers to that org's Main Account the needed funds. This is the ALLOCATION.

From this Main Account the org now further transfers funds to its other accounts.

Any reserves being built by the org are taken from the allocation.

The management of the allocation remains with the org.

The judgment of the FBO, based on the org's expected income as stated in the FP, and on the FP submitted, as to what amount the FBO allocates is entirely up to the FBO and is not subject to appeal. The FBO must make his experienced allowances for down periods and for the actual production of final valuable products of the org.

Any cash shown on a cash-bills graph is cash salvaged from former allocations (org reserves) or current allocations. The cash expressed on the cash-bills graph of the org must exist in actuality and must be real sums that can be expended. It may not be "credit coming to us from an FBO" nor collectible but not received sums. Even checks delayed in clearing may not be part of this org cash figure.

The FBO also pays from his own funds so collected from orgs, management expenses incurred locally. These are no part of an org's expenses.

The sums and accounts of the FBO are solely under the control of the FBO. Allocated sums for the org are under the org's control.

Funds requested by an org FP from the FBO's accounts for a specific use must be applied to that use or refunded to the FBO if not so used.

The orderliness and in-admin of a Treasury Division in an org are under the overall supervision of the org's Treasury Sec, and the org's Treasury Sec and the state of his division and the reality of his activities are the responsibility of the Treasury Bureaux as well as under the Executive Director or the Commanding Officer of that org or activity.

Balance sheets and other reports are under the same responsibility as the Treasury Division but in the matter of balance sheets and tax also come under the Office of Special Affairs and the Finance Office to which both Treasury Aides and A/Aides are answerable.

The viability of the org and area is the local responsibility of Treasury Secretaries and A/Aides and Aides of the Treasury Bureaux and, as it may seem to them to apply, the Finance Network.

The solvency of the orgs and areas is the responsibility of the FBO.

The FBO's statistics consist of cash paid in to central reserves and the allocation–production ratio of each org and of the area.

Central reserves are used for defenses and management overall cost and viability.

Org reserves are used for local emergencies or periods of down stats or large acquisitions to increase production.

Nothing in this policy letter disturbs in any way existing finance policy except to modify the Cashier's and Dir Income's actions in turning over all income properly accounted for to an FBO and receiving, via FP and the Treasury Sec of the org, from the FBO the allocation passed upon by the FBO.

FINANCE SERIES 2

FINANCIAL PLANNING TIPS

FP need not be a burden at all.

If these five conditions exist then FP is very easy.

1. PRODUCE AS AN ACTIVITY. Look over what your products should be, particularly your valuable final products, and then begin to get those products somehow anyhow. This and only this is the shining reason why you can have a decent allocation. If it is then denied you you can howl and be sure of redress. A cap in hand with no product is a sure route to chopped FP. (Example: An org with half a million collectible on its books but which didn't even send out statements had an awful time with FP. Asking for "allocations" that were really handouts, neither its FP body nor its FBO fully understood WHY, but it just seemed unreal to give it money. It was asking for money. It wasn't requesting the return to it of money it had made and was entitled to. It did not make other value so could not justify value. Therefore it "sort of looked odd" to Finance. Even Finance did not know why. The wildest example of this was the 1950 LA Foundation which, under a US Navy ex-rear admiral, wanted $47,000 a week to subsidize a foundation potentially making $80,000 a week. But he closed its doors and wouldn't run it until he could get "legal" and subsidized. Another one is DK 1969 wanting Flag to pay it $3,000 a week to keep it going when it wasn't even sending out letters and did not even own a typewriter yet was accidentally making $5,500 a week average. There are tons of such examples. Activities go on to government appropriation think instead of *promote—sell—collect* and *deliver* and wind up with no pay, no food, no uniforms and FP troubles and conflicts you wouldn't believe possible.)

2. KNOW YOUR FINANCE PACK. When members of FP bodies have not done their finance pack they get into total confusion. Further any finance authority gets disgusted with their admin irregularities and won't regard their propositions or troubles with any seriousness. Failure to do, refusal to do a finance pack (which only takes a couple part-time study days) can give an FP body a bad name with Finance people simply because their ignorance is mistaken for foolish proposals.

3. SEPARATE OUT DIFFERENT TYPES OF EXPENDITURE. An early policy letter (HCO PL 15 Feb. 64, THE EQUIPMENT OF ORGANIZATIONS) on "title" of various items helps clarify. Find out and get it agreed to what is covered under Title

A (permanent), Title B (valuable nonexpendable) and Title C (issuable or usable) and get Finance to agree to what is which and exactly what one is doing FP on and the tangle becomes easier to undo. What is Permanent Fixture? Does one FP for new ships, new buildings, vital repairs, vital spares? (Actually no, but it has to be covered in general finance.) Is one FPing for gimmicks and oddities and possibly useful things (Title B)? Or is one FPing for expendables, wages, food, fuel, papers (Title C)? Maybe one FPs for all three BUT in the category of necessities to operate and would be nice and future hopes. Necessary spare parts for Title A that would break everything down are of course necessities. So probably should pass without question. Whereas Finance people often don't see them that way. Wages, food, uniforms, fuel are subject to cutbacks where an activity is not able to demonstrate production. Good idea Title B usually comes in for purchase when the activity is really making the money and otherwise are a yawn. Future hopes depend totally upon one's profitable use of what one has. Once you get all this agreed to with Finance people they can't change the rules on you every FP. And a lot of the strain goes out of it. No FO or PL could easily set up exact rules for every type of activity there is. Essentially it would be what is agreed upon between the Finance people and the FP body. The Finance people want to get cash to reserves and they resent justly a freeloader activity that has subsidize or unwise think. They want to give an activity X beans (money) and get back X beans plus. When they give out X beans and get back *no* beans they are hard to live with. Even a ship that produces no money directly still sells org help events and trained experienced SO members for beans from orgs. Any org would give it good hard beans for real help and trained experienced SO members. If AOLA could "buy" all the excellent SO members it wanted and needed from the station ship it would be delirious with joy. But if the station ship has not been making them, it has a hat-in-hand aspect to Finance people. Finance people then shift the rules around to try to get out of giving *any* money at all, naturally. While this is covered in no. 1 above, it also affects no. 3, this one. Everything is considered Title C, even the ship, and subject to total reduction as it does not increase Finance people's viability. So "the rules" get shifted on the FP body. If it isn't making a valuable final product that can be changed for cash with something that has cash (no. 1 above) and if it doesn't know general finance rules (as in no. 2 above) and if it has no solid agreement with the finance authority on Title A, B and C, then of course FP is a nightmare for everyone concerned.

4. NEGLECTING NECESSITIES. When an FP body is not aware of the necessities of its operation and neglects to FP for them Finance people (Bureau Three Treasury and FBOs) have to do it for them. This causes a lot of bad feelings from Finance people. A new drinking fountain or trampoline mat for staff and no postage FPed for is sure to cause a lasting engram! An FP body should have a list of vital necessities by division and FP for those first before it begins to wonder. Strangely, pay, food, uniforms are not considered necessities. They do not directly influence an activity's income. A "necessity" is what it takes to make products and valuable final products. In a cap-in-hand activity food is qualified as "some food, oatmeal maybe." Pay becomes "maybe but no bonuses ever." Uniforms become "none." Recruiting posters, YES. Fuel becomes "economical amounts carefully used." Training materials becomes YES. So what's a necessity? A necessity is what it takes to make *the* valuable final product, not individual survival but group survival. So an FP body doing individuated think can get in severe FP trouble just by the nature of economics.

5. USING FP TO NEGLECT DUTY. It is a shame but true that people will excuse lack of vital action by blaming FP. "The building burned up because we couldn't get fire hoses through FP." "The main engine broke down because FP rejected . . ." Actually tracing such statements usually discloses the item was never FPed for at all even to the FP body or that an "FP" was used as a means of escaping the work. If you buy all this blame of FP you will think FP and Finance people villainous. Actually FP is often a whipping boy to excuse not doing the job or to delay it. Failure to handle and saying it was FP when it wasn't is Comm Ev stuff. So don't let FP get a bad name unjustly. It's grim enough even when done right.

The future of any activity depends upon these five factors above. It is an economic world in which we live, regardless of "isms" like capitalism or communism or socialism.

If you have these five things cared for you can do FP quite merrily.

The essence of getting money is making money in the first place. FP is the second step of what do we do with the money we make. It will never solve neglecting to make it. You always have trouble with money if you don't make any.

I hope this helps lead some finance bodies out of the jungle into the sun.

BASIC FBO DUTIES

Refs:

HCO PL	29 Jan. 71RA Rev. 2.2.91	Finance Series 1 FLAG BANKING OFFICERS
HCO PL	13 Feb. 71	Finance Series 2 FINANCIAL PLANNING TIPS

ORG CASH COLLECTIONS

The FBO collects the cash from Div 3.

He verifies what he has received.

He gives a receipt for it.

He writes it all down in his records, making a total list of what the monies are.

He makes out a bank deposit slip.

He goes to the bank and he deposits the money in his FBO No. 1 Account.

FP LINE

Exec Council of the org passes on and finalizes its FP and hands it to the FBO who verifies it by production for himself.

The FBO writes a transfer check from the organization's FBO No. 1 Bank Account and just transfers the FP amount to the org's bank account (Main Account).

The org's own executives are signatories on their own bank accounts.

The FBO and Director of Special Affairs are the signatories on the FBO accounts, with the LRH Communicator (or Flag Representative if no LRH Comm posted) as a secondary signatory. Only in the absence of the FBO or DSA is the third signatory used.

The FBO maintains a second bank account (FBO No. 2) to which he transfers money for International Management expenses.

He sends money from the first (FBO No. 1) account to SO (not org) Reserves.

The FBO keeps an invoice and disbursement voucher system on his FBO No. 2 Account.

The FBO never spends any money out of his FBO No. 1 Account. Money goes into it and is transferred out of it. Only transfer checks are drawn on it (to SO Reserves or to org or FBO accounts).

The FBO keeps enough float in his No. 1 Account to cover bounced checks. Checks bounce ONLY on that account.

The minute a check bounces or fails to clear, the FBO reports the drawer for false report and personally contacts him to establish whether the check should be re-presented or another check drawn.

This transaction does *not* go through the org Division 3 and is *not* entered on the org's books. The org is left in the position of the public's friend. It is the FBO who is the public's devil.

No Division 3 is ever touched, approached or harassed on bounced checks by an FBO. It is an offense for him to do so.

Division 3 collections have to do with collecting Qual credit invoices and advanced payments and any other credit advanced by the org.

BANK ACCOUNTS

FLAG BANKING OFFICER (org name) No. 1 ACCOUNT. Signatories: Org FBO and Director of Special Affairs. LRH Communicator (or Flag Representative if no LRH Comm posted) as secondary signatory. Only network heads as listed — no org terminals. Transfers only. Requires two signatories.

FLAG BANKING OFFICER (org name) No. 2 ACCOUNT. Signatories: Org FBO and Director of Special Affairs. LRH Communicator (or Flag Representative if no LRH Comm posted) as secondary signatory. Only network heads as listed — no org terminals. Management expenses only as approved by authorized management terminals, no org expenses. Requires two signatories.

FLAG BANKING OFFICER (org name) No. 3 ACCOUNT. Signatories: FBO and Director of Special Affairs. LRH Communicator (or Flag Representative if no LRH Comm posted) as secondary signatory. Only network heads as listed — no org terminals. Receives *special income,* a huge lump sum of money received by an org for services which cannot be immediately delivered. These funds are available for use when the services paid for can be delivered.

ORG MAIN ACCOUNT. Receives only monies transferred from FBO No. 1 Account, never from Cashier. Usual org signatories. These are the CO/ED, HES, OES and PES. The allocation received from the FBO goes into this account. All org expenses, salaries, etc., are paid from this account.

ORG RESERVE ACCOUNT. Receives any funds like building fund *org* is holding as reserves for the org as saved from allocations. Held by and signed on by the org officers.

GENERAL LIABILITY FUND. A reserve built up by weekly allocations against major catastrophes and risks. Held by and signed on by the Board of Directors of the Church.

BUILDING FUND ACCOUNT. A reserve account used as per the purposes delineated in HCO PL of 18 Jan. 65, BUILDING FUND ACCOUNT.

HCO BOOK ACCOUNT. All monies collected for the account whether cash income or from advance payments used for bookstore materials are transferred by the FBO from his No. 1 Account to the HCO Book Account. D/FBO MORE, who is holder of the checkbooks, is one of two signatories. Org signatories are HCO Exec Sec, HAS or Dissem Sec.

FSM ACCOUNT. Receives funds from FBO No. 1 Account for use to pay FSM commissions. The signatories are the FBO and, with final approval from the FBO, the CO/ED, HES, OES and PES. Requires two signatories.

SERVICE COMPLETION AWARD (SCA) ACCOUNT. Receives monies from FBO No. 1 Account for payment of awards to students and preclears who complete org services. It is administered similarly to the FSM Account. The signatories are the FBO, CO/ED, HES, OES and PES. Requires two signatories.

RESERVED PAYMENT ACCOUNT. Is used to set aside funds which are awaiting disbursement before they are actually paid out. Usual org signatories.

CLAIMS VERIFICATION BOARD (CVB) ACCOUNT. Receives monies deposited by the FBO for future payment of refund/repayment claims when these are fully verified by the CVB.

NO OTHER BANK ACCOUNTS.

HCO POLICY LETTER OF 17 FEBRUARY 1971-1RC
REVISED 29 OCTOBER 2000

REMIMEO
FBOS

FINANCE SERIES 3-1

HANDLING OF BOUNCED CHECKS AND REFUNDS

This policy letter outlines the exact handling of bounced checks including FBO actions as would be required in connection with HCO PL 29 Jan. 71RA, Finance Series 1, FLAG BANKING OFFICERS and HCO PL 17 Feb. 71RC, Finance Series 3, BASIC FBO DUTIES.

It is a duty of the FBO to safeguard incoming monies and to ensure that *all* income is properly and legibly invoiced by the org and that the exact same amount is collected and receipted and banked by himself each day.

FBO records must therefore agree with and verify those of Div 3 always.

All daily income collections are thoroughly checked by the FBO before issue of any invoice of receipt.

He carefully checks the tape total of the day's income against org invoices. He checks the invoices for admin correctness and legibility. He ensures that all copies of any voided invoices are stapled to the in-series copy.

He then tape-totals the checks and counts the cash against invoice totals.

These must equal the same amount exactly.

He inspects checks for correctness of date and endorsement and quickly obtains any needed corrections.

The FBO then issues his invoice to Dept 7, made to "Dir Income" or "Cashier" in the exact currency of receipt.

He ensures that his deposit slips equal the same amount as org invoice total and the amount of his receipt for the money.

All org income collections are then deposited to the Finance Office No. 1 Account.

BOUNCED CHECKS

Thus, any bounced checks are returned from the bank to the FBO.

The FBO receiving a bounced check from the bank debits it to the org with a MINUS INVOICE of the same number series on which he issues his invoices of daily collections from the org.

The org Dir Income or Cashier then at once writes his own *MINUS INVOICE* debiting the account of the person who presented the check. A copy is provided the FBO.

This protects the org from delivering services which have not in fact been paid for. One org had on its books in excess of $20,000 which had bounced and remained uncollected but which still showed in the customers' files as credits!

COLLECTION

The bounced check is now subject to immediate re-collection action by the FBO, who reports the drawer for FALSE REPORT and personally contacts him to obtain a new check or okay to redeposit.

The FBO makes notes of all collection actions on a single sheet to which all other related papers are attached.

When the FBO has secured collection on the check, he writes an invoice crediting the org, attaching a copy to his collection notes to indicate collection complete. These are then filed.

The org Dir Income or Cashier then at once writes his own CREDIT invoice showing "BOUNCED CHECK COLLECTED" and crediting the person's org account.

The re-collected check is banked by the FBO.

WEEKLY INCOME TOTAL

Gross income as reported on OIC is the total of monies collected *by the org* and is unaffected by bounced checks or bounced check collections.

Minus invoices for bounced checks are *NOT* deducted from the weekly income total; and re-collected bounced checks, having already counted as income once, are not again counted.

However, the amount of bounced checks received that week is subtracted from the income when calculating the corrected gross income, and the amount of bounced checks collected is added to the *corrected gross income* figure.

PACKET INVOICES

Div 3 weekly invoice tape total excludes any invoices for bounced checks or bounced checks collected.

The FBO's weekly invoice tape total excludes any such invoices but a separate tape is made by the FBO for any bounced checks and a third for any such collected that week.

FBO deposit slips for checks being redeposited are made out separately and are so marked by the FBO to distinguish them from org income being banked.

FBO invoice packets are kept secure and in order by the FBO and made available for use in audits.

ADVANCE COLLECTIONS AND BOUNCED CHECKS

Advance collections obtained from persons in the org on behalf of others were discovered in one org to be at the root of large numbers of bounced checks.

Services are often sold to family groups with one member paying for some or all of them.

This is not uncommon and is perfectly legitimate.

But beyond that, org personnel may not solicit payments from staff or public on behalf of others.

Orgs may not arrange for checks to be issued temporarily on behalf of another between public persons or with staff to obtain collections.

Occasionally a student or pc in the org offers payment for a friend. That's fine.

But orgs may not solicit or suggest it. Not ever.

Advance collections are obtained by industrious collection from "hot prospects" and other potential students and pcs.

The essence of it is signing up the person for the service, collecting the money for it and getting the service delivered. (Unused prepayments are subject to refund.)

REFUNDS AND REPAYMENTS OF PREPAYMENTS

Refunds and repayments of prepayments are not minus invoiced but are paid by Dept 8.

A voucher copy debiting the public's account is placed in his accounts file.

Any monies required for such by the org must be obtained from the CVB Account.

The FBO must know refund/repayment policies and require that they be applied fully and exactly.

INCOME SOURCES

Added to FBO duties are:

a. Income demand.

b. Tracing and summarizing of present and past income sources of the org for the org.

He does this from actual invoices and promotion returns and accounts collectible files.

As a routine activity, he searches old records and invoices and files to detect and revive any past income sources no longer current, as well as summarizing current income.

Results are presented to the Exec Council and Ad Council by the FBO.

None of this relieves the Registrar or Ad Council or Exec Council or Division 3 of responsibility for income and collections.

Ad Council *also* has copies of its departmental income sheets, posted weekly by dept heads against service department copies of invoices.

Ad Council's statement of projected future income, which it presents to Exec Council, can now be based on a planned increase of actual past and current products and income sources and promotion successes and new income planned.

The planning by which the projected income is to be made is expressed in the FP.

An FP body and its FBO must know its products and income sources cold to be able to plan at all and to make the projected income materialize.

An FP body that can project expected income with reality and can produce an FP that will obtain increased org products and the projected income amount sensibly and realistically will have no trouble with finance authorities.

An FP body that cannot do this will have endless trouble with finance authorities and an FBO who cannot allocate accordingly will have endless trouble with FP bodies.

FP LINE

Added to the FP line is the FBO's prepared statement of summarized income sources of present and recent weeks and any previous income sources discovered and promotion successes insofar as they are available.

These are provided Ad Council and Exec Council by the FBO prior to financial planning. The presentation is in figures and is factual, not opinion.

Copies of such FBO reports are sent to the Continental and Flag Finance Offices and to Flag and FOLO Data Bureaux. Ad Council and Exec Council now have a basis on which to plan projected future income with reality.

Ad Council, having prepared its statement of projected income and proposed its FP, passes the FP via the Treasury Secretary to the Exec Council which finalizes the org's financial planning and income planning and then presents it to the FBO for the approval of the allocation.

ALLOCATION

The FBO looks at (a) expectancy of income as laid out by the Ad Council and Exec Council of the org and (b) the amount of FP. He makes his allocation accordingly.

When the org is really making the money, and can project still more with a good FP realistically planned, the FBO must take this into account in allocating for items of image and facility improvement which may not directly cause income increase but which were earned by high production and high income.

The amount of an FP is of less concern to the FBO than an increased allocation–production ratio.

Activities (orgs) that have no direct expectancy of income are put in a cap-in-hand status and demand is made to produce income and meanwhile here's a bare necessity handout. The FBO tries to get more in from the activity than he gives out by considerable.

FINAL FP AUTHORITY

The FBO is the final FP authority and, as such, arbitrates on any disagreements or disputes in the FP.

Adjudication is based on current income and the reality of projected future income and the sensible and realistic planning of the expenditure that will result in that amount of gross income which has been projected.

Any staff member who feels that the use of the org allocation is incorrect may appeal directly to the FBO on the matter per HCO PL 4 Sept. 71RB I, Finance Series 8, FP AND NECESSITIES and where dissatisfied with the result of the appeal may take his appeal to the Cont FBO or FBO Int per that PL.

FINANCE SERIES 5

FBO HAT

This policy letter outlines FBO duties and actions as given in recent issues and in early 1968 Flag Orders by which the post was initially established.

ORG BOARD LOCATION:

1. The International Finance Office is located under Watchdog Committee (WDC).
2. At Flag, continental and org level, the Finance Office is located in Department 21.
3. The FBO's authority stems from his position as an officer of the Church organization he is part of.
4. The Finance Office representative in an org is called the FLAG BANKING OFFICER.

FBO PRODUCTS:

1. Sea Org reserves, hugeness of.
2. Cash to Sea Org reserves in acceptable range and rising in trend.
3. Increased org solvency as indicated by an increasing allocation–production ratio.
4. Finance Network programs, projects and orders quickly and thoroughly and completely *done*.
5. Data and reports completed accurately and on time and sent to Flag and Continental Finance. Includes accurate and contemporary data to Data Bureau Flag and Continental.
6. The competent and terminated *handling* of local finance situations arising, by application of the related policies, and the reporting of such to Flag and Continental Finance.
7. Solvency of Flag projects and actions in the area.
8. Financing of Flag projects and actions in the area.

FBO PURPOSES:

1. TO MAKE THE ORG MAKE MORE MONEY.
2. TO GIVE THE ORG A WELL–PAID STAFF.
3. TO MAKE IT VERY WORTHWHILE FOR FLAG TO MANAGE AND HELP IT.

FBO STATISTICS:

1. Payments to Flag.
2. Allocation–production ratio in the org.
3. Payroll divided by staff.

IMMEDIATE SENIOR:

1. The immediate network senior of an org FBO is the Continental FBO.
2. The senior of the Continental FBO is the FBO Int.
3. The immediate senior of the Flag Finance Director is the Int Finance Director who heads the International Finance Office.

FBO DUTIES:

1. To establish and maintain the proper uses, titles and signatories of the three FBO bank accounts, No. 1, No. 2 and No. 3, on-policy.
2. To collect daily all sums of income from the org and to ensure that all incoming monies are invoiced and banked by the FBO before any allocation or expenditure may occur.
3. To ensure that any loans from SO reserves and any debts to it are recorded as such.
4. To verify all sums collected by the FBO against the org's invoices for that day, and to ensure that the org's invoices tape-totaled equal the exact amount received by the FBO.
5. To issue an invoice of receipt to the Cashier or Dir Income.
6. To keep an FBO LEDGER into which all incoming monies are entered on the left-hand page for that day, giving a total list of what the monies are.
7. To enter separately (bottom, same page) and apart from current income, any bounced checks returned from the bank that day, and any bounced checks re-collected by the FBO.
8. To record on the opposite (right-hand) FBO LEDGER page for the same day the exact disposal of the day's income — to the FBO No. 1 Account or abroad for exchange.

9. To inspect the dates and endorsements and currency of all checks for correctness before deposit.

10. To separate out any domestic nonconvertible checks from other countries if such are received, to be sent by the FBO abroad for exchange.

11. To make a deposit slip for the day's income being banked and a separate slip for any bounced checks being redeposited.

12. To deposit all incoming monies daily to the FBO No. 1 Account.

13. To keep a consecutive record of bank deposit slips in a notebook or bank deposit book provided by the bank.

14. To file a second copy of each deposit slip with the FBO invoices for the week.

15. To package and label FBO invoices weekly to include the in-series invoices and add-strip, a loose set of copies, the week's deposit slips and the bank debit advice for any bounced checks for the week.

16. To keep express and exact record of any amount sent abroad for exchange and to follow up each such amount until returned. Such sums having been once invoiced by Div 3 on receipt may not return via Div 3 or be reinvoiced on return from abroad as such introduces an error into income.

17. To maintain enough float in the FBO No. 1 Account to cover any bounced checks returned from the bank.

18. To collect daily from the bank any bounced checks.

19. To handle all bounced checks at once by urgent and personal contact with the drawer, obtaining immediately a new check or the drawer's authority to redeposit. It is a fast and urgent contact action with ethics in the offing.

20. To redeposit such sums daily by separate deposit slip to the FBO No. 1 Account.

21. To ensure that bounced checks are collected *only* by the FBO and that neither the bounced check nor the re-collection of it appear in org records or org GI or Div 3 stats. A reinvoicing of bounced checks by Div 3 would introduce an error into income. The only org records these show up in are the individual's accounts file and adding the amount collected to the org *corrected* gross income.

22. To threaten legal action on any long-uncollected, bounced check and if still uncollected to give the action over to Legal.

23. To report weekly to Continental Finance Office the amount of checks bounced, checks collected and checks outstanding, with a copy to Flag Finance Office.

24. To collect weekly from the Treasury Sec a copy of the income sheets posted up by dept heads from their service dept copies of the week's invoices.

25. To ensure that DEBIT invoices are also shown and clearly marked on these sheets and to ensure collection of DEBIT invoices by Div 3.

26. To weekly summarize receipts and income sources of the org for the org.

27. To search out org collection files and old invoices to detect and revive any previous income sources no longer current or dropped in volume.

28. To trace income sources to their successful promotional actions where such info is available as factual (not opinion).

29. To present the Exec Council and Ad Council of the org with a factual summary of org income sources, to include the current week or month and copies of earlier reports and any past income sources newly discovered. This is presented prior to financial planning and assists the Exec and Ad Councils in preparation of FP.

30. To demand income increase from the org, particularly where past successful income sources or collections have been neglected.

31. To know the vital necessities required by the activity to produce its valuable final products and particularly its income.

32. To maintain agreement with the FP body regarding Title A, B and C expenditure and product necessities, and how these are covered by FP and general finance.

33. To receive the Ad Council's proposed financial planning and statement of projected income when passed as okay by the org Treasury Sec and Exec Council.

34. To inspect the proposed FP with regard to (a) expectancy of income and the plan by which it is to be materialized and (b) the amount of FP, and to allocate to the org accordingly.

35. To ensure that FP sums allocated by the FBO cause an increased income, thereby giving an increased allocation–production ratio and an increased statistic of cash to SO reserves.

36. To transfer sums of expense thus approved by check to the org's Main Account.

37. To send to Flag and Continental Finance Offices a copy of the approved financial planning against which the allocation was made.

38. To transfer all HCO Account income to the org's HCO BOOK ACCOUNT.

39. To transfer to the org's CVB Account any refund monies required.

40. To transfer to the org's FSM Account monies for FSM commissions paid, these not being subject to financial planning.

41. To issue to the Treasury Sec of the org a voucher with each transfer check, detailing the amount and intended use of the monies.

42. To recover from the org any allocation amount (except HCO Account monies) not applied to the approved use. Sums allocated by the FBO may only be used for the purpose requested and approved and if not so used, they must be returned to the FBO.

43. To receive a copy of any EMERGENCY PO not covered by the org's financial planning but vital to org credit or promotion or product, and to deduct 125 percent of its amount from future allocation to the vessel or org.

44. To deduct from future allocation 200 percent of the amount of any EMERGENCY PO found to have been approved without any copy advising the FBO, or if the expense presented as an emergency was not an emergency in fact.

45. To collect from the Treasury Sec a weekly disbursement sheet listing all vouchers and sums paid out by Div 3 during the week.

46. To ensure that the Treasury Sec accounts for all monies issued to him by weekly total of expenses and cash on hand against monies from FBO that week.

47. To transfer by check from the FBO No. 1 Account, sums to SO reserves, to the FBO No. 2 Account for management expenses incurred locally and to the FBO No. 3 Account for special income.

48. To see that amounts owing to management for services and missions are collected.

49. To keep a separate invoice-voucher series for the FBO No. 2 Account, including separate deposit slip records and invoice and voucher packs as with the No. 1 Account.

50. To pay from the FBO No. 2 Account any International Management expenses incurred locally, keeping exact and express records of these.

51. To keep accurate and flawless record of all FBO receipts — banking, transfers and disbursements — as required of any accounting activity by standard Scientology accounts policies.

52. To make a brief weekly summary of receipts to and payments from all three FBO accounts, sending these to Flag Finance Office and keeping a copy.

53. To keep and reconcile weekly an FBO CASH JOURNAL for recording of any CASH amounts the FBO may hold on hand. A CASH JOURNAL and cash box are only for the occasional CASH disbursements, usually in connection with management expenses. FBO disbursements and transfers are normally only by check.

54. To receive checks cleared from the bank on the FBO No. 1, 2 and 3 Accounts and to tape these back into their original checkbooks onto the check stub.

55. To collect from the bank a month-end statement on the FBO No. 1, 2 and 3 Accounts and to reconcile each on receipt.

56. To tape-total, package and label monthly the FBO in-series vouchers with a loose set of copies. FBO No. 1, No. 2 and No. 3 Accounts each have their separate voucher series and the vouchers are packaged up separately.

57. To make a full monthly financial report to Flag Finance Office summarizing all income to and transfers from the FBO No. 1 Account—to include an attached copy of the month-end bank statement reconciled.

58. To make a full monthly financial report to Flag Finance Office summarizing receipts to and disbursements from the FBO No. 2 and No. 3 Accounts.

59. To include with this report a full statement of management expenses paid locally, categorized as required by Flag Finance Office, and to include a xerox or carbon copy of all such bills paid and the voucher of payment. Also attached is a copy of the month-end No. 2 Account statement reconciled.

60. To provide the required weekly and monthly finance reports on time and with total accuracy so that management and org solvency and viability can be centrally summarized at Flag.

61. To provide Flag Finance Office with a copy of the signature mandates for each of the FBO accounts and to provide revised copies whenever such mandates are changed.

62. To keep FBO accounts and funds completely secure at all times including an occasional check on bank security to ensure that only the authorized signatures are accepted.

63. To report FBO statistics promptly and accurately to org OIC and to Continental and Flag Finance Office.

64. To provide Flag and Continental Finance Offices with a stat analysis of the FBO statistics at the end of each stat period.

65. To know and apply Scientology finance and accounts policies with regard to allocations to the org and with regard to the FBO's own accounting admin.

66. To act as a STABLE TERMINAL for Int, Flag and Continental Finance Offices.

67. To get Command orders and finance programs DONE quickly and thoroughly and exactly and to include in the compliance report exactly WHAT was done and the results.

68. To report Div 3 outnesses to Continental Treasury Bureau and to follow up the handling of these.

69. To pick up and terminatedly *handle* local finance situations arising, by application of the related policy. This is by DOING the handling—not writing despatches.

70. To make a brief and concise weekly report of these, stating the SITUATION and its HANDLING. These weekly reports go to Continental Finance Office for relay to the Flag Finance Office. A copy is made for Flag and Continental Data Bureaux.

71. An FBO produces raised FBO statistics, orders and programs competently DONE, reports completed accurately and on time, and situations *handled*—not reasons why, and can'ts and problems.

The chief concerns of an FBO are income sources, income demand and income increase.

It is factually the size of org income and the increase of allocation–production ratio that determine cash to reserves.

This does not mean that he runs the org via financial management. He does not.

But he *does* expect income increase and an increased allocation–production ratio from what he pays out, and if he doesn't get it, he finds out WHY. He finds his WHY in facts and figures, not opinion.

Org managers can then take all this up along with other data affecting management.

And if the FP members are well hatted and the FBO knows his job and does it, finance conflicts resolve and the results are expressed in rising stats.

FINANCE SERIES 6

BEAN THEORY
FINANCE AS A COMMODITY

The allocation paid out by Finance to an org or activity must *BUY SOMETHING*.

It buys more funds back from the activity than it paid out and it buys the production of that activity.

Finance is best understood as a COMMODITY in terms of beans.

So many beans issued to an activity and so many more beans back.

Beans do not magically materialize into more beans. What brings back more beans for those issued is the PRODUCTION and INDUSTRY of org staff and how wisely the beans are allocated.

Even the interest one earns on a bank account is earned in fact by someone's production and ability to get more beans out of an activity than are put in.

Where Finance uses its beans to buy production and industry and projected income at a cost which requires the activity to be viable it gets back more beans and a raised allocation–production ratio.

The first rule of Finance and any activity is INCOME GREATER THAN OUTGO.

Where Finance can skillfully apply this to the divisions and personnel of an org as well as the org as a whole, the additional beans materialize because what is bought is production and the products which add up to the product of raised income and viability.

PRODUCTION

Activities that allocate by need and fail to force and pay for production are the basis of failed economies and welfare states.

"We need . . ." is taken by Finance with a yawn unless followed at once by a projected resulting valuable product or income realistically planned and immediately in view.

Finance allocates against proven production and projected income.

The FBO looks at where the beans are going and what income and production they are buying.

When he finds that the beans issued to an area or division are not buying production or income he designates a cap-in-hand status to *that* area and the beans issued become those essential to product only until the product emerges in the expected volume and quality.

One org with a soaring payroll particularly in the Tech area while delivering less than five auditing hours per auditor *per week* had all on full pay and bonuses. The org had finance troubles and found sums needed to promote absorbed instead by high payroll.

How? The org was on fixed pay (high) and gave only small production bonuses, obligating a high payroll expense without regard for production.

Other errors aside, the Finance error is an absent demand that the beans issued to that area buy more beans or valid full capacity production.

A reversal of this, setting low basic pay and high production bonuses, would have bought *production* for the beans issued and where there was no production would have issued no beans or a bare minimum.

INCOME SOURCES

The apparency that income sources devolve upon certain single portions of an org leads Finance into difficulty unless the products and subproducts of the org and its divisions are fully grasped.

The tracing and reinforcing of income sources, while a necessary and vital action, falls far short of the total action of Finance in its investment of beans.

A company receiving income only after the fact of delivery would appear to an inept or unfamiliar Finance person to have DELIVERY as its major income source. If Finance then seeks to raise income by forcing all beans into stepped-up delivery while neglecting the prior promotion and sales, there is soon no demand and nothing to deliver and NO BEANS.

Income sources traced superficially to SALES expertise alone, neglecting promotion and delivery again gives NO BEANS.

A Finance person seeing sales expertise as the company's immediate and major income source quite rightly issues more beans to sales. But if he leaves promotion and delivery underfinanced, sales suddenly finds itself selling an unknown product due to absent prior promotion, and sales made go undelivered or poorly delivered or even refunded.

Finance tracing income sources to promotion alone and neglecting to follow up with sums to sales and delivery gives the same result.

Thus, in addition to org income sources, Finance and org managers must know the valuable final products and subproducts of the org and its divisions and posts in order to wisely allocate funds.

COSTING

Income greater than outgo applies equally to each division and person in an org.

If Finance is fully familiar with the products of divisions and key posts of an org and their costing and value to the completed org product and expected volume or capacity, it can skillfully apply income greater than outgo individually to each.

An org has valuable final products for which it collects income.

Each division and area of the org has a product or products which contribute to the whole action which gets the org product promoted and delivered and the income collected.

How much it costs to produce how much product is the COSTING of a division or org or post.

It is not always possible to determine how much *income* a single post or division contributes to the whole activity.

But one *can* know to what degree a subproduct is vital to the delivery of the org's valuable final product and one can know how much it costs to produce it. And one can expect each area and post to be productive and viable as a single activity.

Costing to be real must also take into account the expected CAPACITY or IDEAL SCENE of the activity.

A plant producing at half capacity yet fully manned and running at full expense gives a product which costs twice what it should if the activity is to be fully viable and profitable.

A costing of the Tech Division described above would show that with production at one-fifth capacity, its product cost five times what it should cost to be viable as an activity and profitable to the org.

Thus, funds allocated to an activity by costing alone will not buy or ensure production or return more beans.

If one were allocating beans by income and products, he would have to consider the COSTING of each product, the importance of each product (how vital it is to the valuable final products of the org) and the expected capacity or volume of each area.

One could juggle these about and assign an allocation value to each product and subproduct and key stat.

So many letters out, so much bulk mail out, so many student points and well done hours = so much allocation.

Under such a system the FBO would get production and more beans back for the beans put in.

The Exec Council doing FP on such an allocation would shortly see what underproductive areas were causing a reduced allocation and would pound those areas to produce. Likewise, the activities of productive divisions and areas would be reinforced by the FP body.

What accomplishes this is NOT Finance acting as org management, but Finance applying income greater than outgo to each division and area of the org and handling money as a commodity of which one issues so much and gets so much more back.

Finance becomes org management only where it ceases to handle finance as a commodity like beans and where org managers themselves fail to grasp and understand financial realities.

LOST INCOME

Financial planning is how one uses the funds one has to keep things running well and make more income.

There is some degree of loss in a failure to prevent unreal and unprofitable expenditure.

Orgs and FP bodies are sometimes improvident in their planning and Finance people are alert for this and have to be because they quite rightly expect beans back plus more for beans expended.

But the greater loss to Finance is income lost or never made.

The difference between what an org should be making and what it does gives Finance greater loss than any FP saving could ever recover.

Foolish or unreal expense is prevented because it's a poor investment. But an org of $50,000 income potential making only $20,000 is a weekly loss of $30,000 to Finance.

An org stacking up thousands in collected but undelivered services gives Finance a potential and staggering loss in sums refunded.

An org seeking to save ten shillings while neglecting to develop and boom a continent doesn't make sense.

One knows the income sources of the org cold and one knows what subproducts promote and sell and deliver and collect income.

One puts finance as a commodity first and most into these and never saves on them except to raise the viability of a vital division or area not producing well and then only to raise production.

One seeks new income sources and means while reinforcing those already successful and reviving any no longer current.

One gets sums already owed to the org collected with industry and in high volume.

One handles emergencies by making more money and has lined up three or four valid income sources each and any one of which would provide the needed funds.

One uses beans to buy raised income and production and refuses to finance nonproduction or fruitless expense.

One knows cold the costing of vital and other org products and demands full capacity production and viability and income greater than outgo of each division and area and post of the org individually.

One predicts and plans for expansion occurring and the future adequacy of materiel and quality of delivery before the sudden absence of adequate staff or delivery facilities becomes a screaming urgency.

And one knows that more profit can be lost than ever could be saved on expense.

Money is a commodity.

It is subject to certain realities. Its realities apply to the whole org and equally to the divisions and persons in the org. Its realities have to be fully grasped by Finance and FP members and org managers.

Handled by Finance people as a commodity of which one always gets back from an area more than went in, it brings raised income, expansion and reserves.

MONEY

So you think the GI should be higher.

So you wonder why the staff isn't paid better.

In order to successfully solve these riddles it is necessary to know something about MONEY.

Basically *money* is "an idea backed by confidence."

The idea is that the exchange of goods or services kind for kind is too clumsy. To carry your dozen eggs all over town until you find someone who has bread he will exchange for your eggs so you can have bread is too clumsy. That is called a "barter (trading) system" and is used in primitive tribes. To solve this, men get the idea of making metal or slips of paper represent the eggs and the bread. Thus you don't need to look all over town. Anyone will buy your eggs that wants eggs and give you money and anyone who has bread will accept money for it. Like: one money particle is worth five loaves of bread or one dozen eggs or two hours of manual labor or one booklet or a square inch of land or — or — or.

Confidence comes in that the money particle (piece of metal or paper or some such symbol) WILL be further accepted after you have accepted it for your eggs. This extends to confidence in the country that issued the coin or the paper.

As metal has other uses — gold, silver, copper, bronze — it is more likely to have confidence placed in it as the country could go broke and one would still have his metal. With paper one has to have more confidence in the country.

So MONEY is only something that can be exchanged confidently for goods or services. It is a symbol which represents value in terms of goods or services.

When money is paid out without buying value (as in welfare handouts or war materials or bad stocks or just a promise with no backing) it itself gets into trouble. It begins to buy less because it no longer represents production or services or value.

When one begins to receive and spend money he gets into a field known as ECONOMICS.

To understand money one *must* understand economics. Or he'll be made a fool.

ECONOMICS in modern language means "the social science that studies the production, distribution and consumption (using) of commodities (things)."

If you like money or want money or use money you cannot remain ignorant of "economics."

The reason Marx and socialists in general can fool everyone is that there are very few people who know economics and economics itself is not a science but a primitive art. So just as you may stumble on this word "economics," so can the supertotalitarian socialists make whole societies stumble and fall into their hands.

The word originally meant "the science or art of managing a house or household" and that is still its first meaning. From this grew up a study of the whole community as a connected activity.

Remember, *money* represents *things*. It is a substitute for goods and services.

What governments, people and even our orgs can't get understood is that NO PRODUCTION = no money.

If one performs a valuable service *and* exchanges it for goods, he does so through the item of *money*.

Production can mean producing a service or an item that can be exchanged for goods and services.

If an activity does not produce *and* deliver *and* exchange with other activities, no money is possible.

Example: Lack of good Division 6s (Public Division) in orgs makes it impossible to *exchange* with the community. Equals no money.

This is what is behind low gross income.

The steps to take are, get the org so it can produce a valuable service in some volume and then *exchange* through Div 6 contacts that service with the community for *money*. Then increase the volume and quality of the service and increase the exchange through more Division 6 contacts. That builds up to a big GI that will continue to be big and not slump.

As soon as one ceases to deliver the service the *exchange* breaks and the GI collapses. No matter how hard you *sell*, if you don't deliver, you get into trouble.

The staff member, as part of the org, may think his pay comes from mysterious places. It does not. It comes from his own personal production.

The combined services of staff members give the org the valuable final services it can exchange for *money*. If it does this, then the staff member gets paid and cared for.

It is up to Division 6 to build up a DEMAND for the services and a volume of people who then demand the service. It does this with surveys of what the public will buy that the org can offer. It then makes the public aware of this by ads and

contacts. The public comes in and pays. The rest of the org keeps itself functioning and delivers it.

That is really all there is to it.

When you see a staff unpaid or an org not very solvent, it is the data above that is not grasped.

When you see an org solvent and its staff well paid, then the majority there have grasped this and are doing it.

When they do it well enough and in enough volume, they control more and more goodwill and expand.

People today are very badly taught on this subject. All money comes from daddy. Governments roll it out in endless streams (and the currency becomes worthless).

It's no wonder people believe in "luck" as the only thing that makes them rich and powerful. Or some wild idea that was never tried and would be a flop.

The truths of wealth are:

Income of money on sales must be greater than outgo on bills.

Books, auditing and training, tapes and meters, must be sold for more than they cost the org to produce or buy.

Money is simply that which represents delivered production.

Morale also depends upon accomplished and exchanged production.

Money does *not* equal morale. The idle rich are a wonderful study in psychosis.

And welfare money degrades because it is not exchanged for delivered production.

These are all factors in economics.

The way to good pay is an understanding of the subject as above and the work necessary to make it so.

EXCHANGE

So many tricks have been entered into economics systems, and so many political fixations exist that a manager is often very hard pressed trying to bring about solvency for his activity.

Money can be manipulated in a thousand different ways.

There are "speculators" who seek to buy something (like land) cheaply and sell it dear. Or sell it dear, depress the market and buy it back cheaply. In either case they make a profit.

It is less well understood that "speculators" also operate on the subject of money itself. By manipulating the value of one currency against another they seek to obtain a profit. This is the "international banker" at his daily work. He buys a hundred billion French francs for x dollars. Then he causes a panic about dollars. The franc gets very valuable. He sells his hundred billion French francs for 2x dollars. Then he says dollars are great. He has "made" a huge new lot of dollars for himself.

Or he finds a crummy politician like Hitler, builds him a war machine, gets paid back out of the plunder of Europe before Hitler collapses.

The banker loans George Manager 100,000 to modernize his plant. George wanted 200,000. But he takes the 100,000. The banker holds the whole plant as security. George doesn't make it as it really took 200,000 to do it. He goes broke. The banker grabs the 5,000,000 plant. This includes the 100,000 now spent on new machines. The banker sells it to a pal for 2,500,000 and makes that sum on his "loan."

The shareholders of Bide-a-Wee Biscuit are told Bide-a-Wee is busted. The stock falls. A group buys the stock up for peanuts, emerges as the owners of Bide-a-Wee which turns out not to be busted.

All these and a thousand thousand other systems for making money, indulged in too often, spoil CONFIDENCE and destroy money.

Eventually a whole religion like communism will grow up dedicated only to the destruction of capitalism. What has been dropped out is the idea of EXCHANGE.

Money has to *represent* something because it is not anything in itself but an idea backed by confidence.

It can represent gold or beans or hours of work or most anything as long as the thing it represents is real.

Whatever it represents, the item must be exchangeable.

If money represents gold, then gold must be exchangeable. To prove this, the moment gold couldn't be individually owned, the dollar, based on it, became much less valuable.

There has to be enough of the thing that money represents. By making the thing scarce, money can be manipulated and prices sent soaring.

Economics by reason of various manipulations can be made into the most effective trap of the modern slave master.

Periodically through history, not just in current times, monied classes or those believed to control money have been torn to bits, shot, stoned, burned and smashed. The ancient Pharaohs of Egypt periodically lost their country through tax abuses.

Money, in short, is a passionate subject.

Modernly, the lid is coming off the economic pot which is at a high boil.

Too many speculators, too many dishonest men generating too much hate, too many tax abuses, too many propagandists shouting down money, too many fools, all add up to an explosive economic atmosphere.

A group has to be very clever to survive such a period. Their economic arrangements and policies must be fantastically wise, well established and followed.

As it exists at this writing, the only real crime in the West is for a group to be without money. That finishes it. But with enough money it can defend itself and expand.

Yet if you borrow money you become the property of bankers. If you make money you become the target of tax collectors.

But if you don't have it, the group dies under the hammer of bankruptcy and worse.

So we always make it the first condition of a group to make its own way and be prosperous on its own efforts.

The key to such prosperity is *exchange*.

One exchanges something valuable for something valuable.

Processing and training are valuable. Done well, they are priceless.

In many ways an exchange can occur. Currently it is done with money.

In our case processing and training are the substances we exchange for the materials of survival.

To *exchange* something one must find or create a *demand*.

He must then supply the demand in EXCHANGE for the things the group needs.

If that is understood, then at once it is seen that (a) a group can't just process or train its own members and (b) a group cannot give its services away for nothing and (c) the services must be valuable to those receiving them, (d) that the demand must be established by surveys and created on the basis of what is found and (e) that continual public contact must be maintained.

Thus, by bringing the problems of viability down to the rock-bottom basics of *exchange,* one can cut through all the fog about economics and money and be practical and effective.

If one is living in a money economy, then bills are solved by having far more than "enough money" and not spending it foolishly. One gets far more than "enough money" by understanding the principles of EXCHANGE and applying them.

In another type of economy such as a socialist state, the principles still work.

The principles of exchange work continuously. It does not go high and collapse as in speculation or demanding money but failing to deliver. Or delivering and not demanding money.

We see around us examples that seem to violate these principles. But they are nervous and temporary.

What people or governments regard as a valuable service is sometimes incredible and what they will overlook as valuable is also incredible. This is why one has to use surveys — to find out what people want that you can deliver. Unless this is established, then you find yourself in an exchange blockage. You can guess, but until you actually find out, you can do very little about it.

Once you discover what people want that you *can* deliver, you can go about increasing the demand or widening it or making it more valuable, using standard public relations, advertising and merchandising techniques.

The fundamental is to realize that EXCHANGE is the basic problem.

Then and only then can one go about solving it.

DEPT 8
CHECK SIGNERS
FBO HAT

FINANCE SERIES 7

FP ACTIVATION

FP allocation amounts become due for transfer from the FBO No. 1 Account to the org's Main Account immediately following FBO approval of the FP and allocation figure.

The FBO is generally watchful of the FP routing and handling lines and prevents any undue delays.

With the FP approved and allocation amount established, the FBO issues his transfer check AT ONCE, rapidly obtaining the needed co-signature of the Director of Special Affairs or LRH Communicator (or Flag Representative if no LRH Comm posted) and delivers the check to the hands of the Treasury Sec.

The Treasury Sec gives his receipt and sees that the allocation check is banked *AT ONCE* to the org's Main Account.

When the FP check has been cleared and been credited to the org's Main Account by the bank, the FP as approved may be activated by Division 3. *NOT BEFORE.*

Checks drawn or POs activated against an FP for which the allocation check has not yet been deposited or cleared amounts to spending money which is not there and violates earlier policies and falsely affects the org's cash-bills stat.

FSM commissions due for payment and refunds or repayments due for transfer to the CVB Account follow the same principle.

Dept 8 prepares all forms and related data and applies via the Treas Sec to the FBO *AT ONCE* when such payments and transfers are due. The FBO rapidly verifies and *immediately* issues a check to cover valid FSM commissions due and a separate check to cover any refunds to be transferred. His transfer voucher lists the names and amounts. FSM commissions are *NEVER* held up for once-a-week check signing and where the FSM has personally brought his selectee into the org and is due a commission it MUST be paid at once with the FSM Account check given directly into the hands of the FSM by the org.

Executives signing FSM checks from the FSM Account must see a copy of the FBO transfer voucher, the selectee invoice and a copy of the selection slip before they may sign the FSM commission check.

As it would cause delays on FSM commission payments to require that the transfer from the FBO No. 1 Account be in the org FSM Account before an FSM payment check can be issued, the FSM Account is started with a balance equal to an average of one full week's commissions. After that, the routine of transferring the amounts for commissions paid each day will keep the account maintained at a level that commissions can be paid with no danger that they will not clear the bank. When the volume of commissions increases in range the org Dir of Disbursements should CSW to the FBO to transfer additional funds to the FSM Account to ensure that its basic level is kept sufficiently high to handle the traffic. The FBO would then transfer the additional funds from his FBO No. 1 Account to the org's FSM Account. The exact administration of the FSM commission line is covered in HCO PL 5 Apr. 79RC II, FSM Series 6, NEW FSM ACCOUNT.

That the FSM Account is handled as above does NOT mean that it may be used as a "float" to pay out FSM commissions on a bypass of the FBO.

A check signer who fails to verify that the FBO transfer has been done before signing checks against that transfer risks signing checks against funds not there or allocated to other purposes.

CASH–BILLS

Cash-bills as reported by Division 3 includes sums actually *on hand* only in the org Main and Reserve accounts versus bills due and purchases newly ordered.

Thus a check signer accepting checks for FP activation without evidence of FBO transfer also risks a falsely reduced cash-bills stat which gives an untrue picture of the org's actual financial position.

FP AND NECESSITIES

(THE FBO APPEAL LINE)

A "NECESSITY" is what it takes to make products and valuable final products. (Ref: HCO PL 13 Feb. 71, Finance Series 2, FINANCIAL PLANNING TIPS)

A divisional secretary is responsible for seeing that the necessities of his division are provided for in financial planning. This responsibility extends to follow-up of approved items to ensure that they are purchased by Division 3 and delivered in good order.

For the Treasury Secretary this duty extends to the necessities of the entire org.

DENIED NECESSITIES

Too often, FP troubles trace on investigation to one or more of the following:

1. The item in question was never proposed to any FP Committee.
2. The item was returned for better CSW and never reappeared.
3. The item was refused by an FP body but never appealed — either to the FP body or the FBO.
4. The FBO saw the item safely through FP months ago but it was then never bought or the money was otherwise (illegally) used.

In order that the FBO can ensure that existing policies on the above are followed, an appeal line is hereby established.

The appeal line is direct to the FBO. Any staff member may use it.

It concerns the *use* of the org's allocation — not the amount.

It is used whenever a *vital* necessity is denied in FP.

It is used when an FP-approved item has stalled on purchasing lines.

It may be used in any case where *usual* lines have failed to remedy a nonoptimum situation concerning the approval or purchase of necessities.

Any staff member may appeal to the Cont FBO or even the FBO Int if not handled to the satisfaction of the staff member at org level but in such cases must include the result of the appeal to the org FBO.

Any report of such situations received at Cont or Flag level without first having been appealed to the org FBO shall be considered false.

Where the appeal concerns delayed implementation of a Flag or higher level issue or order, a copy of the appeal *must* be sent direct to the Continental Flag Rep.

FBO ACTION

The usual FBO action would be:

1. To get the situation HANDLED terminatedly and reported to the Cont FBO at once with info copies of the report sent to FOLO and Flag Data Files for that org.

2. To get the related policy letters or other issues checked out on all concerned.

3. To require of the Dir I&R an investigation of the matter to determine the source of the situation and any out-ethics found handled; and failing that, the FBO must personally investigate the matter and handle TERMINATEDLY. The results of any such investigation must be reported to the Int Finance Ethics Officer with copies to Flag and FOLO Pgms Chiefs.

REASON

The FBO has a statistic of the ALLOCATION–PRODUCTION ratio of the org.

If his allocation buys VFPs, he can expect a rising allocation–production ratio statistic. Normally, this is assured by the use of an allocation system which allocates against VFPs.

However, if the org and divisional necessities are denied or neglected outside his view, he may find allocation–production crashed weeks or months later.

Also, too often FP and Finance are given a bad name in connection with situations actually tracing to 1, 2, 3 or 4 above.

Finally, this policy letter gives staff members a line of recourse and final appeal in the event that it is needed to ensure the continued and high volume production of valuable final products of their divisions and the org.

No staff member may be made the subject of an ethics or justice action for making an appeal which conforms with this policy letter. However, not making an appeal when it results in lessened production in an org would result in ethics or justice actions being taken against the staff member.

FINANCE SERIES 9

FLAG BANKING OFFICER PURPOSES

(His Most Important Policy Letter)

A Flag Banking Officer works for the reputation of himself and his network as follows:

"An org with an FBO makes more money and has a better paid staff and makes it more worthwhile for Flag to manage it than any org ever would without an FBO."

This reputation is to be *earned* by the conduct and good sense of the FBO.

Therefore the purposes of the FBO are:

1. To make the org make more money.

2. To give the org a well-paid staff.

3. To make it very worthwhile for Flag to manage and help it.

FBO ABILITY

An FBO must know how to make money.

An FBO must know HOW an org makes money and keeps its reputation with excellent delivery.

An FBO must know the policy expertise used in making money.

An FBO must know that "turning down FPs" plays into the hands of any that wish the org to fail and that forcing in a proper FP allowing for promotion and needful actions is the way to defeat counter-intention in the org.

An FBO must know that expenses incurred in the future beyond the org's ability to pay must be halted before the expense is incurred, not after the org has been committed.

An FBO must realize that finance control is a primary point of management authority and that this control must not be locally developed to a point where Finance forms a hidden command line, unknown to management or Flag. The FBO has no authority to permit new acquisitions or obligations and no authority to dismiss personnel or cut off obligations without Flag *Commanding Officer* approval. No one in the entire network from top to bottom has any authority to change operating orders or policy and must obtain such authority for specific cases only from those in actual command, i.e., Commanding Officer of a Continental Liaison Office or the Commanding Officer of the Flag Bureaux as major changes affecting basic planning are command decisions. (Proper, future contracts, staff hiring and dismissals, basic changes in the FP No. 1 of an org, are all command decisions, not to be made in the FBO Network. Things that are any future risk at all require authority from the Flag Bureaux.)

An FBO should realize that he is well backed up and that his warnings and suggestions are usually authorized by command channels.

An FBO must realize that one can pass endless regulations regarding finance to block off efforts to escape from old regulations (as witness tax people's problems), and that all new regulations will also be escaped. The FBO to handle this should work instead to bring understanding and cooperation into the org in matters of finance.

The FBO must know that lack of Word Clearing and hatting will make a financially irresponsible org and must see that Word Clearing on all finance policies occurs both in himself and in the org.

The FBO in doing his duty must work always to earn the reputation set out and postulated at the beginning of this policy letter.

PURCHASING AND CHECK–SIGNING LINES MODIFIED

The effectiveness of financial control in orgs depends primarily upon the degree to which financial and income-making policies are known and applied by FP members, FBOs and Treasury personnel.

However, the effectiveness of the administrative lines which govern purchasing and bills payment is also a vital factor.

Unless these lines are sharply IN, the FBO and execs can be working full ahead to ease the org out of a tight financial situation only to find new bills arriving that nobody heard of before or that a printing press has just been ordered by the new purchaser because "somebody told him to!"

When an org has reached a low cash–high bills situation, it may take many months of careful planning to restore income and solvency.

And even when things are going well, the purchasing and bills paying lines must be held under firm control to keep it that way.

Therefore, the following shall apply fully to all Sea Org and Scientology orgs, *and FOLOs:*

1. All letterhead stationery in use by the Treasury Division must bear the following statement:

   "ANY EXPENSE COMMITTED IN THE NAME OF THE CHURCH MUST HAVE THE WRITTEN AUTHORIZATION OF THE TREASURY SECRETARY OF THE CHURCH TO BE CONSIDERED VALID AND PAYABLE BY THE CHURCH."

   The word "organization" may be substituted for "Church" in any org where corporate status may require it.

2. Every firm with whom the org does business and every new firm contacted for purchasing or pricing must at once receive a letter from the Treasury Secretary using this letterhead and introducing by name those persons who are authorized to make purchases.

3. Such letters must promote our excellent credit standing and should make clear that the persons named are the ONLY persons authorized to purchase goods or services for the company.

   This serves to make company policy known and prevents random persons from running up bills.

4. Every personnel change within the org which causes a change of authorized purchasers must be followed at once by new letters to all firms advising of the fact.

5. All expense commitment is by written order prepared by Dept 8, signed as authorized by the Treasury Secretary, and shown to the business firm at the time of purchase.

6. The Treasury Secretary in signing such orders must see the valid PURCHASE ORDER for each item ordered.

7. Expenses such as utilities and postage and occasional others which cannot be handled in this manner are nonetheless covered by ordinary purchase orders or estimated purchase orders (EPOs).

8. All purchasing lines are routinely spot-checked by the FBO for application of this policy letter and results reported to Flag and Continental Finance Offices.

9. Long-distance phone and other such services can become an unexpected source of sudden expense increase unless HCO requires a signed PO for each long-distance call as required by HCO PL 1 June 58, PURCHASE ORDERS, and other utilities are watched for sudden increase.

10. All check signing on the org Main Account will be done once weekly by usual signatories and in the presence of the FBO. All checks must be tape-totaled and petty cash amounts limited.

    The HCO Book Account is excepted in that Book Account checks may be signed at any time and FBO presence is not required. Instead the D/FBO for MORE is a mandatory signatory and checks on this account may be signed at any time with the D/FBO for MORE held responsible to inspect Book Account records and the state of the bookstore, book stocks and book sales to ensure that Book Account policies are being fully adhered to, including correctness of expenditures.

    FSM Account checks are also exempt from the once a week check-signing rule as FSM commissions must be paid instantly. Signing is by any two available per-policy signatories.

11. The FBO in carrying out this duty ensures that all check-signing and dateline policies are applied and that all checks being signed have been properly authorized and do not exceed the org's allocation and, in the case of FSM commissions and refunds, that covering amounts have been transferred to the applicable org accounts by the FBO so that org cash-bills is not falsely affected.

12. Current and unused checkbooks for the org bank accounts are kept by the FBO in his safe and are issued to the Treasury Division only for weekly reconciling, check preparation and the return of cancelled checks to their check stubs.

    The HCO Book Account and FSM Account are excepted in that current HCO Book Account checkbooks are kept by the D/FBO for MORE in his safe and the current FSM Account checkbook is held by the Treasury Secretary in his safe. Unused Book Account and FSM Account checkbooks may be kept by the FBO.

13. These policies may not be used in any way to delay valid purchasing or bill payments but must be applied so that no delay occurs and so that financial admin lines are strengthened and made more secure.

14. The enforcement and application of these policies is the responsibility of the FBO, who must personally groove them in with the Treasury Sec and Dept 8 and again on any change of personnel.

INCOME FLOWS AND POOLS
PRINCIPLES OF MONEY MANAGEMENT

(This PL corrects any earlier PL
where there is a difference or conflict.)

POLICY

If a management unit such as a Bureaux, a Continental Liaison Office, an OT Liaison Office or any agent thereof such as an FBO or Flag Rep is any good, THE NEAREST SERVICE ORG WILL MAKE AMPLE MONEY TO PAY the managing unit and HAVE LOTS LEFT OVER TO SWELL Sea Org Reserves.

Therefore if the managing unit or activity next to a Central Org or service org is "in funds" or "without funds" it is a direct index of management quality as expressed in the stats of the nearest service org.

MAJOR ORG

For an OTL the term CENTRAL ORG must have active use as applied to their nearest major org.

For a CLO an AOLA or AOSH is the nearest org therefore its major org.

For Flag and International management, the Flag Service Org is the nearest service org when considering financial support.

FLOWS

An OTL or CLO or Bureaux *must* manage lesser orgs so they build up a public that (1) services locally with those lesser orgs and (2) FLOWS STUDENTS AND PCs TO THE MAJOR ORG.

Thus field auditors — missions — small orgs — CENTRAL ORGS — SHs — AOs is THE FLOW *LINE* without which the Central Org or top org will go broke.

If these lesser activities are kept prosperous and flowing persons *upward* via the FSM system and other systems, THE LOCAL, CONTINENTAL and INTERNATIONAL management units WILL BE IN CLOVER.

If this flow line is not made to operate that way all will be awful. If it *does* operate that way all will be *well*.

A *CENTRAL ORG*, THEREFORE, MUST GIVE HIGHER (IN TYPE) AND BETTER SERVICES THAN FEEDER ORGS.

An AO must give higher better services than an SH.

Flag services must be higher in class than an AO's.

DEFINITIONS

Lack of precise definition as to what is income and what is "reserves" has caused trouble in identifying activities and in this flow line of management and income.

The main trouble it has caused is that a management unit, not having precise definitions and not knowing the flow lines (as above) reaches out to the wrong "finance pools" for their support.

(Examples: A Continental CLO tried to live on management 10 percents which were not theirs [UKLO '71]. A CLO let the nearby AOSH go down and tried to live off Flag [USLO '71]. A CLO let an AO go down ignoring it completely while building up only its most distant org [USLO '71]. A Div 3 would not collect actively on huge debts because it could borrow from reserves [FAO '71]. An OTL ignored its nearby CENTRAL ORG and kept trying to get its support from its CLO [ANZO '71]. The earliest example was a navy admiral [Scoles] running the LA Foundation into the ground in 1950 because he thought it should be supported by Elizabeth, New Jersey.) The WHY of all these was lack of understanding of flow lines, and lack of definition of income, expenses and reserves as different, precise money pools and different types of orgs.

The following is a summary of key terms used regarding Church of Scientology finances. They refer to ecclesiastical management matters as they relate to finances of types of activities or areas. They are not intended to define the corporate structure of the Church.

THE SEA ORG: The elite religious fellowship within the Church of Scientology. Its membership is involved in Church management and the delivery of the higher level services of the Church.

INTERNATIONAL MANAGEMENT: Consists of the International Watchdog Committee and the International Management Executives (Exec Strata) and those units DIRECTLY attached to them such as the international office of the Finance Network. WDC covers SECTORS (entities such as Scientology Missions International, Sea Org orgs, Scientology service orgs, FSO, etc.) and is essentially a policing and inspection organization which makes sure things get MANAGED. The Executive Strata (and ED International) does not run orgs; it handles the FUNCTIONS that orgs do, without regard to entities but coordinates the functions in them.

FLAG: The main vessel of the Sea Org. Historically, the word "Flag" means the Flotilla Commanding Officer and his personal staff and is of timeless usage and is not new. When the operations and crew of Flag were stationed on land, the term was modified to "Flag Land Base." Flag consists primarily of a management organization (Flag Bureaux), a public service organization giving the highest levels of services (Flag Service Org) and an estates organization servicing public and crew (Flag Crew Org).

FLAG SERVICE ORG: The main public service organization located at the Flag Land Base.

FLAG BUREAUX: The management body which is responsible for the management of the Flag Service Org (FSO), Sea Org orgs, Scientology orgs and Celebrity Centre service orgs. It is basically a tactical unit running orgs on evals done under upper echelons and is an execution arm for International Management. It operates through FOLOs (Flag Operations Liaison Offices). It is part of the Mother Church.

FLAG COMMAND BUREAUX (FCB): The management group, made up of all the management organizations in charge of the different sectors of Scientology, such as: the LRH Communicator, Finance and Office of Special Affairs Networks and Flag Bureaux. Includes Scientology Missions International (SMI Int), World Institute of Scientology Enterprises International (WISE Int), Association for Better Living and Education International (ABLE Int), and the Publications organizations, each of which is a separate corporation and operates under the authority of their own Board of Directors and corporate bylaws.

CONTINENTAL LIAISON OFFICE (CLO): The SO office of a continent that manages that continent. A CLO contains offices for sectors and networks, represented as departments on the org board. Some of these are separate corporations (SMI, WISE, etc.). It has a department which is a FOLO acting as the management link between the FB (Flag Bureaux) and the orgs managed by the FB. A CLO coordinates all management units for that continental area.

FLAG OPERATIONS LIAISON OFFICE (FOLO): A department in a CLO which deals with the execution of planning and programs issued to it by or through the Flag Bureaux. Their major purpose is to see that Flag planning becomes an actuality in orgs in their zone of responsibility. The FOLO sees that orgs are put there and manages them.

OPERATION–TRANSPORT LIAISON OFFICE (OTL): The branch office of a CLO managing the area or orgs assigned to it.

SCIENTOLOGY MISSIONS INTERNATIONAL (SMI): Scientology Missions International is a church which acts as the Mother Church for missions and is responsible for the direct management of the mission network. SMI missions pay tithes, a portion of which is used for SMI expenses.

INTERNATIONAL FINANCE NETWORK: The International Finance Network is located directly under WDC. This network is responsible for seeing that finance policy in the Church is adhered to; that organization assets such as meters, books, recorded LRH lectures, insignia and films are safeguarded, marketed and utilized to drive public down on the orgs; seeing that org staff are well paid; seeing that as a result of making orgs prosperous, management is well paid, and it is entrusted with safeguarding and

increasing Church reserves. Its overall objective is to see that there is an abundance of SO reserves.

THE CONTINENTAL FBO: The Flag Banking Officer and office engaged in the financial management of a continental area. He is part of the Continental Finance Office headed by the Continental Finance Director.

ORG FLAG BANKING OFFICER: The FBO attached to an org to help manage it financially. His direct network senior is the Continental FBO.

SO RESERVES: Often miscalled "Flag reserves" or "management reserves" which they are NOT. SO reserves are: the amount of money collected over and above expenses that is sent by various units (via FBOs and the Finance Network) to central reserves bank accounts of Scientology corporations and trusts. It is used for purposes assigned by the boards of directors or trustees of such corporations and trusts and for NO OTHER PURPOSE. These are normally employed for periods of stress or to handle situations. They are NOT profit. It is *not* support money for "Flag" or "management." It is *not* operating money. (Examples: Huge sums were required to cover WW when under attack and to catch the PUBS 1970 crash.)

PAYMENTS TO FLAG: The total money collected for International Management and Flag Bureaux management services and products whether paid directly or to Scientology reserves trusts. It includes funds collected for training and processing delivered by international training orgs and billings for missions, promo, etc. A portion of this goes to support management operations and the remainder, and major portion, goes to SO reserves.

INTERNATIONAL MANAGEMENT EXPENSES: Total of *all* expenses for International Management and Flag Bureaux activities including comm, missions, training programs, promo, crew welfare plus any other costs of units connected to and supported by International Management bodies.

CLO EXPENSE: A CLO is supported by funds from its nearest major service org, by tours and Flag Service Consultant commissions and by such services to orgs and other activities as training and cramming. A maximum of 10 percent of the CGI of the major org should be more than adequate to support the CLO, as it should be making far more from its other income sources and since if the CLO is any good at management at all, the income will be high in that major org. A CLO is expected to send far more to SO Reserves than it consumes.

OTL EXPENSE: The same as for a CLO. It should be supported by a maximum of 10 percent of the CGI of its nearest major org plus tours and Flag Service Consultant commissions. If any good it will boom the nearest major org and others as well. It has to boom others so they will feed to the nearest major org. It is expected to send far more to SO Reserves than it consumes.

CLO/OTL RESERVES: Any reserves that may be built up locally through salvage of former allocations or from current allocations.

CONTINENTAL FINANCE OFFICE EXPENSE: The Continental Finance Office expense is paid by the CLO to which it is attached. Thus it must make lines flow. It collects for SO Reserves!

FBO LOCAL EXPENSE: Paid by the org to which the FBO is attached. The org FBO collects for SO Reserves and Flag.

LOCAL ORG RESERVES: The reserves built up by an org through salvage of former allocations or from current allocations.

THE GOVERNING POLICY OF FINANCE

The governing policy of finance in any organization is to:

A. MAKE MONEY.

B. Buy more money made with allocations for expense (bean theory).

C. Do not commit expense beyond future ability to pay.

D. Don't ever borrow.

E. Know different types of orgs and what they do.

F. Understand money flow lines not only in an org but org to org as students and pcs flow upward.

G. Understand EXCHANGE of valuables or service for money (HCO PL 27 Nov. 71 I, Exec Series 3, Finance Series 6-1, MONEY and HCO PL 3 Dec. 71, Exec Series 4, Finance Series 6-2, EXCHANGE).

H. Know the correct money pools for any given activity.

I. Police all lines constantly.

J. MAKE MONEY.

K. MAKE MORE MONEY.

L. MAKE OTHER PEOPLE PRODUCE SO AS TO MAKE MONEY.

A small sack of beans will produce a whole field of beans. Allocate only with that in mind and demand money be made.

A finance management which does not understand and USE these principles will be like a driver who hasn't the tech to drive a car. He'll wreck it or not driving it at all will have no transport.

Money is a *tech.* IT FLOWS. Although one dollar looks like another dollar, they may be from completely different places and mean completely different things.

PTS PERSONNEL AND FINANCE

PTS means Potential Trouble Source. This is a person who is connected to a suppressive person, group or thing. (For further data on PTSness see HCOB 24 Nov. 65, SEARCH AND DISCOVERY, and HCO PL 27 Oct. 64, POLICIES ON PHYSICAL HEALING, INSANITY AND SOURCES OF TROUBLE.)

NCG means No Case Gain despite good and sufficient auditing.

A chronically ill person, whether the person is known to be connected to a suppressive or not, is always found to have been so connected and PTS.

IT IS UNSHAKABLE POLICY HEREAFTER THAT NO PERSON WHO IS PTS OR CHRONICALLY ILL OR WHO GETS NO CASE GAIN MAY BE ON FINANCE OR REGISTRAR LINES OR IN TOP COMMAND POSTS OR AS HAS OR ETHICS OFFICER OR MAA.

TECHNICAL FACT

A person who is connected to a suppressive person, group or thing will dramatize a "can't-have" or an "enforced overt-have" on an org or staff members.

A "can't-have" means just that — a depriving of substance or action or things.

An "enforced overt-have" means forcing upon another a substance, action or thing not wanted or refused by the other.

The technical fact is that a PTS person got that way because the suppressive *was* suppressive by depriving the other or enforcing unwanted things upon the person.

The PTS person will dramatize this characteristic in reaction to the suppression.

Therefore, a PTS person as an ED, CO, product officer, org officer, Treasury Sec, Cashier or Body Reg will run a can't-have on the org and its staff by:

a. Refusing income,

b. Wasting income made,

c. Accepting wrong customers (like psychos) and forcing them on the org,

d. Fail to provide staff or service,

e. Advocate overt products.

HISTORICAL

When staffs went on proportionate pay in the late 1950s, so long as I ran the orgs directly the staffs made more money than before.

When I moved off these lines directly, the staffs began to receive less money personally.

At that time it seemed to me that proportionate pay served as an excuse to some in an org to run a can't-have on the staff.

We knew that some Registrars could take money in easily and others never seemed to be able to.

The technical reason for this has just emerged in another line of research entirely.

In completing materials and search on Expanded Dianetics, I was working on the mechanism of how a PTS person remained ill.

I found suppressives became so to the person by running a "can't-have" and "enforced overt-have." This pinned the PTS person to the suppressive.

Working further I found that a PTS person was a robot to the suppressive. (See HCOB 10 May 72, ROBOTISM)

This research was in the direction of making people well.

Suddenly it was apparent that a PTS person, as a robot to SPs, will run "can't-haves" and "enforced overt-haves" on others.

Checking rapidly, it was found that where finance lines were very sour a PTS person was on those lines.

RECOVERY

PTS tech, Objective Processes, PTS Rundowns, Money Processes and Expanded Dianetics will handle the condition.

However, one cannot be sure that it has been handled expertly in orgs where a money "can't-have" has been run as its tech quality will be low due to an already existing lack of finance.

Only stats would tell if the situation has been handled fully.

Thus the policy stands. Handled or not handled, no person who is PTS or who has no case gain will be permitted in top command or any lines that influence finance.

Any org which has consistently low income should be at once suspect of having PTS or NCG persons on the key finance posts, and an immediate action should be

taken to discover the PTS or NCG condition and replace such persons with those who are not connected to suppressives or who do get case gain.

Nothing in this policy letter permits *any* PTS person to be in an org or cancels any policy with regard to PTS.

This policy letter *requires* direct check, close investigation and handling of PTS or SP situations on these posts that may go undetected otherwise.

NOTHING IN THIS POLICY LETTER PERMITS ANY KEY ORG POST TO REMAIN EMPTY.

NATIONAL

As a comment on something that may impinge on orgs and might affect them, the FOREMOST reason for a failing national prosperity and inflation is a personal income tax agency. This runs a vicious can't-have on every citizen and makes them PTS to the government. Individuals even begin to run a can't-have on themselves and do not produce. This IS the cause of a failing national economy. It can be a factor in an org and must be handled on the individuals so affected.

PROMOTION ALLOCATIONS

WARNING: ANYONE WHO THINKS THAT HE CAN RUN UP A BULK MAIL STAT BY MAILING OUT FLIERS AND BITS OF PAPER TO THE ENTIRE CF INSTEAD OF MAGAZINES, IS C-R-A-S-H-I-N-G YOUR ORG.

A few orgs in one area were *using* their income to send out tons of "bulk mail" to anybody and everybody to get the GI up but had overlooked the ghastly fact that this "bulk mail" wasn't raking in a cent and their cash-bills were worsening, brought about the following investigation which resulted in this policy letter being written.

POLICY: OEC Volume 2.

SITUATION: Orgs sending out huge quantities of bulk mail with no visible returns.

INVESTIGATION: The majority of orgs have been flooding their CF publics with scraps of paper promoting one service after the other.

One org went so far as to set aside other basic costs to get out massive quantities of bulk mail hoping to get the GI up.

But what they got as a result was the bills for the promo, no GI increase and worsened cash-bills.

An SH bent over backwards to get out a Power flier (one-pager) to something like 17,000 individuals in CF and laid out 688 pounds odd to do so. What they got in return was a deteriorating cash-bills and a continuing fall off of Power sales.

Meanwhile, a real proven income producer for the SH, *The Auditor* mag, is mailed out bit-and-piece style. Little bit this week, little bit next week with a couple of hundred *Auditor*s from last month thrown in for good measure, and so it goes.

An interesting graph of an org's GI and bulk mail showed income going along nicely for 4 months (April–July 71), bulk mail crawling along. Income crashes, does not recover, but bulk mail goes sailing on up and continues its high trend for about 3 months and then eventually slides on down to the low GI range.

A large org has a CF of around 3,700 (very small for such a large org) and have their Address illegally tabbed as follows:

Book: (1) Town, (2) Suburbs, (3) Out of Town.

Service Takers: (4) Town, (5) Suburbs, (6) Out of Town, (7) Requests, (8) Odds.

They have not got a hope of communicating to the public individual or signing him up for the service the person needs and wants.

These are just a few examples of the misuse of promotion which have occurred — there are more.

Throughout OEC Vol 2 there is constant mention and heavy emphasis on (1) mags and (2) letters and what effect these two pieces have on gross income. Fliers have become an altered importance for Division 2s, and an unusual and costly solution in an attempt to get the gross income up. It is far easier to confront getting out a flier than it is a magazine and far easier to confront "the public out there" rather than the *individual*.

Munich, one of the best orgs in the world, has a soaring GI (making over $11,000 per week). Their bulk mail out averages around the 1,000 mark. Letters out stat is rising nicely and brings in about a 40–50 percent response. They are in constant comm with their CF public and sell specific services to specific persons.

STATS: Very expensive mail out with huge rising bulk mail stats and no returns.

WHY: Orgs do not hold to the exact categories of what is mailed to what publics.

IDEAL SCENE: Orgs sending proper bulk mail out to the correct categories and publics and Finance only authorizing promo allocations based upon those exact categories.

HANDLING

PLAN: Come down hard and get promo policy forced in and applied. Issue a checklist of allowed promotional items that FP and FBOs can fund.

PROMOTION RESTRICTIONS

1. NO PERSON WHO IS PTS OR WHO GETS NO CASE GAIN MAY BE PERMITTED ON FINANCE LINES.

2. HASes MAY NOT SCHEDULE PROMOTION.

3. BULK MAIL IS NOT TO CONSIST OF FLIERS. FLIERS ARE FOR STUFFING IN LETTERS OUT, MERCHANDISE SHIPPED, STATEMENTS, INFO PACKS, ETC.

4. FLIERS ARE NEVER MAILED OUT AS SINGLE PIECES.

5. THERE IS TO BE NOT ONE PENNY ALLOCATED FOR BROAD MAILINGS OF FLIERS.

6. NO PROMO ALLOCATION HEREAFTER MAY BE GRANTED THAT IS NOT PER THE EXACT CATEGORIES LISTED ON THE MOST CURRENT APPROVED CHECKLIST FROM THE EXECUTIVE STRATA INTERNATIONAL, SPECIFYING VALID PROMOTION ITEMS.

7. THE APPROVED PROMOTIONAL CHECKLIST MAY NOT BE ALTER–ISED OR CHANGED IN ANY WAY EXCEPT BY REVISION OF THE CHECKLIST ISSUE WITH APPROVAL FROM THE EXECUTIVE STRATA INTERNATIONAL AND WATCHDOG COMMITTEE.

8. SHOULD PROMO PRESENTED VIOLATE THIS CHECKLIST, NO GO, SEND IT BACK WITH A BLAST AND A DEV-T CHIT.

9. WHEN PROMO IS PRESENTED TO FP AS PER THE EXACT CATEGORIES OF THE CHECKLIST ONLY THEN WILL THE MONEY BE ALLOCATED FOR PROMO.

10. NO ONE MAY USE THIS HCO PL AS AN EXCUSE NOT TO SEND OUT PROMO, OR THEY WILL REALLY BE IN TROUBLE. IF AN ORG SENDS PROMO INCORRECTLY THEY WILL NOT ONLY BE IN WORSE TROUBLE, BUT WILL ALSO GO BROKE.

11. PROMO MONIES MUST BE PROPORTIONED OUT TO COVER THE VARIOUS TYPES. NONE OF THIS PUSHING ASIDE OTHER BASIC PROMO AND GOING HELLBENT ON NOTHING BUT LETTERS OUT. OR, ONLY GETTING OUT THE MAG AND NEGLECTING EVERYTHING ELSE. ETC.

FLAG EXTERNAL EXPENSES

(Cancels HCO PL 3 Nov. 72, PAYMENT OF FLAG BILLS INCURRED LOCALLY and its revisions.)

Ref: LRH ED 271 Int 2 Jan. 76 MISSION EXPENSES LETTER OF CREDIT

The above cancelled policy letter sought to organize a bills payment and rendering line to handle Flag bills incurred via org and FOLO FBOs and distant purchasers.

In practice this line has over its several years of use always proven hard to control in any degree of broad use. FPPOs, missions and others had run it into an avalanche of unauthorized "Flag bills" even within the restraints of the cancelled issues.

The policies governing externally incurred Flag bills are now revised as follows:

1. No person or office including FPPO or Mission Ops or any other may contract or incur any expense on Flag's behalf without FP authorization beforehand.

2. As Flag is within easy range of supplies, external logistics will be used only rarely if at all. All such orders must attach the approved PO or a copy.

3. Missionaire's expenses will be issued by local FBOs only against a FLAG LETTER OF CREDIT. Amounts are doled out every week or few days but never all at once and never to exceed the total authorized by the letter of credit.

Flag letters of credit are issued by Flag Treasury Bureau to departing missionaires to a specific face amount on the considered estimates of the Action Aide and against sums already authorized by FP. They deduct as their first amounts the missionaire's travel fares and petty cash issued before departure. Local FBO disbursements to the missionaires are added to the tally each time, right on the back of the letter of credit until the authorized face amount has been reached.

Any mission overstaying its credit limit must get a new letter of credit issued in the same way before it may be given more funds. In issuing a second letter of credit (against fresh FP sums authorized for missions) Treasury Bureau would require the Action Aide's recommendation to be based on extended time rather than missionaire extravagance.

Any missionaire extravagance condoned by the local FBO becomes at once an expense of his own org.

4. Recruit and returning veteran fares to Flag may be disbursed by an FBO only with the Flag FP authorized PO in hand. Since Flag is in rapid comm with all areas, this cannot block recruit arrivals except by FPPO omission or neglect.

5. In no event will external Flag bills be cash reimbursed.

Orgs and CLOs have debts to Flag for management and other services and these accounts can be credited to the amount of any properly authorized expense made on Flag's behalf. Provided that Flag Treasury Bureau can match up submitted FBO expense statements with their Flag FP authorization and PO, a credit invoice will be written applying to the org's Flag debt.

Because such credit invoices represent externally expended Flag "income" and "expense" and must be present in Flag audit figures, Flag audit personnel may require any special invoice designation necessary to the orderly inclusion of such credit invoice amounts in Flag balance sheets.

If, through poor FBO submissions (lacking the paid bill or approved PO), Flag Treasury cannot marry up the expense to its original authorization, it will not be credited to the org's account. FBOs are thus warned to make both proper and timely submissions as POs age and may be retired if too long unclaimed for payment.

The format of FBO submissions may be any that facilitates identification of the expenses, excepting only that it must be neatly presented and complete with attachments. A returning missionaire's used letter of credit, any leftover cash and receipts will be examined at Flag and if in order will pass automatically to Bureau 3 Income for "reimbursement" to the org FBO by credit invoice listing his sums issued. Thus FBOs need not submit for these unless the credit invoice becomes overdue.

In the event that the Treasury Aide FB authorizes FBOs to include such credits on their payments to Flag statistics, it could not of course be counted until Flag's crediting invoice is in the FBO's hand.

6. FBOs with a mission in the org or in a location normally accommodating recruit fares or occasional logistics are required by an early FBO duty to have adequate funds to hand in the FBO No. 2 Account. They are after all Flag Banking Officers.

It should be understood that the intent of this issue is to extend all the usual controls of finance policy and FP to distantly incurred Flag expenses and to prevent bills from mounting up in outer areas on Flag's behalf unknown or otherwise.

Thus it is also policy (always has been) that ANYONE IN ORGS ADVANCING MONEY OR COMMITTING FLAG TO EXPENSES WITHOUT A FLAG PO OR FP, INCLUDING LEGAL EXPENSES, TRAVEL AND, IN THE CASE OF MISSIONS, WITHOUT A LETTER OF CREDIT WILL BEAR THE EXPENSE THEMSELVES.

These policies should be well studied and understood — you'll find them actually easier to follow than previous FBO bills systems.

FINANCE SERIES 14-1

FLAG EXTERNAL EXPENSES ADDITION

Finance Series 14 is broadened to include and legalize any red PO issued by Flag by telex. The red PO must be passed by the FP Committee and Treasury first to be valid.

In order to expedite vital Flag external cycles with speed such as parts, fares, missions, logistics, etc., red POs by telex are sometimes necessary.

The procedure is:

1. The red PO must be passed by FP Committee and Treasury.

2. The telex red PO must state specific figures authorized for disbursement and what the money is for.

3. The red PO telex must have Treasury Sec FB okay on it in order for it to be valid.

4. The telex should include that the red PO is en route by mail.

ANY RED PO SENT BY TELEX MUST ALSO BE SENT BY MAIL AFTER BEING TELEXED.

The above provides speed while maintaining standard admin procedures as laid out in Finance Series 14 and the elimination of incurred unauthorized expenses.

TWO–BIT FP

A two-bit FP consists of lots of little items, but none of them will make you any money.

I first ran into this in the UK. Orgs would buy a whole bunch of 25-bob purchases and the FP would add up to 25,000 pounds.

You can put together a whole slew of two-bit purchases and they add up to thousands of dollars without making any beans.

FP is not "how do we get some money from the finance authorities?" FP is "how do we stay solvent?"

SPECIAL INCOME

There is a type of income called "special income." It is huge lump sum income that might have to be returned. It can't be immediately delivered and consequently can't be included in the CGI. It does count on the org GI but must be deducted as part of the computation of CGI on the allocation form.

The crux of special income is that it is huge lump sum income for something that the org cannot now (and may not be able to in the future) deliver.

There are many possibilities of what could be classified as special income. A few of these are:

A. A huge sum donated for the training of staff for *a yet to be established* organization. The liability being that the funds may be requested to be returned as "unused" before such organization comes into being.

B. A huge sum donated for services which the organization does not deliver currently or which it may not deliver in the future. A specific example could be someone wishing to donate to an organization for upper-level services which he hopes may be deliverable in the future at that organization.

C. A huge donation for an unspecified service or services. For example, a person donating his life savings to Scientology without having specific services in mind but simply feeling it to be the best place for his money. The org could then possibly be in a position of not being able to deliver fully and in the future might be in a position where the person or even his estate would request the funds back for services at a higher org or any of a number of other things.

D. Variations and other possibilities exist.

The way special income is handled is by subtracting it from the org GI in the CGI calculation and depositing it in a special account by the org FBO specifically for this purpose. This account is to be known as the Finance Office No. 3 Account. The

signatories on this account are the same as for the Finance Office No. 1 and 2 Accounts. The "special income" account should be a high-interest-bearing account.

When an org FBO receives "special income" for deposit he should notify the Reserves Committee in the International Finance Office of the amount received, its designated use and any other specifics connected with the matter.

Funds received and deposited as above are not considered org reserves and may not be used for anything until the org begins to deliver service against it. Once the org begins to deliver service against the "special income," the amount *delivered* (such as an intensive, series of intensives, or a course) (and *only* the amount being *delivered*) is added to that week's CGI for the org and is available for allocation, while leaving the remainder (the *un*delivered portion of the "special income") in the Finance Office No. 3 Account. Any interest accrued is to be sent by the FBO to SO reserves.

If "special income" is actually treated as *special* income as above, then all will be well. If it is not handled in this manner, it can cause endless trouble for an organization.

So treat these funds for what they are and it will make things smooth for both the organization and the public concerned.

(*NOTE:* I realize that management units, orgs and staffs are daily pounded with false economic data. The real facts of life collide with much false data. Such crippling data comes from many sources — school, advertisers, government, bankers, propagandists, even parents who insisted Johnny be a doctor so he could "live well" or set a horrible example themselves. Many have had a hand in messing up people's wits on the subject. It is a factor in inhibiting the individual prosperity of executives, staff members and orgs. Where an area is not prospering, this PL should be star-rated on its people and the false data they have on this subject stripped so that they then can prosper as they should.)

"Standard of Living" can be defined as the relative quality of a person's or group's possessions, quarters, food, equipment, tools and conditions of their area of work and existence. It is the state of the person's living, including working, environment. Where its potential continuance exists it is related to survival. It is a basic natural economic law that personal production of VFPs and one's standard of living are intimately related.

This applies to the individual as well as the team.

Where violations occur, inequities exist.

At a personal level one must produce in excess of his standard of living just to retain and maintain it.

Actually the "excess" means that because of overload, taxes, services, plant, utilities, raw materials, machine and other costs additional to his own work sphere, a person cannot expect to get the full value of his VFPs all to himself. That is not economically feasible. The "excess" varies from post to post and job to job but is never less than 5x minimum. In industry it is considered to be at least 10x to maintain company standards and solvency. The "excess" can be very high indeed in some industries. But in any case any idea that it should be one-for-one is fatal. People who know little of economics or management sometimes propose a worker should get the full value of his VFPs—but all work and all VFPs require support services and to neglect these would quickly bring on poverty. Even when working for oneself alone these "excess" factors exist and seldom drop below 5x as one still requires support services. Corrected gross income divided by staff has to be at least 5x the cost of the standard of living of the individual staff member for that standard to be barely maintained. This does not mean staff pay should be 1/5 of that figure. It means that all the things (pay included) that go into maintaining their welfare and work environment would have to be covered by 1/5 of that figure. A fairly efficient and prosperous org with a hatted, industrious, gung-ho staff can very easily maintain quite acceptable standards at 1/10 that figure. The actual cash value of every piece of work done by a person can actually be calculated. It is intricate and tricky to do and much subject to over- and underestimation but it can be done. It is not vital to do this but one might just be curious about it. If so, do it for yourself. Thus VFPs can be priced against what they bring in as part of the overall scene even when they seem indirect. All the above figures are very rough and subject to variation but this gives you some idea of what is meant by "excess" in that law.

Where a number of people in a group or on a team do not produce VFPs in excess of their standard of living, they depress the standard of living of the group or team.

Where some in a group do not only not produce VFPs but produce overt products, they actively depress the standard of living of everyone in that group or on that team.

Many economists and theorists seek to avoid that law. They do it to gratify politicians or aggrandize some false philosophy whose true purpose is suppression under other colors. But the law remains and its violation breeds an epidemic of economic ills. Amongst such ills are inflation, superbureaucracy, chaos with the marketplace and a decay of the civilization.

When a whole society demands a high standard of living and yet doesn't concentrate on the personal production of VFPs, it is finished.

Products are the basis of a standard of living. They don't appear from midair. They come from work truly done. Not from hope or false data.

It is a druggie's dream that machines, computers, under the dictatorship will do it all. Machines can raise a standard of living by assisting in production. But they can't do man's living for him. Intelligently designed and used they permit, within limits, increases in population. But machines are just tools. They have to be thought up, designed, built, run and serviced and their raw materials and fuel have to be found and delivered and their products promoted, delivered, used and often in their turn serviced. The machine age was actually recognized as failed when world leaders first began to urge population reduction on the planet to "improve the individual standard

of living." If machines were going to solve it all, why is the civilization now in such a steep decline? It took producing men *working* in and with a machine age to make the society go. Not idle mobs on welfare expecting a high standard of living while a few guys work their guts out. Pie in the sky is nice but did anyone ever get to eat it? This misinterpretation of the machine age was a heavy violation of the above economic law. But the real harm of the machine age was creating a false belief that one did not have to produce much to survive. This lowered people's estimate of how much they would themselves have to produce to survive, much less have a high standard of living. Factually one normally has to work fast and expertly and in high volume to bring about any acceptable standard of living for himself and his group. This is a point the machine age obscures. But it remains vividly and demonstrably true.

An executive who works hard yet wonders about his own low standard of living should look over his people to find those who are not producing VFPs or who produce even overt products while yet demanding a living. *They* are absorbing the potential raised standard of living of the group.

Where a group has a very low standard of living, it need only review the above law and its potential violations to understand why.

One cannot, in fact must not, increase the standard of living of a group in ways that violate the above law. It will eventually bring calamity on that group.

In a society led astray by crackpot economics, violations of the above law create a vast number of wrong examples. The rich (most of whom work like mad) are seen as idle or even criminals. The best way of life is made to appear to be idleness. One seems to be owed a living without any effort on his own part. The producing worker should be fined by higher taxation. These are not seen to be simply false data spread about to wreck the place but are held as "truths." And in their wake comes a funeral for that group or society.

There is even an economic theory spread about today called "equalitarianism." It declares everyone should get the same pay and have the same standard of living. It does not mention that anyone should do any work. It holds that the better worker should not be better rewarded. It would crash any society.

Then there is the "monetarist" who believes you can manipulate a whole society with money alone. And no thought of any production. His answer to production? (You won't believe this.) Decrease demand! In other words, reduce everyone's standard of living!

Basic economics eventually catches up with all these weird false pretenses. It may take time but, as in the law of gravity, the apple eventually falls. No matter how many crackpots advance theories to say it can't fall, will go up or vanish. Real basic economic laws are like that. They catch up. So don't wonder about inflation and depression and decayed civilizations. Basic economics caught up with the crackpots.

An executive has to pay attention to the basic law about a standard of living. If he doesn't pay close attention to it, the standard of living of himself and of his group will cave in.

He can be "a good fellow" and seek popularity by attempting to raise the standard above what is earned. He and his group will crash.

He can be foolish and seek to raise his own rewards above what he personally is earning in terms of VFPs. But both he and his group will fail.

He can ignore the real producers of the group and not see that their standard of living is comparable to their individual production. And he and the group will fail.

He can ignore the nonproducers and the overt product makers and, by so ignoring them, tear his own and the group's standard of living to bits.

He can listen to a bunch of PR from a staff member about how valuable that staff member is and surrender to it without ever really counting up the real VFPs that staff member is not producing (or even preventing). (It happens.) Only real VFPs count.

He can work himself half to death without demanding production from others and have his own standard of living crash.

There are swarms of false data flying about today on this subject. It is taught in schools, the very best schools; it is heard on the radio and seen on TV and in the papers. The civilization, as it caves in, is blinded by literally thousands of false ideas about what and how a standard of living occurs. These, where they conflict with the basic law, actively prevent one from prospering as they blind him to the truth of his scene.

In an org or management unit in Scientology, the real VFP is valuable fine people who produce valuable final products who then make up a valuable fine public. Every piece of work and duty in a management unit or an org contributes to that.

The standard of living of an executive, a management unit, an org or a staff member is determined by that one basic economic law: The personal production of VFPs for the group and one's standard of living are intimately related.

FINANCE SERIES 18

CHANGING WORKABLE FINANCE SYSTEMS

(Note: I have not been on Finance lines for many years. But I was the first Flag Banking Officer. I evolved the hat out of a morass of confusion an area had fallen into and pulled the area out and it thereafter prospered. The hat of FBO was passed on to others and, when worn the way it was designed [covered in Finance Series 1], orgs and staffs have prospered and the public has attained far better service. Although it is not my job and although I receive no recompense, I recently observed some strange outnesses in org finances, simply by looking at some stats. I have a good record of making orgs solvent and prosperous and I was always the one to instigate bonuses and improve staff pay and I could see, by indicators, that these points were not optimum today. So I suggested to those in charge of things now that they investigate. They did. They found something that is quite new in orgs — some instances of dishonesty. Today we live in an era where the psychologist teaches the blessings of being a crook: All men, they say, are basically dishonest and that it is only a question of how much temptation is required. Of course, that is a lot of you name it. But where some person, newly off the street, gets a post and, having been taught in psychology-dominated schools since he was five that he was natively a crook, orgs can get areas of dishonesty. There is, of course, a pitiful side to this: The poor blank sets himself up for no case gain and may even be consigning himself to no new life: Overts against Scientology recoil casewise and that's not just propaganda. Those in charge found these areas and the instigators have been shot from guns. But I think, as a favor to my friends, I had better write this up. You may have been curious why, when I went off the lines, things went wrong. Well, here's a lesson. — LRH)

Beware of people who change workable finance systems.

In the past two years at least three instances have come up where finance systems had been changed to everyone's detriment.

The first of these goes way way back. We used to have a very workable finance system as given in Finance Series 1 and 11. It was the FBO N/W. Everything got along fine: it was relatively simple. Where there was an FBO orgs got solvent and staffs got paid.

Then Herbie Parkhouse, DGF WW, got on the line. He used a tax report flap and other means as excuses to push the FBO system out. The reason for his changes was evidently personal power. Org solvency declined, staffs went into apathy over inability to control their income, International Reserves went down.

The system is being reverted now and Parkhouse has been shot from guns. But the cost to orgs and staffs was staggering. If they had not been arrested they could have crippled Scientology. And these losses came right out of your pocket!

The second instance was an independent unit. It did specific production items. When no one was looking, the person in charge of it changed all the internal finance lines: this involved the wipeout of all FP and every financial control. Her husband was the Treasury Sec and he and his staff then were able to embezzle huge sums of money. Production "costs," unwatched, soared. The products became overt products of little use to anyone. The losses were staggering.

These criminals are now under charges and will wind up in jail as the evidence is very plain. They were all failed cases (naturally, for who can get gain across such overts) and had other out-ethics situations around them. But the fact remains that here again some people changed a workable finance system for personal reasons. The system has been reverted but it caused an awful lot of loss in many other ways than money and the reward was jail bars.

The third instance has just come up. At first glance it seemed a small thing but on further look it became very big.

GI in a large org was always counted as "money actually received in the shop before 2 P.M. Thursday." Someone changed this policy to read, "money that will possibly be invoiced anywhere in the world, even on the other side of currency control borders." The result was false GI you would not believe. Other out-ethics things came right in behind it such as wrongly crediting pcs to their advantage so as to make the GI look bigger.

Of course certain people would personally benefit. Anyone whose bonus was tied to GI in any way would be enormously overpaid.

The situation is under handling and with big long teeth by the proper authorities, but the fact remains that once again a finance system was changed so that someone could personally benefit and rip it off.

So you wonder where the staff pay got so undermined. And why financially things went somewhat sour.

All these things are handled and the systems are being reverted. But you can learn from this:

BEWARE OF ANYONE PROPOSING A CHANGE IN ALREADY WORKABLE FINANCE SYSTEMS.

Be very careful it is not being done to bring about a personal rip-off.

The org and YOU are the ones who suffer from this. You would not stand still for a squirrel change in workable tech. Tech works. Why tolerate changes in workable finance systems?

BE ALERT!

PROPORTIONATE MARKETING

In marketing one must always push *harder* toward the largest bulk of future business. It is peculiar to Scientology marketing that you have to push hardest at the lowest levels to make the upper levels come off.

This gives you a sort of scale that tells you the target proportion of finance and effort to allocate in marketing.

For Scientology and types of orgs, it goes like this:

Heaviest: Raw public not yet into Scientology.

Next heaviest: First services they will take.

Next heaviest: Into HGCs and Academies.

Next heaviest: To SHs.

Next heaviest: To AOs.

Next heaviest: On to Flag.

You can also draw a scale of this for individual business or orgs of any class.

It can be done simply by how much money and personnel and pieces are to be devoted to each point of the scale.

Failure to do this gives one faltering stats as the flow is not being proportionally marketed. Done correctly one gets a very heavy and quite even flow up the Grade Chart. Doing it unevenly one gets booms, depressions and instances of cannibalizing.

FINANCIAL IRREGULARITIES

Anyone who permits, neglects or forwards financial irregularities with org finances is, to put it very mildly, tampering with his own future.

It is not a matter of "Oh, that's just the org" and "The company is a bottomless pit." It is not the same with Scientology orgs as it is out there in business.

The waste and financial laxity which characterizes the workaday world may be the fashion out *there* but it is *not* the way Scientology orgs may go.

The business of Scientology involves the future of this population and planet and only the very insane would tamper with that.

I have been researching upper OT levels and I can tell you this very plainly: If Scientology doesn't make it worldwide you've had it — yes, I mean *you*.

One is not working for just this life. He is working for any future life *at all*.

When one uses an org for personal rip-off, he is cutting his own throat.

Oh yes, I know the insane commit suicide. Yes, I know the psychs believe they are just brains and thus soulless zombies. Yes, I know they hope they live only one life.

Only the insane or a zombie would imperil his own future.

So leave the insane conduct, the zombie ranting about one life to the psychs and the Justice Department and other trash. Don't forward their avowed intent of bankrupting Scientology financially. They have not made it, will not make it. But why help them?

Are you such a good friend of the raving psychiatrist or the terrorist FBI that you would imperil a Scientology org by condoning financial irregularities?

The money donated to the Church belongs to expansion and salvage of the world population.

I set you a good example. Money that I make as an author is dedicated to this planet's future. And whatever I make — and I happen to be one of the best-paid writers on the planet — will go into salvaging people — and has gone into it for over half a century. What do you think paid for, pays for, the research you use?

Many people sacrifice a very great deal — and thousands even forego high pay — for orgs to have enough money to get the job done. Don't waste it or, worse, engage in personal games with it.

It isn't a matter of "What can I make on the first dynamic." It's "What can I make *for* the third and fourth?"

The lifeblood of the Western nations is money. When an org is dealing with this society it can go as far as it has financial resources.

The money that one makes for an org is intended to save more people.

All right, all right, if one has a penchant for being a soulless idiot and believes he has no future, then he is in for a dreadful surprise once he kicks the bucket. The worse off he is, the nastier the surprise.

So don't let people play around with this.

One has no right at all to be an idiot about org funds, much less to waste or misuse them. Ignorance is no excuse at all. The data is all in Finance packs. Good sense itself should make one prudent.

Let those who engage in financial irregularities go join the walking dead. They sure are no part of this team. They are buying no future. In fact they are burying themselves. If they knew what they were burying themselves in, they'd faint.

This is not a plea. I am just pointing out that org monies misdirected in this life could very well guarantee a very nasty next.

Millions of criminals suffering in prisons share this in common with those who engage in org financial irregularities — they too thought there were no consequences. But those criminals have it easy. They are only suffering *this* life.

Anyone who has misdirected Scientology org monies will, of course, try to brush it off in various ways — black PR, belittlement, seeking to make nothing of the crime. But it won't brush off, brother, it won't brush off. THAT crime stood in the way of freedom. You better believe it.

Whether one has any reality on Scientology or not — he will, once dead, oh yes, he will!

This is not a threat or a curse. This is about the most friendly advice anyone ever gave.

FINANCE SERIES 21

FBO FP ADJUDICATION

A monitoring point in the FBO's judgment of how much to give the org for its FP is how much is the org delivering.

The FP should really not be more than the org's VSD. VSD is a reflection of how much the org is delivering.

If the org's VSD is high, and high consistently, then the org is in good shape and will probably continue to be in good shape and worth investing into. It is worth it to the FBO to invest his beans into such an org.

If the org's VSD is low and consistently low, then the org is in poor shape and likely to be in worse shape. Putting beans into such an area is not a good investment for the FBO.

The FBO must not let the org run on unearned income, and income collected on which service is *un*delivered is really unearned income. The org hasn't really earned it, the org merely collected it.

What is meant here is *NOT* that every penny collected by 1400 hours Thursday should be delivered by 1400 that same Thursday. Of course it would not be. But on the average, week after week, an org should be delivering at a rate matching what it is collecting. Otherwise, it will build up unused APs. And an org certainly should NOT be spending more than it is delivering.

It is not important if this week it spent a little more than its VSD as long as next week it spends a little less. An org must not be permitted to spend *ON AN AVERAGE* more than its level of delivery.

This is a point of FBO judgment. His adjudication is, "Is this org running consistently on *more* than the dollar value of what it is delivering?" If so, that org is going to starve. "Is this org running consistently on *less* than the dollar value of what it is delivering?" If so, then that org is in good shape, and there will be coffee and cakes for all.

EXECUTIVE SUCCESS

The whole story of marketing is told in just a few words:

ONE FINDS OR STRENGTHENS OR CREATES A DEMAND.

The whole story of economics is told in a few words:

ONE SUPPLIES OR DOES NOT SUPPLY A DEMAND AND GETS ADEQUATELY PAID OR DOES NOT GET PAID FOR IT.

The speed with which one can collect information, debug, write immediate bright, applicable, doable programs or evaluations on each area that will handle marketing, economics, delivery and collection and, above all, the speed with which one can get out letters, despatches and telexes based on the programs and get real dones on them back determines the volume of income in any given time period.

And that's the full essence of executive success.

FINANCE SERIES 23

THE COUNTING OF GROSS INCOME

Ref: HCO PL 5 June 59 I INCOME REPORT REQUIRED

"These reports [departmental income reports] are compiled by department heads after Thursday at 2:00 P.M. on the week's income ending then."

Ref: HCO PL 6 May 64 ACCOUNTS POLICIES

"The accounts week closes at 2:00 P.M. Thursday, at which time a new accounts week begins."

Ref: HCO PL 6 May 64 ACCOUNTS POLICIES

"Posting [of disbursement vouchers in ledgers for the companies concerned] is done in periods of one week, ending 2:00 P.M. Thursday to agree with the income period."

It might interest you to know *why* an org's income production period, measured by the gross income statistic, is a weekly period, from 1400 hours (2:00 P.M.) Thursday of one week to 1400 hours of Thursday the next week.

IMPORTANCE OF THE GI STAT

It is complete folly to run or try to manage by anything but correct stats. Rumors, bad or good, kill orgs. Generalities, bad newsy or good newsy, kill orgs. Old school tie popularity, or lack of it, kills orgs. Running an org or managing an org by anything but stats kills the org.

Running by stats shows one the state of the org and enables one to do something about a down statistic and reinforce an up statistic.

NEVER RUN OR MANAGE BY ANYTHING BUT STATS.

CORRECT GI STAT

The GI stat must be correct and must honestly reflect the org's income production.

No one can bank money "en route to the org, but not here yet." No one can FP against money "lined up." And *you* cannot be paid from sums that "will be here soon."

But you *can* bank, FP against, and pay yourself from real money, good right now, that is in the shop right now.

A GI statistic that is made up of anything but cold, hard, bankable currency, bankable immediately, and in the shop right now is a false statistic, denying you a paycheck and blocking those who would attempt to expand the org.

NEVER REPORT, RELAY, OR CONDONE A FALSE GI STATISTIC.

TRENDS

Orgs are managed by trends and ranges of statistics. Is the trend of this statistic up or down? What is the condition of the trend? And at what range?

Weekly statistics, neatly graphed, show one and all the condition of the continent or org or division or department or section or unit or individual staff member.

Why weekly?

Because our orgs are *fast* man! Other organizations and companies throughout the world work at a snail's pace compared to any Scientology organization.

How would you like to find out how you were doing at *three-month intervals,* a month or so after each interval? Yet this is common business practice!

It's no wonder governments go broke and talk of budget deficits and corporations cackle proud as peacocks about how they *only lost* 30 million less than they lost last year this time.

No, thank you! Nineteenth century "business practices" will not do for us. You must know how you're doing right now and you must know how you did this week compared to previous weeks. Only then can you take measures to correct or reinforce, in order to improve or raise *next* week's production.

Why 1400 hours Thursday?

I instituted this at London Org in the 50s. Friday was too late for their Advisory Council to act on the just ended week's statistics, and get the gears rolling for the new week as the weekend (and the Foundation org) was right upon them.

By meeting on Thursday they could put their plans into motion Friday and get started. 1400 hours was the chosen cutoff period to enable them to meet that evening.

That procedure worked then and for decades since!

Only when an org goes out-ethics and varies its stat ending period from 1400 hours Thursday do you have trouble managing by stats and trends.

YOU CAN ALWAYS DO SOMETHING ABOUT A STAT TREND. BUT YOU HAVE TO KNOW WHAT IT IS.

UNUSUAL SOLUTIONS

I can't imagine any org staff member or executive failing to understand any of the above. This is all hard-won experience and established policy which should be known to all.

Nevertheless, one encounters the "strangest" applications of unusual solutions anyone ever heard of. And *every* time an org tries to count its gross income in a way other than as described above, the org and its staff suffer.

For example, there were "postulate checks" in the early 70s in which some orgs counted nonexistent funds as in-the-shop GI, while swearing to one and all that "90 percent of them are good. The FBOs just aren't collecting them."

Result: Frozen accounts, busted boom!

An org one time sought to "raise its GI" by transferring sums back and forth between accounts, counting these transfers as income.

(Well, that's just grand for the double-entry finance "wizards of Wall Street." "Improves" their balance sheets remarkably. But it doesn't prevent one giant corporation after another from slipping away to bankruptcy.)

Result: The org went insolvent!

Another org sought to "raise its GI and book sales" by "buying" its own books (they transferred from their Main Account to the HCO Book Account and counted it as GI), and then gave the books away.

His "majesty," Lord Keynes, would cheer with gleeful approval. But unfortunately there's a hitch. Unlike the Keynesian dupes, governments, we don't haul out the presses and print more currency. And books cost us *real,* earned, in-the-shop money.

Result: This org, too, went insolvent!

And then there was the org that reported its GI on Thursday, waited for it to come in by Sunday, and worked all weekend to make sure it did come in Sunday so that what they reported last Thursday would be correct!

They were spending three days (sometimes more) of the new week to make good the production of the previous week. This left them with about four days of production time to devote to the new week's GI.

But not to worry, they had this solved!

"We have until Sunday to get in next week's GI, that we report on Thursday, and GIs and CGIs can easily be reported a week behind based on Sunday night collection figures." Oh yeah? One might ask, "But how can you allocate funds at the weekly FP

meeting on Thursday night when the funds are not going to be there until Sunday night?"

"Oh, that's no problem. That's why we hold FP on Sunday."

Digging deeper, one might ask, "But that means you can't get going on activating the org's FP and get the items required by the org to carry on until Monday."

"Well, yes, but that's because the money doesn't come in until Sunday, and we don't want to be nonstandard, so . . ."

And now, jumping in with both feet, one asks, "But, look! Ron just wrote this new HCO PL, 18 Feb. 82, Finance Series 18, CHANGING WORKABLE FINANCE SYSTEMS, in which he says to, 'beware of people who change workable finance systems.' And what you've done is *changed* a workable finance system!"

"I know, but see this CSW here? We're going to *change* that PL . . ."

USUAL SOLUTIONS

THE MOMENT YOU VARY FROM THE EXACT TRUTH OF ANY TRANSACTION YOU INVOLVE YOURSELF IN POTENTIAL CONFUSION THAT REQUIRES EXTRAORDINARY SOLUTIONS.

WHEN YOU FIND YOURSELF BEING ASKED FOR EXTRAORDINARY SOLUTIONS YOU HAVE DEPARTED FROM THE TRUTH OF THE TRANSACTION.

What is the exact, standard, on-policy procedure?

1. The stat period of an org is from 1400 hours Thursday to 1400 hours Thursday the following week. Not Friday, not Sunday. *Thursday*. Not 1800 hours, not 1410. *1400 hours*.

2. Gross income of an org is the total amount of cash, coin, checks, money orders, cashier's checks, bank drafts, that are immediately depositable, received by the org in the mail, over the counter or wired directly into the FBO No. 1 Account, by 1400 hours Thursday, for any org service or item.

3. The GI figure, already counted, totaled, and verified, is telexed on Thursday as part of the org's OIC cable.

4. FP Committee meets Thursday night.

5. The FBO approves the FP or sends it back for corrections/changes (but in any case, makes the FP approvable), transfers the FP amount, HCO Book Account amount, and the org reserve amount to the org Thursday night or Friday morning.

6. The org deposits the FBO checks Friday morning and activates the FP.

7. The org is already (as of 1400 the day before) collecting the new week's gross income.

Sounds simple, doesn't it? It is!

It is difficult or confusing only when it is *made* difficult or confusing by those who have other fish to fry, usually for their own selfish benefit at the expense of the org and thus your own paycheck.

If you want a higher gross income, if you want the things your org needs, if you want a larger paycheck, just do the usual as laid out above.

Honestly, it is so much easier to be standard.

Try it!

REVISED 2 FEBRUARY 1991

REMIMEO

FINANCE SERIES 24

BOOKS ARE ASSETS

Books, meters, recorded LRH lectures, films, other audiovisual properties and insignia are assets.

The operating principle is: Just as you would handle money, so must be handled books, meters, recorded LRH lectures, films, other audiovisual properties, insignia and materiel.

There is a difference: Money decreases in value — books increase.

But just as an FBO would not think of letting money be around, unguarded, just as he would think it vital that sums be listed and cross-checked, so should he think of books and related items.

In an area where books have been ripped off, it will be found quite difficult to get people to keep up-to-date stock lists. They know they could be detected and sent to jail for stealing if it was detected they had been ripping off books.

So it requires just as much policing on lines to handle books as it does to handle money.

Orgs can get themselves into a bind by not accurately accounting for stocks.

They suppose that the money they take in for selling books, etc., can be spent in their FP any way they please. Soon they run out of books and have no money to replace them and there goes their local dissemination and there goes their overall GI. In short, they cut their own throats by trying to run their org using the book sale money for other things.

This was so bad in early years that it was thought orgs could not be solvent unless they used up *all* the money taken in from books on other things.

There is another angle to this safeguarding materiel: Things which people can rip off they do not respect. If they do not respect books and materiel they will not only not sell them, they will also black PR them. And there goes their public goodwill and their GI.

It has been said a single Dianetics or Scientology book is more valuable to the human race than the discovery of the wheel or fire. That is because it could halt man's own decline and personal demise. Be that as it may, one single book or meter gone astray in the stock inventory can seriously dent the org profit received from books.

It is a profit and loss thing: Lost stock not only denies profit, it also creates indebtedness — the books won't balance. But in that case it is worse: If books and materiel do not exist to be gotten into public hands, there is no prayer of continuing an org GI.

So carelessness or inattention to book materiel can whittle down and then destroy the org GI.

This is why books and materiel and HCO Book Accounts are now under the supervision of the FBO Network.

Routinely, full inventories must be taken of all such materiel.

And at a change of executive structure, an outside firm must be gotten in to do a certified inventory of the materiel and new executives and officers must sign for it on any turnover. And in the event stocks are missing the FBO must be prepared to take police action just as he would if money were missing: He would suspect embezzlement and act that way.

Thus day-to-day stock lists must be kept and inventories must be balanced with invoices routinely.

Where consignment, without cash, is done to an outlet, then a full receipt for all such assignment must be gotten AND checked up on AND the money or the stock collected in due course.

The Pubs Orgs must never operate on a credit line to orgs. In the past this has caused insolvency and denied the placing of books in public hands. An org, to get book stocks in such event, has to make cash money or GI to get books or borrow the money elsewhere and pay it back.

Books, meters, recorded LRH lectures, other audiovisual properties are BIG business. Regarding them as a sideline can be fatal to GI. It is the book in public hands which starts any boom, regardless of any other promotion. The books are the ambassador and messengers to the world. This has been proven countless times from 1950 forward.

This does not mean books, etc., must not be backed up by other promotion. But it is the book that closes. Try to operate without them and an org falls flat on its face!

This does not mean books, meters, recorded LRH lectures and other audiovisual properties should not be displayed. It is a maxim that when the public sees just one book or meter on a shelf they do not buy. And it certainly does not mean that books are not sold in volume.

It does mean that books, meters, recorded LRH lectures, films, other audiovisual properties and insignia are assets greater than hard money. And they must, from the

moment they come off the press until they arrive in public hands, be treated as such, counted, inventoried, stock listed.

The FBO Network I/C is responsible for implementing this PL and originating the routine report forms and admin that must be kept and submitted regularly to him on this subject.

And he must be prepared to take action of the strongest kind, just as he would in any other form of embezzlement, when he finds stocks missing.

It is vital to the survival of Dianetics, Scientology and orgs that this PL be given the closest attention. For one is dealing with the future health of orgs.

There is no sin in making high income from books and materiel themselves. Just like money, it is a crime to waste it.

A primary cause of slow expansion of Dianetics and Scientology in the world has been a carelessness from Pubs Orgs on down to orgs and FSMs in pushing and safeguarding books.

This trust is now given into the hands of the FBO Network as they have shown over the years they can be trusted.

DEPUTY FBOs FOR MARKETING OF ORG RESOURCES FOR EXCHANGE (D/FBO FOR MORE)

Refs:

HCO PL	28 May 72	BOOM DATA, PUBLICATIONS BASIC FUNCTION
HCO PL	5 Feb. 82 II	PR Series 35 Marketing Series 16 BOOKS AND MARKETING
HCO PL	11 Mar. 82	Marketing Series 17 Finance Series 19 PROPORTIONATE MARKETING
HCO PL	9 May 82	Finance Series 24 BOOKS ARE ASSETS
HCO PL	10 May 82	BOOKSTORE OFFICER HAT
HCO PL	2 Sept. 82	Finance Series 26 AND THAT IS BANKING
HCO PL	3 Sept. 82	Finance Series 27 DEPUTY FBO FOR MARKETING OF ORG RESOURCES FOR EXCHANGE (D/FBO FOR MORE) PURPOSE
HCO PL	10 Sept. 82	Finance Series 28 EXCHANGE, ORG INCOME AND STAFF PAY

As covered in HCO PL 9 May 82, Finance Series 24, BOOKS ARE ASSETS, books, meters, recorded LRH lectures, films, other audiovisual properties and insignia are assets of an organization. They are not merely assets in the sense of their dollar value, but are in fact the gold and diamonds that give the way to man's total freedom. Therefore, it is vital that they not only be safeguarded, but that they be gotten into the hands of the public to point the way to the road out.

Add to the above the marketing of those assets and the marketing of Dianetics and Scientology training and processing services and you have a very broad area of responsibility which has been entrusted to the FBO Network.

To handle this added responsibility, a new post has been created which is the Deputy FBO for Marketing of Org Resources for Exchange (D/FBO for MORE). At this writing this post is being filled in each org around the world with high-caliber staff. In their hands lies the potential of achieving planetary dissemination at a rapid rate. This is no desk job but requires very dynamic individuals who will work effectively on these high-powered lines.

ORG BOARD

The org D/FBO for MORE is located in Department 21, as is the FBO. He comes under the FBO but also has a direct line with his network seniors at continental and international levels for the routine operation of his post, reports and compliances.

In Pubs Orgs and Golden Era Productions an analogous post exists who would have lines to org D/FBOs for liaison, information exchange and alerts on any situation needing attention.

DUTIES

The key duties of a D/FBO for MORE are:

1. Ensuring that at least minimum book stocks are maintained at all times. (Ref: LRH ED 5 Int, 27 May 68, MINIMUM BOOK STOCKS)

1a. Seeing that there are adequate sales of books and bookstore materials so these stocks get out into public hands and don't just build up an unmoving inventory.

2. Being the final authority on the use of and administration of the HCO Book Account and to ensure the per policy use of the same.

3. Ensuring that weekly book stock reports are done and that regular inventories are done of all stocks.

4. Seeing that book orders are filled immediately—any order not filled within 24 hours of receipt of the order is simply unthinkable!

5. Seeing that books and bookstore materials are not loaned out or given away and seeing that appropriate ethics action is taken and carried through when this does occur.

6. Bringing criminal proceedings against those found to have embezzled HCO Book Account funds or stolen books or other items from the org.

7. Using the points listed in HCO PL 10 May 82, BOOKSTORE OFFICER HAT, as a daily checklist and to ensure that all points go in and remain in.

8. Ensuring that there *is* a Bookstore Officer on post and that his seniors take adequate responsibility for this area of the org. No CO/ED or HAS can be considered bonus eligible until this post is manned by a competent person who can and does get his duties done per HCO PL 10 May 82, BOOKSTORE OFFICER HAT.

9. Approving the HCO Book Account FP and issuing the checkbooks for check writing only on the approval of an FP, and then recovering and holding this checkbook once the FP is activated.

10. Ensuring that Treasury and the Bookstore Officer maintain perfect records of all HCO Book Account transactions.

11. Getting in, in an org, all the points of HCO PL 20 Nov. 65RA, THE PROMOTIONAL ACTIONS OF AN ORGANIZATION, which apply to his sphere of responsibility.

12. In liaison with the org FBO, ensuring that the FP Committee uses LRH ED 245RA Int, 27 Aug. 74, FINANCIAL PLANNING CHECKLIST FOR THE PROMOTIONAL ACTIONS OF AN ORGANIZATION, as they apply to his area and get these items POed for, bought and then *used.*

13. Seeing that all audiovisual equipment is properly cared for and calling for ethics action on those being negligent in their responsibilities.

14. Getting films, videos, slide shows, laser disks, recorded LRH lectures and any future audio or visual properties in full use in the org.

15. Liaising with the D/ED or D/CO for Delivery and Exchange in the org to ensure maximum marketing and sales of LRH books, recorded LRH lectures and other appropriate audiovisual properties are being done in the local area.

16. Receiving the weekly Book Account Stock Report and using this as an income sources summary for books to isolate which books in which areas are selling well and why and to reinforce these actions, including noting which book campaigns have been successful and resurrecting these. Then to isolate which books and areas are not doing well per sales and debugging these.

17. Noting any discrepancies on the Book Account Stock Report and ensuring the Bookstore Officer locates the reason(s) for such discrepancies and, failing this, locating the reason(s) himself. Then getting adequate handlings done so the situation *never* occurs again!

18. Getting FP to cover the costs of any bookstore items found to be missing after the weekly stock report is done and when the missing item cannot be otherwise located.

19. Ensuring that translated books, recorded LRH lectures and other audiovisual properties exist in the org for all languages used in the local area.

20. Monitoring the planning and use of the HCO Book Account funds to ensure maximum profit, and not blowing the profits on "two-bit FPs" and short-range or extravagant planning.

21. Execution of marketing programs authorized for execution on D/FBO lines.

22. Ensuring compliance to HCO PL 11 Mar. 82, Marketing Series 17, Finance Series 19, PROPORTIONATE MARKETING.

23. Seeing that the org invests in marketing and promo actions which result in increased income and body flow into the org (bean theory).

STATISTICS

The post statistics of the org D/FBO for MORE are:

1. Total retail value of all properly secured and inventoried assets calculated from the weekly book stock report. (Covers all Bookstore items: books, meters, recorded LRH lectures, other audiovisual properties, insignia, etc.) This is based on the weekly stock report done at the end of the previous week. The D/FBO

must actually inspect the state of the stocks and may not count any items improperly stored which presents a threat to their value through damage or theft.

2. Gross book sales of the org.

3. NBSRAW (number of bookstore items sold to raw public) for the week.

4. Amount of film lease payments for the week actually paid out, per film lease agreement.

5. Allocation–production ratio computed as follows: Total amount actually spent in the previous week (not just set aside) on marketing and promo measured against the total org gross income for the current week. It reads as a ratio so that the allocation is always 1 and the production figure varies according to its relationship to the allocation. (E.g., allocation amount equals $2,000.00 and GI equals $20,000.00 so the ratio is 1:10.)

The weekly condition of the D/FBO is based on the above major stats. In addition to these the following substats are to be calculated and reported weekly:

a. Books portion of the GBS.

b. Meters portion of the GBS.

c. Recorded LRH lectures and any other audio properties portion of the GBS.

d. Videos and any other visual properties portion of the GBS.

e. Insignia and jewelry portion of the GBS.

f. Hat and course packs portion of the GBS.

g. Total amount paid out for restocking or for new bookstore items for the week.

h. Books portion of the restocking stat.

i. Meters portion of the restocking stat.

j. Recorded LRH lectures and other audio properties portion of the restocking stat.

k. Videos and any other visual properties portion of the restocking stat.

l. Insignia and jewelry portion of the restocking stat.

m. Hat and course packs portion of the restocking stat.

Accurately calculating and reporting these statistics will show the effectiveness of the D/FBO and will enable accurate management of the area to occur.

The D/FBO in an org is to report his statistics weekly to his continental senior who then forwards the reports from all the orgs in the continent to the Int FBO for MORE.

THE FUTURE

Orgs in the past have tended to remain small or grow slowly because they did not properly or extensively market their wares.

The primary block on marketing has been org miscomprehensions of finance as it relates to marketing, promotion and sales. Hence, these functions are placed in the

Finance Network where they can be expertly monitored by trained and competent personnel with a knowledge of both finance and marketing.

Today's money wisely invested in marketing an org's wares results in tomorrow's GI.

Orgs in the past spent their promo monies only on BMO (bulk mail out) — which is to say, only on the Scn field they already had sold.

To expand, an org must continually reach not only old and on-lines public but especially new public. It is upon this that future expansion depends.

Every book, every recorded LRH lecture and other audiovisual property sold to raw public potentially increases Scn public to whom, then, even more books, recorded LRH lectures and audiovisual properties AND NOW org minor and major services can be sold. Every public film properly shown the public potentially increases org GI. Every Academy film potentially increases MPT (money paid for training) — IF the public knows of them.

The future GI and size of the org is regulated (given in-tech service and on-policy admin) by the proper placement of books, recorded LRH lectures, other audiovisual properties and insignia in public hands, and the exhibition of films. There is a direct co-relationship between the marketing of books, recorded LRH lectures, other audiovisual properties, insignia and films, and the future GI of the org.

This is why the D/FBO for MORE is there. Never before has there been a network for this purpose.

The formation of this network is a direct push for individual org expansion, a direct and heavy forward thrust into the population, and upon it may well depend the future of this planet.

Over to you, D/FBO.

Good luck!

FINANCE SERIES 26

AND THAT IS BANKING

You might be interested to know something about banking and money that bankers and governments don't know: BASICS!

These are very simple basics. They are also very, very O——L——D basics.

Money can be said to be a lot of things. It can be said to be an idea backed by confidence. It can be said to be a system of exchange. It can be said to be something easier to carry around than a side of beef or a bushel of wheat. Money can be said to be a lot of other things.

But from the viewpoint of a banker and solid facts, you get the basic law of banking and the basic definition of banking and money.

MONEY IS A NEGOTIABLE RECEIPT FOR DEPOSITED GOODS.

In order to understand this, you have to understand the original function and practices of (surprise!) goldsmiths! You see, goldsmiths simply used gold as a commodity. It went like this:

The goldsmith took in a commodity of one unit of gold. He gave a receipt to the person who gave him the gold. He did this several times. He then had, let us say, six receipts — six guys had given him gold to hold and he gave them each a receipt. These six guys could then use those *receipts* as *currency* since it was gold on deposit with the goldsmith. This is a one-to-one basis. One receipt given out for one unit of gold taken in.

Now the goldsmith, because he assumed and hoped that all six wouldn't want their gold all at the same time, could then issue additional receipts against the gold — against the same gold for which he issued the first six receipts. So he would issue receipts on, let's say, a three-to-one basis — he issued three receipts for every one unit of gold he had on deposit. These receipts were trusted because people knew he had gold on deposit.

So you see the goldsmith issued more receipts than he had gold on deposit. He could then loan out these receipts (currency) that he had created. People "borrowed money" from him by obtaining one of these receipts and now they would owe him what they borrowed plus interest. AND NOW THE GOLDSMITH WAS INTO BANKING. IT WAS THAT STEP THAT PUT HIM INTO BANKING. You see, there were other things this goldsmith could do. He could issue receipts and buy property or keep his business

running or something. But the moment he issued and handed out a receipt to people who used that for currency, why, he was now into banking.

And that is banking.

Now you can do the same thing with commodities. You have a warehouse and you're into banking. If everybody puts his commodity in the warehouse and the banker issues a receipt for it, he can now issue on a three-to-one basis, as the goldsmith did, or twelve-to-one, which is getting pretty risky but they did that. But, you see, he can do the same thing with commodities. I don't care if they're shoes or whatever. Now, because he's got shoes (and other things) in the warehouse, he can issue general receipts against these goods on a basis of one-to-one, which is just the depositors, on up to twelve-to-one.

And he can take those receipts and he can issue them to a manufacturer who can *then* buy with those receipts the equipment necessary to set up his plant. But everything the manufacturer makes is a commodity deposit. The manufacturer makes something and now he has a commodity deposit. When you realize that the banker is not taking in all this commodity, you realize it starts sitting all over the place in all kinds of different warehouses and so forth. But it is consigned to the bank. It belongs to the bank. It backs up the receipts. The guy who the banker loans the money to, just out of the blue sky, doesn't have any commodity there. The banker loaned out money (a commodity receipt) to a guy without any commodity. Well, that guy has got to put a commodity there. And this is the basis of banking. If that guy now doesn't manufacture a commodity, the banker is out of luck. In other words, he doesn't produce the commodity he's loaned money to produce. The banker now only has the plant.

So now we're off into the banker loaning against the plant. We've extended it from the deposited goods to what makes the goods.

And that is banking. And that's all there is to banking.

And that's why you see bankers favoring short-term loans. They're not interested really in a real estate loan. That's a secondary stage. They're interested in the cars sitting on the lot at Chrysler.

I noticed that when a European automaker recently went to blazes, a fleet of their cars turned up as being sold to a bank in America, after that company went defunct. In other words, their manufactured cars became, just as Chrysler's would become, the property of the bank.

Now what is inflation? INFLATION IS DETERMINED BY THE RATIO BETWEEN THE DEPOSITED GOODS AND THE NUMBER OF RECEIPTS ISSUED. This present society has got it up to several thousand to one. In banking, I would never go above three to one. That is sound banking.

All right. Let's recapitulate. We started by issuing receipts for deposited goods. Then we extended it to what makes the goods. And we're going to issue receipts on a safe, intelligent basis—a three-to-one basis, for example. All right. This is sound banking.

But these current "bankers" extend it out on whether or not they think the guy's credit is any good. They extend it out on whether or not he's going to issue stocks or shares of his own. (His own issued "receipts.") And then they're going to keep those as

security and, honest to Pete, you're now up here in froth. That is strictly froth. This whole current banking system is in froth. Even the American Federal Reserve. They write down a figure in a little book and tell the US government that it can now print that much money. (You may think I'm kidding — I assure you, I'm not.) To back that money, the Federal Reserve issues Federal Reserve stock, called Federal Reserve bonds and so forth, which is bought by the public. Just recently, two "issues" have gone out on the same transaction which was based on nothing to begin with.

In other words, they don't just issue a hundred million dollars in currency. They issue a hundred million in currency *and* a hundred million in bonds. So regardless of their computations, they have not really issued a hundred million, they have really issued *two* hundred million, which doubles instantly the amount of paper in the society on the same transaction. Result: more inflation.

Hold on, it gets crazier.

Of this transaction, only half of it is covered by interest — only the bonds. So they feel they're getting only half the interest because the total issue of paper was two hundred million, and they're only drawing interest on the bonds, one hundred million. So, "of course" they have to get twice as much interest on the bonds. And there shoots up the interest rates and now money becomes too expensive to borrow in order to manufacture something and there goes your new and future commodities and eventually there goes your society.

And (currently) that is banking (unfortunately).

But don't you be confused. It is really very, very simple. For instance, if you can get the idea that you would take all of your household goods and give them to a bank and they would put them in their basement and then they would give you a receipt for the household goods and then you could give that receipt to somebody else for some negotiated action — you wanted something they had or would do for you — why, then you'd understand banking.

And if you can get the idea that that other person that you gave your receipt to could then go claim those household goods if he chose to, then you'd understand banking.

And if you can get the idea that that other person might not (probably wouldn't) go claim those household goods, but instead that he might transfer the receipt that you gave him (that you got from the bank) to somebody else for something that he wanted, then you'd understand banking.

And if you can get the idea that even though this other fellow didn't take your receipt and go claim the household goods, that the receipt does, in fact, represent those items of household goods that it is for and that the receipt is backed up by those household goods, why, then you'd understand banking.

And now we go a bit further and if you can get the idea that we don't bother to put those household goods in the bank's basement — we leave them in your home — but that in essence you have sold them to the bank for the receipt they gave you (and this is what is known as collateral), then you'd understand banking.

And now we go way upstairs and if you can get the idea that the bank would print up and issue receipts on a greater than a one-to-one basis (three-to-one or six-to-one, for example), and then loan these receipts to someone so that he could exchange them for manufacturing equipment, for example, and produce a commodity and that then these receipts that had been issued to the manufacturer were now, in fact, backed up by goods, then you would understand banking, REAL banking. And you would understand that banking, real banking, can all by itself, increase production. And lo and behold, THAT WAS THE ORIGINAL PURPOSE OF BANKING!

And that is banking. That's all there is to it. That's the basics. That's it!

You see, violations of these basics are what got the current bankers and governments in their present predicaments. Oh sure, they have this plan and they have that plan. But let me point out to you that they had those plans last year and the year before that and that last year was not as bad as this year! So maybe there's something a little wrong with their plans. Well, yes, there is a lot wrong with their "plans" — their basics are out.

As a banker you can stretch that three-to-one, like the goldsmith did, to five-to-one, or twelve-to-one. But when you get up to astro-ratios like these current bankers, boy, are you in trouble. You can get a run on a bank. A run on a bank is when all the guys who hold receipts suddenly believe the goldsmith is about to blow or leave town so they all go in and ask for their gold at the same time. Well now, of course, he can't pay it out because he is not holding that much commodity. So if he had issued receipts on a twelve-to-one basis, NOW his receipts are worth 1/12 (one-twelfth) what they had been worth, just like that.

Anyone who can recall back to the 1930s will tell you . . . "and that was banking!"

These basics would be known by the wizards of Wall Street, you would think, but maybe not. They certainly are not known to London's Parliament. They might say, "Yes that's interesting, but we do things differently now . . . sort of inapplicable . . ." Well, I notice that inflation, loss of purchasing power, economic chaos, etc., aren't being created any differently. They manage to keep these actions going at a high roar. So maybe these basics ARE applicable! OH, YES, they are applicable all right — you can bet your house, car, job and future on them.

All right, we had the goldsmith, then we had the banker who issued receipts for deposited goods. Now, we've got a new factor — the governments produce nothing really and yet they print money. What backs it up? NOTHING! Governments never do produce anything to go into the depository that then backs up the receipts (currency) and that they then can pay back.

So you wonder why there is inflation? Well, it is just the ratio of the amount of money against the goods.

I've already told you that there is a limit on the issuing rate in banking. Anybody that is going for a twelve-to-one ratio (twelve receipts for one unit of goods) has got his neck stuck out. It is going to cost more money for a commodity because there is more money around than commodities.

All right, look at your tax collector. When taxes start going up to certain percentages that penalize the company (and worker) and give it an unmanageable burden, make it

difficult to service the machinery, make it difficult to introduce new tools and equipment for a new product, etc., why, the tax man starts putting businesses out of business. They've been doing that in America and are nearly finished with the job in England. When a company folds that produces shoes, let us say, there is then going to be less shoes on the market and therefore the shoes that remain are going to cost more, again for the same reason as in the previous paragraph — there is more money around than commodities.

Ideally, a company should work itself out of debt, not into it. But because of suppressive, penalizing tax percentages and bank interest rates, a company works itself into debt so one could say that the tax collector is in collusion with the banker in these sectors. This brings about inflation because it is an unproductive 25 or 50 percent of the price of goods. The government is not furnishing anything to account for that. So this now goes back into the banking aspect because the company or the individual can never accumulate enough money to buy new machines, so the banker has to continuously loan him money to enable him to get his new machinery. But then that's got interest on it so the tax collector . . . You see? The guy can never get enough money to buy a new plant, he'd never make enough money. He's either got to get his new plant or his replacement machinery and so forth, either from the bank or just not do it at all with the tax collector.

There is another twist to this. What do governments (and sometimes even banks) do with these tax collections and other pounds of flesh gouged from the carcasses of people trying to get on with their jobs? They hand them out as "foreign aid," the dole, welfare and other activities designed to degrade.

All of that gets added to the price of commodity and that is what inflation is.

Simple. So simple. It's too simple for these idiots not to be able to con everybody in the society into believing that it's very complex. But they don't want the public to understand this because they've got a racket going and they know it's a racket. They are a goldsmith with a 2000 to 1 receipts to goods ratio and it simply doesn't happen to matter what theory or explanation they dream of. The facts remain. Period.

And so do the basics remain. And these basics are very, very much for use by FBOs. FBOs are, after all, *banking* officers.

I've told you that money is a negotiable receipt for deposited goods. Well, what about services? Your orgs sell a lot of them. How does a service fit into this?

A SERVICE IS DEFINED AS AN INCREASE OF USABLE GOODS.

Consider a lawn mower repairman who sits down and someone brings him his broken-down mower and this repairman fixes it. He didn't actually *make* that lawn mower, but he did increase the number of usable goods in the society because before he fixed it there was one less lawn mower and when he was *finished* supplying his *service* there was one *more* lawn mower. And to this degree, no matter how small it may seem, that lawn mower repairman helped hold down inflation.

In the case of your org, A SERVICE INCREASES THE USABILITY OF A PERSON. Students and pcs come to you in one state or condition, you supply them services and they become more useful, more valuable, more productive. This is not a light statement.

The more productive people there are in a society, the more goods there will be in a society, and the better off society will be in general.

The goldsmith, as a banker, used his basement as a depository. What is the FBO's depository?

SERVICE CAPACITY UTILIZED IS THE DEPOSITORY FOR AN FBO.

It is up to an FBO to increase his depository, his utilized service capacity. And whatever increases his service capacity utilized is the direction the FBO heads in. A bookstore outlet, another bookstore outlet, more auditing rooms, more auditors, more pcs to help fill those auditing rooms, a second HGC, another course room, more Supervisors, more students so the Sups won't be lonely, more Word Clearers, and so on.

The greater the service capacity utilized, the greater the service delivered.

The greater the service delivered, the greater the income.

The greater the income, the greater opportunity for this banker (FBO) to loan (invest in FP) for more service capacity.

The greater investment in more service capacity, the greater ability to get more service capacity utilized.

The greater the service capacity utilized, the greater the service delivered.

The greater the service delivered, the greater the income.

And on each of these cycles, the FBO and the org get another benefit from this: products delivered out into society and reserves.

You've got the title of Flag Banking Officer and you've got the tech of banking. So now let's see you use these basics of REAL banking to do what they were invented to do and what they DID DO innumerable times over countless ages—increased production and built empires, yes EMPIRES!

Let it be up to you to apply these basics and then hold up the Power-trending stat graphs of your org and your reserves and say, "And THAT is banking!"

(*Note:* Nothing in this PL relieves management in any echelon or division from any duties or functions stated in policy and this PL denoting the purpose of the D/FBO for MORE may not be used to offload hats of promotion or sales on the D/FBO Network. Its authority is to see that such hats are worn fully by org posted terminals and only in their neglect or absence to bypass.)

Why are marketing, books, recorded LRH lectures, other audiovisual properties, films, insignia, meters and related items in the FBO Network?

Well, to begin with such items are assets. And like any asset, any or all of these items are valuable and can be stolen, abused, misused, ripped off or result in loss.

Like money these items can be the subject of exchange and in times when money is less valuable these assets might even be more valuable.

Any of these items are cared for by or subject to accounting procedures. They have to be counted and safeguarded just like money. The real basis of all money is goods, and goods are more basic than money for money is simply a substitute for goods or services.

In the past these items have been subject to very wide abuses which have affected the health and prosperity of orgs. In earlier times orgs could obtain such items from the Publications Department, sell them and instead of ordering new items, put the money made into the org accounts and spend it for staff pay and so forth. In this way Central Publications activities were subsidizing orgs. This was so bad that orgs actually thought they would go insolvent if they could not illegally misappropriate money for these items for their own use.

This was what began the HCO Book Account. Unless the Book Account is used to replenish stocks, an org will shortly run out of stock and have nothing to sell. This effectively cuts its reach to the public and reduces demand on the org for service GI. A not-so-nice word for the practice of using book money for running expenses is embezzlement. Thus one has to have a broad and trustworthy network to safeguard against such practices.

But there is an even more fundamental reason why these items are entrusted to and generally overseen by the FBO Network.

This has to do with a general principle which is glaring in its omission on this planet. It has to do with the fundamentals of prosperity.

Governments, the tax man, bankers and even accountants on Earth (and in most space civilizations as well) operate on the principle that they are there to *take* money from activities for their own use. It is to be noted that robbers have the same idea. Such entities operate on the basis that their sole activity should be devoted to taking money. This is why you get down economies, why empires go broke, why inflation occurs and innumerable other evils. Such misguided people have a fault in their arithmetic. They think they can take something from nothing and that, let us say, 10 percent of nothing is something.

There is a different principle which can be applied and this is the principle of making an individual or area so prosperous that the money spills over into your lap. One can, by operating on the third and first dynamic, achieve in abundance any ambition on the first dynamic to have lots of money. All one has to do is to make sure that what he is taking the money from is so prosperous, so well run economically and so financially sound that even a river of money taken from it does not affect its overall prosperity. Now, this is real money management.

When I am talking about this second principle I am not talking about economic pie-in-the-sky or Marx or Keynesian crackpot theories like they are. I am talking from a long background of solid economic application which has worked and worked and worked. I could actually point out, just in Dianetics and Scientology management, areas where I have done this repeatedly and successfully. It was at those times that International Reserves swelled. In fact most of the money in Int Reserves was made in exactly this way.

This began a long time ago but we won't go into that. The genus of it is that I like to see people prosperous. I mean them well. This is, by the way, unique. The head of the Federal Reserve — judging by his financial "practices" — does not have this attitude. He probably rubs his hands and chortles all night at the thought of people in rags. And I am sure that an IRS man is never happier than when he has just got

through bankrupting a business. Money is a form of power and power is all too often used to crush, suppress and get even with the world.

If one is very clever and knows his business, he can actually force into existence unbelievable levels of prosperity for one and all.

Now you won't easily believe this but this second principle is one of the hardest principles to get across in all the lexicons of expertise. One is going up against, as one tries to get this operating, first dynamic fixations. Trying to get people to see that they will continue to make pennies if they persist in trying to rip things off whereas they themselves could make big money if they worked to make their collection points prosperous as their main area of concentration, appears to be very difficult. The people one is trying to convince and get cooperation from have too many examples around them of shortsighted arithmetic. Additionally most of their literature concerns itself with people getting rich by ripping others off. In fact it is apparently deeply ingrained in people that there is no other way of life.

But I have an answer to this: one does not closely consult or expect much cooperation from people in applying the second principle above; one simply does it on a bypass. You see this expressed in such a line as, "Drive more business down on an org than it can waste" and that is almost the guiding principle of the Deputy FBO for MORE.

So you could draw a little diagram of flows. Here's the FBO attempting to make collections so that the cost of management can be defrayed. Put him on your little diagram over to the upper left. Now put a circle in the middle. This is the org or the service center or the bulk of the civilization. Now put a very thin line from that center circle up to the FBO, now label this line with a money symbol. Now over to the right of that center circle put some very thin arrows pointing at the center circle with zeros on them.

In this first diagram you have outlined a very difficult situation. There is little if any money flowing into the center circle so the money the FBO can get out of that is very close to zilch. This, believe it or not, is the normal pattern in practice in tax offices, banks and etc. Obviously this makes economics and finance very, very, very, very, very difficult.

Now let's draw a second diagram. Let's put the FBO up in the upper left-hand corner, let's put the circle in the middle and now let's put a D/FBO up in the upper right-hand corner. Now down from the D/FBO draw a number of lines which curve out to the right and then point back to the center circle. Put a money symbol on each one of these lines. This symbolizes the D/FBO driving public money in on the org. Now let's draw a very fat line from the center circle up to the FBO and put a very fat money symbol on it.

You have there in the second diagram the major purpose of the D/FBO.

To understand this one has to understand what marketing does, what books can do, the role of insignia, the actual effect of recorded LRH lectures, other audiovisual properties and even meters in full use in public hands. The publics involved are raw public (divided into many categories) and Scientology public (again divided into many categories). If each one of these publics were interestedly active, the amount of bleed-off from that activity into the org would be stupendous. The org and all of its staff

would become prosperous and the percentages of money taken by the FBO would hardly be missed. And the money taken by the FBO used in part to create more central marketing activities and to make it profitable to manage the org from afar feeds back into the cycle of public monies into the org.

In other words you get a little machine going here. Regardless of where the org is if it had an efficient FBO keeping it financially honest and on the rails with finance policy and a D/FBO, with or without a checkered coat and megaphone, using every tool to drive business in on the org you would get a little whirlwind going which would get bigger and bigger and bigger and bigger and bigger.

An org is essentially a service unit and unless it delivers what is being sold and delivers it well it will soon get into trouble, but the form of that org and its degree of activity is the basic concern of overall management. When the org does not deliver or delivers badly it gets into refunds and flies back into the teeth of the FBO Network. Thus it is of enormous interest to the FBO Network, of course, that the org is well managed both on long distance lines and internal lines and there are many networks and management lines and terminals to ensure this.

But what has been the existing state of affairs? In the past orgs have neglected the various publics even to the point of not marketing Book One, the source of all subsequent public demand. Even as I write this a datum is to hand that right this minute when the Pubs Organization sends out promo to orgs a number of them simply take it off the express and put it into a closet. I can assure you that that closet is not going to buy any training or processing. The amount of income lost is really income not made. The potential of income generated by promotion, if not realized, is actually a loss. Poor promotion angled for the wrong publics, promotion material not used or simply no promotion at all is about the most expensive loss now being experienced. It is, at minimum, in terms of millions a week. But you must realize that promo itself is an asset. It costs money. It has to be well used and it should not be wasted.

Films shown incorrectly or not shown at all are a loss of not made income. The public, not knowing they exist or that if they sign up for training they will see films not otherwise available, does not sign up.

People who have read Dianetics and Scientology books, as any Registrar will tell you, are very easy to sign up. People who have not are very difficult to sign up.

On the subject of insignia, if the image and symbols of Dianetics and Scientology are not seen around it remains to that degree unknown.

Lecture plays in the org and recorded LRH lectures and other audiovisual properties sales outside the org make the public aware of the product and when these are dropped out the whole purpose of Dianetics and Scientology tends to become lost.

If field auditors are not auditing, buying updated packs and using good meters, the field is not only relatively inactive, one gets a poor word of mouth in the field which makes it difficult to push business down on the org.

The tools of the Deputy FBO are any of those connected with marketing, promotion, PR, advertising, merchandising, and are actually pretty standard tools. We have a lot of advanced tech on this subject and all of it is of interest and it needs to be applied at org

level. But historically unless there is somebody there making sure that these tools are used, it hasn't happened. The D/FBO Network is the first time ever that there has been an international control of marketing, promotion, advertising, PR, etc.

Thus we see that the D/FBO is safeguarding assets and making sure they are not neglected or abused and getting those assets into full use so that the resultant exchange with the public and the org brings about a prosperity which makes the functions of the FBO much easier and, indeed, even possible.

We have in Dianetics and Scientology a highly desirable product which is unique and effective. The public demand for it is proportionate only to the degree that it is made known and made available. It quite honestly works. And if properly delivered results in rave individual results. That of course is a statement of minimum scope concerning these subjects: They go far beyond that.

Historically, if you care to look on the 32-year backtrack, I have had to wear the hat of applying that second principle described above. I have also had the hat of "driving more business down on the orgs than they could waste."

It is a great relief to have somebody else wearing this hat.

Wear it well.

EXCHANGE, ORG INCOME AND STAFF PAY

Sometimes the question of staff pay arises although, by survey, the condition with most staffs reportedly is secondary to org income and getting a show on the road.

So it is of interest what really underlies org income and staff pay.

There is a term used in business called "fair exchange."

Let us apply this to an activity engaged in servicing the public.

We could isolate four conditions of exchange.

1. First consider a group which takes in money but does not deliver anything in exchange. This is called rip-off. It is the "exchange" condition of robbers, tax men, governments and other criminal elements.

2. Second is the condition of partial exchange. The group takes in orders or money for goods and then delivers part of it or a corrupted version of what was ordered. This is called short-changing or "running into debt" in that more and more is owed, in service or goods, by the group.

3. The third condition is the exchange known, legally and in business practice, as "fair exchange." One takes in orders and money and delivers exactly what has been ordered. Most successful businesses and activities work on the basis of "fair exchange."

4. The fourth condition of exchange is not common but could be called exchange in abundance. Here one does not give two for one or free service but gives something more valuable than money was received for. Example: The group has diamonds for sale; an average diamond is ordered; the group delivers a blue-white diamond above average. Also it delivers it promptly and with courtesy.

Now, believe it or not, org income and staff pay depend upon *which* of the above four exchanges is in practice by (a) the org or group, or (b) the staff member in the group.

If no. 1 is in vogue, income will dry up with a thoroughness you wouldn't believe. Although the TV and movies try to tell one that robbery is the only way to get rich, this is not true. Those who engage upon it, whether they be stickup men, corporate con men or governments, are not long for this world. The bigger the group the longer it takes for it to fall but fall it assuredly does. And the individual who takes but does not give ends up with a deep-six in many ways quite rapidly.

The second condition of partial exchange can only keep a group or individual going just so long. The end result is painfully a demise of status or position and, most certainly, income. Many "third world countries" and even the bigger ones are in this plight right now. They take in but do not really produce or give. This is what inflation is all about. The unemployment ranks are full of such.

The third condition of "fair exchange" gives one a rather level progress. It is considered honest, is socially acceptable and very legal under law. It does not, however, guarantee any expansion or improvement of a group or the lot of a person. It is barely comfortable.

The fourth condition is the preferred one. It is the one I try to operate on and have attempted to for ages. Produce in abundance and try to give better than expected quality. Deliver and get paid for it, for sure, but deliver better than was ordered and more. Always try to write a *better* story than was expected, always try to deliver a better job than was ordered. Always try to — and deliver — a better result than was hoped for.

This fourth principle above is almost unknown in business or the arts. Yet it is the key to howling success and expansion.

It is true for the org, it is true for the individual staff member.

Where a group is concerned there is another factor which determines which of the four above is in practice. It is group *internal* pressure. Where this only comes from executives, it may not get activated. Where it comes from individual group members in the group itself, it becomes assured. The internal demand of one staff member to another is what really determines the condition of the group and establishes which of the four conditions above come into play.

Thus the org collectively, in electing which of the four principles above it is following, establishes its own level of income and longevity and determines its own state of contraction or expansion.

While this is a must in an executive — to establish the principle being followed — the *real* manifestation only occurs from pressure by individual staff members or others within the group.

Unions and workers in the auto industry elected to follow no. 2 above. This brought about the decline you see in auto companies. Had they elected to follow no. 3 they would not be in trouble. Had they elected to follow no. 4 they would now be in clover for the world today does not really have a truly good, economical, wreck-free car.

It is up to the individual staff members in a group what the org income is and what their own staff pay is. The org cannot earn more and the individual staff member cannot be paid more than will be established by which principle above they elect to follow.

If they follow no. 3 they will get along. But if they follow no. 4 they will really flourish and prosper. *And* it is the only one which guarantees expansion.

Solvency consists only of income greater than outgo and making enough money. This is measured by the organization's cash-bills ratio and its method of calculation is of value in building a prosperous organization.

CASH ON HAND

The following is to be used in calculating the cash on hand statistic of an organization:

THE AMOUNT OF CASH IN THE BANK AS PER THE LAST WEEK'S BANK STATEMENTS PLUS THE AMOUNT OF CASH ON HAND AS PER 2:00 P.M. THURSDAY OF THE CURRENT WEEK OF THE REPORT.

Cash on hand is calculated from *reconciled* bank statements.

Cash shown on a cash-bills graph is cash salvaged from former allocations (org reserves) or current allocations. The cash expressed on the cash-bills graph of the org must exist in actuality and must be real sums that can be expended.

Some accounts are not included in the calculation of cash so as to prevent a false idea of the financial position of the org from occurring. These include the Reserved Payment Account, CVB (Claims Verification Board) Account, FSM Instant Payment Account, Service Completion Award Account, Building Fund Account, General Liability Fund and the HCO Book Account. Additionally, the FBO Accounts are not the org's accounts and are not included in the cash calculation.

BILLS OWING

The bills owing statistic of an organization is computed as follows:

THE TOTAL OF DEBTS OWED BY THE ORG PLUS OVERDRAFTS AND CURRENT PAYMENTS DUE ON MORTGAGES, HIRE PURCHASE (TIME PAYMENTS) AND LOANS AND BOND OR SHARE RETIREMENT BUT NOT THE TOTAL GROSS AMOUNT OF MORTGAGES, HIRE PURCHASE (TIME PAYMENTS) OR LOANS OR BONDS.

In computing the debts owed by the org it would be quite unreal to add up the mortgage totals, time payment (hire purchase) totals and all outstanding stocks and bonds, as the call on the org is for current payments on these due or any retirement program. The bills statement (in actual practice) can serve as this statistic.

When making up the bills statement, the Department of Disbursements *must* examine folders for POs outstanding not covered by statements and report these on the monthly bills statement. The bills would be those against the same accounts on which the cash calculation is made.

The only exception in calculating the cash and bills statistics concerns the Reserved Payment Account. Where a debt exists which should be covered by the Reserved Payment Account but those funds are not deposited to that account, the amount of debt not covered must be carried on the org bills statistic in order to have a true picture of the org financial position.

The bills owing is a total accumulation of statements and purchases. This makes a true picture of what is currently owed.

INTERORG BILLS

Interorg bills are to be reported weekly as a separate figure and is the total of sums owed to other orgs, not including any management bills. It is *not* additive to the BILLS OWING stat but is its own figure reported and graphed separately.

RESPONSIBILITY

The only collective responsibilities of an Executive Council are the cash-bills ratio of the org, its reserves and actual assets and for the successful conduct of an org as a whole.

Each Executive Secretary is responsible for and is personally known by the gross divisional statistics of his or her divisions.

SUMMARY

Accurate calculation of the cash-bills statistic gives one a true picture of the org's solvency. By strict application of finance policy a thriving and affluent organization can be created.

FINANCIAL PLANNING—RESPONSIBILITY FOR

(This policy letter modifies any previous issue which states or infers that the financial planning for an org is solely the responsibility of the Advisory Council. The major responsibility for financial planning lies with the Executive Council as it is the governing body responsible for the org's solvency.)

Refs:

HCO PL	26 Nov. 65R Rev. 31.10.82	Finance Series 31 FINANCIAL PLANNING

HCO PL	27 Oct. 82RA Rev. 23.9.89	Finance Series 29 CASH–BILLS DEFINED

Financial planning means handling the assets of an org and allocating its funds in such a manner as to achieve income greater than outgo.

The basic purpose of all financial planning is to increase the wealth and assets of the organization in order to help achieve its goals and purposes and its expansion.

Financial planning was originally the responsibility of the Advisory Council which, in 1965, was composed of the HCO Exec Sec and the Org Exec Sec and was understood to include the org's Executive Director. As a result of an evolution in org pattern the Executive Council was formed and the Advisory Council was then made up of the divisional secretaries. (Ref: HCO PLs 21 Dec. 66, Issue I, ADVISORY COUNCIL and Issue II, EXECUTIVE COUNCIL)

Despite these policies, which clearly state financial planning is a primary duty of Executive Council, with the role of the Advisory Council being to originate, advise and recommend to Executive Council measures for approval, confusion seems to have persisted in some areas as to who actually wears the financial planning hat.

To set the matter straight, the correct datum is:

THE EXECUTIVE COUNCIL IS RESPONSIBLE FOR FINANCIAL PLANNING AND ACTS ON THE ADVICES OF THE AD COUNCIL (AND IT, THE AD COUNCIL, IN TURN GETS ADVISED BY THE HEADS OF DEPARTMENTS).

By Executive Council is meant: the council composed of the senior executives of the org — the ED or CO, the HCO Exec Sec, the Org Exec Sec and the Public Exec Sec.

By Advisory Council is meant: the council composed primarily of the heads of the divisions of the org — the divisional secretaries.

(Where a *complete* Esto system exists in an org, the financial planning is done by the Estos and requires approval by the Treasury Sec, Executive Council and the Flag Banking Officer. Refs: HCO PL 7 Mar. 72R I, Esto Series 1, THE ESTABLISHMENT OFFICER and Tape: 7203C06, Esto Tape 11, "F/Ning Staff Members, Part I.")

In practice, the department heads of a division would see that any necessary purchase orders from their departments were sent to the div head, along with full CSW and advices as to the department's needs.

The Advisory Council meets and, taking into consideration the advices from the department heads, does its proposed income planning and financial planning for the week and submits its recommendations to the Executive Council.

The Executive Council, with the solvency and expansion of the org in mind, reviews the proposed income planning and financial planning. It acts on the Ad Council's proposals and acts as well on any recommendations from the FBO or the Deputy FBO for MORE. (Ref: HCO PL 3 Sept. 82, Finance Series 27, DEPUTY FBO FOR MARKETING OF ORG RESOURCES FOR EXCHANGE [D/FBO FOR MORE] — PURPOSE) It operates on the bean theory. (Ref: HCO PL 19 Mar. 71RA II, Finance Series 6, BEAN THEORY, FINANCE AS A COMMODITY) It sees that plans are made for effective promotion and delivery of the org's goods and services and that the org's funds are wisely allocated so that the org makes far, far more money than it spends. On this basis it may add to, subtract from, amend or approve the proposed financial planning, or return it to the Advisory Council for correction or revision.

Once approved by the Executive Council, the financial planning, along with the projected income plan, accounts summary, bills summary and income note collections summary, is sent to the FBO. The FBO is the final approval authority for the org's FP. He would review the FP himself and have the D/FBO for MORE check any portions of the FP that concern the hat of the D/FBO for MORE. The FBO and D/FBO for MORE look at FP from the viewpoint of whether the funds proposed to be spent will result in more production and more funds back into the org than are being spent. The FBO is not there to do the org's financial planning himself. He ensures that the Executive Council wears that hat and verifies that it *is* being done correctly to buy more income and production. When satisfied that all is in order, the FBO gives the org its allocation.

CONTENTS
ORG BOARDS
INDEX

The line goes from the department heads to the Advisory Council to the Executive Council to the FBO.

Although the FBO is the final approval terminal for the allocation before the FP can be activated, the Executive Council is fully responsible for financial planning for the org. This includes long-range financial planning as well as the weekly FP. In the final analysis, the financial health of the org is in the hands of the Executive Council. This is why the statistic of the Executive Council is org cash-bills, as it is the statistic which reflects the competence of the Executive Council to manage the finances of the org and bring about a *very* solvent and prosperous org. If cash-bills is improving by *trend,* you know that the Executive Council is wearing its financial planning hat correctly.

Where an Executive Council or any member of it is not wearing this hat, responsibility for the org as a whole is missing and it will show in a declining cash-bills spread by trend.

With sound financial management, an active, on-policy, on-hat Executive Council can build a viable, expanding and prosperous org.

FINANCIAL PLANNING

(In 1965, when this policy letter was originally written, it was the Advisory Council's hat to do financial planning. At that time the Advisory Council consisted of the senior executives of the org. Later, with the introduction of the seven div org board, what was the Advisory Council became the Exec Council and the Div Heads Council took on the name of Advisory Council. With the introduction of this change some staff mistakenly thought that the final org responsibility for financial planning became the territory of the div heads which would, of course, be impossible as it is the Exec Council who are held responsible for the solvency of the org as is clearly expressed in HCO PL 21 Dec. 66 II, EXECUTIVE COUNCIL. The real datum is that the Exec Council is responsible for financial planning and acts on the advices of the Ad Council and in turn the Ad Council gets advised by the heads of departments.

Therefore, this HCO PL has been updated to reflect the changes which have occurred since the original issue, including the role of the FBO in relation to financial planning.)

HCO PL	31 Oct. 82	Finance Series 30 FINANCIAL PLANNING — RESPONSIBILITY FOR
HCO PL	21 Dec. 66 II	EXECUTIVE COUNCIL

The Finance Series policy letters

Financial planning means — how to handle the money and assets of an org so as to maintain outgo below income.

The financial planning hat, in the final analysis, is worn by the Executive Council, as theirs is the responsibility for the successful conduct of the org as a whole.

In this, it is assisted by the Advisory Council, whose responsibility is to assist the Executive Council in planning for the solvency of the org and to propose to the Exec Council sane and prosurvival handlings for its income and assets. The Ad Council, in turn, is advised by the heads of the departments.

Once the Exec Council has reviewed and approved the financial planning it is then forwarded to the FBO for approval of the allocation. Final authority for the allocation is the hat of the FBO and he may approve it as proposed, lower it or raise it in accordance with the policies issued in the Finance Series to ensure that his allocation will result in

increased income and production. In exercising this authority the FBO may override the proposal of the Exec Council and his decision is final. Where an Exec Council is seen to be properly wearing its financial planning hat and is getting the required income and production expected from the org, the FBO would simply verify this for himself and verify that the allocation requested is correct and then transfer to the org the approved allocation.

The actions of financial planning are as follows:

1. Income planning. This is planning which forces in marketing, promotion, sales and delivery which will result in income.

   It is the first step in the sequence as income must be *made* before it can be *spent*.

2. Ensuring that Financial Planning Program No. 1 is done for the org and maintained.

3. Directing the outlay of funds necessary to execute its planning, in alignment with HCO PL 19 Mar. 71RA II, Finance Series 6, BEAN THEORY, FINANCE AS A COMMODITY.

4. Directing the payment of bills.

5. Directing any necessary delay in the payment of certain bills.

6. Handling finances in accordance with "dateline paying" as covered in an early policy letter.

7. Setting limits on the purchase orders that may be signed.

8. Preventing divisions or departments in Emergency from buying any but essential promotional supplies or postage.

9. Adjusting payrolls.

10. Setting limits on pay, overtime or bonuses and all authorizations for pay, overtime or bonuses.

11. Reviewing prices, to ensure all the org's services are priced and priced properly and where any adjustments are needed, getting authorization for such from top management. (Prices may not be set locally in orgs without top management authorization.)

12. Directing any transfers of funds.

13. Deciding upon any large purchases.

14. Authorizing the sale of any equipment or property.

15. Passing upon prices offered for any equipment or property.

Any matter affecting the financial health of the organization has to be passed upon or planned by the Executive Council and authorized by the FBO.

FINANCIAL PLANNING SCHEDULE

While overall financial planning for the solvency of the org must exist in medium-range form, as in Financial Planning Program No. 1 and in other longer range programs which align with any strategic planning for the org, the immediate handling of the org's income and assets is done on a weekly basis.

The weekly financial planning is taken up each Thursday night after the week's end and is a vital part of the Executive Council meeting for that week. From the Executive Council the completed FP goes to the FBO for his final approval.

Thus the three major summaries which have always been required for standard FP (the Monthly Bills Summary, Monthly Accounts Summary and Income Note Collections Summary) are still required and made up in monthly format, but they must also be updated weekly for the weekly FP.

DISBURSEMENT SECTION

The Disbursement Section furnishes the data without which financial planning is impossible.

A short summary of the data required for financial planning is as follows:

The Disbursement Section files every bill received in the disbursement files. It also files every purchase order in these files (once the purchase has been made). (Ref: HCO PL 2 Mar. 65, PURCHASE ORDER FILING)

Those bills that are repetitive and purchase orders that are for materials from companies from whom goods or services are ordered regularly are filed in folders under the company name. The one-time bills and the one-time purchase orders are filed in a loose folder for a single month.

The Disbursement Section has made up a mimeographed form. This is the Monthly Bills Summary.

This form has the name of each company with which the org does business plus adequate blanks after each alphabet letter for new companies to be added.

This form has four columns. The first column is the company owed. The second column is the grand total of money owed that company. The third column is the amount that is past due. The fourth column is the month since when the bill has been past due.

All bills are *filed* on arrival. They are not kept out and entered. They are filed in the folders. This is important. No one must pay bills just taken from the post and saved up. They are promptly filed.

Then one takes the folders one by one and makes up the Monthly Bills Summary. As each folder is taken up the bills are examined for correctness, straightened up and entered in the Monthly Bills Summary. Purchase orders where the purchase has been

made but no statement has yet come in must also be filed and entered on the Monthly Bills Summary as, statement or no, this money is owed.

The way the system breaks down is to make up too many folders.

Only a repeating creditor rates a folder. One the org does business with routinely like the light company, the landlord, the paper company, etc. The occasional bills and the activated purchase orders for the occasional creditor go into the occasional bills folder for the month.

Each time a Monthly Bills Summary is made up, the occasional folders for past months containing unpaid bills *and* used but not-yet-paid-for purchase orders are gone through again and added to the statement.

The statement for one month complete, then tells one the total monies owed by the org for that month. Thus there is a statement for each month.

While this is made up and used in a monthly format, it must now be updated weekly in order to provide an accurate picture for those handling financial planning.

The Monthly Bills Summary, updated for the week, is due in the hands of the Executive Council for the weekly Thursday night Executive Council meeting which includes FP.

BANK RECONCILIATION SECTION

The Bank Reconciliation Section of the Dept of Records, Assets and Materiel makes up the latest bank records of monies on deposit concurrent with the Monthly Bills Summary.

This section (concurrent with the Monthly Bills Summary) reconciles all bank statements, tapes all cancelled checks on their counterfoils and in short makes certain there are no bank errors or omissions.

A *Monthly Accounts Summary* is then prepared showing the amount in each bank account. This too is a mimeographed form showing the names of the banks used, checks outstanding, etc. It also carries a total sum of monies in the bank.

This form also carries a section devoted to loans outstanding that the org must pay.

The Monthly Accounts Summary form, once made out, is then updated weekly and submitted to Executive Council on Thursday night for their financial planning.

INCOME NOTE COLLECTIONS SUMMARY

THE COLLECTIONS SECTION

The Collections Section of the Department of Income submits to the Ad Council a form called the *Income Note Collections Summary*.

This form carries an amount for cash collectible from notes (possible to collect) and a cash collectible from notes past due and the amount of notes that are apparently uncollectible. The total is added into grand total of *credit advanced.*

It gives the total of payments received during the month past (the 1st to the last day of the month).

It gives the number of statements mailed in the month just past.

It gives the number of persons with overdue notes who have been handed over to the Director of Clearing and passed on to field staff members.

The Income Note Collections Summary is then updated weekly and, along with the updated Monthly Bills Summary and Monthly Accounts Summary, is placed in the hands of Executive Council on Thursday night in time for the weekly financial planning.

EXECUTIVE COUNCIL ACTION

The first action of the Executive Council is to prepare and get mimeoed the three forms described herein.

The second action of the Executive Council is to make sure the Treasury Division is so organized as to be able to make out the forms provided easily, that their files are so arranged as to do so and that personnel exists to do them.

The third action of the Executive Council is to make sure the persons making up the forms know this and other pertinent policy letters.

The fourth action of the Executive Council is to make sure that it receives the proper forms, updated each week and ready for use in financial planning.

The fifth and continuing action of the Executive Council is to make sure routinely the forms are accurate and actual and not generalized or "roughly estimated."

The sixth and most important action each week is to plan financially on the basis of the three reports and set limits or restraints in POs or personnel numbers or whatever is necessary to achieve "Outgo less than Income" and get or keep the org solvent.

Upon completion of the financial planning, the Executive Council forwards the FP to the FBO for final approval.

INCOME

The Executive Council's actions of assigning conditions to divisions on the basis of the gross divisional statistic and actions in straightening up divisions in Emergency, strengthening Affluences and pushing standard promotion as per HCO PL 20 Nov. 65R I, THE PROMOTIONAL ACTIONS OF AN ORGANIZATION will keep income up.

It is more vital to pressure income up than to save money by financial planning restrictions. The Emergency Formula places, rightly, economy after promotion. Promotion comes first.

But economy is also vital. It is handled in relation to income.

When income is far down the Executive Council simply shuts off all but promotionally *vital* POs.

Where a division is in Emergency the Executive Council shuts off all POs except those vital to promotion in that division. (The tendency of a division in Emergency is sometimes to demand extravagant or unwise purchases.)

CHECK SIGNING

The check-signing line contains all three of the above reports as of the last time they were prepared and a tape of all checks paid since.

Check-signing policy as already released thus requires the other two monthly reports as well as the other items specified.

To that policy also add that a check signer must, to sign a check, also have before him the last issued orders of the approved financial planning.

It is very easy to confuse a check-signing line with a financial planning line.

They are, however, completely different.

One signs any check only after financial planning has been done and approved and with the total reports of financial planning and decisions taken, before one.

Check signing is a secondary action and is the result of financial planning decisions.

One pays only what financial planning has okayed to be paid and how.

DISBURSEMENT ACTION

When financial planning indicates what to pay or not to pay, Disbursement makes up the checks and sends the lot to check signers.

Checks signed during the period are signed as authorized by financial planning each week such as "Franking machine, FSM commissions and petty cash up to _____ may be paid in the coming week." This, part of the financial planning minutes of each meeting, is the guide by which weekly checks are made up, submitted to signers, signed and sent.

SUMMARY

Unless all these actions are done, an org cannot in fact prosper, has poor credit and is generally upset.

One has to get in the income. That is done by income planning and demand, and by making divisions do their proper promotions and keep their statistics up. The mechanism is gross divisional statistics, assignment of conditions and investigating and putting right divisions in Emergency and strengthening the actions that have brought about Affluences by Executive Council personal inspection. This is the first part of Executive Council assignment of conditions to divisions. Sometimes, where a divisional Emergency is continued too long, the Executive Council has to order an E-Meter and case survey of its personnel as an SP is surely about.

In financial planning one safeguards what one gets in, as described above.

Check signers and PO signers are not necessarily Executive Council members but, whether they are or not, are governed *entirely* by the last approved financial planning directive.

The financial planning directive of the week is issued promptly after the FP is finally approved, as a local Executive Directive, with the week and financial planning on it in caps, such as FINANCIAL PLANNING FOR THE WEEK OF _____.

Financial planning is the second part of the Executive Council assignment of conditions to divisions.

Long-range financial planning also appears on this directive. This long-range planning is not binding and is often changed in view of current happenings. It is a guide by which other executives can tentatively plan.

HCO PL	3 Sept. 82	Finance Series 27 DEPUTY FBO FOR MARKETING OF ORG RESOURCES FOR EXCHANGE (D/FBO FOR MORE) PURPOSE

(NOTE: The pilot for this post has been long and successful: it is the FCCI PO [Flag Case, Course, Internship Product Officer] whose duties were covered by the famous Bulldozer EDs issued on Flag. However, the FCCI PO also covers the post of what is now called D/FBO for MORE [D/FBO for Marketing of Org Resources for Exchange]. Without this post effectively manned, the FSO — Flag Service Org — collapses and any sag in its stats is instantly traced to the nonfunctioning of the FCCI PO post. The post once functioned well in the Office of the Staff Captain and has functioned less well in the Office of the CO FSO. Therefore, the D/CO [or D/ED] for Delivery and Exchange post is put in close liaison with the strong and powerful International Finance Office Network, while remaining under the authority of the CO or ED of the org.)

The Service Product Officer in any org should have D/CO or D/ED status.

His key function is to see that the org operates at the highest level of exchange. (Ref: HCO PL 10 Sept. 82, Finance Series 28, EXCHANGE, ORG INCOME AND STAFF PAY)

Therefore, his post is now retitled D/CO (or D/ED) for Delivery and Exchange and he is located in the Office of the CO/ED, Department 19, of all Class IV and Sea Org orgs.

He is the bridge between the D/FBO for MORE and the FBO.

This creates a flow:

You have the D/FBO whipping up business by seeing that the public is made aware of the org's products and services, and driving more business down on the org than it can waste.

The D/CO (or D/ED) for Delivery and Exchange makes sure this public gets SIGNED UP and SERVICED. He is a product officer who names, wants and gets promotion, sales, call-in, delivery itself and re-sign occurring.

The FBO, then, sees to the org's solvency by ensuring income is greater than outgo, that production is properly financed, that staff are well paid for their production and that Flag is recompensed for good management of the org. And all of this makes it possible for the org to then expand and deliver in greater volume.

The flow goes from public (D/FBO) to ⟶ the whole sign-up and service line (D/CO or D/ED for Delivery and Exchange) to ⟶ solvency and volume (FBO).

It is this incredibly workable lineup that takes an org stably up the conditions of exchange. (Ref: HCO PL 10 Sept. 82, Finance Series 28, EXCHANGE, ORG INCOME AND STAFF PAY)

But the line breaks down where there is no D/CO or D/ED for Delivery and Exchange posted. And where it breaks down most specifically and ruinously is in the area of CALL–IN.

If one wants call-in to occur and the org's exchange with its public kept in, the only way to do it and also expand the org is to get a D/CO or D/ED for Delivery and Exchange on post and functioning.

Public interest may be kindled, public reach may be occurring, public may be paying partially or in full for goods or services, but if goods and services aren't being delivered in full the flow is broken and the org is in a condition of only partial exchange. Delivery in full means calling in the person so the service CAN be delivered. In this way the org maintains "fair exchange" with each and every public on its lines.

So the answer for any org that is sitting in a condition of only partial exchange, or an org that is ANYWHERE below the fourth condition of exchange — exchange in abundance — is to immediately, at once and yesterday, and without ripping off some vital post, post a D/CO or D/ED for Delivery and Exchange.

The first and primary function of the D/CO (or D/ED) for Delivery and Exchange is CALL–IN and this means he personally gets call-in done all by his little lonesome. With his own hands and voice he himself begins to call in fully and partially paids. Call-in is his first duty and when he's got that going he posts a Call-in Officer to take over the hat which he has already begun and he then expands onto the other functions of his D/CO or D/ED for Delivery and Exchange post, as covered in HCO PL 9 Aug. 79R II,

SERVICE PRODUCT OFFICER. But he FIRST and PERSONALLY and BY HIMSELF gets call-in going and exchange occurring at once.

What is involved here is the administrative principle that in order to get something done that is an expanding function you give it to somebody and tell him to expand it.

A CO or ED, whose responsibility it is to see that the main functions of the org are getting done, also wears the planning and coordination hat for the whole of the org's activity. If he's going to get the show on the road he needs to delegate some of this responsibility. He needs a deputy — the Deputy CO (or D/ED) for Delivery and Exchange — and that deputy needs the authority and the clout to see that, through promotion, sales, call-in, delivery and re-sign, the main products of the org do get produced.

Getting this post filled competently enables the ED to fully wear his planning and coordination hat and makes it possible for the flow from D/FBO to D/CO (or D/ED) for Delivery and Exchange to FBO to occur.

As some orgs in recent times have experienced both external and internal suppression on the subject of calling people in and servicing them, the D/CO (or D/ED) for Delivery and Exchange is given the additional powers of immediate communication to the International Finance Office and the Inspector General Network without vias to report and get help to remedy internal and external situations in orgs which suppressively inhibit call-in, delivery or expansion whether by inattention, refusals to post vital posts, failures or refusals to contact or call in interested persons, theft of org prospects or business or outright rip-offs to the end of ensuring successful execution of his duties and the expansion of the org. A form for such a report will be provided but absence of a form or a supply of such forms must not inhibit such reports.

This IS the winning combination by which an org moves up to "fair exchange" with all of its public and from there up to the highest level of exchange.

And it is the highest level of exchange toward which the whole activity of the D/CO or D/ED for Delivery and Exchange is geared — exchange in abundance!

VIABILITY
THE MAKE–BREAK POINT OF AN ORG

I have spotted a new stat which would measure the viability of an org. It is the actual income of the org as plotted against its FP No. 1.

An FP No. 1 should give you the make-break point of the org.

Therefore you can take your GI against your CGI against your make-break point and you can tell whether or not the org is solvent by comparing the two figures.

FINANCE SERIES 34

THE PUBS COST ACCOUNTING FORMULA

The Pubs Cost Accounting Formula is:

THE STOCKS REPLACEMENT COST PLUS THE RUNNING EXPENSES OF THE COMPANY VERSUS THE GROSS SALES OF THE COMPANY.

This takes a different type of workout than cash-bills. Cash-bills is another thing.

For instance, as wages of an organization aren't added into cash-bills, here is a riding liability. Or the organization might not be ordering any stock and just bleeding their stock down which would not show up in cash-bills, and all of a sudden you could have a bankrupt organization.

So therefore you need a solvency picture for the org and this formula is where your solvency picture is.

The formula is very important.

FINANCIAL PLANNING PROGRAM No. 1

Refs:

LRH ED 55 Int	10 Dec. 69	FINANCIAL PLANNING PROGRAM No. 1
LRH ED 79 Int	30 Jan. 70	FINANCIAL PLANNING PROGRAM No. 1 ADDITION

Carefully planned financial handling will result in an organization which is not only solvent, but expanding on a sound gradient scale.

To do this an organization has to first of all assess the following:

1. How many *basic* staff members are required to run and handle the organization?

   a. How much should staff pay be weekly per your approved pay and bonus system?

2. How much is required for the basic organizational needs to merely KEEP the organization there:

   a. How much is the rent weekly (or mortgage or reserves loan repayments)?

   b. How much is the telephone weekly?

   c. How much is the electricity weekly?

   d. How much is the water weekly?

   e. How much are rates weekly (property taxes)?

   f. How much are costs weekly to cover any other taxes, corporate or legal matters?

   g. How much is needed for natural gas or heating fuel weekly?

   h. How much is needed weekly for Estates to maintain the org buildings and MEST?

   i. If building is owned, how much is needed weekly for improvements/upkeep of the building so it retains and increases its value?

j. How much is amortization for the building and org equipment weekly?

k. How much are basic admin supplies like pens, paper, file folders, carbon paper, staples, paper clips, etc., weekly?

l. How much is insurance for the org building and assets weekly?

m. How much is your weekly 5 percent to your general liability fund so as to build up a reserve per HCO PL 3 May 66R, RESERVE FUND?

n. How much is your weekly amount to the Building Fund per HCO PL 18 Jan. 65, BUILDING FUND ACCOUNT?

o. How much is your weekly deposit to your org Reserve Account?

3. How much is required for basic promotional actions:

a. How much are envelopes, stationery and stamps for so many Letter Registrar letters out weekly?

b. How much is required to keep up and mail out advance registration packets weekly?

c. How much does it cost on a weekly basis to mail a magazine or broad mailing to your full address list once a month?

d. How much does it cost on a weekly basis to mail out statements to people who owe the organization money?

e. How much does it cost to mail out information packs to your new names weekly?

f. How much does it cost to advertise your basic Div 6 services?

g. How much does it cost weekly to cover any awards programs?

h. How much does it cost weekly to service and give your FSMs materials to select people to your org?

i. What are the other promotional costs needed to sell services, books, recorded LRH lectures and other bookstore items to ever increasing numbers of public?

j. What is the cost to supplement your HCO Book Account if more funds are needed to get stocks of bookstore items up to their required level, purchase new material or make up for past stock losses?

4. How much does it cost weekly to keep in your basic communication lines:

a. How much is your weekly payment to Flag? Although sent by the FBO, this is a cost for services provided to the org by management and comes from the org's corrected gross income.

b. How much is your weekly mimeo expense internally and/or to FOLO? This covers remimeoing all issues for staff distribution, org business forms, mimeo files, newsletters and payment to FOLO for mimeo sent to your org.

c. How much is the weekly cost of freight, mail and telex to keep the org in comm with management?

d. How much is your average weekly film lease fee?

e. How much is the weekly average cost of recorded LRH lectures for use in public lecture plays?

5. How much is required for basic delivery actions:

a. How much is clay weekly?

b. How much is required to keep authorized audio playback systems operational?

c. How much does it cost weekly to keep up supplies of mimeo forms? (Auditor Report Forms, routing forms, pink sheets, auditing lists, etc.)

d. How much does it cost on a weekly basis for auditor worksheet paper?

e. How much is needed weekly for materials required for courses per HCO PL 16 Mar. 71R I, WHAT IS A COURSE? (Reference books, bulletins, policy letters, dictionaries, translated LRH lectures, etc.)

f. How much is needed weekly for materials for a full Qual Library and hat packs for the staff?

g. How much is the weekly payment for staff training at a higher org including any payments for previous training not yet fully paid off?

(Note: The HCO Book Account has its own separate financial planning and is administered separately, under the control of the D/FBO for MORE. Its use is not subject to the org's weekly FP. The following points would be assessed in doing an FP No. 1 for the HCO Book Account.)

6. How much is required to handle the sale of LRH books, meters, recorded LRH lectures, insignia and other HCO Book Account items:

a. How much is the weekly average cost to restock items which have been sold?

b. How much is the weekly cost for promotion and marketing of Book Account items?

c. How much needs to be set aside to purchase new items such as new books or recorded LRH lectures?

d. How much is the weekly cost of shipping and packaging to handle mail order?

The list above provides the guidelines for any org in calculating its FP Program No. 1.

Sea Org orgs and units would need to plan additionally for basic staff welfare expenses, such as: the amounts needed weekly for crew allowance, food, medical and dental expense, basic cleaning supplies, basic housing and berthing supplies, child care, crew uniforms, laundry, transport, etc.

A management org might also have other basic expenses; for example, the basic amount needed to be set aside weekly for mission (Action Bureau) expenses, etc.

Any org would review the list provided above for any additional basic expenses or any not applicable and would then work out its FP No. 1 within the purpose of the functions of that org.

HOW TO USE THIS PROGRAM

After carefully figuring out your weekly costs as per above, you now know exactly how much income you will require weekly in order to exist and to promote. If you do not make this amount of income weekly, you will know at once that you are spending more than you are making, at which point everything must be done to sell more services to your public.

An organization could be in the situation where it has spent more than it has made, in other words it has greater bills than it has money with which to pay them. Now this places an organization into a Danger condition as regards the society which runs on the basis generally of "pay within 30 days or else."

An organization in this situation, therefore, has *got* to make more money than simply its basic weekly costs. Therefore, all excess monies over its basic weekly costs must be used to pay off its bills, carefully paying such on a dateline payment basis and as per policy with regard to threatening creditors.

When an organization is no longer in a Danger condition as regards society and now has more income than it has in bills, it can gradually use its excess income to do more promotion, to expand its staff to make more income to do more promotion and to buy more facilities to increase promotion and so on.

There are many ways an organization can obtain service facilities like chairs, desks, typewriters, address machine, and mimeo or offset machines without driving the organization into debt and causing it to have vast monthly payments which exceed its ability to pay. Inexpensive secondhand equipment can be obtained while the org sets aside so much money until outright purchase can be made or it can lease equipment with an option to buy.

There is definitely a maxim with regard to money and it is: THE LESS AMOUNT OF INCOME AN ORGANIZATION OR AN INDIVIDUAL HAS, THE MORE CAREFULLY AND WISELY FINANCIAL PLANNING MUST BE DONE.

PROGRAM ADDITION

When FP Program No. 1 was first presented, the initial reports on its use made it necessary to amplify the program.

The first organization reporting compliance had an average income of £3,500 per week, yet in doing FP Program No. 1, found that its operating costs, promotional costs, and monies needed to pay sums due on writs against the organization amounted to £5,800 per week, whereupon it was gleefully decided that the organization would have to make more income. Now this was not the whole intention of Financial Planning Program No. 1.

NAVIGATE

ORG BOARDS
INDEX

In presenting Financial Planning Program No. 1, it was considered that the basic costs of the organization would be LESS than its income, but that such basic costs would give the Executive Council an idea of how much they would have to make to barely survive and every once in a great while, it would require added effort by the organization to pull its income up to its bare existence level.

Therefore, the following has been added to this program:

A. After completing the actions listed above, the average *weekly* corrected gross income for the past four months is to be calculated.

B. If the basic expenses of the organization are greater than the average weekly CGI income, the operational costs must be reduced and the organizational expenses CUT BACK to a figure below that of the average weekly CGI.

C. If the organization also has past bills owing, then the organizational expenses must be CUT BACK even further to permit past bills to be paid. At least 10 percent to 15 percent of the average weekly CGI must be set aside to pay past-due bills and so the cutback in expenses must take this figure into account. Once the past-due bills are paid, the org's FP No. 1 is to include a minimum of 5 percent of the CGI to the org Reserve Account.

Even if an organization is in the position of having more income than bills such basic data as this will help in planning for better expansion.

Therefore, the Executive Council of each organization should meet weekly to review its basic operational costs in order to really get in this financial planning program.

In using this Financial Planning Program No. 1 it must be understood that the weekly allocation for the org is not fixed against the FP No. 1 amount. Any idea of fixed allocations is a complete falsehood and would be simply an attempt to wipe out FBOs whose job it is to allocate *in relation to* the org's production.

It is expected that orgs will greatly expand and thus will require more space, more course supplies, more promotion, etc. So it is necessary to regularly review and update an org's FP No. 1.

SUMMARY

Survival of an org depends on solvency.

Solvency depends on making more than it spends.

It is very important that Financial Planning be done well as if it isn't, it threatens your pay as well as the org's survival.

About the Author

No more fitting statement typifies the life of L. Ron Hubbard than his simple declaration "I like to help others and count it as my greatest pleasure in life to see a person free himself from the shadows which darken his days." Behind these words stands a lifetime of service to mankind and a legacy of wisdom that enables anyone to attain long-cherished dreams of happiness and spiritual freedom.

Born in Tilden, Nebraska on 13 March 1911, L. Ron Hubbard's road of discovery and dedication to his fellows began early in life. By the age of nineteen, he had traveled more than a quarter of a million miles, examining the cultures of Java, Japan, India and the Philippines. He had even gained access to forbidden Buddhist lamaseries in the Western Hills of China. Yet for all the celebrated traditions of the East, he found much that troubled him: ignorance, poverty and wanton disregard for suffering. "And amongst this poverty and degradation," he later wrote, "I found holy places where wisdom was great, but where it was carefully hidden and given out only as superstition."

Returning to the United States in 1929, Ron resumed his formal education and enrolled in George Washington University the following year. There, he studied mathematics, engineering and the then new field of nuclear physics — all providing vital tools for his continued philosophic research. To finance that research, Ron embarked upon a literary career in the early 1930s, and soon became one of the most widely read authors of popular fiction. Yet never losing sight of his primary goal, he continued his mainline research through extensive travel and expeditions.

With the advent of World War II, he entered the United States Navy as a lieutenant (junior grade) and served as commander of antisubmarine corvettes. Left partially blind and lame from injuries sustained during combat, he was diagnosed as permanently disabled by 1945. Through application of his theories on the mind, however, he was not only able to help fellow servicemen, but also to regain his own health.

After five more years of intensive research, Ron's discoveries were presented to the world in *Dianetics: The Modern Science of Mental Health.* The first popular handbook on the human mind expressly written for the man in the street, *Dianetics* ushered in a new era of hope for mankind and a new phase of life for its author. Ron did not, however, cease his research, and as breakthrough after breakthrough was carefully codified through late 1951, the applied religious philosophy of Scientology was born.

With the ever-increasing popularity of Dianetics and Scientology came the need for an administrative and managerial technology to keep pace with expanding organizations around the world. Through the following six years LRH researched existing organizational systems, theories and managerial methods, all to come to the conclusion that "We are starting with known data. A word, *organization,* exists. That's known data. The rest of it's wilderness."

And so, Ron embarked upon a fully original path of discovery—specifically, "to shake out all the basic fundamentals of business and organization so they exist as laws." What eventually followed from that "shake out" are those organizational policies and patterns fundamental to every Scientology organization.

All told, the fruition of his research spanned more than 30 years of work and resulted in the largest cohesive statement on the subject of organization from any single author. Here is what LRH quite correctly describes as an actual philosophy of administration drawn from natural laws embracing the whole of the subject.

As he wrote, "Administration is third dynamic auditing. And just like auditing, has its standard processes for standard situations." This is the technology contained within the eight volumes of the Organization Executive Course. It is a technology representing the natural laws governing all organizational and group endeavors—a technology stripped from the very "woof and warp" of the material universe.

Particularly in the name of third dynamic auditing, L. Ron Hubbard provided the Management Series—with tools for the building and running of organizations in ways that entirely parallel the precision of auditing technology. The three volumes of the Management Series provide eleven essential managerial subjects containing the laws and principles governing organizations.

All told, L. Ron Hubbard's works on Dianetics and Scientology total forty million words of recorded lectures, books and writings. Together, these constitute the legacy of a lifetime that ended on January 24, 1986. Yet the passing of L. Ron Hubbard in no way constituted an end—for with over a hundred and ten million of his books in circulation, millions of people and thousands of groups and organizations daily applying his technologies for betterment, it can truly be said the world still has no greater friend.

LIST OF TYPES OF ISSUES & MAGAZINES

List of Types of Issues & Magazines

The purpose of this list is to give a brief overview of the various issue types used over the years in Dianetics technology and Scientology applied philosophy. It is for reference only and is not intended to replace any policy or other issue.

***Ability*® Magazine,**

magazine of the Founding Church of Scientology of Washington, DC, since 1955. More recently, also used by various other Central Organizations as the title of their magazine.

Administrative Letter,

1. an issue that carries normal general policy enforcement or advices by the Executive Director. These are on yellow paper, are mimeographed and are usually designated Gen. Non-Remimeo. The Executive Director's Administrative Letters are different from others in being headed above their subject title: EXECUTIVE DIRECTOR DIRECTIVE. They remain in force unless cancelled. (HCO PL 22 Feb. 65 III, EXECUTIVE DIRECTOR COMM LINES)
2. admin letters were issued by others. Pale salmon paper. HCO Divs — green ink, Org Divs — red ink, Public Divs — black ink. Purpose: normal general policy enforcement or advices. *See also* Advice Letter, HCO Administrative Letter, HCO Continental Administrative Letter.

***Advance!*® Magazine,**

the magazine of the Advanced Organizations.

Advice Letter,

an issue whose purpose is normal general policy enforcement or advices. Pale salmon paper. HCO Divs — green ink, Org Divs — red ink, Public Divs — black ink. *See also* Administrative Letter, HCO Administrative Letter, HCO Continental Administrative Letter, HCO Continental Technical Letter, HCO Technical Advice Letter.

Aides Order (AO),

an issue that covers EXTERNAL matters having to do with CLOs, FOLOs and outer orgs. Usually contains evaluations by LRH or Flag management personnel. The program of an evaluation is sometimes issued as a Flag Program Order. Issued to senior executives on Flag and personnel concerned. They are numbered by area to which they apply. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Associate Newsletter,

a newsletter sent by LRH to Scientology doctorate schools, associates and centers. First issue appeared 23 Apr. 1953, last appeared 19 Nov. 1953. By LRH.

***The Auditor*®,**

magazine published by the Saint Hill organizations (ASHO, AOSH UK, AOSH EU, AOSH ANZO).

Base Flag Order (BFO),

an issue that contains regulations and standing orders applying to Flag's Base which remain in continuous force. Approved only by LRH. (Base Flag Order 1, 21 Nov. 75, NEW NUMBERED ISSUE)

Base Order (BO),

1. an issue that has been used interchangeably for Flag Order. FOs started as Base Orders. Occasionally erroneously used at bases. Should be a CO (Continental Order) when locally issued. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)
2. all "Base Orders" previously issued shall be considered to be in force as they apply and by Flag Order 1 are made into Flag Orders. (FO 1, 12 Aug. 67, REORGANIZATION)

Board Issues,

BPLs (Board Policy Letters), BTBs (Board Technical Bulletins), BEDs (Board Executive Directives). These were similar in content to HCO PLs, HCOBs and LRH EDs respectively, but were written by someone other than LRH and issued on Flag by or for Boards of Directors of the Churches of Scientology. They were printed on buff paper with green ink for BPLs, red for BTBs and dark blue for BEDs. You cannot be comm eved or given a Court or disciplined for not following Board Policy Letters, Board Technical Bulletins, or targets or orders that violate HCO Policy Letters. The same applies for technical terminals. They can only be disciplined or given Courts or Comm Evs for violations of HCO Bulletins, LRH tapes or issues. Technical terminals cannot be given Courts or Comm Evs or disciplined for not following Board Technical Bulletins, local technical issues or verbal tech or Board Policy Letters. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF; HCO PL 13 Jan. 79, ORDERS, ILLEGAL AND CROSS)

Board Resolution,

orders or directions in Scientology for anything relating to corporate status, starting or closing bank accounts and vital planning. Black ink on white paper, signed by all board members. (HCO PL 13 Mar. 66 I, ORDERS, PRECEDENCE OF PERSONNEL, TITLES OF)

***Cause*® Magazine,**

magazine of the International Hubbard Ecclesiastical League of Pastors.

***Celebrity*® Magazine,**

magazine of the Church of Scientology Celebrity Centre International.

Central Bureaux Order (CBO),

an issue that applies to SO Bureaux. It is distributed to Bureaux personnel and SO Org executives only. Issued by the head of a Central Bureau at Flag. Black on white. Has no force on nonbureaux personnel. These regulate the organization and activity of SO Bureaux and their offices. Bureaux need master files for Bureaux hats. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Central Office of LRH Executive Directive (COLRHED),

an issue established for THE OFFICE OF LRH on Flag. Blue ink on yellow or buff paper. (COLRHED 1, 1 Nov. 73, NEW SERIES)

***Centre*® Magazine,**

magazine that is the mission journal, publication of Scientology Missions International.

***Certainty*™ Magazine,**

magazine of the Church of Scientology in London, England (started in 1954).

Commodore s Staff Order (CS Order),

an issue that contains orders necessary to Commodore's Staff. (FO 795/CS Order 2, 30 May 68, COMMODORE'S STAFF)

***Communication*™ Magazine,**

the standard organization magazine of down under.

Compliance Executive Directive (CED),

an issue that carried a program on how to get an LRH issue or issues implemented in an area. Also could carry a project to execute a target in the program. Drawn up by an area or cont LRH Comm and authorized by CS-7 on Flag for a LOCAL CED. International or continental CEDs were issued from Flag. Blue ink on blue paper. (No longer issued as of the last revision of HCO PL 24 Sept. 70RA, ISSUES — TYPES OF.)

Conditions Order,

an order issued by any executive to assign or improve a condition. Published on divisional color flash paper not goldenrod. Where a mimeo or duplication line jams, an executive may post the order in his own handwriting on the staff notice board, filing two copies with the Ethics Officer. (HCO PL 5 Jan. 68 II, CONDITIONS ORDERS, EXECUTIVE ETHICS)

Continental Director Directive,

an issue used for the issuance of board minutes and any broad area directive emanating from a Director of the International Board or a Continental Director. Green ink on green paper. A technical directive emanating from such a source — red ink on green paper. (HCO PL 23 Feb. 61, DIRECTIVES FROM A BOARD MEMBER)

Continental Order (CO),

an order issued by Continental Captain or the Commanding Officer of a Continental Liaison Office or FOLO. Distribution is all Sea Org personnel in the area. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Dianetic Auditor s Bulletin (DAB),

a bulletin published in the early 1950s as an information source on Dianetics development and research. Many LRH DABs can be found in the *Technical Bulletins* Volumes.

Divisional Order,

an order that each division sends to its staffs or to its opposite-numbered divisions. The order is followed by the place and org name. The paper is color flashed for the division. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Ethics Interrogatory,

used as a despatch to carry out an investigation. It is used to collect data to determine the facts of a situation. It is on gold paper with blue ink. (HCO PL 8 May 65 III, FLASH COLORS AND DESIGNATIONS)

Ethics Order (EO),

an order that includes all local Committee of Evidence issues and other matters. Gold paper with blue ink. (HCO PL 8 May 65 III, FLASH COLORS AND DESIGNATIONS)

Executive Directive (ED),

a directive issued by any Executive Council and named for the area it applies to. They are valid for only one year. They contain various immediate orders, programs, etc. They are blue ink on blue paper. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Executive Director Directive,

an Administrative Letter issued by an Executive Director. Normal general policy enforcement or advices. Yellow paper, mimeographed, usually designated Gen. Non-Remimeo. Remains in force unless cancelled. (HCO PL 22 Feb. 65 III, EXECUTIVE DIRECTOR COMM LINES)

Finance Directive,

a directive issued at Flag by Flag Finance Office, usually by CS-3 or by authority of CS-3. Contained programs, orders, directions and projects. Blue ink on red or pink paper. Any Finance Directive issued locally by FBOs was only after specific approval of CS-3. Did not retire unless specifically cancelled. Did not apply to Treasury Divisions unless otherwise stated on the directive. (Cancelled by HCO PL 16 Mar. 72 III, FINANCE DIRECTIVES CANCELLED)

Financial Planning Directive of the Month,

a directive formerly issued promptly after the second Tuesday meeting of the month as an Exec Division Admin Letter with the month and Financial Planning on it in caps such as: FINANCIAL PLANNING FOR MARCH. Long-range planning also appeared on this directive. This long-range financial planning was not binding and was often changed in view of current happenings. It was a guide by which other executives could tentatively plan. Replaced by Financial Planning Directive of the Week.

Financial Planning Directive of the Week,

a directive issued promptly after the FP is finally approved, as a local Executive Directive, with the week and financial planning on it in caps, such as: FINANCIAL PLANNING FOR THE WEEK OF _____. Long-range planning also appears on this directive. This long-range financial planning is not binding and is often changed in view of current happenings. It is a guide by which other executives can tentatively plan. (HCO PL 26 Nov. 65R, rewritten 31 Oct. 82, Finance Series 31, FINANCIAL PLANNING)

Flag Bureaux Data Letter (FBDL),

an issue issued by a Flag executive to COs/EDs, FRs and Flag execs. Their purpose is TO INFORM EXECUTIVES. May contain news, forewarnings of traffic loads, expansions, PR interest items. Essentially they are newsletters. They are numbered. Printed in black ink on white paper (formerly blue ink on white paper). (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF; CBO 48RA, 4 Nov. 73, FBDLs)

Flag Liaison Office Newsletter,

a newsletter published by the Flag Liaison Office for distribution to all staff in the world.

Flag Conditions Order (FCO),

an order that is the equivalent of a Scientology org HCO Div Order such as an Ethics Order. Distributed only to those concerned and Masters at Arms (Ethics Files). (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Flag Divisional Directive (FDD),

a directive that applies to specific divisions in Scientology and SO orgs alike. Is the SO equivalent of a Divisional Order. Printed on divisional color flash. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Flag Information Letter (FIL),

a briefing sheet to org staff about a specific activity and includes a general program telling them how to set up for it and how to promote it.

Flag Mission Order (FMO),

mission orders for Flag missions, distributed to those concerned, not to others. Usually confidential. Should never be shown around or sent to Bureaux Liaison Offices not concerned with that mission. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Flag Order (FO),

an issue that is the equivalent to a policy letter in the Sea Org. Contains policy and sea technical materials. They are numbered and dated. They do not decay. HCO PLs and FOs are both in effect on Sea Org orgs, ships, offices and bases. Black ink on white paper. Distribution to all Sea Org members. It is vital for Sea Org units to have master files and quantity of FOs from which HATS can be made up for SO personnel and courses. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Flag Personnel Order (FPO),

an order that contains all personnel transfers, removals, postings, etc., on Flag and ordered by Flag in orgs. Issued only by Flag. Distributed to those concerned. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Flag Program Order (FPGMO),

an order issued on Flag for internal or external use. Contains long- or short-range production programs which are usually the entirety or major part of the handling of a published evaluation. Distributed as designated. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Flag Project Order (FPJO),

an issue containing a project issued on Flag for internal or external use, to execute a target in a program. Distributed as designated. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Flag Representative Network Data Letter,

an information letter to Flag Representatives which gives strategic planning for Flag Bureaux and strategies for individual orgs. They are black ink on green paper.

Flag Ship Order (FSO),

an issue that never goes off Flag. Full distribution to Flag Ship's personnel. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Foundation Bulletins,

publication of the Hubbard Dianetic Research Foundation, mid-1950s.

Founding Church Policy Letter,

policy letter issued at the Founding Church in Washington, DC in 1950s.

***Freedom*®,**

1. Scientology's international newspaper. It is published by churches of Scientology around the world and appears in many languages. *Freedom* features articles involving human rights and social reform and has a large non-Scientology readership.
2. a publication like *Freedom* is a defense action and is for public consumption. It is not distributed to org mailing lists. (LRH ED 59 Int, 14 Dec. 69, MAGAZINES)

***Freewinds*® Magazine,**

magazine of the Flag Ship Service Org, named after the ship.

FSM Newsletter,

a special newsletter for FSMs sent by orgs to their field staff members.

Golden Age of Tech Newsletter,

newsletter issued by the Office of Senior Case Supervisor International on wins and news from the Golden Age of Tech.

Goldline,

newsletter of Golden Era Productions.

Good News,

newspaper to Scientologists and staff from the LRH Personal PRO Office.

HASI Assoc Sec Administrative Order,

an order formerly issued by the Association or Org Sec of any Central Organization. Gave technical or admin data for services or personnel in a Central Organization. Green ink on blue paper. (HCO PL 4 Feb. 61, TYPES OF LETTERS ESTABLISHED)

HASI Assoc Sec Technical Order,

an order formerly issued by Association or Org Sec of any Central Organization. Red ink on blue paper. (HCO PL 4 Feb. 61, TYPES OF LETTERS ESTABLISHED)

HCO Administrative Letter,

an issue issued by HCO personnel from Flag with AVC okay. Contains checklists of issues and admin data of an informative nature. Does not contain policy or orders. Green on salmon. Distributed as designated. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

HCO Bulletin (HCOB),

technical bulletins written by LRH only. These are the technical issue line. They are valid from first issue unless specifically cancelled. All data for auditing and courses is contained in HCOBs. An org needs a master file of them (and their stencil file) from which to prepare course packs. These outline the product of the org. They are distributed as indicated, usually to technical staff. They are red ink on white paper, consecutive by date. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

HCO Continental Administrative Letter,

an issue that is green ink on yellow paper. By HCO Continental Secretary for any area. Contains admin data, orders and information. (HCO PL 4 Feb. 61, TYPES OF LETTERS ESTABLISHED)

HCO Continental Technical Letter,

an issue put out by HCO Continental Secretary of any continent. Technical advices, orders and data. Red ink on yellow paper. (HCO PL 4 Feb. 61, TYPES OF LETTERS ESTABLISHED)

HCO Executive Letter,

1. the normal comm line from the Executive Director to Assoc/Org Secs and HCO Secs or department heads in orgs. This is on legal size blue paper, is mimeographed and is headed TO:, FROM:, SUBJECT:, REFERENCE:, with numbered paragraphs. It is always sent Gen. Non-Remimeo and goes to all orgs even when addressed only to one org or even to a person in that org. It may also be meant for every org. HCO Executive Letters carry advices, how to do things, short-term projects, requests for data, information, reports on the state of things in general or some activity in particular or how some emergency was caused or how some emergency is progressing. (HCO PL 22 Feb. 65 III, EXECUTIVE DIRECTOR COMM LINES)
2. an issue that is blue ink on green paper. (HCO PL 5 Mar. 65 II, POLICY: SOURCE OF)
3. an issue that is white paper with blue ink. (HCO PL 8 May 65 III, FLASH COLORS AND DESIGNATIONS)

HCO Information Letter,

an issue that is strictly an LRH line only. Not mandatory data. Just news LRH wants to see gotten around. Blue ink on white paper. (HCO PL 4 Feb. 61, TYPES OF LETTERS ESTABLISHED) (Per HCO PL 8 May 65 III, FLASH COLORS AND DESIGNATIONS, HCO Info Letters are no longer issued.)

HCO Newsletter,

a newsletter issued by any member of HCO WW. Gave data and news, technical, admin or personal of general interest. Blue ink on salmon paper. (HCO PL 4 Feb. 61, TYPES OF LETTERS ESTABLISHED)

HCO Policy Letter (HCO PL),

basic organizational law in organizations. Written by LRH only. This is a permanently valid issue of all third dynamic, org and administrative technology. These, regardless of date or age, form the know-how in running an org or group or company. The bulk of hat material is made up from HCO PLs. They are printed in green ink on white paper. They are filed by consecutive date. More than one issued on the same date are marked Issue I, II, III, etc. Every org must have full master and bulk files of these or it won't be able to make up hats or hat packs for staff or know what it's doing and will fail. Stencil files to replenish supplies of HCO PLs are also kept. It took 20 years to find out how to run orgs. It's all in HCO PLs. HCO PLs are distributed to all staffs or as indicated or as made up in packs. (HCO PL 5 Mar. 65 II, POLICY: SOURCE OF; HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

HCO Secretarial Letter,

an issue that arrives in a central operation and is typed up after being viewed by the HCO Secretary. They are never mimeographed unless they are for the whole staff; put a copy on the board, put a copy to the persons it is to and that's it. These things are basically policies, they are hats and so on. They may have particularities but they definitely have a lot of policies connected with them. (Tape 5812C29 "HCO Area Sec Hat")

HCO Technical Advice Letter,

an issue by any official of HCO WW. Was always TECHNICAL in nature, never administrative. Red ink on pale salmon paper. (HCO PL 4 Feb. 61, TYPES OF LETTERS ESTABLISHED)

HCO Technical Letter,

an issue issued in early 1960s. Technical observations or information written by WW, Saint Hill or international personnel for L. Ron Hubbard.

***High Winds*® Magazine,**

the magazine of the Sea Organization. (FO 579, 30 Mar. 68, POLICY ON "HIGH WINDS")

***Hotline*™ Newsletter,**

official newsletter to PROs from the LRH Personal PRO Office. (CBO 787, 29 Sept. 88, THE HOTLINE NEWSLETTER)

***Impact* Magazine,**

magazine of the International Association of Scientologists.

Info Letter, Information Letter,

see HCO Information Letter.

Inspector General Network Bulletin,

a bulletin that provides information and briefings to staff from Religious Technology Center. Carries the logo for Religious Technology Center on the first page and is issued with black ink on white paper (formerly blue ink on cream paper). Issue introduced 19 Apr. 87.

International Management Bulletin (IMB),

a bulletin that provides information and briefings to staff, from International Management. Carries the logo for Church of Scientology International and the Scientology Cross on the first page. Black ink on white paper. Issue introduced 24 Nov. 82.

International Management Executive Committee Executive Directive (IMEC ED),

a directive that is issued by the International Executives of the Senior Executive Strata. They are distributed broadly to management and service orgs and contain immediate orders. They are blue ink on blue paper.

International Management Executive Committee Program Order (IMEC PGMO),

programs which are issued by the International Executives of the Senior Executive Strata. They are distributed to management and service orgs. They carry the logo for Church of Scientology International on the first page and are printed with black ink on white paper. IMEC Program Orders do not expire and remain valid as these programs are reusable by existing organizations and new orgs as they are formed.

International Scientology News,

newsletter that contains news for all Scientologists from International Management.

Journal of Scientology **(JOS),**

publication of the Hubbard Association of Scientologists International, Phoenix, Arizona, issues 1-G to 43-G, 1952–1955. Many LRH *Journals of Scientology* can be found in the *Technical Bulletins* Volumes.

KSW News,

newsletter of the Religious Technology Center.

LRH Executive Directive (LRH ED),

L. Ron Hubbard Executive Directives, earlier called Sec EDs. These are issued by LRH to various areas. They carry current line, projects, programs, immediate orders and directions. They are blue ink on white paper with a special heading. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Magazine,

1. advertising pieces for other items or services. Newspapers and magazines review and discuss and direct attention to things and make them desirable. (HCO PL 4 Nov. 73, PUBLISHING POLICY, BOOKS AND MAGAZINES)
2. a magazine is an internal "house organ." Magazines go out, major issue to members every two months, minor issue to the whole CF list on the in-between months. This means a magazine every month. (LRH ED 59 Int, 14 Dec. 69, MAGAZINES)

Mission Order (MO),

detailed actions which a Sea Org mission carries out to achieve the purpose of the mission. (FO 848, 6 June 68)

Newsletter,

an informal periodical report printed in letter format, usually devoted to news for a special interest group or distributed internally in an organization and to its customers and business prospects.

Operational Bulletin,

issue type started in 1955. Purpose to furnish information of various types to Scientology organizations and personnel. (Operational Bulletin No. 13, 17 Jan. 56)

Orders of the Day (OODs),

orders issued by any Commanding Officer to his own unit daily which may contain current activities, Ethics Orders, etc., by others. Contains the schedule of the day. Serves as a crew briefing. (OODs are also put out to their own orgs by Executive Directors or Executive Councils in Scientology orgs.) (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Professional Auditor s Bulletin (PAB),

bulletins from Ron to professional auditors containing technical and promotional material to assist the auditor. Started 10 May 1953. Some were compiled from Ron's research papers or lectures. Many LRH PABs can be found in the *Technical Bulletins* Volumes.

Project Order (PJO),

1. orders such as a premises mission, a logistics mission, etc. Not production missions going out to handle orgs and activities and get them producing. (FO 3485/CBO 345, 4 Aug. 74, PROJECT MISSION OPERATIONS)
2. orders issued for a project. The key here is that a job must be done that would overload existing terminals and so a project order is written to do it and MOs are then written to take steps to get it done. If one had a project order one would merely have to write MOs giving the actions necessary to get the project actions done. If one doesn't have a project one then incorporates the project into the MOs as targets. (FO 2936/CBO 133, 31 Aug. 71, MISSION ORDERS, TYPES OF)

***Ron* Magazine,**

a series of magazines exploring the work, the life and the contributions of L. Ron Hubbard. They cover aspects of LRH's life as a writer, philosopher, adventurer/explorer, artist, educator and humanitarian.

Ron s Journal (RJ),

originally a tape recorded lecture by Ron, designed for org staffs as an intimate chat with staff members to let them in on what's going on and what we're planning so that staffs could be informative to the Scientology public. Has at times been released as a printed or mimeographed issue and distributed to public as well as staff. (HCO PL 13 Aug. 70 III, PR Series 3, WRONG PUBLICS)

Ron s Special Thursday Bulletin,

Ron's special bulletin to mission holders which was done on white paper with red ink. (1959)

Scientology Policy Directive (SPD),

a directive whose purpose is to provide an issue type for policy for the Church of Scientology, and to distinguish from policy issued by LRH which is issued in HCO PL form. Senior to all administrative issues except HCO PLs and any other issues or advices by LRH. Its distribution is all staff unless otherwise designated. Green ink on green paper (formerly black ink on blue paper).

Sea Org Executive Directive (SO ED),

a directive distributed broadly or not to SO and/or Scientology orgs and binding on both. Usually issued by Flag management personnel. Contains immediate orders or programs. Blue ink on blue paper. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Secretarial Executive Directive, Secretarial Executive Director, Secretarial to the Executive Director (Sec ED, Sec l ED),

1. high speed, urgent communications having the force of policy and requiring instant emergency compliance. High velocity comm line used to change personnel, to handle emergencies or to make limited-time policies or to handle personnel conflicts or chronic slumps. (HCO PL 22 Feb. 65 III, EXECUTIVE DIRECTOR COMM LINES)
2. explicit temporary urgent orders. (HCO PL 7 May 65, CANCELLATION — MIMEO DISTRIBUTION CHANGES [SEC ED DISTRIBUTION])
3. secretarially signed order of the Executive Director, expiring one year from date of issue. (HCO PL 13 Feb. 66 II, SEC EDs, SEC ED OKAY [CONTINUED], POLICY LETTER CHANGES AND ORIGINS)
4. now named Executive Directives or EDs. (HCO PL 1 Sept. 66RA, FOUNDER)

Senior C/S International Bulletin,

a bulletin issued from the Office of the Senior Case Supervisor International whose purpose is to provide a communication line to technical personnel over the world. They do not have the force of policy; this line exists to give tech people an opportunity to keep informed as to what is being found and corrected in various areas. Black ink on white paper with the Standard Tech logo on the first page (formerly gray ink on white paper).

***Source*® Magazine,**

magazine of the Flag Land Base.

Station Ship Order (SSO),

an order formerly issued for that station ship only by the Captain or Deputy Captain. Goes to all personnel of that ship and a copy to Flag.

Tapes,

an issue line of both policy and tech as designated. They are recopied at Golden Era Productions and issued for courses and other purposes. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)

Technical Individual Program (TIP),

1. an issue originated so that personal programs for students and pcs coming to Flag may be issued and published. Numbered and dated. More than one program can be on one issue. They are on green paper printed on one side of a page, so they can be cut up. Distributed only to those concerned. (HCO PL 24 Sept. 70RA, ISSUES — TYPES OF)
2. to keep check of programs on cases and study, a new issue has been created called a TECHNICAL INDIVIDUAL PROGRAM (TIP). These will be mimeoed and go to the various interested terminals. They apply to FEBCs, Qual interns and crew. This will keep things sorted out on individuals so they and others know what's going. (Flag OODs, 21 June 71)

***Understanding*™ Magazine,**

magazine of the Church of Scientology in Johannesburg, South Africa (started in the 1950s).

***Up* Magazine,**

early magazine of the Advanced Organization.

Urgent Directive,

orders of a remedying or preventive nature issued instantly by directive, to remain in effect until all data is in. (HCO PL 31 Oct. 66 I, AKH Series 2, ACTIONS, EXECUTIVE, FOR HANDLING DISASTROUS OCCURRENCES)

product conference
conducted by CO or ED of org, 2:329
success of, 2:329

production
ability to name product and, 1:238, 2:445
accomplishing worthwhile, 0:306
administrator is interested in, 1:232
allocation and, 3:439, 3:537
applies to every member of group, 1:231
awarding of, 0:127
bean theory and, 3:439, 3:441
be, do, have and, 3:76
boredom and no production, 1:523
chain of all production sequences, 2:60, 2:199
completed cycles of action, 0:743, 1:411, 2:248
confusion and, 0:445
consumption and, 1:523
death and, 1:523
debug of, 2:489
definition of, 1:524
difficult without personnel, lines and hats, 2:75, 2:220
economics and, 3:337
establishment slower than, 2:359
ethics and, 2:102, 2:513
experimenting on standard production line, 2:246
failure in, 2:53, 2:192
False Data Stripping and, 2:463
hatting and, 2:397, 2:439
ideal scene and, 1:516
illegal policy and, 2:47, 2:186
immediate organization for, 1:339
income and, 0:132, 3:441
increase, how to, 0:515
Key Ingredient, 1:195, 1:208
low level of, reasons for, 1:240, 2:447
mandatory on any part of a group, 1:527
misunderstood word and, 2:452
money and, 1:365, 1:366, 3:445, 3:446
morale and, 0:233, 0:511, 0:675, 1:201, 1:228, 1:372, 1:384, 2:346, 2:389, 2:488, 3:74, 3:232
organization and, 1:201, 1:208, 1:241, 1:242, 1:430, 1:626, 1:628, 2:143, 2:448, 2:449
organization and individual staff members, 0:132
org form and, 1:409, 2:244, 2:436
out sequence and, 1:201
penalizing of, result, 0:127
point of success or failure in organization, 2:52, 2:191
poor or spotty, handling for, 2:143
Post Purpose Clearing and, 2:509
posts operating on irreducible minimum, effects on, 2:62, 2:201
pride, happiness and, 1:523
primary barrier to, 3:74, 3:94, 3:250
problems versus, 0:527
program used to handle short-term, 1:627
safe pointing and, 3:124
statistics are only sound measure of, 1:516
stopping of
by ill-intentioned persons, 2:487
without seeming to, 2:487
success in, 2:60, 2:199
survival and, 1:230, 1:231
way to increase, 0:514

production target
cannot be only type of target, 1:320
definition of, 1:324
first target of a program, 1:628
setting quotas against time, 1:320

product officer

draws up program, 0:739, 1:224, 1:331
duties of, 1:241, 1:460, 2:312, 2:322, 2:346, 2:351, 2:448
example of, 1:257, 2:277, 2:475
hatting and, 1:242, 2:449
hatting of, 2:400
HE&R and, 3:95, 3:251
job of, 0:746, 1:250, 1:414, 2:251, 2:270, 2:468
knowing beat of, 1:258, 2:278, 2:476
most common failure of, 1:238, 2:445
names, wants and gets his products, 1:238, 1:240, 1:257, 2:277, 2:445, 2:447, 2:475
product orientation and, 1:461, 2:313
push, debug, drive and, 1:258, 2:278, 2:476
runs on programs, 2:330
Service Product Officer, 1:275, 2:293, 2:515, 3:529
technology of, covered in FEBC lectures, 1:247, 2:267, 2:465
using Esto as organizing officer, 2:350

Product Rundown
correction of, 2:393
procedure for, 2:348

professional
audience and, 3:368
being professional, 3:365
definition of
in the arts, 3:349
description of, 3:368
fluid in time, 3:375
ideal scene and, 3:368
magic or luck and, 3:376
product and, 3:368

program
abandonment of, 1:152
agreement and execution of, 1:120

arbitraries and, 1:153
attainment of ideal scene and, 1:515
authority of, 1:562
bad program, 0:737, 1:42
based on wrong Why, handling, 1:563
basic management tool, 1:297, 1:454, 2:310, 2:530
best is, 0:736, 1:42
best way to form, 1:150
changing, altering or dropping of, 1:151
clearance, 0:174
complete planning and, 1:324
completion of, 0:740, 1:225, 1:332, 1:562
compliance
    ethics presence and, 0:595
computer use in executing, 0:741, 1:268, 1:333, 1:346
Correct Comm Program, 0:236, 2:335
correct procedure in ordering staff to any project and, 0:739, 1:224, 1:331
Danger Formula and overhaul of, 1:156
definition of, 1:155, 1:292, 1:324, 1:449, 1:560, 1:561, 2:88, 2:305, 2:525
does not report progress but only dones, 1:562
down statistics and, 1:121
dreams and, 1:192
dropped programs, 1:110, 1:152
dummy projects, 2:411
emergency program that pulls off hats, 1:30
establishing validity of new program, 1:150
establishment of, 1:156
Esto and product officer run on, 2:330
evaluation and, 1:563, 1:640
example of, 1:561
execution of, 0:735, 1:41
expansion program, 1:626, 1:628
    basic org rudiment function, 1:626
    executed by LRH Comm, 1:628, 1:629
    production program and, 1:627
expansion program, ethics codes and, 0:687
explicitness of, 1:154
failure of, 1:120, 1:192, 1:634, 2:144
finance programs, 3:437
first target of must be production target, 1:628
five-year plans and, 1:192
folder, program folder, contents of, 1:562
follow-through on, importance of, 1:110
good leadership and, 1:120
heart of, 1:559
ideal and, 1:120
implementation of, by leader, 1:120
issuance of, 0:740, 1:225, 1:332
knowledge of, by organization, 1:153
LRH Communicator approval of, 0:740, 1:225, 1:332
majority of people cannot follow, 2:411
maxims on, 0:736, 1:42
missing element in getting group to operate, 2:139
mission program as example, 0:472
multiple sit evaluation and, 1:581
must be executed, 0:736, 1:42
must handle actual situations, 0:740, 1:225, 1:332
new Ad Council and, 1:153
new program run as pilot project, 1:189
nobody did it, 0:735, 1:41
no excuses for not getting correct program done, 1:564
nonexistent resources and, 1:634
not understood, results, 2:411
organizational problems and, 1:150, 1:151
organization without, 1:119
overhauling of, 1:156
perfect program, 0:735, 1:41
personal contact and execution of, 1:593
pilot project as, 1:196
positiveness of, 1:119, 1:120
priorities set in, 0:740, 1:225, 1:332
problems and, 1:148, 1:153
production program, 1:627
    expansion program and, 1:627
    Flag Representative and, 1:627, 1:628, 1:629
    short-term, 1:627
product officer and, 0:739, 1:224, 1:331
project written to carry out one step of, 1:560
prosperity and, 1:120
purpose and, 3:174
putting new program into action, 1:195
reason not done, 0:735, 1:41
removing programs, 1:152
repeating targets on, 1:628
requires guidance, 0:736, 1:42
requires some finance, 0:736, 1:42
responsible person for, needs to be named, 1:592
reverting of, 1:151
run as special project, 1:151
running of new programs, 1:151
Saint Hill programs, 1:148
Scientology orgs rich in, 1:153
Situation and Why without, 1:564
slumps and, 1:110
special project and, 1:151, 1:156
standard program becoming less important, example of, 1:152
standard program, example of, 1:151
step of, is an order to person or unit named at program step end, 1:562

successful program dropped, handling for, 1:150
success of, 1:151
supervision of, and target troubles, 1:593
swan song of, 0:735, 1:41
targeted project and, 0:739, 1:224, 1:331
targeting of, 0:220
team action and, 0:739, 1:224, 1:331
test of evaluation and, 1:588
understanding and, 1:194
United Nations, prime program of, 1:121
unsuccessful, reason for, 1:150
up statistics and, 1:121
useful programs are numerous, 1:192
valuable and acceptable program, example of, 1:192
wasted work through not using, examples, 0:739, 1:224, 1:331
without guidance will fail, 0:736, 1:42
wrong ideal scene and, 1:635

progress
orderly, 0:687

project
approval of, 0:740, 1:225, 1:332
basic management tool, 1:297, 1:454, 2:310, 2:530
bugged, illegal policy and, 2:48, 2:187
completion of, 0:740, 1:225, 1:332
debug and, 1:563
definition of, 1:292, 1:449, 1:560, 1:561, 2:305, 2:525
difficulty in executing, reasons for, 1:222, 1:329
divisional heads usually write, 0:740, 1:225, 1:332
dummy projects, 2:411
evaluation and, 1:557, 1:563
executive engrossed in, 1:134
issuance of, 0:740, 1:225, 1:332
not being done, reasons for, 1:222, 1:329
overhauling of, 1:156
pilot project, 1:196
purpose of, needs to be real, 1:222, 1:329
special project, 1:156
executives and, 1:157
new program and, 1:151
org board placement of, 1:156
staff and money for, 1:151
starting a lot of new projects, 1:189
visualization of a project being read and done at the receipt point, 1:221, 1:328
writing of, points to look for, 1:222, 1:329

project order
time machine and, 0:525

promotion

"I AM ALWAYS HAPPY TO HEAR FROM MY READERS."
–L. RON HUBBARD

These were the words of L. Ron Hubbard, who was always very interested in hearing from his friends and readers. He made a point of staying in communication with everyone he came in contact with over his fifty-year career as a professional writer, and he had thousands of fans and friends that he corresponded with all over the world.

The publishers of L. Ron Hubbard's works wish to continue this tradition and welcome letters and comments from you, his readers, both old and new.

Additionally, the publishers will be happy to send you information on anything you would like to know about L. Ron Hubbard, his extraordinary life and accomplishments and the vast number of books he has written.

Any message addressed to Author's Affairs Director at Bridge Publications will be given prompt and full attention.

KEEPING SCIENTOLOGY WORKING THROUGH STANDARD ADMINISTRATION

SCIENTOLOGISTS AROUND THE WORLD know the true benefits of Scientology—spiritual freedom and immortality—are assured only with 100 percent Standard Tech. Thus they take to heart the responsibility for keeping Scientology working.

Yet purity of application applies not just to auditing technology—but also to administrative technology.

"Just as there is STANDARD TECH, so is there STANDARD ADMIN. The fact is that any organization can be seen to fail when standard administrative policy is not known and used by its people. And every successful organization will be found to be composed of people who DO know and DO apply the basic principles found in our policy letters."

L. RON HUBBARD

HCO PL 10 July 86 III

The purpose of Religious Technology Center is to keep Scientology working by safeguarding the proper use of the trademarks, protecting the public and making sure the powerful technologies of Dianetics and Scientology remain in good hands and are properly used. Where LRH administrative technology is applied standardly, it invariably results in expansion.

Do your part to maintain the purity of the technology so the Bridge to Total Freedom will always be there for you and all mankind. Keep Scientology working through Standard Administration.

RELIGIOUS TECHNOLOGY CENTER

LOS ANGELES, CALIFORNIA 90028, USA

Learn to Think

"The ability to evaluate puts one at cause over both the mad and ideal. It places a being at a height it is unlikely he has ever before enjoyed in the realm of commanding the situations of life. Evaluation is a new way to think. It is very worthwhile to acquire such an ability as it is doubtful if it ever before has been achieved."

– L. Ron Hubbard

For thousands of years philosophers failed to discover the answer to logic and rational thought.

With the development of the Data Series that discovery has been made — *the* greatest thinking breakthrough in man's history, unlocking the entire field of logic.

Learn to think!

Master the technology of evaluation. Gain the ability to locate *exact* cause behind any situation every time.

This is a course that will change your life. On it, you will:

- Learn the basics of logic and how to think
- Learn how to recognize the difference between fact and opinion
- Drill how to investigate and find the right Why that opens the door to achieving an ideal scene
- Drill recognizing pluspoints and outpoints so that you know them cold
- Drill on how to spot situations
- Learn how to analyze data
- Learn how to investigate and get to the bottom of any situation
- Learn how to establish the ideal scene for any activity

Do the Hubbard Elementary Data Series Evaluator's Course.

Your own survival depends on Your Ability to Think.

FLAG EXECUTIVE BRIEFING COURSE

The Class VIII Course of Admin Technology

"The exact intention of the Flag Executive Briefing Course is to bring executive action up to the high level of precision now only attained in auditing."
– L. Ron Hubbard

Learn 3rd dynamic auditing technology by becoming a Class VIII Auditor of Admin tech.

A Class VIII Auditor is a flawless, flubless, smooth as silk specialist in standard tech who can handle *any* case with ease. And for the administrator, the "case" is the organization itself.

The FEBC brings administrative tech to the level of Class VIII auditing—precision with exact predictable results every time. Gain the skills to run *any* organization, handle *any* situation, organize *any* area and make it expand and flourish — as a flubless 3rd dynamic auditor.

"Administration is third dynamic auditing. And just like auditing, has its standard processes for standard situations." – LRH

Those standard processes are learned to perfection on the FEBC with:

- an exhaustive study of the powerful Management Series,
- rough, tough administrative drills on the key organizational skills,
- the landmark lectures LRH personally delivered aboard the *Apollo* to the first students on the FEBC and those training as Establishment Officers.

Become a Class VIII Auditor—on the 3rd Dynamic.

ENROLL ON THE FLAG EXECUTIVE BRIEFING COURSE

YOUR GUARANTEE OF FREEDOM.

INTERNATIONAL ASSOCIATION OF SCIENTOLOGISTS

The purpose of the International Association of Scientologists is: "To unite, advance, support and protect the Scientology religion and Scientologists in all parts of the world so as to achieve the aims of Scientology as originated by L. Ron Hubbard."

All great movements have succeeded because of the personal conviction and dedication of their members. And no members are as dedicated as those of the IAS, the group which is winning the war against suppression around the world.

Even if you're not directly involved in the fight, it *is* your war. You have a stake in what kind of world this is — and will become.

Become a member of the International Association of Scientologists.

Help guarantee your route to full OT as well as freedom for the millions.
